FRANK LESLIE'S
ILLUSTRATED NEWSPAPER,
53, 55 & 57 PARK PLACE, NEW YORK.
FRANK LESLIE, EDITOR AND PUBLISHER.

NEW YORK, JANUARY 4, 1879.

TERMS TO SUBSCRIBERS.

One copy one year, or 52 numbers	$4.00
One copy six months, or 26 numbers	2.00
One copy for thirteen weeks	1.00

CLUB TERMS.

One copy LADY'S MAGAZINE and ILLUSTRATED NEWSPAPER, one year, $7.

One copy ILLUSTRATED NEWSPAPER, CHIMNEY CORNER and LADY'S MAGAZINE, one year, $10.

One copy POPULAR MONTHLY, and any one of our $4 Publications, one year, $6.

One copy SUNDAY MAGAZINE, and any one of our $4 Publications, one year, $6.

One copy PLEASANT HOURS, and any one of our $4 Publications, one year, $4.75.

Any subscriber sending for five copies of either of our Publications, at the full rates, to be sent to different addresses, will be entitled to an extra copy free.

Subscribers can remit direct, by P. O. Order, Drafts on New York, or Registered Letter, **at our risk.** Those who find it more convenient to subscribe through an agent can do so **at their own risk,** but should first assure themselves of the agent's responsibility.

POSTAGE FREE.

FRANK LESLIE'S ILLUSTRATED NEWSPAPER *is the oldest established Illustrated Newspaper in America.*

It is specially requested that all Photographers and Artists, professional and amateur, throughout the United States, will send photographs and sketches of important events and incidents, and of notable personages, to Frank Leslie's Publishing House, 53, 55 and 57 Park Place. All such sketches as may be used will be paid for at liberal rates.

WILKIE COLLINS'S
New Novel, entitled
"THE FALLEN LEAVES,"
from advance sheets obtained at large cost, will be commenced—simultaneously with its publication in England—in No. 1,215 *of* FRANK LESLIE'S ILLUSTRATED NEWSPAPER, *to be issued the first week in January next. The appearance of this latest work of one of the greatest novelists of the age will be a leading literary event of the New Year.*

RELATIONS OF LABOR AND CAPITAL.

MR. EDWARD ATKINSON, an intelligent writer and accepted authority on questions of political economy, has recently made before the Congressional Committee on Labor, of which Mr. Abram S. Hewitt is chairman, some very instructive statements which shed valuable light on the relations between capital and labor in Massachusetts; and as Massachusetts is, comparatively speaking, the richest of our States, it follows that the field from which he draws his inductions is the one within which capital might be expected to display its greatest advantages over labor, if it has any advantages at all in a country like ours. It appears, then, from the facts gathered by the Massachusetts Statistical Bureau that the aggregate value of property, as returned for that State in the year 1875, and embracing property of all kinds, amounted to $2,194,000,000. After making the necessary deduction from this aggregate on account of property subjected to a double assessment (as in the case of mortgages), and on account of notes and other paper obligations which merely certify the existing distribution of property, without adding to its volume, Mr. Atkinson estimates that $1,000,000,000 represents the present accumulation of fixed capital in Massachusetts, as the net result of the actual product of labor in that State during the two centuries which have elapsed since its first settlement. He next considers the product of industry in Massachusetts for the same year, and found that it is set down at the total of $643,000,000, from which, after deduction made for duplicate returns, he calculates that the annual product of industry in that State may be estimated at a maximum of $500,000,000, and cannot fall below a minimum of $300,000,000. From this exhibit it appears that the aggregate capital accumulated in this thrifty State out of the labor of two hundred years is no more than equal to the net annual product of labor for two, or, at the most, of a little over three years. We may add that these tables, representing the comparative relations of capital and labor in Massachusetts, are confirmed in all their essential features by similar tables which have been compiled from the accurate statistics of England under these same heads.

It is scarcely necessary for us to interpret or enforce the lessons taught by such a striking exhibit. It appears from these incontestable facts that out of the entire annual product of industry in Massachusetts a proportion ranging from 95 to 98 per cent. is directly distributed to labor. To this effect Mr. Atkinson argues as follows:

"In a normal condition of trade, manufacturing capital may yield ten per cent. It cannot yield more, because any industry in which it yields that percentage draws so much capital into it that the profits are kept down by competition. For some years past it has yielded much less, and, speaking for the cotton manufacture, it would not now be yielding anything at all except for the utilization of material formerly wasted and only saved now in consequence of services to which the wits of the manufacturers have been stimulated. Taking ten per cent. as the yield of capital in ordinary times, that amount has to be used to replace worn-out machinery and machinery made useless by new inventions. It has also to repair building, pay insurance, and cover various other expenses, and in the aggregate the amount taken out for these several purposes reduces the ten per cent. to six. Of this five per cent. is used in the payment of domestic and other service employed by the capitalist and in the supply of the actual necessities of the capitalist and his family, leaving only one per cent. that can possibly be devoted to the increase of capital or to luxurious indulgences."

In the face of these statistics, which we beg leave to repeat are authenticated in their facts and inferences by similar statistics compiled in England, we see how idle and groundless are the clamors raised by vaporing communists and "sand-lot" agitators against what they call the "domination of capital." It is labor, not capital, which takes "the lion's share" in the annual product of each year's industry, and it is nothing but the highest intelligence, combined with the strictest economy, which enables the capitalist to hold and retain the existing accumulation which he now possesses, and which he *must* manage with a liberal eye to the welfare of those who labor under him, and with a wary eye to his own self-preservation, for his prudence has an exceedingly narrow limit within which to act for the protection of his accumulations.

Those who talk and write about the destructive competitions of labor would talk much more to the purposes of truth and reason if they would also take into account the fact that capital, too, has *its* destructive competitions. And the competitions of capital are as much more destructive than those of labor, as the brain of the capitalist is keener and sharper than the brain of the laborer. It is for this reason that the accretion of capital is so slow in any country, after a certain aggregation of capital has been reached, and it is for this reason also that the accumulations of capital so frequently change hands in a country like ours.

It remains for us to say that the deductions drawn by Mr. Atkinson from the labor statistics of Massachusetts are confirmed by the philosophy which underlies all the facts of a progressive public economy. Everybody can see that in a settled country the rate of the accumulation of capital must tend to a constantly increasing decline, or, as the political economists phrase it, the general theory of economical progress ends in what is called "the stationary state," where the forces of capital and of labor come into equilibrium. As John Stuart Mill truly says, the richest and most prosperous countries would "very soon attain the stationary state if no further improvements were made in the productive arts," creating a new distribution of wealth and giving a new impetus to industry by starting it in new directions or by accelerating its movement in the old channels. Indeed, as he shows, all old societies may be said to be perpetually skirting on the verge of this state, and if they do not reach it, like China, "it is because the goal itself flies before them" at every new amelioration of industrial arts and processes.

Because in all new countries and in all progressive civilizations political economy is mainly called to concern itself with the phenomena of production and consumption, it has been common to suppose that these two factors are the main elements of public welfare. But, in fact, at a certain stage of economical development it is no longer the production but the *distribution* of wealth which becomes the predominant object of public concern in this matter; and we may know that this stage has been reached in any country where the profits of labor and of capital have been so far diminished that each begins to feel the pinch of that inexorable law which ordains the reduction of profits to a minimum wherever competition is allowed to have full scope—a law which presses with equal stringency on the capitalist and on the day laborer. We would like to show that this law has its beneficent as well as its relentless aspect, but we have already exceeded the limits of the present discussion.

FINANCIAL DISTRESS ABROAD.

THE financial and commercial situation in Germany is by no means encouraging. Trade is generally depressed, and to add to the distress, new indirect taxes are proposed to cover the deficit of 73,000,000 marks in the Prussian Budget. There have been numerous and heavy failures recently, not only throughout Germany, but also in Denmark and Sweden. The Berlin Commercial Company has been obliged to reduce its capital, and in Hamburg and elsewhere a number of banking-houses have gone into bankruptcy. In Austro-Hungary the financial position is equally critical. The dual empire, according to some, is fast on the road to ruin. The annual interest on the debt has now increased to 96,000,000 guilders, an increase of 18,000,000 guilders, or about $6,840,000 since 1873. The occupation of Bosnia and Servia requires 200,000 men, and the charges are excessively burdensome. "Stop the occupation, or we are ruined," is the burden of both Vienna and Pesth papers. Some 140,000,000 guilders of rentes must now be placed in order to meet expenses, but the Austrians themselves are beginning to fear that the credit of the country will not afford such outlays. In Great Britain, also, the financial and industrial depression still continues, growing apparently more serious every day. In Birmingham the distress is so great that the authorities have been compelled to organize means of relief; in Sheffield 2,000 children and 3,000 adults are receiving aid; at Stockton hundreds of families of iron-workers are destitute; in North Staffordshire the laboring classes are generally suffering from want of work and food; in Glasgow the streets are swarming with idle and starving men, women and children; in Aberdeen and Dunfermline private charity and municipal resources are sorely taxed in relieving the necessitous; in Manchester vast numbers of the middle-class poor, who will not appeal to charity, are suffering keenly; in Liverpool, the working classes are enduring greater distress and privation than for many years; while in Bristol, Wigan, Wolverhampton, and other centres of industry, the distress is almost unprecedented.

Meanwhile, our own improving condition is attracting attention everywhere abroad. Thus the *London Globe*, after referring to the fact that our national credit has been placed on a sound basis, remarks:

"If the public debt is no longer being reduced at the rapid rate witnessed immediately after the civil war, its burden presses much less heavily than formerly, as the process of redeeming six per cent. bonds by replacing them with four per cent. bonds makes steady progress. Most welcome sign of all, perhaps, the debt is now being largely brought home. The return of American securities from Europe has assumed such proportions that, instead of owing the great bulk of their debt to foreign holders, it is now mainly held by the American people themselves, as is the case with the English; for the total amount of government loans held abroad, the President says, does not exceed $200,000,000, or, say, £40,000,000, which is scarcely one-tenth of the whole. This is a very gratifying picture, and it may be well believed that sound-headed American statesmen will be anxious that it should not be disturbed by the currency quacks. With a restored credit, revived trade and a sound financial policy carried into effect by the resumption of specie payments on a gold and silver basis, the promise of prosperity of which the President speaks ought soon to be fully realized."

THE REIGN OF SANTA CLAUS.

PERHAPS the best that can be said about Christmas is that it is one of the few things that do not go out. It is neither old-fashioned nor out of fashion; and this is something in an age when fashions change every hour, and novelty is the only permanent fashion; when nothing more is thought of changing one's religion than one's bonnet, and it is even considered more fashionable to be without a religious faith than to possess one. But in the very teeth and face of this condition of dissolving views and general tendency of all things old to go out and all things new to come in, Christmas has held its own. Whether we be skeptic or believer, transcendentalist or materialist, we all believe in the creed of a yearly merry-making.

Christmas, like every other institution which has survived the decay of other customs, and outlasted the life of other festivals, has had to take its share of historic and critical analysis. Undeniable proofs have been brought to show that we, as Christians, are only perpetuating a pagan festival. There is scarcely one of its tender observances or holy rites that cannot be traced to some heathen practice. Nations, long before the Christian era, held a similar festivity about the same time of the year. It was nothing more or less than a festival in honor of the sun, which, recovering at this season his upward course, announced that mid-Winter was over, and the advent of Spring, with its blessings of light and warmth and blossoms. With the Romans the feast was called Saturnalia, which the early Christians changed from a feast of the wildest orgies to one of religious observance, some of the more innocent rites of the Roman feast, however, being perpetuated.

When we hang up the traditional evergreen, we may be sustained by the consciousness that the custom has at least the stamp of antiquity. Roman matrons decked their houses with similar festoons and interchanged presents as we do. There was, however, probably no advance in the price of evergreen trees, nor a demand for an unlimited supply of Roman hose, since Santa Claus is a mystical personage, and the lighting of the Christmas-tree and the hanging-up of the festive stocking are mystical observances, handed down from certain old Teuton ceremonials. Our Christmas is thus seen to be a curious medley of pagan, Scandinavian and Christian rites, offering an interesting study to antiquarians.

But what matters the history of the blessed Christmas-time, so long as it be still among us the festival, of all others, fullest of real and beautiful significance? What need to know from what people descends the custom of lighting the tree, since with that glow are lighted the fires on the hearth of the affections? All the knowledge of all the rites in the world has no power to change the present experience of pleasant things. Whether the Druids did or did not look upon the mistletoe as sacred makes a certain osculatory process performed beneath that bough neither more nor less a delightful occurrence. Mirth, joy and generosity are of no age or date; they are as old as the human heart and as fresh as human feeling. It is certain that all things, whether to give or to take, to eat or to buy, seems doubly good when they wear their Christmas dress. Our children's laughter is never so sweet as when they find the Santa Claus stocking, and the wife of one's bosom seems doubly attractive when she proudly wears the Christmas offering. Of all puddings in the world is there one that can equal the flavor of the odorous plum? As for the poor at our gate, for one day in the year, at least, we are glad they are always with us; for the fragrance of their grateful thanks follows us like a breath from heaven.

In this blessed season the well-springs of happiness are let loose, the frozen currents of selfish egotism being turned into active streams of benevolence. Even the Scrouges among us must hearken to the voice of the Tiny Tims, and the surliest feel some touch of the holiday glow. And it is always well to keep in mind that this is the time, of all others, when at least some of Christ's poor should be made richer through our generous offices.

THE CITY RAILROADS.

THE annual reports of the city horse-car companies, recently made, do not justify the public expectation that the elevated railways would destroy their business. On the contrary, it appears that the traffic of these lines has suffered a comparatively small decrease, and nearly all of them are making larger profits on their investments than the elevated roads. The Sixth Avenue line, which probably feels the influence of elevated railway competition more directly than any other, shows a decrease in receipts in the five months ending with last October, compared with the corresponding period in 1877, of only $47,764, equal, in other words, to a falling off of about 6,000 passengers out of the 50,000 previously carried daily. But, in spite of this decrease, the profits of the company amounted to about twenty per cent. on a capital of $750,000, according to its own report. The Third Avenue line, which has also been affected by rapid transit, is said to have made a profit last year of $740,000, or thirty-seven per cent., on a watered capital of $2,000,000. The reports of other street-car lines tell practically the same story. The Broadway and Seventh Avenue lines—one company—managed to divide $318,500 profit, besides purchasing cars to the tune of $37,852. The Eighth Avenue Company lost about half a million passengers, as compared with the previous year, in the four months during which the Metropolitan Road was running, namely, June, July, August and September. Even this road divided $155,220 profits. The Belt Line carries about 40,000 passengers per day, and last year divided about $300,000 profit. As a rule, it may be set down that even now, in spite of rapid transit, there is no business in the whole City of New York so lucrative as that of the horse-car lines. It would seem, in view of all the facts of the case, that the justice of the demand for a reduction of fares on these lines cannot be reasonably resisted, and the Legislature should, by statute, require the companies to render, either in cheap fares or in taxes, an equivalent for the valuable franchises which they have so long enjoyed without adequate compensation.

DEATH OF BAYARD TAYLOR.

AMERICAN literature suffers a serious loss in the death of Mr. Bayard Taylor, which occurred at Berlin on the 19th instant. While not positively great, Mr. Taylor possessed many qualities which made him a representative of what is best and purest in our culture and life. Versatile, conscientious, industrious, painstaking, fearless, he did well and thoroughly whatever he undertook, and, dying, has left behind him a name, both as author and traveler, which his countrymen will cherish with peculiar affection. His career as a publicist

Digitized by Google

was brief; and the post he occupied as Minister to Germany was not of his own seeking; but he had met its requirements to the entire satisfaction of the Government, while to the Court to which he was accredited his presence was from the first exceptionally welcome. The Administration will be fortunate, indeed, if it shall succeed in naming for the place now vacant a Minister who shall be in every way as acceptable, both at home and abroad, as was the appointment of Mr. Taylor.

BEYOND THE SEAS.

PRINCESS ALICE, Grand Duchess of Hesse-Darmstadt, and the first of Queen Victoria's nine children to die, expired, by a striking coincidence, on the anniversary of her father's death, which occurred seventeen years ago. As full obituary notices have already been given of this lamented Princess, it may only be noted here that she fell a victim to the same disease, diphtheria, which but a few days ago carried off her four-year-old daughter, Princess Marie, and which, preventable as it is, has been allowed to seize so many other victims among the dwellers in European palaces built long before the laws of hygiene were so well known as at present. Even now these laws are neither so generally known nor so faithfully observed as they ought to be, alike in the humblest hut and the proudest palace. Two other conspicuous names must be added to our mortuary list—the name of the Hon. Bayard Taylor, United States Minister to Germany, who, in his fifty-fourth year, bade fair to surpass the distinction he had already won in the sphere of letters and of travel, and the name of Karl F. Gutzkow, an eminent German writer of romances and philosophical essays, and a journalist as well as a dramatist.

Speeches from a throne are proverbially commonplace, and words are usually put in them to the very use for which a famous diplomatist once said that words were expressly invented, namely, to conceal thoughts. In these eventful days when deeds first interpret the real intentions of sovereigns and the news is rapidly flashed everywhere along telegraphic wires, less attention even than formerly is in general commanded by royal discourse. But those recently made by the Emperor of Russia, the Emperor of Germany, and the Queen of England and Empress of India, are all noteworthy for one thing—they seem to agree that nothing really definitive has yet been settled by the Berlin treaty. They verbally indorse the testimony of facts that the peace of Europe has not been consolidated by it. Indeed, the few words addressed by Kaiser Wilhelm to the functionaries of his court are avowedly sad and foreboding, like the harangue of the Czar to the Muscovites; and Queen Victoria only ventures to express a hope, more or less confident, that the terms of the Berlin treaty may somehow be carried out satisfactorily. Lord Beaconsfield, however, speaks in a bolder and more cheerful tone. He told a deputation from the Pacific Coast, who presented him on the 19th of December with a casket and congratulatory address from British residents in California, that he believes the Berlin treaty will effect the pacification of Europe; that it was made with this end in view, and that the signatory powers are determined to execute it. He added that Cyprus as a station was not inferior to Malta. There is a great variety of opinions on this point. But in Austria the special committee of eighteen has advised the Reichsrath to assent to the Treaty of Berlin. The Austrian Ministerial crisis may be regarded as at an end. M. Waddington, the French Foreign Minister, has defended himself in the Senate against objections to his course at the Berlin Conference, and has announced that all the Cabinets have come round to the opinion which France was the first to maintain—that the execution of the Berlin treaty is the only way not to jeopardize the peace of Europe. A large number of its clauses are already carried out, and he believes that the rest will be in due time. M. Waddington says that he now has positive assurance of the coöperation of the Powers, without exception, and everything done in favor of Greece particularly will be done through the collective action of Europe, at the instance of France—and, it may be added, to her great honor. The new Council of Ministers at Constantinople has decided to settle, without delay, the questions pending with Greece, Persia, Montenegro and Austria, and to conclude, as soon as possible, a definitive treaty with Russia. The recent conspiracy against the Sultan, it appears, was a serious attempt to dethrone him and to replace him by his brother, Reshad Pasha. The Sultan was with difficulty restrained from putting Reshad and Mahmoud Damad Pasha to death in true old Turkish style. It is far from being creditable to United States Consul Hess that he still acts, apparently, in behalf of the Turkish and not his own Government, as the jailer of the naturalized American citizen, Romer, who is accused of complicity with the conspiracies against the Sultan. The late Captain Ingraham set a better example to United States officials abroad by demanding the release of Koszta within eight hours, and then forcibly rescued him from an Austrian brig-of-war at Smyrna. But this happened long ago, when naturalized and native citizens of the United States alike had rights which foreign Powers were bound to respect. They have the same rights now, and, unless it be proved that they have forfeited these by crime, their rights should be enforced by war, in case of the failure of diplomacy to secure that end.

The Afghan war, as carried on in Parliament, resulted in victory for Lord Beaconsfield, although Mr. Whitbread's resolution in the House of Commons censuring the action of Government was rejected by a majority of only 101 instead of 120, as some of the more sanguine Conservatives had anticipated that it would be. And although sickness has visited the camps of the invaders of Afghanistan, and General Robert's Anglo-Indian army has been attacked with loss by one of the fierce hill-tribes, and Winter must soon prevent the victors from marching far into the interior, yet the triumph of the Viceroy over the Ameer seems now to be a foregone conclusion. Jellalabad was occupied on December 20th. The Ameer has fled from Cabul. Meanwhile, the power of the British Empire is confronted at home by a more formidable enemy than has yet directly threatened it in India. The wisest and most charitable measures cannot hope at once to subdue the general distress arising from bank failures, from strikes and mercantile troubles, throughout the United Kingdom.

WE present with the present issue our usual holiday supplement, crowded with original poems and tales written expressly for this number, by authors of acknowledged prominence.

RESUMPTION is already an accomplished fact, gold having sold on Wall Street on Tuesday last, December 17th, at par. Now that we have actually returned to a specie basis, it seems almost impossible to believe that gold ever sold at 285, as it did in 1864. The currency quacks who have declared resumption on January 1st to be an impossibility, are not likely hereafter to command much confidence as trustworthy prophets.

THE "Old Whig Party" is on its feet again, the Senate having confirmed Hon. Henry S. Foote—the sole surviving representative of the ghostly organization—as Superintendent of the Mint at New Orleans. President Hayes is to be congratulated upon this discovery of fossil remains, which is only equaled in importance by the discovery of "the Northeast passage" from Western Europe to Behring Strait by the Swedish Arctic expedition.

IT is stated that Mr. Bret Harte is to deliver his lecture on "The Argonauts of '49" in London and the principal provincial towns during the Winter. If we remember rightly, this gentleman was some time ago appointed as the Government representative at a certain commercial agency in Germany. Are we to understand that the rules of "civil service reform" permit our consular and other representatives abroad to engage in professional and money-making pursuits to the neglect of their official duties?

THE joint committee appointed by Congress to investigate the causes which lead to yellow fever epidemics, has already mapped out its work. Thirteen experts, distinguished medical gentlemen, have been appointed to assist in the inquiry. One portion of the committee will pursue its inquiries at New Orleans, while another portion will go to Memphis and the adjacent towns and cities visited by the fever last Summer. It is expected that the committee will be able to submit a full report in time to have it acted upon by the present Congress. It is probable that one result of the inquiry will be a proposition for the establishment of a national quarantine and the creation of a sanitary board charged with the whole general subject of enforcing precautions for the protection of the public health.

THE resolution of Mr. Blaine relative to the investigation of alleged outrages upon the suffrage in the recent elections, as finally passed by the Senate, provides that the inquiry shall extend to the North as well as the South, and shall cover all charges of the collection of money from Federal office-holders by assessment or otherwise for election purposes, as well as the action and conduct of United States supervisors of elections in the several States. An investigation thus comprehensive and thorough, if honestly made, should develop the precise facts as to the matters covered by it, and must either disprove or confirm, very conclusively, the allegations of intimidation, bribery and fraud which noisy partisans have so freely bruited in Congress and elsewhere since the November elections.

THE recent *matinée musicale* given by Professor A. F. Christiani, the eminent pianist, at his residence, 24 Irving Place, was a supreme success. Assisted by his pupils, the Professor placed before an audience consisting of the *crème de la crème* of New York society a programme that for taste, variety, æstheticism, novelty and charm, could not by any possibility be surpassed; and when we mention as one of the *morceaux* an *aria* from Gounod's "Polyeucte," we need add no other word. Professor Christiani's mode and method of training is admirable, leading to a proficiency of which the visitors to the *matinée* had ample and all-satisfying proof. Madame Gerster was present, and the gifted *cantatrice*, in common with the remainder of the audience, was intensely pleased, both with the programme and the very complete manner in which it was carried out.

ONE of the Oregon Senators has introduced in Congress a Bill prohibiting the employment on Government works of any person who is not a citizen of the United States. The design of the Bill, it is understood, is to prevent the employment of Chinese laborers in Government service on the Pacific coast. We cannot suppose for a moment that so proscriptive and intolerant a measure will command the approval of Congress. If the Chinese can perform the work required by the Government as efficiently and satisfactorily, and more cheaply, than Irishmen, Italians, or persons of any other nationality, why should we discriminate against them? The laws of supply and demand in the labor market cannot be reversed or controlled by statute, and we shall only make ourselves ridiculous by attempting to erect a Chinese wall of exclusiveness about the Government workshops, in the hope that we can isolate ourselves from the influence of natural laws.

THERE are few Americans who will not concur in Mr. Gladstone's estimate of the British war against Afghanistan, as stated in his recent masterly speech to his constituents at Greenwich. This war, judged by the evidence so far furnished, is absolutely and utterly unjust, and its injustice cannot be wiped out by success, however brilliant or complete it may be. Mr. Gladstone well said: "The question of its justice cannot be settled by military successes, for, thank God, the arbitrament of the sword is not the sole nor the supreme arbitrament in the affairs of civilized man. It cannot be settled by Parliamentary majorities, for that responsibility which at the moment I speak is undivided upon ten or twelve men will next week, or the week after, very likely be divided between them and the Houses of Parliament, and within no very long period—it may be within a very short period—the people of England will have to say whether they will take upon themselves their share of that responsibility of guilt and shame." Mr. Gladstone's speech is said to have produced a great effect, and we cannot doubt that, sooner or later, the conscience of the British people will array itself, on this question, on his side.

CAREFUL statistics furnished by the United States Consul at Wurtemberg show that the number of cabin passengers who left America for European ports during the year ending with June last was 36,555, while the number leaving European ports for America was 30,974. The number of steerage passengers leaving America for European ports during the same period was 50,334, and the number leaving European ports for America 77,360—showing the arrivals in America to be 27,026 more numerous than the departures. The movement of this vast multitude across the Atlantic Ocean was effected without accident of any kind. The same authority gives the number of American visitors constantly but temporarily abroad as 58,488, and their daily expenditures as $292,444, or, $106,594,600 per year drawn from the United States in gold. The number of Americans who are in Europe exclusively for educational purposes is stated at 7,048. There can be no doubt that the sums spent by American citizens in educating their children in European educational institutions would go a long way in building up and sustaining similar institutions in their own country that would be superior to any others in the world; and where, too, they would be free from the influences which are antagonistic to our republican system. It is to be hoped that this tendency of our people to go abroad for what they are pleased to term "the best forms of culture" may be arrested before it shall become universal.

NEWS OF THE WEEK.

Domestic.

IN Executive session the Senate has ratified the new Commercial Treaty with Japan.

FOR the first time in seventeen years gold reached par in New York City on December 17th.

ARRANGEMENTS have been made for the establishment of a new steamship line between Philadelphia and Amsterdam, Holland.

CHAIRMAN POTTER and Messrs. Stenger and Cox, of the Potter Investigating Committee, will go to New Orleans for additional testimony.

SECRETARY SHERMAN has called for the remainder of the outstanding Five-Twenty bonds of 1865, new series, amounting to $10,996,100.

THE St. Louis Bridge was sold at auction on December 20th, to a new company of New York and St. Louis capitalists for $2,000,000.

THE banking house of C. F. Adal & Co., at Cincinnati, suspended on December 18th, with liabilities at $780,000, and nominal assets of $400,000.

CONGRESS has passed and the President signed the Bill to duplicate the Government bonds stolen from the Manhattan Savings Bank, of New York City.

A GENERAL strike of disaffected car-drivers on the Third Avenue Railroad, New York City, occurred on December 16th, resulting in a little delay and few arrests.

SAMUEL B. LUDLAM has been indicted for setting fire to the Ocean House at Cape May, N. J., last November, by which a vast amount of hotel property was destroyed.

THE Committee on Ways and Means have decided to devote three days immediately after the holiday recess to a hearing of persons interested in the sugar question.

A COMMITTEE has been formed of Southern Senators and Congressmen to draft an address thanking the North for the promptness and liberality of the aid extended during the late epidemic.

SENATOR CONKLING, to whom the New York nominations were referred in the Committee on Commerce, has asked of Secretary Sherman the cause of the removal of General Arthur and Mr. Cornell.

ALTHOUGH Judge Wallace, in the Killona plantation suit, decided that General Sheridan had no right to issue the order for the seizure of the estate, the jury brought in a verdict for the defendant on December 20th.

PRESIDENT HAYES sent a communication to the Senate on December 19th, accompanying it with a report from Secretary Evarts, on the importance of fostering commercial relations with South American countries.

IN the prosecutions under the Local Option Law at Norwich, Conn., Judge Kellogg has decided that the hop beer and cider sold there come under the prohibition, both articles being found on analysis to contain alcohol.

JUDGE JOHN LOWELL, of Boston, has been nominated and confirmed as Judge of the First United States Judicial Circuit, and it is thought that Oliver Wendell Holmes, Jr., will be appointed his successor in the District Court.

EX-PRESIDENT JOHN S. MORTON, of the Market Street Railway Company, of Philadelphia, and Samuel P. Hahn have pleaded guilty to the charge of fraudulently overissuing stock of the company, and have been sentenced to ten years' imprisonment each.

IN the Senate on December 17th the Consular and Diplomatic Bill was passed after being considerably amended, and Mr. Blaine's resolution was adopted by a vote of 36 to 6. The House passed the Postal Car Service Bill. On the 18th the Senate passed the Pension Appropriation Bill, and also the amendment to the Posse Comitatus Bill. The Southern Investigating Committee, provided by Mr. Blaine's resolution, was announced on the 19th, Mr. Teller, of Colorado, being chairman. The committee organized on the following day, and appointed a sub-committee to take testimony in Louisiana. On the 20th the resolution to purchase the papers of the Count de Rochambeau, and a Bill to amend an error in the Revised Statutes about challenging grand jurors who rendered aid to the rebellion, were passed in the Senate. Both branches adjourned to January 7th.

Foreign.

SIGNOR DEPRETIS formed a new Italian Cabinet which the journals dislike and doom to a speedy dissolution.

M. WADDINGTON, French Minister of Foreign Affairs, has expressed strong hopes of the faithful fulfillment of the treaty at Berlin.

COUNT ANDRASSY declares that the annexation of Servia and Montenegro would be a most perverted and unhappy policy for Austria.

MR. GLADSTONE has intimated his intention to present himself as a candidate at Midlothian at the next election for the House of Commons.

AFTER an illness of several months from dropsy, Hon. Bayard Taylor, United States Minister to Germany, died suddenly at Berlin, on December 19th, aged fifty-three years.

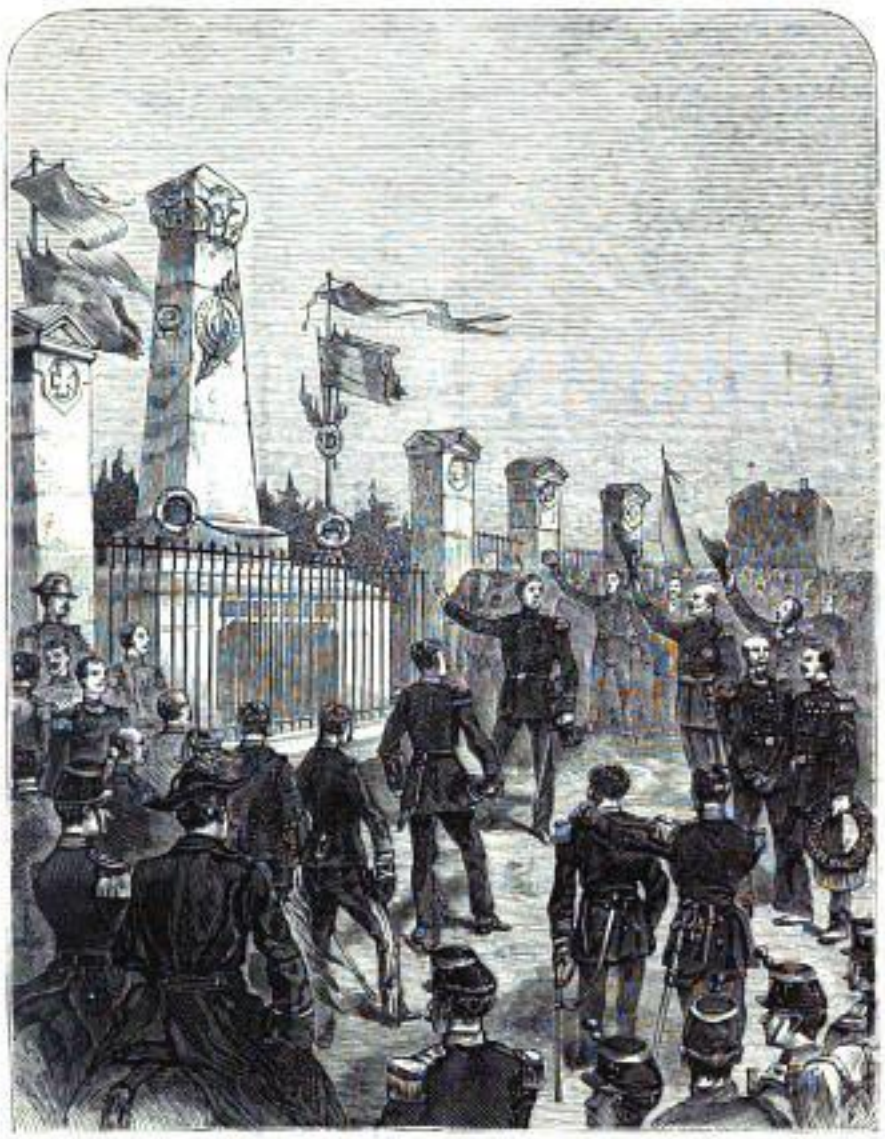
IT is rumored in Constantinople that Russia will not oppose a scheme for a new Turkish loan guaranteed by England if the question of the war indemnity is settled simultaneously.

CITIZENS of Berlin have decided to commemorate the escape from assassination and the return to the capital of the Emperor, by erecting a monument of bronze and marble, to cost $75,000.

THE steamer *Byzantine*, from Marseilles to Constantinople, collided with the English steamship *Rinaldo*, near Gallipoli, in the Sea of Marmora, on December 18th, and 150 lives were lost.

COMMUNICATIONS are passing between the Governments of Germany and Switzerland looking to an abrogation of the privileges acquired under the latter by Socialists driven from the country by the former.

OWING to the death of the Princess Alice of England, Grand Duchess of Hesse-Darmstadt, it is improbable that there will be any State entertainments at the Vicereal residence in Canada for three months.



THE new Spanish copyright Act protects telegraph dispatches, newspaper articles, Parliamentary reports, legal documents, musical and dramatic, and anonymous and posthumous works and literary collections.

NEGOTIATIONS are pending between Great Britain and the Porte concerning British jurisdiction over foreigners in Cyprus. England concedes the Sultan's sovereignty over the Island, but denies that the regulation about consular jurisdiction is still applicable there.

Half a Dollar.

A Christmas Story.

By

Mrs. Ann S. Stephens.

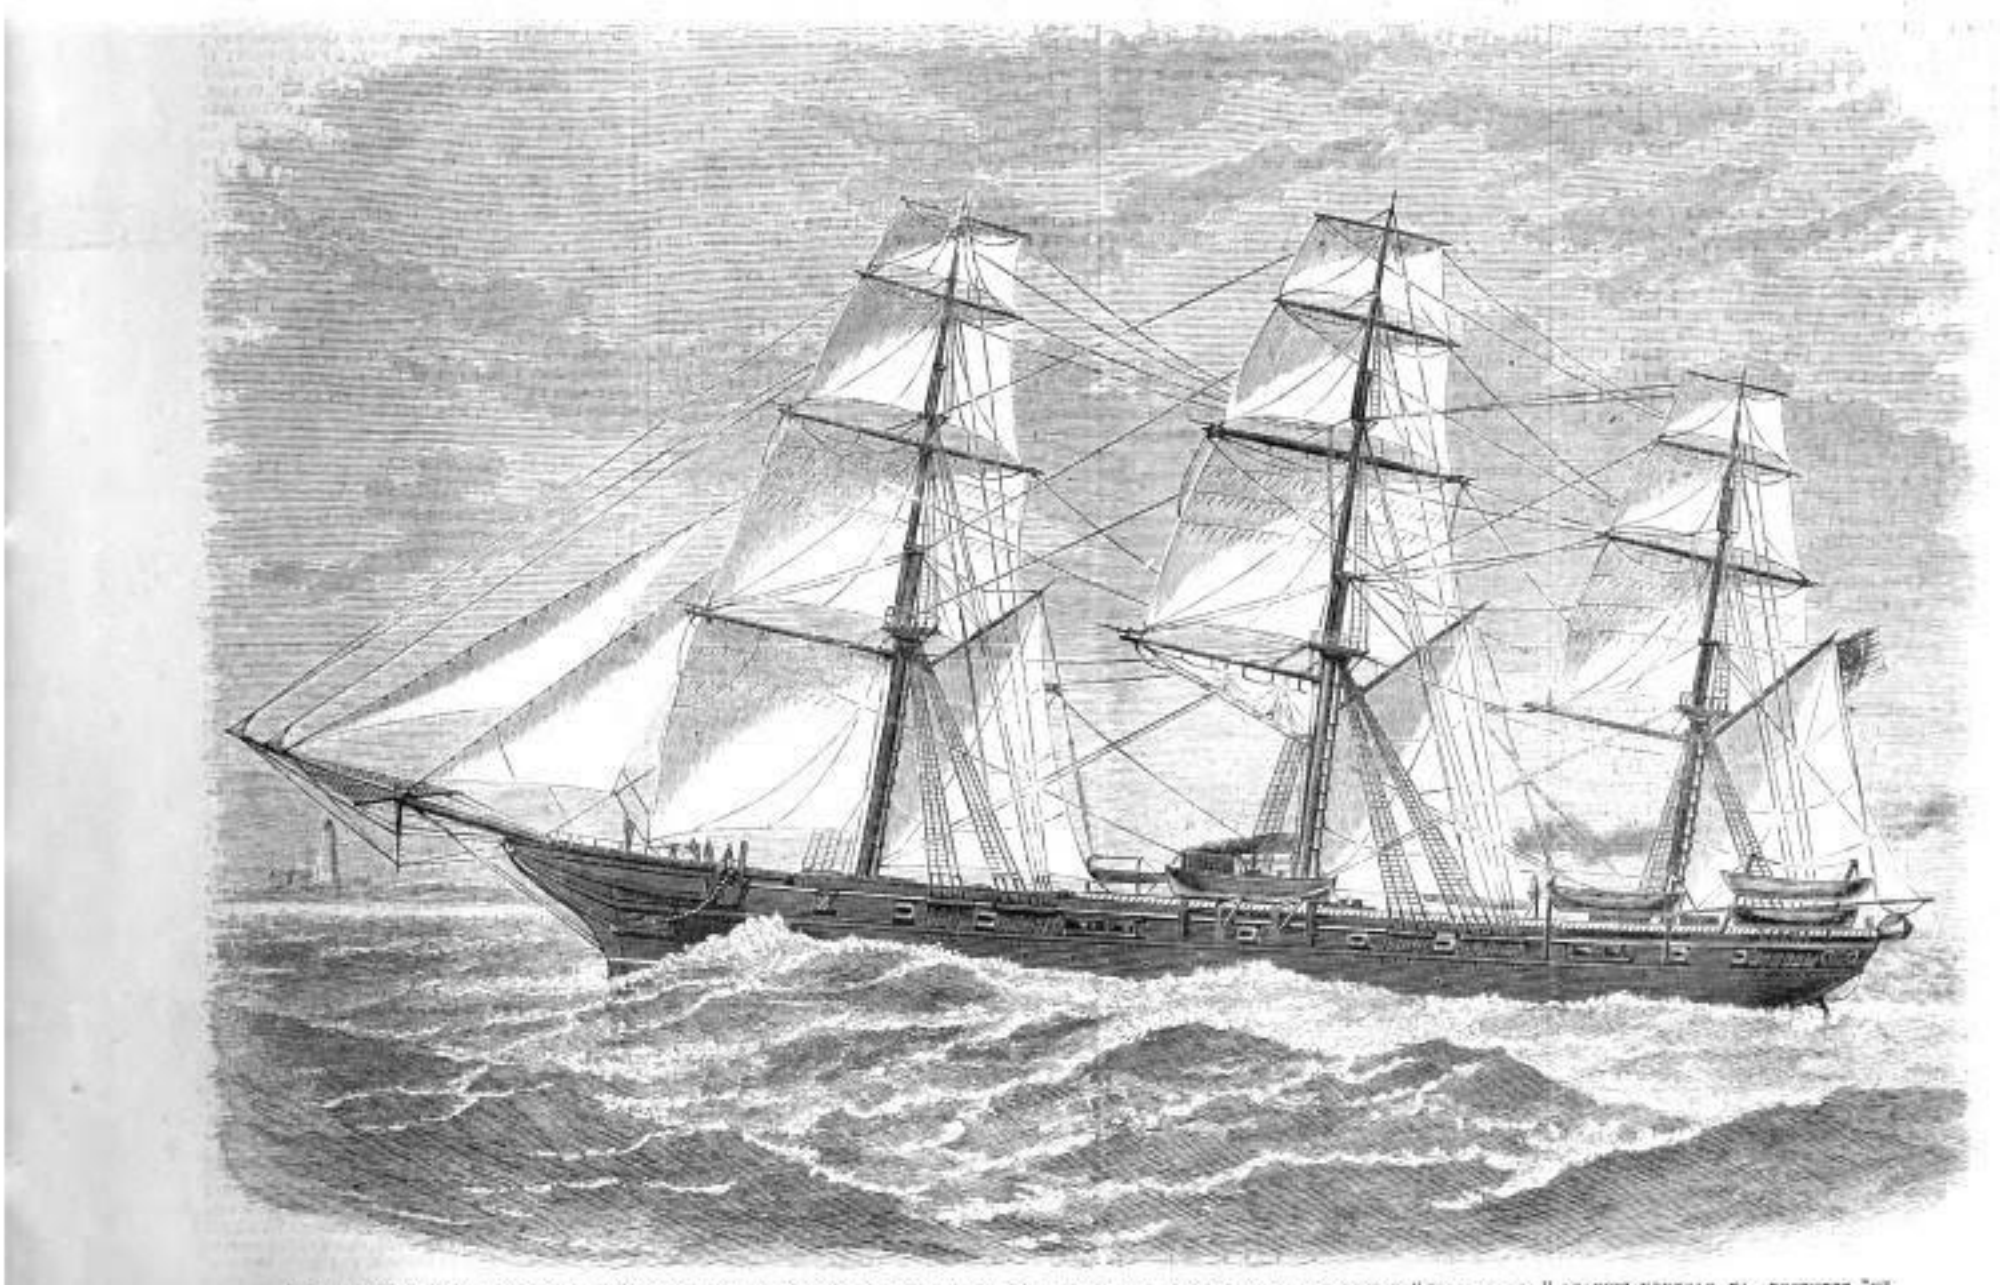
CHAPTER I.

THEY stood together that cold morning—the widow and her child—hesitating in the half-open basement-door. She looking drearily through the rusted iron-railings of the area as if she dreaded to go out on a search for work that seemed hopeless. The little girl more cheerful, but subdued and saddened by the mournful pallor of her mother's face.

"Don't go very far, mother, and keep the shawl tightly round you, for it's going to be awful cold," she said, striving bravely to keep herself from shivering, under the cape of an old cloak that had little warmth in it. "I'm sure to sell some of these things—they are so useful, you know, and lots of people will want them, when it is so close to Christmas."

Ruth looked wistfully into her mother's face as she made her hopeful argument. The day before, when her mother was out in search of work, and there had been neither fire nor food in the basement for twenty-four hours, she had found, in an old, disused chest among other things too worthless for use or the pawnbroker, some fragments of a worn-out shawl, which, being of wool, held in its decay some gleams of bright coloring.

Out of this poor material she had made holders for smoothing-irons and little, starlike pen-wipers, in the pitiful hope that in the crowd of purchasers thronging the streets she might find some kind soul that would buy her wares for enough to give a little food and fire for Christmas Day.



HALF A DOLLAR.—"'NO, YOU MUST PUT IT ON FIRST,' SHE SAID, RESTING HER HAND SOFTLY ON HIS BOSOM, AND HOLDING THE RING TOWARD HIM."

The widow had listened to the child with a patient smile when she followed her to the basement-door and thus begged her to come back soon and tell her how to spend the money she was sure to make—a smile such as hopeless women wear, sometimes, when their hearts are breaking. Then, stooping down, she kissed the sweet, eager face, and turned mournfully away in her dreary search for bread.

Thus tenderly encouraged, the little girl tied the strings of a rusty cloak-hood, out of which her pale, but most lovely face, shone like a flower as she went back to the basement resolved to do wonderful things that would surprise her mother when she came home. Searching out a poor little market-basket long out of use in that household, she arranged her precious articles in the bottom, putting the brightest side uppermost, and made her way into the busy part of the city, far more hopeful than her mother had been.

Once in Broadway she began to look around for customers, holding her merchandise well in sight and lifting her beautiful eyes in eager appeal, almost in astonishment, when so many went by without deigning to look in her basket; for it was the day before Christmas and the throng she wandered through were in search of far more sumptuous gifts than she had to offer.

Sometimes the heart would leap in her bosom as some lady turned her eyes that way, attracted by the loveliness of her face rather than her merchandise; but only

to sink heavier and heavier as a glittering toy-shop or gorgeously draped window lured even that small notice away from her.

Poor child; no one in that moving panorama cared for her or the waves on which she had built such loving hopes. So, sad at heart, and faint with disappointment, she struggled on with the unseemly basket on her arm, urged at last to call out and beseech people to look on her humble store; but this she did so timidly, and in a voice that only rose high enough in the general din to frighten herself. No one else heeded it.

Still the girl toiled on, hour after hour, hoping against hope; for it seemed impossible to her that some one in all the group she passed should not care for the things on which she had lavished so much hopeful ingenuity.

At last the gathering of a great storm thinned the streets and drove her homeward utterly chilled. On the way into her own dingy neighborhood she passed by a carpenter's-shop where one of the workmen had sometimes given her shavings to kindle the fire with.

She could hear his plane moving to and fro with a soft, rushing sound, and knew that shavings were dropping in a soft heap of curls beside his workbench; perhaps he would give them to her. Even one flash of heat in that cold basement would be better than nothing when her mother came home. Her poor, dear mother, who would be so disappointed when she found that none of her holders had been sold.

She was right; the carpenter was at work, buried knee-deep in pine shavings. He smiled as she came in, and, seeing her basket, motioned that she should help herself.

In a moment Ruth had her arms full of shavings, and was crushing them into the basket, leaving a quantity of chips that lay underneath untouched; but, with unusual benevolence, the carpenter thrust them toward her with his foot, and, when her basket was full, picked up some fragments of lath which he tied into a bundle and asked her, kindly, if she could carry it.

Carry it! The girl absolutely laughed as she lifted the basket with one hand and took the bundle under her arm. At any rate, they would have one good fire when her mother came home. She lifted her grateful eyes to the man and thanked him so earnestly that he gathered up a few more blocks and heaped the basket to overflowing.

Ruth was right; when her mother came in, faint and heartsick, a cheerful fire was crackling on the hearth which illuminated the whole room, while Ruth stood before it, half forgetful of her disappointment, feeding the flames with shavings and smiling as the warmth spread its glow all around her.

All those weary hours the poor woman had been in search of work, sewing—something—anything that would bring food and warmth into her miserable home, for the terror of absolute starvation was upon her. Starvation for the child she loved better than her own life, and had shielded from want almost at the expense of her life, as any one might have known by her thin figure, the haunting hunger in those large, sad eyes, and the tender devices by which she led the little girl into believing that she got plenty out-of-doors, which made her appetite so slender at all other times.

This terrible dread that Ruth must suffer as she had done drove the poor woman to desperation that day; never in her greatest need had she pleaded for work with such persistence; but people were too busy and would not listen to her importunities. Some dismissed her curtly as an annoyance. Others, more kind for the moment, told her to come again when the holidays were over; but no one seemed to understand or care for her great need of work. So at last she crept home again and stood in the door amazed by the fire that spread its glow all around her dwelling.

"Come, mother," said Ruth, shoving a chair to the hearth. "Isn't this a famous fire to warm oneself by? Sit up close and enjoy yourself, while I take off your bonnet and just smooth your hair a little."

The widow seated herself, held out her numbed hands to the fire, and drew a deep breath—the heat was so grateful to her. Ruth took off the rusty straw bonnet, but folded the shawl which her mother had worn tightly around her; for she knew how thin and scant were the garments underneath, and dreaded to think how soon the fire would burn out.

"I haven't got anything else, mother," she said, faltering a little in her speech. "People didn't want my poor little holders, though I did try so hard to sell them; but never mind—another day I'm sure to do better. You see, they didn't seem just like Christmas presents; so don't be discouraged any more than you can help."

"Ah, my child, I am so used to disappointment that it seems natural to me now!" said the mother, looking tenderly into the sweet, upturned face that was making such pathetic efforts to smile.

"But I feel it dreadfully. I had laid such plans for to-night! I saw the man at the corner grocery cutting off such a lovely slice of ham for a woman this morning, and you don't know how I wanted one of them for your supper. If I could only have sold my holders—only one of them—it would have been so nice. But it wasn't my fault; I tried and tried, till it was like begging."

The poor woman burst into tears, and kissed the face now lovingly pressed to hers.

"Begging, begging!" she repeated, mournfully. "Your father little thought that our girl—his child and mine—would ever be brought to speak of that."

"But he did not know how hard it is to be hungry and cold," answered Ruth, meekly, while her eyes drooped beneath their thick lashes, and a look of shame stole over her features; for she understood her mother's words as a reproach. "He had not felt you shivering with cold, as you are doing now, spite of the fire."

"Thank God that he never did see it!" said the mother. "But even hunger and cold shall not make us beggars till we have made one effort more. You have never gone so long without food in your life before, my darling. Are you very hungry?"

Ruth looked down quietly.

"No, not very."

"I have tried to keep you from it."

"And so you have, mother. See how round and rosy I am, while you grow thinner and colder every day."

The child took the pale, famished face of her mother between her two little hands, and kissed it tenderly.

For a while the mother and child sat together, gazing into the firelight, which was going down almost as suddenly as it had been enkindled. The night had set in earlier than usual, because of the storm; and, in very weariness, those two sat upon the broken hearth until the last shavings had sunk into a handful of black ashes with here and there a spark darting through them.

When the last vestige of warmth had departed from the yawning fireplace, the woman arose to her feet, and, gathering the shawl about her, searched for the miserable straw bonnet Ruth had put aside.

"What is the matter? Where are you going, mother?"

"Out again. It is Christmas Eve, and Christ died for us as well as others."

"Yes, mother; I know that."

"We must not sit here and perish while there is one hope left. There is a person who owes me a half-dollar for work done months ago. I have called for it so often that it seems hopeless; but we cannot sit here and freeze to death."

"May I go with you?" asked Ruth, tying on her hood by the light of a street-lamp that came dimly through the frosted window. "There, now, you see I'm ready."

"Yes, dear, storming as it is, anything must be better than sitting here alone. Perhaps there will be some luck for us. It has been so hard to reach the lady through so many servants, and she may not know that I have been to her house so often. Besides, the amount is so little she may have forgotten. Come, dear, wrap your cape about you, and keep under my shawl."

Ruth crept under the apology for a shawl, and, thus clinging together, the two went up the broken steps into the street, which, narrow and squalid as it was, had made some pretense at illumination; for the windows of a baker's-shop at the corner were unusually brilliant, and the grocery opposite met the little river of light it cast across the street more than half-way, hedging it over with radiance.

(Continued on page 322.)

HOLIDAY SIGHTS IN NEW YORK.

THE SHOPPING EXPERIENCES OF MR. AND MRS. BROWN.

I WAS very agreeably surprised, upon descending to the breakfast-room on Monday morning last, to find Mrs. Brown very neatly and becomingly attired, her Grecian fringe denuded of curl papers, and her face adorned with a smile that denoted "set fair"; her manner, too, instead of being jerky and snappy, reminded me of the brief but blissful period immediately subsequent to my leading her to the Hymeneal altar, while certain delicate attentions, such as asking me if my tea was all right, if my toast was crisp enough, if my mutton-chop was done exactly as I wished it, if my egg was unexceptionally fresh, tended to place me, I freely confess, in a condition of good humor such as I have not reveled in for two long years.

When breakfast had been discussed, and Mrs. Brown had gayly chatted all through the meal, her conversation being of so agreeable a nature as to cause me to hang over the table and almost forget my morning paper, she suddenly exclaimed:

"George, dearest, I mean to take a walk with you to-day. See, I am ready. I have only to slip on my sealskin and my hat. Here they are," producing the articles of apparel as she spoke. This action on Mrs. B.'s part was so novel as to startle me. My habit of life was to wait—ay, for hours; but I'll not grumble just yet.

When we emerged into the Avenue she playfully observed, "Now, Georgie, I've got you, and I mean to keep you the *whole* day. You'll devote yourself to your toodlywoodlay, won't 'oo?"—a form of endearment that had passed away with the honeymoon—"I want to visit all the beautiful stores—not to *buy* anything"—observing a decided inclination on my part to bolt—"but just to *look* at the exquisite things on show for Christmas."

What could I do but yield? And, like a lamb being led to the slaughter—for I did entertain secret misgivings that my better-half meant business as much as pleasure—she jubilantly marched me off, leaning upon my arm just as she used to when she was still Miss Arabella Sophonsba Smith.

Her first visit was to Tiffany's, that superb, bejeweled palace in Union Square. The crush, as we entered, was so great as, happily, to prevent my wife from approaching too near, or remaining too long over the too seductive cases, and we filtered slowly along until we found ourselves in the Diamond Room.

Here Mrs. Brown uttered an exclamation of mingled bewilderment and delight; her eyes sparkled as they did at the moment I asked her to be Mrs B., for she was standing opposite a glass case containing precious stones to the value of a quarter of a million dollars. Her raptures knew no bounds when a diamond necklace, valued at $15,000, was placed confidingly in her hands, followed by a single white diamond worth $15,000. These were followed by a hand-mirror of Champlevé enamel, set with oriental onyx, cut to bear the appearance of Oriental cat's eyes, each stone held in its place by diamonds, the handle of gold, and the whole valued at $10,000; by a yard of diamond lace, first produced at the recent Exposition at Paris, consisting of diamonds laid on silver wire, woven into *point d'Alençon*, or Rose-point, or Guipure, at will, and only $10,000 a yard. She then tried on a necklace and earrings—diamonds, of course, valued at $100,000; a diamond tiara for which the Duke of Brunswick paid £6,000 visibly affected her, while a pair of opals, the finest for sale in the world, brought forth a sigh such as she uttered when I was obliged to postpone our wedding-day on account of the alarming illness of my maiden aunt from whom I had expectations. I was not sorry when Mrs. B. came down to a bangle bracelet of $6,000; and when the courteous Mr. Cook showed her some Cyprian ornaments of mere gold, I felt that the crisis was over. Mrs. B. somewhat contemptuously fancied a Pompeian bracelet at $300, and—ah, I didn't like to say No.

"Let us get out of this," she exclaimed, in a low tone. "Why—oh, why did I not marry one of the Van Boomgees? *Then* I'd—but no matter."

Our next visit was to the Meriden Britannia Company in Union Square, the finest establishment of its kind in the world. Here I felt much more at home, but not by any means safe, for the display of articles was of so classical and so elegant a nature, and withal so cheap, as to cause me to conclude that a punch-bowl—opposite to which stood riveted an elderly gentleman whose eyes glistened and whose nether lip protruded in the ecstatic imagining of a stoup from out of one of the twelve surrounding tankards—would look the very thing upon my carved oaken sideboard. Mrs. B. was lost in admiration of a case of spoons, forks and cutlery, gotten up in the highest art, and this I purchased as a Christmas-box for Mrs. Spuyten Duyvle, an old flame of mine that—ahem!

We crossed the Square and turned into Steinway's Pianoforte Warerooms, in Fourteenth Street, where, amid a grove of pianos—the firm have turned out 2,600 during the year—our attention was drawn to a recent production called the Parlor Grand, which is only six feet long by four feet seven inches in width, but which, it is claimed, has the same interior construction and action as the Concert Grand.

"This will fit our alcove as if it was made for it," said Mrs. B., and she requested the gentleman who waited upon us to send it home, a liberal allowance to be made for the one to be exchanged. I could not remonstrate, as the sweetness and power of the Parlor Grand proved too much for me.

We were in luck during our visit, for upon entering an apartment sacred to prize pianos—the firm of Steinway & Sons have carried off first prizes from all the Great Fairs of the World—we dropped in for a rich musical treat, for Madame Gerster was singing like a nightingale to the superb accompaniment of Mr. S. B. Mills.

Again crossing the Square, we paid a visit to Mason & Hamlin's organ establishment.

"A cabinet organ would be *such* a nice, thoughtful present for the Rev. Mr. Slowsermon," observed Mrs. B., as we pushed aside the glass doors.

To my wife's astonishment, and, indeed, genuine pleasure, his reverence, as though divining her intention, was there before her—a very grave, dignified, but somewhat proxy son of the Church, accompanied by a pretty daughter, Tottie, and I am free to confess that "the chords of a great Amen" as pealing forth from those superb instruments quite reconciled me to the idea of the presentation to Mrs. B's. pet clergyman, especially as Tottie seemed so grateful to me on the score of the gift.

We had rather a pleasant walk along Broadway—Mrs. B. and his reverence, Tottie and I—and parting them at Twenty-third Street. I was for returning home, but my wife wouldn't hear of such a thing.

"Let us see the newest things in furs," she said. "We'll just take a look into C. G. Gunther's Sons, only for *half* a second, dearest! There it is on the avenue."

In a few minutes I was surrounded by sable, chinchilla, black fox, silver fox, blue fox, lynx and other skins too numerous to mention, shiny and glossy, as if the animals to whom they had once belonged were in full possession and enjoyment of them, and Mrs. B. did really look so *chic* in a "princess cape"—she is a fine figure, there's no gainsaying that—and as she exclaimed, "My dear, I must have it!" I could not resist the pleasure of presenting her with it, and so pleased was she at this token of my admiration, that, while the attendant went in search of a pen and ink—unfortunately I had brought my check-book with me—my spouse, under pretense of examining a sealskin sacque, and behind the cover of the body of a gigantic polar bear, gave me an unexpected but refreshing hug.

Emboldened by my expression of pleasure and gratification at this unlooked-for mark of her gratitude, she proposed a visit to the jewelry store of Theodore B. Starr, Fifth Avenue, and thither we repaired, to be charmed with the exquisite taste exhibited in the "get up" of the store, charmed by black pearls, and pink pearls, and Oriental pearls—by lockets, set with diamonds in crescents, fit for the breast of the Commander of the Faithful, with crosses that infidels might adore, and after purchasing a cameo brooch set in brilliants—a present for my mother-in-law—we once more emerged into the open air.

"Let us take the crosstown cars," said Mrs. B. "I want, of all things, to go to Ehrich's—it's on Eighth Avenue and Twenty-fourth Street."

"I am in for it now," I murmured, "and I may as well go through with a good grace."

At Ehrich's establishment, which was crowded to the doorway, there was so much to attract the eyes, that for a few minutes I was fairly bewildered. Of course Mrs. B. darted in the direction of the ladies' mantles, whither I reluctantly followed. I am bound to confess that the display was both handsome and unique, and the prices not even on the verge of alarming. Having to purchase some toys for our children—we have two at present—we directed our steps to the toy department, and I sighed as I thought of the rude playthings which were in vogue twenty-five years ago when compared with the ingenious mechanical contrivances of to-day. Here were young ladies waltzing the five-step waltz, their partners keeping a step that would have delighted the heart of Monsieur Cartier; young ladies inhaling the fragrance of blooming flowers; young ladies fanning themselves as naturally as though they were on the Puerta del Sol, at Madrid; sailors who danced hornpipes; gymnasts twisting themselves into black knots; and other figures equally lifelike and diverting. Mrs. B. and I were especially fascinated by the "Interrupted Serenade." This, as performed by the mechanical figures, was humorously funny. An amorous swain serenades his mistress through the medium of a guitar. After a little, three windows open, and two young ladies gaze with ardor upon the serenader, while an elderly dame regards him with a frown. Presently an elderly gentleman pops his head out of the window, the ladies disappear in the twinkling of an eye, and the amorous swain betakes himself and his guitar to regions unknown. I in no way regretted my visit to Ehrich's, or the money I expended in mechanical toys for my own and other people's children, while a long gaze into the window—at the garden-party—amply repaid me for the "scrooging."

"Now for Macy's," said Mrs. B. I was powerless, played out, and yet this delicate young woman was as fresh as "a new-blown rose"—I was going to say a clam, but that's vulgar.

We found Macy's as usual. A throng of anxious people hustling one another to the music of the shrill cries of diminutive cash-girls, attired in black aprons. All was life and bustle, while every counter was lined three deep, and every person seemed bent upon buying up the whole store, cash-girls and all. Mrs. B. and I forced ourselves up one flight of stairs into a new pottery, porcelain and glass department—a very esthetic collection, where we invested in Wedgewood, as Mrs. B's. mother has a craze for white or blue. The centre point of attraction was, however, the steeplechase, set up in one of the windows, around which old and young, rich and poor, craned their necks, stopping there and seemingly lost in admiration. The course was admirably marked out, the jocks being dolls, the stablemen dolls, the betting-men dolls, the starters dolls, the spectators dolls. Dozens of dolls dressed in the most correct form lounged about the course, nor was the four-wheeled drag, with its accompanying lobster and champagne absent, while the toilets of the *crème de la crème* on the roof of the coach were worthy of Worth.

From Macy's we wended our way to the lordly establishment of A. T. Stewart & Co., and in much less time than it takes to write it my wife was enshrined in a lace shawl such as the nuns of old dreamt of in their gloomy Belgian cloisters, and woven apparently by fairy fingers. Mrs. B. has a very *piquante* figure, and I do *not* regret the investment.

"I want to give dearest mamma a set of cut-glass tumblers and glasses, and I also want a small but elegant dinner-service for ourselves. Blossie"—our youngest—"played Aunt Sally with the set we brought from Paris. Poor dear child! she was greatly attracted by the flowers on the plates and dishes."

If I had been within range of Miss Blossie the attraction of my open palm would possibly have proved more *striking*. At Bassford's, in Cooper Institute, we repaired these little deficiencies, and Blossie will soon be herself again. Of course my wife's mother's interests were looked after, and, in addition to the glassware, several fancy articles of cutlery were thrown in, while our little dinner-service, I am in justice bound to admit, has been very much admired; even Mrs. Plantagenet Jones, who lives next door, and who imitates Mrs. B. in everything, was heard to say to Mrs. Tudor Smith that it was the choicest set she had seen since the Paris Exhibition.

I was fairly used up—as used up as Sir Charles Coldstream. Human nature has its limits of endurance. I felt that a glass of sparkling champagne would alone pull me together. There are moments when champagne means life; this was one of them. I uttered no word, but, seizing Mrs. B. by the arm, stepped into a passing stage, and, alighting at 208 Broadway, plunged at a bottle of Werner's "America" champagne, and filling a tumbler till the beaded bubbles seethed and danced at the brim, tossed it off—the delicious nectar—and felt a new man. Talk of imported brands, at fabulous prices! I'll give nothing but Werner at my dinner-parties for the future.

Having helped my wife to a third of the bottle she proposed to start anew.

"My dear," said Mrs. B., her eyes sparkling like the wine, "I'll walk now till midnight."

"*Walk!*"

"Yes, walk. I've on a pair of Burt's shoes and I can do anything in them. I never had real, genuine, solid comfort until I invested in Burt."

Mr. Burt, in his new manufactory, No. 150 Duane Street, employs 400 workmen and workwomen, and by the use of machinery is able to turn out from 600 to 800 pairs every working day in the year. He received the gold medal at the Paris Exposition, which is the highest award ever given to a manufacturer of shoes.

Yes, we did walk, and walk, and walk, into stores, and out of stores, up streets and down streets, across town and around avenues till I thought of the Wandering Jew, and until I had to be assisted by the butler up the steps of my own house. I never got further than the dining-room, and, dropping into a chair, I feebly called for "America" extra dry.

In the evening Tudor Smith and his wife paid us a visit. Smith looked wan and worn and done up; his wife, like my own, was all triumphant smiles. When the ladies had retired to have a gushing gossip, I poured out Smith a tumblerful of wine and asked him what was wrong.

"Oh, I've had *such* a day," he groaned. "In a moment of weakness I consented to accompany my wife, just to look at the Christmas stores, and"—here he groaned dismally again—"I'm almost dead."

"Where did you go to?" I asked, a fiendish joy permeating my system.

"Where did we not go? To Horsman, William Street and Malden Lane, for toys; to Stern Brothers, Twenty-third; and Waller & McSorley, Grand Street; and W. Jackson & Co., Broadway; and Aitkin, Son & Co., Broadway, for dry-goods; to Freeman & Woodruff, Broadway and Park Place—I wanted some articles of clothing; to J. & P. Coates, White Street, for cotton threads; to Barbour Brothers, Church Street, for linen threads; to Palm & Fechteler, art amusements; to J. Marshing & Co., decorators; to the Parisian Flower Co.; to Ridley & Sons, 309 Grand Street, brilliantly illuminated by their new electric light, and a host of others, I need not name. Our last visit was to E. A. Morrison's, and although the last, it did not prove the least attractive, as the holiday gifts imported direct from London, Paris, Vienna, Switzerland, Italy and Russia, by Mr. Morrison, were unique, rich, handsome, and cheap. The Russian leather goods were alone worth a prolonged inspection, and I invested heavily in purses and pocket-books for gifts for some of my "pals" in Wall Street.

Tudor Jones had not as yet recovered, Monday last; and, as for myself, when Mrs. B. catches me again, may I—well, be—beatified.

HOLIDAY ATTRACTIONS IN PHILADELPHIA.

A TOUR AMONG THE PRINCIPAL DEALERS.

UPON one thing representative dealers in Philadelphia all agree. Trade is better this season than it was for the corresponding season last year. The leading houses have their hands full. Shop-windows were never gayer. Costly presents were never more sought after. Preparations were never more complete to satisfy the popular demand. This demand has already had the effect of diminishing the number of clerks out of employment and adding to the force of the regularly employed. There has been a race, lively, determined and spirited, among men of a kind in business, to excel each other in the display of holiday goods. To describe the results would take columns. The leading houses are like expositions.

HOLIDAY BOOKS.

Two Christmas shoppers, a lady and gentleman, started out last week to see what was to be seen. Their tastes being literary, they first dropped into Porter & Coates's book-store, on Chestnut Street, above Eighth. What a jam! Everybody else seemed to have been impelled to Porter & Coates's from the same instinct. The literary couple squeezed their way up to the centre of the store, where Mr. Henry T. Coates was trying to wait on two or three customers at once. Mr. Coates is himself a literary man, the author of the "Fireside Encyclopedia of Poetry," a very fine work, just out of the press.

"Your work is meeting with very favorable criticism throughout the country, Mr. Coates."

The gentleman expressed himself gratified. His work is no small one. It contains over 1,300 poems by over 400 different authors, English and American. Books is a subject upon which Mr. Coates talks with enthusiasm at all times.

"I do not exaggerate," said he, "when I say that I think we have the largest and most complete collection of books in the country. George W. Childs took a stroll through our store, shortly after returning from his last trip to Europe, and remarked that

Digitized by Google

he saw no collection of books anywhere while abroad that equaled ours. You cannot name any style of book that we do not have here."

Porter & Coates have always been noted for their rare books. Some years ago, when it was believed there was only a single copy of the first edition of "Pickwick Papers" in America, which copy was in possession of a New England bookseller, Porter & Coates got the impression that they had a similar lying book around somewhere, looked among their stock, and found two copies of the original edition.

Leaving Porter & Coates's, the lady and gentleman took themselves to the store of J. B. Lippincott & Co., on Market Street, below Eighth. The tall brown building, with an imposing front, incloses a world of activity. Here "Lippincott's Magazine" is published, and all Lippincott's books. One-half the store seems to be offices and the other half books, yet the latter half is large enough for six good-sized bookstores. They have an immense stock on hand. Their holiday assortment is the largest ever brought out by them yet.

Among the works upon which they have been doing and are doing and expect to continue doing a good trade, aside from the holiday trade, are "Worcester's Dictionary" and "Chambers's Encyclopedia"—works of which they have the exclusive right of publication. The dictionary is got up in six different styles, ranging in price from ten dollars to sixteen dollars and a half. The "Encyclopedia" is complete in ten royal octavo volumes.

Lippincott & Co. have already announced in their monthly bulletin an arrangement with the Cambridge Bible House in England for the sale of a series of books of the Bible, with notes, for school use.

The lady and gentleman next visited Claxton, Remsen & Haffelfinger, whose book-house towers up almost opposite Lippincott's on Market Street. The shelves and counters of this spacious store were freighted to their utmost with books of every sort; and customers were there, as elsewhere, to the size of a regiment, trying to reduce their stock. The lady and gentleman encountered Mr. Camp, cashier of the establishment, in their rambles, and he told them something about the new "Shakespeare" they were getting out.

"It's the 'Avon Shakespeare,' said he. "We are publishing it in large, clear type, and have embodied in it the latest revisions by the best Shakespearean scholars. All the improvements of this or that previous edition is embodied in one. The work includes a descriptive analysis of the plot of each play, an alphabetical index to the character of each play, an index to familiar passages, and a complete glossary of the words used in the text that vary from their modern significance."

Another book brought out by this firm this season is "Heavenly Dawn," a poem by a Philadelphia lady. The rapid sale which this book has already met with has astonished even the publishers themselves.

JEWELRY.

The next place visited by the shoppers was James E. Caldwell & Co's jewelry-store. The great marble-fronted building, on the corner of Ninth and Chestnut Streets, was found in the midst of the rush and throng which comes with the season. The store was full, the clerks were busy, Mr. Caldwell was busy, and the sales were multiplying. Mr. Caldwell's store is indescribable. There was a panorama of gold and silver, a dazzling flare of diamonds, a soft gleam of ceramics, a flash of polished bronzes, imitations of the olden style, and of ebony boxes, ornamental clocks, Sèvres, porcelain, china and glass. And there was so much of it and such a bewildering variety, that the eyes got discouraged looking at it.

"Tell us what you are doing most in just now, Mr. Caldwell."

"Dear me," says the sagacious head of the firm, "there's so much to do and so many to wait on, we're turning away two hundred customers a day, because we can't attend to them."

Mr. Caldwell found time to say they were doing a business at the present time beyond anything ever known to their experience before.

"We lead in the watch trade in this country. Ever since we bought the Waltham Watch Company's Exhibit at the Centennial Exposition, we have led in the trade in American watches. Then we sell the Ehegren Swiss watch, manufactured in Geneva, the best watch in the world. We have the exclusive right of sale in this country. Old man Ehegren, the maker, is a Dane. He took a medal at the Paris Exposition, a medal at our own Exposition, and has been taking the first prizes for years for his make of watches."

This firm manufactures in its own workshop *repoussé*, or chased silverware, and had on hand the largest stock exhibited by any house in Philadelphia.

MISCELLANEOUS.

A visit to "The Arcade" of the Brothers Ostheimer found a warehouse of the most attractive gems in Philadelphia. Foreign art in the way of fancy porcelain, and everything else which European skill in ceramics has produced, was found there. Artistic work in pottery, antiques, mosaics, malachites, articles of *vertu*, *bric-a-brac*, sent from Europe to Ostheimer Brothers as the American consignees for the Centennial Exposition, and after the close of the Exposition purchased by the consignees, form a part of the choice collection they have on hand now. Large purchases of this line of articles have been made by them at the Paris Exposition, and are being received now.

Some fine work in the line of chandeliers are on exhibition at Gibson, Shaw & Co's, 716 Chestnut Street. This firm have succeeded Baker, Arnold & Co., and are following a business plan not more remarkable for its enterprise than for the individuality which originated it. All the work they turn out is from the designs of the second member of the firm, Mr. Shaw, and they allow no lithographic copy to be taken of anything they make, thus securing to themselves the certainty of exclusive possession. They are fertile in original designs—so much so that, after placing a chandelier in a man's house, if their customer desires they will not duplicate it. They have secured the best trade in the city by this means. A contract was given them by the Social Art Club the other day to place chandeliers in the whole building. William B. Kempton, the dry-goods merchant, has had one of the finest chandeliers of the lot put up in his own house.

John Wanamaker's great depot is a small Centennial Exposition. He has added to it books, toy-books, and the classics. There was never a greater stock of goods to be found under one roof than his place shows now. The grand depot is practically twenty-eight stores in one, each a large store in itself. To visit it any day is like going to a great menagerie.

China, glass and Queensware is displayed in every variety at Frymier & Edwards, successors to B. Dorsey & Sons. This is the oldest firm in this line of business in Philadelphia. B. Dorsey established the house in 1815. Their sales this season have been largely among table sets and fine glassware.

Almost within shadow of the Western Union Telegraph Building at Tenth and Chestnut Streets, a fine collection of optical instruments is displayed in a shop window. It is R. & J. Beck's establishment, a London firm. W. H. Walmsley, the Philadelphia manager, is building up a splendid business. Recently large shipments of stereoscopes, telescopes, microscopes and other articles in the same line, were received from England for the holidays. They have been arranged conspicuously and make a fine display.

The Model Printing Press, J. W. Daughaday & Co., has penetrated almost every corner of the globe. The large building, a few doors below Eighth Street and Chestnut, contains thousands of these presses of every size, from that of printing a small card up to the size of a large pamphlet. This firm have built up an immense trade within the past four years, and have shipped presses to every portion of Europe, and even to Africa, as well as to the Sandwich Islands, Australia, and other remote points, besides building up a large and constantly increasing trade in America. Printers' ink, they say, did it all.

HOLIDAY BOOKS.

THE tidal wave of progress that sweeps over our "rushing" country bears high upon its crest an enterprise so unique, so perfect in wondrous detail, so admirable in its mighty mechanism, so eminently suited to the imperious requirements of the hour as to compel a tribute of admiration to enforce an expression of respect. "The American News Company," 39–41 Chambers Street, is an institution of which this country may well and justly feel proud. Its arteries extend all over the length and breadth of the land. From Alaska to Texas, from Maine to Florida, it is familiar in the mouth as a household word. Its operations have pierced the primeval forest, have cut through snow and ice, have traversed lake and river, have crossed mountain and plain. It is the mighty machine that distributes tens of hundreds of thousands of newspapers in every known tongue, North, South, East and West. Through its agency every periodical—from a child's magazine to an æsthetic review, from a two-cent journal to an essay on the Diophantine analysis—finds its way to lordly dwellings, houses, and log-cabins, to learned colleges and village clubs, to *bloué* cotton-raisers, or desperate and hardy trappers. The wondrous store palace in Chambers Street contains every sheet printed for the readers of the world. Within its walls is a modern library, such as would have flung Mezzofanti into a lunatic asylum. In addition to books and papers and periodicals, the dealer finds a superb assortment of stationery, of notions, and of various kindred nick-nacks. The American News Company have recently started a new branch of business, namely, cigars and tobacco. This with a view to supplying news-stands with a first-class article at a cost only to be reached through enormous dealings. The marvelous success of the American News Company is but the inevitable outcome of enterprise based upon energy, ability, and good faith.

"Little Stay at Home and Her Friends," by L. Clarkson, author of "Gathering the Lilies," and "Violet with Eyes of Blue," is a very charming little book, gotten up with exquisite taste, while the illustrations are on the borderland of very high art. "Just Out," with its pert little chicken, gazing saucily at its empty shell, is an excellent piece of workmanship both as to design and color. "Tiny Tittens" is also admirable, while dear "Little Stay at Home," all in white, and seated upon the tender green leaf of a lily-of-the-valley, is a truly poetic conception. F. W. Robinson & Co. Philadelphia.

"The Rag Fair," by L. Clarkson. This reverie, for we can only designate its dreaminess thus, is a book of poems, enforcing the great Christian truth of sanctification of the heart through the mediation of the Great Father, who said, "Suffer little children to come unto me." It is beautifully and profusely illustrated, and its tone is "thorough." F. W. Robinson & Co., Philadelphia, publishers.

Among the holiday publications of E. P. Dutton & Co., No. 713 Broadway, are "My Boyhood" and "Prairie Days," the former of which will be sure to delight the male juveniles into whose hands it may fall, while the latter will prove scarcely less acceptable to both girls and boys than the famous "Little Women."

Among recent publications of J. B. Lippincott & Co., Philadelphia, is "Paul Faber, Surgeon," by George MacDonald. This agreeable writer has a multitude of admirers in this country, and the book just issued will add to his reputation, being marked by the acute analysis of character and profound insight into the recondite problems of life and religious faith for which all his later works have been remarkable.

Holiday buyers of books will find a complete and attractive assortment at the establishment of E. Worthington, No. 750 Broadway. The catalogue is especially rich in the publications of Chambers and other famous Edinburgh publishers. A special attraction is the quarto, just issued, containing portions of the works of Burns, Scott, and Ramsey, with fine illustrations. Indeed, there is nothing in the way of superb books, fitted for the holiday or general trade, which cannot be found at this establishment.

THE SHUFELDT COMMERCIAL EXPEDITION.

THE expedition of Commodore Shufeldt in the United States man-of-war *Ticonderoga*, which recently sailed for the coast of Africa, is one of the most important movements for the development of American trade which has been undertaken for many years. The expedition will go directly to Liberia and look after American interests, as well as the interests of that colony, and Commodore Shufeldt, while in Liberia, will act as a commissioner representing the Liberian Government in the settlement of the question of the boundary line between that country and the British possessions in Africa. After these duties are completed he will sail up the Congo River and investigate the natural resources of that region. He is also authorized to establish commercial relations with Burmah and Borneo, and will extend his cruise among the Pacific Islands. His instructions from the Navy Department embody some valuable suggestions from the Secretary of State, and he is authorized to report directly to the Secretary of the Navy, instead of forwarding his communications through the commandants of American fleets abroad. The Secretary expects to have monthly reports from the expedition showing the success and progress of the work.

SECOND PRESBYTERIAN CHURCH, CLEVELAND, OHIO.

THE Second Presbyterian Church of Cleveland, Ohio, is located on the corner of Prospect Street and Sterling Avenue. It is cruciform in shape, with four gables, each forty-six feet wide. The main building is one hundred by one hundred and six feet, the auditorium eighty-four by one hundred, arranged in amphitheatre form, with seating capacity for eleven hundred people, the chapel, sixty by one hundred, containing the usual lecture, dining, class, sociable, kitchen and school rooms. A central dome, fifty feet in diameter at the intersection of the arched lines of the gables, forms the ceiling of the church proper. The main tower is one hundred and fifty feet high and twenty-six square at the base. There are ten entrances to the building. The structure is faced with Ohio stone, is constructed in the Norman style of architecture, has three immense stained glass windows, besides numerous smaller ones, is heated by steam, and cost, with the ground and chapel, $141,647.89. The Rev. C. S. Pomeroy is the pastor, and Joseph Ireland was the architect.

PICTORIAL SPIRIT OF THE EUROPEAN ILLUSTRATED PRESS.

Military Cemetery, at Champigny, France.

In the early part of November, 1870, the French Army defending Paris crossed the Marne under the orders of General Ducrot and endeavored to cut through the Prussian lines and seize Montmesly. They were defeated by the Prussians, and 6,000 men were left on the field of battle. Five years later the Commune of Champigny raised a commemorative monument to a number of the lost, and subsequently the Government decided to collect the remains of as many as possible and bury them at the same place. This was done, and on the 2d day of December last the crypt was formally dedicated. The monument is situated on the left of the plateau on the road from Champigny to Proviis, and consists of three galleries, a principal and two laterals. In the centre of the principal gallery is a very fine mortuary chapel. The crypt contains from 2,500 to 3,200 exhumed skeletons, and is under the surveillance of the local hygienic council.

Accident to the Russian Imperial Yacht "Livadia."

The imperial Russian yacht *Livadia*, having on board the Grand Duke Alexandrovitch and suite, and Count Schouvaloff, the Russian Ambassador to England, which left the port of Yalta, on November 2d last for Odessa, ran upon a submerged rock near the lighthouse at Tarakhut during an intense fog. The passengers and baggage were saved, but the vessel was injured so severely that it is believed she is beyond repair. During the last war she was transformed into a war vessel, having the elegant pavilion on her deck cut down to make room for an Armstrong gun, and at the signing of the armistice she was placed at the disposal of the Grand Duke Nicholas and sent to Constantinople.

Maori Meeting, New Zealand.

This interesting gathering took place at the end of June (having been delayed some days by inclement weather) in the Taranaki district, New Zealand. The time chosen for the illustration is the moment of the distribution of the food to be eaten at the feast. It consisted of some 2,500 baskets of potatoes, kumeras and taros, a large number of dried shark and ninety-one pigs. The whole was stacked in a solid heap, like a wall. The preliminary ceremony of welcome having been concluded, a Maori, armed with a long wand, stepped on to the pile of food, and proceeded to call on the tribes present by name, and to allot to each a portion previously marked off by a dried shark stuck on end. After the distribution the food was taken by the tribes and rapidly cooked on hot stones in Maori ovens made for the occasion. An hour or two was devoted to feasting, and in the afternoon Rewi, the chief of the Ngatimaniapoto, and head man present, opened the meeting with Sir George Grey and the Government party, which lasted several days, many topics of interest to the natives being discussed.

Restoration of the Palace of Justice, Paris.

The portion of the Palace of Justice in Paris known as the salon of the "Lost Footsteps," is at length restored. It occupies the site of the great salon of the palace of the ancient kings of France, which was burned in 1618. Jacques Destrosses had charge of the rebuilding of the palace, and he laid out this apartment with the same dimensions it has to-day. During the brief régime of the Commune in 1871 it was again destroyed; but to-day it appears in its old-time magnificence, beautifully illustrating the Doric style of architecture and decoration. The name of the "Lost Footsteps" is derived from the fact that owing to its extreme length, breadth and height, the footsteps of persons walking at one end are entirely unheard at the other. The staircase shown in the engraving gives access to the judicial chambers.

The Afghan War—An Elephant Battery.

The use of elephants in the present Afghan campaign, as conjectured in a recent number of this newspaper, has become quite a feature in the field movements of the British columns. The powers of traction and endurance of these animals are greater than those of the horse, and the wisdom of employing it for heavy mountain work was shown in the attack upon Fort Ali Masjid, when the battery of 40-pounder Armstrong cannon, which, by their long and accurate range and well-delivered fire, led to the silencing of the Afghan guns and the capture of the fort, was drawn up the mountain and into position by elephants.

Observatory on Mount Vesuvius.

The observatory of Professor Palmieri, the courageous savant, who has devoted his life to the study of this mountain, is situated on a long and narrow ridge of rock on Mount Costarosi, almost at the foot of the actual cone of the volcano. Owing to the slight elevation of the rocky ridge, and to the sharp point which it presents to any stream of lava which may come curling down the mountain, the Observatory is much safer than at first appears. During the recent eruption, as well as that of 1874, the most valuable results have been chronicled by the Professor, who has been able to calm the exaggerated fears of the inhabitants of the surrounding villages, who were terrified at the threatening appearance of the mountain, by making a very fair forecast of the proceedings of the volcano.

Loss of the Steamship "Pommerania."

The fatal collision which took place off the Foreland, in the British Channel, on Monday, November 25th, resulted in the deaths of fifty-four persons, thirty-seven of whom were passengers. The accident happened at night, soon after most of those on board the *Pommerania* had retired to their berths, after indulging in some festivities in the main cabin in celebration of their near approach to port. Both vessels were built with water-tight compartments, but the *Pommerania* sank like a log because her doors had been left open; whilst the *Moel Eilion*, though frightfully damaged in the bows, as will be seen in our engraving, was safely towed into harbor, the water never penetrating further than her first compartment. Captain Schwenken went down with his ship, but having risen again to the surface, he was picked up by the *City of Amsterdam*, and subsequently landed at Maasslys. The majority of those saved were taken on board the *Glengarry* and landed at Dover.

AT HOME AND ABROAD.

—THE American Government has expended for freedmen's schools $3,711,225.47.

—THE German universities cost the State $2,500,000 per annum. There are 1,300 professors and 20,226 students.

—THE total endowment of the public schools of the United States is $8,000,000, and it is estimated that the average daily attendance is 4,500,000.

—A COMMISSION, composed of experts, will meet in Berlin during the Easter holidays to decide on the measures to be taken for the compulsory teaching of drawing in the higher schools.

—THE Citizens' Relief Committee of Memphis have wound up their affairs by distributing the cash on hand, $7,253, among the poor white orphan asylums, and setting aside $1,208 in county warrants for the colored asylum, if it shall be organized.

—THE electric light will make a valuable saving of coal in England. According to a very careful estimate made a few years ago, the quantity consumed in gas-making was set down at 6,560,000 tons, against a production of coal of 114,300,000 tons.

—THE Indian Government has lately taken steps for providing places of refuge on the main line of railway throughout India, wherein women, children and invalids could be collected under protection in case of disaffection being evinced by the native army.

—THE value of silk ribbons annually exported hither from Switzerland has fallen from four million to one million dollars since 1873. Patterson silk mills are running on full time and employ eight thousand to ten thousand hands, and the greatest demand is for ribbons and scarfs.

—AN examination of the salaries of clergymen in Virginia, South Carolina, Georgia, Kentucky and North Carolina, shows a lower average in North Carolina than in either of the other States. Georgia supports her ministers best, Kentucky next, Virginia third and South Carolina fourth.

—THE new line along the right bank of the Rhone, from Nimes to Teil, is being prosecuted with the utmost dispatch by the Paris, Lyons & Mediterranean Railroad Company. It will cost $2,000,000. Five thousand men are at work (Sundays and *fête* days included), and their number is increased daily.

—THE absconding bank director of Glasgow escaped from Ireland in a ventilated coffin. The coffin was driven in a hearse to the steamer, and the detectives, who were closely examining every passenger on board, actually helped to place the coffin in the ship, little thinking it contained the object of their search.

—FROM the *débris* of the coal mines France makes annually 700,000 tons of excellent fuel, and Belgium 500,000 tons. In England, where there is not so much waste in coal-mining and where coal is much cheaper, the manufacture of artificial fuel is only about 200,000 tons a year. Germany makes fuel, for the most part, from peat and similar earths.

—THERE are in Denmark 173 noble families, only twenty of which are of pure old Danish nobility, all the remaining families being originally of foreign extraction, or Danes ennobled within the last 200 years. The richest nobleman is Count Frits Früesenberg, whose income reaches $200,000 a year. There are only two families descending from an illegitimate child of a king.

—THE London diamond merchants have built a palatial club-house for themselves in Hatton Garden, but, unlike most club-houses, it is used not for recreation alone, but partly for business purposes. It is, in fact, a combined club and diamond exchange. Some of these diamond men are accustomed to carry fortunes about with them, and sales take place where they would least be expected.

—THE Russian Minister of Finance has at his disposal for the construction of barracks throughout the Empire a special fund, as yet untouched, amounting to 55,000,000 roubles, and bearing interest to the extent of 1,719,000 roubles yearly. This vast sum is said to have been almost exclusively formed by the amounts paid to the Government during a number of years by individuals desirous of being freed from the obligation of military service.

—THE sales of one of the largest firms of hair merchants in Germany have fallen off 25 per cent. in bulk, and 40 to 50 per cent. in value, within the last three years, entirely through the increased demand for Chinese, Japanese and other cheap hairs. In 1871 the exports of hair from the treaty ports were 286 tons; in 1874, 330, in 1876, 570. This serves in some degree to explain the pigtail robbing which has been rife, and which is also said to have been prevalent at the periods 150 years ago.

—THE work of fortifying the two lines of defense of Constantinople proceeds with great activity. The Government factories are occupied in the manufacture of 10,000 wagons and barrows for the conveyance of the material, cartage of earth, etc. These fortifications will, when complete, be armed with 880 guns of large calibre. The defensive works are constructed in parallel lines, so that the first is commanded by the second, the second by the third, and so on. They are connected by trenches, with embankments serving as shelter for the infantry.

—ROUMANIA has made a good thing out of the war. They Russians paid for everything they got, and settled all the accounts for supplies and railway transportation. The payments, moreover, were made in silver, and not in depreciated paper. Before the war the Roumanians could not pay the interest on the public debt; but this year they have done it easily, and notwithstanding their military expenditures, have a good surplus. The peasantry have laid up money against a rainy day, and, seeing that their tills are filled with silver, are disposed to think tolerably well of the Russians after all.

—THE Government of Honduras is making great efforts to develop the agricultural resources of the country. Coffee planting has been vigorously carried on, and the Government makes free grants of land to all persons desirous of undertaking the cultivation of coffee, sugar, or of cocoa, and gives free transport of the necessary material and labor to the site of the grant. Besides these advantages, planters are exempt from military service, and all implements and materials necessary for the use or formation of plantations are admitted into the country free of duty. Strangers are admitted to the same privileges as citizens of the republic.

—ON Friday, December 27th, the completion of the viaduct extending from Superior Street on the east to Pearl Street on the west of Cleveland, will be formally celebrated. The extreme length of the viaduct and approaches is 3,200 feet; general width, 64; height of roadway above the river, 68; span of large arch, 97; span of eight small arches, each 83; length of drawbridge, 230; and width of each sidewalk, 11. Including the right of way, the structure has cost $2,200,000, and the additional cost of removing the canal and weighlock and lowering the railroad tracks is estimated at $500,000. A little over three years' time has been occupied in the work.

HER NAME.

SHALL I call my lady, Birdsong, for the sweetness
Of the glad, spontaneous melody she brings,
To the garden-ways that feel their incompleteness
When her absence stays the thrush that loudly sings,
While the lark abates his buoyant strain and fleetness,
And the drooping roses dream of bygone Springs?

Shall I call my lady, Sunshine, for the brightness
That continually encompasses her soul;
For the tender, fostering warmth and airy lightness
That abide within her body's sweet control;
For the deft-spun webs that clothe her dainty whiteness,
And the silken hair that forms her aureole?

Shall I call my lady, Fragrance, for the essence
That around her gracile lissomness distills,
Like the consciousness of some celestial presence
Which in all the sentient being moves and thrills,
When, at her touch, the world grows vague and lessens
In the heart's desire her amorous breath fulfills?

Ah! no Mozart, all his God-born genius lending,
Could compass yet the music of my love,
And no Raphael, all his subtlest colors blending,
Could depict the iridescence of my cove,
As no emulous, attar-laden breeze ascending
Could reach the redolent air she breathes, above!

But all names I give her in my hours of waking
Go echoing through the far domain of dreams;
And, of old as Flora's, wintry fetters breaking,
Her presence fills the land with flowers and beams,
While, from my soul, life's coil and taint off-shaking,
I dwell within the realm her grace redeems!

JOHN NOBLE.

A SECRET MARRIAGE
AND
ITS CONSEQUENCES.

BY THE DUKE DE POMAR,

AUTHOR OF "THE HONEYMOON," "THROUGH THE AGES," "WHO IS SHE?" "FASHION AND PASSION," ETC.

BOOK SECOND.
CAN YOU FORGIVE THEM?

CHAPTER X.—FORGIVEN.

WHEN Lady Rollingford entered her husband's chamber, she found, to her astonishment, that not only a woman knelt by his bedside, but that a little child, dressed entirely in white, was playing beside him upon the bed.

"Come here, Laura," he cried, on seeing her, in a feeble voice, yet with great pathos. "She has forgiven us—she has forgiven us!"

"Forgiven us! What—what do you mean? What has this woman to forgive? It is your forgiveness that she came to seek."

"Oh, Laura, Laura, how can you speak so? You know that she is my wife. You know that we were really married. Oh, what is the deception her love prompted her to practice upon us compared to the great crime I have since committed."

"She has been turning your head; she has been making you believe all sorts of stories. You know how weak you are, and that your mind is unfit to reason just now. How can you believe the tales such a creature chooses to invent, taking advantage of your illness to gain some selfish ends of her own?"

The lady by his bedside rose to her feet and turned towards her. Her face was deadly pale, and her beautiful black eyes were dimmed with tears; but even thus she looked most wondrously handsome.

"You need fear nothing from me, madam," she said; and her voice betrayed great emotion. "I came here only to seek the forgiveness of a man whom I had deeply injured, and whom I had heard was dying. I have obtained that forgiveness, and I will go. You will never hear from me again. I will never cross your path. To me, as to every other person in this world, you will remain for ever Lady Rollingford. Can I do more," she added, turning towards the poor man on the bed—"can I do more to atone for the past?"

"Oh, Marie, Marie, you are an angel!"

"Hush! you must forget me now; you are married to another."

"See, see!" Frank cried, taking the child that was playing beside him on the bed in his arms. "See, Laura, this is my daughter—my darling little Louise!"

Lady Rollingford could not repress a cry of rage which rose to her lips and almost choked her.

"Your child? THAT your child?"

With a rapid movement Marie caught her little girl in her arms and clasped her to her bosom.

"I did not bring her here for you to look at. I brought her that her poor father might see her and bless her before he died—my poor little orphan!" and hot tears rolled down her handsome face.

"But do you think that I will let her go now that I have seen and blessed her?" Frank cried, with all his old eagerness.

"What do you propose doing, then?" Lady Rollingford muttered between her teeth.

"I fear that I can do but little for her," he said, taking her again in his arms and looking with a loving gaze that had already something more than human in its hectic intensity into the sparkling black eyes of the child, who was a miniature copy of her handsome mother. "I am dying—I feel it—I cannot live twenty-four hours longer, whatever the doctors may say; but this child is mine—she is my own, and while I live I must provide for her as well as I can. Laura," he added, turning towards her, "by the will I made in London, after my poor father's death, you are sole mistress of all I possess. I cannot alter that will now, there is no time; but I want you, for the love you bear me, and as an atonement to this poor woman to whom we have both been so cruel, to adopt this child—to bring her up as if she were really your own daughter—to give her our name, and at your death to leave her the fortune you receive from me."

"Frank!"

"Nay, Laura, you must promise to do this for my sake."

"My daughter does not need her protection or her charity," Marie exclaimed, coming forward and drying her tears. "Thank God, I am not so destitute as to have to accept *that!*"

"But, Marie, it is my wish," he said beseechingly; "you must allow her to remain with us for my sake. I cannot have you—do not take away my child also from me." There was something so sad and pathetic in the tone of voice in which he said this that both the ladies were moved, and Laura, approaching the bed, raised the child in her arms and kissed her."

"I cannot let the sins of the mother be visited on the child," she said; "if this pretty girl is indeed my husband's daughter, it is my duty to adopt her, and to bring her up as mine."

"You, will, then, love her for my sake?"

"Yes; but this woman must never claim her. From the hour she enters my house, she must be mine, and mine only."

"I will never consent to that. Abandon my only child! part from my only daughter! Oh, never! never! I cannot turn her over like this into the hands of my bitterest enemies."

"Surely you do not look upon Laura as an enemy?" pleaded the poor invalid.

"She has been very bitter to me."

"Oh, Marie, forgive her, forgive her. This confounded illness of mine has turned her head."

"I bear her no resentment, François, believe me. I, who am in such need of forgiveness, ought to forgive my enemies."

"Let her have the child, then. I am dying—I know it; you would not deny me this last wish. Marie, it is the first thing I ever asked you to renounce for me."

"And she will bring her up and make her happy?"

"Yes, I promise to do that," Laura said, her cold heart warming at the sight of that lovely young face which lay against the pale cheek of her poor young father.

"Perhaps she will be happier with you than with me. Alas, what can I offer her? What position can I give her? I have not even a name to bestow upon her—my poor little one!"

"I will give her her father's name, and at our death she shall have all we possess. But you must never come between us again; you must swear that from this moment you will give up all claim to be Lord Rollingford's wife."

"I never wished to be called his wife; no one in the world knows that I was married to him."

"You swear that you will never claim this child as yours, and that you will never come between us?"

"Yes, on one condition, and that is that my Louise shall be brought up a Catholic, and that she shall marry none but a Catholic. I will give her up to you, as I see that it is for her good, but I cannot consent to her ever becoming a Protestant. It is the only request I make."

"If you promise never to come between us, I will promise you in my turn that she shall be brought up as you desire."

"Upon that condition, I swear it."

"And I shall die in peace!"

CHAPTER XI.—TO HIM WHO LOVETH MUCH, MUCH SHOULD BE FORGIVEN.

THE next morning, when Mrs. Champion came down to breakfast at her hotel, a letter was handed to her, which had been sent a few seconds before from the Hotel Mirabeau.

With a trembling hand she tore open the envelope and read the following:

"DEAR MRS. CHAMPION—I write just one line to inform you that Lord Rollingford died last night at eleven.

"As you know already so much of our unfortunate family history, I think it right to tell you that I have adopted my husband's daughter as mine, and that I will bring her up as if she were indeed my own daughter—providing for her during my life, and at my death making her sole heiress to all the property which Lord Rollingford has left me, as it seems that she is really his child, and I desire in all things to do what is right by her; for the poor child is innocent of the sins committed by her mother, both before and after her marriage to Lord Rollingford.

"I inclose you the check I promised for ten thousand pounds—for the ambulance you have determined to provide for the Italian campaign, and which my bankers will pay over to yours as soon as my affairs are settled and Lord Rollingford's will is proved. But, I must, however, remind you again of your promise never to divulge to any one—even to your husband—this unfortunate secret, that must for ever remain a mystery to the world, as both my honor and that of my dear deceased husband are concerned in it.

"On this understanding pray believe me yours, etc.,
LAURA ROLLINGFORD."

It was with mingled feelings of grief and indignation that Mrs. Champion read these lines. Grief at the news of the death of poor Frank, for whom she had always entertained a deep regard; and indignation at the calm way his widow treated the event, and at the business-like manner in which her letter announcing it was written.

Her first feeling was one of sorrow and desolation; she had allowed the image of this young man, almost unknown to herself, to take a very deep root in her heart. And now that he was gone for ever out of her life she realized how dear he had been to her.

She was not a woman to give way to weeping—tears are only for the weak—but the grief that filled her heart was almost greater than she could bear.

"I never could have believed that I loved him so much," she muttered to herself; and then her face became radiant, and her eyes acquired a strange brilliancy, and she continued, as if inspired: "I must forget him—I must try to forget him—I need my thoughts for other things—I must not allow his image alone to fill them. I have already wasted too much of my life upon him, and the brief moments of joy he has afforded me have only left my soul more desolate. I was never meant to feel like others. I was never made to love and to be loved; mine must be a very different lot—to dream that I felt, not really to feel, has been my fate. My life hitherto has been spent in idle dreams of things that could never be. I have lived in a world of visions and of fancies; and I now see how vain have been these dreams, and how idle will ever be my fancies. My fate is stronger than myself. I cannot hope to change my nature. I was not born to love; I was born to accomplish a mission, and that mission alone must henceforth fill my thoughts. This boy that I have so loved was no better than the rest. I see it now, yet I must try to forget it, as I must leave something of the past worth regretting, or else what a blank my future will be! Surely, I have not raised up my ideal visions, only for my own entombing!"

Then her eye fell upon the table, and she saw the check which Lady Rollingford had inclosed in her letter, and a rapid change came over her thoughts.

"She sends me the money," she exclaimed with scorn—"the money with which she would have bribed me to keep her secret. Am I justified in taking it? Ah, this money, which would have been so welcome to me yesterday morning, now seems hateful in my eyes. Am I justified in taking it? My honor says No; and yet have I not promised of my own free will to keep the fatal secret? It was not to obtain this paltry piece of paper that I gave my word, but to save the honor of the man I loved. I refused to accept it as a bribe, but as a present ought I to refuse it? It is not for me, it is for others that she sends it. It is, as it were, the last bequest of that poor boy, who, had God spared him, might have been of the greatest service to the cause."

She looked around her, and everywhere the different articles for the ambulance which she had lately provided met her gaze. There they lay all about the room—surgical instruments, cases of medicines, bundles of bandages, piled up on every table, just as they had come from the various shops, all ready to be packed and dispatched to Italy. She thought of the brave soldiers who were fighting for their country. She saw in her mind's eye the bloody battlefields and the thousands of wounded and dying who lay helpless on the ground, bathed in their own blood, with no one to look after them or relieve their sufferings; and instinctively she grasped Lady Rollingford's check and pressed it to her heart.

"It is the price of blood," she said; "it comes from one that is no more, and it shall be the means of sparing blood and of saving many lives. No, no, I cannot—I cannot refuse to take it."

Again she read the letter through, this time with deep attention.

"It is written in a most business-like manner," she thought; "she puts it in such a way that I cannot but keep her secret even in spite of myself, for she knows well that I cannot refuse her money; yet by this very letter she commits herself. If I had a mind to betray her, these words in her own handwriting would witness against her. This letter confirms all. She has outwitted herself in her anxiety. What could have induced her to put all this in writing, and to sign it with her own name? It burns my hands. Shall I allow the flames to consume it?"

For a few moments she remained buried in deep thought.

"No, I shall keep this; no eye shall ever see it; yet it may be the only means of helping this poor child of his. It will be a power that will force her, even in spite of herself, to keep the promise she made to this child's father."

And she locked it up in her dressing-case where she kept her most private papers, and there, amongst letters from secret societies written in cipher, and mysterious dispatches from Garibaldi and Cavour and Mazzini, she made her mind up it should rest for ever.

She put on her bonnet and her shawl, and without stopping to partake of any breakfast, she hurried to the Rue de la Paix, bent on seeing once more the face of the man she had so loved, though the spirit of that man no longer animated the cold clay.

She found the hotel in great confusion, and on being shown to Lady Rollingford's sitting-room she met the chaplain of the English Embassy, who, in his character of God's minister, had resorted at once to that lady's side to comfort her in her affliction.

"How is Lady Rollingford?" she inquired of him.

The sanctimonious little man shook his head with great resignation.

"Wonderfully supported," he said—"wonderfully supported. It has never been my lot to meet with a lady who bore her sorrow so composedly. Her religious fortitude is a pattern to every one. A wonderful woman—truly, a wonderful woman!"

"Shall I be able to see her?" she said, paying little attention to his stereotyped sentences.

"Her ladyship begged that she might not be disturbed; the poor thing must shed her tears alone. No one can comfort her in such a calamity save a clergyman. Ah, who would have thought that this poor young nobleman would die so suddenly? Such a superior person, too—a true nobleman both by birth and feelings; a man to whom so much had been given, and for whom life opened so brilliantly. He had only been married two months; and to be snatched away like this in the very prime of life! Ah, mysterious, indeed, are the ways of Providence! One can only say, 'The Lord loveth whom He chasteneth.'"

Mrs. Champion felt deeply moved; but she could not quote texts appropriate to such an occasion; and the sight of this sanctimonious man, who had never seen or known Frank in life, mourning so much over his death, jarred upon her nerves.

"I must see her. Will you be kind enough, sir, to inform her that Mrs. Champion would like to speak to her for a moment?"

"The sight of a stranger might reawaken her sorrow. I left her so full of Christian fortitude that I fear to disturb her. Already this importunate Sister of Charity, who insisted on attending the poor young nobleman in his last moments, has caused her unnecessary grief; and now her present frame of mind is so very edifying."

"A Sister of Charity, did you say?"

"Yes; one of these French *Sœurs de Charité* whom hotel people, with their mistaken anxiety, summon to attend their guests whenever they fall ill—a most distressing custom. I really begin to believe that the priests pay them to do so. They are very deep, indeed the Roman Catholic clergy here."

The little clergyman's stereotyped phrases and petty bigotries were more than Mrs. Champion could bear at that solemn moment, and, making an imperative gesture, she insisted on being admitted to Lady Rollingford's room.

She found that lady sitting alone by the fire reading a prayer-book, and looking quite composed. There were no traces of tears on her cheeks, and her strange self-possession contrasted greatly with the excitement and agitation which she had shown on the previous day. She rose to meet her visitor, and in a calm voice she muttered something about "in the midst of life we are in death."

"This is a most unexpected blow," Mrs. Champion said, taking her hand. "I feel greatly for you, dear lady. Is there anything I can do for you?"

"No," she murmured, "I think not; every one has been most kind to me. Have you seen Mr. James?—a truly good man. He came immediately he heard the sad news, and has afforded me great consolation."

"I am glad to see you bear the blow with so much Christian fortitude."

"Yes; this is the advantage of having received a truly religious education. I never felt the comforts afforded by our religion so much as now. Yes, Mrs. Champion, it is a Christian's duty to bow to the will of the Lord, and to accept His chastenings as mercies."

Mrs. Champion felt all her blood freezing in her veins. She had come prepared to meet a desolate widow, and to try and soothe her grief; but she certainly could not have hoped to find that widow in such a very blessed state of mind, as Mr. James would have said; and yet, somehow or other, she was not wholly pleased with her.

"If you take it that way, Lady Rollingford," she said, "of course I can do nothing. I am glad to find you are able to bear your bereavement with so much fortitude."

"Thank you. It was very kind of you to think of coming to see me. By-the-by, did you receive my letter?"

"Yes; and I came to give you the receipt for the handsome gift you have been kind enough to send me for my poor wounded soldiers."

She took the paper which Mrs. Champion handed to her with a steady hand, and read it attentively.

"I see you say nothing here about your promise, you know."

Mrs. Champion's face flushed with indignation.

"No!" she exclaimed; "I do not accept your money as a bribe, but as a free gift. I gave you my word of honor yesterday not to disclose your secret. I gave it to you of my own free will, and I can accept no money for it. If you like to have your check back, here it is."

Lady Rollingford gave a long sigh.

"No—oh, no; keep it. Only you can imagine how anxious I feel, particularly just now; and what a consolation it would have been to me, under the circumstances, to have had your promise in writing. But if you refuse, why, I must submit."

And she turned her eyes to heaven with the air of a Christian martyr who has learnt to suffer in silence.

Mrs. Champion was too indignant to continue the subject; so she tried to give a new turn to the conversation.

"Were you with him when he died?"

"Oh, yes."

"And was he conscious at the last?"

"He was conscious till the very last, and he died calm and full of hope."

"I hear that a Sister of Charity was with him."

Laura's face darkened.

"You can guess who *that* was. Yes, he insisted on having her near him, and I, of course, could scarcely refuse him anything at such a moment. Poor Frank! he is gone to a better world now! But, to save appearances, I insisted on her being dressed like a *Sœur de Charité*. Such women often attend sick people in this country, and in that guise no one could suspect anything."

"I see your grief did not destroy your reasoning faculties. You have acted with a great deal of caution and forethought."

"What could I do? Ah, Mrs. Champion, only you can know what I have had to suffer—to be forced to allow such a woman to remain by the side of my poor dying husband! Ah, it was really too dreadful! Fortunately, no one guessed the truth. She is with him now, I believe. Ah, I have been up the whole night, and have no more strength left."

"You should lie down; I think a little sleep will soon set you up again. I will intrude upon you no longer. I leave for Rome in a day or two, and shall probably not see you again for a long time. But make your mind easy; your secret is safe with me; and if a stray bullet kills me one of these days, why, then your secret will die with me. Good-by."

"Good-by, Mrs. Champion. So very kind of you to have come. Good-by."

On quitting Lady Rollingford's room, Mrs. Champion directed her steps to the apartment where Frank's body had been conveyed.

With a cautious step and a beating heart she entered the spacious room, and with profound reverence she approached the bed, and looked for the last time in her life upon that face she had so loved. The handsome features she remembered so well were now perfect in repose; the glossy fair hair was brushed back, disclosing the noble forehead; the eyelids were carefully closed over the eyes, and he seemed as if asleep: the delicate, small, sweet mouth, with its voluptuous-looking lips, which she had so many times longed to kiss, looked far sweeter now than even in life; and, stooping down with great reverence—for there is something in death which always inspires reverence—she pressed her trembling lips to the dear mouth which that cruel sleep that knows no waking had closed for ever.

As she did so she perceived for the first time that she was not alone in the room. On the other side of the bed, on her knees, and with her head

Digitized by Google

buried in her hands, was a motionless figure in the dress of a Sister of Mercy.

Mrs. Champion immediately recognized her. She walked softly round, and laid her hand on her shoulder. A shudder ran through the girl's frame, she looked up half-frightened, and rose to her feet. For an instant she remained motionless; then casting her eyes on the bed, she burst out crying.

Mrs. Champion was greatly touched: there was something so sad and despondent in that beautiful young face, bathed in tears of supreme anguish, that her heart was warmed towards her, and taking both Marie's hands in hers she kissed her tenderly, and said in a low voice, "Poor Marie!"

Marie, for it was indeed she, looked at her for a second, and then, burying her face once more in her hands, she cried:

"I thought I was prepared, but I was not."

"I cannot tell you how I feel for you."

"Ah, Mrs. Champion, Mrs. Champion! I never could have believed I loved him so dearly. How happy we might have been if—ah, a horrible fatality attends on love; the beings whom we most fondly love are given to us but to perish—too soon or else too late the heart-beat quickens. We desire and we worship, but those to whom we are united are seldom those we love. Woman's destiny is to love, and when love is done, to weep must be her only portion; henceforth my heart will be a sealed book, at the contents of which I tremble."

"You loved him?"

"Ah, no one will ever know how deeply! Cruel-hearted men say that such as I cannot love. Ah, I suppose the words do sound mockery on my lips; yet here in this supreme moment, with my hand upon this heart which loved me so well, I swear to you that I worshiped this man." And stretching out her hand, she laid it upon the breast of the dead man.

"Mrs. Champion," she said, after a solemn pause, "he spoke of you at the last; he told me how much he loved and respected you, and what a deep regard he entertained for you. I am sure that you will not shrink from me, and scorn and despise me, as others do."

"No, I cannot scorn you, Marie, for love and sorrow have made us sisters."

Marie then came closer to her, as if she longed to seek her protection; and there, by the body of that man they had both loved so well, she told Mrs. Champion the sad history of her life, and opened her heart to her, not shrinking from laying bare every fault and weakness of her nature.

Dorothea was greatly moved; her tender heart swelled and rose up within her. And when the poor forlorn creature looked at her with her large, earnest, imploring eyes, and asked at last in a tremulous voice whether she thought God would ever forgive her, she raised her in her arms, and in a voice full of pathos she said, "Daughter, our Lord said to a woman who was even a greater sinner than you have been, 'Her sins, which are many, are forgiven; for she loved much.' Try and repent, and make atonement for the past."

"I will try; oh, yes, I will try hard now," she cried, in a piteous tone; "but it is so hard, so difficult. Twice before I have tried to reform. The first time when I was trying to be good I met this man, and I was again drawn to sin. When I left him I was determined to shut myself up in a convent, and to devote myself to God; but, alas! my nature was stronger than my good intentions, I could not; and now you see I have sunk even lower than before!"

"Oh, Marie!"

"I will try again; I promise you I will. But my child! I am going to abandon her. Lady Laura has promised to adopt her; will you promise me in your turn that you will look after her, and teach her not to think too badly of her poor mother? I fear Lady Laura will teach her to hate me, and the thought of this makes me miserable; you loved her father; try to love his daughter for his sake."

"I will, Marie, I will; think not of her, think only of yourself." And thus that strange woman bound herself, in the presence of the man she had so loved, to protect and cherish the little girl whom he had left in charge of the woman the world believes to this day to have been his wife.

BOOK THIRD.

THE MYSTERIOUS HEIRESS.

CHAPTER I.—IN THE HEART OF MAYFAIR.

MORE than twenty years have elapsed since the events I have narrated in the two preceding books.

During this long lapse of time a great many changes have taken place. There have been wars and revolutions and changes of government without end. France has witnessed two great revolutions and a mighty war. Spain has become a republic, then a monarchy under an Italian prince, then a republic once more; and Italy has at last obtained her liberty and become one united nation, with the Eternal City for a capital. The good day-dream of the divine Dorothea has been realized after all, and perhaps it is thanks to her that this great event has come about. In the other personages of our story, however, these twenty years have not been particularly eventful, and so I shall pass them over in silence, and take up their history as it were anew, in the present.

We are in the lovely month of May, in the middle of a gay and unusually brilliant London season, and our lot is cast with the sayings and doings of that bright, effervescent world which calls itself "the great world."

It is a fine, starry night, and the carriages of the aristocracy roll in every direction through the now gay streets of Mayfair, conveying the worshipers of fashion to the various temples where they intend devoting the evening to the god of pleasure.

In one of the most fashionable squares of the metropolis Lady Oddicums holds a select reception, and it is to her house that we first direct our steps. A brilliant crowd is gathered in the elegant and artistically-decorated saloons of the marchioness, and her ladyship stands at the top of the gilt and velvet-carpeted staircase receiving her guests.

In the back drawing-room, which opens into a large conservatory, profusely adorned with flowers, we perceive a group of persons who seem unusually preoccupied in some all-absorbing topic of conversation. Let us approach them, and listen for a moment to what they are saying.

"She is very beautiful," is the general remark; "but what is her true history?" is asked on all sides; and, strange to say, a long silence follows the question.

The old ladies shake their heads, while the younger ones smile and look unutterable things. The men, for the most part, remain silent, and cast on the young ladies looks that imply a great deal of unspoken scandal.

"Do you think that she can be her daughter?" at last, murmurs a little lady, who evidently is but a recent arrival amongst them.

"Oh, dear me, no," answers an elegantly-dressed lady, whom, by her fair curls, tall, graceful figure, and unmistakably patrician features, we recognize at once as Lady Boursetile, the reigning queen of many a royal feast—"Oh, dear me, no. Why, my dear, two women more unlike never existed in this world; no one who knows them can possibly say *that*. Lady Rollingford is a fresh-colored, fair-haired Scotchwoman, who, though no longer particularly young, has lost none of the unmistakable characteristics of her race; whilst Miss Reymond is a brunette, with an olive complexion, dark hair and black eyes, that speak of a Southern country and reveal a Southern blood."

"Was Lord Rollingford dark?" asked the little lady, again.

"Lord Rollingford? Oh, no, he was fair and very English-looking. I remember him quite well—poor fellow, he died in Paris whilst on his wedding tour!"

"Then you do not think that she can be *his* daughter?"

"I do not think it at all probable; besides, would a woman like Lady Rollingford have adopted a daughter of her husband's? I say no—what do you say, duchess?"

The lady to whom this question is put by the charming countess is a tall, frisky dowager, in a pale-pink satin dress. She is the well-known Duchess of Warrington, and by her side stands her equally admired daughter, a young lady who, though perhaps no longer in her first youth, adds to her by no means common charms of person a most uncommon mind.

The duchess smiles graciously, and after a short pause answers:

"I agree with you, Lady Boursetile; I do not believe that Miss Reymond is any connection whatever of the Rollingford family."

"Yet she bears the family name," urges the stranger.

"Ah, because Lady Rollingford has adopted her, so of course she bears the family name."

"But what is her real name?" says Lady Boursetile, shrugging her alabaster shoulders, amply disclosed by the lowest of black tulle bodies, and making the splendid diamonds and sapphires on her neck glitter and sparkle—"*that* nobody knows."

"How very strange!"

"Yes, it is certainly one of the mysteries of Mayfair."

"I wonder Mayfair has not found it out long before this, or *faute de mieux*, invented a story, to account for it some way," exclaims a tall, fair-haired young lady of most condescending manners.

"Oh, as to that, Miss Oscott, Mayfair has not been behindhand; believe me, the worst of it is that it invents far too many stories. Twenty or thirty different accounts of Miss Reymond's birth and parentage, all equally inconsistent with each other and with common sense, are in circulation at the present moment."

This is said by a young nobleman of manly appearance, fair mustache, and expressive eyes, who is evidently anxious to win the regard of the young lady before him.

"What is the last account, Lord Kingsford?" asks this young lady, with a look of expectation.

"The last account is that she is the daughter of a certain high personage whose name had better not be mentioned."

"But his daughter by whom?" inquires the countess.

"You want to know too much, Lady Boursetile. I am sure your imagination is lively enough. Can't you guess?"

"Well, yes, perhaps," she says, laughing, and then adds, turning to the duchess, "Oh, my dear, is it not too shocking?"

(*To be continued.*)

THE NEW PLAY AT UNION SQUARE THEATRE.

ON page 305 we illustrate the duel scene and groupings which mark the fourth act of a most remarkable play, "The Banker's Daughter," now running at the Union Square Theatre, in this city. This play is purely American in its characters and its morals, and is probably the most effectively successful yet written on a purely American theme by a purely American author. In its construction, its climaxes, and its manipulations of dramatic situations, however, it is evidently based on the best French models. This already popular play is the handiwork of Mr. Bronson Howard, and has a double moral running through its every scene—the first being the folly of marrying for money; the second being that a true love—a love unto sacrifice and unto faith—will win back love under circumstances seemingly most adverse to its development and growth. There are fourteen characters in the play and five scenes. The characters are distributed among such artists as Mr. Charles R. Thorne, Jr., Mr. John Parselles, Mr. J. H. Stoddart, Mr. J. B. Polk, Mr. J. W. Lemoyne, Mr. M. Lingham, Mr. Walden Ramsay, Miss Sara Jewett, Miss Maud Harrison, Mrs. E. J. Phillips, etc. The scenery, which is certainly as gorgeous in effect and as perfect in detail as any that ever was set on a New York stage, is from the pencil of Mr. Richard Marsden. The interior of the banker's house, the salon of the rich American in Paris, the vestibule and stairways of the American Legation, the ruined and snow-covered chateau, with the sleeping city and ice-locked river in the distance (which our picture reproduces), the boudoir of the alarmed wife, with its delicately stenciled roses, make a series of stage pictures that rival each other in beauty and are rivaled by nothing else.

The story of the play is a story of the heart, appealing more to sentiment than to passion, but beautifully and sequentially told by the action of the play, and admirably rendered by the actors. The sentiment is cunningly relieved by a vein of humor pouring out of the presentation of some purely American characteristics; and the denouement, at once poetical and domestic, leaves the spectator pleased to see a story that has interested him end precisely as he wanted it to end.

Those who take an interest in the American stage feel no little pride in the success of this beautiful work, and, pointing to it, ask "Is it necessary always to go to London and Paris for plays we like to see?" It certainly would not be if our American dramatists would supply our stage with such plays as "The Banker's Daughter."

SCIENTIFIC INTELLIGENCE.

Meteorology.—The physicists of the French Central Bureau of Meteorology are engaged in establishing a nomenclature to diminish the number of letters used in signaling.

Resignation of Professor Marignac.—Professor Marignac, after having filled for a period of thirty-eight years the chair of Chemistry at the University of Geneva, with the greatest distinction, has recently resigned. He has been replaced in the chair by Professor Graebe, of the University of Koenigsberg.

Preparation of the Nitrate of Soda.—By fusing sodium nitrate with iron of dings Menke has succeeded in preparing the sodium salt of nitrous oxide. The compound is not formed when zinc is employed in place of iron. The new salt is readily soluble in water, crystallizes in colorless needles containing three molecules of water. The silver salt was prepared by Divers in 1871.

Longitude of Rio Janeiro.—M. Liais, Director of the Observatory of Rio Janeiro, has informed the Geographical Society of Paris by letter that, through the liberality of the Emperor of Brazil, he is now in a position to commence the important work of fixing, by the aid of the electric telegraph, the longitude of Rio Janeiro with relation to that of Greenwich. When that operation is concluded it will determine with exactitude the geographical position of each town in South America.

Researches in Astronomy.—Professor Lehmann has just completed his mathematical investigations relative to the small planet Ismenia. His conclusions are that this planet is receding from the sun in the same proportion as the little planet Hilda. These two bodies being simultaneously close upon their perihelion are at no greater distance from one another than double that which intervenes between the earth and the moon. It is worthy of note that these planets are, in certain cases, liable to approach Jupiter much nearer than we approach the sun, and may consequently experience considerable perturbation from their proximity to this gigantic planet.

Arrival of Fish Spawn in Paris.—The Société d'Acclimatation has just received from the United States the spawn of some California salmon, a gift of Professor Spencer F. Baird, General Commissioner of the United States Fisheries. The mode of packing in ice and the care bestowed on the charge during the journey by Mr. Mather, of Newark (N. J.) has enabled the spawn to reach the garden in the best possible condition. The salmon of California, which is remarkable for its hardiness and extremely rapid growth, will prove a valuable acquisition to some of the French rivers, where ordinary salmon would have but little chance of propagation. The gift consists of about 100,000 eggs.

Iron that will not Rust.—Professor Barff's process for preventing the rusting of iron is exceedingly simple, and consists mainly in the subjecting of iron to the action of superheated steam—steam having a temperature of 1,500° Fahrenheit. Water-troughs and saucepans treated in this way can be left filled with water for weeks without showing a particle of rust. Iron piping and ornamental castings have been exposed for seven months without the least alteration. The cost of the process is said to be less than that of galvanizing and decidedly cheaper than the constantly recurring necessity of painting. The application of the process to sanitary purposes is destined to be very important.

Cultivation of Mushrooms in Paris.—An interesting subject of study to the market gardener is the cultivation of mushrooms in the caves under Paris, where, at a depth of from sixty to eighty feet below the surface of the ground, in old stone quarries, this edible fungus is grown systematically on a very large scale. These caves furnish not only the daily supply to the Paris markets, but to a large extent those of England and other countries also, preserved mushrooms to the extent of 14,000 boxes annually being exported to this country by one house alone. It is estimated that in and around Paris the daily production of mushrooms amounts to about twenty-five tons, of the value of about £1,000, or close upon £400,000 ($2,000,000) per year. One large grove near St. Denis is described as employing nineteen horses and fifty men. Mushrooms are very extensively used in France, not only in their fresh state, but preserved in various ways, either by drying, bottling, preserving in butter or oil, or reducing to powder.

A Scientific Hospital in Paris.—The new hospital of Ménilmontat, in the northeastern part of Paris, has just been opened to the introduction of patients. This hospital has been built upon the most thorough scientific principles. The buildings are constructed on the system of isolated pavilions. The wards are spacious and hold each twenty two beds, with a supply of air equal to fifty-three metres per each patient. There are apartments with one, two, three and four beds. Each ward has its private staircase, and in the centre of each pavilion there is a staircase for the transportation of provisions and for general service. An enormous chimney is introduced into the system of ventilation. In the first story of each pavilion there are balconies where the convalescents can repose in pleasant weather. There is also a maternity ward entirely isolated and separated from the general hospital, in which there are single rooms adjoining pleasant gardens. The cost of the new hospital, including the site ($500,000), was about $2,000,000. There are accommodations for 640 beds.

Electrical Communication with Trains in Motion.—M. de Bailleache has invented a mode of communicating with a moving train, which has been tried with success on the Western Railway of Paris. Along the centre of the line, between the rails, runs an ordinary telegraphic wire, placed so near the ground that the ash-pan of the locomotive passes over the wire freely, but it is very carefully insulated. In the train is a van containing a telegraph apparatus attended by a competent clerk. From it descends a movable metallic lever with a conducting pad which runs along in contact with the wire, the ends of which are in communication with a special apparatus at the various stations, so that a constant circuit is kept up and a transmission of messages between the train and the station is as easy as between any two fixed points on land. As soon as the train has passed a station the communication is cut off, so that nothing may impede its intercourse with the one it is approaching. Notice can also be sent to the moving train to stop, in case the track is impeded, and the train can give notice of its whereabouts at any given moment by the ringing of a bell or by sending a message.

PERSONAL GOSSIP.

THE exhibition lottery tickets, which were originally disposed of for a franc apiece, have been sold on the Paris Bourse at twenty-five francs.

THE Empress of Austria will go to Ireland early next month to begin the hunting season, for which extensive preparations have been made.

MLLE. SARAH BERNHARDT, the celebrated French actress, is diligently studying English, with a view to playing in London in that language.

MR. CHARLES FRANCIS ADAMS has bought lots at Kansas City, Mo., worth $40,000, and will build on them a cotton mill and cottages for workmen.

THE trial of that famous Belgian forger, T'Kint, lasted one month and cost the Government $40,000. The jury were given 595 questions to consider.

PRINCIPAL AMBROSE P. KELSEY, of the New Hampshire State Normal School, has been elected Stone Professor of Natural History in Hamilton College.

MR. DANIEL WINKLEY, of Philadelphia, has added $10,000 to his gift of $25,000 to Dartmouth College. The money will probably be used in establishing a professorship.

EX-SENATOR RAMSAY, of Minnesota, has given his private library to the Historical Society of that State. It contains many valuable historical and documentary works.

DR. LIVINGSTONE, the explorer, is to have a tablet erected to his memory in Westminster Abbey, Dean Stanley having consented. It will take the form of a stained-glass window.

THE Baroness Burdett-Coutts is interesting herself in gathering clothing and money for the relief of the 100,000 fugitives who have been driven to Constantinople from the districts devastated by the late war in Turkey.

THE late G. H. Lewes's funeral was of the simplest character, only old and intimate friends being present. Among them were Robert Browning, Frederick Locker, Anthony Trollope and Herbert Spencer. He was buried in Highgate Cemetery.

PROFESSOR HENRY A. WARD, of Rochester, has started on a three months' tour in foreign lands. He first goes to Europe and then sails for South America, where he will collect botanical specimens for the Brooks Museum in the University of Virginia.

MADAME CHRISTINE NILSSON is soon to be installed as the Grand Mistress of the Ancient Charitable Masonic Order of the "Eastern Star." The Order is composed chiefly of English ladies of rank and distinction, whose male relatives belong to the fraternity.

DURING the first three of the ten years Presidency of Dr. McCosh at Princeton, he received gifts of money for the college amounting very regularly to $1,000 per week. After that subscriptions rose to $10,000 at a time; and in all there have been received about $2,500,000.

THE Chinese envoy at St. Petersburg (Chung-How) has received, by imperial decree, the title of "Ch'ian Thian-ta-ch'en," which formidable designation implies that he is now an ambassador altogether, absolutely plenipotentiary. The promotion of Chung-How is not without significance. It is said that the Chinese Government has never yet honored any of its representatives at foreign courts with so high a title.

MR. HENRY THOMAS RICHARDSON, of Bryuhyfryd, Wales, who recently died, was, in conjunction with his father, the inventor of the tubular lifeboat, in which he performed a daring voyage along the English coast, and which is in use at Rhyl and New Brighton, and which has been the means of saving many lives. By his will he bequeaths $50,000 at the death of Mrs. Richardson, for the purchase and maintenance of lifeboats at Pwlheli and Deal.

HIS HOLINESS POPE LEO XIII. is anxiously engaged in drawing up the scheme of a joint deed to be entered into by all the European Powers with a view to the repression of Socialistic and International tendencies, which have lately been productive of such lamentable results. The Vatican authorities are working out the details, and the whole will, when completed, be dispatched to the Papal representatives abroad for submission to the Governments to which they are accredited.

THE son of the celebrated police minister, Fouché, Duc d'Otrante, has just died in Sweden. He was formerly aide-de-camp of Charles XIV., better known, perhaps, as Bernadotte, who from the ranks of the French army rose to be first prince of Ponte-Corvo and then King of Sweden. It is rather curious that at the outbreak of the revolution both Fouché and Bernadotte were lawyers, and that after the fall of Napoleon, who had loaded them with honors, both conceived the hope of succeeding him. In the end both died abroad, Charles XIV. at Stockholm and Fouché at Trieste.

MRS. OGLE TAYLOR has donated her rare and valuable collection of china to the Corcoran art building. Next Spring an annex is to be built. The plans have been ready for three years, but there is a strip of land between the building and Admiral Philip Lee's residence which is owned by Mrs. Lee. Mr. Corcoran hopes to purchase the lot, as it is necessary for the addition which he wishes to make to the art school and the Taylor collection. Mrs. Taylor has a superb cluster diamond ring which she intends to bequeath to her successor as presiding officer of the lady managers of the Louise Home. The ring is to be the insignia of office.

THE death of the late King of Burmah was received very quietly in Mandalay, and the ministers had so carefully arranged matters that the Theebaw prince succeeded to the throne as a matter of course. The body of the King was formally laid out in the palace, and Europeans, Mogols and Chinese were all invited to take their last look at a monarch who, with all his faults and vices, was not altogether unpopular. One sad incident is reported. The royal princes, to the number of twenty or thirty, who had been heavily ironed and placed in prison, were released for a few hours and taken to the palace to do obeisance to the corpse. In token of their sorrow they are said each to have given a lock of hair, with which the hands and legs of the dead king will be tied prior to burial. The unlucky youths were then marched back to jail, were again fettered and placed under a strong guard.

MR. MUNDELLA, Member of Parliament, in a speech at a banquet of the Sheffield Traders' Council, lately, said that America was just recovering, after five years of unprecedented depression in trade, and her recovery was due to her boundless resources, for thousands of her artisans had been driven by trade depression to the cultivation of the soil. Now she was not only supplying her own people with goods, but exporting her manufactures to such an extent that she had become a powerful rival to England. It did not follow, however, that America's growth would be England's decadence, for he believed that England would grow with America's growth, and strengthen with her strength. Still, it was important that English workmen should be fully alive to the strides America was making, and should know that America had been able to export so extensively because of her labor-saving machinery, and that, owing to the improved state of her patent laws, she could more easily utilize her inventions.

THE LATE BISHOP J. B. P. WILMER, OF THE DIOCESE OF LOUISIANA. FROM A PHOTOGRAPH BY C. D. FREDRICKS & CO.

THE LATE BISHOP WILMER.

THE Right Rev. J. B. P. Wilmer, Protestant Episcopal Bishop of the Diocese of Louisiana, died suddenly of apoplexy in New Orleans, on Monday evening, December 22. He was a native of Alexandria, Va., and a graduate of the University of Virginia and the Protestant Episcopal Seminary near Alexandria. After ordination he had charge of two parishes in the southern section of Virginia, and left that State to assume the rectorship of the old Church of St. Mark's, in Philadelphia, retaining the position until the breaking out of the war, when he resigned, returned to Virginia and became a chaplain in the Confederate army. During the war he was sent to England to procure Bibles and Testaments for the Southern armies, and in attempting to run the blockade, on his return, he was captured in Chesapeake Bay, and taken to the Old Capitol Prison at Washington. On his release he rejoined the army, and served to the close of the war. On November 7th, 1866, he was elected Bishop of the Diocese of Louisiana. A short time previous to his death he had returned, apparently in good health, to New Orleans, from an official tour of the northern parishes. He officiated in Christ Church the day and evening prior to his decease. The remains were brought to the North, and funeral services were held in Christ Church, Baltimore, on December 6th, after which the body, dressed in full vestments, was interred in Greenmount Cemetery.

THE LATE JOHN E. VASSAR.

"UNCLE JOHN VASSAR," as he was affectionately called by all his intimate acquaintances, died at his home in Poughkeepsie, N. Y., on Thursday, December 5th, after a long and tireless work as an evangelist, colporteur and missionary of the American Tract Society. Closing an extended experience in the Far West, he began, in the early part of 1863, his labors as a missionary in the Army, and was chiefly with the Army of the Potomac. He seemed to be everywhere that he was most wanted. He marched with the soldiers and endured all their hardships, many times, though over fifty years of age, carrying the guns and knapsacks of younger men whose strength had failed them. All his time was devoted to personal intercession with the soldiers, who came to love him dearly. In the hospital he was as tender as a mother to the wounded men, and could often be seen feeding "the dear boys," as he called them, when they were too weak to feed themselves. Many times he took a spade and dug the grave of some soldier who would otherwise have been left unburied on the field.

A large audience gathered in the Church of the Holy Trinity on Sunday evening, December 15th, and Dr. Tyng, Jr., as he opened the service, said: "I had thought of draping the pulpit with the tokens of mourning, but a second thought showed me how impertinent it would be, for the Christian warrior is also the victor, and Uncle John Vassar has entered upon his reward."

Dr. Fulton echoed all that had been said. "To me," he said, "Uncle John Vassar is the marvel of the age. I know of at least three funeral services that are at this moment being held in his memory, and thousands of Christians all over the land are dropping tears upon his grave." He told many incidents of the old veteran's devotion to the cause of Christ, and in concluding said: "America will make of the memory of John Vassar what England

has made of the memory of Bunyan." General Clinton B. Fisk testified: "In camp and march and bivouac, in field and fight and hospital, Uncle John Vassar was a true soldier of the Cross. He was a perfect Moody and Sankey combined. His sweet voice could be heard at all times telling the praises of Jesus. When after hard days in the field the officers would say, 'Uncle John, you're tired,' his cheery voice would reply in song, 'Oh, how sweet to work for Jesus.' You will find all over this country, in homes desolated by the late war, the precious letters of Uncle John Vassar, in which the last words of dying soldiers were sent to the loved ones at home, with other words of comfort which no man knew better how to speak."

At the close of the service a committee was appointed to receive contributions to a fund to place the family of the deceased beyond all pecuniary want.

THE MUTUAL LIFE INSURANCE COMPANY OF NEW YORK,

144 and 146 BROADWAY.

NEW YORK, *November*, 19th, 1878.

TO THE POLICY-HOLDERS OF THIS COMPANY:

"*Shall Corporations shape and manage their own business, or shall their rivals dictate and manage it?*"

This Company commenced business in 1843 as a Mutual Company, and without capital. The first money it received was - - - -	$108.50
in payment of a premium.	
Ten years afterwards, February 1st, 1853, the amount at risk was - -	$17,917,418.00
And its assets and accumulations -	2,000,649.30
In June of that year the present administration began. Since that time it has issued 151,000 policies, insuring - - - - - -	550,000,000.00
It has paid for death claims, on original policies - - - -	30,700,092.00
And for death claims on additional assurance given for over-premium payments on the same, called dividends - - - - -	5,121,977.00
Its entire over-payments, called dividends, paid out in cash, or for insurance, amount to - - -	45,580,028.00
It now holds assets, consisting of Bonds and Mortgages on property in New York and adjacent States, amounting to - - - -	57,041,941.84
It owns Real Estate, consisting of its three office buildings in Boston, Philadelphia, and this city, and such as it has purchased under foreclosure of its Mortgages, amounting to - - - -	6,933,423.19
It has Stocks — United States, State, County, and City — paying interest, and worth par and over, amounting to - - - -	17,786,081.38
Its gross Assets, on the first of October, ultimo, were - - -	86,910,342.45
The amount now insured is - -	289,061,295.00
The increase of its assets in twenty-five years is - - - -	84,849,714.15

It represents more assets than any known financial institution, and twenty-one millions of dollars more than the combined capital of all the banks in this city.

Its assets are ample for all purposes, as its Annual Report will shortly show.

These are the principal figures which exhibit the history and condition of this Company. It has always met every honorable and just financial claim with cheerful promptitude. No stain, it is believed, rightfully rests upon its record.

Of all known business, that of Life Insurance requires the most forecast, as to future contingencies, and the closest attention to all the different principles and features of its management, upon which its prosperity depends. Abundant and undoubted assets are necessary to pay its claims on the one hand, which must be kept in absolute security and readiness for that purpose; on the other is the equally important duty of maintaining and keeping intact its vitality at or above the standard mortality tables, on which its premiums are based. Some Companies are believed to be so short-sighted as to neglect this second great principle of its business, while they effect to bestow uncommon attention to the other.

In view of the possible depreciation below the vital standard, by reason of the unusual number of retiring members during the last three years (for, as a rule, those who elect to retire are younger lives than those who decide to remain), it was incumbent upon the management to check this decrease by such means as would be efficient to the end sought, and the least burdensome to the existing policy-holders of the Company.

After due consideration of all points involved, embracing equity, economy and efficiency, it was proposed that thirty per cent. rebate on the first two years' premiums should be allowed to entering policy-holders, whether old members or new.

We should have been wanting in proper interest and ability, had we not foreseen the necessity for this action and provided for it.

As the members who retired sought to sunder their connection with the Company, of which they had agreed to remain members for life, the just and universally admitted principle governing all business, led us to say to each of them: "If you leave us, to our damage, you must supply the place you leave vacant by another life equally acceptable with your own." To accomplish this end, we deduct from the surrender value allowed these retiring members a sum sufficient to satisfy all the claims of the Company and existing policy-holders, upon the party withdrawing, and an additional sum to constitute a fund to replace the loss. Not one penny of the moneys contributed by the existing members went into that fund. It was a special source of accumulation, the use of which was left to the discretion of the Executive Officers in their administrative capacity, for the purpose of obtaining new members. Whatever remains beyond that necessity will go into the common fund. Whatever is used for the purpose explained, will be like the wheat cast into the ground and lost for a time but to bear a certain harvest to its owner.

No measure that we know of could have been devised which is more thoroughly just, economical or equitable to our policy-holders than this, and none that will be so advantageous and profitable to them. This we assert from a full knowledge of all the principles involved, and with unbounded confidence in the results which will be obtained.

The ability of the Company to lower its rates of premiums has been demonstrated by the past experience, and we have unwillingly taken premiums in amounts quite beyond the necessities of our business for years past. Why should we have been compelled to take the forty-five millions which we have returned to our policy-holders as over-payments, called dividends? The public, in its own time, will ask this question with emphasis. We have given back from year to year to our policy-holders all that has not been necessary to guarantee our contracts beyond question; but why should the poor man, who pinches himself to insure his life for the benefit of his family, be required from year to year to pay us a sum beyond what is necessary, the effect of which is to involve him in unnecessary commission and loss of interest? There has been no year in the history of the Company when it could not have taken premiums upon a far cheaper scale than it has done, and even then have been able to return a respectable percentage in over payments at the end of the year.

But now, when this Company proposes to benefit its policy-holders and the insuring public by a rebate for two years upon their premiums, with no present design beyond that time, and in a way in which old policy-holders are benefited and not injured, are we to be maligned and misrepresented by rival companies who club together to control the press, and send paid emissaries to this and other cities to poison the minds of our policy-holders by false statements?

We have neither leisure, disposition, nor funds to follow our defamers; but prefer quietly to state our case and leave it with those it interests.

We give this history and condition of the Company as the truest tests of its management, by these tests we are content or stand to fall.

In conclusion, we repeat the question: "Shall corporations shape and manage their own business, or shall their rivals dictate and manage it?"

Your obedient servants,

P. F. WINSTON, *President.*
RICHARD A. McCURDY, *Vice-President.*
WM. H. C. BARTLETT, *Actuary.*

FUN.

PUDDINGS just now are "current events."

THE side door of a bar-room is like a great many people's prayer-books—good only on Sunday.

A SHREWD patent-medicine man has been chasing Alex. Stephens around for three months, trying to draw a load on him with a packed carpet. He wants him for a preface to his advertisement to illustrate "before taking."

OF COURSE.—Judge (to witness, a bricklayer): "Now, Bob Trowel, you made an affidavit in this case? Witness: "I DO, SIR." Judge: "And you know what an affidavit is, I suppose?" Witness (confidently): "Yes, sir, it's the second course of bricks."

A MEDDLESOME old woman was sneering at a young mother's awkwardness with her infant, and said: "I declare a woman never ought to have a baby unless she knows how to nurse it." "Nor a tongue either," quietly responded the young mother.

"MY SON, would you suppose the Lord's Prayer could be engraved in a space no larger than the area of a nickel cent?" "Well, yes, father, if a cent is as big in everybody's eye as it is in yours, I think there would be no difficulty in putting it on about four times."

"I WANT five cents' worth of starch," said a little girl to a grocer's clerk. The clerk, wishing to tease the child, asked: "What do you want five cents' worth of starch for?" "Why, for five cents, of course," she answered, and the clerk concluded to attend to his own business.

A JUSTICE OF THE PEACE in a Pennsylvania rural town married a couple the other day, and the groom asked him his terms after the knot was tied. "Well," said the Justice, "the code allows me two dollars." "Then," said the young man, "there's a dollar; that will make you three."

SYMPATHIZING BYSTANDER (about an unfortunate man who has been knocked down and stunned by the train): "Poor man! Take him to the station—" *Injured One* (recovering): "Tyek me to th' station! What for, then? If aw've dune ony harm to yo'r engine, aw's willin' to pay for 't!"

WHILE a country parson was preaching, the chief of his parishioners, sitting near the pulpit, was fast asleep; whereupon he said, "Now, beloved friends, I am in a great strait; for if I speak too softly those at the further end of the church cannot hear me, and if I talk too loudly I shall wake the chief man of the parish."

IN the middle of a fast thing with one of the Surrey packs on a Tuesday, reports a contemporary, one of the field, who was well up in the first flight, went a tremendous cropper into a brook. The master heard the noise, looked round, saw that a disaster had happened to somebody, and, turning to the first whip, who was close beside him, said, "Who's that, Will? Hadn't we better help him out?" "Oh," returned Will, coolly, "it's only the parson, sir, and we aha'n't want him till Sunday!"

WHY, VERILY!

Why be an animated tallow-shop when Allan's Anti-Fat is a safe and sure remedy for obesity, or corpulence, and will reduce the most ill-proportioned form to a graceful outline within a few weeks. It contains no ingredients that can possibly prove deleterious to the system. A well-known chemist, after examining its constituents and the method of its preparation, gives it his unqualified indorsement as a remedy that "cannot but act favorably upon the system and is well calculated to attain the object for which it is intended."

Baltimore, Md., July 17th, 1878.

PROF'S ALLAN'S ANTI-FAT, Buffalo, N. Y.:

Dear Sirs—I have taken two bottles of Allan's Anti-Fat and it has reduced me eight pounds.

Yours respectfully, MRS. I. R. COLES.

BEFORE THE HON. JAMES HOWELL, Mayor of the City of Brooklyn, personally appeared William R. Beeston, who, being sworn, says:

My boy, Henry R. Beeston, 127 South Second Street, Brooklyn, E. D., aged seventeen years, has suffered with epileptic fits for two years. They troubled him every night, lasting over an hour, and were so severe that they reduced him greatly in health and intelligence. I had him constantly under the advice of physicians and followed their directions, but without benefit. On 3d November I took him to a physician in New York, and, discontinuing all other medicines, he put him under the use of VITALIZED PHOSPHATES three times a day. Upon this treatment his fits became shorter and less violent every night. On 9th November his fit lasted but a few minutes, and was a mere tremor with no violence. Since that time he has had no fit and is improving daily in health, strength and intelligence. He continues taking VITALIZED PHOSPHATES for relief of his nervousness.

Sworn at the City Hall, Brooklyn, December 11th, 1878.

To P. CROSBY, 666 Sixth Avenue, N. Y.

FRANK LESLIE, ESQ.: The Wheat Gluten and Cold Blast Flour Breads of the Health Food Company have done a really wonderful work upon two miserable dyspeptics—Mrs. Wilson and myself. I am confident that there are thousands of badly-nourished sufferers who only need these delicious foods to make them well. ISAAC R. WILSON, Trenton, N. J.

INDIGESTION, DYSPEPSIA, nervous prostration, and all forms of general debility relieved by taking MURRAY'S FERROZONE BEEF TONIC, the only preparation of beef containing its entire nutritious properties. It is not a mere stimulant like the extracts of beef, but contains blood-making, force-generating and life-sustaining properties; is invaluable in all exhausted conditions, whether the result of exhaustion, nervous prostration, overwork, or acute disease; particularly if resulting from pulmonary complaints. CAGWELL, HAZARD & Co., Proprietors, New York.

THE well-known and popular seedsmen, Messrs. D. M. Ferry & Co., of Detroit, Mich., are again before our readers with their annual announcement. Their catalogue, which is mailed free, is offered to all of our readers. We would advise them to avail themselves of this offer.

NOT a dark room in the St. Nicholas Hotel, of this city, all light, large and cheerful. In construction it is perfect. Its table and attendance generally are not surpassed by any in the world.

WEST BROADWAY, READE AND HUDSON STS., New York, August 24, 1877. Messrs. H. W. Johns Manufacturing Company, 87 Maiden Lane, New York. Dear Sirs,—In my application of it, as boiler and steam-Pipe-Covering, your Asbestos Felting (single and double air-chamber) gives most complete and thorough satisfaction, and is far superior to any of the various kinds of coverings that I have tried or am familiar with. I very willingly recommend it to engineers and the public generally as the best non-conductor of heat that has been put upon the market. Yours respectfully, CHARLES D. SEVERINGHAUS, Engineer for H. K. & P. B. THURBER & CO.

Keep your Bird in health and song by using SIEGERT'S FOREIGN GERMAN FOOD. For sale by druggists and cage dealers. Depot, 419 Hudson St., New York.

GRATEFUL—COMFORTING.

EPPS'S COCOA.

"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of well-selected cocoa, Mr. Epps has provided our breakfast tables with a delicately flavored beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—See Article in the Civil Service Gazette.

HOLIDAY SUPPLEMENT TO FRANK LESLIE'S ILLUSTRATED NEWSPAPER

Entered according to the Act of Congress, in the year 1878, by Frank Leslie, in the Office of the Librarian of Congress at Washington.

No. 1,214.—Vol. XLVII.] NEW YORK, JANUARY 4, 1879. [Holiday Double Number.

THE GOVERNOR'S DINNER.

By EDWARD E. HALE.

CHAPTER I.

THEY were in the old council chamber of the old State House in Boston.

In those days men were more apt to call it the Town House.

This was the old Town House, which was burned down in the horrid fire of 1712. That fire was fourteen years after the time we write about.

The old Town House stood where our dear Boston friends see their "Old State House" every day when they go down to State Street to draw their dividends.

It was in the Council Chamber of the old Town House—as I was saying when you interrupted me—that, as the Council broke up after a sufficiently stupid session, the day before Christmas, Master Danforth talked with Major Cooke, Captain Sergeant talked with General Winthrop, but Judge Sewall stood alone, while Colonel Hutchinson was talking with Lord Bellomont.

Judge Sewall was not used to standing alone, and he did not like to stand alone; all the same he stood alone, and the rest laughed and talked together.

Before the day was over, the secret came out why Judge Sewall stood alone. All secrets are sure to come out, some time or other.

The Governor was to give a dinner-party the next day, and while he had asked General Winthrop, and Master Sargent, and Colonel Hutchinson, and all the rest to his Christmas dinner, he had not asked Judge Sewall.

Judge Sewall was a little silent at his own dinner that day, and when in the afternoon half the Council came in, pretending to talk about some matter of affairs, he knew very well that that was not what they came for.

The thorn was well down in the bottom of the judge's heart, and he knew Major Cooke would drag it out before he went away.

Sure enough, as they threw on their cloaks in the ample hall of old Father Hull's house, and as they tied scarfs round their ears against the biting cold, Major Cooke asked the judge if he would be at the governor's dinner the next day.

The major knew perfectly well that the judge was not asked, and everybody knew that he was not asked. The judge said, without telling a lie, that he knew nothing of the governor's dinner. Nor did he nor what the dinner was to be. But he knew that it was Christmas Day, and he knew what a Christmas dinner was likely to be, and he knew that they knew that he knew it.

CHAPTER II.

The truth was that Governor Bellomont was as sorry not to ask Samuel Sewall as Samuel Sewall was not to be asked. But what could a man do?

Here had this town of Boston lived and thrived for sixty-nine years. And when Christmas Day had come round, men had hewed their wood and drawn their water. They had split their toughest knots and broken their hardest ice into little blocks, they had sent the boys to school and set the girls to spin, they had taken care that the dinner should be a little more plain than common, and if they heard any man whistling in the street on that particular night they set the watch to see that he was not going to a dance-house. On any other night he might have whistled as he pleased.

Only for the year or two when Andros the tyrant had been here had there been any Christmas dinners at the Governor's. And when Andros the tyrant gave a Christmas dinner, he knew very well whom to ask and whom not to ask. But now Andros the tyrant had gone.

And Lord Bellomont is not a tyrant in the least. To be sure on Sunday he goes to the King's Chapel, because it is the King's Chapel; but he goes to Thursday lecture on Thursday, and the countess goes to Thursday lecture.

Lord Bellomont was walking back from Thursday lecture one day with the gentlemen of his suite, and they passed the apothecary, lounging at his shop-door.

"Oh, my dear doctor," said the lord, "you have lost a precious lecture this morning."

"I should have gone, my lord," said the wretch, "had I been paid as well as your lordship for going."

For men will say that Lord Bellomont lives in Boston and not in New York, his other capital, because this colony pays him better than New York does.

So Lord Bellomont is no whit of a tyrant. He is a loving and peaceful Governor, who lets us have our own way if we pay him two thousand pounds a year for it, and among other things goes to Thursday lecture. Such a governor is no tyrant, and he will not ruin us even if he do have roast beef and roast turkey to eat on the twenty-fifth of December.

And Lord Bellomont and the countess will have roast beef and roast turkey, and they will have oyster-pies, too, and roast partridges, and they will have squash-pies, and cranberry pies, and minced-pies spelled with the letter y. Marlborough pyes have not yet come in.

And they will have a great plum-pudding, boiled in a bag, and when it is brought upon the table, Lord Bello-

THE GOVERNOR'S DINNER.—"THE DOOR IS PURSED GENTLY OPEN, AND A DARK FIGURE CROSSES THE GRAY OF THE TWILIGHT SKY."

Digitized by Google

mont's lackey will pour a glass of brandy over it, and, just as he stands at the door, the cook will set fire to the brandy, and he will bring it in, all blazing, to the table.

And every gentleman of the Council and every magistrate in the town will be at the dinner excepting Samuel Sewall.

Now, Samuel Sewall, the judge, has been as courtly to Lord Bellomont as any man of them all. Did not he take the countess to the top of Cotton Hill the other day? It is all dug down now, Emma, and you cannot go there. I had a good crying-fit the last time I went there when I saw the horses, and the carts, and the men who dug it down.

But that was the year I was twelve years old. If you want to see the view which Judge Sewall showed the countess, go to 15 Pemberton Square, and ask Mr. Ladd to give you the key to the attic-stairs, and put your head out of the open scuttle-way, and look around and you will see.

Judge Sewall showed the countess the view, and then he brought her down through the gateway of the garden—which opened about opposite where the Museum is now—and when she said she had been charmed with the view, he said he was glad, and might he not call the gate Bellomont Gate afterward? And she tapped him with her fan, and said:

"Why, you are quite a courtier, judge."

And then he asked her into the house, and Betty Sewall brought her a glass of better Madeira than she had ever drank in her life, on a bigger silver waiter than there was on the Bellomont sideboard. And she said pretty things to Mistress Sewall, and Mistress Sewall said pretty things to her. And this was so a few weeks ago, and yet the Governor has not asked the judge to his dinner.

The truth is, the Governor is too wellbred to ask the judge to dinner. The judge is the last of the old Puritans; he would whip any of his smallest children who cracked a walnut or ate a raisin because Christmas Day had come. And if any of the larger children went to the King's Chapel on Christmas Day to see the evergreens or to hear the singing, why, the judge would put them on bread-and-water for a week.

Lord Bellomont is a good-natured man; he does not want to hurt anybody's feelings, and so he does not ask the judge to dinner.

And, on the other hand, the judge would have died before he went to dinner, only—and this is human nature, dear George and dear Harry—only he would have liked to say "No." It was not becoming that Major Cooke should ask him if he were going, and he have to confess that he had not been asked! What will people say? What will the church-members, even, say? What will the freemen say? And what will this rough-scruff of those who are not "freemen" say?

Christmas comes on Sunday this year, and the other gentlemen, as soon as meeting is over, will wear their gay red cloaks and will loiter outside the Governor's house, so that people can see them. The major and the colonel will clatter in from the country on horseback—the major with his black boy, the colonel with that old Indian whom he has made a lackey of, to take care of their horses. Then the boys in the street will know that they go to the Governor's dinner. Then the boys will wait to see Judge Sewall's carriage; it is the only carriage in town. They know that he will be going, of course, and he will not be going. By eight o'clock Monday morning, in every barber's shop in the town the news will be told that Governor Bellomont did not ask Judge Sewall to dinner.

CHAPTER III.

FOR us, who read this story, more things depended on that gap in the table than the mortification, great or small, of the rejected guest.

The countess knew that this was a State occasion as well as the judge. The countess was a woman, and she therefore knew some things which the Earl of Bellomont did not; for he was only a man. The countess had therefore advised, and advised pretty earnestly, that the judge and his wife should be invited; the countess thought they would come, in truth. Whether they came or not, they remembered the glass of Madeira, and she did not want them to be mortified.

But the earl had been stanch, and he said, "No." He represented His Majesty, and he was not going to be rebuffed by any man, though he was a good-natured earl. All the same, the countess kept open two seats till the very last.

"I tell you," said she, "that you can do it by accident, as it were; you can do it without any fuss. You can one-half invite him, and take the rest for granted; or I shall meet her, and I will ask her, and then she will make him come."

And the earl had let it stand in this mixed-up way till the very last. This was because he was a man. But Christmas morning came, and there had been no chance, and no invitation had been given. Twenty-four plates, all marked with the Bellomont crest, had been set on the table the night before, and Lady Bellomont had only twenty guests certain, beside her husband and herself. Who should fill the two vacancies?

Thus it happened that when the governor and his party went to church that morning, the countess had to come to the attack again.

"My dear," she said, "nothing has been heard from the judge, has there?"

"Of course not," was the reply.

"Then," said the jolly countess, "never speak to me again, unless you bring some gentleman home with you. I will make Martha put on her silk dress, and she shall fill one seat, if you will only make sure to fill another; but I will not have an empty seat at my table on Christmas Day."

Whether the Governor would have remembered or not, I am sure I do not know. But so it happened that when the parson had well advanced in "Dearly beloved brethren," there was a little clatter at the door of the little chapel, and steps were heard up the little aisle. A handsome young man, whose ruffle and boots showed plainly to every girl in church that the ruffle was not cut by a Boston snip, nor the boots made by a Boston cobbler, was led up the aisle by John Beadle. He was made to sit in the form, almost empty, which was opposite the Governor's, and just in front of the reading desk. The Countess of Bellomont did not look round till they came to the Creed; but after she had looked round she looked round again; and, by-and-by, under pretense of handing to the Governor the right psalm in the Psalter, she took occasion to say:

"The young gentleman in the form opposite will do; bring him home to dinner."

And, at last, the Christmas sermon of the parson was done. It was according to the true Episcopal standard of those days—twenty minutes in length, and of no depth at all, or breadth either. The wellbred and courtly worshipers, perhaps a hundred in number, stood and waited—first for Dr. Miles, the minister, and then for the Governor, to pass. Lord Bellomont himself bowed courteously to the young stranger, who was thus pre-ordained to be the twenty-fourth person at his table.

The stranger was standing in the form of Master Turfrey. The Governor loitered a little in the porch, shaking hands with the more distinguished of the worshipers, and courteously wishing them a Merry Christmas. As Master Turfrey approached him among the last, the Governor even stepped forward cordially; and, as he put out his hand to that gentleman, he bowed again to the handsome young stranger. Master Turfrey, well pleased, named him to the Governor.

"Let me present to Your Excellency," he said, "Master Grove Hirst, one of our townsmen, who has just returned from London. He came in in Shepherd, this morning."

This meant that Master Hirst was a passenger in a ship of which John Shepherd was the master. The Governor saluted the young man courteously, detained him for a minute or two in conversation on his voyage and the news he brought from England, and thus he was able to extend to him the invitation which the countess had suggested—that he should join them at their Christmas dinner.

"You shall have as good a bit of beef as you would have had in England, Mr. Hirst, and I think, Dr. Miles, that the turkey will be better."

The young man, all amazed at the ease with which honors were distributed in the new order of things, was no such fool as to hesitate. He gladly took the goods the gods had provided.

The Governor's procession went on, and Master Hirst, who had gained audacity in his foreign travels, said with alacrity, "I think this is Judge Sewall and Madam Sewall, is it not?"

The young gentleman had never seen either of them in his life.

CHAPTER IV.

THE Governor and the parson and the countess and young Master Grove Hirst walked down School Street together, for even if the Governor's carriage had arrived—and I do not think it had—he would not have used it for so short a journey.

The Governor and the parson walked in front, and Master Grove Hirst and the countess walked behind, and behind them walked Mistress Martha Coote, and I don't know how many others of the Governor's suite.

So it made in all quite a little procession. And as the powers ordered which had any hand in the management of this story, just as they passed Master Cheever's house—the Master Cheever who kept the school in those days—they came full on Judge Sewall and Mistress Sewall and Betty Sewall and Joe Sewall and all the little Sewalls, who were walking up School Street from the old South Meeting-house towards Cotton Hill.

So all the Bellomont party had to lift their hats and drop their courtesies to all the Sewall party, and all the Sewall party had to do the like to the Bellomont party.

And this had to be done, even more carefully than another day, because the Governor had not asked Judge Sewall to dinner, and every one except Master Grove Hirst knew that he had not asked him.

Master Grove Hirst was quite at ease, because he did not know. He was quite at ease, until, as he lifted his hat for ceremony, he saw the pretty face of Mistress Betty Sewall. Here all mere ceremony vanished from wellbred Master Grove Hirst, and he bowed profoundly as he recognized the girl. And she, ah me! she was prettier than ever, as she blushed to her eyes in the sudden recognition.

Captain Tuthill was walking by her side. He was rather dull, but I don't think even he was so dull but that he observed the special politeness with which Master Grove Hirst bowed to the young lady.

You see, it was more than a year ago since Grove Hirst had seen Betty Sewall, or as much as heard her name. It was a year ago last July that Betty Sewall was on a visit with her cousins at Salem. And one afternoon, on a frolic, they had all gone over in a boat to Marblehead Neck. And there had been a clambake on the shore. And who should appear at the clambake, among other young men and maidens, but Master Grove Hirst? And Master Grove Hirst and Miss Betty Sewall—well, they had spent most of the afternoon together at the clambake.

I don't know what he said to her, and I don't know what she said to him. I dare say most of it was nonsense. Indeed, I never heard a word of it. But I am sure that this Christmas, when Miss Betty Sewall met Master Grove Hirst, she remembered a good deal of it, and I know that he remembered every syllable, and could have written it all down if it were necessary.

But the very day after the clambake, Master Grove Hirst had gone out in a brig laden with barrel-staves to Lisbon. And from Lisbon he had gone to Leghorn, and from Leghorn he had gone back to Marseilles, and from Marseilles he had gone to Lisbon again, and then he had found another brig of his father's, and from Lisbon this time he had gone to Bristol, and from Bristol he had gone to London, and from London he had gone back to Marseilles: then from Marseilles he had gone back to London again, and so it was that for the year and a half he had never heard a word of pretty Mistress Betty Sewall.

Still Master Grove Hirst had remembered Mistress Betty Sewall all the same, and I am afraid that Betty Sewall had remembered him, although she had heard no word of him in these seventeen months.

And this was the reason why Master Grove Hirst bowed so profoundly when he met the young lady. As I have said, Captain Tuthill was not pleased that Mr. Hirst bowed so profoundly, but the Captain could not help himself, and he was fain to make no remark on the occasion.

When the Sewall party arrived at old Father Hall's house, about where you stop to-day if you want to buy a plaster from Mr. Metcalf, Captain Tuthill had to bid Betty Sewall good-day. Had it been any other day but Christmas, Judge Sewall would have asked that gentleman in to dinner. For he was hospitable, and he knew that Captain Tuthill had a good estate. It would have been very queer had he not guessed also how much Captain Tuthill liked Betty Sewall. But it was Christmas Day, and by the same token that Lord Bellomont could not ask Judge Sewall, Judge Sewall could not ask Captain Tuthill to dine.

So the captain went woefully away.

CHAPTER V.

AND so it was that the Reverend Dr. Miles, and Mr. Grove Hirst were the first guests to arrive at the Governor's dinner.

But it was not long before generals, and colonels, and judges, and their wives began to appear. They were all a little frightened, perhaps; for they knew, every mother's son of them, and every father's daughter of them, that their fathers and mothers would have died before they would have bowed down to such idolatry. But they had quieted their consciences in some way, and here they were. The men rubbed their hands in front of the cheerful hickory fire. The women gathered in little knots, scrutinized each other's dress, and said little.

"We should treat these gentlemen well, dame," whispered the Governor, as Wait Winthrop and Mr. Addington came in. "They give us our bread."

"Never fear me with the gentlemen," said the jolly countess; "only you take care of the ladies."

And, to tell the truth, the earl's share was harder than the countess's. But he did his best, and before long he had the pleasure of seeing all the twenty-four chairs filled. Master Grove Hirst, as the last comer, and of the lowest rank, sat half way down the table. He had taken into dinner Miss Martha Coote, a cousin of the Governor's—the same lady who would have been overseeing the cook in the kitchen had Madam Sewall and her husband come to the dinner.

The talk went on as briskly as it might. But where there is a little awkwardness at the bottom, even a cordial earl and a jolly countess find that things drag a little. They had pounded away on the last news from Captain Kidd—on the messenger who came from the Penobscots on Thanksgiving Day, on the reason why wheat had been blasted, or the misfortune to the oysters in the Plymouth colony. The Governor had kept the Madeira going pretty freely, and the dame had pressed everybody to eat turkey from the thirty-five-pounder before her, till they could eat no more.

At last, in despair, the earl spoke down the table, where Mr. Grove Hirst had been keeping up small-talk with Miss Martha Coote.

"Did you see the Czar, Mr. Hirst, in London?"

"I had very good luck, my lord. He came on board Captain Shepherd, with a party of Muscovites. They wanted to see some of our New England ways."

"Ah, ha! Indeed! So you could teach the wild bear a thing or two."

"Did he hug very hard?" said the countess, from her end of the table.

"Not so hard but that I am here, my lady."

To say the truth, they all liked the good Jamaica our captain gave them; and when he treated with some figs we had on board, they ate them as Mashpee Indians would have done. Their tooth is as sweet as any savage's."

"I like a good fig myself," said the earl, "and I hope your good friend Shepherd has not given them all to the Czar."

At this there was a little laugh, and Mr. Hirst hastened to say, that he was sure Captain Shepherd would give the earl a chance to see what cargo he had brought with him. And so a safe subject was well introduced, and what with Peter the Great, and the fire at Whitehall, and Lord Portland's mission to France, the dinner went forward bravely, till the plum-pudding and the burning brandy came.

And before the dinner was over Mr. Grove Hirst was in prime favor with the earl and the countess, and every counselor and every magistrate knew it. Pretty well for a young man of twenty-three years old, who had followed the sea for half his life and had never dined with a governor before. But such are the chances on which turn the fate of kings and of nations. What would have happened to Mr. Grove Hirst if Judge Sewall had been asked to dinner, I am sure I do not know!

CHAPTER VI.

BETTY SEWALL had made very short answers to Captain Zachariah Tuthill as they walked up the hill together, and I am by no means sure that she knew what she said to him. I think she would have known if she had not met Grove Hirst. But, to tell the truth, the moment she saw him her mind ran back to the Marblehead rocks and to that pleasant Summer afternoon.

It was only a day or two after, that Betty Sewall's father went round to see Mr. Mico. He pretended he went to inquire about some lumber which Mr. Mico wanted to sell. But he did go to inquire about Captain Zachariah Tuthill.

Mr. Mico said that he never heard any ill of him. He said he was in good business and like to be in better. He said his estate was six or seven hundred pounds. He said if he had a sister whose father was going to settle a thousand pounds on her, he would be glad to have Captain Tuthill ask for her. This was all Judge Sewall got from Mr. Mico, and this the judge told his wife, and this Madam Sewall told Mistress Betty. But I appeal to any young lady who read FRANK LESLIE'S ILLUSTRATED NEWSPAPER, to know whether she thinks this amounted to a great deal. If Captain Tuthill had been tender and entertaining, and unaffected; in short, if he had been "nice," this would all have been very well. But as it was, to know that old Mr. Mico had never heard any ill of him was certainly very little.

"Why," said Miss Betty, pertly, but truly, "I do not suppose Mr. Mico ever heard any ill of old Rocket."

Now old Rocket was the Indian who cleaned the judge's boots, and split the wood for the judge's fire.

But it made no difference what Mistress Betty said. Thursday night came round, ten days after Christmas, and, after the candles were lighted, Betty found herself sitting alone. Her father and mother had gone over to Mr. Willard's, to see about Mrs. Moody's funeral. So the judge said; but Betty knew it was so they might be out of the way. None of the boys or girls were at home, and Betty knew that they had been sent off. She was "mad as fire," as she told Eunice Scott afterwards; but the poor girl could not help herself, or thought so. So at seven o'clock came the knock at the front-door, and then that grinning Dinah showed in Captain Zachariah Tuthill. He was got up in his best sailor finery. A gold chain from the Congo coast hung at his fob. A great turquoise blazed on his finger, and his ruffles, said Betty, when she told Eunice the next day, looked as if they had been starched by the Queen of Ashantee.

Captain Tuthill urged his suit a good deal as he might have urged the men in the tops to take in the top-sail in a gale. At least, so Betty pretended, when she saw Eunice. I am afraid Betty exaggerated. But on the other hand I am afraid he was a little peremptory. As for Betty, she was at first silent, then she screwed herself up to the point. She succeeded in keeping her temper, and she succeeded also in saying, "No."

Then the captain was more peremptory.

Betty was still civil, but she was as firm as the rocks below Mr. Eliot's meeting-house.

Then Captain Tuthill was indignant, and talked about what her father had said, and what Mr. Mico had said, and what he had expected. Then Betty's wrath waxed hot. She told him that he didn't know how to speak to a gentlewoman. She stood up and opened the door and asked him to go.

And when the Captain blundered out an apology and talked about his love for her, the girl's rage upset her completely. She told him that if he staid in that room a moment longer she would call old Rocket, and old Rocket should put him out of the door.

This was outrageous in Miss Betty, but, as has been said, she had been put in an outrageous mood. Captain Tuthill went out of the door without Rocket's assistance. Then Betty Sewall ran up crying to her room and flung herself on her bed.

CHAPTER VII.

MEANWHILE, Master Grove Hirst had been following his hand, as the ungodly say. But no such wanton expressions were spoken or heard in circles where Betty Sewall moved.

On Monday morning, a package of the choicest figs had gone to Lady Bellomont with Mr. Grove Hirst's respectful duty. The same afternoon, a box of a dozen bottles of Alicant went to Lord Bellomont, to his private room at the Town House, with Mr. Grove Hirst's humble respects to His Excellency.

Within a day or two, Mr. Grove Hirst had been sent for to see His Excellency. His Excellency had given the young man a very courteous reception; had talked with him about English politics; had asked about his next voyage, and in every way had shown that he would be his friend. Nay, he had asked him to call and see the countess, and this the young man was fain to do. And this time the bright young courtier asked if he might have the privilege of presenting to Mistress Martha Coote a little box of feathers which he had brought from Nantes with him. He was told that they were quite the *mode* at the French court.

Really, Master Hirst, for a youngster who went to Nantes to barter salt codfish for olives, you are coming on very well!

And Judge Sewall saw Mr. Grove Hirst once and again at the Council Chamber. But the audacious youngster could contrive no way in which to be presented to Judge Sewall. The wound in the judge's heart was too sore. All the town knew who took his place at the Governor's Christmas party.

In the judge's eyes Mr. Grove Hirst was, to all men, the visible symbol of his disgrace. Whatever other man the judge would speak to in the little town, he would not speak to Mr. Grove Hirst. And, as you know, the poor judge has many things just now to make him testy. Here is Mr. Mico enraged with the treatment of his friend. Here is Captain Tuthill coming in, three times a day, to know when he may see Mistress Betty again. And Betty's eyes are red, and her cheeks are pale every time the judge sees her. Every way the poor judge is very unhappy. But, all the same, he blunders on, for he is only a man, though he be a magistrate; and he tells Captain Tuthill to try again. He tells him that "faint heart never won fair lady." And Captain Tuthill sends round to Madam Sewall, with his respectful duty, a Panama basket with two ostrich eggs in it, and some cowries and other shells. And Betty Sewall laughs like a wild creature, and says this is what the King of Ashantee—for so she chooses to dub Captain Tuthill—has sent for purchase money. Mark you, I do not know that Captain Tuthill was in the slave-trade. I only know that Betty Sewall said he was.

Poor Betty Sewall! I can almost forgive her if she were a little enraged. The week before Christmas she did not speak of Captain Tuthill as if he were the King of Ashantee. When Eunice Scott, and Miriam Addington, and Esther Aspinwall, and the other girls, talked of Captain Tuthill, whom they had met at a husking-party at the Williams's, in Roxbury, nobody had called him the King of Ashantee. And even on the morning of Christmas Day, when he called at the judge's house, and walked down to meeting with Madam Sewall, nobody called him the King of Ashantee. And, when meeting was over, and her father and mother went first, nobody called him the King of Ashantee. It had only been since she met Grove Hirst that day that she had called him the King of Ashantee.

Digitized by Google

"And what was Grove Hirst to her?" the poor girl kept saying. "Why should she be thinking of Grove Hirst morning, noon, and night, and between whiles? Grove Hirst showed no signs of thinking of her! Here it was a fortnight or more since Christmas. All the other girls had seen Grove Hirst, and she had not seen him." Poor Betty did not remember that she would not go to Madam Sergeant's quilting, and that it was after the quilting that the other girls saw him. Poor Betty did not know that Grove Hirst was at meeting on New Year's Day, and waited at the wrong door, in hope of at least bowing to her again. Poor Betty forgot that she would not go to meeting in the afternoon. Poor Betty forgot everything but that people wanted her to marry the King of Ashantee, and that she hated him!

CHAPTER VIII.

AND Madam Sewall had to tell Betty that the captain was to call again. Betty was very wild; she would only say that she expected him—that after he had paid the ostrich eggs he was entitled to his wife. Poor Dame Sewall tried to laugh at this. She would have soothed Betty if she could, but Betty would not be soothed. Her mother told her to be ready in the evening to see him. It was a very quiet table at tea-time, you may be sure; and in the evening, at last, he came.

But where was Betty? She was here just now. There is the stocking she was mending, and her ball of yarn. The captain looked round meekly; Madam Sewall was courtesy itself, and so was the judge. At a nod from their mother, the children took their books into the kitchen. Talk dragged a little, and at last the judge said, "Will you call Betty, my dear?"

So Madam Sewall went to call Betty, and at last she called very loud; but no Betty came. And Madam Sewall sent the boys to Mr. Cotton's, and even as far as Captain Southack's and the Endicotts'. The boys were to say that their sister must come back for a very particular reason. The girl's hood and her hat were in her room. Madam Sewall came back with an anxious look, and said Betty would soon be there.

And Judge Sewall and the captain droned on and on about cowries and Congo and the middle passage. And Betty did not come at all. The captain staid an hour, and went away in a rage.

Then Madam Sewall told her husband, and then he was well frightened. He put on his cloak and went out; he even demeaned himself to ask the watch if they had seen her. Poor man! He went down to the dock and looked weakly over. There was a sort of joy to him to see the ice, which he had forgotten. But how many coves there were, where a wild girl might run down upon the ice, and who should say how far she would go then?

Poor Judge Sewall! He came home sadder than ever; and as he passed the Governor's house there was music and dancing. Could they dance so and his poor Betty stark and cold in the bay yonder?

"No, Hannah, I have not found her!"

"And she is not here!" sobbed his poor wife.

So they sat an hour, or sat and stood, or they walked the room, looked out at the door, and sat again.

It was not till the clock pointed to eleven that quietly the door opened and Betty came in.

"My dear child, where have you been?"

"Where should I be?" my dear mother. "I have been sitting in the coach in the coach-house!"

Was the girl stark mad?

No, I think she was not stark mad; but I think she would have been had she not gone into the coachhouse. Sometimes our good angels take better care of us than we take of ourselves.

When the horrid knocker sounded, when the judge went into the hall to meet his guest, when her mother passed round and snuffed the candles, Betty had stepped out at the side-door, run through the back entry, and, wholly without being noticed by Dinah or by old Rocketts, run across the plank path to the coachhouse, where stood the judge's carriage. The carriage was crowded on one side, that the sleigh and the "booby-hut," as the Boston of that day called a coach on runners, might be ready.

The girl caught up a bear-skin and wrapped it round her, and sank into the corner of the carriage, sobbing.

For two minutes there was dead silence. Then, tap—tap—tap at the door.

Betty did not breathe.

Tap—tap—tap.

Still she made no answer. They had driven her to the walls, and now they might send for the watch or the sheriff. But she would not surrender.

Tap—tap—tap, and then the door is flung open.

A man comes in. Betty does not move. He crosses the light of the open doorway. She does not breathe.

"Mistress Betty, Mistress Betty. Can I not serve you in any way?"

No answer.

"I beg your pardon for breaking in on your privacy. But if you knew how I had sought to see you. Indeed, Mistress Sewall—I was—I was watching your window from the hill-top. I saw you cross the court—and—and I made so bold as to come in."

The girl did not speak then. But she sobbed. And the young man knew where she was, and came where he could speak in low tones.

She sank back in the great carriage, sobbing. The young man did not know what to do, and he did the right thing without knowing it. This was because he acted on the impulses of a gentleman. Grove Hirst turned to the open sleigh beside him and took out a heavy wolf-skin. He wrapped it around the lady, as if he were making her ready for a sleigh-ride. He asked her if her head rested easily, as simply as if it were a matter of course that she should be sitting there.

"Oh! dear, yes," stammered the poor girl. And then she rested, and after a moment, "Now please leave me, leave me alone."

"I will leave you, if you say so," said the young man respectfully, "but I cannot leave you till I tell you why I came. It is not only since Christmas Day, it is since that day at the beach, that I have thought of you, and hoped for you, and prayed for you, every hour of my life, Mistress Betty. Every day since I landed here I have wanted to say as much to you, but your father is displeased with me, I know not why. I sent a basket of fruit to you, and he sent it back again. I made bold to send a letter, and the Indian brought it to my lodgings again within an hour. If this is at your order, I will receive your judgment like a man. But I am proud, and I will take my fate from no lips but yours."

Betty had sprung up in the carriage, and had her foot upon the step.

"They sent back your letter?" cried she, "then I am a prisoner indeed!"

For an instant the young man was as happy, perhaps, as he ever had been in his life. But for an instant only. The girl had fallen back on the seat and was sobbing, almost hysterically. The youngster did not know what to do or to say, to comfort her.

"Shall I call your mother? shall I call your maid?"

"Call nobody. Do not speak aloud," said Betty, almost whispering. And then when he hesitated a moment, "I am very foolish, do not think I am bold," and she laughed, "for I am frightened to death. It is because I am frightened that I say what I say. Please do not go away," and she laughed again. "That's a pretty speech for a girl to make, but I am so frightened. I must stay here. Nobody must know it. And I dare not stay here alone."

Now is your chance, Mr. Grove Hirst, to show yourself what you are—a gentleman through and through.

The youngster bowed most respectfully, as he might have done to his queen. "I am so glad I can serve you," he said, in a whisper. "I will stay till you bid me go. Are you sure you are warm?"

And once more, without a single allusion to what he had said of his own passion—without presuming, even in a breath, to inquire as to her secret, he assumed the tone which he might have taken if she were Mrs. Martha Coote—if she were sitting in a chair at the Governor's and he standing at her side, with a hundred people looking on. In a minute the girl had recovered her composure in the contagion of his. In a minute more she had almost forgotten where she was, as the young man skillfully used up the time in inquiries about their Salem friends and in other commonplace. And when she was at last at ease, and did forget herself so that she could speak like the gentlewoman that she was, he cherished every word, so simply but so grandly! And he answered what she said about his travels so modestly! And then what he said—it was just what a gentleman should say. It was what a gentleman should have seen—it was told as a gentleman should tell it.

Ah, me! how the time flew by! It is absurd to say they forgot where they were, but the truth was they often did forget it. Please to remember that he had been waiting for this hour for a year and six months more. They both started when the hall-clock struck eleven.

"It must be ten o'clock," said poor Betty. "He must be gone now. I will go in."

Grove Hirst led her to the door of the house.

"When may I have the honor of waiting upon you?" said he.

"That will be for my father to say," said Betty, as proud as ever.

CHAPTER IX. AND LAST.

CAPTAIN TUTHILL came the next day, and spoke with Miss Betty in her father's presence: but nothing came of it. The next day he came again; but there was company, and the judge sent him away and bade him come again. I am sure I do not know how often he would have come, but that one day, after the Council, the Earl of Bellomont, with great cordiality, asked Judge Sewall if he would stay a moment for private conference. He then told the judge that he wanted his confidential advice in regard to that knotty matter about the title to Martha's Vineyard. "Young Hirst tells me," he said, "that your notion of such things is worth more than that of a dozen of our friends here, and that all the province says so. I had guessed as much already. They will all be gossiping if I keep you here. Could you and Madam Sewall come and take pot-luck with us to-morrow at dinner? And bring your pretty daughter. The countess has taken a fancy to her. Then people will not think that we mean to talk business."

The judge walked on air as he went home. But when they went to the dinner the next day, he did not walk on air—they rode in the coach; and as her father put the wolf-skin over Betty's knee, she remembered who was the last person to wrap it round her.

It was not quite a family dinner. Besides the Governor's household, was Master Grove Hirst. And at the beginning of the Martha's Vineyard conference, Master Grove Hirst was called in; but long before it was ended, he was sitting by Betty Sewall's side, while Lady Bellomont and Madam Sewall and Mistress Martha Coote discussed the best recipe for diet-drink.

What did he say to Betty Sewall?

I am sure I do not know; I only know that the Hirsts of to-day are his great-great-great-grandsons, and hers too. I believe his courtship had its ups and downs; but in her older years she used to tell the children on Christmas Days that none of them would have been there if her father had been bidden to the GOVERNOR'S DINNER.

The Shadow Dance.

AS all constitutions are not strong enough for outdoor amusements, and Santa Claus is too kind-hearted a genius not to care for these, and to provide for the tender plants that require the atmosphere of the drawing-room, *paterfamilias* shall not call on the monarch of the closing year in vain when he requires appropriate recreations for the little ones, who, at festal seasons have vague longings for strange enjoyments, but forthwith shall be supplied with the means of gratifying the infant appetite for wonder. Magic lanterns are at hand, and many another apparatus, profuse of grotesque *figure-antics* that appear and vanish, causing intense amazement and provoking obstreperous mirth. But much more convenient than most of these is the Shadow Puppet Show, where, by a simple arrangement on the illuminated screen, the shadow of the cardboard figures can be cast, and made to perform all manner of eccentricities. Here you may see Punch and Judy dance the most fantastic of "hops," both curiously and furiously—dance, in a word, "like mad"—tossing about their legs and arms in preternatural fashion, for surely no man or woman of real flesh and blood could ever make so queer a use of either. They put the goblin Puck to shame, and make Queen Mab and her court blush with envy and rage. And yet they are but shadows of pasteboard, impaled on wires and move briskly about under the direction of a clever mortal. If our young readers desire to pass a pleasant evening, let them "rig up" a Shadow Puppet Show and peals of laughter will crown their efforts.

Janet's Hair.

Oh! loosen the snood that you wear, Janet,
Let me tangle a hand in your hair, my pet;
For the world to me has no daintier sight
Than your brown hair behind your shoulders white,
As I tangled a hand in your hair, my pet.

It was brown, with a golden gloss, Janet,
It was finer than silk of the floss, my pet;
'Twas a beautiful mist, falling down to your wrist;
'Twas a thing to be braided, and jeweled and kissed;
'Twas the loveliest hair in the world, my pet.

My arm was the arm of a clown, Janet,
It was sinewy, bristled and brown, my pet:
But warmly and softly it loved to caress
Your round white neck, and your wealth of tress,
Your beautiful plenty of hair, my pet.

Your eyes had a swimming gloss, Janet,
Revealing the dear old story, my pet!
They were gray with that chastened tinge of the sky,
When the trout leaps quickest to snap the fly,
And they matched with your golden hair, my pet.

Your lips—but I have no words, Janet—
They were fresh as the twitter of birds, my pet;
When the Spring is young and the roses are wet
With dewdrops in each bosom set,
And they suited your gold brown hair, my pet.

Oh! you tangled my life in your hair, Janet!
'Twas a silken and golden snare, my pet;
But so gentle the bondage, my soul did implore
The right to continue a slave evermore,
With my fingers enmeshed in your hair, my pet.

* * * * * * *

Thus ever I dream that you were, Janet,
With your lips, and your eyes, and your hair, my pet;
In the darkened and desolate years I moan,
And my tears fall bitterly over the stone
That covers your golden hair, my pet.

JOAQUIN MILLER.

From Thanksgiving to Christmas.

By Amanda M. Douglas.

KITTY TREVOR walked slowly along that chilly November day. To-morrow was Thanksgiving. For a moment a bitter thought came into her heart. What had she to give thanks for? The copying had stopped. Welsh & Bender were using a type-writer and liked it. Their young man was to do the copying for several houses from which she often had chance work. And Madame Fleury had said, an hour ago:

"I am very sorry, Mrs. Trevor, but I do not believe I shall have any more flannel embroidery. People are getting so poor and the machine-work interferes; then my daughter does a good deal. Still, you might call in a week or two before Christmas."

She had in her poor worn little pocketbook, four dollars and sixty cents. They must have coal on Saturday. There was some flour, some apples, and a little bacon in the house. How tempting the Thanksgiving turkeys looked! She had intended to buy one and a bottle of wine for Dick.

"Feed him up well, Mrs. Trevor," the doctor had said. "Good, generous living, will do more for him than all my medicine."

All the long Autumn Dick Trevor had been wrestling with typhoid fever, brought on largely by light living and discouragement. Five years before he had been a happy man, busy, prosperous, hoping in time to own the little house to which he had brought Kitty as a bride. They had planted the roses and vines and trees together; they had welcomed three little baby lives, and giving one back to God, amid many tears. They thought then there could be no deeper sorrow save that of losing each other.

But a sudden blow had fallen. Joe Hildreth, whom he loved and trusted like a brother—laughing, gay-hearted Joe, whose truth and honor he would have sworn to—had suddenly disappeared, after robbing his employer's safe. Dick Trevor was one of his bondsmen. He had meant in a year or two to lift the small mortgage on the house; now it had to be sold. For a year longer they hired it; then Dick's firm failed, and for months he was out of employment. Car-fares were quite an item, so the next Spring they moved in town. But it had been ill-luck all the time. Loss of employment, low wages, and general discouragement. All the Summer there had been nothing but chance jobs, then the fever, and he was still weak and miserable.

Kitty's was a gay, buoyant, fun-loving nature, interested and pleased with the least trifle. As a girl, she had been the prettiest dancer in all Newbury, and it seemed as if the twinkling feet always danced about in pure gladness.

She was beautiful, too, and all the stress of trouble and work had not made her old or ugly. True, she had grown graver, and the merry laugh was not heard so often: but the light, elastic step, the slender figure and trim dress seemed always the same. The gloves and boots did grow shabby, I think, but the air about her compensated.

For the last two years she had eked out their slender pittance by various devices. Now it appeared as if all was to be swept away, work was so dull, prices so small. She stopped at a shirt-store—no, they would starve on that. If she *could* go out washing, and the dollar and a quarter a day looked large to her.

What was this? A flaming advertisement for women still young and pretty. Could any one walk that difficult path and keep pure in soul?

Some spell stronger than herself urged her in.

Fifteen minutes later she came out with a scarlet face and glowing eyes.

"Never!" she said, shutting her lips firmly over her dainty white teeth. "Never that; oh, my God!"

Late that evening she crept out to market and bought a poor tumbled-about chicken that others had refused; a few cranberries, since Dick could have no wine; and a bit of celery—all at a bargain.

How she made so bright a Thanksgiving she could scarcely have told. Nell and Joe went out to a children's party, dressed up in their brave Sunday clothes, Nell's gown a piece of her mother's old one; the coal the next day, some medicine, and then—must they begin to sell off everything they held sacred?

All the next week she crocheted early and late until her eyes ached. No, she could not support the family on that. Then the temptation came back to her. Why should they go hungry and cold? Why should little Joe be compelled to give up school for want of a pair of shoes? There was money to earn. A month, perhaps, God might send something by that time. She could not see poor Dick waste away before her eyes. So she dressed herself in her shabby silk and went out.

"Nelly," she said, a few evenings later, as she stood wrapped in a waterproof, and a thick blue veil tied over her hat, "Nelly, I have had an opportunity to earn a little money. A class meets every evening around in Bond Street, and—and——" how her voice faltered! Could she tell the child an untruth? Then she cleared her throat. "I depend upon you to take care of papa, and wait upon him, and at eight o'clock put little Joe to bed. At nine you may go yourself. I shall be home a little after ten."

"Oh, is it the Bond Street School?" cried Nelly, eagerly. "Jennie Dailey's two sisters go there."

"It is not the public school, my dear," was the grave reply. "Kiss mamma good-night, dear little Joe."

With their kisses warm upon her lips what harm could befall her?

Twenty minutes past ten she was home again flushed and bright. Two dollars in that little while! Next week two dollars and a half!

"So you're teaching evening school, Nelly tells me," Dick said, reproachfully, a few days after this.

"It is only a temporary matter—about a month. I was very glad to have the chance just now."

Why did she turn her face from him? And she had always been so ready to plan everything with him.

"You might have mentioned it," he returned, moodily, wounded by her manner.

"I thought it would worry you a little, Dick. The copying fell off, and—this happened to fit in. And I take a street-car to come home, from the corner of Bond and Walnut."

"And there's the theatre on Strang Place."

"Still, I think a woman who goes quietly about her business is seldom molested. In a street-car you are certainly safe—if you have no pocket to be picked."

With that she gave a little laugh.

"Yet, I *do* hate to have you out alone in the evening. I wonder if I am never to be anything but a burden and a clog on you? Kitty, has good fortune, or Providence, or whatever you call it, forsaken us?"

"Dick!"—and now she raised her lovely eyes, swimming in tears.

"I can't help it!" he flung out, despairingly. "What evil have we done that all this should come upon us? I'm sure I have always been honest and upright, never defrauded a man of a penny or an hour's labor that was due him; and yet I have seen others preferred to me whose record was anything but clear, and every day some defaulter or thief goes unpunished. Yet do we fare any better, being honest? It was bad enough to be well and out of work, but this——"

"Dear Dick, it will all come right some time—it must."

"In the grave, maybe!"—bitterly.

She kissed him. He was too sick and morbid and despondent to be argued with.

Out of her first twelve dollars she bought him his wine again. She fed him on generous beef-steaks and dainty little messes, to tempt his appetite. He was improving.

"We shall have you out by Christmas," said the good doctor.

Something curious went over Kitty's face. He had been so used to its varying emotions. This surely was not a gleam of pleasure; he would have called it a spasm of fright, if he was in the habit of questioning. And yet, now that he thought of it, she *had* acted rather strangely of late—sometimes breaking out into a burst of gayety and humming a snatch of opera music. Then, too, she was so peculiarly reticent about her school.

Dick Trevor sat there in a rather faded dressing-gown, though it was whole, and his wristbands were scrupulously clean. Kitty had taken up her crocheting and lapsed into silence. He studied the face. How pretty it was!—a trifle thinner than in girlhood, but with the lovely contour of cheek, chin and snowy throat; the clear, bright complexion; the dainty ear; the shining chestnut hair, a mop of riotous curls and waves, and the dewy, lucid eyes. Ten years ago, almost, he had married her. She was twenty-eight, and yet she seemed to have the glamour of perpetual youth about her. She was one of the kind of women who could throw off care, and be merry in a mo-

ment – laugh while the tears were yet in her eyes. Still, hers was not a shallow or heartless nature.

If he were dead! A pang wrenched his very soul. Would another kiss her dimpled lips, would another man draw her to his heart with a fond clasp, and whisper words of tenderness in her ear? Before their marriage he had been jealous of her once: he shivered now with the remembrance of the torture.

"Mamma!" exclaimed Nelly, flying into the room, "think of it, a whole week of holidays. Christmas is on Wednesday, you know, so school closes on Tuesday, and does not begin until the week after, on Thursday. Will your school have a holiday, too?"

"No," answered her mother, quietly. "Grown people do not care so much for holidays."

"But can't you get off Christmas Eve. I wish you could take Joe and me down town after the lamps are lighted. You know you did last year, and it was so merry! And we went to the store to meet papa. Oh, mamma, please do ask for that evening. You have never been away a Christmas Eve."

"My child, I cannot." Then she suddenly glanced up. "Why, yes, Nelly, we could go out a little after five and stay an hour."

"Oh, delightful!" Then with a child's half shy, eagerness: "I've been saving up my money and I want to buy something."

"Very well, we will go."

"And how funny mamma that there is school on Saturday night," Nelly went on, in a surprised tone. "Why, I never thought of it before. I should not like to go to school Saturdays and all."

Kitty Trevor's face was scarlet. Her husband saw the flush, and the sudden paleness.

"It ought not to be called a school at all. There are various things taught to people who cannot attend in the daytime. Yes, Joe dear, I think Nelly will go out with you and your sled a little while," to the child who stood beside her.

"Nelly."

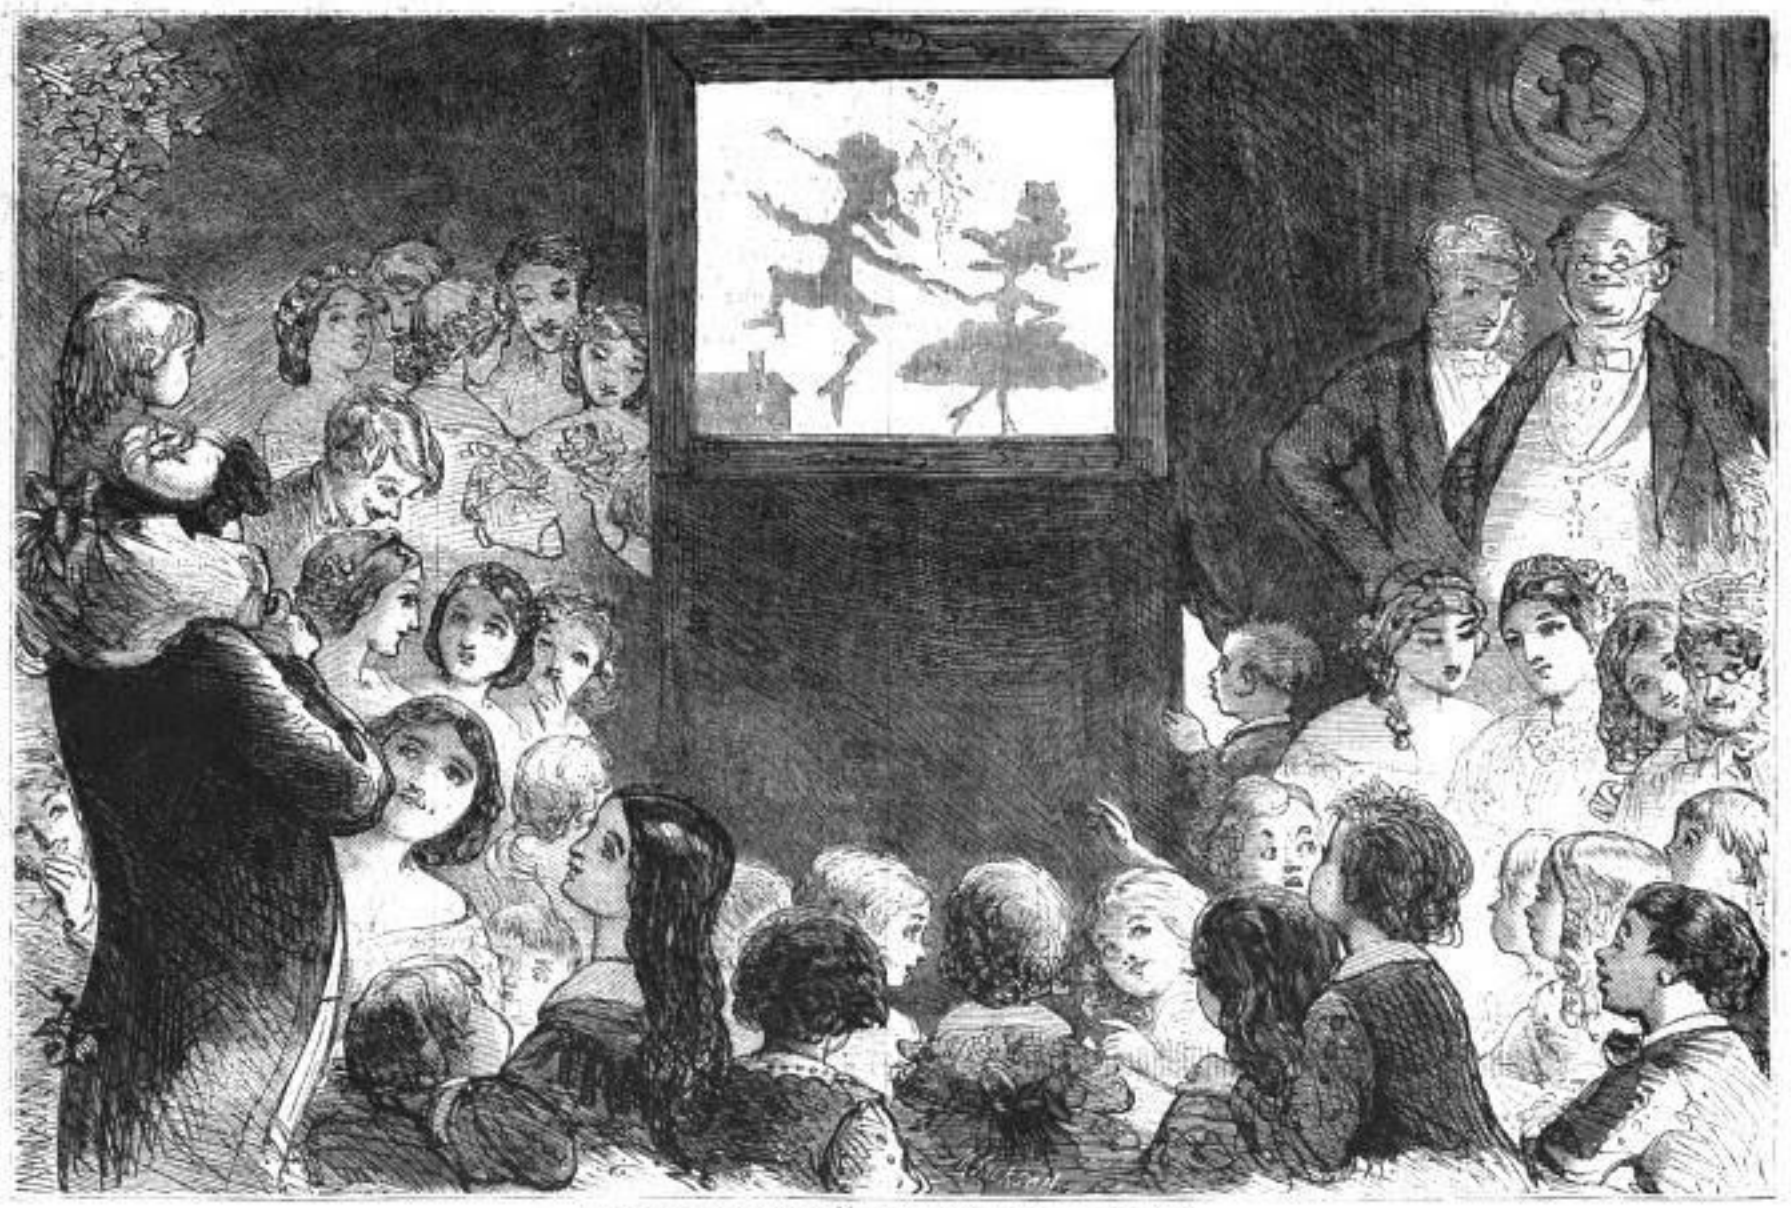
"Yes, mamma."

She glanced up at Dick after the children had left the room. He was watching her intently. An embarrassment akin to terror overspread the fair face.

She had some secret, he knew it then. Pride and anger surged up in his heart. It was not about money, she had told him freely the amount of her earnings. And he knew now there was no schoolteaching on these evenings. What did she do? Surely she would not be afraid to tell him of any honorable occupation! What was she blushing about now?

He was well enough to walk out a little in the sunshine, but the doctor had said, "Be careful of dampness and night air." And yet know this secret he must, even if it cost him—what? Life itself? What was life worth if she had deceived him? Something surely had come over her during the past few weeks—a distance had grown up between them. If she ceased to care for him—no, it was not that, she *did* care in the way of providing comforts, but if he had not her whole heart—why, then, God help him!

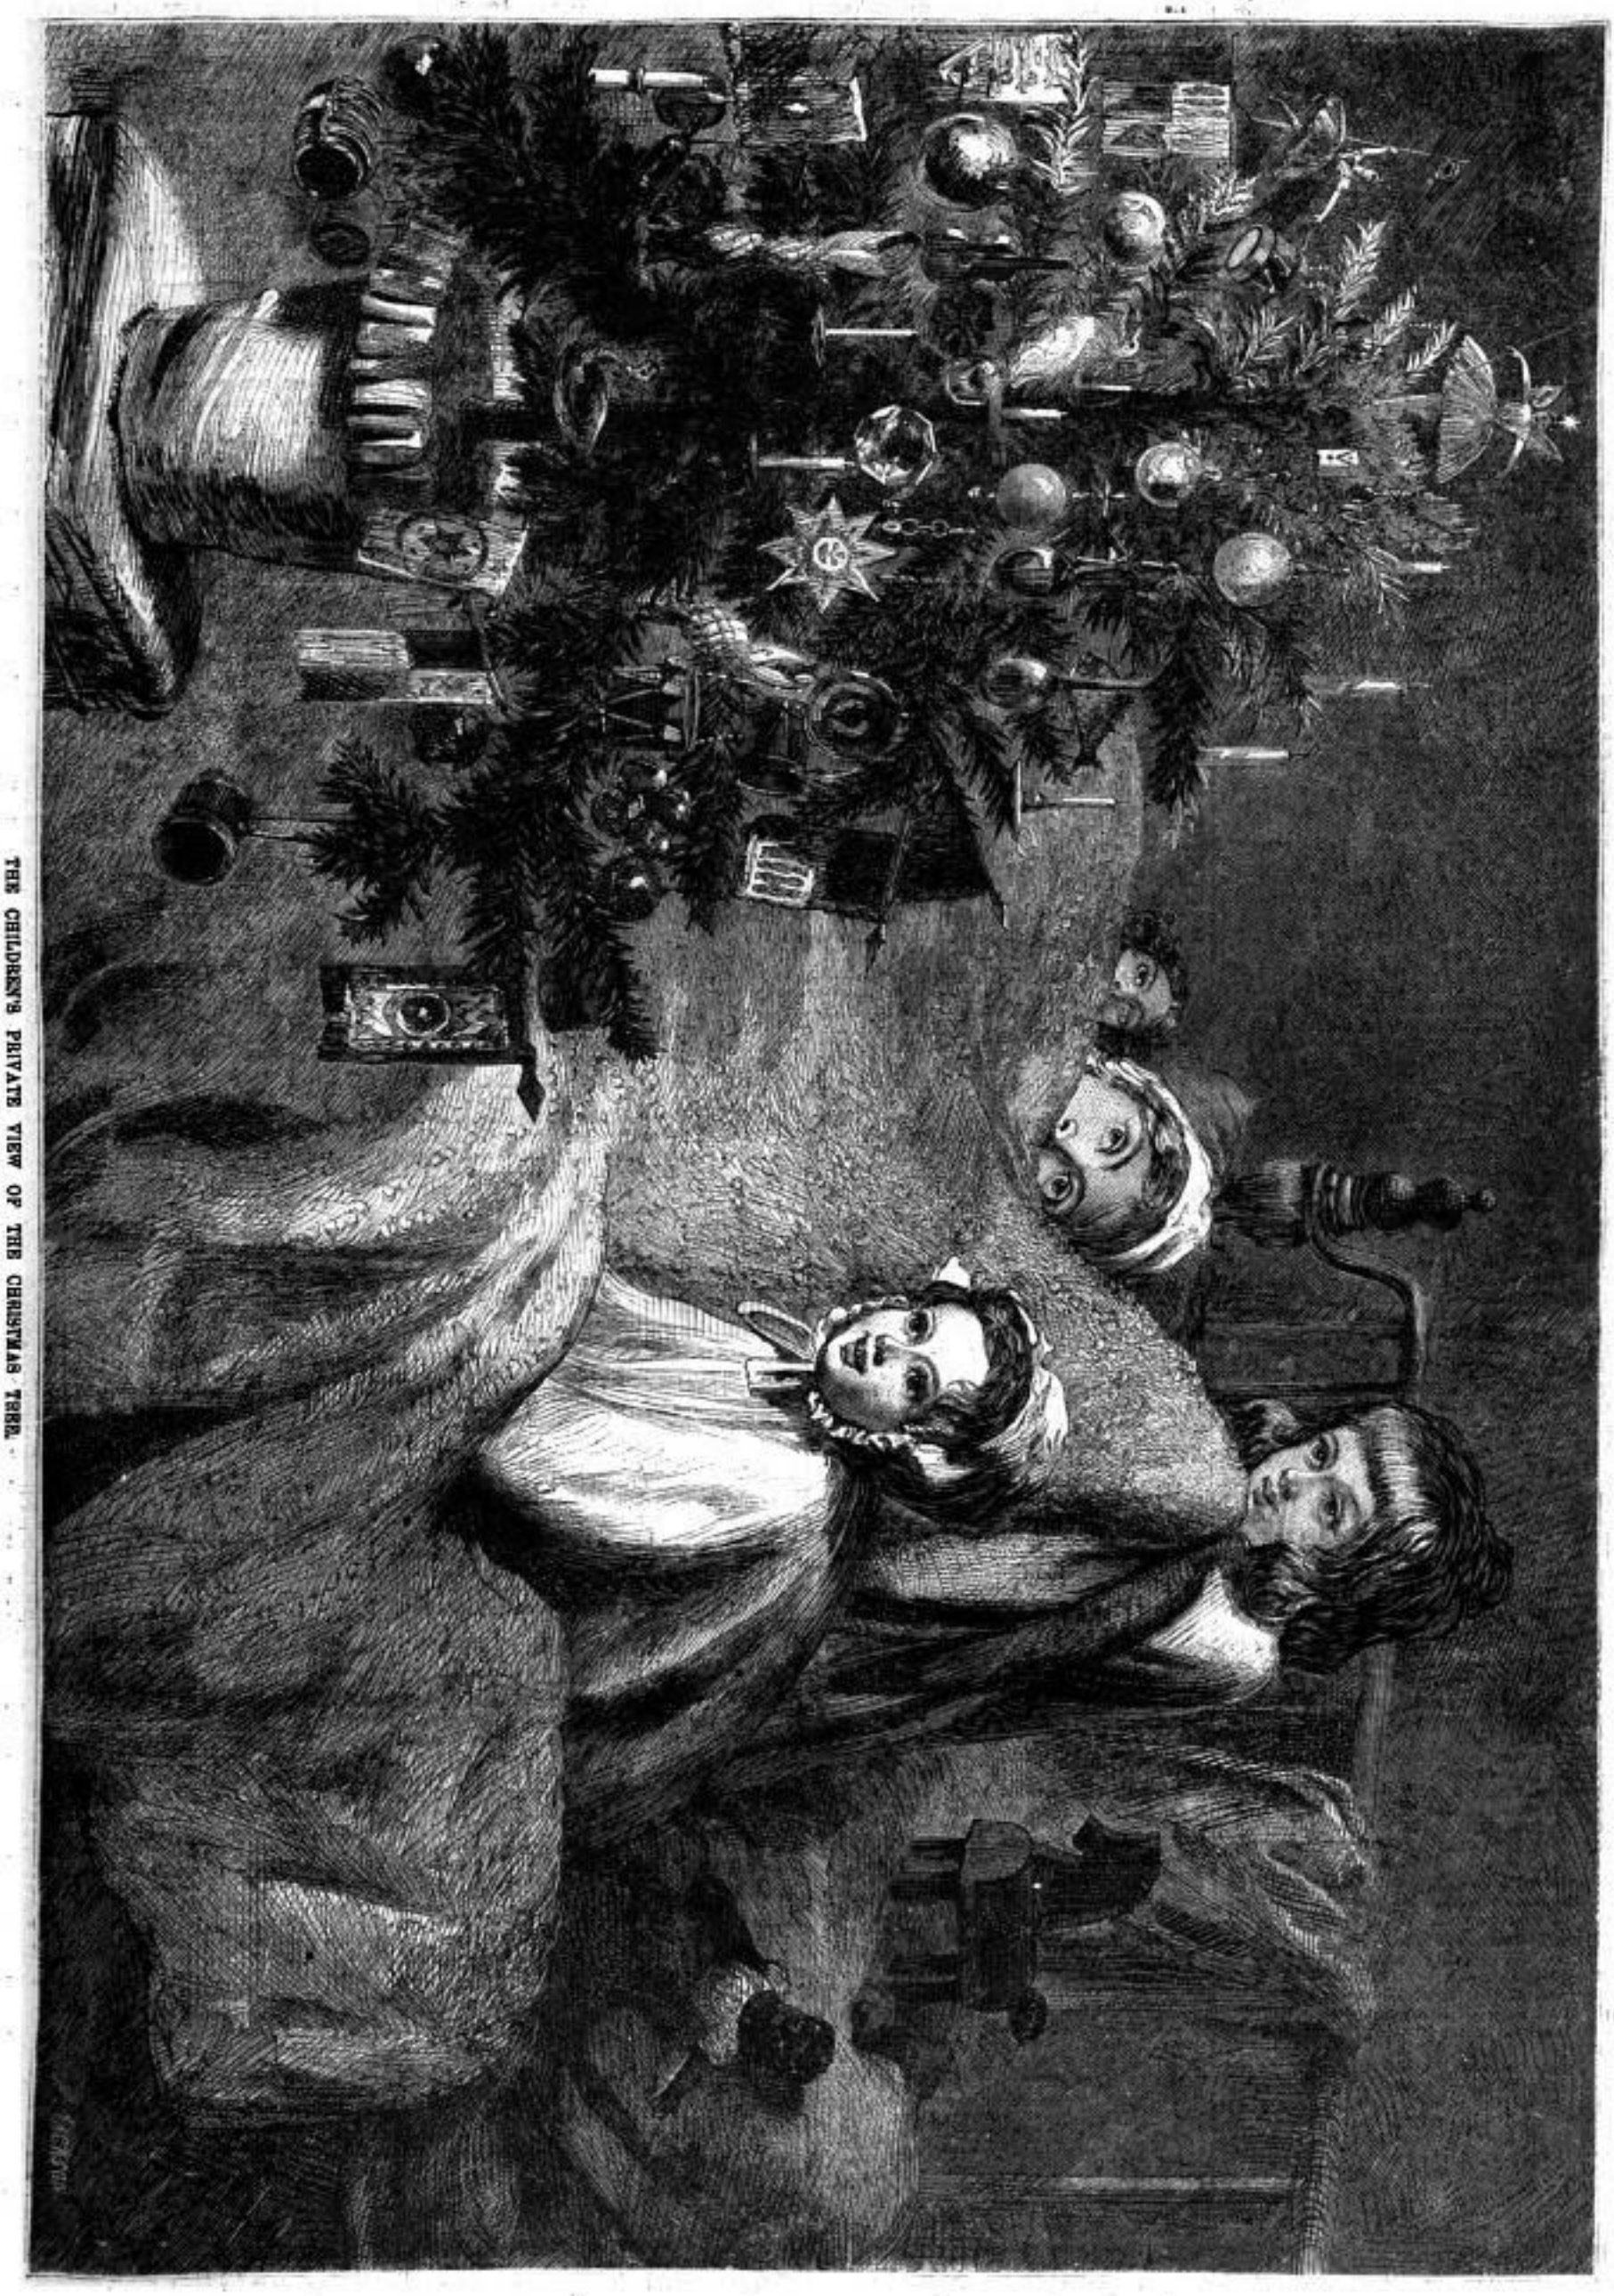
For two or three days he brooded in silent misery, making a desperate resolve. He would follow her, he would know the worst. His brain was on fire, his eyes were wild with a feverish light, and she, looking at him, trembled in every pulse of her body.



There was a little drizzling rain Monday evening. When it came to the point he had not the courage or strength, and she slipped away so quietly. To-morrow night then—Christmas Eve. Let him know the truth or falsity of this maddening doubt.

The next morning dawned gloriously. She spent most of the day in making some little preparations for the children's Christmas. Then just at dusk she took them out.

"Oh, if papa could only come," said little Joe, beseechingly.



FROM THANKSGIVING TO CHRISTMAS.—"SHE SAT DOWN ON THE SOFA BESIDE HIM. HE PUT OUT ONE WHITE, TREMBLING HAND, AND SHE COVERED IT WITH KISSES—TEARS, TOO."

"Papa must keep nice and warm by the fire," she answered. Then she stooped suddenly and kissed him on the forehead, but she looked past him, not daring to meet his eyes.

After they were gone he rose with unsteady step, a bright spot burning on either cheek. All his apparel must be ready to slip into. His boots, his thick overcoat, his slouch hat. There was a muffler somewhere—she had laid it in the bureau-drawer, or was it in the closet?

The drawer was locked. Dick Trevor started at so unusual an occurrence. The washstand key fitted it, so he tried that. What was all this finery of tarletan, and lace, and gilt? Something for Nelly, no doubt. Had she money to spend on such trifles? Ah, yes, there was plenty of money nowadays. This morning he had found a bouquet on the table.

Another thing used to be hidden in a box in this drawer. His pistol. What evil genius put that in his head? He hunted it up now. It had not been loaded for a long while—indeed, there was nothing in the house to load it with—but he thrust it into his bosom. The muffler was not here, and yet this had been its place until within a day or two.

He locked the drawer and searched the closet. Gathering the things together, he hid them in the corner of the chamber that opened out of the living room. Every article that he could put on he did; then he lay down on the bed and waited breathlessly.

They came at last, full of glee and brightness, only wishing mamma could have staid longer. And, oh, had papa gone to bed? They had so much to tell him!

"Don't disturb him now," she said, softly. "It will all keep until to-morrow. Now I must be off in a hurry. Oh, my darlings, I wish I could stay home with you. Dick, dear, do you feel worse?"

"I am tired," he said, in a strained, hard voice.

She unlocked the drawer, and took out the fanciful finery, thrust it into a satchel, standing between him and the light. It was for herself, then!

"Good-night. I hope you will be able to sleep a little. You look tired out. I think you must have walked too far to-day."

"Good-night," he answered, huskily.

Then she kissed the children again and again. Always she kept their little faces before her eyes.

When he heard her shut the door, he sprang up and locked that between the room and the chamber. Hurrying on his outer garments, he emerged into the hall, and stole softly down the stairs. The confusion of night and lamplight blinded him as he first stepped into the street; but presently he distinguished the slender figure in a waterproof threading its way along rapidly.

She evidently did not mean to ride. Bond and Walnut Streets—he kept that in his mind. She certainly was going in that direction. How she hurried! He was beginning to get short of breath, and paused a moment when she disappeared. He strained his eyes; he ran a few steps. Was that she with a tall man bending over her, apparently talking? On and on they sped; now others intervened; then he caught sight of them again. They turned into Bond Street. She seemed to fly, while the man strode beside her. Then they paused, stood a moment or two talking, he gesticulating with both hands, as if imploring. Ah, if he could but reach them! The street was in a whirl; his breath came in great gasps. It seemed as if he would fall dead at their very feet!

"No, no! Be here at ten—this very spot. Do not come in for me. We will go home together; I have not another moment."

The wind seemed to bring the words to him. She disappeared, and the man stood still, as if astounded.

Dick Trevor sank down upon a stoop, panting. The man glanced at him in an idle, half-curious way. Where had he seen the face before? A good-looking, rosy, full-bearded face—a tall, fine figure—a something oddly familiar about the eyes.

He strode off down the street. The keen wind blew through Dick Trevor, and he drew his muffler closer round his throat. What place was this? No school or office, surely; and yet she had disappeared within. Why, it was one of the entrances to the Strang Place Theatre! What could she be doing here? And at ten this man was to meet her!

Dick was shivering with the cold. Opposite was a saloon, and he crossed over. The smell of beer and tobacco disgusted him, but the warmth of the stove was comforting. Two or three of the men stared at him; indeed, his pallid face was frightful. He called for a little brandy, and it seemed to revive him. Then he began to think.

It was very madness. Was he losing his senses? Visions danced before his eyes. Kitty in her youthful beauty and gayety; their first, fond, passionate love; their pretty home that he had been wronged out of by his friend's perfidy; the years of tender happiness; and in vivid contrast rose the cheerless present. Her heart had been turned from him, from her home. For a little longer she might play the hypocrite; he knew the story and how it ended. Some day he would have no wife, and his children would be worse than motherless.

Then he remembered the pistol in his bosom. This was why he had hidden it there. Yes, let them both go out of life—he had lost every thing a man holds dear—wife, home, health; and she—oh, a hundred times better it would be for her to die now, than to tread the terrible paths leading to destruction.

The man was wild, maddened with suspicion! Little incidents flashed across his mind that seemed to stamp his fancies with strongest proof. Ah, how sweetly deceitful she had been, pretending to care for him, bringing him trifling luxuries, when all the while her heart was being weaned from him. She had not dared to look him in the eyes, she had evaded his questions, and held aloof in some strange way from caresses. If he And only died weeks ago when he was at the worst! If he could have gone to his grave without knowing aught of this!

The city clocks were striking nine. He rose and walked tremblingly to the door. His work was not all done yet. Ah, how bitter keen this wind was! The streets were full of Christmas cheer; merry young folks running to-and-fro; shop windows alight with glitter; laughing voices, eager eyes, and light feet. Down the street he went. There was a pistol-gallery somewhere. Ah, here it was! Would he dare try his hand, he wondered.

He entered and glanced furtively around. There were no familiar faces. He loaded his pistol and drew near to a little group firing at a mark. He did not shiver so much now, and his brain felt preternaturally clear. No, his hand had not lost its cunning. It could do deadly work if need be.

Trevor glanced at his watch, it was high time to start. Ten o'clock. What had she been doing all this time, he wondered. Was the man watching for her? Had she really been in the theatre? Not as an actress, surely. She would not need to hide that from him. This was a variety theatre, used mostly for scenic plays. Oh, my God! What if she should be there among those tawdry, vulgar women!

Yes, here was his enemy tramping up and down. He crouched a little behind the stoop to be sheltered from the wind, and watched with a tigerish glare. The ponderous bell told off the hour again. There he waited, waited. Would she never come? Was she deceiving that watcher as well?

A light step on the stone pavement. A muffled figure, and the man halted.

"Oh, here you are! Are you wrapped warmly? Take my arm. I have been thinking of what you told me of Dick, poor fellow——"

Dick Trevor was beside them. With the grasp of a madman he tore them apart, and the next instant a pistol gleamed, was wrenched from his hand, and the three stood in deadly silence.

"Dick!"

Such a wild, pitiful cry.

"Dick Trevor, old fellow, you've cause enough to hate me; but I am not so black as I seem. Good heavens! What are you doing here? You don't remember me—Joe Hildreth?"

Others were coming out of the theatre. One or two turned to glance at them.

"Oh, let us go!" she cried, in anguish. "Dick, dear Dick, everything is against me, I know; but I can explain. Oh, why are you here in the cold?"

Dick Trevor staggered like a drunken man, and threw out his arms wildly. Hildreth led him along by main force. At the corner a cab was passing, and he hailed it, lifting in Trevor as if he had been a child, and then Kitty, who was now sobbing hysterically. The fictitious strength that had upheld Dick gave way altogether, and he fainted in Kitty's arms.

"Faster, faster!" shouted Hildreth to the driver; and, though it was but a few moments, it seemed ages to the poor wife.

"Oh, he is not dead?" she cried, as Hildreth took him out.

"No, I am sure not"—with a cheerful ring in his voice. "Where is it—up-stairs? Ah, how warm and cozy! I'll lay him right here on the sofa, and go pay the hackman."

Joe and Nelly had fallen asleep in the big arm-chair, but were roused by the sudden noise. Dick opened his eyes. Kitty was clinging to him and sobbing. What was it all about? He could not remember.

Then Joe Hildreth came in, with his breezy, inspiriting air, threw off his coat, and began to unwrap poor, bewildered Dick.

"Haven't you some sort of stimulant? He looks like a ghost. Dick, old chap, it's good news all the way through! Thank God I found you before it was too late! And right here this blessed Christmas Eve we'll have the mysteries cleared up, and you will forgive the wrong I so unwittingly worked you."

"Kitty!" Dick said, tremulously.

"Kitty is the best and bravest of little women. It was through her I found you, though I should have turned this great city upside down before I'd given up the search. There, are you comfortable? Now the wine. And this is little Joe——"

"I had better put them to bed," said Kitty.

When she returned, Joe had drawn the sofa up nearer the fire, and arranged the pillows. Dick looked ghostly enough, but, as he turned his eyes upon Kitty, he felt that whatever mystery there might be, she was pure and clear; she still loved him. Oh, my God! Had there been a dream of murder in his mind?

She sat down on the sofa beside him. He put out one white, trembling hand, and she covered it with kisses—tears too. She was his, every thought of her soul! Had he been mad, and dreamed this horror?

"Can you listen, Dick? I want to get along with my story by the dawn of Christmas. Dear old friend, can we not come back to the love of the past? And yet I have sinned against you grievously."

"Go on," said Trevor, in a husky tone, wondering still how Kitty had come in contact with him.

"Well, let us go back to five years ago the past Autumn. I think you suspected a little, Dick, that I had fallen into some bad ways. I was wild to go off to California and join some chums there, and had partly made arrangements, you know. You had warned me against too much intimacy with young Brisbin, and a little coolness between us had resulted.

"I believe I was half fascinated with him. He drank, he gambled, he kept bad company; still, he was the son of the head of our house, and when he singled me out as his friend and equal I felt elated; my wretched vanity was in a flame. Still, the worst I ever did with him was to drink a little and bet. One night he cleaned me out—more than that, I was a hundred dollars or so in debt."

"'Here's a chance, Joe,' he said, 'a ticket to California. Steamship leaves to-morrow at noon. I took it of a poor devil who had meant to go, but was sick of his bargain. I'll put it up against nothing and give you a chance.'

"Well, I won that and fifty dollars beside, and then it was almost morning. I threw myself on the sofa in his room and fell asleep. I shall always believe the wine I had been drinking was drugged. At nine he woke me."

"'Come,' he said, 'if you are going to start at twelve you had better bestir yourself.'

"After a few minutes it all came back to me. I was in a reckless mood. As well go now as any time. Here was my ticket and some money. I had just begun a new month at the store, and the few days' salary was no object. I went to my boarding-house and packed my trunk, and Brisbin sent a hack. I found him in it."

"'My dear fellow,' said he, 'I've been to the store and made it all right. They were quite taken by surprise, especially the governor; but it's a jolly lark! Now, if you want to write any farewells to any one I will see them safely delivered.'

"'I was thinking,' I returned, 'that it is a very sudden move, but I'm not in debt save a trifle to you, and I have been doing nothing criminal, so I can go off with a clear conscience. But if you will take charge of two notes for me?'

"'Gladly, my dear fellow.'

"One was to you."

"And it never reached us," interposed Kitty.

"There was a very good reason. I used to wonder on shipboard, when I came to my senses, why he was so interested in getting me away."

"And you mean to say, Joe Hildreth, that there was no reason for your sudden disappearance?"

Dick Trevor sat up as if roused by an electric shock, his eyes staring wildly, his whole frame shaken as if in an ague.

"No criminal reason, thank God! It is a hand clear of murder or dishonesty," and he clasped Dick's warmly.

"Well, I reached San Francisco, I hunted up Sam Bender, found a boarding-place and a situation, and in a month's time was down with a fever. When I was getting well I wrote again."

"But we did not receive that either," explained Kitty.

"The fates were against me, surely; I had all kinds of bad luck. I tried the diggings and failed, I made a little money and was robbed, and so it went on for three years. Then I started off for Black Hills, and made a fortune in time. I heard the old house of Brisbin & Chapman and that of many others had gone under. I resolved to start for home and hunt you up, Dick. The last night of my stay a new party came in, among them one poor miserable fellow at the point of death. My own misfortunes had given me a tender feeling for others, and I went to inquire about him. Dick, as I live it was our old office-boy and messenger, Murray Thorne! I watched him that night, for it was plain to see that his hours were numbered; and, Dick, he made me a curious confession. You know one part of it. The very day I sailed he abstracted a package of money from the safe, and handed it over to James Brisbin. It contained twelve thousand dollars, and he had two thousand for his share. It was laid to me very naturally. My bondsmen made good six thousand of the sum, and young Brisbin interceded to have the matter hushed up. This was the very first I had heard of it. I wrote out the deposition, and Thorne signed it before witnesses."

"Good heavens! and you were innocent!" cried Dick Trevor.

"I was innocent," said Joe Hildreth, proudly. "You may fancy that I lost no time in coming back. The first man I sought out was James Brisbin. He has married an heiress, you know, and is a great railroad man. If I had risen from the dead he could not have been more surprised. I read him Thorne's confession. He asked to see it. There was a grate-fire burning in the room, and, like a flash, he threw it in the flames.

"'Where is your proof now?' he asked, jeeringly.

"'Safe in a lawyer's hands,' said I. 'Did you imagine that I was fool enough to trust the original with you?'

"He undertook to brave it out, but the fact was, I had been in his company all that night until the time of my sailing, and Chapman had put the package in the safe, and locked it up. Thorne took it out the next morning. I had my man cornered, and then he begged abjectly that I would not disgrace him by raking up the old story. He would reinstate me in the good opinion of those I really cared for, and return the six thousand to my two bondsmen. When I saw this done, I tore up poor Thorne's confession. Meanwhile I had been hunting for you. I found you had been compelled to give up your pretty cottage, and that somehow in all the changes you had dropped out of the familiar haunts. Day after day it was the same fruitless search. Then some one told me you were dead, but I still resolved to find Kitty and the children. Last evening I entered the theatre——"

"Oh, let me tell him," interposed Kitty, with a burning, tearful face. "Dick, my darling, I could not see you and the children starve. Everything else failed. I could get this engagement to dance at the theatre. It was no school. I tried hard not to deceive any one. I went and came with the utmost secrecy, but I began to feel that you suspected something, and last Saturday night I gave up my post; for, oh, Dick, it was better to starve than to make you miserable. They could not get the woman they wanted until to-morrow, and so I went these two nights."

Kitty broke down, sobbing.

"My darling!" and her husband laid his hand on her bowed head.

For his sake! Oh, how he had misjudged her!

There was a long silence that Joe Hildreth broke, in a tremulous voice:

"I knew that was Kitty Trevor. She danced so differently from the rest, so bewitchingly. I made some inquiries, but I fancied she would use an assumed name. Then I followed her home, and this morning I learned you were living here, and had been ill a long time. I scarcely knew how to thrust myself upon you. I saw Kitty go out with the children, and come back again. I wondered if she would go to the theatre, and waited, resolved to waylay her. She tripped down the steps presently, and after a block or two I came up close in the crowd and said, 'Kitty, I am Joe Hildreth, an innocent man, and not the villain you have thought me. I have a long story to tell you and Dick, but I would like you to listen to a few facts first'; and Kitty, brave little woman that she is, neither screamed nor fainted."

"I knew the voice in an instant," replied Kitty, "and it seemed like the voice of a heaven-sent friend. I had given up every earthly aid, and was trying to cling to Providence only. Oh, my friend! Oh, my husband!"

They clasped each other's hands in silence, and for many minutes no one spoke.

Hark! What is that? Christmas bells are ringing, for midnight has come, and ushers in the new dawn; and in the street below go by a youthful group from a neighboring church, singing a tender carol. It is a time to forgive and forget, to clasp hands anew in friendship, to trust in the God of yesterday and the Christ of to-day—new-born, and yet a part of the eternal mystery.

"I have been crazy to doubt you, Kitty," said Dick Trevor, with a sob in his voice. "My God! To think——"

And he shuddered.

"It is all past with the old day," said Kitty, with the voice of an angel.

She could see how it would end. Love had been given back to her purified, friendship had returned with stronger bonds than those of the past. And thus began Kitty Trevor's Christmas.

The Private View.

WHEN the managers of theatres and other places of amusement have got ready, with infinite cost and pains, the most popular exhibitions of the season, it is the usual custom to invite a few not unfriendly critics to inspect "the properties," look at the effective pieces of scenery, and in due time witness the rehearsal. Such seems to have been the idea of some good-natured but treacherous nursemaid—so may the reader conjecture—who has permitted three or four young spectators of the Christmas Tree shown in our illustration to taste the perilous and unadvisable enjoyment of seeing before the due time, and in a very improper place, the rich and splendid fruitage of the splendid plant which blooms in the warm rays of the festive hearth on the night of the 24th of December. It is a very improper place, as any mother of a family would say. A Christmas Tree in bed! Why, it's turning the world upside down to think of such a thing. What if the children *did* lie awake talking about it, Miss Mary and Miss Lucy in their bed together, saying they hoped there would be a nice doll to be sister to their old dolly; while Master Frank, in his cot, was calling out to them, saying he knew his papa had brought home a lot of swords, and whips, and drums? Was that any reason for fetching the Christmas Tree out of the back parlor, where their mamma and Aunt Jane had left it when it was finished, meaning to have it locked up in the coal-cellar and kept there all next day, to be brought out at the party in the evening, between the last game at forfeits and the supper? Certainly not. This is very wrong, nurse; we have a great mind to give you warning. And, God bless these children, will they ever go to sleep, now that they have seen the Christmas Tree? Oh, you foolish little folk, all your pleasure for to-morrow night will be spoiled, and when the tree is ever so beautifully lighted up you will not care so much about it because of this Private View.

CAVALTO.

By Mrs. M. V. Victor.

And the little lady grew silent and thin,
Pining and c er pining,
As the way is with a his chagrin.
—BROWNING.

CHAPTER I.

KATHLEEN GARLAND went to bed very tired and very happy. In fact, so tired and so happy that she could not rest. To-morrow, the 6th of September, was set for her wedding-day. She was to be married at eight o'clock the next evening, in Grace Church, to Coventry Faye. She had been to a concert with her father and Mr. Faye, and the latter, knowing, as he said, that she must be quite worn out with the many excitements of the day, had bidden her good-night at the door.

Kathleen had obeyed his expressed wish and gone straight to bed, promising that she would not think of rising before ten in the morning, since he had whispered that he wanted her to be fresh and bright for the afternoon.

The trying on of her costumes from Paris, the being constantly consulted about the arrangements, the anticipation of the stately ceremony at the church, had wearied Kathleen.

She shut her eyes together tight, counted one hundred, tried to fix her mind on the monotonous rise and fall of the sea—as she had been told to do when she desired to woo reluctant sleep—to no avail. Suddenly she slipped out of bed and went to her open window.

The night was close and warm for the middle of September. A high, bright moon shone down between the tall city houses on her pretty, childish face—Kathleen was just eighteen—gilding the ripples of gold-brown hair which streamed down either side of it and curled up on her shoulders. Her dreamy eyes fixed themselves on this glorious moon for a few moments, then dropped slowly down the azure spaces until the opposite roofs came in view—down past the closed blinds of the upper story of the house facing her, down until they suddenly rested on an open window of the third floor. For the girl's eyes saw something there which held them.

Kathleen's chamber was also on the third floor of her father's house—a rear room, looking across the two small yards into the one which confronted it.

There were lights in that other apartment. One of Kathleen's high-bred delicacy would, ordinarily, have turned away from looking into a private room; yet she was so fascinated by what she saw, from the first—so fascinated and so amazed, that she utterly forgot any lesser consideration.

What she saw was this: four persons, one of them a young, wasted creature, a girl, with long black hair falling over her pillow, as she lay propped up in her sick bed. On one side of the bed stood a woman, supposably a nurse, with a wine-glass ready in her hand, in case it should be needed. On the opposite side, two men: one, a white-haired clergyman, holding a prayer-book; the other a young man, who stood as close to the sick lady as possible, his right hand clasping her right hand. From the position and movements of the parties, it was perfectly evident that a mar-

Digitized by Google

riage ceremony was being solemnized. Kathleen distinctly saw the young gentleman take a ring from his little finger, hand it to the clergyman, receive it again from him, and place it on the sick girl's hand.

She almost imagined that she heard the words uttered; and when the minister and the new-made husband knelt, she, too, dropped on her knees in complete sympathy with the scene.

Then the hero of this midnight marriage arose, kissed his pale wife on the brow, and turned to speak with the clergyman.

Then it was it seemed to Kathleen that a knife was driven into her heart and that she was dying. A horrible pain went through bosom and brain; sparks floated before her darkening eyes; she could not see. But she had seen enough!

As the bridegroom turned, the light of two burners each side of a dressing-mirror, shone full upon his face. It was Coventry Faye! Without the shadow of a doubt, it was the man Kathleen expected to marry on the morrow. She had recognized, all the time, a strange familiarity in the tall, lithe figure, which she did not understand until she had that one conclusive look at his face.

Kathleen seemed to herself to be falling down eternity in blackness and flame. She had only swooned, poor child. When she came to her senses, she was chilled by the damp air rushing in; the moon had set, the first faint glimmer of dawn was in the sky.

She crept back into her soft nest, and lay there shivering. Hours ticked themselves away in the heart of the jeweled watch under her pillow. It had been broad daylight a long time. No one came to arouse the bride-elect, for they liked her to have a good rest before the excitement of the day began.

Kathleen looked more than once at her watch. When it told her the hour of ten had arrived, she arose, rang for her maid, and began to dress.

"You are very pale, Miss Kathleen; let me bring you a cup of tea."

Her young mistress did not object, and the girl brought it, strong and hot, and Kathleen drank it.

"Your father's love, and hopes you are well this morning."

"Quite, quite well, tell him, Susan."

Susan shook her head and muttered to herself as she went on dressing her young lady in a dark-blue silk which she was to wear until it came time to assume her wedding attire.

Word came that Mr. Faye was in the drawing-room before Kathleen was ready to go down. Susan saw a single chill or tremor run through her.

"Perhaps it's only nervousness that makes her look so strange."

Kathleen took her way through the front chamber, where a white satin robe and a lace veil lay on the silken counterpane of another bed. There was evidence of quiet stir and excitement through the house as she went down the stairs; the odor of flowers was oppressive; men were wreathing the staircase with smilax and roses; plants, confections, wedding-presents were crowding in.

Coventry Faye stood expecting her, impatiently, as she entered the drawing-room, closing the door behind her. Thin, tall and dazzling, she came toward him, the golden masses of her crimpled hair gleaming like an aureole about her stern, pale young face. He sprang to clasp her to his bosom, when she recoiled a step, holding up her hand in warning.

"Why, Kathie, sweet! Is my Kathie ill? What is the matter?"

He, too, changed color as he spoke. Guilt, or anxiety, or both, drove the blood away from his warm, olive-tinted face.

Before she answered him, Kathleen glanced at his left hand; the ring he usually wore, the ring she had given him, was gone!

"Kathie, dear," he repeated, after a silence; and his wooing voice never before seemed to her so irresistible.

"Not Kathie and not dear, to you, Mr. Faye! I have changed my mind at the eleventh hour. I shall not marry you this evening, nor any other time!"

"Do not speak my death-sentence! I infer from your manner, Kathleen, that you know—have heard—that you believe me——"

"I know what I saw, looking across from my room into the one opposite at half-past twelve last night. You were married to one woman a few hours ago; would you marry another in a few hours more, Mr. Faye?"

"That poor girl is dead, Kathie."

"The more shame on you then, as a creature utterly without heart or conscience! What! I, Kathleen Garland, am to wed a widower who has mourned for less than twenty-four hours the loss of his first dear wife! I thank you—so!"

The unutterable scorn which flashed from her lips and eyes seemed to wither her lover almost as if he had been scorched by lightning. He shrank a step back, and his head sank on his breast. After a moment, during which he tried hard to recover himself, he said, still not looking her in the face, and speaking in a low, constrained voice:

"Do not look, do not speak like that, my own Kathie! I can explain to you the strange and complex circumstances which drew me on to the culminating episode of last night."

"You married the woman you loved, I have no doubt, Mr. Faye; and now you would secure the one who brings you money and position. That is easy to comprehend. I desire no explanation—refuse to listen to any. You have always assured me that I was your one and only love. To be false in one thing is to be false in all. I bid you good-morning, and leave you entirely at leisure to attend to the funeral of your wife."

Sweeping before him a stately courtesy, she walked out of the room. Up the rose-wreathed staircase she returned, sat down to the writing-desk in her room, penned a hasty note to her father; then, quickly donning a traveling hat and mantle, and snatching her purse from an enameled box on her bureau, she ran down and gained the street before her maid had reluctantly broken off a brief flirtation with a young confectioner in the dining-room.

In the terrible wakefulness of the early morning, Kathleen had arranged in her mind the course she meant to pursue.

CHAPTER II.

THE matrons of society were vexed to lose the excellent supper, the clergyman was annoyed at missing an extravagant fee, the bridesmaids were angry at not having an opportunity of displaying their Parisian toilets, and Mr. Garland enraged at the scandal brought down about his ears. Yet none of these disturbed persons could alter the situation. Miss Garland had changed her mind; would not marry; had gone to spend some time with a Quaker aunt in Philadelphia.

Coventry Faye vouchsafed no explanations, but kept himself nobody knew where, until a week after the wedding-day which was to have been; then those interested noticed his name on the passenger-list of a Havre-bound steamer. It was rumored that he intended to remain abroad three years. Not a soul, not even Mr. Garland, was able to say with any precision of facts, which of the two had been to blame. The least of the wild rumors flying about made Miss Garland a flirt and Mr. Faye a fortune-seeker. Worse things were whispered, but did no serious damage after the excitement had died away.

When Kathleen knew to a certainty that Mr. Faye was where there was no likelihood of her meeting him, she returned home. By this time the gay season of New York society was fairly open; and, brightest of the bright, loveliest of the lovely, Miss Garland was to be seen at tea-fights and germans, at receptions and in her opera-box. To superficial observers, her broken engagement—broken almost at the altar—had not affected her deeply. Entering the lists with half a dozen other beauties, she contended for the palm of belleship with brilliant success. Before Lent sent these beauties into penitential semi-retirement, it was freely stated that she was again affianced.

A very rich young Cuban, Señor Carlos Cavalto, had certainly fallen passionately in love with Miss Garland. The contrast of her blonde loveliness to his own dark, intense beauty; the rose-bloom of her delicate face, the golden glamours of her hair, the pure blue of her eyes, bewitched him.

Kathleen, in the wicked, desperate mood now habitual with her, had played with his heart as if it had been only a blood-red rose; until, suddenly, she found it such dangerous amusement that, in a mere fright, she engaged herself to this fiery lover, who demanded it of her almost as he would have demanded a duel of the man who had struck him on the cheek. The suspicion that she had been trifling with him made his declaration a challenge.

No sooner, however, had she promised to marry Señor Cavalto, than Kathleen began to lose spirit and bloom. A false excitement had rendered her unnaturally brilliant; now a dull, slow reaction stole the color from her face and the sparkle from her wit.

The señor was very fond of gayety, and when the forty days of sackcloth and ashes were worn through, he wanted his beautiful betrothed to go with him to balls and theatres incessantly. If she refused, he said that she did it to vex him; she had been fond enough of going before their engagement. If she went, he told her she was *distrait*—that it was an insult to him to be so pale and spiritless. She made a desperate effort to overcome her fixed melancholy, yet she could not hide from her lover that she was pining, and ever pining. He knew all about her former love affair—at least, all that the world knew—before he offered himself to her; so he had no right to fling it in her face, as he finally did, made perfectly miserable by his jealousy.

"No, Carlos," she answered his accusation, looking straight at him with her sad, clear eyes, "I do not care for that man. He killed my love for him stone dead. Truly, I think I am ill. If I were well, I should have more spirit to go about with you, and be what you like—what you thought I was. You had better give me up. I shall never satisfy your eager nature. But then, I am quite sure I shall not live a year."

Regarding her with a new anxiety, he saw, almost with terror, that she really was fading; and it seemed to him that he would rather have her, dead and moldering in her coffin, than any other woman it was possible for life to offer him.

"Then, Kathleen, I will not tease you or tire you any more; but I shall die when you do—I cannot live without you!"

"Men may die and worms may eat them, but not for love!" she said, with that mocking, dazzling smile that was all her own.

"Kathleen, I have never before asked you—have you any objection to telling me why you did not marry Mr. Faye?"

"You have a right to know, Carlos. He married somebody else the night before he was to have made me his wife."

"The scoundrel! Why did you not shoot him through the heart? Kathleen, I am afraid you love him yet!"

"I do not think I do. My respect for him has gone, you see."

"Will you tell me the circumstances?"

She related to him the discovery of that fatal night, adding that Mr. Faye expected to wed her the following day, as if nothing had come between them, knowing that the girl he married was dying at the time.

"She did die, I suppose, that night. He said she did. It is my impression she left him money. He was poor before that; now, I hear, he is living abroad in luxurious style. His hypocrisy to one or the other of us must have been detestable! He got her riches, doubtless—yet he coveted mine too. He was doubly false and venal—twice a scoundrel—don't you think so, Carlos?"

Carlos's head had sunk low on his arm where it rested on the sofa. He did not answer her for some little time. When he raised his face it was white and changed; he looked at her so strangely with those fiery eyes that she grew almost afraid.

"I did not know it until this hour, I swear to you, by Mary, the Mother of God, but it was my own sweet sister who married Señor Coventry Faye on her death-bed!"

It was Kathleen's turn to open wide her wondering eyes.

"I cannot tell you anything more to-night; I must have time to think. This has come upon me like a hurtful blow—it stuns me. God be with you, my darling, and good-night."

She rose up to follow him to the door, but he did not wait for her, or turn for a last loving look—rushing out of the house as if driven by an invisible fiend.

It was at the end of two long, dragging days, that he again presented himself before Kathleen. He looked ill and haggard; but he was not so occupied with himself but that he noticed that she, too, was paler and thinner than when he had seen her last.

"Swear to me that you do not love that man, and I will tell you my sister's story."

Kathleen began to tremble. She had had two endless days in which to ponder on the señor's strange looks when he learned the secret of Mr. Faye's midnight marriage. He had not accused Coventry of any wrong.

For the first time, she was sorry she had not allowed Coventry to tell his story to her the day they parted. The first faint breath of a coming storm was stirring and whispering in her heart.

"Swear that you will not break your troth with me, whatever I tell you!" he cried, with rising passion.

"Oh, Carlos! do not ask me to swear anything! Tell me the truth," she pleaded, trembling more and more.

"Swear! swear! Swear that you hate him—that you love me! Swear that you will be my beautiful, blue-eyed wife, if you have to wade through seas of blood to meet me at the altar!"

"Carlos, are you mad?"

He burst into a horrible laugh that surprised and terrified her.

"What makes you ask me that? Mad? No, nor ever will be. It is in the Cavalto blood—but not in mine. My father spent years, walled up in one room of his great palace, before he died. But I—I am like my mother. She always declared I would escape the doom. My pretty sister—*she* was a little touched; and, happily, she died early. Let that question go, beloved Kathleen. We will not discuss it. What was it I wanted you to do? Let me think. Oh, yes! I wanted to see how you would look if I made a rope of your golden hair, and twisted it about your neck, very tight!"

They were in the long, double drawing-room, and Kathleen had been slowly backing down the room—away from those burning, blood-shot eyes; but he had followed as she retreated, and his hot breath was in her face as he uttered the last sentence.

The door was open into the hall; but she dared not turn her eyes from his long enough to see if any help was at hand; she did not know where her father was, or John, the footman. She dared not make the attempt to dart aside, or even to place a table between them; and so she brought up against the mirrored wall between the two windows, and stood there, trying to face him down with calm, smiling eyes, while her heart leaped inside her bosom with short, quick leaps, as if it would burst its bounds.

Was her pride in her long, glorious golden hair to be the death of her? She had let it out of its braids that afternoon, simply tying it back with a blue ribbon; for she liked sometimes to wear it in that girlish fashion, and to see it glimmer and shimmer about her, as if she were a naiad inside a golden fountain.

The singular glance of Cavalto darted from the long tresses to the fair, slender neck. He stood about an arm's-length from her, and still she forced herself to smile at him, and keep down the ghastly terror which crouched behind that courageous smile.

She realized that this was no longer Carlos, her fond and tender lover, but a madman, at whose mercy she was. Her strained ear ached for the sound of a coming step; but the silence was absolute.

Perhaps her brave gaze wavered from sheer exhaustion—all of a sudden, the lithe arms were about her with a tenacious grasp, while the faint scream that struggled in her throat was choked back by the cruel cord made of her own silken hair, wound about and about her throat by the cunning fingers of Cavalto, till all grew black, and she suffered no more.

CHAPTER III.

THE Summer preceding that in which he became engaged to Miss Garland, Coventry Faye spent at a certain quiet sea-side resort, patronized by a class of wealthy and refined people who shunned the more popular watering-places. Faye was not wealthy—he could afford only an attic-room in a cottage; but the sea-views were superb, and he had come simply and solely to paint marine pictures.

The old-fashioned New England village sprawled itself out on the shore of a lovely bay, which gave safe harborage to the yachts and pleasure-vessels of the Summer crew, as well as to the rough boats and smacks of the fishermen. Faye spent more than half of his time on the water. He was heart-free that Summer, and wooed no goddess but Fame.

At one of the two great hotels, there was stopping for the season a young Cuban and his sister, who attracted more attention than any other pair. Their riches were known to be princely; they were beautiful, graceful, bright—ready to please and be pleased.

The señor was devoted to his sister—a slim, dark young creature, with eyes as soft as planets, and as bright as fire. The credentials of the Cavaltos were faultless, and everybody was ready to pay court to them.

Coventry Faye heard of them some time before he met them. His acquaintance with them came about entirely by chance. He was out on the bay one afternoon of a sultry July day, his row-boat anchored while he made a little study in water-colors of a rocky point, when suddenly a small sailing-vessel which had been hovering near, capsized. The flaw of wind which struck it and sent it over, scarcely rippled the bay. Faye was astonished to see it go over—a moment's cloud over the face of the sun, a moment's darkness over the rolling waters, seemed insufficient to account for the accident.

In an instant he thought of the ill-fated *Mohawk*, which had capsized in just such a passing flurry of air, which had scarcely kissed the smooth bay.

With all the skill of a practised oarsman, he hurried to to the scene of danger—found a gentleman supporting a lady in the water, both of them nearly exhausted, got them into his shell of a boat, and took them ashore; leaving a sailor, who declared himself able to keep afloat until other help came, to be rescued by a fisherman, who was coming up from a more distant point.

At first, this little adventure would seem to have been most fortunate for the artist. The gratitude of young Cavalto and his sister was ardent and boundless, and was expressed with the passionate freedom of the South. Faye was their friend, their savior, their hero. They complained bitterly if he failed to reciprocate their admiration and friendship.

They would have his society—he must share their pleasures. No matter about his painting—it was quite too delightful Summer weather for painting; leave that for the dull Winter! Carlos ordered thousands of dollars' worth of pictures. Every study in his friend's portfolio was admired, and a finished work from it desired.

Faye could not, in two years, do all thus engaged and half paid for in advance. No longer poor and struggling, his future was assured. The friendship of the wealthy Cavaltos was a gold mine.

Yet, is it not one of the immutable laws that we must pay to the uttermost farthing for all that we have in this world? Coventry Faye had to pay heavily for the patronage of these two. They gave with unstinted liberality of their affection, their appreciation, their riches; but that which was asked in return amounted to more than he could afford to give.

Rosa Cavalto could not or did not conceal from him that she loved him. She had the impulsiveness and passion of her race, with no mother or sister to advise her. She was modest, and she was pure; but she gave her love, unsought and freely, as a young queen would grant knighthood to her hero.

She evidently never dreamed that it could be refused. Accustomed to admiration and homage, how could she infer that her hand, her wealth, and her beauty, would be unwelcome to a poor painter?

Faye had his ideal of womanhood—some "Lily maid of Estalot," with bright, fair hair, cheeks the faint pink of the wild rose, and a soul so sensitive that its petals would close at the approach of love. He meant to win him such a wife as that some day, when his talents would enable him to support her.

The open admiration of the dark-eyed Cuban repelled him. He felt a warm friendship for her, as for her brother; but he could not love her—and he would not be tempted by her position and fortune to pretend that he did.

He never forgot the quiver of Miss Cavalto's lip, or the imploring, piteous look of her eyes, when they parted that Autumn in New York—he to go to his studio, she to sail for her home. He seemed cruel, to his own observation, because he could let her go as he did; but Love is a high-flying, willful bird, who will not come or go at command.

And scarcely had he begun the Winter, before he met the "lily maid" of his dreams. Kathleen Garland—slim and tall and fair, with delicately blooming face, golden hair, blue eyes, and a nature so reserved that it took him months to win one sweet, lingering look from under those long lashes—dawned upon him in her young beauty; the very girl his fancy had pictured.

It took some time, too, for Coventry Faye to humble that pride of his to the fact that Kathleen's father was rich, while he was poor. He had now a good income, and some fame; yet he knew, even after Mr. Garland had given him permission to marry his daughter, that the old merchant was disappointed in Kathleen's choice, and would have preferred money to brains. This consciousness rankled like a thorn in his breast. Perhaps he needed this pain to keep him from being too happy.

He had kept up a desultory correspondence with Carlos Cavalto, and as soon as he was engaged to Kathleen he wrote of it to his friend, expecting that Carlos would inform Rosa, and so, if they ever met again, there would be less embarrassment.

Summer came round again, and he avoided the little seaside resort to which the Cubans went as before. Carlos seldom wrote to him that season; when he did, he said always that Rosa's health was failing. Coventry was sorry—he heard this bad news with a bitter regret that was almost remorse; but he and Kathleen were in the seventh heaven of their betrothal, and their wedding-day was drawing nigh.

It is not strange that the lover never mentioned to Kathleen his friendship with the Cavaltos. A chivalrous delicacy toward Miss Cavalto, more than anything else, caused him to shrink from speaking of her. All that Kathleen knew was that a Cuban gentleman warmly admired and freely purchased Coventry's pictures.

One morning, only a week previous to the day set for his marriage, Faye sat in his studio, lost in gloomy, half-angry brooding. Mr. Garland had made some remark the previous evening about marrying money, which had wounded and hurt him almost mortally. If he had not felt that to give up Kathleen would be to break her heart as well as his own, he would have flung his scorn in the face of the haughty old merchant.

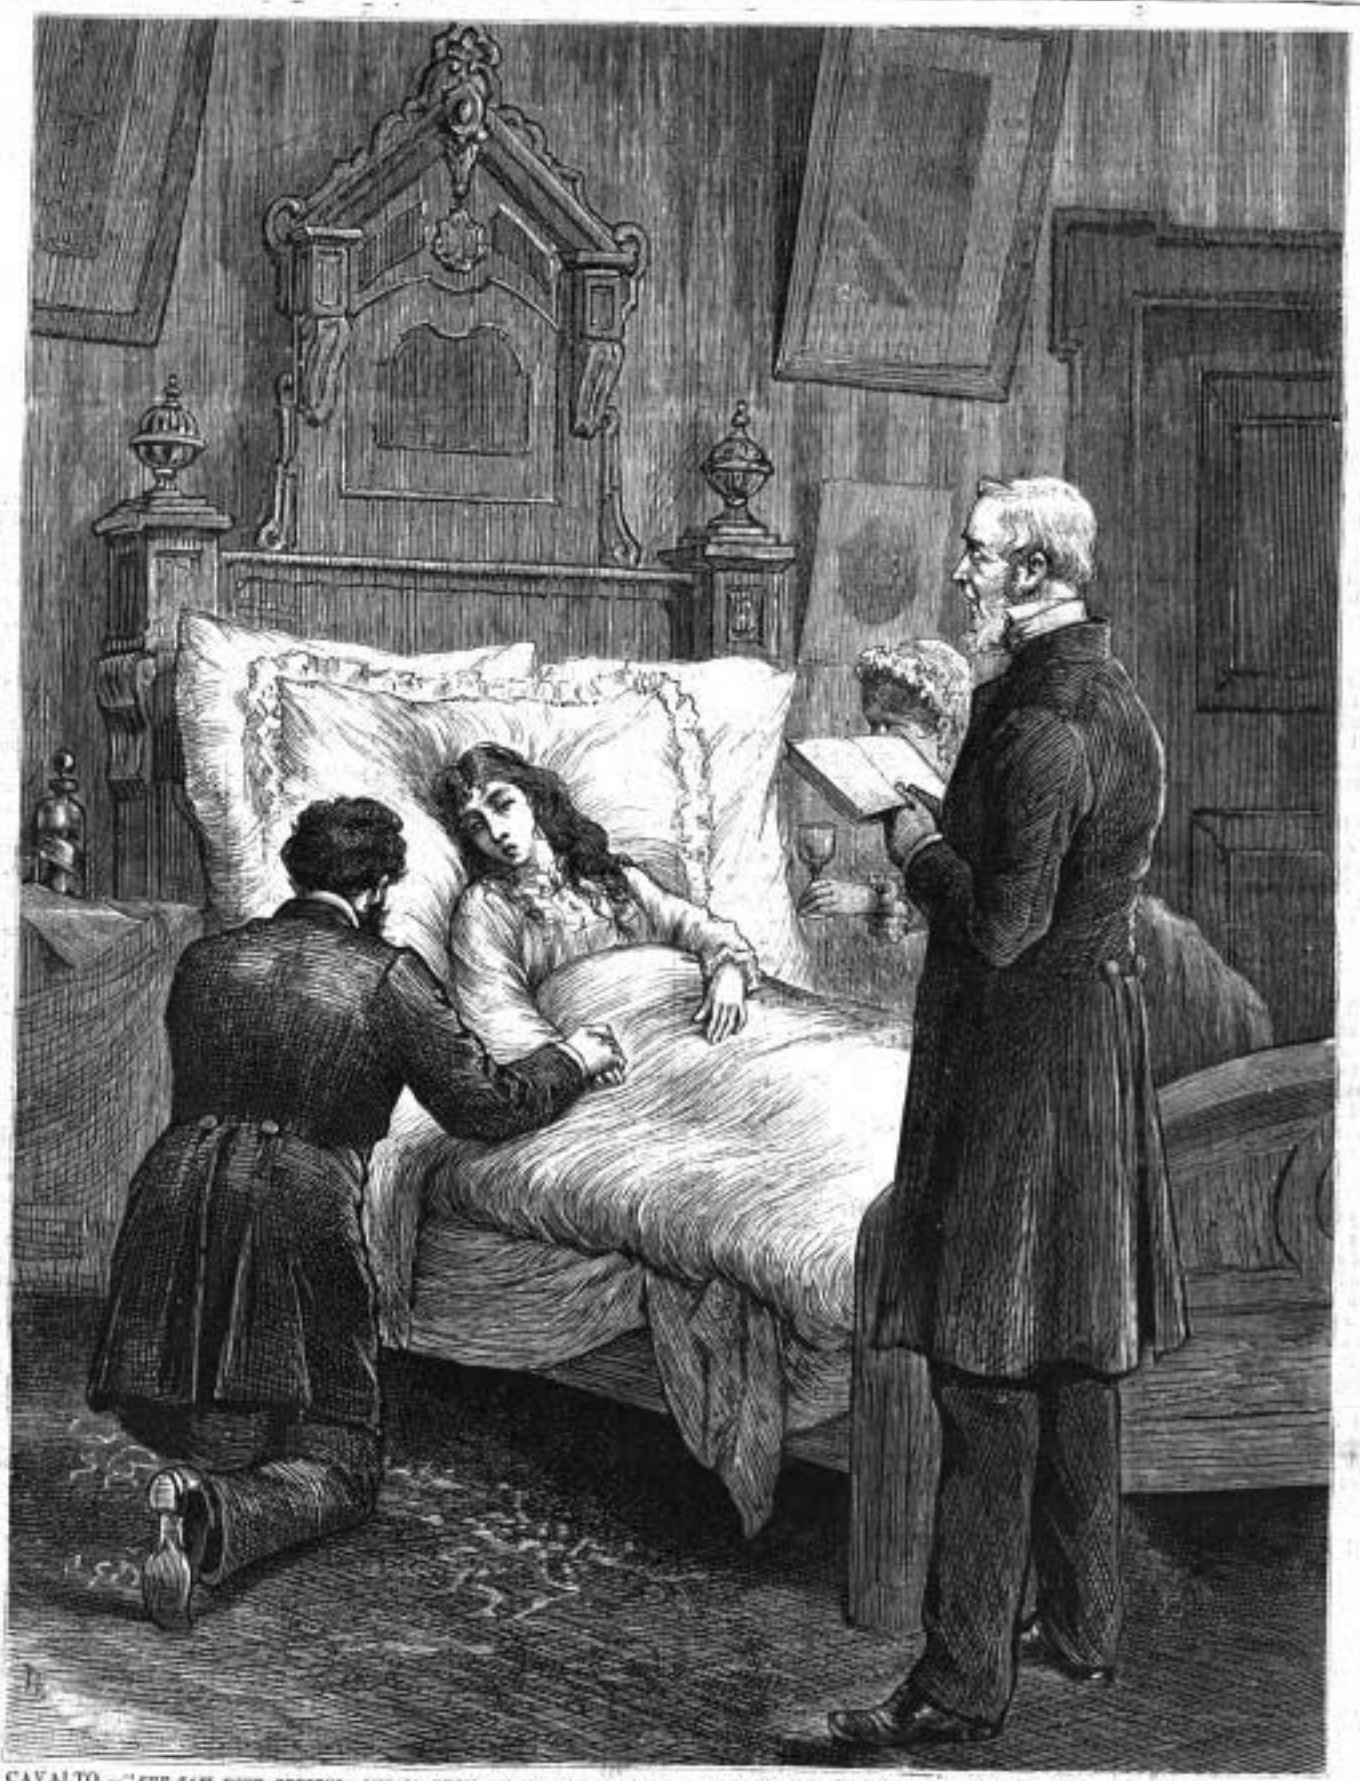
As he nursed his unhappy thoughts, who should walk in upon him but Carlos? They embraced as tenderly as two girls, and then Faye saw that his friend was in trouble.

"How is Miss Cavalto?"

"Ah, my dear friend, I am the most wretched brother that ever lived! The doctors have given her up. My only relative on earth, my darling sister, can live but a few days. Ah, Coventry, how shameful, how cruel and hard it was that you could not love her! Her affection for you has been the death of her. She has never been the same sister since she parted from you. I have been obliged to see her fade from day to day—to

Digitized by Google

feel that I was losing her—to know that she, my beautiful, my proud sister, whose suitors have been numbered by hundreds, loved one who felt for her only pity. My God! why must this have been? Faye, I wonder that I do not curse you. I wonder that I do not hate you for saving our lives only to make us both wretched. Far better my dear Rosa had been drowned that day! As for me, I know what is in store for me after she dies—a madhouse cell! Yes, I feel it—I know what is coming. My father died raving, and so shall I. But I did not come to you to complain. I came to ask you to grant my darling's dying request. She wants to see you once more. Here is our address. Will you call upon us at eight this evening?"



Coventry's eyes were blind with tears as he promised to go. Carlos did not linger long; topics of ordinary interest neither of them could discuss, and he soon went away. That evening Coventry sent a note to Kathleen that he should not be able to call until late, if at all. He found the address of the Cavaltos to be that of a fashionable boarding-house on a street running parallel with and next to that on which the Garlands lived.

Carlos came down to meet him when his card was sent up, conducting him at once to his sister. Although he had been told of her fatal illness, Coventry could not be prepared to see this pale shadow of the beautiful and brilliant girl, who lay on the bed in her large, airy sleeping-chamber, a ghost of the gay Rosa Cavalto, except for the great, bright eyes which turned eagerly to smile upon him.

A pang went through Coventry's heart. He had the affection of a brother for this fated girl; he would have given up everything to save her—*except Kathleen*. As he took the little, wasted hand she extended, he burst into tears.

"You pity me," she whispered, "but you do not love me. Are you married yet, Mr. Faye?"

He shook his head; he could not command his voice to speak.

CAVALTO.—"SHE SAW FOUR PERSONS—ONE OF THEM A YOUNG, WASTED GIRL, A NURSE AND TWO MEN: ONE A CLERGYMAN, THE OTHER A YOUNG MAN."

"I am glad of that, for I have a plan. The doctors tell me that I cannot live a week. I want you to marry me."

He almost dropped the little, feverish hand, but, looking at him steadily with those glorious eyes, she went on:

"She you love need know nothing of this. It will be for a few hours, or days, at the most. I have confessed to my father; I have made my peace with the world; but I cannot die happy unless you allow me to call you my husband for a little, little while! Is it so much to ask? Can you not do this much for one who is dying because she loves you too well?"

Faye felt that he was worse than a heathen, worse than a brute, not to be able to assent willingly to this curious proposition. Carlos stood by, regarding him with restless, burning eyes, as if he would resent any hesitation on his part as a deadly insult. Still, the image of Kathleen before her lover's mind made it impossible to consent. Supposing Rosa should live, and his wedding-day but a week off? He caressed the thin hand: he spoke gently and soothingly; he told her how fond he was of her—how he loved her purely and truly as a dear sister—should never forget her; but that he thought it would be a wrong to the young lady he was so soon to wed to vow such vows to any other.

It was by far the hardest thing he had ever had to do to get out of that room without promising. He did, however, promise to come again.

He went the next day, and Miss Cavalto renewed her appeal. She clung to it with strange obstinacy.

"Oh," said she, with a bitter moan, "I want to die, I suffer so; yet I cannot die until we are married. You are keeping my soul in my dead body by holding out against this wish of mine. Why, I am dead—dead already! My soul longs to take its flight, and you will not release it, who are so cruel to me who love you so?"

At last the scruples of the strangely perplexed man gave way before such agonized pleading as this, and he compromised with her by solemnly swearing to come and marry her whenever the physician certified that she could not live twenty-four hours. She yielded to this singular promise, and he returned to his every day life like one who still sleeps and dreams. Nothing appeared natural to him. He lived in such a state of anxiety, with such a strain upon his nerves, it was no wonder Kathleen thought afterward, that his heart had not been with her those days before the wed-

ding-day. Every hour was an age to Coventry Faye, as the time dragged by. He lived in dread of that summons to Miss Cavalto's death bed. The last day before that of his wedding with Kathleen came and passed. Apprehensions that he might be sent for at the last hour made him wretched and restless. It was with almost a keen joy that, on his bridal eve, as he parted from Kathleen, a man put a note in his hand from Carlos, with the one word "Come"; so great was his relief to think the trial would be over.

What would he do if Rosa were still living when the hour for his nuptials with Miss Garland came? It was a miserable position in which, with no fault of his own, he was placed.

When he reached the bedside of the dying girl, *that* fear, at least, vanished. The death-dew was even then gathering on the young forehead. She smiled at him, a smile glorious as the last brave effort of an expiring light, and bade her nurse give her wine to keep her alive until the minister should arrive. Poor child! his heart bled for her. He could not be sorry he had yielded to her wish.

There was a table beside the bed with ink and paper ready. The clergyman came, the solemn ceremony was performed. Rosa, bright and radiant, and, for the moment, apparently strong, raised herself from the pillows, signed her name to the marriage register, then called out:

"The other! give me the other paper, Carlos."

Carlos took up a parchment from the table, and arranged it before her. Again, and for the last time, she wrote her name, "Rosa Cavalto Faye," under the writing on this parchment. The brother and the minister added theirs, and, with a low sigh of content, and a happy smile, she lay back on her pillows and died.

CHAPTER IV.

IT was not until Kathleen had cast him from her with that cruel taunt that he was marrying her for her money, that Coventry Faye, walking out from her father's house with a scarlet spot on one of his cheeks, as if he had been struck in the face, went around to see Carlos Cavalto and speak to him a few words of such comfort as he could, and there learned, what he had before not even suspected, that Rosa, in her unselfish devotion to him, knowing him to be poor, had desired to leave him her fortune. This she could not do unless he

Digitized by Google

became her husband, since the terms of her father's will were, that if she died unmarried her half of the property was to revert to Carlos. Her dying act had been to sign a will leaving her wealth to her husband, Coventry Faye. This purpose of hers, Carlos, generous as air, had furthered.

In the light of such unselfish love, Kathleen's anger, distrust and accusation looked poor and mean. Coventry felt very bitter toward her. She had refused to listen to his explanation; he never again would offer it.

Making his preparations as quickly as possible to quit the country, he did his best to persuade Carlos to accompany him abroad, believing that the change would be the most favorable thing which could happen to the bereaved man. Cavalto refused, for some reason of his own, stating that he intended remaining in New York for the Winter.

Coventry Faye went abroad, stopped all Winter in fascinating Paris, tasted the pleasure of being a very rich man, was flattered and fawned upon, and learned by experience that all the servile attention paid to money did not give him half the rapture which used to thrill him when some critic paid a compliment to one of his dear pictures. He learned, too, that it was not easy to put Kathleen out of his heart. He had time to reflect that no woman's faith on earth could be expected to convince her of his truth against the direct evidence of her senses. Poor Kathie! no wonder she felt outraged and angry! No wonder she looked about for *motives*, and could find none but that he had never loved her, and was after her fortune! The memory of her colorless, drawn face, her stern brow, her blanched lips, and the anguish which she could not quite keep out of her true eyes, haunted him night and day.

When Spring came, he felt that there was nothing for both of them unless he went back to her, humbled his pride and entered into explanations. He returned across the sea with no announcement to any one. Scarcely waiting to change his garments and lunch after the arrival of the steamer, he hastened, one sunny May day, along the familiar street, pausing one moment to still the too-rapid beating of his heart at the foot of the stone steps, guarded by brown carved lions, which led up to her door.

In that one instant the door was flung violently open, and a wild-looking young man, hatless, with gleaming eyes, fled down the steps. As he caught sight of Faye he stopped, staring at him.

"Cavalto!" cried Coventry. "My dear friend, what is the matter?"

"Matter? Matter enough!" returned the other, a low laugh breaking from his foam-flecked lips. "You killed my sister, you stony-hearted devil! I resolved to have my revenge. I stayed behind you, here, in your cold city of ice and snow. I made the acquaintance of your blue-eyed sweetheart. Ay, I made love to her, and she promised to be mine. She will never marry either of us now; for I have killed her, as you did poor Rosa. I have just strangled her with ropes of her own pretty gold hair. She is as dead as Rosa now. Go up and see!"

With long strides he hurried away, chuckling to himself at thought of his friend's horror-whitened face.

Coventry dashed up the steps. There was no one in the hall. He turned, blanched and quivering, into the well-remembered drawing-room.

A slim, white figure lay on the floor, between the two windows.

"Kathleen! Kathleen! Kathleen!"

He lifted her in his arms. Her lips were blue, her eyes stared out of her head, her face was swollen. He called, he screamed for help. With trembling fingers he untwisted the silken, cruel, golden tresses from about the slender neck—poor, blackened neck!

Servants came running. Mr. Garland came out of the library, where he had been quietly reading while the murderer's work was going on.

"Cavalto did it! He has gone mad!" murmured Faye.

The terrified father sent for physicians. He and Coventry bore the light figure up-stairs and laid it on a bed. Water was brought and dashed in the distorted face.

That was a half-hour of agony. Were you to speak to Coventry Faye about it to-day, he would lose color and begin to tremble.

"There is a pulse yet," the doctor had said, when he came in; and Kathleen had gasped, sighed, breathed, opened and shut those staring eyes, and a look of wonder and joy had come in place of their awful stare, as she recognized Coventry bending over her.

Kathleen wore a very broad necklace of pearls and diamonds at her wedding, for the black bruises remained long on her fair skin, and Coventry would not wait for them to go quite away.

Poor Carlos was sick a long time in hospital, where Faye went every day to see him, and take him fruit and roses. It was brain-fever from which he suffered, and when he recovered he was sane enough. Grief for his sister, doubt of Kathleen's love, had brought it on. When he was well enough he returned to Cuba, without ever confessing whether he had purposely sought revenge on Faye by trying to win his betrothed. He seemed to have forgotten much of the past. Let us hope that life has still enough that is sweet and fair for him.

Paterfamilias at Home.

MR. BEN SKINNER has resolved that he will pass a happy Christmas at home. No friends are invited, and no friends are wanted, his family circle being large enough to form a respectable party by themselves. And what more charming reunion could he desire? Adieu, business! Good-by, Wall Street! to-day all thoughts of the daily routine of mercantile slavery are consigned to the depths of oblivion. Over the door of that happy home "All those who enter here leave care behind," could be most appropriately inscribed. Health, prosperity, and happiness; the love of a good father, the care of a virtuous wife, and the healthy romping of the numerous offsprings of this united family, serve to render the scene at once soothing and exhilarating. Baby, the youngest, snugly ensconced in the mother's arms, crows happily as she watches the joyous scene. Young Sammy is gallantly trying to curb the feverish ardor of his fiery wooden steed, while other members of this genial circle are compelling poor papa to serve as a camel while they drive him round the room. Jimmy and Mary have started a rival conveyance, but Jim has come to grief, and with a shout of laughter deposits his rider on the floor; she, noble aspirant to equestrian fame, seizes the tablecloth, and brings the contents of a Noah's Ark about her head.

"Christmas comes but once a year,
And when it comes it brings good cheer."

So this family seems to think, at any rate.

Christmas at the Baronial Hall in the Olden Time.

SIR WALTER SCOTT, in his introduction to the sixth canto of "Marmion," dwells rapturously on the joys of Christmas-time when he sings:

"The feast and holytide we share,
And mix sobriety with wine,
And honest mirth with joys divine."

He conjures up with a poet's magic skill, and flashes upon us from his magic glass, a brilliant relfex of Christmas as kept at the Baron's Hall in the olden time, full of life and reality. We give Scott's lines that the reader, glancing from the poem to the picture, may see how happily they are matched:

"And well our Christian sires of old
Loved when the year its course had rolled,
And brought blithe Christmas back again,
With all his hospitable train.
Domestic and religious rite
Gave honor to the holy night;
On Christmas Eve the bells were rung;
On Christmas Eve the Mass was sung;
That only night within the year,
Saw the stalled priest the chancel rear.
The damsel donned her kirtle sheen;
The hall was dressed with holly green;
Forth to the woods did merry men go,
To gather in the mistletoe.
Then opened wide the Baron's hall
To vassal, tenant, serf, and all;
Power laid his rod of rule aside,
And ceremony doffed his pride.
The boar, with rosés in his shoes,
That night might village partner choose;
The lord, underogatory, share
The vulgar game of 'post and pair.'
All hailed with uncontrolled delight
And general voice the happy night,
That to the cottage as the crown,
Brought tidings of salvation down."

Mrs. Prynne's Santa Claus

By Walter Edgar McCann.

CHAPTER I.—HIS APPEARANCE.

"HARK!" said Mrs. Prynne, going to the window and drawing aside the blind; "there goes the third alarm."

Marina turned down her novel and listened. The great bell of the distant Ravenhead Prison boomed mournfully, now rising with the swell of the wintry blast, now sinking with a dismal cadence almost into silence.

"Well, there can be no doubt now," said Mrs. Prynne, with an emphatic nod in the direction of the younger lady. "A prisoner has made his escape, and Mr. Stanbridge won't make his appearance to-night. I think we had better tell Sarah to bring in the tea, dear."

"Just as you think best, Aunt Clarinda," replied Marina Gale; who called her aunt, though the relationship was rather obscure. "You told him what time he would be expected, and he knows that you are peculiarly strict about hours."

"Not more, I hope, than is proper in a well-regulated household, Marina," said Mrs. Prynne, a little severely. "But as you seem to make a point of it we will allow Mr. Stanbridge still further grace—say a quarter of an hour; and that will make"—she added, glancing at the queer old Dutch clock, which was as reliable in its movements as one of the planets—"twenty-five minutes."

Marina smiled and went on with her book; the concession was not to her, she knew very well.

"A dreary evening—very cold, I think—it has blown up much colder," said Mrs. Prynne, coming to the fire, and taking her great easy-chair; "and he will relish a good cup of tea. Christmas Eve! Robert—I wonder where he is? I wonder whether he is thinking of us."

The old lady leaned back, looking into the fire, her mind busy with the past. After a while she took a bundle of letters from the little desk on the mantelpiece, and putting on her spectacles began looking over them—her habit on Christmas Eve for the last four or five years. These letters were from her grandson, Robert Hurlock—the last dated some eighteen months before.

Marina Gale watched her thoughtfully, forgetting the volume in her own hand; smiling faintly. Every year Mrs. Prynne, besides reading the letters, which she knew by heart, made precisely the same remarks: "I wonder where Robert is? I wonder whether he is thinking of us?" To which, of course, she could scarcely have expected a very satisfactory reply.

"I hope he has not forgotten his humble friends in this part of the world," said Marina; "but I am afraid it looks very much like it. Eighteen months is a long while; and when people begin to rise, to get rich and famous, and all that, as Robert Hurlock has been doing lately, they are very apt to ignore old acquaintance and the past altogether."

"Some, perhaps; but not Robert. I think he loves his old grannie, and knows how she loves him," replied Mrs. Prynne, her voice trembling a little. "I wish I could feel sure he had got my letter telling him we had moved from Dartford; perhaps he doesn't know where we are. A handsome, noble fellow! I knew he would do me credit. Bank president, and candidate for the Legislature—that's very well for five years a perfect stranger, he was, with scarcely anything—but the West is the place to rise. I am pleased with my boy, and I shall try to do something—not much—I can't—but a little by him, before I go. He will have something like seven hundred a year, and in the strong-box there's about eighteen hundred cash—I *think* there is; but I shall count it again to-night. I have gathered it penny by penny, as you know, Marina, and I believe my boy will take it kindly from his old grannie, rich and famous as he has grown."

"He will, auntie; me he may have forgotten, but not you!" said Marina; and then, lowering her voice, she said: "I sometimes wonder whether you are quite prudent to keep so large a sum in the house. It is a great temptation for the tramps and rogues who are always about."

"How is it a temptation, dear, if they don't know of its existence? Nobody is aware of that except ourselves and old Sallie; and then we live so near the prison, you must recollect. No," said Mrs. Prynne, taking off her spectacles and laying them across the letter with a sigh; "I am not at all concerned about the safety of the money—only I wish Robert would come; I may not be here much longer; and he promised in several of his letters that it should be very soon, and you know what he said when he went away: 'I will come back, grandma, when I am wealthy and distinguished; when you look upon me again it will be, I hope, the proudest moment, and the happiest, of your whole life.'"

Aunt Clarinda was in a retrospective mood to-night. Her voice sank and she looked dreamily into the fire again, tracing out I know not what strange pictures there. And now, at last—the hands of the famous clock pointing to the expired quarter—there was a sudden knock at the door; and there being an individuality even in knocks, both ladies knew that the sound announced the visitor they expected.

A moment later in stepped Mr. Stanbridge, Warden of the Ravenhead Prison—a handsome gentleman, rather English looking, a little bald in front, with short side whiskers, clear blue eyes and ruddy complexion.

Seasonable greetings having passed, and proper comments upon the weather, in came old Sallie with the tea and muffins and other things, and the little party sat about the table and were very cheery and pleasant.

Mrs. Prynne mentioned about the alarm a short time ago.

"Oh, yes," said Stanbridge, looking serious; "another escape. We have people out searching, and I don't know whether I did right in coming away under the circumstances; but they were scarcely the more likely to recapture the fellow because I remained."

"How did it occur, Mr. Stanbridge?" asked Aunt Clarinda, anxiously, having a taste for sensations.

"I don't know precisely. The first alarm came from the watch on the North Wall—capital tea, this, Mrs. Prynne—and I believe he—the convict, I mean—got over on that side."

"And what was his name?"

"We have no names there, you know; but his number was 379—a rather dangerous fellow, as his desperate escape shows. We shall get him again, though; his flight is known all about the neighborhood, and he will have no refuge, and very likely will surrender of his own accord, as they so often do."

"And, of course, he will be punished. What can prompt them to run away! Such folly," said Aunt Clarinda, resuming her supper.

"Well," returned Mr. Stanbridge, with a sigh: "I trust it will not be my task to punish him. There may be a reply to my letter of resignation before he is caught. The governor promised to act upon it immediately, and a fortnight has passed already. I wish you ladies could only realize how weary I am of the place."

Mr. Stanbridge glanced directly at Marina, and his remark was, in fact, expressly intended for her. They had not exactly agreed about this—that is, there was another matter pending upon the fate of Mr. Stanbridge's letter of resignation.

Marina, however, did not raise her eyes from her plate, except presently to say in a very careless tone: "the sugar, aunt, please."

It was a little cruel, and Mr. Stanbridge sighed again. This stalwart gentleman—six feet of English bone and muscle—at whose look more than a thousand hardened jailbirds quailed, the sound of whose voice made their hearts jump with terror, was himself equally at the mercy of this pretty, fragile girl, and though he, perhaps, did not quite realize it, a living and vivid illustration of the power of love, and of what helpless noodles it will make the mightiest of us.

He was now, indeed, about to give up his empire at her bidding, and awaited impatiently the intelligence that he was free. The loss of power he did not regret; association with so much crime and misery had sickened him; and he yearned for the other and ineffably brighter existence he had planned with the woman of his love.

His condition, however, was still one of suspense. He had sent in his letter of resignation two weeks ago, but the governor had not yet taken action upon it; the State is sometimes loath to part with an efficient officer, such as Stanbridge had proved himself, and what if his resignation were refused? Very serious complications might arise, and though he could not actually be retained against his will, yet his retirement might be accomplished under circumstances particularly embarrassing and annoying to a sensitive man. But while he was Warden of Ravenhead, or any other prison, he could not be the accepted suitor of Miss Marina Gale, who had a special horror of such places, and would not entertain the wooing of any person connected with them; and there being a very brilliant and attractive young clergyman who came sometimes to Mrs. Prynne's cottage, and was always graciously received by Miss Gale, Mr. Stanbridge could not help drawing uncomfortable and unflattering comparisons; so that his suspense about his letter of resignation had lately reached very nearly the point of anguish.

Pleasantly they continued chatting, and a pretty picture the little group made, sitting around the tea-table this Christmas Eve.

The refection over, Marina went to the homely, old-fashioned piano, and played and sang, while Mr. Stanbridge turned over the music. Aunt Clarinda, resuming her seat before the fire, busied herself reading Robert's old letters.

After a while, she relieved Miss Gale at the piano, and for almost an hour played industriously all sorts of faded and forgotten tunes—polkas, marches, and quadrilles, such as were popular fifty years before—while the lovers sat on the sofa and whispered.

At last it was time for Mr. Stanbridge to go—a fact that he recognized with a good deal of reluctance—and pulling on his coat, and bundling himself in it carefully, he bade them a wistful good-night, and withdrew.

"A short evening, it has seemed," said Aunt Clarinda, after a few minutes. "He is so very entertaining. I hope you—you acted sensibly with him, Marina. He is a gentleman, and certainly—a—a—desirable in every point of view, and I am sure he loves you very much. About his position there can be no further objection; he has resigned, and even if it should not be accepted, the place is really one of so grave responsibility that I scarcely know of a higher distinction than to hold it; and the—the emolument is assuredly a consideration——" the old lady paused, looking down on the table thoughtfully.

"All that is true, aunt," said Marina, quietly; "but I have told him as before that I cannot be his wife while he is warden of Ravenhead Prison; my resolution on that point is fixed. Very foolish and pig-headed you think me, no doubt; but I really could not marry any one associated with such a dreadful place."

"Well, of course you know best, dear, and I sha'n't try to influence you. Are you going now? Take the smaller lamp; and I suppose you did not forget to ask him to eat his Christmas dinner with us? That's right—good-night."

So Miss Marina vanished, and her aunt was alone. All now was quiet: old Sallie in her bed, too, by this time; and Mrs. Prynne bethought her of her strong-box. Unlocking the cupboard, she stood upon a chair, and took down from the top shelf, among the jars of pickles and preserves, that leather-bound treasure-chest, and carried it to the table.

And now it lay open, and disclosed its little piles of gold and silver, and its rolls of notes. Standing over it, with her back to the window, and the lamp at her right hand, the old lady contemplated the treasure with a wild smile and the absorption of a rapture.

She saw for the minute nothing but her hoardings. She saw not the stealthy hand raising the window behind her, and the haggard, white, greedy face looking in; she saw not the villain who now emerged from the darkness of the night outside into the brightness and warmth of this cozy little room, and stole with cautious step across the floor. Not the next instant his hand was on her shoulder, and his mouth at her ear:

"Give me your money, or I'll kill you!"

She screamed, of course; but Mrs. Prynne was a rather strong-minded person, and had plenty of courage. She broke away from the man, and recollecting the revolver in the cupboard, ran there, and seized it, and instantly presented it, with a steady hand, in his direction.

At the same moment, Marina, who had heard her cry, appeared at the door.

The robber wore a convict's jacket and trowsers; but was without hat or shoes—evidently it was the man who had escaped that afternoon.

"Surrender, my man, or I'll kill you!" said Mrs. Prynne, determinedly, in a tone that left no room for doubt, and there were six barrels.

"Stop, grannie! Don't you know me? It's Bob!"

The pistol dropped from her hand, and she stood looking at him with a strange, wild stare, and then fell back against the wall, and threw up her head, with something between a sob and an hysterical laugh:

"My God, it's Robert! So this is how he comes back."

CHAPTER II.—HIS STAY.

THERE was a long and dismal silence. She seemed on the point of fainting, or having a spasm, and Marina was too confounded to stir, while Robert Hurlock had sunk into a chair by the table, hiding his face in his arms, and crying bitterly.

At last, Marina roused herself, and went to her aunt, and led her to her seat before the fire. She would not have wine, or even water, but asked for a minute to collect her thoughts, speaking in the voice of a sick woman.

So another period of quiet ensued, so painful, that you would have thought some one dearly beloved was dying.

Mrs. Prynne spoke at length, sitting more erect, and without taking her eyes off the fire:

"You have come back, Robert Hurlock."

He raised his head, and it was dreadfully white—the sickly pallor of confinement, the pallor of a great shock—and his features were thin and pinched, and great tears still rolled from his eyes; over all was the indescribable look of a hunted fugitive, the guerilla against society, with every man's hand against him and his own as pitiless in turn. His short cropped hair and clumsy convict's dress, no shoes on his feet, and stockings stained with blood, added to his villainous appearance; he looked wretched, and at the same time formidable. Marina Gale, who knew him so well, had not yet said a word to indicate recognition, and as she looked at him, she added:

"I have come back, grandma," he answered, with a kind of stifled choke.

"And all your letters were—lies;" it was the first time in her life she had used so strong an expression.

"No; not a single one, I swear, grandma—on my honor—on my soul!" he added, hearing her disdainful laugh at the other form.

"Bank officer and candidate for the Legislature! You meant candidate for the Ravenhead Penitentiary!" she said, bitterly. "You were elected, it seems, without opposition. Merciful Heaven, who would have dreamed!"

She again threatened convulsions, and Marina hastened to soothe her. When she was calmer, Bob Hurlock got up, and drying his eyes on his sleeve, limped across the room, and stood beside his grandmother's chair, with his hand on the back

Digitized by Google

She sat up stiffly without turning her head, and after a little hesitating movement, he bent down and kissed her.

"Grandma, will you hear my story? I am in Ravenhead Prison for embezzlement"—he spoke in this tense, showing his expectation of going back—"and I took money which did not belong to me, but never used it, and as God is my judge, I am as innocent of robbery as you are."

"Every convict in the world is innocent," said Mrs. Prynne, with another bitter laugh.

"But will you listen to me, grandma? The jury did that, and I was recommended to mercy. Perhaps I did not look before them the savage outcast I do here; but wrong has made me desperate, and I am hurt from climbing the wall, and for hours I have been skulking in the woods, nearly frozen. Have mercy, grandma, and believe what I shall tell you."

She did not reply, and he went on. His story was not a new one to those who read the newspapers. He had been a trusted officer in the bank, and had used the funds to loan to a friend, expecting their immediate return. But they were never returned; the vortex of speculation swallowed them. There was no possible way to replace them. Discovery followed, prosecution, ruin; the friend escaped, but Robert Hurlock went to prison. He got away somehow, but the brand was upon him—fatality pursued him everywhere, and finally, for some other offense, the last link in the same chain, he reached the Penitentiary at Ravenhead.

Quietly and distinctly, even with a sort of eloquence, he related this dreary history; and when he had finished, stood looking down, awaiting his grandmother's comment. The Dutch clock ticked off nearly five minutes before she spoke, and when she did so her voice was clearer, and, he fancied, kinder, certainly relenting, and she said:

"Hadn't you better warm yourself, grandson? I—I suppose you have told me the truth; but I don't know what is to be done. Your attempt to escape is madness; you will be found here and taken back, and, of course, punished."

"Oh, grandma!" said the unhappy man, with clasped hands, "if I could only get away to some place where no one knows me, and where I could begin a new life! All that has happened will be a lesson for the future. Anything rather than go back to that prison and mingle among those brutes who were once human beings! Surely there is some means by which I might be smuggled out of reach."

"I fear not. Our position is peculiarly delicate. Mr. Stanbridge is a constant visitor here—a suitor for Marina's hand, and we expect him to dine with us to-morrow, and if there should be discovery, or even suspicion—— Robert Hurlock, you do not know the misery you have brought upon us. If you had written I might have been prepared; but think of the shock of your sudden appearance, in the guise of a robber!"

"I did not know you had moved, and I entered that window a madman. From the outside I had seen you counting your money—you, as I supposed, a stranger to me, comfortable by your fire and under your roof, while I had neither. A fourth part of that treasure, useless to you, I reflected, would enable me to escape beyond pursuit, perhaps; and it was like the sight of water to him who is perishing of thirst in the desert. Think of these things, grandma—and you, too, Marina—and pity me!"

His words made an impression. Mrs. Prynne placed her handkerchief to her eyes, and Marina advanced to Hurlock and gave him her hand, which, with a kind of rude chivalry, he kissed.

Thus, if there was not exactly reconciliation, there was at least compassion and a willingness to consider his case. But what could be done? If anything, it was growing late, and there was no time to lose.

Mrs. Prynne stood up and faced him, with something of the old tenderness he remembered so well in her countenance.

"Robert," she said, "I don't believe there is a hope, but if the mere shadow of one exists, we must not let it pass. Let us put our heads together before we lay them on the pillow to-night. You are exhausted, grandson; I must get you some wine."

And so it was brought, with more substantial refreshment, and over both they sat for a long time, in deep conclave.

Next day, as we know, was Christmas. Old Sallie learned that during the night Mrs. Prynne's friend of many years before, Captain Tempest, had unexpectedly arrived, and rather in bad health, and with a particularly severe cold and neuralgia, which necessitated his keeping his face and head tied up.

The captain proved to be an extremely quiet visitor, never once, in Sallie's presence, uttering a word. He puzzled Sallie considerably; she could almost have sworn that he had on one of the old suits of clothes which had formerly belonged to dead and gone Mr. Prynne, and which had been hanging in the garret closet ever so long. On the whole, old Sallie was not favorably impressed with the captain.

Nor was her mistress, she fancied, altogether pleased with her visitor. Mrs. Prynne and Miss Marina both looked worried and as if they had not slept. Every sound startled them; and once, when there was a rap at the door, both ladies turned pale as death, and did not recover until they saw it was old Mr. Higgins, who had stopped on his way to church to bid them merry Christmas.

Mr. Stanbridge was expected at a quarter before two, dinner being exactly at two. Mr. Stanbridge knew Mrs. Prynne's railway punctuality, and had never failed to respect it, except once, and that was last night. To fail twice together was impossible.

But this is an uncertain world. At half-past one, Marina being upstairs dressing and Aunt Clarinda and Robert Hurlock in the little dining-room, which served as sitting-room also, there came a knock at the door.

It must be the man with the milk for the eggnogg, and she signed to Robert to go into the cupboard, not deeming it necessary that he should retire to his own apartment above, and he obeyed. Then she opened the front door, and Mr. Stanbridge entered, smiling and tendering his good-wishes. For a minute she stood in a panic, staring at him as if she saw a ghost.

CHAPTER III.—HIS DISAPPEARANCE.

HE was a little mystified and stared also. "I am afraid I am somewhat early, Mrs. Prynne," he said, taking off his gloves and coat; "but I have been walking round and about for nearly an hour, trying to consume the time, until finally I became so chilled that I was obliged to seek refuge here, at the risk of being premature."

Aunt Clarinda, now more collected, welcomed him pleasantly and made some excuse, and not daring to leave the room, sat down by him and engaged in voluble conversation. She talked incessantly, about the weather, past and present, the prospects of next year's crops, the political situation at home and abroad, new inventions, literary matters, amusements, and the latest fashions, much surprising Mr. Stanbridge, who had supposed her a rather reticent old lady, with a list of subjects limited to the business of the little world immediately about her.

They even got up a religious argument, Mrs. Prynne setting forth some views that really startled him. Extremely conservative himself, he found her wildly heterodox, and her extraordinary positions she maintained with a boldness and vehemence that gave him an entirely new view of her character. He did not suspect how poor Mrs. Prynne was trembling inwardly all the while she conversed, and expounding her new and amazing theories to absorb his attention and keep him in his place.

At length, to her infinite relief, Marina appeared, and then, after a little, dinner.

When they were seated, Aunt Clarinda noticed old Sallie fidgeting about the table uneasily and making signals, intended to be covert, but so palpable that Mr. Stanbridge could no longer decently pretend not to see them.

"What is it, Sallie?" asked Mrs. Prynne, sharply.

"You have forgotten the strange gentleman, ma'am."

"Oh, he doesn't wish any dinner. He is not at all well, and has gone to bed," and Mrs. Prynne explained about the arrival of her old friend, Captain Tempest.

Dinner from this point proceeded very pleasantly. After a while, Mr. Stanbridge said:

"Not a syllable yet from the governor, and I think it too provoking."

"So it is; but very likely he is enjoying his Christmas, and has concluded to postpone business till after the holidays; and certainly we can't blame him, Mr. Stanbridge."

"No; it is the season of enjoyment," laughed the warden, "and we must allow even the governor a short relief. Blessed is the Christmas-time, Mrs. Prynne; all the world looks the brighter for it, I think. Even our wretched convicts share something of the general jubilee."

"H'm! speaking of that, Mr. Stanbridge," said Aunt Clarinda, quickly, "I saw in the paper the other day that some of our astronomers claim that, owing to the spots on the sun, our Winters, in course of time, are likely to be much warmer, and eventually of a really tropic character; and, necessarily, our Christmases will lose the charm of ice and snow, and snug fires, and all those delightful features we now associate with them."

Mr. Stanbridge did not, perhaps, quite see the relation; but after a minute of reflection he said:

"Yes; very likely; but I think some of our scientific men claim just the contrary; and, at all events, neither is likely to happen very soon. With regard to our convicts, we give them an extra dinner to-day, which I left them already enjoying in anticipation. The fellow who made his escape last night must be having a cheerless time of it, wherever he is."

Mrs. Prynne turned violently red, and Marina looked down at the piece of turkey on her plate, with just the faintest glimmer of a smile on her face—the sense of the humorous sometimes strikes us in the gravest situations, and can be with difficulty repressed.

"I scarcely envy him," pursued Mr. Stanbridge. "At this moment, I dare say, he is thinking of the good dinners the rest of the world are enjoying, while he has none. Just fancy his sensations if he were to have a view of us! Miss Marina, it seems to amuse you."

Marina could keep back her laughter no longer; she laid down her fork, and the sound of her merriment was like the chime of silvery bells.

Poor Aunt Clarinda, with a crimson countenance, glanced at her reproachfully, and seemed to be praying inwardly for the floor to open and engulf her.

"Here is a turkey I think he would relish," continued Stanbridge, with unconscious cruelty. "I can't imagine greater torture than to be hungry and to stand in view of people enjoying a turkey like this, without being permitted to join them."

"To change the subject, Mr. Stanbridge," observed Mrs. Prynne, with a struggle, "I remark in the daily papers that Russia is involving herself in very serious complications."

"That is scarcely changing the subject, Mrs. Prynne," laughed the warden, perhaps emboldened by his wine; "for to speak of Russia at once suggests Turkey again, and turkey our unlucky fugitive——"

Aunt Clarinda looked a little black, and I scarcely know what might have happened had not old Sallie at this moment reappeared. But the diversion was only for an instant and most unfortunate.

"What is it, Sally?" asked Mrs. Prynne.

"The brandy for the pudding, ma'am," replied that faithful domestic, as she stepped to the cupboard.

Aunt Clarinda and Marina both sprang up; but it was too late.

The cupboard was opened; Sallie fell back with a kind of shriek, and Robert Hurlock stood revealed.

He saw that the situation was hopeless, and he emerged and stood before Stanbridge, with bowed head and abject—the convict in the presence of his keeper.

Stanbridge for a few moments was transfixed; but education in his peculiar school had given him presence of mind that not even this surprise could shake longer; and, looking sternly at Hurlock with that steady and cold gray eye, under which so many hard-ened spirits had quailed, he said:

"Three Hundred and Seventy-nine?"

"Yes, sir," said Hurlock, faintly.

Mrs. Prynne fell on her knees, with upraised hands and the tears rolling down her face.

"Have mercy—it is my grandson!"

With a gush of wild sobs, she told her story and that of the unfortunate man for whom she pleaded; and it was pleading something like that we may see at the Last Day! An agony of prayer.

Stanbridge had passed through many sad scenes, but never had he seen such distress as this. Her gray hair had fallen down, and she clung to his knees—it was the apotheosis of misery.

She besought him to let her grandson go—to give him only an hour's chance for escape—and repeated the promises he had made for the future, strengthening them with all kinds of protestations of her own; incoherently, and over and over she reiterated these frantic vows.

Stanbridge looked down at her piteously; he was moved; it was the greatest emotion of his life.

He was moved, as I have said; but not from his duty. Alas! that could not be. He was Warden of Ravenhead Prison, bound by an oath from which not even such a dreadful accident as this could absolve him; and sadly, and with a terrible distinctness, he told her so.

She fell on her face when she had heard, and he assisted in lifting her up and placing her in a chair.

"It is impossible, Mrs. Prynne. If he were my own brother I could not do it," he said, in a tone that left no room for hope.

And now there was a long and deadly quiet.

"You must go back with me at once, Three Hundred and Seventy-nine," said Stanbridge, in a hard, cold voice. "I am armed," and he made a step toward the chair where his coat lay.

Marina advanced and touched his arm. She was pale as death.

"Mr. Stanbridge?"

He paused, with a slight bow, but without meeting her eyes.

"If he goes back, all is over between us," she said.

"Miss Gale!"

"I declare it, and I am as resolute as you."

"But remember my oath, Marina. Would you have me a traitor to my duty and a perjurer?" he said, calmly.

"If he goes back, all is over between us," she repeated, in a tone like his own. "But give him only a single hour to try for his freedom—for his redemption—and I will be your wife, when you please."

Stanbridge trembled. He loved her dearly—never in this world could he love another so—but then his honor? his manhood? his sworn fealty to the State?

At this moment there was a knock at the door; Stanbridge, being nearest, opened it, contriving to hide the interior of the room.

"Mr. Stanbridge," said a voice without, "the letter you expected has arrived, and I have obeyed your instructions to bring it you immediately."

"Thank you."

Stanbridge closed the door and stood among them again. With a tremulous hand he tore open the letter and read it, and then he said:

"I am no longer Warden of Ravenhead Prison! I ceased to be so at twelve o'clock last night. My resignation has been accepted, and a successor is already appointed. Robert Hurlock, this is an intervention from Heaven itself; so far as I am concerned, you are a free man."

Stanbridge dropped into a chair and shaded his face with his hands; Marina came over and placed her arms around his neck.

"God bless you!" she said, fervently.

Poor Aunt Clarinda was already clasped in the embrace of her grandson, neither able to utter a word; and old Sallie, who had witnessed everything but understood it imperfectly, suddenly flung herself across the back of the sofa, and cried and hooted hysterically.

* * * * *

Robert Hurlock, I am glad to say, succeeded in getting away without further trouble, and was never recaptured. He is now in Australia, and, according to his letters, a very prosperous farmer; also married; but his family and neighbors know him as William Prynne.

Mr. Stanbridge and Marina are man and wife, and live no longer in the shadow of the institution where he was once warden. They have a quiet country-home far away from that spot, and Aunt Clarinda lives happily with them; and when they sit about the fire on Christmas Eve, they sometimes refer, with a sigh and a smile, to the story of MRS. PRYNNE'S SANTA CLAUS.

The Ghost Story.

THE humorous scene depicted in our engraving sufficiently explains itself. The wide, old-fashioned chimney-place of this homely cottage is decked with holly and mistletoe, betokening a festive evening of the Christmas season.

The company, as it should be at this time, hallowed by domestic charities, seems to include the kindred of three generations—from the cozy grandsire and his aged partner, with the youths and maidens at their side, to the little child that cowers upon the floor, and clings in delicious terror to her sister's arm. The curious-looking fellow whose eloquence has engaged the rapt attention of the whole party is a privileged visitor, and sits with easy dignity in the sole armchair, while he repays the hospitality for the welcome bestowed on him by giving them one of the most marvelous stories ever heard. If we may guess the character of his discourse from the gestures and grimaces of the speaker, we shall infer that it is a grotesque sample of that wild demonology which in every age and country has diverted the popular mind. The old man smoking his pipe in the corner seems to be the least affected of the party. The old woman, with an abstracted look, is musing, perhaps, on some of her old experiences, which the story may have brought to her mind. The younger women are seriously alarmed; not so the young man who leans upon the arm of the settle, and regards, with mingled distrust and admiration, the visitor whose wonderful talk is famed all over the country. At the opposite side of the fireplace is a withered elder, whose face is strongly expressive of incredulity and contempt. Under the table, at the left-hand corner of our engraving, we see a playful cat tugging at the cloth on which a jug of beer and a lighted candle are resting, whence it may be expected that a horrid crash and sudden darkness will presently attend the catastrophe of the Ghost Story.

THE CHRISTMAS ANGEL.

I.

HARK! for across the clear-starred night
The bells ring out as in years of yore
The air is thrilled with a keen delight,
The passionless moon sails chastely white,
And the Angel of Christmas is at the door.

II.

Sorrow and hate may harbor here;
Ghosts of dead dreams may wring their hands;
Vehement longing, regret and fear
May blind the eyesight and dull the ear,
But patient the Shining Angel stands.

III.

He has come ere, burdened with wrong and wrath,
The year goes down where the dead years wait;
Pure-robed he stands in its thorny path,
And gives, as a precious aftermath,
Reprieve from the thousand ills of fate.

IV.

The children hear him above their mirth
While they circle the fire with tale and jest;
They are not yet dulled by the jars of earth
Which deciduous days must bring to birth,
Nor the ranklings of infinite unrest.

V.

How sweet is the holy gleam that falls
From his luminous brows, divinely clear!
How tender the tones wherewith he calls
Through lowly homes and through lordly halls—
"Rejoice, for the Christmastide is here!"

VI.

And he weaves the delicate spells that bring
All happy visions to childish eyes;
They see Kris Kringle's white reindeer spring
With sleigh, gift-laden, whose blithe bells ring
Below the scintillant midnight skies!

VII.

To the heads of gold gray sires bend low,
And tell the old stories told so oft,
And the breath is held and the bright eyes glow
As gnomes and fairies move to and fro
Past the firelit hollies hung aloft.

VIII.

Yet, beautiful angel, grander far
Is the influence that you subtly shed
Over hearts that guilt's worst miseries mar,
Oh, then like the light of Bethelehem's star
Is the lustrous aureole round your head!

IX.

Hark! for across the clear-starred night
The bells ring out as in years of yore;
The air is thrilled with a keen delight,
The passionless moon shines chastely white,
And the Angel of Christmas is at the door!

JOHN MORAN.

Down in a Coal Mine.

By Helen W. Pierson.

UP in the wide, silent sky, the clouds seem hurrying back to leave a path of silver for the Lady Moon. A cold sleet had been driving all day, but now all was crystal clear, and every tree and twig was sheathed in diamond splendor. The trees stood up like great candelabra of molten silver, fit for service in the woods, which were God's first temples. Every bush looked like a sheeny fountain dripping with jewels. Even the rough gateposts of Phil Trelawney's humble cottage were enameled as with costliest crystal.

Phil, rough-looking miner as he was, felt somehow touched by the beauty of the night. To one who spent his life among the dusky diamonds in a coal mine—the fairness, the purity, appealed keenly. It was exactly as if God had decked His world for this great festival of Christmas, and the wonder of it all, the vastness and the splendor, smote on Phil's heart, though he could not put it into words. And here was his home. The little window shone like a warm, glowing jewel in the cold diamond splendor of the night. Phil knew how cheerful, how full of firelight and comfort that little room was, but he could not refrain from going to the window a moment and looking in. There was the table set for him—the dishes fairly sparkled with cleanliness, and the fire sent dashes of warm light over all. What a deft little housekeeper Jessie was, and what was she doing? Writing? Yes; she sat there, a slender little girlish thing, with the color of a white rose on her cheek, and eyes of the grayish-blue of a hare-bell. Her pretty bronze-gold hair rippling back from the sweet, low brow, and catching the firelight in its waves. Such a dainty little creature for great, rough Phil Trelawney to call his own.

"I wonder why she ever took up with the like o' me?" he said, with a half-proud laugh, as he turned away to enter the little cottage, which seemed to be quite filled up when the great, burly fellow entered.

Jessie sprang up, pushed her writing into the old book on her knee, and in a moment was buried,

CHRISTMAS FAMILY AMUSEMENTS.—A FATHER AT PLAY WITH HIS CHILDREN.—SEE PAGE 318.

as it were, in two strong arms and a rough, shaggy coat.

"I declare," she said, with a little laugh, "you are like a great Newfoundland dog in that thing."

"An' faithful as one, Jess, my lass," Phil said, in a deep, happy voice. "Was you a writin' the billey-doo, eh?"

"Writing!" exclaimed Jessie, as the color deepened on her cheek, and she turned nervously away.

"Yes. I took a look at you—out you."

"It's not like you to be spying, Phil," she said, with a pretty little air of petulance.

"Never mind, lass. No need to talk about it. You can write a book if you like," said Phil, good-naturedly. "You're smart enough for it, I do believe. But if I ain't mistaken it's tripe that's simmerin' and bubblin' up in that aggravatin' manner. Bless my soul! So it *is* tripe. Well, I'll soon dispatch 'em. This frosty night makes me feel nippish."

Jessie placed the hot, savory dish on the table, and looked on while her husband enjoyed it; but she had a somewhat absent and preoccupied air.

"I've bin a thinkin' of last Christmas," said Phil, when he sat at last with his pipe in his hand, toasting his feet at the fire, and Jessie with her knitting was at his side. "An' I know I've a deal to be thankful for, though I did have such a long pull at the fever, as set us back some. We're poor enough to-night, but content, my lass. I hope credit and love are in our house."

"Why, I'm sure of that, Phil."

"An' you don't repent takin' a rough old fellow, eh; and makin' his life bright? Sometimes when I look at you, Jess, I think you was made for somethin' better."

"There's nothing better," said the young wife, with a smile.

"You'd do credit to a fine house, my lass, and jewels wouldn't look amiss on that white neck, an' many a one with finer words might have wooed you, but never one with a truer heart."

"Oh, I know that, Phil, dear old boy," she said. "I'm not half good enough for you."

"I found out how much you were good for in the fever, lass. I knew I had picked a pretty little bit of a wild-rose to wear in my bosom, but how could I know what a faithful little nurse I had won. Jess, I shall never forget how your hand felt on my hot, blunderin' old head. Just like a little cool rose-leaf, for all the world."

And then Phil went over to his wife and stroked her soft, shining hair with his horny hand in such a tender way that a tear trembled in the blue harebell eyes.

"How trim the little room looks," he said, glancing about proudly. "Oh, I see, it's the holly as gives it such a Christmas air. But where did you get holly?"

Jessie flushed strangely.

"One of the village boys——" she began.

But Phil did not notice her confusion.

"I couldn't compass a turkey, Jess, my love, that would have been grand, but I couldn't; so we'll have to make our Christmas dinner of a bit of beef. It's a very small bit, just enough for you and me; but we'll have a deal of love with it, and——"

"That's better than turkey, and a contentious woman, isn't it?" laughed Jessie, recovering herself.

"And as for plum-puddin'——"

"Oh, it's very unhealthy, and, of course we're better without it." laughed Jess. "What is it you want, Phil?"

And Jessie sprang up in a strangely nervous manner as her husband turned to the door of a little closet near.

DOWN IN A COAL MINE.—"HE SEIZED THE BROKEN WIRE BETWEEN HIS TEETH, AND BEGAN TO CLIMB THE STEEP SIDES OF THE MINE."

"I was goin' to fill my pipe again, that's all, child. Perhaps it's too much dissipation, eh? You look so frightened."

"Oh, no, indeed! It's holiday time," she said, with a forced laugh. "But I'll fill it, dear. Just sit there and toast yourself."

"How good you are, lass; but surely you're sort of—— Good gracious, Jess, you're not goin' to have nerves, eh?" In an anxious tone.

Jessie, still with an unusual flush on her cheek, exclaimed: "Oh, no, indeed," as she handed him his tobacco-box.

"I wouldn't like to see you take to smokin', dear, and that's what poor women do when they has nerves—the fine ladies. I've heard they all have 'em."

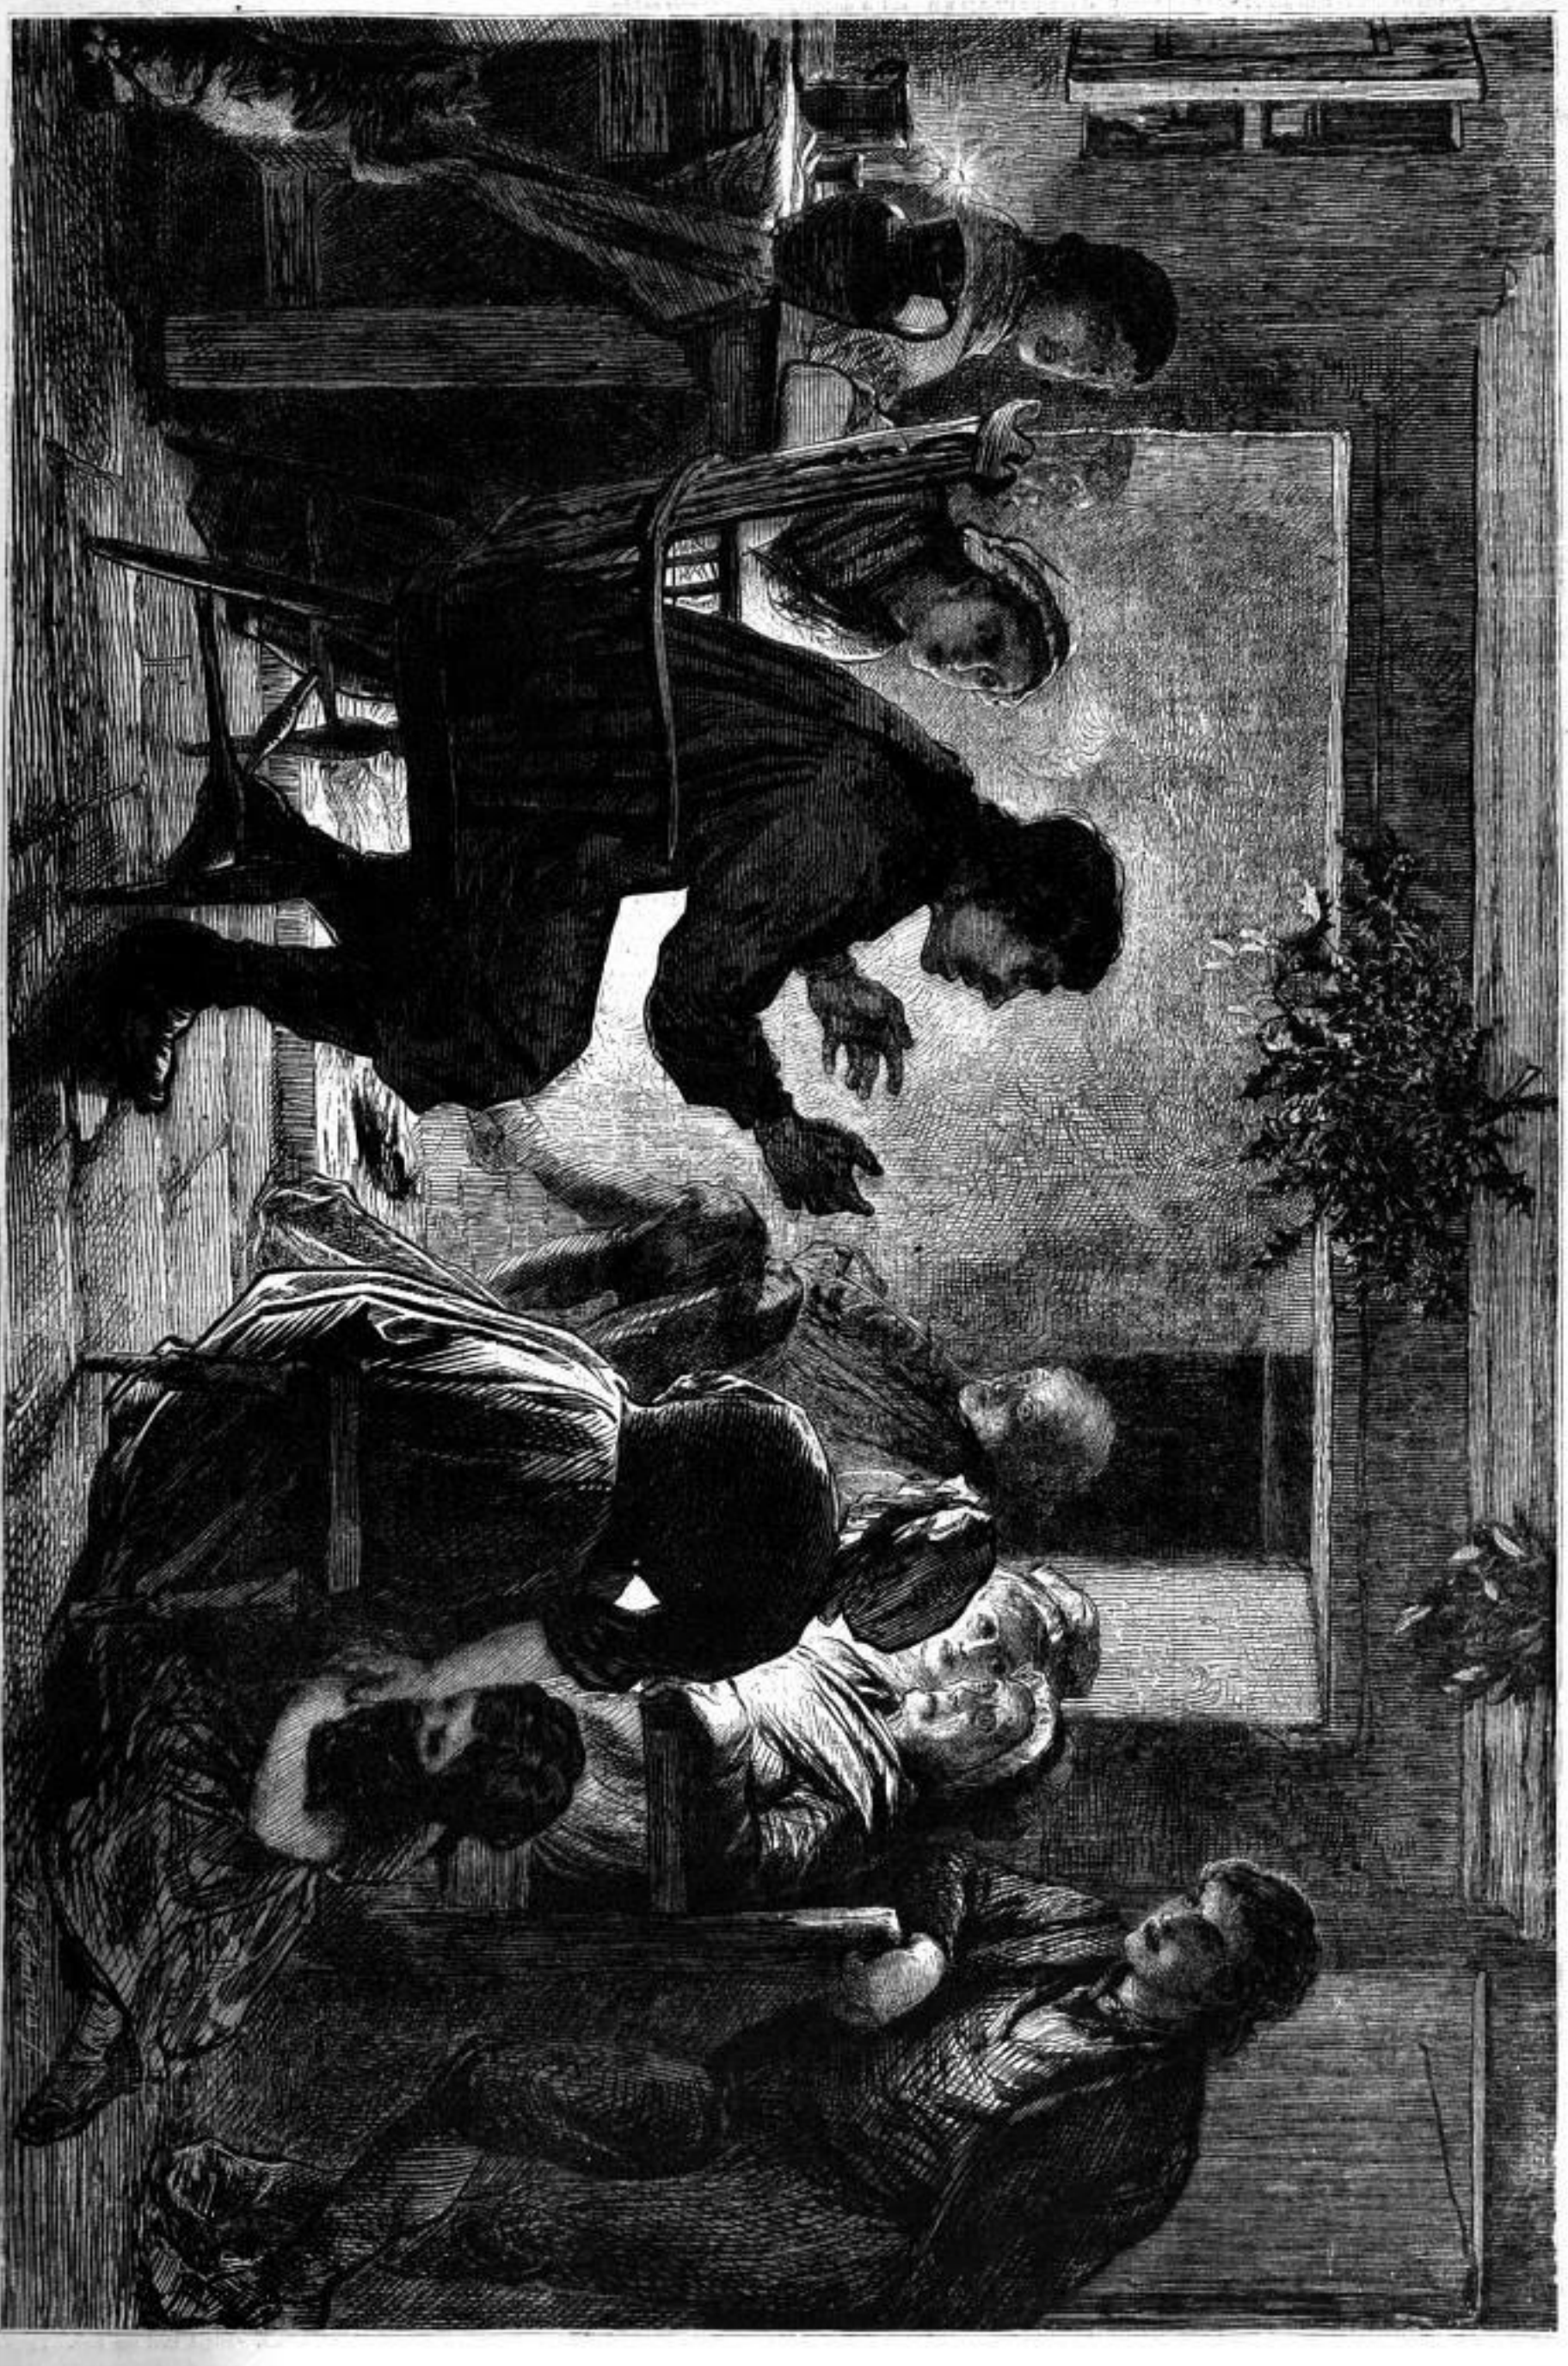
"I don't know," said Jessie, absently.

Phil was starting to his work long before the grand crystal chandeliers were lighted by the sun the next morning. So he could not see the opaline splendors kindle in their jewels and die away as the warmth unsheathed the diamonds, and they dropped one by one upon the ground. But he saw that it was going to be a fine day, and he was glad. He almost stumbled over a little white-headed lad who seemed hanging about his gate.

"Want anything?" asked Phil, sharply.

"No, in course I doesn't," said the younster, pertly; "I'm a-restin'."

"Well, don't injure your constitution with too much hard work, my boy," cried Phil, cheerily, as he trudged on over the crisp, white road.



What a grand place this world was, after all! No wonder its Maker had pronounced it "very good" so many centuries ago—Summer and Winter for ever changing, yet always full of beauty! Buttercups and daisies, or snow-wreaths and scintillating ice-jewels, each had its own peculiar charm.

Phil had not exactly these thoughts in his mind this morning, but his heart sang within him for joy, and he would not have changed places with young Jack Eversleigh, the son of the owner. God had given him his heart's desire, and Jack could gain no more—no, not if he had the wealth of the Indies!

Phil was early, but some of the men were already at the mouth of the pit. He was a sort of king among them—partly for his giant strength, which they all knew, and partly for his integrity and tender heart. As they went down into the depths of the earth this morning, something of the joy of the time seemed to go with them and light the dusky avenues and dark tramways. There was young Will Harding, who was to be married the next day! He was, of course, absent-minded, and responded faintly to his companions' jokes. There was Jim Brady, who was going to America. This was his last day's work, but he was full of hope and talk about that new land where he had a chance to do something better for his wife and tribe of little ones. There was old Sims, who lived by himself in a lonely bit of a cottage. To-morrow his daughter was coming with her husband to stay with him, and he was full of delight, telling what a housekeeper she was, and what bread she could make. He'd eaten hard enough fare in his time, poor fellow!

So the Christmas joy seemed to penetrate into the dusky mine, and the sweet anthem that has

sounded down the ages, "Peace on earth, good will to men," was singing in their heart's with the olden music, which had lost nothing of its gracious sweetness since it was sung for the Babe in Bethlehem centuries ago.

"I say, we'll be eatin' another sort of dinner to-morrow," said one of the men, with a chuckle, as he took out a solid wedge of brown bread at the noonday meal. "I won a goose last night at a raffle, and my wife's a one at cookin', and won't she be juicy basted in her own fat and plenty of ingins!"

"Who—your wife?" asked Will Harding, mischievously. "'Ave we a cannybal among us?"

"Oh, never mind him," said another. "Likely he think Nell's good enough to eat. Wait till you've been married twenty year, and you won't believe in h'angels."

Phil did not hear these words. He heard nothing save a strange singing in his ears, and he saw nothing but a queer gray mist about him and a bit of a note he held in his hand. He had found it in his dinner-pail. Had Jessie dropped it there as she put up his frugal little lunch? Had it fallen from her bosom—his wife's bosom? How else could it have fallen there? The light from his lantern seemed to play over it with a baleful fire. He stared at it, but he knew it by heart. Each word was burned in on his brain "with a dim dilating pain":

"My sweet Jessie! You cannot help being the loveliest woman on God's earth any more than the flowers can help blooming and making the world fragrant! I know you have a kind little heart, too, and that you will not judge too harshly a heart that loves you. I have kept the little rose-bud I stole from your window the last time I was there as a sacred thing. Let me show it to you to-day. I must see you. I will send a boy for your answer. It will be no Christmas for me unless you give me one smile and a kind word. You will see how sincere I am. I can lift you out of your common, sordid life into one of refinement and beauty such as you were made for. Trust me. *He* will not grieve long; it is not in such coarse natures to love as I do. Come to me, my little love. My heart is weary waiting.

"JACK EVERSLEIGH."

A swift, darting flame seemed to flash through every vein as Phil stood there with this note in his hands. Scathing as the lightning's stroke is such fire, and it left him unnerved as a little child. Tears came into his eyes—not transient, easy tears such as relieve the surcharged feelings, but big drops of agony, such as gush up

> "When the deep fountains of the heart
> By strong convulsions torn apart,
> Are running all to waste."

They rolled down his cheeks unheeded. His wife—his little Jessie—ah, now he was ready to die, now all the sweetness was taken out of his life, and the bitterness of death was gone! He thought of Jack Eversleigh's handsome face, his blonde mustache, his mocking blue eyes, his white hands.

"No wonder," he thought, as he looked at his own, grimy and hard with his work; "his dainty ways have won her. But, oh, Jessie!—oh, my darling, I did not think you could ever break my heart!"

"Why, Phil, man—hast seen a ghost?" cried Harding at his side, and he roused himself by a mighty effort to gather his shattered self together.

Oh, ay! Had he not seen a ghost—the ghost of his love, of his hope—a ghost that could never be laid again?

"You've a due ear, Phil," cried Phil Harding again; "just cock it for the sake of society. Here's Tom Seames says he hears a strange rumblin'; but I'm thinkin' it's just the echo of that raffle that's in his ears. They had somethink besides the goose there—eh, Tom, old fellow?"

Phil started to his feet, his face grew ashen, his lips quivered. Why, here was death coming to meet him like a friend! There was a low whir—a faint gurgle—just the very faintest in the world—but he knew it well. So he might lay down this burden called life, and Jessie would never know that the last throe of anguish was for his lost love!

But all these poor fellows who had something to live for, they must know—they can save themselves, and go up to upper light and sunshine once more. For him the face of all the world has grown dark—darker than the mine, darker than death!

"It is the water rushing in. Quick, to the telegraph, my boys!" he cried.

They rushed as one man to the spot. Far above them a little sphere of light shone the mouth of the pit. They thanked God that they could send up their cry swift as the lightning to those above.

Could they? Ah! one despairing groan as from one man, burst from the crowd. The wire was broken! One piece lay trailing on the ground.

Will Harding sank in a heap on the spot. "Oh, Nell, Nell!" he moaned. "To-morrow was to have been my wedding-day, and I—I shall not see it. It is too hard. Oh God, it is too hard!"

The rest stood staring impotently at the broken wire. Old Sims bowed his gray head and sobbed: "My girl need not come now," he groaned.

Phil glanced about at the stricken group. The blow that had paralyzed them had scarcely touched him. He had suffered the agony of death before; but for these—his comrades—these men with wives and clinging little children—he can still dare something. He seized the broken wire between his teeth, and began a frantic attempt to climb the steep sides of the mine. The others stared at him in a dazed way, as if scarcely comprehending his effort. He dug in his nails painfully, he clutched every projection, while the sweat started on his forehead and rolled in great beads down his face. His strength was miraculous, and at last the crowd gave a feeble cheer. He had reached the spot where the wire had parted!

But a despairing groan followed. He was hanging by his hands. How, then, could he join the parted wire? Even Will Harding, poor boy, had struggled to his feet, and stood watching with dim, dilated eyes and quickened breath. Life—life—hung on that parted wire, for the sound of rushing water was swelling on their ears. So, the problem is solved! Phil has caught the other end in his teeth and has fastened them together—chewed them tight in some strange way—and is dropping himself back among his fellows, in the same slow, painful manner. One moment and he is with them with torn and bleeding hands, sending up the call for help. They are saved! they are saved! They pant out their words of love and praise, and wonder that Phil is so silent and cold. Even when all are huddled about him in the air and light once more, he scarcely answers their eager thanks. There is a crowd about the mouth of the pit—Nell is in her lover's arms, laughing and crying, Jim Brady's children are swarming up his legs—but Jessie is not there!

Old Mr. Eversleigh comes up and speaks nobly to Phil of the company's gratitude. What a disaster it would have been for Christmas-time, so many homes darkened! Phil gets away from them all with difficulty; lets them go to their homes. Like a wounded animal he is sick with longing to get to his own. He has lost the exaltation of the terrible struggle. He is feeling now the reaction, and trembles like a child. He fairly creeps along the road which he had trod that morning with such an elastic, almost aggressive step. Yet how clear and blue the sky was—what a bright, heartsome day—strange that Nature could be so smiling when an earthquake had shattered his life.

He cast no loving glances this time into the small, diamond-bright window-pane, but walked straight into the house. Ah, Jessie was not there! How silent and desolate it seemed, as if there had been a death in it! The very holly looked forlorn, the fire had burned out into glimmering ashes. Phil built it up again, shivering terribly.

"It will be weary without her!" he muttered, with trembling lips. "But I must just go back to what I was afore, only I have some work to do first. I must kill that villain."

Ah, could he ever wipe out the sweet story of the past year and go back to his lonely life as if his love had never lived, and never met a violent death? He threw himself on the lounge in a trance of pain and groaned aloud.

The next moment a light step is at the door, some one is tripping in and a sweet voice cries:

"Oh, Phil! I heard a dreadful story of the mine. I almost ran all the way from town. Thank God you are safe!" and she ran to him and threw her arms about his neck.

The touch made him spring up.

"Where have you been?" he asked, hoarsely.

Jessie looked at him in a frightened way.

"I! Oh, I have been to the town as I said!"

He grasped her hands convulsively.

"Quick, why did you go?"

"You hurt me, Phil!" Jessie cried, drawing back. "And I think you must be dazed by the accident. You look so—so queer!"

"Did I hurt you, lass. Well, I have been cruelly hurt myself, you will know how when you see this."

And he threw to her the bit of a note which he had kept in his pocket.

Jessie glanced at it, and her lip curled.

"Oh, that thing!" she said, proudly. "Well, I wondered where it was! I wanted to send it back."

"Jessie!" cried Phil, "an honest woman does not get such letters!"

The young wife's eyes blazed.

"Do you doubt me?" she said, fiercely. "Then that is what a man's love and trust is worth."

But the next moment she melted into tears.

"Oh, Phil!" she sobbed. "Was it so wicked to like people to admire me? I believe it was now. I believe vanity is at the root of all evil. If Jack Eversleigh had not found out my silliness, he would not have dared to make love-speeches to your wife."

Phil felt a sort of balm steal into his wounded heart.

"I did not meet him! I do not care for him, the jackanapes!" she cried, angrily, her eyes kindling. "I love only you, dear, dear, old Phil. I thought you knew it. I have been hiding something."

"Ah!" exclaimed Phil, with a start.

"And I have felt, oh, so guilty," went on, Jessie, rapidly, the sweet color mounting to her face. "I have been working secretly at things to sell, fleecy things for the head, dear. Miss Tidd showed me how. I wanted to have a grand Christmas feast, and I knew my dear old boy had not the money. I've sold them, and bought everything, such a turkey, bursting with fatness, and links and links of sausages, and the rosiest cranberries, and the crispest pippens, and——"

Phil had his arm about her now. He knew she was true as the angels in heaven.

"I was going to keep it secret till to-morrow," she went on; "but, oh, I couldn't I know! Last night when you came in I was writing to Miss Tidd, and to your father and mother, and Boggs, the carrier, took the invitations, and he's coming too. And Aunt Esther, too, poor thing. When you got up to get your tobacco last night I was so afraid as death you'd see the turkey. It was in that closet, and so big, it couldn't be hidden."

"My little lass," said Phil, stroking her hair softly, "I was a brute!"

Then Jessie caught sight of her husband's poor, torn hands, and she cried over them a little, and then kissed them; and—as if that were not a sufficient cure—she anointed them and bound them up in fine linen, and then, as a great treat, led Phil to the door of the cupboard and showed him the mammoth turkey. Poor fellow! there was infinite repose in his attitude, though his legs stuck out so stiffly. "After life's fitful fever he slept well," and, indeed, his life must long have been a burden to him from sheer corpulence. There was a huge tankard of cider, too, and a bushel of nuts and apples.

"Now lie down again, poor boy," cried Jessie, "and you shall have some of those very sausages for supper, done brown."

Lying there at his ease and watching Jessie's slender form flitting here and there, the memory of the day's agony seemed like a nightmare dream. Looking in that innocent, girlish face, those dewy-bright eyes, with life's morning light yet unquenched, he wondered at his own doubts. He could scarcely forgive himself for wronging his darling in his thoughts.

All at once Jessie left the sausages to brown, and crept near to him.

"That Christmas holly," she said—"shall I throw it out? A little lad brought it, but *he* sent it. I had forgotten——"

"No, let it stand," Phil said. "It cannot harm us—the brave, bright holly! I don't mind. I think I don't mind anything now."

And what a happy little supper it was! Phil told the story of the mine, and Jessie ran around to kiss her hero, as she called him. Then through the starlit night sounded the chimes of the village church, far away like "the horns of elf-land softly blowing"; and those two happy hearts seemed to set themselves to the music—the grand and glorious anthem of the time—"Peace on earth, good-will to men."

But what an exciting story was the next one! Jessie was up before the first rosy flush crept up the Eastern sky; but Phil was soon at her side, and she showed him a mysterious looking speckled ball.

"Our plum-pudding!" she cried, with a little triumphant laugh. "You never dreamed of that, did you, old fellow?"

"No; but I'm afraid I shall to-night," answered Phil, with a grimace, as he contemplated the fearful and wonderful compound.

Jessie made good use of her time, so that they might go to church. The turkey was such a monster that they might leave him in the oven safely with a slow fire, and everything else was in readiness.

Phil went with alacrity. Never had he felt so much like thanking God for His goodness since the day he first had clasped Jessie in his arms. Now that he had dreamed how utterly bare and flavorless his life would be without her, he felt like joining in a great, triumphant chant; and an unutterable joy swelled up in his heart as if for the first time Christ was born for him.

And Jessie, although she knew little of the heart-throes through which he had passed, felt a sense of unusual thanksgiving as she remembered how Phil and so many others had been snatched by Heaven's mercy and one man's heroism from a terrible death. Ah, what would this Christmas have been, with Phil buried away from her sight—with that strong arm that she leaned on, that true heart that she rested on, snatched away for ever? No wonder a tender radiance filled her face with new beauty and her shining eyes overflowed with some of the rapture that glows in those of the painted saints. And then the music pulsed through the little church like a joyous beating heart, and seemed to throb up to the very heaven above their heads.

And, at last, when they stood outside in the clear morning sunshine, what an ovation there was for Phil! How his hand was wrung till it pained again, and good wishes were showered upon him and his pretty little wife till he seemed to stand knee-deep in them. And there was his mother—a rosy-cheeked little woman who wiped her eyes and stared up at him as if he were too dazzling and great for this wicked world. And his gray-haired father—stalwart yet—who proudly spoke of him as "my boy" to all who would listen. And there was Boggs, the carrier, and Miss Tidd, who was extremely genteel, and accordingly never expressed herself quite as she felt. She had been Jessie's teacher, and was a model of propriety, her only weakness being a fancy that every male with whom she came in contact was in love with her, and this lent to her manner a perpetual smirk and self-consciousness; otherwise she was a sensible person. Then there was Aunt Esther, who had traveled with an invalid on the Continent, and had seen a great deal in her day, only she could not remember names—which rather impaired her information.

But a more jovial party never set out for a Christmas feast. The hard, white paths seemed resonant with the music of their joyous feet, as with the sound of a triumphal march. As the little cottage-door was opened, what a delicious odor diffused itself about the room, and greeted their nostrils with grateful fragrance! That turkey was doing himself credit in the most exemplary manner, as was to be expected of such a generous bird, and the plum-pudding was not to be outdone. It was bobbing up and down in the pot in the merriest manner—"Dancing a sort of Christmas jig," Boggs said.

Well, it was all ready at last, and "a jollier spread was never seen," so Boggs said. As for the tenderness of that turkey, and the brown crackle of his juicy, rich skin—it was enough to haunt one for days, and fill one's nightly dreams. How really majestic he looked in his bed of sausages, with that broad expanse of bosom bared to the cruel knife! And as for that plum-pudding, which came on blazing, and shed a Christmas light on the jovial faces—it could scarcely be kept together for richness.

Then Boggs, with a huge mug of cider in his hand, proposed the very original toast, "The ladies—God bless them!" And Miss Tidd flushed and whispered to Jessie "that he was getting too pointed." Jessie smiled, and, leaning over toward her husband, whispered:

"He *has* blessed me!" and Phil patted her little hand softly under the table.

Then there was a startling knock at the door, and what should that be but a messenger from the Eversleigh Mining Company with a package for Phil, which he tore open at once.

What was this? Why, a vote of thanks and a purse of thirty guineas for the hero of the day! Thirty golden guineas that glittered with the promise of many a pleasant thing to come.

"The old Squire's heart's in the right place," said Boggs. "Ere's to 'im and the Eversleigh Mining Company, and to Phil Trelawney, the Prince of Miners!"

It was rather a mixed toast, but all drank it heartily; and then Boggs added:

"And may God bless us, every one!"

But Miss Tidd declared he looked at her very tenderly when he said that.

WHAT we employ in charitable uses during our lives is given away from ourselves; what we bequeath at our death is given from others only as our nearest relations

(Continued from page 286.)

HALF A DOLLAR.

A CHRISTMAS TALE.

By Mrs. Ann S. Stephens.

CHAPTER I.—(CONTINUED.)

"How little of that would make us comfortable!" thought the poor woman, turning her famished eyes on the loaves of bread heaped on the baker's counter.

But she moved on in silence, pressing the little hand in hers tenderly, as she turned up a cross-street, facing the wind and sleet with desperate energy.

The night would have been dark and dreary enough at any other time of the year, but now the principal streets were in grand illumination. The shop-windows were all ablaze, and through them came the vivid coloring of holiday gifts, tinting the very storm with an idea of warmth. It was a joyous, pleasant scene, spite of the storm; for the pavements were thronged, and eager traffic was going on; but the widow and her child went through it, blind to everything but their own great want.

"Mother," said little Ruth, as they came in front of a noble mansion where the widow had paused, searching for a number, "mother, will the half-dollar be enough to get a little of the ham too?"

"Do not think of that, darling. We may get nothing at all. Try and be a brave little girl if we should fail. See, there is a carriage at the door! The lady is going out. Keep close to me, for I must speak to her."

While she was speaking, the door of the mansion opened; a flood of light broke through, and moving down the wet steps came a lady folded in a cloak of soft, white cloth, with a cloud of lace wound over her head, through which came a gleam of diamonds—a middle-aged lady, sumptuously arrayed for some dinner-party. A footman was in attendance, carrying an umbrella over her head with one hand, while with the other he reverently lifted her velvet train from the wet stones.

When the lady reached the last step, the widow came forward, so eager in her distress, that she could only gasp out:

"Lady, lady! Only one moment! I must speak with you!"

The lady did not seem to hear; for the footman had pushed himself between her and the poor woman, whom he gruffly ordered to stand back, while he sheltered his charge to the carriage door, closed it with a dash, and climbed to the coachman's seat.

Before the mother could speak again, little Ruth darted out from her shawl and ran after the carriage as it was about to drive away.

"Oh, stop, lady! Make them stop?" she cried out. "We cannot wait. Mother must speak with you."

The only answer she received was the swift curl of a whip lash around her hood, the end of which hurt her cheek like the sting of a wasp. Then there was a great stamping of hoofs, and the carriage dashed away, throwing a gleam of its lamps on the desperately white face of the woman as it turned.

"Oh, mother! What shall we do?"

Poor little Ruth crept back to her mother as she uttered this woe-begone appeal and stood shivering there.

The woman took her hand with a wild, almost fierce grasp, and was turning away when a perfect river of light broke across the pavement at her feet.

Ruth looked up at the window from which it came, and cried out, joyfully:

"Oh, mother, look! They haven't all gone out! See, what a beautiful lady!"

The woman lifted her eyes, and there, standing at a window, holding back its crimson silk and lace draperies with her hand, saw a young lady looking out upon the storm. The light of many rainbows seemed falling on her from a crystal chandelier that kindled up the room with its diamond reflections, and through the open leaf of a folding-door broke in the grander illumination of another room, hung profusely with Christmas garlands, woven in with richer draperies. In the centre of this room a young spruce-tree towered to the ceiling laden down in every branch with glittering and costly gifts—a tree that, to the eyes of little Ruth, seemed planted in fairy-land.

"Mother, mother, look! Isn't that a Christmas-tree?" cried Ruth, shoving her mother closer to the window. "Oh, my, how could she! It is all shut out."

It did seem cruel when that young lady turned from the window, with an air of dejection, and allowed the rich draperies to sweep this little vision of paradise from the child's sight.

The widow stooped and quietly wiped away the tears that were filling the child's eyes.

"Come," she said, "it seems like good luck to know that some one is at home. We must try the basement bell."

Once in the area the steps above sheltered the mother and child from the fierce blasts of the wind, so, after ringing the bell, they waited long and patiently before any one came. At last a pampered cook, who was regaling herself at a side-table in the kitchen on the last part of a canvas-back duck, which had been kept warm between two china plates after a choice selection from those sent up for her master's dinner, bestirred herself enough to reflect that some one must be at the door, so with much deliberation she arose and went down the hall, wiping her mouth with a damask napkin in the progress.

As she opened the door, a gust of wind rushed into her red face, and quite took away her breath; but not before a street lamp had revealed the two persons standing without.

"Nothing for you, and serves you right for ringing like a market-man. We don't keep cold victuals for beggars that don't know how to pull a bell-handle. Such a night as this too, when the wind howls and the sleet pricks your face like needles. Just stand back, while I shut the door. There

Digitized by Google

now, no use of trying to talk. I can't have a word, and wouldn't if I could."

With this the woman seized on the door with both her strong hands, and closed it forcibly against the intruders.

The widow looked down upon her child, whose sad disappointment was clearly revealed by the street lamp. She did not know that her own features were still more wan and despairing.

"Oh, God help us! What can we do?" she said, holding the little hand in hers, as if it were the only frail thing on earth that she could depend on.

"Go up to the front door," said the little girl, earnestly, "ring the bell and ask for that young lady. She isn't like the others, I'm sure as sure can be. Say that you must see her. You are a lady just as much as she."

"I was a lady once," said the widow, with a sad smile, "and a proud one, too, but no one would think it now. Come, child, come! Why should we not go in at the front door?"

As she said this, the widow hurried up from the area, and mounting the broad entrance steps, rang the bell with a nervous pull that sounded her presence with something like authority.

The sound of the bell reached the young lady who had been walking restlessly up and down the room, of which the poor woman had caught a glimpse that seems to mock at her own wretchedness. She stopped a moment, held her breath and listened, then stole to the window on tip-toe, as if ashamed of what she was doing, saw a carriage in the gloom, and knew that, spite of the storm, her lover had come.

The servants were moving about in the back-room, so she closed the folding doors, and hid the Christmas-tree, and sat down demurely waiting for him to come in, as if she had not indulged in a thought about the matter till then; though her heart was beating so tumultuously that a little tuft of flowers that lay among the gossamer lace on her bosom fluttered as if a breeze were passing over it.

The door opened only to admit a servant, which brought an impatient glow to the girl's fair cheek.

"A person, miss. One of them sewing women that never will take no for an answer. She says that the madame owes her some change, just fifty cents, and she wants it."

"A woman, Robert, about sewing work. You ought to know that I am engaged—particularly engaged. Why didn't you tell her so?"

"I did, miss, but its no good trying to put such people in their place She says she must see you."

"Must see me! Indeed, I can see no one to-night, that is no one who is not expected. Stay, I will send the money if I can find it, no matter whether it is due or not."

The girl went to a work-box on one of the tables, and hurriedly searched for a portemonnaie that she supposed to be there.

"I cannot find it. Tell the woman that I cannot be troubled just now. She must call again," she said, heartlessly, for that moment the step that she had been listening for fell upon her ear.

The servant went out with alacrity, for he rather liked the petty tyranny of his position, and found the widow shivering.

"The young lady is particularly engaged. I told you so before: besides, she don't know a thing about any money due for work; but being kind-hearted, she says you may come again to-morrow."

"To-morrow! Oh, pray tell her that we are in great *need*. We must have it to-night. I would not have come so far in this awful weather but for that," pleaded the woman.

"I've brought your answer and won't ask for no other," answered the man; for the wind that swept sharply through the door irritated his lordly temper.

"But we need it so much!"

"There, there—stand aside. Can't you see that a gentleman is coming up the steps?"

The poor woman shrunk back with a piteous moan. Her face was so pinched and deadly white that a young gentleman who had alighted from a close carriage at the steps paused an instant in his swift ascent, struck painfully by it; but she shrunk further back. The door was flung wide open, and he passed into the hall. Without addressing a word to those he shut out, the man closed the door, forcing it against the wind with both hands, and obsequiously helped the young gentleman to divest himself of his overcoat. Then he held the parlor-door open for him.

The poor widow, thus left out in the cold, might, indeed, feel that one glimpse of that luxurious apartment was a cruel mockery of her destitution, for it was, indeed, a nest of artistic luxury. A bed of glowing coal burning in a grate of glittering steel and silver filled every corner with genial warmth. Rare pictures hung upon the walls, rich draperies lent their graceful glow and wealth of coloring; Oriental vases and rare bits of antique china stood in the recesses and covered the little tables.

While the storm raged without, no breath of it reached that dainty room strong enough to stir the basket of tea-roses, Japan lilies, and japonicas that had been sent to that fair girl as her first Christmas gift in the morning. Now their fragrance pervaded the whole room, and it seemed as if the fair owner moved through the calm of a tropical climate when she came forward to receive her guest; for that portion of her dress that swept the floor was rich with lace, and Summer-like in its texture as if the blast of a storm could never reach her.

"My darling, you scarcely expected me, I am sure," said the young man, coming forward with his hands extended and a world of lovelight in his fine eyes; "but it must have been a fiercer tempest than this that would keep me from you to-night, foolish fellow that I am."

"I should never have forgiven you if you had not come," answered the girl, with arch tenderness. "Why, sir, I have been waiting here half an hour already."

"Wondering what I should bring you for a Christmas gift?"

"No, no—not that," she answered, turning her eyes on the basket of flowers, and blushing like one of its roses. "That came this morning, and I would let them put nothing else in this room, for your roses turned it into a little heaven of my own."

The young man took both her hands in his, and held them close as he looked smilingly down into her eyes.

"Oh, flowers amount to nothing."

"You must not say that, George. They are the loveliest things on earth."

"They will perish in a day or two at the best. But I really have brought you something that will keep its own so long as we love each other."

"So long! Then it will be perfect to all eternity."

Smiles and tears both broke into the girl's face as she said this in the fullness of her glad heart.

The young man grew serious. Something in these words had struck him with a thought of death, from which the most intense human love can save no one.

"God forbid that it should not remain so while you and I live, dear one; for, see, it is the engagement-ring I have brought you."

A flood of crimson rose to that sweet face. The little hand held out for the ring quivered like a falling leaf. Then the girl began to tremble all over with a solemn realization of the bond this ring would seal. She held the star-like solitaire in her hand a moment, gazing on it with subdued reverence, scarcely conscious of its beauty, unquestioning as to its value. It might have been a lot of glass rather than a limpid diamond for anything she thought of the matter, for every sensitive power of feeling or mind was uppermost just then, and she only felt how solemn and sacred a thing that jewel was.

"No, you must put it on first," she said, resting one hand softly on his bosom, and holding the ring toward him. "I shall always love it better if taken from your own finger."

The young man, gazing down into her face, read all the solemn and beautiful thoughts that prompted the action, and his own sympathetic nature was subdued by them into solemn harmony.

As he stood before her, submitting one hand to her sweet will, his figure drooped from its proud bearing, the lids fell over his fine eyes, and he felt like one performing a sacred rite rather than the ordinary presentation of a Christmas gift.

"Now," he said, taking the glittering pledge from the tip of his finger, for it was too small for more than that—"now, darling, you have made this the very happiest day of my life. If I could give you the whole world it would not be enough."

He placed the ring on her finger, kissing both hands as he relinquished them. She gazed on the sparkling stone a moment, then lifted her sweet face to his, and for one happy, happy moment their lips met and clung together in a lifelong pledge. Then with his arm about her waist, the young man led his almost bride to a sofa, and there, seated among the embroidered cushions, fell into one of those broken conversations in which perfect confidence gives the sweetest zest to love.

"And you are happy now, my beloved?" he whispered, for her face was so near to his that a breath reached her ear.

"Happy! Oh, George, if we could be always so, heaven would begin here with you. To me it seems as if the whole world must be happy to-night."

These words jarred upon the young man, for they brought to mind the shivering child and white-faced woman he had passed only a few minutes before on the steps of that very house with the storm beating over them.

"Ah," he said, a little sadly, "it seems so to us; but while men and women live there will be some who rejoice and some who suffer. I was chilled a little on the steps to-night by a sad-looking woman and little girl who seemed pleading with your servant for something. The woman's face was intelligent, but so mournfully hopeless! Who can she be?"

As he spoke, the young man felt the form his arm encircled shrink a little.

"Oh, I had forgotten her. I was so glad to hear your step so soon. It was a sewing woman who says she has done work for mamma."

"And your people sent her away?"

"I do not know—you came in just then, and I forgot everything else: but I am so sorry. Did she really seem in distress?"

"Great distress. Indeed, nothing less than that would bring any woman out this fearfully cold night!"

"Is it so very cold? I had not felt the difference."

"God forbid that you ever should feel the inclemency of a night like this. Yet, my darling, the poor woman I passed on your steps seemed frail and gentle, and may have been an object of love and care also."

"Don't, George—don't. I am so sorry. How could I be so cruel?" The girl covered her face with both hands, and her voice was full of tears, as she went on:

"The poor woman asked for a little change that was due her. Mamma was not at home, and I knew nothing about it; besides, my portemonnaie had been displaced, and—and—you came in. Oh, how could I make myself so miserable! but, perhaps she is there yet."

The girl sprang up as this hope struck her, and rang the bell: when the servant came in she bade him go to the door and see if the woman who called was there yet.

"I shouldn't wonder," he said, on receiving this distasteful order; "she stood on the steps like a statue—as if she never meant to move again, when I shut the door on her. But the young 'un kept on ringing the bell, and I felt quite sure banged against the door with both her hands, as if the little creature was bent on breaking through. P'r'aps they may be hanging about yet such people never do get tired with waiting."

"Go and see at once!" ordered the young man, impatient at the delay this long speech created.

The man obeyed promptly enough now, and while he stood in the open door, looking indifferently into the darkness, the eager young couple followed him, and looked out anxiously.

There was no one visible. The steps were covered with sleet, that the wind swept in upon that daintily dressed girl, almost taking away her breath.

"I can see nothing of them," said the young man; "but they cannot be far off. Bring my overcoat," he added. "Tell me, if you know, where they live."

"Haven't got the least idea," answered the man, disgusted with all that was passing. "Theodore, the footman, knows, p'r'aps; but he's out with the madame. So you see, sir, it would be going out for nothing."

The young couple turned away reluctantly, and went into the room they had left; where the sleet that had fallen over their garments turned to water and hung trembling all over them, like dew that should have belonged to the flowers that glowed in the tropical warmth.

Both were greatly saddened, and the soft eyes of the girl were full of tears.

"Do not grieve so. We shall know where these poor souls live, and I will go to them early in the morning. That is the best we can do," said the young man, kissing away the tears with more tenderness than the first kiss of their betrothal had known.

"I—I will go with you—quite early, remember, and give her ever so much more than she asked for, and be a friend to her for ever after," replied the really kind-hearted girl, smiling through her tears.

CHAPTER II.

NO WORD was spoken between the widow and her child on the way home. The storm had abated something of its fury, but a stinging frost set in, turning everthing to ice, over which those two slipped, worried, and made their uncertain way to the desolation of their own basement. Once there, the broken-hearted woman fell into a chair, and beyond that, seemed unable to move. Ruth took off her shawl—now frozen stiff, and hung it over the empty fireplace, where it rattled and shook in the sharp currents of air drawing through from the window, giving out a faint, dismal sound. Then throwing off her cape, she drew close to her mother, and winding both arms about her neck, laid her cheek against her cold face.

"Come, mother, come; just try to cheer up. This hug from your own little girl will warm you up—see if it don't?"

A low, convulsive sob, which the poor woman strove in vain to suppress, was all the answer she could give.

"Don't, mother, dear—please don't! Try and bear it a little longer, and Christ will help us, for He died for us *all*—think of that! It almost makes one forget being hungry."

The child's voice had a sweet ring of courage in it: but underneath was a pathetic sound of tears choked back.

"You are tired out; it frightens me, mother, to see you sitting here, with your face falling on your bosom so. Come, now go to bed. I'll stir up the stove beautifully. The wet hasn't got into the corners. Come, mother."

There was a straw bed lying in a corner of the room. Ruth had become accustomed to the darkness, and began heaping up the straw on the side where her mother was to sleep. Here she persuaded the worn-out creature in the chair to lie down, and spread the worn quilt carefully over her, tucking it in against the wall. Then she placed a piece of rag carpet between the bed and the floor, that it might seem like a pillow: and hung another piece on the back of a chair, and thus shielded the corner a little from the icy blast that came through the window.

"There, mother; isn't this comfortable? Now just drop asleep, and I'll come to bed the minute I can."

A low murmur, too faint for a sob, came from the bed—then all was still; and the little girl heard nothing more, though she sat there, holding her breath as she listened.

Satisfied that her mother was asleep, the girl gathered up her rejected holders, and stole softly into the street. The sidewalks were one glaze of ice, but, spite of her fatigue, the child managed to reach the corner grocery, just as the owner was looking dejectedly over a pile of chickens and turkeys that had been left on hand, much to his disgust. He looked up as the girl came in, and made a gesture that she should leave the store.

"It is no use coming again," he said, curtly—"two shillings is the limit. I won't trust you another cent!"

"Oh, sir, please; don't say that! I didn't come for trust this time; only, if you would be so kind, to make a little trade. We are so cold at home, and we've had bad luck all day: so I thought that you might let me have just one loaf of bread and a bundle of kindling wood, and keep these to make sure that you would be paid. See how prettily this streak of red runs through them. I am quite sure that some of your lady customers would buy them."

"What—those little bundles of rags? What on earth are they good for?"

"Why, holders for kittles and flat-irons. Don't you see how thick they are—can't burn your hands through them if you try. Lots of women would be glad to get 'em."

The man turned the bundle parcel disdainfully over with his hands, then pushed it toward her.

"Take the trash away! I have no use for it," he said, crossly.

"Let me look at them," said a kindly voice from back of the counter. "Don't be in such a hurry to drive the poor child away, John. Such things are useful in the kitchen."

Ruth ran eagerly up to the counter and spread her wares upon it, trembling with hope.

The woman, whose gentle voice could at all times tame the savage in her husband's bosom, selected two of the holders and put them aside.

"These will do," she said, smiling down on the anxious face lifted to hers. "They are real pretty, and just what I want. Give her a nice, fresh loaf, John, and a bundle—two bundles—of the kindling-wood."

"Oh, ma'am, how good you are! I—I want to thank you, only—only sometimes when I'm very glad it makes me cry. Isn't that foolish, now?"

Even the burly grocer was touched by something in that voice, and some unusual emotion stirred in his throat as he selected the two largest bundles of kindling-wood from a heap behind the door, and put them carefully in the child's arms, piling the loaf upon them, as the good little wife stood smiling by.

"There, take that too," she said, rolling a great red apple across the counter. "Now scamper home, for it's an awful cold night."

Ruth did not scamper home—the sidewalks were too slippery for that, and her arms were full: but she made the best of her way along the ice, through the area, and crept softly into the basement, trembling as much from happiness as cold.

"Mother, mother! are you asleep?"

She scarcely lifted her voice above a whisper, fearing to disturb the weary woman if she should be still sleeping.

No answer came, and she stole up to the fireplace, thinking:

"I'll kindle the fire, and when it begins to blaze and crackle she'll wake up and be astonished. Then I'll give her the soft of the bread, and the apple, and—and just sit down and cry for joy to see her eat. After all, won't it be a jolly Christmas Eve!"

So Ruth broke one of her bundles of wood and set a match to it, took the loaf and cut away some of the crust for herself, then a thick slice for the sleeper; resolutely refusing to touch her portion till the mother awoke to join in the feast.

The match did its work; the fire blazed up with a cheerful sound, shedding its glow out among the shadows of the room; but this was not enough to awaken the woman prostrate there in one corner.

"Poor mother!" thought the girl, looking wistfully that way. "She's so worn out, it's a shame to wake her. I'll just wait a little longer, and then——"

The poor child not finish the sentence. Fatigue, anxiety, and this little glow of warmth had its effect on her. With her feet planted on the rounds of the old chair, and her head resting on the back, she, too, fell asleep.

It was daylight when Ruth awoke—broad daylight; for the clear Winter sunshine was shining in at the window, and afar off she heard the Christmas bells ringing joyously. She started up, bewildered. The fire had all burned out, but there upon the little pine table lay the bread, a knife, and one fair apple. Daylight, and her mother had eaten nothing yet.

Everything was so still that the child felt a sort of terror steal over her, and crept toward the bed like a creature afraid.

"Mother, dear mother, wake up now. It's morning, and I've got a lovely breakfast. Come, mother! you have had a good long sleep—get up now."

The child spoke low and hurriedly at first, then louder, and with a great effort at cheerfulness: but no answer came. The woman on the bed did not move.

"Mother, I say!"

Ruth knelt down by the bed and touched the sleeping woman with her hands. How cold it was in that corner of the room!

"Mother! mother!"

There was alarm in her voice now, and she started up, looking around helplessly.

That moment a carriage drove to the door, out of which came a young gentleman, and the lady she had seen the evening before at the grand house from which she had been turned away. She met them at the door, too much terrified for surprise.

"Oh, sir, will you try and wake my mother? She has been sleeping so long, and the cold has chilled her so! I tried to move her, but could not. I only had to speak, till now, and she would hear. Will you try to make her know how she frightens me?"

The young man came into the desolation of that room with a sinking heart; for its stillness struck him with inexplicable awe. The young lady, too, felt the chill through all her frame, and sank into a chair, wringing her hands in an agony of self-reproach.

The young man knelt down by the bed, and recognized in the white face turned partly against the wall the features that had aroused his sympathy the night before. He touched the thin hand, that was still clutching the quilt as it had been drawn up to her throat. Then he looked up, pale, almost, as the woman he had gazed upon.

"Does she hear? Oh, does she hear?" wailed the frightened child.

"She will never hear again," was the solemn answer. "Poor orphan! poor little thing! your mother is dead."

"Dead!" repeated the young lady, white to the lips; "dead!"

"Yes; frozen to death. She must have died early in the night."

Ruth had not spoken, but crept to the bed, threw out her arms, and clung to her mother, moaning.

Those two looked on sorrowfully, one sorely conscience-stricken, the other sad from intense sympathy. Some few broken words passed between them. Then the young man went out, leaving that delicate young girl alone with misery and death for the first time in her life. She strove to lift Ruth from that squalid deathbed, but the child only clung closer to her mother, begging to be left alone. Then the lady took off her fur-lined cloak, spread it softly over the two, and sat down in the cold, weeping bitterly because there was nothing else that she could do.

By-and-by some neighboring women came in from the tenement-house above, and one of them took the child by kindly force in her arms, and bore her up-stairs into her own room. The young lady followed after, and there, hour after hour, watched by the orphan; sometimes holding her close to her own bosom, in a gentle effort at consolation. And thus the Christmas, slowly marching, went by.

When the coroner's jury and the undertakers had done their work, a single carriage, in which that betrothed pair had taken the orphan child, slowly followed a hearse from that tenement-house to a neighboring cemetery. When the carriage returned, Ruth lay insensible in the arms of her young protector, and was borne into the house from which she had been driven only the night before, to be cared for thereafter as one of the family.

THE TRAGEDY QUEEN.

HER triumphs are over, the crown
Has passed from her brow;
And she smiles—"To whom now does the town
My poor laurels allow?"
It has wept for her, dying, a hundred times,
With mimic passion, in mimic crimes:
Who cares for her lying discrowned and dying
In earnest now?

Only those who have known her strange story,
And watched her through all,
So serene in the day of her glory,
So grand in her fall—
In the sphere beyond all tragic art
Playing her own deep woman's part,
A few faithful befriend her, still cherish, attend her,
And come at her call.

And so, when to-night the old fire
Flamed up in her eye,
And she said, "'Tis a childish desire,
I cannot deny,
To see the old boards and the footlights again,
To feel the wild storm of the plaudits of men!
But grant me this pastime, you know 'tis the last time,"
What could we reply?

Her form to the carriage we bore
In dark mantle and vail;
On my arm, at the gloomy side-door,
She hung, lily-like, frail;
But, treading the old, familiar scene,
She moved majestic, she walked a queen—
The rouged ballet-girls staring to see her high bearing,
So proud and so pale!

At the wing, her swift glance as we waited
Swept royally round:
I could feel how she thrilled and dilated,
And how at the sound,
The brief commotion that intervenes
In the busy moment of shifting scenes,
The creaking of pulleys, the shrill shrieking *coulisse*,
Her heart gave a bound.

The manager hastes and unlocks
The small door from the wing;
To the deep-curtained, crimson-lined box
Our dear lady we bring.
All aflutter with life, all aglitter with light,
The vast half-circle burst on the sight;
The fairy stage showing amidst, like a glowing
Great gem in its ring.

The strong soul in the weak woman's face
Flashes forth to behold
The gay world that assembled to grace
Her own triumphs of old.

"THE NEW QUEEN STOOPS AT THE OLD QUEEN'S FEET."

The vision brings back her bright young days—
For her the loud tumult, the showered bouquets;
And her fancy is ravished with joy amid lavished
Glory and gold.

In that moment of dream disappear
Sorrow, sickness, and pain:
Airy hopes, a romantic career,
Beam and beckon again.
Alas! but the life itself could last
No more than the dream: and the dream is past—
'Tis gone with the quickness of breath, while the sickness
And sorrow remain.

We saw her, pain-stricken and white,
Sink back in her place:
Could a pang of sharp envy so smite
The brief joy from her face?
Lo, the queen of the ballet! she waves and glides;
Upon floods of strong music triumphant she rides,
And laughingly pillows each movement on billows
Of beauty and grace.

And there, in his orchestra stall,
The stage-vampire is seen,
Foremost once, most devoted of all,
In the train of our queen
Still seeking a fresh young heart to devour,
Still following ever the queen of the hour,
Enrapt by so rare a sight, sits the gray parasite,
Ogling the scene.

Not envy—her heart is too great.
But for her, for all these,
Whose fortunes, like flatterers, wait
On their powers to please,
Whose substantial happiness draws
Its air-plant life from the breath of applause,
The powers soon jaded, the flowers all faded
And withered she sees;

The unworthy contentions, the strife;
Feet lured from the goals,
Hands staid in the contest of life,
By the hour that cajoles
With its wayside-scattered apples of joy;
The sunshine that pampers, the storms that destroy,
And all the besetting temptations benetting
These butterfly souls.

And naught, as we know, can assuage
Her keen anguish of heart,
Seeing thus from her dearly loved stage
The true grandeur depart
Now the people prefer these wondrous shows,
Scant costume, antics and flushed tableaux;
For tinsel and magic, forgetting her tragic
Magnificent art.

"Let us go!" she entreats. "I am ill!"
And unnoticed withdraws
From the theatre, thundering still
With the surge of applause.

As slowly she turns behind the scene
For a parting glance, comes the gay new queen,
By fairies attended, all glowing and splendid
In spangles and gauze.

From the footlights, arms filled with bouquets,
One is hurrying back;
One gazes with cold marble face
From the vail's tragic black;
And there at the manager's beck they meet;
The new queen stoops at the old queen's feet,
With all her soft graces and sweet commonplaces
Of greeting no lack.

"FROM THE COLD DIM COACH ONE LOOKS HER LAST AT THE THEATRE LIGHTS AND THE JOYOUS PAST."

Before her the great lady stood,
So gracious, so grand!
"You are lovely—I think you are good;
Oh, child, understand!
Be prudent, yet generous; false to none;
Keep the pearl of the heart; be true to one;
Be wise, oh, be gentle!" and from the dark mantle
She reached forth her hand.

And they parted. All freshness and fire,
One passed in her bloom,
Feet swift with delight and desire,
Arms shedding perfume!
From the cold dim coach one looks her last
At the theatre lights and the joyous past;
And away in the lurid wet night we are hurried,
Through rain-gust and gloom.

"THE FALLEN LEAVES." BY WILKIE COLLINS.

Published exclusively in this Journal by special arrangement with the Author.

THE PROLOGUE.

I.

THE resistless influences which are one day to reign supreme over our poor hearts, and to shape the sad, short course of our lives, are sometimes of mysteriously remote origin, and find their devious ways to us through the hearts and the lives of strangers.

While the young man whose troubled career it is here proposed to follow was wearing his first jacket, and bowling his first hoop, a domestic misfortune, falling on a household of strangers, was destined nevertheless to have its ultimate influence over his happiness, and to shape the whole after-course of his life.

For this reason, some first words must precede the story, and must present the brief narrative of what happened in the household of strangers. By what devious ways the event here related affected the chief personage of these pages, when he grew to manhood, it will be the business of the story to trace, over land and sea, among men and women, in bright days and dull days alike, until the end is reached, and the pen (God willing) is put back in the desk.

II.

OLD Benjamin Ronald (of the Stationer's Company) took a young wife at the ripe age of fifty, and carried with him into the holy estate of matrimony some of the habits of his bachelor life.

As a bachelor, he had never willingly left his shop (situated in that exclusively commercial region of London which is called "the City") from one year's end to another. As a married man, he persisted in following the same monotonous course; with this one difference, that he now had a woman to follow it with him. "Traveling by railway," he explained to his wife, "will make your head ache—it makes my head ache. Traveling by sea will make you sick—it makes me sick. If you want change of air, every sort of air is to be found in the City. If you admire the beauties of nature, there is Finsbury Square with the beauties of nature carefully selected and arranged. When we are in London, you (and I) are all right; and when we are out of London, you (and I) are all wrong." As surely as the Autumn holiday season set in, so surely Old Ronald resisted his wife's petition for a

NEW YORK, JANUARY 11, 1879.

WILKIE COLLINS'S NEW NOVEL.

In this Number of FRANK LESLIE'S ILLUSTRATED NEWSPAPER *will be found the opening chapters of* WILKIE COLLINS'S *latest novel,* "THE FALLEN LEAVES," *which is pronounced by those who have read it to be the best and greatest work of that highly gifted author. Every one into whose hands this Number may fall should read these initial chapters. They are characterized by the peculiar vigor and artistic effects which are inseparable from Mr. Collins's style, and afford a delightful foretaste of the enjoyment which is in store for our readers in the perusal of this remarkable work.*

We wish to call the attention of our readers to a new monthly magazine, entitled FRANK LESLIE'S CHATTERBOX, *full of interesting reading matter for the young—published at the low price of ten cents per number, or one dollar per year. What better gift can be made to a child than a year's subscription to this beautiful little magazine?*

PACIFIC RAILWAY MONOPOLY.

SOME sixteen years have elapsed since Congress first made the people of the United States responsible for the payment, in round numbers, of $65,000,000 on account of the Pacific Railways, mere private corporations. To the first day of December, 1878, public taxes to the amount of $39,835,039.86 have been used to pay interest on this loan of Governmental credit, of which sum only $10,445,916.73 has been repaid by transportation service. The balance is $29,389,123.13, which sum, if applied to a reduction of the war indebtedness of the country, would diminish the national burden to the extent of $1,763,347 per annum. If the public at large benefited pecuniarily by this vast loan of credit and payment of interest, there would be no cause for complaint. But they do not. On the contrary they are made the victims of rapacious extortion and unblushing insolence.

The monopolists, according to *Poor's Manual*, operate 2,251 miles of railway; and in order that our readers may appreciate to some extent the justice of our arraignment, we present the annexed official statement of the gross and alleged net earnings for five years, commencing with 1873, of these Pacific Railways:

Years	Gross Earnings.	Net Earnings.
1873	$26,209,944	$13,648,195
1874	24,784,094	14,874,742
1875	29,614,508	16,714,858
1876	31,033,803	17,033,517
1877	32,170,992	15,453,588
Total	$141,813,281	176,724,900

The foregoing shows the total net earnings to have been something more than 54 per cent. of the whole sum derived from transportation of passengers and freight, and yet, for purposes of their own, the managers of these corporations have underrated the amount of gain derived from the public. This can best be shown by comparing the operating expenses of the Pacific monopoly with the cost of railway service throughout the country during the period under consideration.

The following table, based upon authoritative statements, exhibits the cost per mile of railway operating throughout the country, as compared with the cost of service on the Pacific route:

Years	General R. R. Service.		Pacific R. R. Service.	
	Cost per Mile.	Decrease.	Cost per Mile.	Increase.
1873	$5,172 47	.....	$4,692 70	.....
1874	4,778 12	$394 35	4,626 54	.....
1875	4,434 46	343 66	5,508 55	$884 11
1876	4,228 18	206 28	6,220 47	711 92
1877	4,074 00	154 18	7,603 95	1,383 48

These figures are instructive. They plainly show that, independent of the Pacific roads, the expenses of operating our railways have been lessened year by year, the cost per mile being $1,098.47 less in 1877 than in 1873. On the other hand, the monopoly managers wish to make the public believe that the cost of operating their line has increased from $4,692.10 in 1873 to $7,603.95 in 1877, an increase per mile of $2,911.85. They would further impose upon public credulity by claiming that it costs $3,529.95 more per mile to operate their route than any and all others at the present time. This is simply untrue. The Pacific companies operated as many miles in 1873 as in 1877. During the former year their operating expenses were $480.37 per mile below the general average, and there has been nothing since, either in the price of labor and material, or increased accommodation to the public, to enhance the cost.

The operating expenses of the Pacific Railways for the years 1863 and 1864 varied but little, and averaged, for the two years, $4,658.29 per mile. Although it is reasonable to assume that they followed the general decrease, yet, admitting that this ratio of expense continued, we have the following result as to the net receipts reported and the net receipts as they really were for the years 1875, 1876 and 1877:

Years.	Reported net Receipts.	True net Receipts.	Difference.
1875	$16,614,855	$18,429,038	$1,814,183
1876	17,620,517	20,467,991	3,434,476
1877	15,053,583	21,584,272	6,830,689

This imposition upon the public, however, is far from being the worst that may be urged against the Pacific Railway corporations. Their whole history has been one of duplicity and imposture. Having beguiled Congress into granting a land subsidy of more than 37,000,000 acres, and making the Government sponsor for a money indebtedness of $65,000,000, their constant study and effort has since been apparently to so shape matters as, in the end, to escape all payment. Having obtained sufficient Government aid to build their road, they inveigled Congress, at an early date, into making the national claim of secondary importance. Looking to the evasion of payment of interest on the subsidy bonds, a decision was had from the Supreme Court, whereby payment of interest has been postponed until the bonds mature. Year after year they have gone on absorbing the vast revenues of the line and turning them to their own account. From these revenues the Central Pacific Company is now building a new road across the continent to be used, ultimately, as a competing road when the present line shall become worthless in their hands. Other portions of the revenue are being devoted to the building of other lines of travel, and the purchase by the managers of first mortgage bonds. They have constantly refused to consider final payment of the subsidy bonds and interest, hoping to evade any and all payment of the same.

The "peculiar" management and bad faith evinced by these corporations led Congress, during its last session, to enact the Thurman-Edmunds law. This Act requires the Central and Union Pacific companies to create out of their earnings a sinking fund which will, if the act be enforced, ultimately pay the subsidy bonds and accrued interest. By its provisions the companies are permitted to pay from their gross receipts running expenses and interest on first mortgage bonds. One-fourth of the remainder is to be paid to the Government for the purposes of the sinking fund. The law also debars the Central Pacific Company from declaring any dividend on its capital stock, or entering into arrangements for the leasing of any other railroad, steamboat or steamship line. The law further provides that a failure to comply with its provisions shall work a forfeiture of franchise and a reversion to the Government.

In this law we have the first vigorous attempt of Congress to yoke this overgrown and defiant monopoly. Its managers, however, will not submit if the law can be evaded or set aside. Even now they are taking legal steps to have the Act, if possible, declared unconstitutional by the Supreme Court. Looking to this end, one Albert Gallatin, acting in concert with the managers of the Central Pacific, recently brought suit in the United States Circuit Court, at San Francisco, to restrain that corporation from paying dividends on its capital stock. As pre-arranged, demurrer followed and the company evidently expected to procure judgment by a declaration of the unconstitutionality of the law. But a hitch occurred. Judge Sawyer would not serve them. Adverse judgment was submitted to without argument and an appeal taken to the Supreme Court. The result remains to be disclosed; but as this is a matter which concerns the nation, the people should be watchful of the proceedings. Should the monopoly triumph, as it has invariably done in the past, then the question may be seriously mooted whether the Congressional Acts incorporating these monopolies are not unconstitutional.

OUR DOCK IMPROVEMENTS.

FEW persons, perhaps, except those immediately and directly interested, are aware of the great work which is now in progress along the city front of the North River, and which promises at an early day to give an entirely new character to the west side of the metropolis.

Enjoying a constitution which enables them to conduct their business without the collision and friction so largely experienced by the other departments connected with the city, the Commissioners of Docks have proceeded with their work noiselessly and without ostentation, until now they are able to call attention to the partial completion of what is really a gigantic undertaking. From their recently published annual report we learn that the present Department of Docks has been in existence since 1871; that it underwent some sort of reconstruction in 1873, and that this is its eighth annual report. The management of the Board is vested in five persons called Commissioners, who must be resident in New York. They are appointed by the Mayor, and they hold office for the term of five years. It is the one department connected with the management of city affairs which does not come under the control of the Board of Apportionment, a circumstance which has from time to time been the occasion of wrangling. It owes its allegiance rather to the Sinking Fund Commission, it being provided by law that the Dock Department "shall possess such powers and perform such duties and receive such compensation as shall be established and defined by the Commissioners of the Sinking Fund of the City of New York."

It has been complained that the Dock Department makes but slow progress with its work. It is probable, however, that this charge is made by those who are ignorant of the difficulties which, from the commencement, the Commissioners have had to encounter. The water front is owned only in part by the City of New York, and when the Commissioners first entered upon their task a large proportion of that which they owned was held in lease by other parties. There has thus been the double difficulty of securing those portions of the water front which, although city property, was held on lease by others, and those other portions which were owned by corporations or private parties. These difficulties have gradually been diminishing, although it cannot be said that they have yet wholly disappeared. It can be seen at a glance, however, that the Commissioners are not without excuse for whatever delay may be complained of in the progress of the work under their care. There is no evidence that the Department is not executing its task faithfully and well. On the contrary, this latest report shows that steady and substantial progress is being made along the water front on the west side of the city. The section between Canal and Eleventh Streets has been all but completed, and the workmen are now busy on the wall between Warren and Canal. By means of this new wall the piers and wharves are thrown further out into the river, and West Street acquires a width of 250 feet. It is calculated that between Warren and Eleventh Streets there will be ample room for all the foreign lines of steamers; and, what with the greatly widened streets along the docks, facilities will be afforded for connecting by tracks the railroads and the different piers. The advantages of such an arrangement are obvious, and the result, when the proposed improvements are completed, cannot but be an immense gain to the commerce of the city. To carry out and to complete the work so far successfully advanced will involve large expense. Considerations of cost, however, must not be allowed to hinder the progress of an enterprise so fraught with advantage to the future of the metropolis.

It is gratifying to find that the financial condition of the Department, in spite of its difficulties, is favorable. The revenues for the year ending April 30th, 1878, show an increase over the expenditures of $223,745.37. The Commissioners express the confident hope that the revenues of the Department will, in a comparatively short time, reach the sum of one million dollars annually.

We do not care, at present, to enter upon the discussion of the questions which, to a certain extent, divide the opinions of our public men regarding the constitution of the Dock Commission and the manner in which the business of the Department is managed. It might be just as well for all parties if the Department were subject to the same control as the other Departments of the city. It is to be borne in mind, however, that the Commissioners themselves are not responsible for the laws under which the Department is organized; and it is indeed difficult to see why the public interests should not be as well cared for by the Sinking Fund as by the Board of Apportionment. That which is of paramount interest to us all is that good work is being accomplished for the city—a work which will at once improve its appearance and increase its trade. It is certainly in the last degree desirable that the improvements thus far advanced should be carried on and completed. It is a matter of minor importance by whom the work is done—whether by the Dock Department, as at present constituted, or by some other more directly amenable to the control of the usual city authorities.

NEW YORK AND RESUMPTION.

THE speech of Secretary Sherman at the annual dinner of the New England Society in this city, on the evening of the 23d ultimo, dealt almost entirely with the question of resumption, and was eminently satisfactory in its assurances to the distinguished company to whom it was addressed. The Secretary, after dwelling upon the necessity and duty of maintaining the public faith, and the difficulties which have attended the return to the specie standard, went on to say:

"Now that it is nearly accomplished, its maintenance will be easy or difficult precisely as the business men of this country, and chiefly of this city, make it so. Congress, hitherto doubting, waits in hopeful expectancy the maintenance of resumption. The Supreme Court is, I believe, unanimously in favor of restoring coin as the constitutional standard of money. The President of the United States will not only enforce the Resumption Act, but has an abiding faith in its easy execution. The powers invested in the Treasury Department are ample to meet even an extreme emergency, but I do not anticipate any necessity for their full exercise. Coin will not be largely used in the ordinary transaction of business, but other forms of money, strictly limited in amount to the sum that can safely be maintained at par with coin, will be freely paid and accepted as money in all transactions and for all demands. The necessary confidence that will make this easy will depend very much upon men like you, who in the great marts of trade handle the productions of our whole country. If you, guided by the public good as well as enlightened self-interest, will support the policy of resumption, the notes of the United States, like its bonds, will travel with increasing credit the circuit of the world. The notes should be regarded, not, as heretofore, as irredeemable and depreciated money, but as the coin certificates of a great nation, rich in mines, workshops and broad fields, and richer still in untarnished honor. Every man should feel that to aid in this is a matter of pride; to obstruct it a just cause of reproach."

The appeal to the business men of New York to aid in the maintenance of resumption has already been anticipated by their strikingly unanimous action in demanding, at the hands of the Government, a liberal and absolute fulfillment of the national obligation to pay the Federal notes in coin. Even when Mr. Sherman has wavered, and seemed disposed to coquette with the delusions of the Silverites and Greenback fanatics, the voice and conscience of New York have resisted with decisive emphasis all propositions looking to the debasement of the national currency or the smirching of the national honor. Now that resumption is reached, there need be no doubt or apprehension as to the direction in which the controlling influence of this metropolis, on this great and vital question, will be asserted. If the restoration of national prosperity, through the maintenance of honest money and an honest financial policy, depends upon the "business men chiefly of this city," the country may anticipate, with confidence, a speedy deliverance from the depression and embarrassments which have so long paralyzed its energies and darkened its prospects.

OUR WHISKY REVENUES.

IN view of the important relation which the Internal Revenue Bureau sustains to the finances of the country, it must be gratifying to taxpayers to know that the administration of this branch of the public service is characterized both by integrity and a high degree of efficiency. No department encounters more formidable obstacles in the prosecution of its work; the laws affecting the interests with which it has to deal provoke the antagonism of all the baser elements of vicious natures, and their provisions are, not unfrequently, successfully evaded, greatly to the damage of the public revenues. During the past year, however, their enforcement has been exceptionally thorough and satisfactory. The report of the Commissioner shows that, as a result of the operations against illicit distillers in the mountain regions of the Virginias, the Carolinas, Kentucky, Tennessee, Georgia and Alabama, 1,258 stills have been seized and 2,990 arrests have been made for illicit distillation. The greatest number of seizures, 290, was in North Carolina, and the next highest, 235, in Georgia. Since July, 1877, five revenue officers have been killed and thirteen wounded in incursions against illicit distillers. Of a gross collection from the spirit, tobacco and all other taxes of $110,663,808, but $9,705 was unaccounted for at the end of the fiscal year, and of this sum $4,665 has been paid in, leaving a net deficiency of only $5,035, or about one-fiftieth part of one per cent. of the whole amount collected. No better testimony as to the efficiency of this service could be desired than is embodied in these simple figures.

Digitized by Google

The report of the Commissioner presents some additional facts touching the extent of the whisky manufacture in the country at large which have a peculiar interest and value at this time. During the year 5,652 distilleries, in full operation, consumed for the purpose of distillation 1,027,886 bushels of malt, 3,947 of wheat, 55,612 of barley, 2,156,832 of rye, 11,074,366 of corn, 277,607 of mill-feed and 71, of other materials, making an aggregate of 14,680,552 bushels. Of molasses, 1,995,645 gallons are reported fermented for the manufacture of rum. From these various materials were produced 56,103,053 gallons of distilled spirits. During the first four months of the present year 3,302,766 gallons were exported, against 787,471 gallons in the corresponding period last year. The manufacture of Bourbon whiskies has spread into Illinois, Arkansas, Indiana, Nebraska, New York, Ohio and Texas; but Kentucky yet leads the list, having marketed 3,600,000 gallons out of a total of 5,000,000 gallons for the entire United States. Massachusetts monopolizes the entire licensed rum trade, with the insignificant exception of 48,000 gallons made in New Hampshire. In rye whiskies Pennsylvania leads with 1,051,634 gallons, followed by Kentucky with 230,212 gallons, Maryland with 212,104, and Virginia with 119,979. In gin distillation Connecticut leads the list, there being 175,959 gallons marketed from that State, as against 116,914 from Illinois and 72,006 from Massachusetts. The receipts from fermented liquors show a steady increase, reaching $9,937,051 in the fiscal year as against $9,480,780 during the preceding year.

These figures will at least afford striking texts for the advocates of the temperance reform. They certainly seem to show that the liquor interest, in spite of repressive legislation and the influence of moral suasion, has not materially diminished in magnitude or importance as a business factor.

THE BUSINESS OUTLOOK

WHILE the year just closed has been marked by extraordinary vicissitudes, and capital and labor have sustained a serious and almost universal extinguishment of their usual profits, the fact remains that the business of the country has been greater than in any preceding year of our history. This is very conclusively shown—not to consider other evidences—by the returns of freight transportation by the principal routes. Thus the tonnage by the New York Central and Erie Railways and the New York Canals, in 1873, which was the largest then ever known, amounting to 18,200,208, was exceeded in 1878 by 816,500 tons, equal to four and a half per cent. On the Pennsylvania Railroad, the Grand Trunk of Canada, and the Baltimore and Ohio, the tonnage shows a like proportionate increase—the gain of the Grand Trunk being over thirty per cent., and that of the Baltimore and Ohio nearly one hundred per cent since 1873. Even these figures do not fully represent the actual increase in the traffic of the country; but they are quite sufficient to show that our business has attained a volume altogether unprecedented, and that at the pace at which we have started on the high road to prosperity, there can scarcely be a question as to our speedy recuperation from all the losses and exhaustion of the panic. We may well enter upon the new year with buoyant hope and confidence in the future.

HOW THE OLD WORLD WAGS.

WISHES for a Merry Christmas and a Happy New Year have been very imperfectly fulfilled in the Old World. They have been cruelly disappointed in the British Isles by the distresses accompanying a great commercial and industrial crisis. Bank failures, suspensions of leading mercantile firms, short hours or utter stoppage of work in the manufacturing districts, actual and threatened strikes, and, in the east of London particularly, sheer destitution, offer a sad contrast to the picture of national prosperity which the United Kingdom has been wont to present. The situation has been aggravated by severe Winter weather throughout the kingdom. In Scotland this has been especially severe. All the railways in the north were blocked by the heaviest snowfall in thirty years. Two London mail-trains was snowed up two or three days before Christmas near Aberdeen. Altogether seven trains were snowed up and traffic was suspended. Very cold weather has likewise prevailed on the European Continent. In Geneva itself four hundred men and one hundred and twenty horses and carts were constantly occupied in clearing the streets. There is more snow on the Vosges than the oldest inhabitant remembers, and wolves have penetrated as far as the gates of Metz. Metaphorically, also, the wolf is at the door in many other places throughout Europe.

Politically, however, there is a prospect of a less stormy Winter beyond the Atlantic. Russia and Turkey appear to have decided upon putting an end to the difficulties so long protracted in the old Turkish provinces. Caratheodori Pasha, and Count Zichy—the Austro-Hungarian ambassador in Turkey—have at last arranged the terms on which will be established the convention between the Porte and Austria relative to Novi-Bazar and Bosnia. This perspective excites the former leaders of the Bosnian insurrection, and one of them has even threatened the inhabitants of Serajevo to raise forty thousand men in the district of Novi-Bazar for the purpose of punishing them. Furious at seeing his schemes foiled by the Albanian League, the same chief has tried to stir up the people against this league, which has ordered his arrest. Thirty steamers have been engaged at Odessa in order to carry back to Russia 100,000 men of Todleben's army now in Turkey. It is manifest that if the Czar is thus preparing to reduce his army of occupation, it is because the definitive treaty desired by him is on the eve of being signed by the Sultan. Italy has proposed concerted action on the part of the European Powers not directly interested in the Eastern Question, in case there should be any further disturbance in Bulgaria and in Roumelia after the evacuation by the Russian troops. If all these hopes shall be realized, at least a tranquil Winter in Europe can be counted upon.

As for the prospect in Afghanistan, it is probable that, notwithstanding all the contradictory dispatches relative to the flight of the Ameer and the departure of the Russian Mission from Cabul, the first month's campaign of the invading Anglo-Indian armies having successfully attained the immediate objects in view, the British Government will patiently await the eventualities of a four months' Winter, without many more active or extensive operations. If the Ameer has actually fled beyond the frontier, it is likely that the Viceroy of India will be instructed to assure the inhabitants of Afghanistan that his Empress Victoria does not war upon them but only against Shere Ali himself. In that case, indeed, fresh complications may arise, as a civil war in Afghanistan might afford the Czar a new pretext to interfere in behalf of the Ameer against his son, Yakoub Khan (who is said to have come submissively into Jelalabad), or any other vassal prince by whom the British Government might decide to replace him, without attempting, at present, at least, to annex Afghanistan—an ambitious project which would cost so much life and treasure, and be, unquestionably, so unpopular with British taxpayers.

Meanwhile, the Abdin Palace—the Winter residence of the Khedive of Egypt—has been half destroyed by fire; the King of Denmark and the Emperor of Austria have been threatened with assassination; and the Czar is too busily engaged at home in trying to conjure down the Nihilist spectre and to repress agitation among the students of the universities, to devote more than secondary attention to what is going on in Afghanistan. The Czar and his long-headed counselors know very well that they can afford to bide their time without prematurely hastening the conflict which is bound to come, sooner or later, in Central Asia between the British lion and the Russian bear. It is a pity, however, that the Emperor Alexander should be ill-advised, in trying to repress the internal troubles of his empire, to adopt similar measures to those employed in Germany by his uncle, the Emperor William, and by Prince Bismarck—measures so reactionary as to aggravate the very evils they are intended to cure.

Happily, in France and in Switzerland the signs of the times are more auspicious. Gambetta confidently predicts a Republican majority of twenty-four in the French Senate, and declares it to be the duty of the Republic to consolidate itself and to govern all opposing parties. And the Grand Council of Geneva has adopted the principle of separation between Church and State—a principle so well established in our own republic that we have nearly forgotten to appreciate it adequately, but which is still, and probably too long will be, at the bottom of most questions that agitate Europe.

IN Cincinnati a grave-robber has been sent to the penitentiary. A more effective punishment, probably, would be the public flogging of all persons convicted of this crime. Men will go to jail without a murmur who would shrink with shame and terror from the idea of being whipped in the presence of a gaping crowd.

IT is announced that Chief Justice Waite will preside at the trial of the election cases in South Carolina, which will begin within a few days. An honest and impartial trial being thus assured, the verdict, whatever it may be, will no doubt be accepted by the country, unless it shall turn out that the juries are subjected to partisan intimidation.

THE total receipts of the New York canals during the past year amounted to $993,342, being an increase of $113,146 over those of the year previous. The whole amount of freight carried on the canals from the opening to the close of navigation was 5,170,822 tons, against 4,955,963 tons last year, being an increase of 214,859 tons. Among the articles showing an increase are wheat, corn, apples, pig-iron, sugar, molasses and others; while among the items showing a decrease are pork, lard, barley, flax-seed, bloom and bar-iron, railroad iron, coal and iron ore.

THE Senate in the next Congress will contain 42 Democrats, 33 Republicans, and 1 Independent, a Democratic majority of 8 over all. The House of Representatives will consist of 146 Democrats, 129 Republicans, 10 Nationals, and three members classed by the New York *World* as "Tammanyites," who will act with the Democracy on national issues. There is one vacancy, and four members are yet to be chosen from California. There will be several contested seats; but, in any case, it is apparent that the Democrats will have a clear working majority. It is to be hoped that the Party may employ its power somewhat more wisely than it has done in the present Congress.

THE Moffat bell-punch has proved a comparative failure in Virginia, where, during the year just closed, the registers and licenses combined produced only $83,669 more than the old license system. It was claimed for the registers that they would yield at least $600,000 per annum. In many localities public opinion has been against the law, and dealers who have neglected to ring the bell upon the sale of drinks have not been reported, because their customers regarded the law as oppressive, inquisitorial and unjust. Efforts will be made to amend the law so as to secure greater efficiency in the system, but we suspect it will be found in the end that all devices which depend for their success upon the integrity of the keepers of groggeries will prove a poor substitute for a vigorous license system honestly enforced.

STATISTICS compiled by the Department of Buildings show that the value of the new buildings put up within the limits of this city during the last ten years reaches the enormous sum of $297,000,000—that is, an average of $30,000,000 a year. For buildings altered and repaired, there has also been an expenditure of about half that sum yearly. During the last eight years, the amount of building, each year, has very sensibly declined, but there are now indications of a revival—the first nine months of the present year showing a decided increase over 1877 in the number of new buildings erected. The new structures are nearly all dwellings, and are situated almost entirely in that part of the city lying north of Fortieth Street. The total number of buildings now within the corporate limits of New York is about 88,000.

IT is a striking illustration of the office-hunting greed of the average American politician that within a day after the announcement of the death of Bayard Taylor, and before his remains had been coffined, shoals of candidates had started up for the position made vacant by his decease, and a sharp contention was in progress at Washington among the eager rivals for the favor of the Executive. To say that such proceedings are indecent is but feebly to express the feeling with which they must be regarded by all right thinking people. The lean and hungry seekers of office might at least wait until the dead in whose shoes they seek to stand are under ground, and the tears of the mourners are dry, before thrusting themselves forward with lustful impetuosity as applicants for honors of which, at the best, they are seldom worthy.

ONE would suppose that genius would scarcely attempt to improve so simple an implement as a steel pen, but Mrs. Henry D. J. Pratt, of Washington, D. C., has obtained a patent for a peculiar-shaped pen that is destined to become immensely popular. The right point is sharp like that of other pens, while the left one has a slight bevel on the side, this being the peculiarity which produces all the advantages of the new implement. To a back-hand writer this pen is the most valuable that has ever been made, as the bevel prevents all scratching or picking of the paper. It is also far superior to other patterns for engrossing, hair and swelling lines being controlled with the utmost ease. In our own editorial-rooms Mrs. Pratt's pen has been put to hard, everyday work, and gives complete satisfaction. We understand that it has been received with the favor it deserves in the various departments of the National Government.

NEWS OF THE WEEK.

Domestic.

THE coal combination was formally dissolved, December 27th.

THE REV. LEONARD WOODS, L.L.D., ex-President of Bowdoin College, died in Boston, December 24th, aged 72.

A COMPANY has been formed of New York and Boston capitalists to carry out rapid transit schemes in Brooklyn.

REAR-ADMIRAL HENRY K. HOFF, United States Navy, died at Washington, D. C., December 25th, aged sixty-nine.

A VIADUCT connecting the east and west ends of Cleveland, Ohio, 3,200 feet long, was formally opened December 27th.

THE great snow blockade in central, western and northern New York was broken December 27th, and trains began running.

CHIEF MOSES and ten of his principal men have been captured and placed in confinement at Yakimas, Washington Territory.

E. L. PIERCE, biographer of the late Senator Sumner, has been appointed Assistant Treasurer of the United States at Boston.

A STATUE of the late Charles Sumner, erected in the Public Gardens Boston, was unveiled on December 24th, Governor Rice making the address.

THE Supreme Court of Ohio has decided that the recent issue of $2,000,000 in bonds to complete the Cincinnati Southern Railroad was valid.

GENERAL D. C. MCCALLUM, late General Superintendent of Construction of Army Railroads, died in Brooklyn, N. Y., December 27th, aged 64.

WILLIAM H. VANDERBILT has chartered fourteen iron steamships to transport the freight of the New York Central Railroads to various parts of Europe.

JAMES GORDON BENNETT'S steam yacht, the *Jeannette*, arrived at San Francisco, December 27th, and will leave in June with the American Polar Expedition.

JUDGE INGALLS has granted an order restraining the officers of the Manhattan Savings Bank, of New York City, from resuming payment at the expiration of the sixty days' limit.

IT is believed that the decision of the Comptroller of the Treasury will be modified, and that he will supply the Teller Committee with funds to begin the investigation of Southern elections.

INTELLIGENCE has been received of the foundering of the steamer *Emily B. Souder*, from New York to Santo Domingo, on December 10th, probably off Hatteras. But two persons are known to have been saved.

ROBERT A. PROWICK, the alleged defaulting Custom House clerk of Bonkard & Hutton, New York, who is accused of taking $109,000, and who disappeared last October, was arrested on Broadway, on December 28th, and released on $5,000 bail.

THE Bill for the reorganization of the army will be called up in the House of Representatives soon after the holidays, and an effort made to have a day set for its consideration. It meets with much greater favor in army circles than was anticipated.

ARCHBISHOP PURCELL of Cincinnati has begged of the Pope a release from his ecclesiastical labors on account of the infirmities of old age. He has made a statement concerning his pecuniary embarrassment, of which it is expected the clergy will relieve him.

A MESSENGER of the Importers' and Traders' National Bank of New York lost a package containing $209,722 in certificates and notes, while on his way to the Clearing House on December 27th, and on the following day all but $7,722 was returned to the bank through the post-office.

THE suit against the Government brought by the heirs of Stephen A. Douglas, for certain cotton captured by the United States Government in Mississippi during the war, and sold as abandoned property, has been settled finally in the Court of Claims at Washington, by a judgment in favor of the claimants.

Foreign.

THE miners in West Yorkshire, England, are taking steps to resist a reduction in wages.

A SYNDICATE has been formed to lay another cable between France and the United States.

LERMA, a revolutionary Mexican chief, has been defeated, and eighty of his adherents were immediately hanged.

THE Duke d'Audiffret-Pasquier has been elected member of the French Academy, vice Archbishop Dupanloup, deceased.

SULEIMAN PASHA, sentenced to fifteen years' imprisonment for misconduct in the Russo-Turkish war, has been pardoned by the Sultan.

THE official inquiry into the cause of the loss of the German steamship *Pommerania* exonerates the captain and his officers from blame.

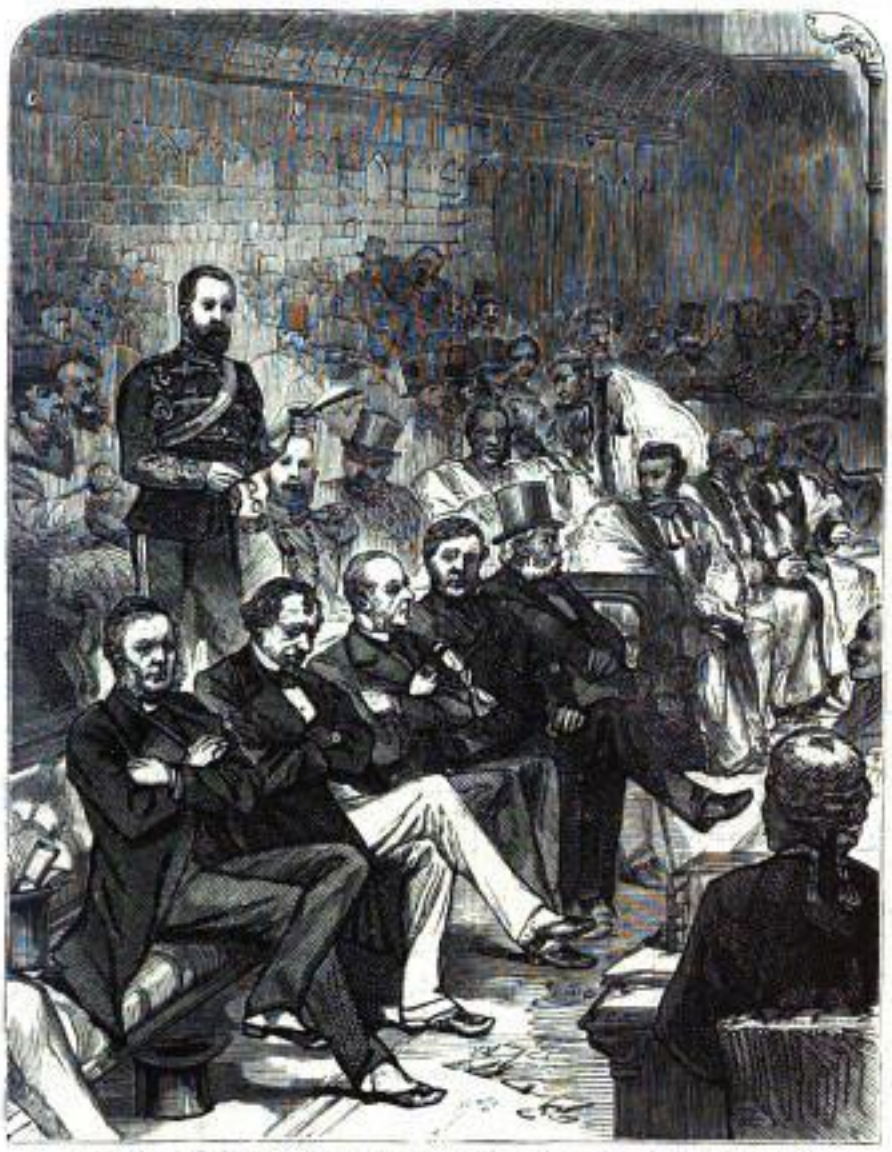
THE Supreme Court of Justice has finally condemned to death Juan Moncasi, who attempted to assassinate the King of Spain on the 25th of October last.

THE Vatican has authorized commemorative services on the anniversary of the death of King Victor Emmanuel in all the churches of Rome, except the four Basilicas.

A FURTHER litigation has occurred among the students at the Universities of Kieff and Moscow, but it was promptly suppressed. Most of the students recently arrested at St. Petersburg have been released.

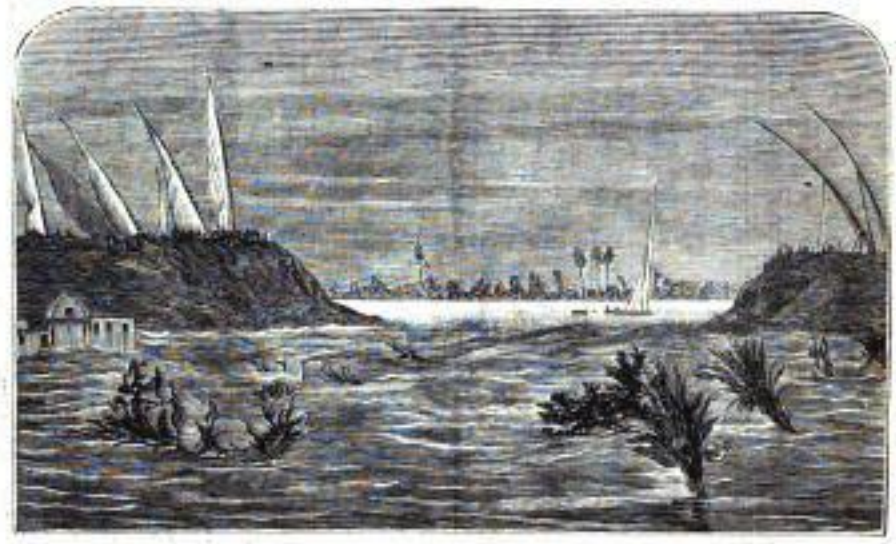
IT is officially denied that Germany contemplates founding a colony in America, and declared that there is no ground for reports of a conflict or of unfriendly relations between Germany and America.

M. LEON CHOTTEAUX has again been delegated to visit America in the interest of the Franco-American Commercial Treaty, and it is believed that the draft of a new treaty will be submitted to both Governments before July next.



A TELEGRAM from Ceara, in North Brazil, reports that the deaths in the capital of that province from small-pox number 600 daily. The distress in the interior of the province is appalling. The people are devouring carrion and corpses.

IN Afghanistan, the British forces have hanged an Afghan who, while in their ranks, sought to warn his countrymen of an advance on the Peiwar Pass. Eighteen others were sentenced to terms of from seven to fourteen years' penal servitude for desertion.



THE State Line steamship *State of Louisiana*, bound from Glasgow to New York, grounded on Hunter's Rock, when entering Lough Larne, seventeen miles from Belfast, December 24th. All the passengers were taken off and half the cargo will be saved. The vessel will probably prove a total wreck.

PENNSYLVANIA.—DEPARTURE OF THE NAVAL CRUISERS BUILT FOR THE RUSSIAN GOVERNMENT FROM PHILADELPHIA, DECEMBER 21ST.

DEPARTURE OF AMERICAN-BUILT RUSSIAN CRUISERS.

TWO of the four vessels built at Cramp's shipyard, and purchased by the Russian Government for naval cruisers, left their moorings on Saturday, December 21st, and proceeded to sea. They were named, when the frameworks were laid, the *State of California* and the *Columbus*, but under their new ownership will be christened the *Europe* and the *Asia*.

The clearance papers of the two vessels were taken out at the Philadelphia Custom House. They represent the ships as in ballast and bound for Sitka, Alaska. Their papers are regular and legal, and the vessels are nominally American bottoms bound for an American port.

As the ships left the wharf the Russian sailors on the steamers *Africa* and *Zabiaca* mounted the rigging and gave them a parting salute, and the Keystone Battery fired a salute of twenty-six guns. They were also saluted as they passed the Market Street wharf. A number of invited guests accompanied the steamers down the river to Chester. A salute greeted the two vessels as the *Europe* led the way past the Navy Yard at League Island and steamed slowly down the river through the fog and falling snow.

In order to avoid possible international difficulties both vessels cleared under their original names—*Columbus* and *State of California*. They displayed no colors except the United States flag, and Mr. Barker, the reputed agent of the Russian Government, went with the *State of California* (the *Europe*) as the registered owner, and in charge of both vessels. They are, therefore, nominally, American craft, bound from one American port to another. The *Europe* carries about three hundred and the *Asia* two hundred "passengers." It is said that when the vessels are out of the jurisdiction of the United States Mr. Barker will transfer them to Captain Smetschkin, Chief of the Bureau of Construction of the Imperial Navy of Russia. Captains Grippenburg and Aullan, of the Russian Navy, will immediately displace Captains Shankland and Schellinger of the *Europe* and *Asia* respectively. The two remaining Russian cruisers, the *America* and *Africa*, are expected to leave Philadelphia in about a month.

JOHN WALTER,

PROPRIETOR OF THE LONDON "TIMES."

THE present proprietor of the great English newspaper, the *London Times*, is known contemporaneously as John Walter the Third. Upwards of a hundred years are the world heard the announcement that for the future the *Daily Universal Register* would bear the title of the *Times*, and would be "printed logographically." But even this innovation failed to secure any special attention to Mr. Walter's news-sheet; nor was it till its printer, proprietor and editor, in 1790, attacked the corruptions of the Court with the customary consequences of fine and imprisonment, that the first gleams of the future greatness of the *Times* were visible. In the course of five short years the essential features of the *Times* were definitely and immutably established. Of course it paid the penalty for its boldness. It denounced the abuses of Lord Melville, and the Government withdrew from the Walters the office of Printers to the Customs, which the family had held for eighteen years. A little later, when Napoleon was engaged in his struggle with Austria, and the public desire for news had reached an intensity hitherto unknown, John Walter's intelligence packets were stopped at the outports, while those destined for ministerial journals were hurried on to London. In answer to his complaint he was told significantly that he might receive his papers as a favor. But Walter was not to be bribed. He first defied the Government and then he beat them. In August, 1809, the *Times* announced the capitulation of Flushing two days before any information of the event reached Whitehall. From that day to this the history of the *Times* has been one of progressive triumphs and increasing sway. Its ventures and its successes have passed into history, and need scarcely be dwelt upon here.

A few years ago, during the Franco-Prussian war a young German named Kastenbein brought a composing-machine which he had invented before the attention of the authorities of Printing-house Square. The idea was approved and was adopted. More than fifty years previously to this a countryman of Kastenbein, one Frederick Koenig, conceived the idea of printing by steam. In 1814 John Walter the Second decided to adopt Koenig's patent. The prejudice of the working-classes against the innovations of machinery was then at its height, and Mr. Walter deemed it advisable to conduct his operations in secret. At length the suspicions of his employés were aroused. They threatened openly "destruction to him and his traps." Mr. Walter deemed it expedient to communicate with the police, and at six o'clock on the morning of November 29th, 1814, he walked into the press-room and astonished its occupants by telling them that the *Times* was already printing by steam; that if they attempted violence there was a force ready to suppress it; but that if they were peaceable their wages should be continued till similar employment for them could be found. Sixty years ago the Koenig press "ran off" 1,100 copies (printed, however, only on one side) in an hour. To-day the double-barreled Walter press prints 17,000 copies, on both sides, an hour, and that press is the work of John Walter the Third.

It may well be considered a grotesque chance which gave a man so cool-headed and clear-visioned as Mr. Walter such a colleague as he had on his first entrance to Parliament in 1847, Feargus O'Connor, who, strangely enough, four years previously, had brought an action against the publisher of the *Times* for a libel, charging him with venality and corruption, and had obtained a verdict of £20 damages. John Walter the Second had represented Nottingham for some years, both before and after the first Reform Bill. In 1843 he suggested that his son should take his place. John Walter the Third came forward, and was defeated. Four years later the borough famous for lace and lambs, rotten eggs and Mr. Bernal Osborne, elected him, free of all expense. In the House of Commons the debates in which Mr. Walter has chiefly distinguished himself have been of a social, educational or religious character, while he has been a most useful member of committees innumerable. Prepared to take what may be called the popular view in most political matters, Mr. Walter has never been a hunter after political popularity, and has frequently refused to gratify the vanity of a popular audience with a courage and a candor that are far above all praise. He has confidence in himself; he has no aggressive self-consequence in his manner. If one were to judge from the admirable completeness with which he plays the *rôle* of country gentleman: the solicitude which he takes in the tilling of soil and the yield of crops, in model farms, workmen's cottages and threshing-machines—in a word, in every department of country business—one might suppose that Printing House Square had neither attraction nor interest for Mr. Walter. He has built five schools on his Berkshire estate, providing accommodation for a total of 700 children: the bricks of the new office of the *Times* in Queen Victoria Street were made by his own laborers and in his own brickfield; and if he has crowned the fortunes of his family, it is because he perpetuates in himself the abilities and the virtues of its founders.

ENGLAND.—JOHN WALTER, M. P., PROPRIETOR OF THE LONDON "TIMES."
FROM A PHOTOGRAPH BY SOTMAN.

THE MICROPHONE IN THE PULPIT.

ON a recent Sunday, a microphone was placed in the pulpit of a chapel in Halifax, England, and connected by a private telegraph line running by with the residence of a gentleman a mile distant. Every part of the service was distinctly heard at the gentleman's house, with the exception of a few words rendered indistinct by the preacher becoming a little excited, and shaking the microphone, the presence of which he never dreamt of, or he might have been somewhat nervous at the idea that his sermon was being conveyed away, he knew not

Digitized by Google

whither. So faithfully did the microphone do its work that the chapel-keeper was heard to close the doors after service, walk up the aisle and up the pulpit steps, in conversation with some one else. Subsequently, experiments were made in the schoolroom of another chapel, and the singing of the scholars was transmitted and re-transmitted over a number of telegraph lines with remarkable clearness. The idea is about to be put to practical use, the gentleman already referred to having given instructions that his house should be connected with that of a gentleman near, in order that an invalid may hear the service from one of the churches in the town.

THE FALLEN LEAVES.

By Wilkie Collins.

(Continued from front page.)

change of scene in that form of words. A man habitually fortified behind his own inbred obstinacy and selfishness is for the most part an irresistible power within the limits of his domestic circle.

As a rule, patient Mrs. Ronald yielded; and her husband stood revealed to his neighbors in the glorious character of a married man who had his own way.

But in the Autumn of 1856, the retribution which sooner or later descends on all despotisms, great and small, overtook the iron rule of Old Ronald, and defeated the domestic tyrant on the battlefield of his own fireside.

The children born of the marriage, two in number, were both daughters. The elder had mortally offended her father by marrying imprudently—in a pecuniary sense. He had declared that she should never enter his house again; and he had mercilessly kept his word. The younger daughter (now eighteen years of age) proved to be also a source of parental inquietude, in another way. She was the passive cause of the revolt which set her father's authority at defiance. For some little time past she had been out of health. After many ineffectual trials of the mild influence of persuasion, her mother's patience at last gave way. Mrs. Ronald insisted—yes, actually insisted—on taking Miss Emma to the seaside.

"What's the matter with you?" Old Ronald asked; detecting something that perplexed him in his wife's look and manner, on the memorable occasion when she asserted a will of her own for the first time in her life.

A man of finer observation would have discovered the signs of no ordinary anxiety and alarm, struggling to show themselves openly in the poor woman's face. Her husband only saw a change that puzzled him. "Send for Emma," he said, his natural cunning inspiring him with the idea of confronting the mother and daughter, and of seeing what came of *that*. Emma appeared, plump and short, with large blue eyes, and full, pouting lips, and splendid yellow hair: otherwise, miserably pale, languid in her movements, careless in her dress, sullen in her manner. Out of health as her mother said, and as her father saw.

"You can see for yourself," said Mrs. Ronald, "that the girl is pining for fresh air. I have heard Ramsgate recommended."

Old Ronald looked at his daughter. She represented the one tender place in his nature. It was not a large place; but it did exist. And the proof of it is, that he began to yield—with the worst possible grace.

"Well, we will see about it," he said.

"There is no time to be lost," Mrs. Ronald persisted. "I mean to take her to Ramsgate to-morrow."

Mr. Ronald looked at his wife as a dog looks at the maddened sheep that turns on him.

"You mean," repeated the stationer. "Upon my soul—what next! You mean? Where is the money to come from? Answer me that."

Mrs. Ronald declined to be drawn into a conjugal dispute, in the presence of her daughter. She took Emma's arm, and led her to the door. There she stopped, and spoke:

"I have already told you that the girl is ill," she said to her husband. "And I now tell you again that she must have the sea-air. For God's sake don't let us quarrel! I have enough to try me without that."

She closed the door on herself and daughter, and left her lord and master standing face to face with the wreck of his own outraged authority.

What further progress was made by the domestic revolt, when the bedroom candles were lit, and the hour of retirement had arrived with the night, is naturally involved in mystery. This alone is certain: On the next morning, the luggage was packed, and the cab was called to the door. Mrs. Ronald spoke her parting words to her husband in private.

"I hope I have not expressed myself too strongly about taking Emma to the seaside," she said, in gentle, pleading tones. "I am anxious about our girl's health. If I have offended you—without meaning it, God knows!—say you forgive me before I go. I have tried honestly, dear, to be a good wife to you. And you have always trusted me, haven't you? And you trust me still—I am sure you trust me still?

She took his lean, cold hand, and pressed it fervently; her eyes rested on him with a strange mixture of timidity and anxiety. Still in the prime of her life, she preserved her personal attractions—the fair, calm, refined face, the natural grace of look and movement—which had made her marriage to a man old enough to be her father a cause of angry astonishment among all her friends. In the agitation that now possessed her her color rose, her eyes brightened; she looked for the moment almost young enough to be Emma's sister. Her husband opened his hard old eyes in surly bewilderment. "Why need you make this fuss?" he asked. "I don't understand you." Mrs. Ronald shrank at those words as if he had struck her. She kissed him in silence and joined her daughter in the cab.

For the rest of that day, the persons in the stationer's employment had a hard time of it with their master in the shop. Something had upset Old Ronald. He ordered his shutters to be put up earlier that evening than usual. Instead of going to his club (at the tavern round the corner), he took a long walk in the lonely and lifeless streets of the City by night. There was no disguising it from himself: his wife's behavior at parting had made him uneasy. He naturally swore at her for taking that liberty, while he lay awake alone in his bed. "Damn the woman! What does she mean?" The cry of the soul utters itself in various forms of expression. That was the cry of old Ronald's soul, literally translated.

III.

The next morning brought him a letter from Ramsgate:

"I write immediately to tell you of our safe arrival. We have found comfortable lodgings (as the address at the head of this letter will inform you) in Albion Place. I thank you, and Emma desires to thank you also, for your kindness in providing us with ample means for taking our little trip. It is beautiful weather to-day; the sea is calm, and the pleasure-boats are out. We do not of course expect to see you here. But if you do, by any chance, overcome your objection to moving out of London, I have a little request to make. Please let me hear of your visit beforehand—so that I may not omit all needful preparations. I know you dislike being troubled with letters (except on business), so I will not write too frequently. Be so good as to take no news for good news, in the intervals. When you have a few minutes to spare, you will write, I hope, and tell me how you and the shop are going on. Emma sends you her love, in which I beg to join." So the letter was expressed, and so it ended.

"They needn't be afraid of my troubling them. Calm seas and pleasure-boats! Stuff and nonsense!" Such was the first impression which his wife's report of herself produced on Old Ronald's mind. After a while, he looked at the letter again—and frowned, and reflected. "Please let me hear of your visit beforehand," he repeated to himself, as if the request had been in some incomprehensible way offensive to him. He opened the drawer of his desk, and threw the letter into it. When business was over for the day, he went to his club at the tavern, and made himself unusually disagreeable to everybody.

A week passed. In the interval he wrote briefly to this wife. "I'm all right, and the shop goes on as usual." He also forwarded one or two letters which came for Mrs. Ronald. No more news reached him from Ramsgate. "I suppose they're enjoying themselves," he reflected. "The house looks queer without them; I'll go to the club."

He stayed later than usual, and drank more than usual, that night. It was nearly one in morning, when he let himself in with his latch-key, and went up-stairs to bed.

Approaching the toilette-table, he found a letter lying on it, addressed to "Mr. Ronald—private." It was not in his wife's handwriting; not in any handwriting known to him. The characters sloped the wrong way, and the envelope bore no postmark. He eyed it over and over suspiciously. At last he opened it, and read these lines:

"You are advised by a true friend to lose no time in looking after your wife. There are strange doings at the seaside. If you don't believe me, ask Mrs. Turner, Number 1, Slains-row, Ramsgate."

No address, no date, no signature—an anonymous letter, the first he had ever received in the long course of his life.

His hard brain was in no way affected by the liquor he had drunk. He sat down on his bed, mechanically folding and refolding the letter. The reference to "Mrs. Turner" produced no impression on him of any sort; no person of that name, common as it was, happened to be numbered on the list of his friends or his customers. But for one circumstance, he would have thrown the letter aside in contempt. His memory reverted to his wife's incomprehensible behavior at parting. Addressing him through that remembrance, the anonymous warning assumed a certain importance to his mind. He went down to his desk, in the back office, and took his wife's letter out of the drawer, and read it through slowly. "Ha!" he said, pausing as he came across the sentence which requested him to write beforehand, and in the unlikely event of his deciding to go to Ramsgate. He thought again of the strangely persistent way in which his wife had dwelt on his trusting her; he recalled her nervous, anxious looks, her deepening color, her agitation at one moment, and then her sudden silence and her sudden retreat to the cab. Fed by these irritating influences, the inbred suspicion in his nature began to take fire slowly. She might be innocent enough in asking him to give her notice before he joined her at the seaside—she might naturally be anxious to omit no needful preparation for his comfort. Still, he didn't like it; no, he didn't like it. An appearance as of a slow collapse passed little by little over his rugged, wrinkled face. He looked many years older than his age, as he sat at the desk, with the flaring candlelight close in front of him, thinking. The anonymous letter lay before him, side by side with his wife's letter. On a sudden, he lifted his gray head, and clinched his fist, and struck the venomous written warning as if it had been a living thing that could feel. "Whoever you are," he said, "I'll take your advice."

He never even made the attempt to go to bed that night. His pipe helped him through the comfortless and dreary hours. Once or twice he thought of his daughter. Why had her mother been so anxious about her? Why had her mother taken her to Ramsgate? Perhaps, as a blind—ah, yes, perhaps as a blind! More for the sake of something to do than for any other reason, he packed a handbag with a few necessaries. As soon as the servant was stirring, he ordered her to make him a cup of strong coffee. After that, it was time to show himself as usual, on the opening of the shop. To his astonishment, he found his clerk taking down the shutters, in place of the porter.

"What does this mean?" he asked. "Where is Farnaby?"

The clerk looked at his master, and paused aghast with a shutter in his hands. "Good Lord! what has come to you?" he cried. "Are you ill?"

Old Ronald angrily repeated his question: "Where is Farnaby?"

"I don't know," was the answer.

"You don't know? Have you been up to his bedroom?"

"Yes."

"Well?"

"Well, he isn't in his bedroom. And, what's more, his bed hasn't been slept in last night. Farnaby's off, sir—nobody knows where."

Old Ronald dropped heavily into the nearest chair. This second mystery, following on the mystery of the anonymous letter, staggered him. But his business instincts were still in good working order. He held out his keys to the clerk. "Get the petty cash-book," he said, "and see if the money is all right."

The clerk received the keys under protest. "That's not the right reading of the riddle," he remarked.

"Do as I tell you!"

The clerk opened the money-drawer under the counter; counted the pounds, shillings and pence paid by chance customers up to the closing of the shop on the previous evening; compared the result with the petty cash-book, and answered, "Right to a halfpenny."

Satisfied so far, Old Ronald condescended to approach the speculative side of the subject, with the assistance of his subordinate. "If what you said just now means anything," he resumed, "it means that you suspect the reason why Farnaby has left my service. Let's hear it."

"You know that I never liked John Farnaby," the clerk began. "An active young fellow and a clever young fellow, I grant you. But a bad servant for all that. False, Mr. Ronald—false to the marrow of his bones."

Mr. Ronald's patience began to give way. "Come to the facts," he growled. "Why has Farnaby gone off without a word to anybody? Do you know that?"

"I know no more than you do," the clerk answered, coolly. "Don't fly into a passion. I have got some facts for you, if you will only give me time. Turn them over in your own mind, and see what they come to. Three days ago I was short of postage-stamps, and I went to the office. Farnaby was there, waiting at the desk where they pay the post-office orders. There must have been ten or a dozen people with letters, orders, and what not, between him and me. I got behind him quietly, and looked over his shoulder. I saw the clerk give him the money for his post-office order. Five pounds in gold, which I reckoned as they lay on the counter, and a bank-note besides, which he crumpled up in his hand. I can't tell you how much it was for; I only know it was a bank-note. Just ask yourself how a porter on twenty shillings a week (with a mother who takes in washing, and a father who takes in drink) comes to have a correspondent who sends him an order for five sovereigns—and a bank-note, value unknown. Say he's turned betting-man in secret. Very good. There's the post-office order, in that case, to show that he's got a run of luck. If he has got a run of luck, tell me this—why does he leave his place like a thief in the night? He's not a slave; he's not even an apprentice. When he thinks he can better himself, he has no earthly need to keep it a secret that he means to leave your service. He may have met with an accident, to be sure. But that's not my belief. I say he's up to some mischief. And now comes the question: What are we to do?"

Mr. Ronald, listening with his head down, and without interposing a word on his own part, made an extraordinary answer. "Leave it," he said. "Leave it till to-morrow."

"Why?" the clerk asked, without ceremony.

Mr. Ronald made another extraordinary answer. "Because I am obliged to go out of town for the day. Look after the business. The ironmonger's man over the way will help you to put up the shutters to-night. If anybody inquires for me, say I shall be back to-morrow."

With those parting directions, heedless of the effect that he had produced on the clerk, he looked at his watch, and left the shop.

IV.

The bell which gave five minutes' notice of the starting of the Ramsgate train had just rung.

While the other travelers were hastening to the platform, two persons stood passively apart as if they had not even yet decided on taking their places in the train. One of the two was a smart young man in a cheap traveling suit; mainly noticeable by his florid complexion, his restless dark eyes, and his profusely curling black hair. The other was a middle-aged woman in frowsy garments; tall and stout, sly and sullen. The smart young man stood behind the uncongenial-looking person with whom he had associated himself, using her as a screen to hide him while he watched the travelers on their way to the train. As the bell rang, the woman suddenly faced her companion, and pointed to the railway clock.

"Are you waiting to make up your mind till the train has gone?" she asked.

The young man frowned impatiently.

"I am waiting for a person whom I expect to see," he answered. "If the person travels by this train, we shall travel by it. If not, we shall come back here, and look out for the next train, and so on till night time comes, if it's necessary."

The woman fixed her small, scowling, gray eyes on the man as he replied in those terms.

"Look here!" she broke out: "I like to see my way before me. You're a stranger, young mister; and it's as likely as not you've given me a false name and address. That don't matter. False names are commoner than true ones, in my line of life. But mind this! I don't stir a step further till I've got half the money in my hand, and my return-ticket there and back."

"Hold your tongue!" the man suddenly interposed, in a whisper. "It's all right. I'll get the tickets."

He looked while he spoke at an elderly traveler, hastening by with his head down, deep in thought, noticing nobody. The traveler was Mr. Ronald. The young man, who had at that moment recognized him, was his runaway porter, John Farnaby.

Returning with the tickets, the porter took his repellant traveling companion by the arm, and hurried her along the platform to the train.

"The money!" she whispered, as they took their places. Farnaby handed it to her, ready wrapped up in a morsel of paper. She opened the paper, satisfied herself that no trick had been played her, and leaned back in her corner to go to sleep. The train started. Old Ronald traveled by the second-class; his porter and his porter's companion accompanied him secretly by the third.

V.

It was still early in the afternoon when Mr. Ronald descended the narrow street which leads from the high land of the Southeastern Railway station to the port of Ramsgate. Asking his way of the first policeman whom he met, he turned to the left, and reached the cliff on which the houses in Albion Place are situated. Farnaby followed him at a discreet distance; and the woman followed Farnaby.

Arrived in sight of the lodging-house, Mr. Ronald paused—partly to recover his breath, partly to compose himself. He was conscious of a change of feeling as he looked up at the windows; his errand suddenly assumed a contemptible aspect in his own eyes. He almost felt ashamed of himself. After nineteen years of undisturbed married life, was it possible that he had doubted his wife—and that at the instigation of a stranger whose name even was unknown to him? "If she was to step out into the balcony, and see me down here," he thought, "what a fool I should look!" He felt half inclined, at the moment when he lifted the knocker of the door, to put it back again quietly, and return to London. No! it was too late. The maid-servant was hanging up her birdcage in the area of the house; the maid-servant had seen him.

"Does Mrs. Ronald lodge here?" he asked.

The girl lifted her eyebrows and opened her mouth—stared at him in speechless confusion—and disappeared in the kitchen regions. This strange reception of his inquiry irritated him unreasonably. He knocked with the absurd violence of a man who vents his anger on the first convenient thing that he can find. The landlady opened the door, and looked at him in stern and silent surprise.

"Does Mrs. Ronald lodge here?" he repeated.

The landlady answered with some appearance of effort—the effort of a person who was carefully considering her words before she permitted them to pass her lips.

"Mrs. Ronald has taken rooms here. But she has not occupied them yet."

"Not occupied them yet!" The words bewildered him as if they had been spoken in an unknown tongue. He stood stupidly silent on the door-step. His anger was gone; an all-mastering fear throbbed heavily at his heart. The landlady looked at him, and said to her secret self: "Just what I suspected; there *is* something wrong!"

"Perhaps I have not sufficiently explained myself, sir," she resumed, with grave politeness. "Mrs. Ronald told me that she was staying at Ramsgate with friends. She would move into my house, she said, when her friends left—but they had not quite settled the day yet. She calls here for letters. Indeed, she was here early this morning, to pay the second week's rent. I asked her when she thought of moving in. She didn't seem to know; her friends (as I understood) had not made up their minds. I must say I thought it a little odd. Would you like to leave any message?"

He recovered himself sufficiently to speak.

"Can you tell me where her friends live?" he said.

The landlady shook her head.

"No, indeed. I offered to save Mrs. Ronald the trouble of calling here, by sending letters or cards to her present residence. She declined the offer—and she has never mentioned the address. Would you like to come in and rest, sir? I will see that your card is taken care of, if you wish to leave it."

"Thank you, ma'am—it doesn't matter—good morning."

The landlady looked after him as he descended the house-steps. "It's the husband, Peggy," she said to the servant, waiting inquisitively behind her. "Poor old gentleman! And such a respectable-looking woman, too!"

Mr. Ronald walked mechanically to the end of the row of houses, and met the wide, grand view of sea and sky. There were some seats behind the railing which fenced the edge of the cliff. He sat down, perfectly stupefied and helpless, on the nearest bench.

At the close of life, the loss of a man's customary nourishment extends its debilitating influence rapidly from his body to his mind. Mr. Roland had tasted nothing but his cup of coffee since the previous night. His mind began to wander strangely; he was not angry or frightened or distressed. Instead of think-

Digitized by Google

ing of what had just happened, he was thinking of his young days when he had been a cricket-player. One special game revived in his memory, at which he had been struck on the head by the ball. "Just the same feeling," he reflected, vacantly, with his hat off, and his hand on his forehead. "Dazed and giddy—just the same feeling!"

He leaned back on the bench, and fixed his eyes on the sea, and wondered languidly what had come to him. Farnaby and the woman, still following, waited round the corner where they could just keep him in view.

The blue lustre of the sky was without a cloud; the sunny sea leaped under the fresh westerly breeze. From the beach, the cries of children at play, the shouts of donkey-boys driving their poor beasts, the distant notes of brass instruments playing a waltz, and the mellow music of the small waves breaking on the sand, rose joyously together on the fragrant air. On the next bench, a dirty old boatman was prosing to a stupid old visitor. Mr. Roland listened, with a sense of vacant content in the mere act of listening. The boatman's words found their way to his ears like the other sounds that were abroad in the air. "Yes; them's the Goodwin Sands, where you see the light-ship. And that steamer there, towing a vessel into the harbor, that's the Ramsgate tug. Do you know what I should like to see? I should like to see the Ramsgate tug blow up. Why? I'll tell you why. I belong to Broadstairs; I don't belong to Ramsgate. Very well. I'm idling here, as you may see, without one copper to rub against another. What trade do I belong to? I don't belong to no trade; I belong to a boat. The boat's rotting at Broadstairs, for want of work. And all along of what? All along of the tug. The tug has took the bread out of our mouths; me and my mates. Wait a bit; I'll show you how. What did a ship do, in the good old times, when she got on them Sands: Goodwin Sands? Went to pieces, if it come on to blow; or got sucked down little by little when it was fair weather. Now I'm coming to it. What did we do (in the good old times, mind you) when we happened to see that ship in distress? Out with our boat; blow high or blow low, out with our boat. And saved the lives of the crew, did you say? Well, yes; saving the crew was part of the day's work, to be sure; the part we didn't get paid for. We saved *the cargo*, master! and got salvage!! Hundreds of pounds, I tell you, divided amongst us by law!!! Ah, those times are gone. A parcel of sneaks get together, and subscribe to build a steam-tug. When a ship gets on the sands now, out goes the tug, night and day alike, and brings her safe into harbor, and takes the bread out of our mouths. Shameful—that's what I call it—shameful."

The last words of the boatman's lament fell lower, lower, lower on Mr. Ronald's ears—he lost them altogether—he lost the view of the sea—he lost the sense of the wind blowing over him. Suddenly, he was roused as if from a deep sleep. On one side, the man from Broodstairs was shaking him by the collar.

"I say, master, cheer up; what's come to you?"

On the other side, a compassionate lady was offering her smelling-bottle.

"I am afraid, sir, you have fainted."

He struggled to his feet, and vacantly thanked the lady. The man from Broadstairs—with an eye to salvage—took charge of the human wreck, and towed him to the nearest public-house.

"A chop and a glass of brandy-and-water," said this good Samaritan of the nineteenth century. "That's what you want. I'm peckish myself, and I'll keep you company."

He was perfectly passive in the hands of any one who would take charge of him; he submitted as if he had been the boatman's dog, and had heard the whistle.

It could only be truly said that he had come to himself when there had been time enough for him to feel the reanimating influence of the food and drink. Then he got on his feet and looked with incredulous wonder at the companion of his meal. The man from Broadstairs opened his greasy lips, and was silenced by the sudden appearance of a gold coin between Mr. Ronald's finger and thumb.

"Don't speak to me; pay the bill, and bring me the change outside."

When the boatman joined him, he was reading a letter; walking to and fro, and speaking at intervals to himself.

"God help me, have I lost my senses? I don't know what to do next."

He referred to the letter again:

"If you don't believe me, ask Mrs. Turner, Number 1, Slains Row, Ramsgate."

He put the letter back in his pocket, and rallied suddenly.

"Slains Row," he said, turning to the boatman. "Take me there directly, and keep the change for yourself."

The boatman's gratitude was (apparently) beyond expression in words. He slapped his pocket cheerfully, and that was all. Leading the way inland, he went downhill, and uphill again—then turned aside towards the eastern extremity of the town.

Farnaby, still following, with the woman behind him, stopped when the boatman diverged towards the east, and looked up at the name of the street.

"I've got my instructions," he said; "I know where he's going. Step out. We'll get there before him, by another way."

Mr. Ronald and his guide reached a row of poor little houses, with poor little gardens in front of them and behind them. The back windows looked out on downs and fields lying on either side of the road to Broadstairs. It was a lost and lonely spot. The guide stopped and put a question with inquisitive respect:

"What number, sir?"

Mr. Ronald had sufficiently recovered himself to keep his own counsel.

"That will do," he said. "You can leave me."

The boatman waited a moment. Mr. Ronald looked at him. The boatman was slow to understand that his leadership had gone from him.

"You're sure you don't want me any more?" he said.

"Quite sure," Mr. Ronald answered.

The man from Broadstairs retired—with his salvage to comfort him.

Number 1 was at the further extremity of the row of houses. When Mr. Ronald rang the bell, the spies were already posted. The woman loitered on the road, within view of the door. Farnaby was out of sight, round the corner, watching the house over the low wooden palings of the back garden.

A lazy-looking man, in his shirt-sleeves, opened the door.

"Mrs. Turner at home?" he repeated. "Well, she's at home; but she's too busy to see anybody. What's your pleasure?"

Mr. Ronald declined to accept excuses or to answer questions.

"I must see Mrs. Turner directly," he said, "on important business."

His tone and manner had their effect on the lazy man.

"What name?" he asked.

Mr. Ronald declined to mention his name.

"Give my message," he said. "I won't detain Mrs. Turner more than a minute."

The man hesitated—and opened the door of the front parlor. An old woman was fast asleep on a ragged little sofa. The man gave up the front parlor, and tried the back parlor next. It was empty. "Please to wait here," he said—and went away to deliver his message.

The parlor was a miserably furnished room. Through the open window the patch of back-garden was barely visible under fluttering rows of linen hanging out on lines to dry. A pack of dirty cards, and some plain needlework, littered the bare little table. A cheap American clock ticked with stern and steady activity on the mantelpiece. The smell of onions was in the air. A torn newspaper, with stains of beer on it, lay on the floor. There was some sinister influence in the place which affected Mr. Ronald painfully. He felt himself trembling, and sat down on one of the rickety chairs. The minutes followed one another wearily. He heard a trampling of feet in the room above—then a door opened and closed—then the rustle of a woman's dress on the stairs. In a moment more the handle of the parlor-door was turned. He rose, in anticipation of Mrs. Turner's appearance. The door opened. He found himself face to face with his wife.

(To be continued.)

NOTE.—The illustration on our front page pictures a scene in Part II. of this story, which will appear in next week's number of FRANK LESLIE'S ILLUSTRATED NEWSPAPER.

The Statistics of Tobacco.

THE statistics of the total and individual consumption of tobacco in the leading countries of the world furnish interesting and suggestive figures. Some of the totals are enormous. For instance, in Austria the consumption in 1876 was 31,614 tons; while in Hungary it was 15,000 tons; in France during the same year it was 31,425 tons, and 32,120 in 1877; in Italy in 1876 it was 17,200 tons, and in Germany the estimated consumption was 80,000 tons. It is curious to observe how the consumption varies from one month to another. Thus, taking the observations from two French and Italian factories, we find that in those countries it increases in January, the cold weather; decreases in March, with the beginning of Spring; rises again; but during the heats of July falls to a minimum, to rise gradually to a maximum during the cold weather of December.

The following table shows the approximate average consumption for several different countries per head and per annum:

Austria	3.25	Germany	4.00
Hungary	1.91	England	1.33
France	1.96	Russia	1.32
Italy	1.55	United States	3.52

How much money per head of the population is spent by their inhabitants is approximately deducible from the amount realized by tobacco taxation in some of the countries:

Austria-Hungary	$1.14	England	$1.13
France	1.68	United States	1.06
Italy	1.04		

From these figures it is apparent that the consumption of the stimulating weed is increasing rapidly.

The Mystic-sounding Church Bells.

MANITOBA LAKE, which lies northwest of Fort Garry, Montana, and has given a title to the province formed out of the Red River region, derives its name from a small island, from which, in the stillness of night, issues a mysterious noise. On no account will the Ojibways approach or land on this island, supposing it to be the home of the Manitoba, the "Speaking God." The cause of this curious sound is the beating of the waves on the "shingle," or large pebbles lining the shores. Along the northern coast of the island there is a long, low cliff of fine-grained, compact limestone, which, under the stroke of the hammer, clinks like steel. The waves beating on the shore at the foot of the cliff cause the fallen fragments to rub against each other, and to give out a sound resembling the chimes of distant church bells. The phenomenon occurs when the gales blow from the north, and then, as the winds subside, low, wailing sounds like whispering voices are heard in the air. Travelers assert that the effect is impressive, and that they have been awakened at night under the impression that they were listening to church bells.

A New Trappist Monastery in the United States.

THE announcement is made that the Order of Trappists has bought a number of acres of land in Western Pennsylvania with a view of establishing a monastery there. The community, to consist of 200 monks from France, Ireland, and Turkey, will be the fourth of the Order that has settled on this continent. The other three are at New Haven, Ky., New Melleray, Iowa, and Tracadie, Nova Scotia, the last having been originally founded seventy-five years ago at Conewago, Penn. The Trappists who are coming are drawn from divers trades and professions, being experienced mechanics, dairymen, artists, architects, lawyers, and physicians, some of whom had gained reputation in their own country before relinquishing the world and its vanities. They intend to put up their own buildings and do all the work of the monastery, beginning their labors next Spring. The Trappists, the most austere of all the religious Orders of the Roman Church, were founded in the seventeenth century by Armand Jean de Rance. They rise at two in the morning, devote twelve hours of the day to devotion, and the remainder to hard work, mainly in the field. No secular conversation is permitted; on meeting they salute one another with "Remember death." (*Memento mori*), and speak no more. They subsist on water and vegetables, meat, beer and wine being strictly prohibited. They sleep on a board with a pillow of straw, and never undress, even in illness. Their extreme rigor has prevented their diffusion. There are less than 2,500, it is said, in the whole world, which is not strange, as their discipline and rules are utterly at variance with reason and the spirit of progress.

PICTORIAL SPIRIT OF THE EUROPEAN ILLUSTRATED PRESS.

The Opening of Parliament.

The scene in the House of Lords on Thursday, December 5th, when their lordships reassembled to consider their address in reply to the Queen's speech, which had been read to both Houses at an earlier hour of the day, is the subject of an illustration. The address was moved by the Earl of Ravensworth and seconded by Lord Inchiquin. There was a very full attendance of peers, among whom their Royal Highnesses the Prince of Wales and the Duke of Cambridge sat on the first of the cross benches, where the Earl of Derby also took his seat. The Lord Chancellor, Earl Cairns, was seated on the Woolsack, having the bishops on the upper side benches at his right hand, and the peers who are Cabinet Ministers—namely, the Earl of Beaconsfield, the Duke of Richmond and Gordon, the Marquis of Salisbury, Viscount Cranbrook, and others. On the opposite benches were Earl Granville, the Duke of Argyll, and others belonging to the Liberal Party. The steps of the throne, and the lobbies and boxes on each side further back, were crowded with members of the House of Commons and of the different foreign embassies. In the side galleries above, to the left of the throne, were their Royal Highnesses Prince Leopold, Prince Christian of Schleswig-Holstein, and the Duke and Duchess of Teck; also many peeresses and other ladies of rank.

The Overflow of the Nile.

As our readers are aware, the rise of the Nile has this year attained a greater height than at any time within the last fifty years. It has unfortunately been attended with more than the usual destruction of life and property. In the Delta alone it is estimated that over five hundred of the natives perished, and about 200,000 acres of land were submerged. The great cause of mischief was the break in the dyke at Mit-Habib, shown in our engraving. This disaster resulted in the complete destruction of several villages. Samanoud, a great commercial centre for the growth of cotton, was partially inundated, and the railway at Rahbain, was also in many places swept away. Another break in the Nile banks occurred at Kafr-es-Zyat on the Cairo line of railway, where a considerable portion of the town was flooded.

Return of the King and Queen of Italy to Rome.

In recent issues we have given illustrations of the attempted assassination of King Humbert, at Naples, and the subsequent ovations the Royal family met at Florence, Bologna and other cities. On returning to the capital their majesties were received with almost unexampled demonstrations of loyalty and affection. The city was generally illumined, and addresses of congratulation poured in upon the King from all quarters. Rome, in modern days, has seldom seen a more joyous occasion.

Presentation of Colors by the Queen.

On Friday, December 13th, the Fourth Regiment ("King's Own"), which is now on its way to South Africa, received its new colors from the hands of Her Majesty the Queen. The ceremony took place in the Great Quadrangle of Windsor Castle, where a guard of honor, consisting of a company of the Coldstream Guards and one hundred men of the First Berkshire Volunteers, was drawn up. The "King's Own" came from Aldershot under the charge of Colonel Bray, C.B., an officer who in his youth served with Pollock's "Avenging Army" in Afghanistan, and soon after they had marched into the Quadrangle, the Queen and Princess Beatrice, with the Duke of Cambridge and Staff, arrived. Her Majesty was received with a Royal salute, and after the National Anthem had been played by the band of the Coldstreams, the "King's Own" marched past, first in slow time and then in quick. The old regimental colors, on which appeared the name of many hard-won victories, were then "trooped" and saluted for the last time, and then borne away through the southern porch. The band of the regiment then marched into the centre of the quadrangle, and piled their drums in a pyramid to form a military altar, upon which the new colors were presently laid. Bishop Claughton (Chaplain-general of the Forces) then offered up a prayer and pronounced a benediction, after which the Queen stepped forward to the altar, and standing between the colors, held erect by Lieutenants Shepherd and Hutchinson, who had received them kneeling, made a short speech, expressing her hope that order might be restored in South Africa before the regiment arrived, and of her confidence that she might at all times rely on their devotion and zeal, and that they would emulate the deeds of their predecessors, who for two hundred years had been distinguished in the annals of their country. Colonel Bray spoke in reply, addressing himself first to the men of the regiment and then to Her Majesty.

Head of Bolan Pass.

This famous cut in the mountain is sixty miles in length, and leads straight to Quetlah, on the road to Candahar. In one part it is so narrow that only three or four men can ride abreast, but a little further on it widens out until a broad plain is reached. Its crest is 5,800 feet above the sea, and its average ascent gives ninety feet to the mile. In spite of its narrowness it is considered very important, in a military sense, because of the comparative ease with which artillery can be moved through it.

Tourists Caught in a Quicksand in Central Asia.

The annoyances, to say nothing of the dangers of travel in Central Asia, are vividly shown in our illustration. An artist, with his family and outfit, is endeavoring to forge a way through the desert to the east of the Caspian Sea near the border of Afghanistan. This route has for years been taken by merchants traveling together in caravan form both for mutual protection and assistance. They are frequently overtaken by storms of wind which fill the air with dust, scattering it in huge drifts on all sides, and greatly impeding travel. The steppes are particularly dangerous by reason of the ravines, which in olden times were the beds of rivers. When the wind fills them up with light dust they possess all the features of a quicksand region, and the heavy wagons of the caravan frequently sink from sight. As the drifts are constantly changing, the locality of these ravines can seldom be made out even by experienced guides; hence it is no wonder that the equipage of the art traveler, jogging on slowly by itself, should be plunged into one of the quicksands.

AT HOME AND ABROAD.

—THE local indebtedness of Illinois amounts to $51,942,691.

—ATLANTA has this year appropriated over $13,000 to her 130 miles of streets.

—CALIFORNIA has eight national banks, representing about $5,000,000, capital and surplus.

—THE Alabama Legislature is composed of 77 planters, 44 lawyers, 4 merchants, 4 physicians, 1 miller, and 1 insurance agent.

—A NEW street railway track has been tried successfully in England. The rail is a flat plate regularly pierced with holes, into which fit protuberances on the wheels.

—DURING the last eight years there has been an addition of 400,000 to the population of Texas. During that time the assessed valuation of property in the State has been increased $250,000,000.

—DURING the past year 2,881 buildings have been erected in Philadelphia, a falling off of 2,334 from 1877. There were 1,193 two-story dwellings, 1,267 of three-stories, and eight of four-stories.

—DECEMBER 6th was the 437th anniversary of the foundation of Eton College, founded under the style of "The College of the Blessed Marie of Eton beside Wyndesor" by Henry VI. in 1441, who also endowed King's College, Cambridge, in connection with it.

—A NEW synagogue, said to be one of the finest of its kind in Europe, and costing $220,000, exclusive of the ground, has been opened in Warsaw. Instead of the Jews flocking to Palestine, they are said to be gathering in large numbers in the Russian cities.

—QUEEN VICTORIA, who is lady of the manor of Esher, offered to give that pleasant village a drinking fountain which she thought would cost $500. The Esherites refused to accept it unless it cost double that amount, as they would have to pay tax for water supplies.

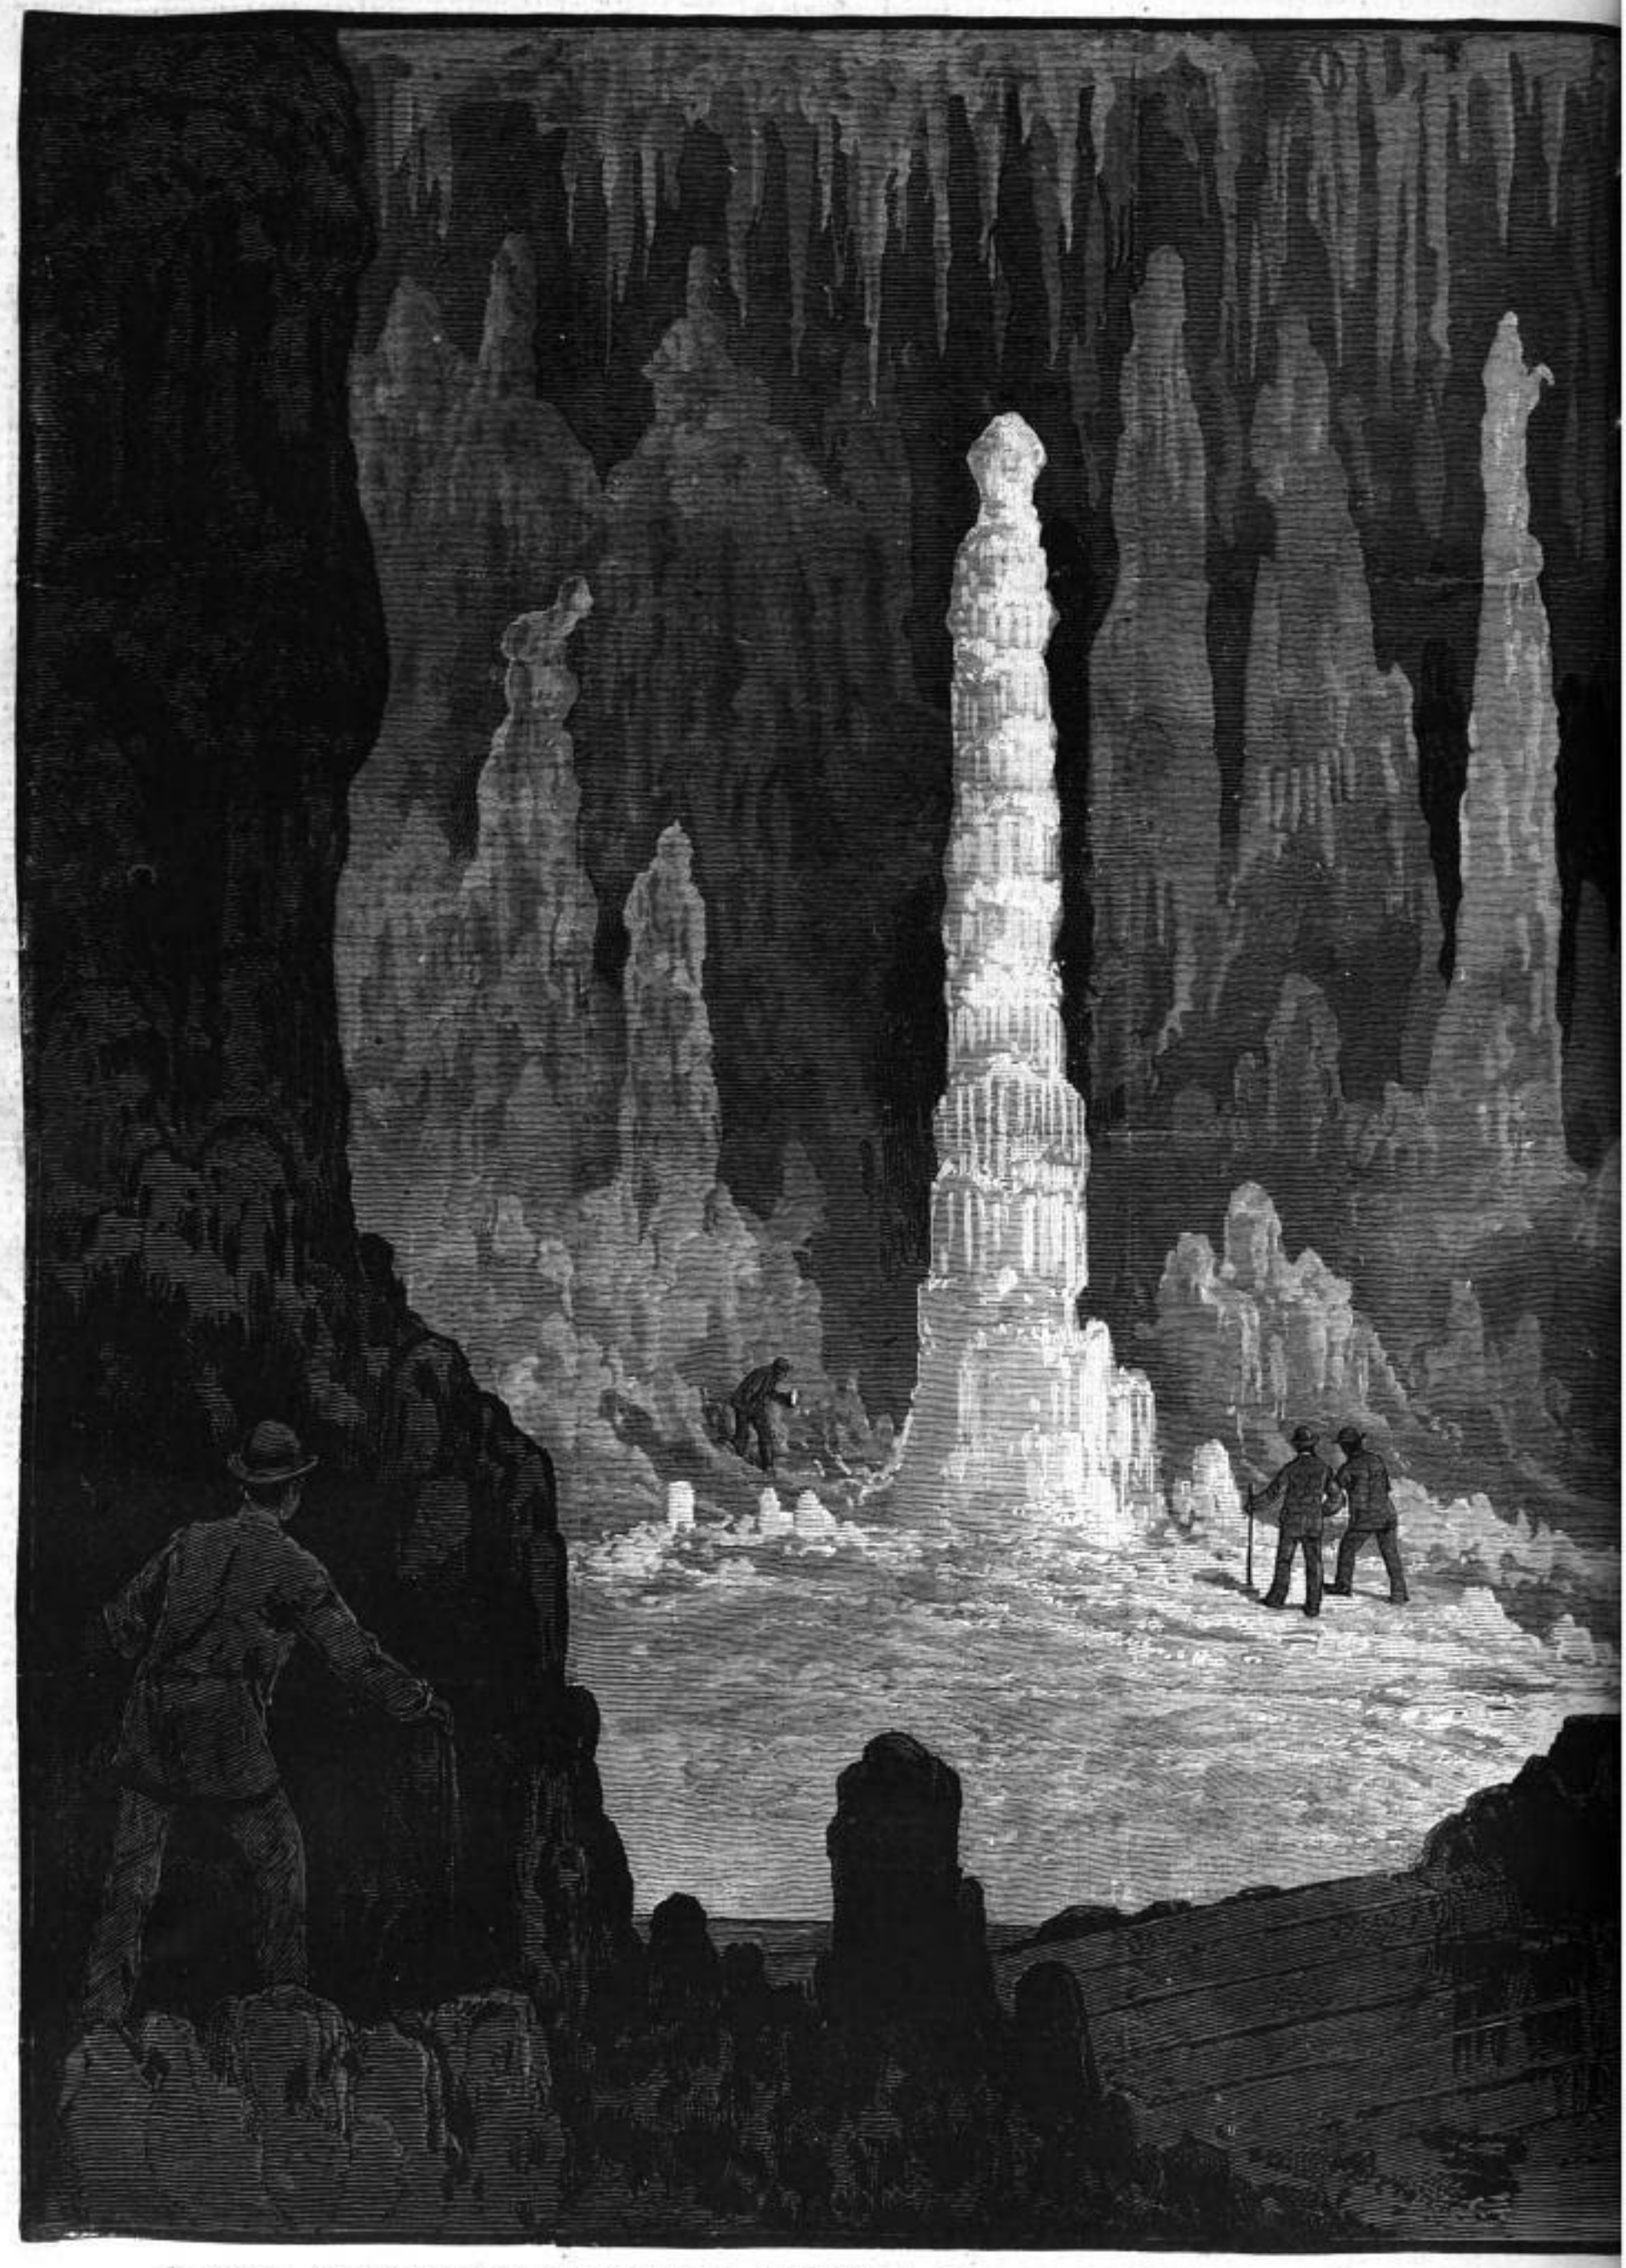
—THE German papers give the strength of parties in the Prussian House of Deputies as follows: National Liberals, 155; Centre, 87; Progressists, 64; Free Conservatives, 33; New Conservatives, 30; Poles, 15; Conservatives, 10; and 21 Independent members.

—INEXHAUSTIBLE beds of lignite have been found between Jaffa and the Dead Sea. This with the asphaltum, also abundant, will make the Holy Land a coal supplier for all Egypt and Syria, both of which possess no wood, and pay from $12 to $14 a ton for foreign coal.

—AN immense grave or vault is being made in the Cemetery of Pere la Chaise, in Paris, in which to place the remains of all the forgotten combatants of the war of 1870. It embraces an area of 400 square feet, and will be surmounted by a monument, the design of which has not yet been chosen.

—A NEW bell has been blessed at Moscow in memory of the emancipation of the Bulgarians, which, though smaller than the monster Ivan the Great, still is larger, the London *Times* says, than any other in the world. It weighs 63,276 pounds, though the contractor asseverated that it weighed 79,284.

—THE German papers quote some statistics comparing the proportion of married persons in the populations of the different countries of Europe. Germany ranks only seventh in the list. To 10,000 souls in each country, there are in Hungary 5,475; in France, 5,566; in England and Wales, 5,398; in Austria, 5,271; in Italy, 5,270; in Denmark, 5,191; in Germany, 5,107; in Norway, 5,065; in Sweden, 4,952; in the Netherlands, 4,943; in Scotland, 4,678; in Belgium, 4,634; in Switzerland, 4,582; and in Ireland, 4,313.



—IT is said that between 200 and 300 men and women of St. Louis drink daily from a half to a pint of blood, piping hot from the veins of slaughtered cattle. More blood-drinking by consumptives and aged persons is done in September and October than during the remainder of the year. The blood of young steers is the best, and should be caught as it comes from the animal and drank while the foam is still on and the steam rising. Consumptives are advised, in addition to drinking the blood, to sit in a slaughter-house for a couple of hours every day at killing-time to inhale the "steam" of the running blood.

—DESPITE the fact that Atlanta, Ga., is practically without water-power, it is making rapid strides as a manufacturing city. At the present time, within a radius of twenty miles of that place, there are enough spindles to annually consume 12,000 bales of cotton; one cotton factory of that city employs 600 hands. Atlanta has also a rolling mill, employing 300 men; three railroad car-shops, employing several hundred, and the largest brewery south of Cincinnati, four boiler shops, six iron foundries, two door and sash factories, and four planing mills. For the year ending with August there were added nearly thirty per cent. to the manufacturing industries of that city.

—THE latest exploit of the San Francisco reporter is the alleged exposure of a process for manufacturing hens' eggs from deleterious materials. According to the narrative the albumen is imitated by a mixture of sulphur, carbon, and fatty matter obtained from the slaughter-houses and rendered sticky with mucilage. The yolk is made of blood, phosphate of lime, magnesia, muriate of ammonia, oleic and margaric acids, and colored with chrome yellow. The shells are shaped by a blow-pipe from a mass of gypsum, plaster of Paris, carbonate of lime, and oxide of iron. After the shells are blown the albumen is forced in through a hole in the small end and sticks to the sides; then the yolk is added, and after being covered with more of the albumen mixture the hole is sealed with cement, the complete egg is rubbed pretty smooth and laid aside for packing. It is asserted that many barrels of these eggs have been shipped eastward for consumption.

—THE EMPEROR WILLIAM is so extremely fond of militarism that he is said to be "pipeclay all over." His palace resembles a military museum rather than a royal residence. Every room in it has pictures of battles, portraits, busts and statues of princes in uniform. In the entrance vestibule figure two large paintings which represent his Majesty charging the revolutionary rabble in 1848, when he was prince, and just before that rabble compelled him to fly to London disguised as a coachman under the name of Möller. This recollection is evidently a bitter one, else so much prominence would scarcely be given to pictures recalling episodes which one might think an emperor would rather forget. In the reception saloon, where stands a bronze statue of Frederick the Great, there are a number of shelves, some of which are covered with miniature models of cannon, rifles and shells, and others with wooden statuettes clad in the uniforms of almost every country in the world.

THE OLD HOME.

I HAVE gone—I cannot always go, you know;
Best 'tis so—
Home, across the distant ridges of the years,
With my tears;
And the old house, standing still on the old ground,
There I found.

In the parlor, in my fancy, I could trace
Father's face;
And my mother, with her old, accustomed air,
Sitting there;
While beside them brothers, sisters, true and good,
Silent stood.

Thro' the stillness swam the song of Summer bird,
And there stirred
On the wall the leaf flecked sunshine; and its glow
Faded slow;
But from all the loving lips I watched around—
Not a sound.

Then I went upstairs, slow entering 'mid their glooms,
All the rooms;
And I trod with softened step along the floor;
Opened doors;
But I never heard a voice or met a soul
In the whole.

Of the breaths that stirred the draperies to and fro
Long ago;
Of the eyes that thro' the casements used to peep
Out of sleep;
Of the feet that in these chambers used to run—
Now are none.

Of the sunshine pouring downward from the sky,
Blue and high;
Of the leafage and the ancient garden plot,
Brown and hot;
Of the streamlet, and the shingle, and the tide—
These abide.

But beyond its azure vaulking overhead
Are my dead;
Though their graves were dug apart in many lands,
Joining hands,
They have gathered and are waiting till I come.
That is home!

THE GOLD DOLLAR:
OR,
A CHRISTMAS CAROL.

BY ANNA BOWMAN BLAKE.

CHAPTER I.

"I'D buy that if I was rich! an' *that*, an *that!*" And over the wet pane of glass of a certain gigantic toy-shop, on a certain snowy Christmas Eve, went a dirty little finger. Tap, tap, tap! with each tap was left a large black stain on the moist glass, stains indicating with unmistakable directness the objects chosen in this rapid journey of selection.

"Golly! would nt it be a bully Christmas-tree though! I wouldn't hev none o' yer nonsense. None o' yer gals' chiney dolls, nor horses thet won't go, nor steam enjines thet don't whistle like mad. None o' yer dern games, neither. Them 'ere's fit fur sillies, gals an' bebbies. I'd show 'em how! I'd guv 'em a taste of a real Christmas-tree, yer kin bet yer life on thet."

A long, suppressed whistle of satisfaction, a whistle freighted with a conscious sense of power, and the little, lean, spare figure of the newsboy straightened itself with a prouder bearing on its crutch, as part of his lower walking machinery gave evidence of being a somewhat superfluous appendage. A foot which didn't seem to belong anywhere dangled and wabbled and twisted itself about in a most helpless and rickety fashion. But the owner of the crutch was evidently used to both. He used the one and ignored the other with an ease that seemed to justify a supposition that crutches were invented before feet.

The boy was but a child, if judged by his size; an old and very experienced one, if judged by the sharp, knowing little face, the keen, shrewd glance, and the deep lines cold, exposure, and a rough, vagabond life had carved on the worn features. But for the moment he was but a child, in a child's paradise. He was entering into imaginary possessorship of most of the contents of the shop. Velocipedes; skates of all patents; locomotives with endless trains of cars; a whole population of automatic acrobats, gymnasts, tight-rope dancers; theatres with troupes of actors, and scene-shifting apparatus complete, and an extensive assortment of the latest patented soldiers—a regiment of which, on wheels, were charging with pointed bayonets on the window pane. For you see it was Christmas, Christmas Eve, and didn't every one give themselves a bit of a treat on that day? His treat was to give his imagination an airing, a form of amusement a very active business career left him little time to indulge in. So he was taking advantage of this holiday season to give himself a bit of a lull. His professional eye—and be it remarked, his business eye was a particularly keen, far-seeing, and wide-awake organ—was for the moment, so to speak, closed. He had turned his back on the trade. There might be fifty customers passing him by, and not a whit cared he. There they were, the paperless, newsless, unsupplied hundreds, hurrying past, with the quick, gay step, the jolly laugh, the joke, in fine old Christmas spirits. No need to rush through the streets, telescope with an army of small boys bound on a similar errand. No need to yell "Fourth *Edd*-tion!" till he was kicked out of a horse-car, or his cough came on, and he was forced to wait till "thet dern pain was by—an' guv' a feller a chance tew ketch his breathin'." Business was at his very back, and at his very back, and yet there *he* was, with his thin, sharp nose flattened against the window-pane, making neither bid nor motion to turn an honest penny. But what cared he? For the moment wasn't he as rich as the richest, this young heir of tatters, this young prince of rags? There wasn't a thing in that shop-window he did not own, as he looked at it, and his possessions were being pointed out with the same significant gesture.

"I'd buy *that*, an' *that*, an' *thet!*" when a soft, sweet voice sounded in his ear.

"What are you doing, little boy?"

But the boy was a boy no longer. He was a ruffian, three and a half feet high. There was a quick clinching of a fist—the well one, the other being temporarily disabled from active pugilistic labor—there was defiance in the dark, sullen eye, there was a growl in the low, insolent tone.

"I ain't a-doin' nothin'," and then, somehow, the clinched fist relaxed, the sullen eye drooped, and the ruffian was only a frightened child, who stood before a lovely, beautiful young girl, who was bending over him, and looking into his eyes with oh, such a kind, kind look!

"I did not think you were doing anything wrong, dear. You were playing you were furnishing a Christmas-tree, were'nt you?"

"Yis'm."

How in thunder did he know?

"Well, now, suppose you help me buy some things for mine. Will you? I am buying so many things I don't know what to buy next, and I am sure you have excellent taste."

"Now tell me what you had chosen?"

The dirty little finger pointed to the velocipede, and regiments of modern soldiers, and theatres, and ballet-dancers. He was looking at her again as she stood near him, "An' goery—but she's a stunner!"

"Now tell me your name."

"My name's the Sparkler."

"The Sparkler! What a queer name! How did you get that name?

"Oh, I sparked a gel las' Summer, and the fellers jibed me, an' I'v been called that ever since."

Sparked a girl! It must have have been in his cradle, thought the beautiful Miss Gordon.

"And where do you live?"

"Over yonder—down that 'ere blind alley."

"Who do you live with, your mother?"

"Never hed none. I live with old Gruffy, he's my boss. Me an' my pal lives there."

"Your pal?" echoed the puzzled Miss Gordon.

"Yes, that's Jim; him with the game eye."

But this vocabulary of the street was becoming too unintelligible for a young woman of fashion. Her talking to him at all was only the freak of a young woman of fashion. But she had been struck by the boy's thin, earnest little fingers, and had caught the sound of his chattering, and seen him pointing with so much intensity, and being a woman, she was curious, and so must have her curiosity satisfied.

Just then a gentleman came out of the store; a young, handsome fellow, with a smile on his fresh, fair face, and the beautiful lady turned to him, and said:

"Ah, Bertram, there you are! I was just talking with this little boy; but I'm ready now. Here little boy, here's a gold dollar for your Christmas. Now, good-by, and a Merry Christmas to you."

Another moment, and the beautiful lady was seated in a satin lined *coupé*, and the gentleman had sprung in after her. Then the girl turned and faced him, laying her hand on his.

"Oh, Bertram, you can't think what a lesson that poor little creature taught me! There he was, out in the cold and the snow, with no shoes on, and scarcely any coat to speak of, it was patched so, and he seemed just as happy as a bird, choosing things out of the window for an imaginary Christmas-tree. And, oh, Bertram, I'm so ashamed of having been cross to you for keeping me waiting; and you'll forgive me, won't you? And I'll never be naughty again!" And then, didn't the most beautiful thing in the world happen! Didn't the lovely young head get very near to the dark, mustached young lover? Didn't four loving, fond lips meet in a lover's kiss? Yes, though it was broad daylight, and the curtains were up! And didn't two happy hearts beat happier and look out upon the world with bright, swimming eyes, and dream that living was always to be loving?

Of course, it was all very improper, this clasping of hands and meeting of lips in this crowded thoroughfare of Broadway. But then, Broadway itself was doing a great many things ordinarily considered improper. To begin with, it was on a broad grin. And isn't Broadway, as a rule, a procession of long faces? But to-day the whole world wore the jolliest of jolly faces. The very air seemed to hold a certain merriment—to be full of the joyousness of the season. How the people tumbled up against one another and never cared a whit, but laughed as if it were the greatest possible sport to have one's toes trod on, and to slip on the icy pavement, and be walked over! How good-natured the crowds were as they streamed in the narrow doorways, squeezed to a jelly and nearly mangled to a pulp! How the street-venders snapped toy-pistols in people's ears and dangled spiders in their eyes, and they laughed gayly, quite cheerfully resigned to being deaf or blind for life! And the children! Were there ever in this world so many children, prancing, leaping, darting, shouting, screaming, singing? Didn't there seem to be the very king of carnival let loose, driving the whole world mad with joy and fun and jollity? And, over all, how quietly, softly, solemnly the snow fell, as if to lay a carpet of silence for Santa Claus, the real King Carnival, to tread on! How fast and quick it let down its draperies of purity, as if hurrying to shut out all wickedness and sin and sorrow, and to shut in all the joy and good-humor! Through the air what a merry ringing of bells—Christmas bells—and how the notes danced and jumped, and thrilled the air with their gay vibrations of sound!

And the Sparkler! There he still stood, in front of the toy-shop. But the spell was gone. The pleasures of the imagination had given way to the rapture of actual possessorship.

"Ain't she a queer 'un? Axin' me questions an' the like, and pertindin' she hain't no mind o' her own! But she *was* a stunner, you bet! An' thet eve swell's her beau! I know; they allers chins an' smiles an' giggles when they're a-sparkin', an' then jaws like two good fellers when they're hitched! Jest like Gruffy an' old Sal! But she treated me handsome, an' thet I mus' say to her."

Upon which, the gold dollar was taken from the usual receptacle for such prizes—viz.: his left cheek—and to the bright, shining, glistening piece the Sparkler applied the professional test. For how did he know it was gold, gold for *sure*, unless he bit it, flipped it on the stone pavement with the tradesman's true adroitness, and made it ring with a fling from his thumb-nail? Yes, it was gold, sure enough. Now what should he do with it? Buy Christmas presents with it, as the Beautiful Lady suggested? How he laughed at the idea! Who had he to give presents to? Old Gruffy? Gruffy had usually emphasized the Christmas season by extra floggings, and it was a time hitherto remembered by the Sparkler as one characterized by a falling-off of business, a consequent depression of old Gruffy's spirits—for the lack of some—and a subsequent elevation of the castigating poker. It was scarcely to be expected, with such a tide of memories fresh upon him, he should be in a frame of mind to think of giving Gruffy much of a present. If the truth must be told, the Sparkler's thoughts took no higher flight than his own personal wants.

"Wish Jim'd come along. We'd go hev a stew. An' I'd stan' treat to the the-a-tre."

But no Jim appeared. Neither did he, upon the signal of a sharp, shrill whistle with a mysterious shriek at the end of it, sounding like a secret signal, as indeed it was. For those young vagabonds of the gutter have a hundred signs at their command—signs which will call a small army of companions about them. Let them whistle a certain whistle, and lo! a swarm of boys seem to rush out of the ground at the summons. But neither whistle nor shriek brought "Jim with the game eye," and the Sparkler was doomed to go without his stew; it being against the vagabond's code of courtesy to indulge in solitary feasts. Hungry? Lord! he was hungry enough! But then he had been born hungry, and he had got pretty well used to it by this time. Ever since he could remember, a gnawing, hungry feeling had been ringing a pretty loud dinner-bell of an appetite in his empty little stomach—a dinner-bell never yet answered by a good square meal. So he didn't mind missing the "stew" so much, as he feared he would miss the "the-a-tre." He had still to deliver his evening papers up-town, and it was growing late.

The deepening shadows were falling fast, and the snow was falling faster yet, but up the gay boulevard trudged the active little figure of the cripple. Somehow, the march didn't seem so long as usual. Perhaps because of that gold dollar. Feeling it, touching it, seemed to make him forget things somehow—forget his cough, and his lame foot, and his sore hand, and his chronically empty stomach. The blind alley didn't seem so dark, either, nor Gruffy so drunk, nor old Sal so cross. The touch of that dollar seemed to turn all things into gold. Spend it? Bless you! by this time he had made up his mind he never would spend it, feeling of it was such a comfort. Not a shadow of a temptation did the candy-shops bring up. He could pass the longest rows of taffy or the fattest sticks of striped peppermint at the apple-woman's stand and not even suffer an envious watering of the mouth. As for the opulent charms of the festive fowl, Broadway might have been festooned with garlands of that bird and the Sparkler have passed them by with never so much as a thought of what one might be, if stuffed and roasted and served up with hot gravy. It did require some heroism to get by the restaurant, though. Such a smell—a smell of such goodies! Such a hot, warm, juicy smell, as if there were endless rounds of beef roasting, and gallons of gravy stewing, and hogsheads of coffee, and tons of puddings! But soon he was up-town, where such temptations no longer assailed him. The snow lay piled on the steps now. He must hobble up the stoops to ring the bells, for if he pitched and tossed the papers, as was his usual custom, "they'd be as wet as a rag afore them lazy cusses'd cum and tek 'em in." But it was hard work. His crutch would slip on the snowy steps, and his cough would "ketch" him, and many a time he must sit down on the icy stoop, and rest there till he could "kinder hist hisself together."

CHAPTER II.

THERE was a great blaze in a certain great, grand house. It was a blaze of light, of warmth, of comfort, of grandeur. Every light in every room in that house was on at its fullest, biggest, brightest turn. There wasn't a dark corner in it, nor a dull room, nor a dismal square inch. But it was in the parlor—the large, spacious parlor—that the lights seemed brightest, as if a portion of the very sun had lent itself, somehow, to the chandeliers that they might be great balls of dazzling radiance. What beautiful objects that dazzling light fell on! what walls, covered with what wonderful pictures! what rich carpets! what elegant, dainty furniture, over which Flora herself must have sprinkled those delicate bunches of roses! And upon what a garden of flowers—real, growing banks of roses, seeming to grow out of the very walls and mantelpieces—did the light fall and shine on! But what were all the roses in the world to those lovely human flowers—those beautiful children who were flitting about in the wildest state of excitement; now running to a certain dark, big door, through which they could see nothing—oh! nothing at all! Only they knew *everything* was behind it—everything: the Christmas-tree and Santa Claus and his very ponies, perhaps—who knows? Then the whole band would rush to the other door, the open one. Then would be—oh! such a shout, such clapping of little hands, as another lovely child was handed in out of the sleigh, carried up the carpeted steps by the giant footman, and taken straight to the open fire to be shaken, and its wraps taken off, and its silks and laces shaken out. And how it was kissed and hugged and dragged in by the whole army of happy little ones! Oh! were there ever such times? And what a merry, merry jig some one was playing on the piano! What beautiful girls and handsome, proud, and happy mammas were trying to keep the children in order! And they didn't. The children were in the wildest possible disorder, and would be till that dark, big door was wide, wide open and everything was seen.

"There's the bell! Let's see who it is!"

Away scampered the whole bevy to the vestibule-door. But this time it was no giant footman carrying a precious bundle of silks and laces. It was the Sparkler, with his rags instead of a ball-dress, his crutch instead of a footman, and chattering teeth and quaking knees instead of the gay laugh and merry, dancing feet. To express the situation in his own language, "he'd got kotched, sure's I'm born." He'd been assisting at that children's ball himself—making one of them, so to speak. Only he happened to be outside in the sleet and the snow, surreptitiously enjoying the festivities through a slit in the vestibule-curtain. Then the door had opened, and it was too late to retreat.

"What do you want, little boy?" asked the child—a child like a "chinee doll," thought the Sparkler, with all that blonde hair and white skin. There was a bevy of children behind her, all open-mouthed and wide-eyed. The Sparkler wasn't afraid—not he; only he dimly felt there were such things as disadvantages in too sharp contrasts.

"What do you want?"

"Don't want nuthin'. I was only a lookin' in."

"What did you come here for?"

"Bringed yer dad's paper," preparing to shuffle himself off; but his cough stopped him, and he had to lean a moment on the crutch and take breath.

"Are you sick?" asked the little girl, changing her tone.

"Bet he's cold," said one of the bigger boys, standing motionless, looking at him critically with his hands in his pocket.

"Come in, children. Come in this instant out of the cold. You'll catch your death," a voice said, in a sweet, fresh tone; and, behold! there was the beautiful lady who had given him the dollar.

She had seen and recognized him before he could get off.

"Why, is that you? How did you get up here? But come in. Come in, don't stand there in the cold!"

Before he knew it, he was inside the great, splendid hall. The lady was dragging him by the hand; the children were dancing all about him, asking him fifty questions at once. Was he always so dirty? Was he hungry? Had he ever seen Santa Claus? He was coming here to-night. He must stay and see him.

Then he was led before another lady, older, taller, but with the same beautiful look on her face as the younger one, who said to her:

"Mamma, this is the little fellow of whom I told you, whom I met down-town this afternoon. I brought him in to get warm, and to put some dry clothes on him."

"And he may stay, mayn't he, mamma. He's never seen Santa Claus. He said so!" cried a dozen children.

"He's awful dirty, and I may help to wash him, mayn't I?"

"And he's hungry, too," said the fattest child of all, to whom that condition could only be known by the wildest flight of the imagination.

Then he was whisked up-stairs, the beautiful lady holding him by the hand all the time. Soon he was put through such a washing process as would have made him believe the Deluge had come, had he ever known anything about that highly interesting occurrence. Then the clothes! Why, his rags fell away from him as if fairies had waved a wand, and before the magic circle was described, behold! he was, for the first time in his life, in a whole suit of clothes!

Then he was whisked down-stairs as fast as his poor lame foot would allow, and was made to eat the largest supper ever a small boy had set before him. When he got up, he felt as stuffed as one of the fat turkeys he had eaten. But all this was as nothing, only a bit of a preparation, so to speak.

"Now you are here, you must stay and see the tree, Sparkler, and I shouldn't wonder if Santa Claus had something for you."

And Miss Gordon was tucking him up in the most comfortable corner of the sofa in the parlor, and put his crutch away her-self. Then everybody crowded round, and asked him questions; and the children were like a swarm of flies in Summer about him.

The manners and social customs of the "blind alley" were scarcely of a nature to fit one born there to be suddenly introduced into the highest society. But the Sparkler conducted himself with much dignity, a dignity due, perhaps, to another new element to which he was introduced, to the starch in his high collar, and the novel sensations of having no holes to lose his hands in, as anything else. Being so clean seemed to wilt him somehow, and he missed, without being able to analyze it, the bravado of dirt. But the fire of questions lasted only a short while.

For, hark! What sound was that? Was the house coming down? Was there ever heard such a jingling of bells, such a cracking of whips, such a loud, deep, joyful voice?

"Whoop! Go along there, Snowball! Whoa! Steady, you, Jingler! I've got to get out here. There are a good many little children waiting for me here."

"It's Santa Claus! It's Santa Claus!"

To be sure it was. Who else could it be? Who else could make such a dash down the stairs—such a bound—into the midst of the half-terrified, half-enraptured children? Who else ever had such a long beard, or such a big cloak, or was covered with snow, and looked as old as the hills, and frisked about as young as a kid? He was soon in a chair, this wonderful being, taking out candies from his boots, and whistles from his ears, and tops from his mouth, and there wasn't a child in the room that he didn't give something to—no! not even was the Sparkler forgotten.

"Ah, my young man, I expected to see you down-town! How did you get up here?" and Santa Claus tossed him a cornucopia and a top.

But all the presents in the world could not deceive the skeptical Sparkler. His early training had not been such as to foster poetical, childish superstitions. He looked at him out of his keen, shrewd, knowing little eyes, he looked round the room, evidently searching for something he didn't find, and then beneath his breath:

"It's her beau dressed up to make believe!" But the wise discoverer kept his knowledge to himself, the joy of his researches only communicating itself to the increased zest with which he sucked the long, pink stick of candy. But real or impostor,

Digitized by Google

Santa Claus was gone long before the candy was. Then happened something that even took the Sparkler's breath away. The big, dark door was flung wide open, and there, oh, oh, oh! Was there ever such a tree?

It was as high as the ceiling, yet every twig, every tiniest branch, was laden with candles, and sugar-plums, and how ever a tree could hold so much and not break, everybody wondered and nobody knew. Then such a time as they all had taking down the presents! Every child had a dozen, it seemed to the Sparkler, and then more than a dozen filled his own little lap. Knives, and toys, and shining balls; but the thing he prized most was what the beautiful lady gave him with her own hands—it was a little watch, a silver watch, that wound up, and told the time. By this time, the Sparkler began to feel as if he had anticipated heaven; that is, he would have felt so if he ever had known any more about heaven than he did about the Deluge. For all the rest of the evening, how kind all the people were to him! The children made him play all the games, and let him sit down. The ladies told him stories, and stuffed his pockets with apples, and he had never been so happy or comfortable in his life, except in the region of the two buttons of his new pants, the waistband seeming to get smaller all the time the more candy he eat. Then to wind up every thing, everybody danced a jig, big and little, old and young, and the Sparkler stood and thumped on the floor with his crutch, and made just as much noise, and had just as much of a jig, as anybody there.

"Now, for a song, a Christmas carol, and then to bed, little ones."

The beautiful lady was at the piano now, and the children all about her. But the Sparkler, nearest to her of all, and never in all his life had he heard any thing like that "singin'." The sweet, fresh, girlish voice pealed forth carol after carol, children and all joining her. And the most beautiful was the last of all—"Hark! the Herald Angels sing"—and the Sparkler thought he was in heaven now for sure, for she sang it alone, and there wasn't a dry eye in the room when she had finished. The Sparkler felt "kinder dry," and "suthin' was in his eyes"—and the "suthin'" was wiped away with the sleeve of the brand new coat. Before he went home—home through the sleet and snow—the lady kissed him, and said she would come and see him soon. Wipe the kiss away? Not he—not if he never washed his face again, but that, indeed, was a matter of very little importance in the blind alley circles.

* * * * *

A week after that, in the blind alley, there lay a weak, pale, meagre little figure on a bit of straw. A pinched face looked out from a torn coverlid, and a racking, terrible cough came through the thin, pinched lips. The little figure was the figure of the Sparkler, and the cough was killing him. It may have been the sitting on the steps that Christmas night, or the sudden transition from the warm, hot rooms to the cold and damp of old Gruffy's cellar; but he had lain there ever since. Lain there, and thought in a dull, dazed way of all that happened that night, and through his hot, feverish dreams, he would mutter strange things about "fairies, an' fellers that make believe Santa Claus, an' the beautiful lady—she that singed the angels is comin'." Then he would cry out, "Where's my gold dollar?" and there it always was, tightly clinched in the thin little hand. Everything else had gone but that. Gruffy had pawned his clothes long ago; the children had stolen his candies; and old Sal sold the toys. But the gold dollar no one could get away from him; sleeping or waking, conscious or unconscious, there he held it, and talked to it, and crowed over it.

He was awake now. And the large, childish eyes were fixed on the door, as if he expected some one. He was always expecting some one. He was looking for *her* to come in. Hadn't she promised she would? Some one did come in, but not the beautiful lady. It was another Sparkler, such as the Sparkler used to be—without the crutch. It was Jim, "him with the game eye."

"Is that Jim?"

"Yis—it's me, pal."

"Jim, I'm wuss. Coughed till I choked las' night. I—I——" and then came on a spell of the dreadful coughing. After that, he couldn't get up, but lay weak and spent on the bit of straw pillow. When next his words came, they were faint, with the faintness of death.

"Tell her, when she cums, I allers kep' the gold dollar, an' watched for her. . . . . Yer kin hev' the top an' things, Jim, but don't yer giv' old Gruffy nuthin'. . . . . Hark! don't yer hear suthin'? . . . . It's the angels. . . . . angels singin'. . . . . tell her I'm cumin'. . . . . the angels. . . . . the. . . . .

And in the dawn of the bright New Year there went out the light of a dark little life—a light that died on earth only to be relit in the great Beyond where the Herald Angels sing alway.

Honor among Thieves.

BELLEW, in his account of the mission which he accompanied into Afghanistan, tells a most remarkable story, which may be quoted as illustrating not only the determination which the race is capable of, but of a sense of honor—such was the word the relator used; and although it is only honor among thieves, there was mixed with it a desire for the honor of the family to which the hero of the story belonged which would be creditable anywhere.

The person who tells the tale was called Khan Gul, and he was one of the actors in it. The whole of his family had, at a former period, become a band of robbers, which occupation they practiced seemingly on the sly, and their neighbors were kept in the dark about their doings. They had determined on robbing a house at some distance, and going there during the night, they made a hole through the mud wall. Khan Gul's brother, like Oliver Twist, was passed in, and he began to hand out whatever was within his reach. The people of the house chanced to waken up, upon which the brother tried to make his escape, but while in the act of returning through the hole in the wall, those on the inside caught him by the feet. Now began a tug like the "tug of war"; fiercely they pulled to get him out of the hole, but it was useless; those within had one or two holding on to each leg, and the burglar was held as if in a vise. The fear that they would be recognized and detected became at last the dominant feeling, and, as they could not possibly pull him out, they determined on an extreme measure, and one so very extreme that it is hard to believe that it could have occurred to any others than these knife-using Afghans. The only plan left to prevent identity was to cut off the head, carry it away and leave the body; and the very striking part of this tale lies in the fact that it was done at the suggestion of the man himself, and, as he expressed at the instant, so that "the honor of the family might be preserved undefiled." This was done. They fled with the head only, leaving all the spoil which had been thrown out, and, as Khan Gul ended the story, he thanked God that the honor of the house had by these means been preserved. There is something heroic in such acts. Neither Agamemnon nor Achilles, as described by Homer, suggests a character capable of such self-devotion.

New Way to Cook Invented.

JUST now, in Paris, you will see the art of grate cooking in perfection with the least amount of fuel. In England and America there is an absolute and unnecessary waste of fuel as well as viands by the employment of huge fires. England is more wasteful by reason of being more prejudiced than America in this matter. In one day in England a cook will consume more fuel and produce less good dinners than a French cook will in a month of superb cooking! Count Rumford laid down practical rules by which a dinner for one thousand persons could be excellently well cooked and served at a cost of ten cents! Now this process is improved upon, and a dinner for fifteen hundred persons can be well cooked at a fuel expense of five cents! Not by gas—that is a wasteful expense—but by the carbonated refuse of the gashouse, known as coke. This coke is placed in a peculiarly-constructed stove, which permits none of the fumes to pass into any other place than the closed chimney. The coke is generated into a brilliant fire at first by a powerful draft, then toned down as per the wants of the cook by a mechanical damper. At this point all the odor of the gas has gone, and nothing but a clear fire, minus smell or dust, is ready. This fire in the broad-top stove does duty for several dishes at the same time. You get your dinner hot and well cooked at a cost of less fuel than ever before known. The owner of the patent is about to proceed to America to protect his invention, or I might explain it.

Street Scenes in St. Petersburg.

THE fine streets of St. Petersburg, well paved and broad, are lined with elegant residences and handsome shops, which contain not only the rich goods of other countries, but are temptingly supplied with the furs of Russia; the products of its manufactories, which are very numerous; and the peculiar silver work of this country, which every traveler invests in. Here one can buy the shoes worn by the peasants; a sort of braided straw, curiously formed, and copied either in silver, gold or porcelain—these for flowers, cards, or for cigar-ashes; water-carriers, in bronze, on stands of any of the peculiar stones from Siberia. The three-horse carriage also is a favorite in bronze and silver; and a bronze table, with silver cloth, on a foundation of malachite or lapis, is often seen, with Russian peasant and wife drinking tea, thus showing their dishes and their peculiar way of preparing the tea, with a great urn in the middle of the table, and the whole forming a beautiful inkstand.

There is no end to this sort of temptation here, and if one's money holds out he never knows where to stop. Prices are at a very high figure for *articles de luxe*—not really needful things—while the necessaries of life are very reasonable; and if they were not, these people could not live under the governmental condition of affairs, as the lower classes have to live on almost nothing, and pay for that well in taxes. Everywhere there is constant life and activity. The little droskys, only large enough for one, but in which two often ride, the larger public carriages, and the elegant private turnouts, are all driven in the main thoroughfares as if in a case of life or death—regular John Gilpin fashion. As one sits in a public carriage, being in the midst of this curious *melee*, he involuntarily holds on, and holds his breath as if at any moment he should be crushed to atoms and nobody would ever know anything about it. The people are a novelty, so are the shops; then every few blocks there is a chapel, and the people praying all about, and at certain points men in peculiar Russian dress are kneeling out on the edge of the sidewalk with fruits and small wares, sometimes whole rows of them, and if a carriage stops they immediately flock up to sell their goods.

Counteracting Anæsthetics.

THE immense services rendered by chloroform, ether, etc., in the alleviation of pain have been somewhat depreciated by the danger to life incurred in their use, and the numerous fatal cases recorded as the result of their administration. Many efforts have been made to find a rapid and certain antidote, but without success, until a very simple remedy was discovered by the late celebrated surgeon, Dr. Nelaton. His son, while quite a lad, was in the habit of amusing himself by catching mice and harnessing them to toy carriages like horses. In attaching them to the miniature vehicles they frequently bit him, and he induced his father to give him some chloroform to enable him to perform his operations without the inconvenience of being bitten. On one occasion, having administered the anæsthetic, he raised the little animal by the tail in a perpendicular direction, when it immediately turned and tried to bite him. He mentioned the subject to his father, who, upon reflection, considered that the explanation was due to the fact that the brain, while the being is asleep, is almost destitute of blood, but that on the position of suspension with the head downwards having been attained, the circulating fluid rushes to the head and awakens the animal. Not long after he had an opportunity of testing his theory. Two eminent surgeons had to perform an operation at Saint-Germain-Laye, and requested the assistance of Dr. Nelaton. He happened to miss the train, and when he arrived by the subsequent one the proceedings had already commenced. The patient was under the influence of chloroform, and the medical men feared from the symptoms that a fatal result might ensue. Dr. Nelaton at once advised that the head of the patient should be hung over the side of the bed and the feet raised in the air. The experiment was successful; consciousness returned, but, upon the person being replaced in bed, all the somnolency recurred. The trial was repeated, and after a suspension of ten minutes, head downwards, the effects of the chloroform were entirely dissipated. So simple a remedy is one which may be of invaluable assistance to medical men, and may be the means of saving many lives.

SCIENTIFIC INTELLIGENCE.

The St. Gothard Tunnel.—The work on the St. Gothard Tunnel is being pushed with considerable rapidity. On the northern side alone 1,000 men are employed inside the tunnel and 400 outside. Three hundred wagon-loads of earth are excavated every day, and in the daily blastings 600 pounds of dynamite are used. Equal energy is being shown on the Italian side, so that the completion of the work may be looked for within the prescribed time.

A Paraffine Fire-Lighter.—A novelty in fire lighting is to use paraffine instead of gas or the more ordinary means of rapid combustion. The contrivance for this purpose is made of annealed iron, shaped like a flat-iron, and is hollow, with a hole through the centre to allow of the admission of air. The hollow part being packed with asbestos is practically incombustible. About two spoonfuls of paraffine or any other oil poured into the receptacle and lighted will be sufficient to start a fire. It is claimed that there is no danger whatever attaching to the use of the lighter.

The White Hare of Russia.—An attempt is now making in some of the colder regions of France to introduce and domesticate the white hare of Russia. This animal is the same species as the variegated hare which is found in large quantities in the Alps and adjacent snowy regions, and lower down during the Winter. The flesh of this game is excellent, although inferior to that of the gray hare of the same regions, which latter is also equally large, but the fur of the white hare is absolutely immaculate. The success with the new game has thus far been very favorable.

Spontaneous Combustion of Wasps' Nests.—A correspondent of *Nature* calls attention to the danger which may easily arise from allowing wasps' nests to accumulate under a roof. He states that it is a well-known fact that in Venezuela the spontaneous combustion of such nests has frequently been observed. The heat is caused by an alteration beginning in the wax, hydrocarbons being formed, which, on being absorbed by the paper-like, porous substance of the cell-walls, must get still more heated, so that a comparatively small access of oxygen would be sufficient to set the whole nest on fire.

A New Method of Refining Sugar.—A new method of refining sugar, founded on the well known action of dilute alcohol on saccharate of lime, has been introduced by M. Manoury of France. The molasses or syrup is evaporated to 35° or 42° Beaumé, according to its richness in sugar, and 5 to 10 per cent. caustic soda are added to precipitate the lime as in soluble carbonate, and is then decanted. Quicklime, in a fine state of division and under rapid agitation, is then added and the formation of saccharate of lime produced. From this saccharate all of the sugar is subsequently extracted by dilute alcohol.

Cave Explorations.—The excavations made in Carniola under the direction of Herr von Hochstätter have hitherto been crowned with every success. At St. Michael, near Adelsberg, there are undeniable proofs of the existence of prehistoric colonies and burial grounds at these places. Another interesting discovery has just been made at the Laibacker Moor, the well-known pile-dwelling ground. A peat-digger found six silver coins of the size of a florin, which all bore the inscription of the Roman Emperor, Claudius Augustus. These researches are to be continued and the objects obtained will be preserved in the Imperial Museum for scientific purposes.

The North Pole in a Balloon.—A scheme has just been proposed by M. Emile Pagan, a Belgian, for reaching the North Pole in a balloon. The aerial machine, which is of a special form, will be used as a sailing vessel as far as the 84th parallel. There he will fill his balloon, of a capacity of 2,500 metres, with pure hydrogen, which he will make in the Arctic regions with 14,000 cubic meters of sulphuric acid and 5,000 pounds of iron filings with which he will be provided. He will be, moreover, supplied with boxes of preserved meats, biscuits, bottles of brandy, alcohol, etc., which he will throw overboard as he advances towards the pole. The car will serve him, according to circumstances, as a sledge or a boat.

Separation of Arsenic and Antimony.—In 1859 Bunsen described a method for the separation of arsenic and antimony, which consisted in treating the solution of their sulphides in potassium sulphide with a large excess of water saturated with sulphurous acid. The liquid was boiled for a long time until the odor of sulphurous acid was no longer perceptible, by which time all the antimony had been precipitated and all the arsenic remained in solution. Last year Nilson asserted that the method was untrustworthy. Bunsen now points out that the discrepancy arises from the fact of Nilson having used a potassium hydro-sulphate in place of the sulphide, and refers to a number of determinations which establish, what few chemists could have doubted, the accuracy of his method.

Utilization of Blast Furnace Slag.—One of the great features of modern civilization is the utilization of materials which have hitherto been wasted, and a conspicuous illustration of such a saving is afforded by the numerous uses to which blast-furnace slag is now appropriated. Thus, slag "sand" is employed for making concrete, building bricks, mortar and cement; slag "shingle" for concrete, also for roadways; slag "wool" for covering steam boilers and pipes, ice-houses, etc., also for filtering purposes and for manufacture into cloth; blocks of slag concrete are used for warming and cooking in the cottages of the workmen and subsequently for curb-stones, paving, walls and fences; finally, by Britten's process, slag is used in the manufacture of glass for roofing and for other purposes not requiring pure glass. In making building-blocks of slag, the slag sand is mixed with gypsum, with the addition of iron oxide and pressed in molds. The cement is made from the slag sand, common lime, and iron oxides. It is little inferior to Portland cement in strength, while it does not cost one-fourth as much. The concrete made from this cement, mixed with the "shingle," is an excellent conglomerate for use in monolithic structures. It is stated by Mr. Charles Wood, in a paper read before the British Iron and Steel Institute, that "it took two good men, with steel bars and sledge-hammers, as much as four days to cut through a wall of this concrete about twenty-six inches thick." Mr. Wood exhibited to the Institute bottles of slag-glass, also specimens of slag-wool. The latter product, according to Mr. Wood, is obtained as follows: A jet of steam is made to strike a stream of molten slag as it falls into the slag-bogies or wagons. This jet scatters the molten slag into shot, and as each shot leaves the stream it carries a fine thread or tail; the shot drops to the ground, but the fine woolly fibre is sucked into a large tube, and discharged into a chamber. This chamber is very large and is covered with fine wire netting. The steam and air carry the woolly particles all over the chamber—the finest into recesses formed for the purpose, the heavier into the body of the chamber. The pool is of a snowy-white appearance, and some specimens of it which were exhibited at Vienna looked so much like cotton wool as to deceive everybody but experts.

PERSONAL GOSSIP.

LORD FALMOUTH'S winnings on the English turf this year amount to $193,000. His horses have won him in all about $500,000.

FRANK BUCKLAND, the English naturalist, gives entertainments to his scientific friends on Saturday evenings, and calls them "pipes and grog."

DR. WILLIAM IVES BUDINGTON has resigned the pastorate of the Clinton Avenue Congregational Church, in Brooklyn, because of ill health.

SIR GARNET WOLSELEY'S health has been so shattered by his residence in the island of Cyprus that he contemplates a visit to England in order to recruit.

THE King of Bavaria is erecting at Herren-Chiemsee a royal chateau, on the plan of that of Versailles. The building is to be spread over fifteen years, and the estimated cost is $9,000,000.

LORD DUFFERIN has declined a marquisate tendered to him, and will instead be promoted from his Knight Commandership of the Bath to the dignity of Knight Grand Cross of the same Order.

MRS. LANGTRY, the celebrated actress, has chosen Washington as the home of her remaining years, and, having purchased a cozy but unpretentious home, holds very attractive receptions to her friends.

KHEIR-EDDIN PASHA, the new Turkish Grand Vizier, is a Circassian. He used to be Prime Minister to the Bey of Tunis, and attracted public attention by a book in which he argued that modern ideas of progress were not inconsistent with the cardinal principles of Islam.

GENERAL TOOMBS says that if the South must remain under Radical rule for another term, he wants "a full lion, not a sneaking sheep." Grant, he says, is a full lion, and he has respect for him, "because he kills or wins."

THE congregation of the Westminster Presbyterian Church of Baltimore have extended a call to Rev. Wm. J. Gill, of Des Moines, Iowa., to succeed Rev. Dr. D. C. Marquis, recently called to St. Louis, Mo. The salary is $3,000, and the candidate has signified that he will accept.

THE Duke of Connaught has been appointed Colonel *à la suite* of the Third Brandenburg Ziethen Hussars. This is the famous regiment commanded by Prince Frederick Charles, the Duke of Connaught's future father-in-law, whose name, "Red Prince," is derived from the troopers' scarlet tunics.

THE late George M. Marsh, of Portsmouth, N. H., leaves the bulk of his property, estimated at between $50,000 and $100,000 to the Episcopal Bishop of the Diocese of New Hampshire, the rector of St. John's Church, Portsmouth, and other trustees, who are to erect an Episcopal church, to be called Christ Church.

THE Madrid *Epoca* of December 8th says it is understood in Spanish ministerial circles that the Government has requested General Martinez Campos to resign the Governor-Generalship of Cuba, and intimates that General Quesada, who has been recalled from his command in the Basque provinces, will probably succeed him.

THE great banquet to Lord Dufferin at Belfast was, as he said in his speech, the greatest compliment ever offered in Ulster. It was attended by all the Tory as well as Liberal peers, and by the Protestant and Roman Catholic bishops and men of all parties. No other man in Ireland could have brought together such conflicting elements.

DE LESSEPS, the engineer, has been visiting the Bey of Tunis, and trying to get his consent to the scheme for piercing the Isthmus of Zaber and opening up communication with the interior of the Dark Continent by water. He was received by the Bey with great respect, and lodged in the palace, but as yet has been unable to bring his Highness to any definite decision.

THE little Prince of Naples has suffered much in health since the attempt to assassinate his royal father. His nights were disturbed by vivid dreams, in which the figure of the assassin appeared to him and all the incidents of the affair were rehearsed until he awoke with a cry of terror. It has been found necessary to give the boy a quieter life with his books and playmates, and less of State ceremonials.

COMMANDER CHEVNE, of the English Navy, has a new scheme for reaching the North Pole. He proposes to go by ship as far as possible, then go over the ice with sledges until that method of conveyance is no longer practicable, and, finally, by means of three balloons lashed together, he would try to get to the Pole. After making observations, he would send back two of the balloons and endeavor to proceed with the third to an inhabited part of Russia.

A WASHINGTON correspondent who has been investigating the subject of the sale of photographs there, writes that Mrs. Hayes leads all others. Of the Senators, that of Mr. Blaine goes off best, with Lamar and Gordon following, while Conkling is far in the rear, even Thurman beating him. Of the Representatives, Speaker Randall leads, with A. H. Stephens close on his heels, and General Butler next. An extra supply of Blaines was laid in to meet the emergency of his last speech.

J. MOREAU, an artillery soldier, who in 1871 lost his eyes, his nose, and his lower jaw by the bursting of a shell during the Franco-Prussian war, has lately left the hospital of Val-de-Grace, in Paris, with an artificial face of metal, with eyes, a nose and a jaw, which enables him to masticate his food properly. Before going to war he became engaged to a young girl, who on his return, far from discarding him on account of his frightful mutilation, married him without hesitation, and has since devotedly supported him.

AMONG literary men who have had their career as writers forced upon them is James De Mille. It is said that he had no idea of writing for the public until some of his letters got in print and were widely read. The author is professor of rhetoric and history in a Nova Scotian college. He is a native of New Brunswick, and was graduated at Brown University, Rhode Island. He is a born raconteur, and, some of his friends think, tells a story even better than he writes it. He is still comparatively a young man, having only recently seen his forty-fifth birthday.

HON. JULIUS HOTCHKISS, of Middletown, Conn., died at his home December 23d. He was born in Middletown in 1810, and, after receiving a common school education, became engaged in mercantile pursuits and manufacturing. For many years he was prominently identified with the business interests of his State, and when Middletown was incorporated as a city he was elected its first Mayor. He was a member of the Legislature during two sessions, and in 1854 was a candidate for the office of Comptroller of the State. In 1867 he was chosen to represent the Second (Connecticut) District in the Fortieth Congress, in which body he served on the Committees on Territories and Freedmen's Affairs. In 1869 he was re-elected to Congress, and in the following year was made Lieutenant-Governor of Connecticut.

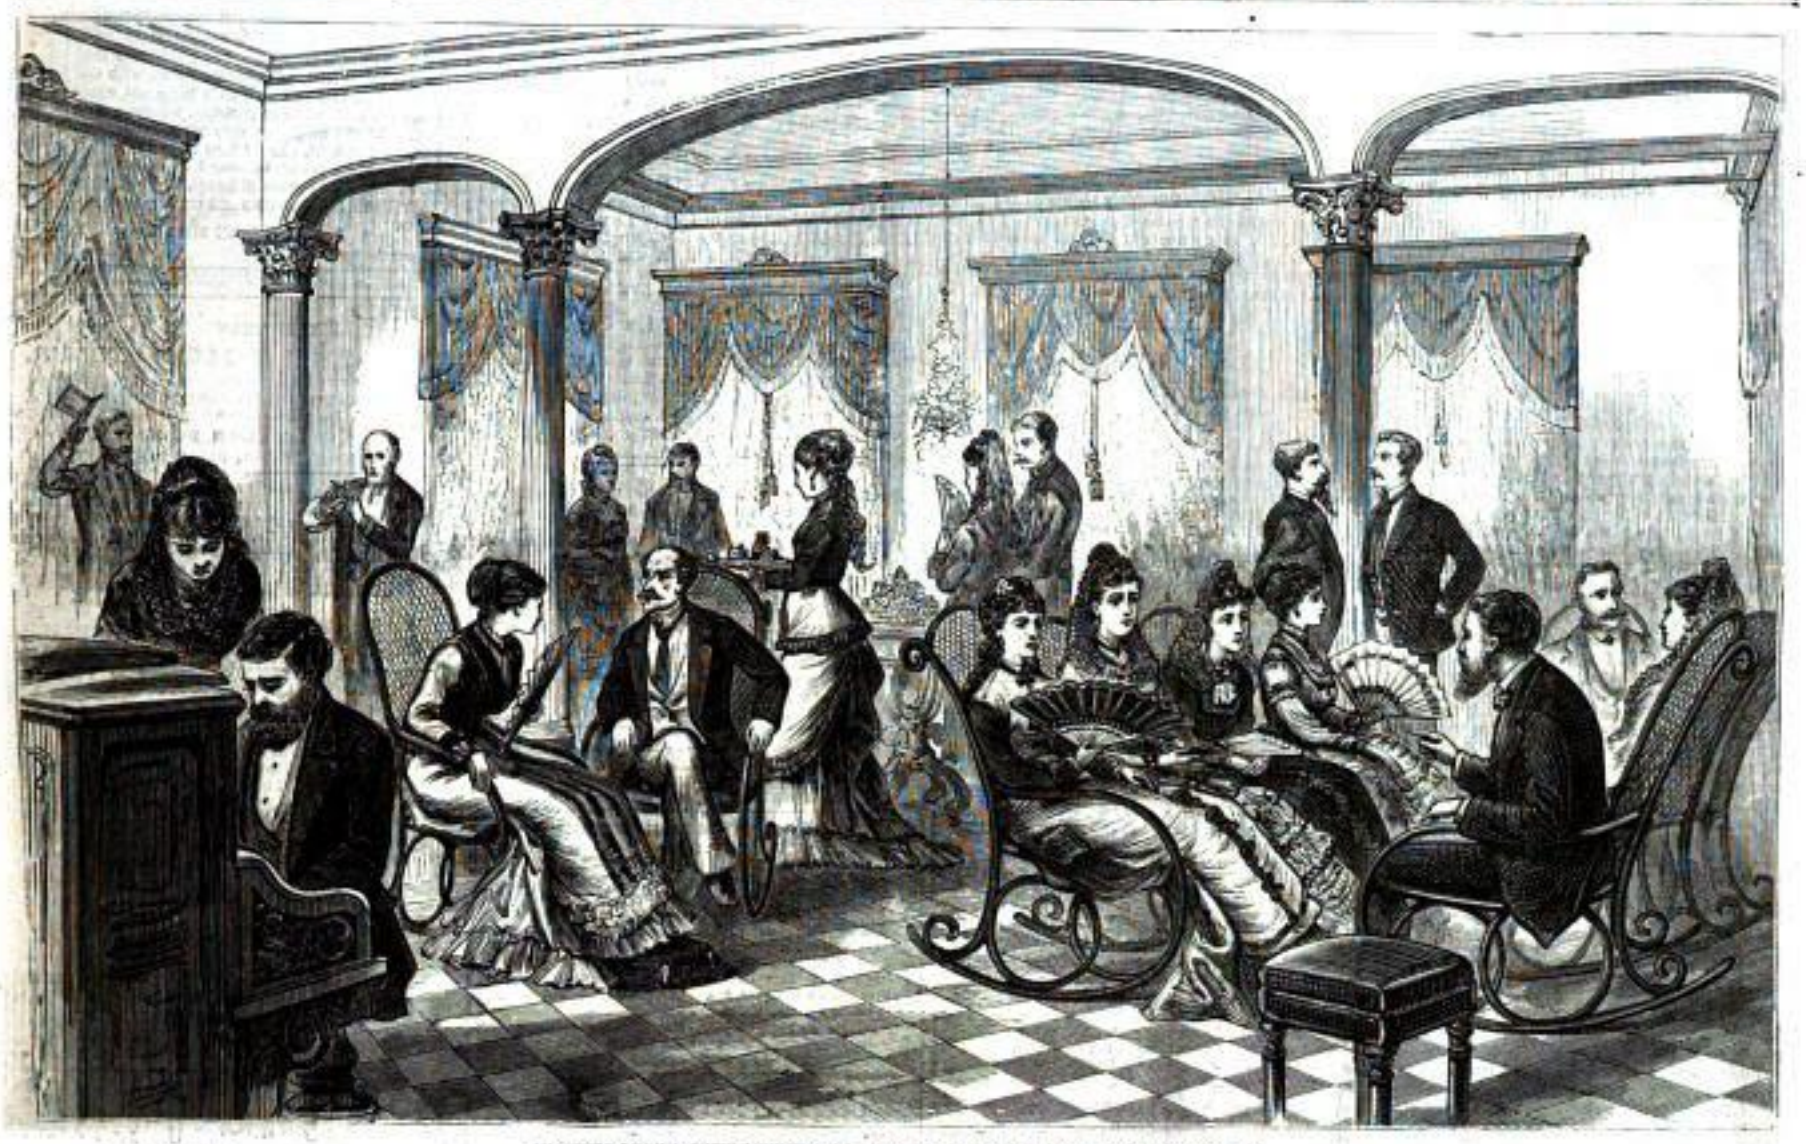
FRANCE.—EXHIBIT OF LAGER BEER BY BERGNER & ENGEL, AWARDED THE GRAND PRIZE AT THE PARIS EXHIBITION.

CAMP FATHER MATHEW,



IN MEMPHIS, TENN., DURING THE YELLOW FEVER EPIDEMIC.

AT the outbreak of the yellow fever in Memphis, Tenn., in August last, Father William Walsh, President of the Father Mathew Total Abstinence and Benevolent Association of that city, conceived the idea of establishing a camp in the suburbs where the members of the Society, with their families, could find refuge from the pestilence. A suitable location was found, and the camp was established. Hundreds soon flocked thither to escape the ravages of the fever in the city, the poor of all denominations being cordially admitted; and Father Mathew's Camp was the means of saving the lives of between four and five hundred people.

The camp was beautifully situated on a noble plateau, embosomed amidst lovely sylvan scenery. On one side it was shaded by a forest of stately trees, and on the opposite side ran a crystal stream, with a bubbling spring of pure fresh water close by. The camp represented a miniature city, with its streets and avenues crossing and intersecting each other. The two principal streets running parallel with each other were known as "Father Mathew Street" and "Father William Street." These streets were about two hundred yards in length, and tents to the number of nearly three hundred, furnished by the Government, were arranged on each side. In addition to an immense commissariat department—capable of meeting the demands of between four and five hundred people daily—with the necessary kitchens, dining-halls, etc., there were hospitals, drug-stores, reading-rooms, schools, and a small church established in connection with the camp—all showing the most admirable thoughtfulness and excellent judgment on the part of the president and managers. The schools were under the charge of the Sisters of St. Joseph, who divided their time between the children and the old folks, instructing the former and ministering to the comfort and happiness of the latter. At the northern end of "Father Mathew Street" was a little chapel of the Sacred Heart, with a sacristy on one side and confessional on the other. This miniature chapel was named "The Ark." There Father Walsh celebrated Mass every morning, after which he went into the plague-stricken city to minister to the temporal as well as spiritual wants of the sick and dying, returning to the camp again at night. His return was anxiously awaited every night by the poor people, who feared that he, like so many of his associate priests, might be stricken with the disease while in the city. On his safe return their joy was great; they flocked around the little "Ark" to hear his words of consolation and instruction, to recite their rosary, and to receive, on bended knees, ere they retired to rest, the benediction of the Blessed Sacrament.

We publish two illustrations of the camp: one, the Thanksgiving Mass (the last celebrated at the camp), which shows the people in a kneeling attitude in front of "The Ark," and the priest, Father William Walsh, in the act of turning round and saluting them with the final *Dominus vobiscum*—"The Lord be with you"; the other scene represents one of the main streets, just after Mass, as the campers were preparing to "pull up stakes" and return to the homes from which they had been driven by the dread pestilence a few months before.

AN AFTER-DINNER ENTERTAINMENT IN THE PARLOR OF THE HOTEL PASAGE, HAVANA.

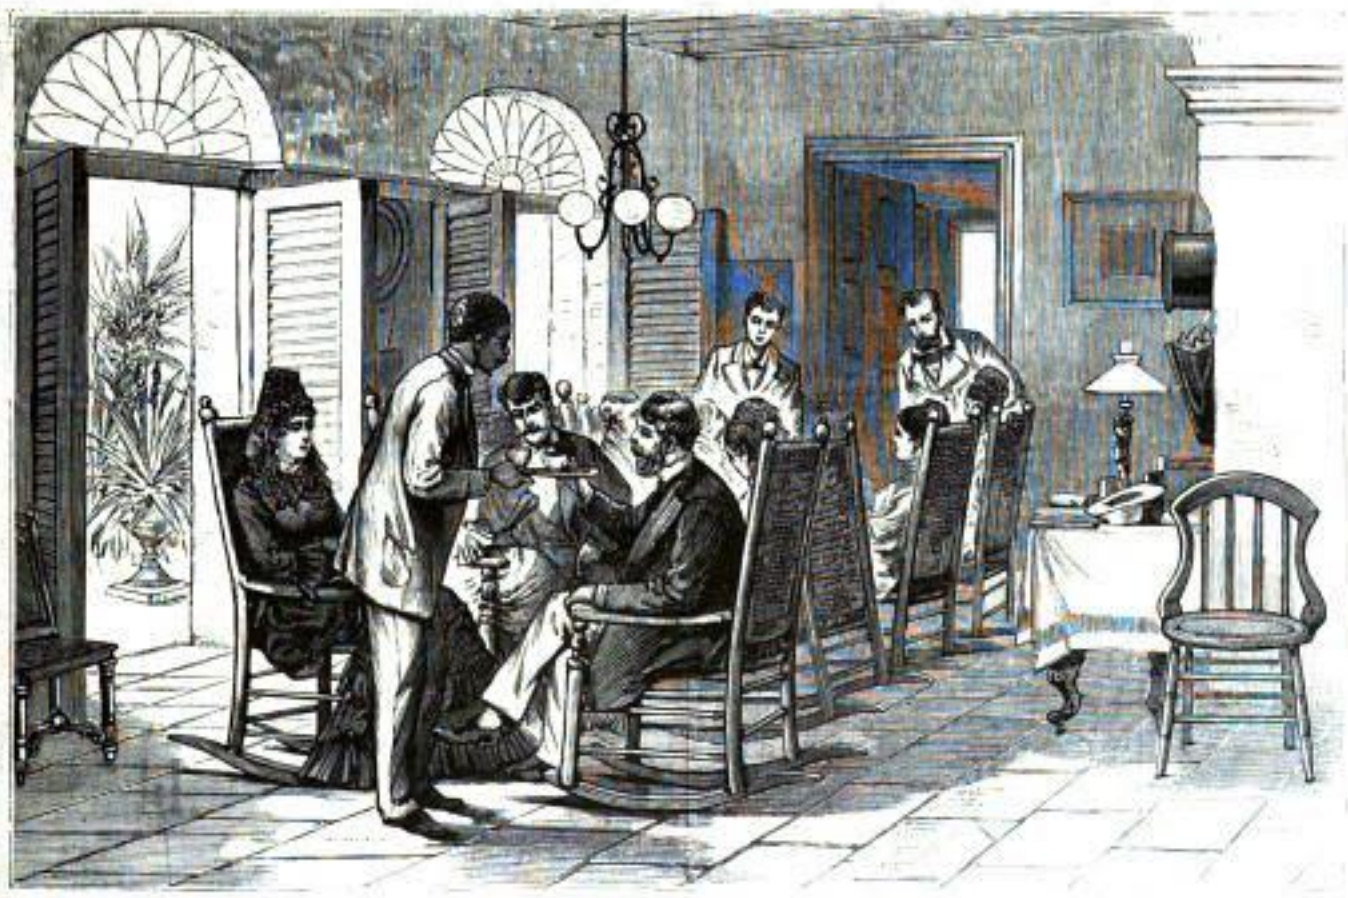
in a couple of hours after the photographs were taken the camp was in marching order, and with the "Ark" in front, filled with little innocents dressed in white, and guarded by stalwart Father Mathew men, proceeded down the principal street of Memphis, towards St. Bridget's Church, where the Thanksgiving was brought to a close with the solemn chanting of the "*Te Deum*." The little "Ark" is to be preserved as a Memorial Chapel in St. Bridget's Church.

It was remarkable that while the fever raged everywhere around the camp, a single case did not originate in it. Of eight or nine who died in the camp each case was contracted in the city. The camp was a continual source of charity during the fever, and its benevolence knew no creed or race. Father Walsh disbursed over twenty-seven thousand dollars independently of generous aid from the "Citizens' Relief" of Memphis.

Our illustrations are from photographs, copies of which our readers may order of R. M. Mansford, Jefferson and Second Streets, Memphis, Tenn., who has prepared a large number of each, size 8 x 10, which will be sold at seventy-five cents each for the benefit of the sufferers, the destitute and orphans, by the great epidemic.

SCENES IN HAVANA.

OUR first illustration represents the parlor in the Hotel Pasage, Havana. The sun can gain no admittance here, but the breeze comes from almost every direction, caressing the cheek of señor and señora, caballero and señorita. Everything is deliciously cool, from the marble-paved floor to the cane rocking-chairs; from the subdued light to the open windows, through which comes stealing that peculiar perfume only to be inhaled in the tropics. The parlor is crowded almost at every hour. Dark-eyed señoritas, such as Byron raved about, attired after the fashion of old Spain, in high comb and black lace, languidly fan themselves with genuine Seville fans, with sails like miniature windmills; black satin, decorated with pictures representing a *corrida de toros*, or bull fight, from the first rush of the maddened bull into the arena to the last stroke of the graceful and herculean *matador*. Stately señoras, watchful as the traditional duefia—naughty hidalgos, strong in lineage and manifold in name—all lounge, lean, sit, stand, walk and gossip in this fragrant apartment. A piano is not wanting, at which some descendant of the Lady Dulcinea del Toboso will warble one of those quaint yet all melodious ballads so charmingly adapted to the guitar and castanets, that measure in three so marked in poor Bizet's opera of "Carmen." Planters talk sugar cane, and planters' wives talk Worth; the hum of the grand, prayerful language of Spain drones musically, while gorgeous tropical flowers add color to a scene unique, charming, and all-satisfying.



EXTERIOR OF THE HOTEL PASAGE.

THE EXTERIOR OF THE HOTEL PASAGE.

The exterior of the Hotel Pasage is particularly striking. The *façade* is rich in plate-glass and balconies, while statues adorn the coping over the entrance. An *alameda*, or walk, shaded by trees, stands opposite, beneath which chairs and benches are placed for the accommodation of the public. The state apartments are in front and jealously guarded by closely drawn blinds during the reign of old King Sol; but in the early morning and at dewy eve these are thrown open, while the guests, in the coolest of possible toilets, lounge on the balconies, chatting, smoking and inhaling the perfume-laden breeze. The *alameda*, too, is thronged by a gay and animated crowd, which passes like a living, moving wave. The gilded youth of the island affect the Pasage, and, standing at its portals, pay the tribute of a stare to the charms of the Cuban belles.

THE TOMANDO CAFE.

This *café* is much frequented by the upper tendom of the island, who stroll in for a gossip, a cigarette, an ice and a cooling drink. Its open doors are guarded by sentinels in the shape of prickly cacti, the pineapple "on its native heath," or the dwarf palm. American rocking chairs are placed "all in a row" opposite the doorways, and their occupants rock to a measure that almost amounts to a lullaby, or a cradle-song. The swarthy attendants, attired in the snowiest of white, anticipate every want; while the *kalebuds* have no necessity to issue orders, their wishes being forestalled. A cooler apartment than this does not exist on the island, while its "fixins" actually suggest, say a temperature of sixty degrees. Here is to be found the much coveted, much sought for *Diario de la Marina*, a newspaper which is to the Cubans what the Koran is to the followers of the Prophet, with many other journals, FRANK LESLIE'S ILLUSTRATED NEWSPAPER included, and periodicals. Every visitor to Havana "does" the Tomando *café*, and does well.

SITTING-ROOM IN THE TOMANDO CAFÉ.—THE AFTER-DINNER CUP OF COFFEE.

BERGNER & ENGEL'S PARIS EXHIBIT.

THE conspicuous success of American exhibitors at the recent World's Fair at Paris has been widely noted at home and abroad. We illustrate this week the exhibit by Bergner & Engel, brewers, of Philadelphia, which won the highest distinction, a "grand prize." But eight honors of this class were awarded exhibitors from the United States, and only three grand prizes were given in the entire display of brewers' products.

Digitized by Google

Bergner & Engel, who also carried off first honors at the Centennial Exhibition in 1876, in their own city, have one of the most extensive and completely organized breweries in the world, and conduct a business which is constantly increasing.

To brew the quantity of beer Bergner & Engel send annually into the market, about 300,000 bushels of barley (converted into malt) are required, which barley is chiefly raised in Canada. Of hops, which are raised principally in the State of New York, 350,000 pounds are used annually. For the conversion of this quantity of malt and hops into beer, the most improved machinery has been introduced. The boiling of the hops in the huge copper kettle, which has a capacity of 400 barrels, is done by steam, which encircles the lower portion of the copper by means of a jacket fastened to its body by stay-bolts. The floors of the brew and ice-houses, and of all the buildings where much water is used, are laid with the "Lithogen Pavement," which equals the ordinary flagstone in hardness, while it presents a smooth and unbroken surface to the cleansing apparatus. The natural result is that Bergner & Engel's Brewery stands to-day without a rival in the successful operation of its internal arrangements, and in the great and undisputed popularity of their lager beer among the nations. The management of this colossal establishment and the work required in its various departments is carried on and performed by 120 persons, many of whom reside on the premises or in the immediate neighborhood, which bears the significant name of "Brewerstown." There are in this establishment five steam-boilers, with a total capacity of 350 horse-power; four steam-engines and twelve steam-pumps. The number of storage casks is 1,200; that of kegs, 25,000, most of which are manufactured on the premises. The greatest feature in Bergner & Engel's Brewery are the "ice-houses," six in number, which were built at an enormous outlay and in the most practical and substantial manner, being, withal, quite an ornament to the neighborhood. Twenty thousand tons of ice are consumed annually for the purpose of retaining the beer on storage at the wonderfully low temperature of 36 degrees Fahrenheit during the entire Summer season. In addition to this, there is a very powerful ice-machine housed on the premises for the purpose of cooling water to 25 degrees Fahrenheit, which is forced by steam-pumps through the tubing of the cooling apparatus. Another considerable item of consumption is anthracite coal, of which 2,500 tons per annum are required for the purposes of this establishment.

The estimated product of Bergner & Engel's brewery, this year, is one hundred and thirty thousand barrels of lager. The present firm is about eight years old; but both members are brewers of many years' experience, and have rapidly carried their enterprise to the very front of its class in the country. Facilities have been perfected and are constantly extending for the distribution of Bergner & Engel's beer throughout the entire United States, Central and South America; and the qualities of purity and excellence which secure for it the highest honors, in competition with the world at Paris, will insure for it an established place among the necessities of life, wherever "lager" is spoken of and drank.

THE KENMORE.

ALBANY is not only favored with having a new capitol within its limits, but is also equally fortunate in having one of the neatest, most comfortable and best-appointed hotels of any city, not even excepting New York. The hotel referred to, which was built by James McNaughton, one of Albany's wealthy citizens, and takes its name from a town in Scotland, the birthplace of Mr. McNaughton's father, has been completed some two or three months; is built in "Queen Anne" style, five stories in height, and has a frontage on North Pearl Street—the principal business street of Albany—of ninety-seven feet, and on Columbia Street of one hundred and ten feet. The kitchen forms part of a separate building in the rear of the hotel proper, and not the faintest odor can by any possible means find its way through the house. One of Otis's elevators is kept running continually, and is the best ever turned out by that famous firm. Each room in the hotel is connected with the office by telephone, the benefits arising from the use of which will be patent to all guests. The proprietor is Mr. Adam Blake, so long the proprietor of the old Congress Hall in Albany. The hotel was built under the personal supervision of Frank P. Wright, of the Albany firm of Ogden & Wright, architects; the carpenter and mason-work by John N. Parker and James W. Shattuck, reflects great credit on these well-known builders, and is, indeed, a marvel of mechanical skill. The steam apparatus was furnished by Tudor & Evans, of Boston, who, by-the-way, are also supplying the new capitol with its boilers, pipes, etc. Dedraaf & Taylor and W. & J. Sloane, of New York, supplied furniture and carpets, the mere mention of whose names is sufficient to give an idea of the style in which the hotel is furnished. Taken all together, the "Kenmore" is one of the most complete, best appointed and best managed hotels in the country. The demand for rooms has been so great that Mr. Blake has been compelled to rent three houses adjoining the hotel in order to accommodate all who apply. The rates are $2.50, $3 and $4 per day, according to size and location of rooms.

Bulgarians and Turks.

FORTY-FIVE Turkish families lately returned to the Bulgarian village of Souffar. Having been robbed of their cattle by the way, they reached their old homes utterly destitute. Since their return several of their number have been killed; the others have been set by the Bulgarians to make brick, and their employers place overseers over them, armed with whips, who keep them early and late at their task. Another batch of refugees arrived at their village of Karabounar with their cattle, induced to return by the promise that the half of the crops which they had sown before their flight, but which the Bulgarians in their absence had harvested, would be returned to them. On their arrival, however, their cattle were taken from them, and the promised half of their crops was refused. They were, therefore, obliged to hire themselves to the Bulgars as hewers of wood and drawers of water—labor for which the Bulgars paid them with their own grain.

Bismarck and the Workingman.

TO JUDGE by German official journals, Bismarck is endeavoring to palliate his rigor toward Socialism by improvements in the condition of the laboring classes. He is urging the creation of workingmen's cities on the plan of Mulhouse in Alsace, designed by Jean Dollfus, and at Hamburg a subscription of half a million marks has been raised towards a second city of that description. The national subscription of two and a half millions, presented to the Emperor William as a testimonial of affection after the last attack upon his life, will be added to the fund. Great economy is effected in Mulhouse, and the mode of living is, at the same time, much superior to that of most laboring men. The large buildings contain cheap apartments on the French flat principle, and rigid rules are enforced with regard to their cleanliness and ventilation. A general system of warming and lighting is introduced, which greatly reduces the expense to each family of heat and light, and there are great kitchens where the inmates can either buy cooked food, or take their provisions to be cooked. Libraries, reading rooms, and baths are also afforded at minimum prices.

FUN.

CAREFUL HOUSEWIFE (lifting a shoe from the soup tureen): "La! who'd a-thought baby's shoe would turn up in the soup? But I know it wasn't lost, I never lose anything!"

"MOTHER, what is an angel?" "An angel? Well, an angel is a child that flies." "But, mother, why does papa always call my governess an angel?" "Well," explained the mother, after a moment's pause, "she is going to fly immediately."

MRS. SHODDY'S views are interesting to those who are thinking about keeping a carriage. She says she has thought it all over, and come to the conclusion that broches are a'most too large, that these 'ere coupons are too shut up, but that a nice stylish pony phaeton seems to be just the thing.

A CORRESPONDENT writes: "Mystery! Innocence and perhaps ignorance! I escorted a very charming person home the other night in an humble fly from a country dance. I am, not to put too fine a point on it, middle-aged, and hope *sans reproche*. But within a hundred yards of her door she turned me out into a muddy lane. 'Why?' I asked, feebly. 'Oh, these fly men have quite too awful memories, and my husband is sitting up.'"

"ARE you the saleswoman of whom I bought those handkerchiefs yesterday?" asked a purchaser at one of our drygoods stores. "I am the sales-lady who served you, madam," responded the reduced empress in bangs of hair, long watch-chain and ringed fingers, who presided at the counter. "Well," said the customer, "I will take a dozen more, and as I wish to get them to my washer-lady at once, I will get you to send them to my carriage around the corner. My coach-gentleman cannot get to the door just now, for the cart of the ash-gentleman."

THE SOCIABLE.

They carried pie to the parson's house
And scattered the floor with crumbs,
And marked the leaves of his choicest books
With the prints of their greasy thumbs.

They piled his dishes high and thick
With a lot of unhealthy cake,
While they gobbled the buttered toast and roll
Which the parson's wife did make.

They hung round Clytie's classic neck
Their apple-parings for sport,
And every one laughed when a clumsy lout
Spilt his tea in the piano-forte.

Next day the parson went down on his knees,
With his wife, but not to pray;
Oh no, 'twas to scrape the grease and dirt
From the carpet and stairs away!

ADVANCED PHYSICIANS.

MANY of the more advanced physicians, having found Dr. Pierce's Family Medicines prompt and sure, prescribe them regularly in their practice.

TWINVILLE, Tenn., May 28th, 1877.

DR. R. V. PIERCE, Buffalo, N. Y.:

Dear Sir—For a long time I suffered with catarrh. I finally called in Dr. Zachary of this place. He furnished me with your Nasal Douche, Sage's Catarrh Remedy, and your Golden Medical Discovery. These remedies speedily effected an entire cure.

Yours truly, JOHN S. CHAMLESS.

[*From The New York Tribune.*]

THE GREAT INSURANCE FIGHT.

MR. HEZRON A. JOHNSON'S GRIEVANCE.

AN EXCEEDINGLY SHARP TURN TO THE RIGHT ABOUT—A FRIEND OF THE MUTUAL LIFE'S MANAGEMENT GIVES SOME STRIKING FIGURES, AND SUGGESTS THAT THE MANAGEMENT UNDERSTANDS ITS BUSINESS, AND THAT POLICY-HOLDERS, HAVING FARED PRETTY WELL AT ITS HANDS IN THE PAST, ARE NOT LIKELY TO SUFFER IN THE FUTURE.

To the Editor of The Tribune.

SIR: Mr. Johnson states in your paper that in 1843 he took out policy No. 3 in the Mutual Life Insurance Company of New York. He has paid in premiums $3,672.

For this sum his policy and additions has been kept in force. In addition to the amount of the policy, which is	$5,000
He is credited with dividends on the same	6,926
So that for $3,672 in premiums paid, his policy is now	$11,926
His annual premium is	$102.00
His last annual dividend in cash was	168.68

—that is, $66.68 more than he paid in premiums on his policy and additions for that year.

Under this condition of things surely the public will sympathize with Mr. Johnson in his great alleged grievance against a management which only produces such results, and will probably follow his example and take out a policy in the company under its new departure. A POLICY-HOLDER.

New York, Dec. 21st, 1878.

FAIRBANKS'S SCALES IN RUSSIA.

From the St. Petersburg Golos (Newspaper) November 7th.

WE are informed from Moscow that the commission of the "Saviour's Cathedral" desired to have a monster bell of a weight of at least 1,800 poods (94,860 pounds), and ordered this bell at the works of M. Finlandski. In presence of the members of the commission 2,000 poods of the necessary metal were weighed off for the bell. In September the bell was ready. For weighing this bell the commission invited the representative of the American scale factory of Fairbanks & Co. But how great was the surprise when instead of 1,800 poods only 1,654½ poods (59,562 pounds) were found to be in the bell. M. Finlandski, as a defense, expressed his doubt as to the correctness of the Fairbanks Scale. In cause of this the Fairbanks Scale was tested eighteen times, on the 7th and 8th of October, in presence of two experts invited by M. Finlandski and a crowd of spectators, and after each test the scale convinced the people that it is undoubtedly correct, and that 145½ poods (5,238 pounds) are missing in the bell.

The "Saviour's Cathedral" will cost upwards of $10,000,000, and the bell above referred to is the second in size in the world. The value of the metal involved in the controversy was about $2,500.

WITH a station on each of the new Elevated Railroads at Grand Street, the St. Nicholas has decidedly the advantage of location over any hotel in New York. Easily and speedily reached from any quarter of the city, the hotel will fully satisfy all demands.

FRANK LESLIE, Esq.: The Wheat Gluten and Cold Blast Flour Breads of the Health Food Company have accomplished a wonderful work in the cases of two wretched dyspeptics—Mrs. Wilson and myself. I believe there are few improperly nourished dyspeptics who would not be made well by these Foods. ISAAC R. WILSON, Trenton, N. J.

TO MANUFACTURERS.—A saving of from 25 to 33 per cent. of customary outlays can be effected by use of the Asbestos Liquid Paints, Roofing, Boiler Coverings, etc. Samples and full particulars will be sent free by the H. W. Johns Manufacturing Company, 87 Maiden Lane, New York, who are the most extensive manufacturers in this line in the world.

INTERMEDIATE..... $40. | STEERAGE..... $26.

OFFICES, No. 29 BROADWAY, NEW YORK.
WILLIAMS & GUION.

A GOOD PLAN

The most profitable way for operating in stocks is by uniting capital of various sums in combining or pooling orders of thousands of customers and using them as one mighty whole, which is done so successfully by Messrs. Lawrence & Co., Bankers, 57 Exchange Place, N. Y. City. By this co-operative system each investor is placed on an equal footing with the largest operator, and profits divided *pro rata* among shareholders every 30 days. $10 invested makes $30 or 5 per cent. on the stock during the month—$50 returns $250 or 7 per cent., $100 pays $1,000 or 10 per cent., and so on according to the market. The firm's new circular (mailed free) contains "Two unerring rules for success in stock operations," and explains everything. All kinds of Stocks and Bonds wanted. New Government Loan supplied. LAWRENCE & CO., *Bankers and Brokers*, 57 Exchange Place, N. Y. City.

Do all Your Own Printing!

THE MODEL PRESS

is the simplest, easiest running, fastest and most perfect press ever invented, and guaranteed to be

Thoroughly Reliable

MODEL *Any smart boy can manage it, and do hundreds of dollars worth of work a year. It saves business men all their printing bills. Presses as low as $3. For business printing, $10 to $35. Rotary foot power, $100 to $160. Over 6,000 now in use, and a Prize Medal awarded at the Paris Exposition.*

The Leading Press of the World.

A handsomely illustrated 124 page book, entitled HOW TO PRINT and copy of the PRINTER'S GUIDE, with full particulars, mailed for 10 cents. Address J. W. DAUGHADAY & CO., Inventors and Manf'rs, No. 723 Chestnut St., Philadelphia, Pa.

THE TRIBUNE.

Postage Free in the United States.

DAILY TRIBUNE, 1 year	$10 00
SEMI-WEEKLY TRIBUNE, 1 year	3 00
Five copies, 1 year, to one Post Office	14 00
Ten copies, 1 year, to one Post Office, and one free copy	28 00
WEEKLY TRIBUNE—One copy, 1 year	$2 00
" Five copies, 1 year	8 25
WEEKLY TRIBUNE—Ten copies, 1 year	$14 00
" Twenty copies, 1 year	25 00

Any number of copies above 20 at the same rate. Additions to clubs may be made at any time. Remit by P. O. Order or in Registered Letter.

PREMIUMS TO FRIENDS SENDING LOCAL CLUBS:

FOR A CLUB OF 5 WEEKLIES.—Any five TRIBUNE Novels.
FOR A CLUB OF 10 WEEKLIES.—An extra copy of THE WEEKLY, or a copy of the Greeley Memorial volume, in cloth, or any eight of the THE TRIBUNE Novels.
FOR A CLUB OF 20 WEEKLIES.—THE SEMI-WEEKLY TRIBUNE, or one extra WEEKLY, and either Mr. Greeley's "Political Economy," or "What I know of Farming" ($1.50 each at retail).
FOR A CLUB OF 30 WEEKLIES.—THE SEMI-WEEKLY TRIBUNE, and any eight of THE TRIBUNE Novels; or Mr. Greeley's "Recollections of a Busy Life," in sheep ($2.50 at retail), and the same Novels.
FOR A CLUB OF 50 WEEKLIES.—THE DAILY TRIBUNE one year, and either of the above mentioned books, or the series of TRIBUNE Novels.

[One Semi-Weekly will count as two Weeklies in the above. Double numbers of THE TRIBUNE Novels count as two.]

Instead of any five TRIBUNE Novels, we will send, if preferred, pamphlet copies, in good type, of THE TRIBUNE'S report of *The Prophetic Conference*, and THE TRIBUNE'S full exposure of *The Cipher Telegrams*. The same, in sheet-form, in place of any three TRIBUNE Novels.

UNEXAMPLED PREMIUMS.

Get the Best—Webster's Great Unabridged Quarto Dictionary.

THE LATEST AND BEST ($12) EDITION, containing 3,000 ILLUSTRATIONS and COLORED PLATES, SENT TO ANY ONE REMITTING, PRIOR TO APRIL 1ST, 1879:
$10 for a single five years' subscription, in advance, or, **$16** for eight 1-year subscriptions to THE WEEKLY TRIBUNE.
$15 for a single five years' subscription, in advance, or, **$30** for ten one-year subscriptions to THE SEMI-WEEKLY TRIBUNE.
$30 for a single three years' subscription, in advance, to THE DAILY TRIBUNE.

The Greatest Premium Yet.—A $210 Estey Organ Free.

THE TRIBUNE makes an offer to churches, musical societies and others, more amazing than anything yet done in the history of newspaper premiums. For 200 subscriptions from one Post Office, or its immediate vicinity, to THE WEEKLY TRIBUNE, at the lowest club rate ($1.25 each), we will send, postage paid, the 200 papers, addressed to individual subscribers, for one year, and will send also to the church or person forwarding the club, the $210 Estey Organ, confessedly the best in the market—style 501, double reed, seven stops, viz.: diap-on, melodia, vox jubilante, tremolo 1 forte and 11 forte. Thus, for 200 subscriptions to THE WEEKLY TRIBUNE at the lowest club rate, the club receives $250 in newspapers, and $210 in the finest organ of its size made in America.

ADDRESS, THE TRIBUNE, New York City.

Frank Leslie's
POPULAR MONTHLY
FOR
January, 1879,
NOW READY.

"We think this is the best number of this popular magazine that we have seen. It is full of information, stories, poems and miscellany of a popular—that is, readable by everybody—character, and it is abundantly illustrated, like all the other issues of this famous publishing establishment."—*Daily Saratogian, N.Y.*

"This number is one of unusual interest, and contains a variety of interesting miscellany, and is beautifully illustrated. For the price, it is ahead of any other magazine published."—*Argus, Jersey City.*

CONTENTS:

Articles, Descriptive, etc.—"British Royalty in America," an account of visits in America by members of the British Royal Family, 13 Illustrations. "Industrial Application of Solar Heat," by Prof. Chas. A. Joy, Ph. D., illustrated. "The Island of Madeira," illustrated. "The Sea Fisheries of Northern Europe," by Lady Blanche Murphy, illustrated. Frank Leslie's
CHIMNEY CORNER.

The Best and Most Popular Illustrated Family Paper.

Each Number contains sixteen pages of original and carefully selected reading matter, with eight pages of admirably executed illustrations.

The Continued Novels are by such eminent writers as John Habberton, author of "Helen's Babies"; N. Robinson, author of "That Husband of Mine"; Etta W. Pierce, Christian Reid, Metta Victoria Victor, M. T. Caldor, Frank Lee Benedict, J. W. De Forest, and others equally celebrated. New novels are constantly appearing.

The Short Stories, completed in each number, are of various descriptions—domestic, dramatic, historical, love, humorous, sentimental, etc., etc., appealing to every age, station and taste—written by authors of acknowledged talent.

The Miscellaneous Contents embrace Biographies, Adventures, Essays, Travels, Curiosities of Foreign Life, Marvels in Nature and Art, Legends, Anecdotes, Poetry, etc., etc.

The Illustrations are admirably executed, and the subjects treated are remarkably diversified. The CHIMNEY CORNER, therefore, is a source of pleasure to both old and young—the literature entertains and gratifies the mind of those of larger growth; while the pictures fix the attention of the young, and excite pleasurable emotions.

Subscribers to this periodical are frequently presented with beautiful steel engravings, which are alone worth considerably more than the subscription price.

Published every Monday, and for sale by all newsdealers, price 10 cents. Annual subscription, $4. Three months, $1. Sent postpaid.

FLORILINE!

"FLORILINE"—FOR THE TEETH AND BREATH,

Is the best liquid dentifrice in the world. It thoroughly cleanses partially decayed teeth from all parasites or living "animalcula," leaving them pearly white, and imparting a delightful fragrance to the breath.

THE FRAGRANT "FLORILINE"

removes instantly all odors arising from a foul stomach or tobacco smoke. Being partly composed of honey, soda, and extracts of sweet herbs and plants, it is perfectly harmless and delicious as sherry.

Prepared by **HENRY C. GALLUP, No. 493 Oxford Street, London, England,** and retailed everywhere.

Parents, take it to your Children.

Frank Leslie's

CHATTERBOX.

A Charming Monthly Periodical for Young Folks.

THE JANUARY NUMBER NOW READY.

In presenting the above Monthly Publication to our readers, we have three objects in view:

I. The improvement of the mind.

II. The diffusion of knowledge.

III. To provide good, healthy and interesting literature for the young.

The "CHATTERBOX" is composed of a choice variety of sketches, written in a clear and forcible manner, and its numerous illustrations are of a superior and interesting character.

Each sketch will convey either a moral or useful information for the young.

The purest tone and language will prevail throughout its pages, and we shall be able to present our readers with a periodical that has long been wanting, which it is hoped will interest and at the same time instruct the young.

Its small cost (10 cts. monthly, or one dollar a year) places it at the command of every household.

Send 10 cts. for specimen copy, which will be sent postpaid by return mail.

RESUMPTION.

The Dance of the Dollars, January 1st, 1879.

THE KENMORE, ALBANY, N. Y.—SEE PAGE 338.

ROYAL BAKING POWDER

Absolutely Pure.

The Royal Baking Powder is a Pure Cream of Tartar Powder.

Indorsed and recommended for its wholesomeness by such eminent chemists as Dr. Mott, New York; Dr. Hayes, Boston; Professor Genth, Philadelphia, etc. Sold only in cans, by all Grocers.

Beware of the injurious Alum Powders Manufacturers and Dealers urge you to buy them, because they can afford to sell them at 20 cts. a pound, and double their money.

Do not buy Baking Powder loose, as it is almost sure to contain alum. The continued use of alum produces griping, constipation, indigestion, headache, and dyspepsia; affects the blood, causes pimples on the face, etc.

MAGIC LANTERNS

And **STEREOPTICONS,** all prices. **VIEWS** illustrating every subject for **PUBLIC EXHIBITIONS, Etc.** ☞ *A profitable business for a man with small capital.* Also **MAGIC LANTERNS** for home amusement. 74-page catalogue *free.* **McALLISTER,** Manufacturing Optician, **49 Nassau St., N. Y.**

COMFORT FOR THE FEET.

All who would have feet free from corns, dress the feet with a view to health, good taste and comfort. Shoes made on our lasts, modeled from nature—an essentially different style—and latest improvements. They press the foot evenly, giving elasticity in walking, and by the ingenuity of their construction, they appear smaller than they really are, giving an elegant appearance even to the largest and clumsiest feet.

EUGENE FERRIS & SON,

81 Nassau Street, West Side, N. Y.

Every Man HIS OWN PRINTER. THE EXCELSIOR **$3 Press** Prints labels, cards, etc. (Self-inker $5) 9 Larger sizes for business, pleasure, young or old. Catalogue of Presses, Type, Etc., for 2 stamps. **KELSEY & Co. Meriden, Conn.**

ANTI-FAT

ALLAN'S ANTI-FAT is the great remedy for Corpulence. It is purely vegetable and perfectly harmless. It sets upon the food in the stomach, preventing its being converted into fat. Taken in accordance with directions, **it will reduce a fat person from two to five pounds per week.**

"Corpulence is not only a disease itself, but the harbinger of others." So wrote Hippocrates two thousand years ago, and what was true then is none the less so to-day. Sold by druggists, or sent by express, for $1.50. Quarter-dozen $4.00. Address,

BOTANIC MEDICINE CO., Prop'rs, Buffalo, N.Y.

No story has ever appeared opening with so many threads of mystery, and exciting the reader's interest to follow a story which, in the hands of such an able novelist, must be throughout intensely dramatic.

The contrast of the two girls, three families, each with its grief, and a fugitive who can never appear but as another, fix the attention and awaken sympathy.

It requires no exaggeration to interest the public in this story; no reader who begins it can fail to be completely carried away.

In the same number of FRANK LESLIE'S CHIMNEY CORNER will also begin:

DRESSING THE HAIR FOR THE DAY.

THE PLAY IN VANITY FAIR.

NEW YEAR'S DAY.

THERE is never a day in the year when the curtain rises on so vast a human drama as on New Year's Day. The booths are wide open, from morning till night, for the performances begin at dawn and only end with the midnight. In every booth there is some act of the comedy being enacted. It is the real passion-play—the play of every passion, feeling, emotion, impulse and desire.

Did any one have time to watch the progress of the great drama, or take note of the side-scenes in the different acts, there would be found much meaty fruit for reflection. But even the satirist sheathes his barbed arrows on that day, for every one is busy playing their own part, and, as on other more mimic stages, the most insignificant supernumerary believes his own special *rôle* to be the most important. The show is nothing if not the grandest exhibition ever planned for the display of human egotism. Vanity dons its cap and bells, and gives its feathers a royal top. Pomposity carries its sense of grandeur with a lordly air, and struts with the calm consciousness of power. Folly flings its ribbons to the winds, and rides on the wings of thoughtless abandon.

It is said that the custom of observing New Year's Day, with all the ceremonies incident to its observance here, is peculiarly an American fashion. It is certain no other nation would ever have possessed the courageous audacity to have invented it. It is only a nation gifted with the talent for an extravagance of exaggeration, and the still happier talent of believing in and carrying into effect its exaggerations, with a kind of pious enthusiasm, that could have evolved the sublime idea of visiting every one one knows on a single day. And this is the day when one's social list extends to the hundreds.

The Frenchman takes the day very quietly; pays his *visites de cérémonies* on his relations, and, for one day of the year, at least, making those visits with madame, who is ravishing in her most charming costume. Artistic New Year's cards are sent to acquaintances, and beautiful *bonbonnières* to the *chères amies*, with the dearest of whom, after he has disposed of madame, he passes the remainder of the day.

The hearthstone-loving German opens the year with a family celebration, and meets the new-born year with his children on his knee.

The insular Englishman is more insular than ever on New Year's, surrounds himself with the four walls of his home, and keeps all his good wishes to himself. But it was left for the inventive American to discover what a single day could be made to bring forth, and how much could be put into it. The steam-pressure system on which the American plan of life is arranged has been applied very ingeniously to the calling custom. It has been found possible to see the whole of the "dear five hundred" between daybreak and midnight—if one be but willing to break down the little strength one has left at the end of a year—and to go into the conversation business as one would into a stock exchange.

If all the talk, lies, compliments, small talk, deep talk and learned absurdities, inanities and stupidities uttered on New Year's day could be suddenly condensed in the form of clouds, it is safe to assert the sun would be obscured, and calls have to be made without the aid of that luminary. But there would be nothing strange in an eclipse of that focal point of our solar system, for nature seems to revel in assuming her most perverse moods on that day of days. If she doesn't send down a rattling shot of sleet and hail, she will let fall her mantle of snow, which, if it would only keep snow, one would not quarrel with her mood. But it is as apt as not for the snow to turn into a cold, thin, drizzling rain that turns a man's nose into a beacon-light, and compels him to make his New Year's bow in a hundred parlors with a damp collar and soaking feet.

It is a mistake to suppose the virtues of heroism are dying out. What more heroic than the attitude of the man who dons a dress suit at ten in the morning and faces the world with a white choker and an open shirt-front before the sun himself, in these Winter days, is fairly awake? Even to the most enthusiastic caller—and there are those who go through the two-hundred call farce with the most serious air, and in true *con amore* fashion—there is something a little trying about the first call.

For the first call is the real plunge. It is always on the stupidest girl, and she will be sure to be ready. She was all dressed, indeed, before breakfast was over. For the dull girls always are. They can't afford to run the risk of losing a single call. The fire of conversation burns low, although both are impressed with a consciousness of what is expected of them. But it is a little too early to send up the sky-rockets of compliments. At ten in the morning, indeed, it must be acknowledged the air is a little bleak for warm flatteries. Before he makes his farewell bow, however, the first caller does muster up courage to tell Miss Squint-Eyes, "She is looking uncommonly well," with a mental aside that the deuce take him if he ever knows where she *is* looking.

"What a charming toilet, Miss Squint-Eyes; quite bewitching, I assure you. Handsomest I've seen to-day—" which is perfectly true, since he has seen no other. That being, indeed, the one and only time he does not lie—on that subject—during the day.

But once started, two or three more calls made, and the conversational ball rolls of itself. He is soon well up on the subject of the weather, and well grounded in an arithmetical calculus of calls made, being made, and to be made. In an hour's time, and the inveterate caller is in splendid calling condition—reduces the business to a science, in fact. Walks in, bows to mamma, wishes her "Happy New Year! Never saw you looking so handsome. Grow handsomer every year, I declare!" all in a breath.

BASHFUL CALLERS.

Rushes up to prettiest daughter—never fails to catch the prettiest—has learned how to dodge the homely ones.

"How charmingly you look, Miss Belle. Had many calls? Glorious weather. Oh, yes! making no end of calls! Excuse me a moment, while I scratch you off the list. Must attend to business before pleasure, you know. Now take me in for a glass of wine. Day-day; many happy returns!" And says the same things to two hundred girls two hundred times that day.

Then there is the bashful caller. He who goes everywhere, and whom no one cares to see. Whom mamma votes "such a nice, safe young man," and whom the girls use as a target for their wit. The bashful caller always has the worst possible luck; is sure to get into the wrong house; and stammers and stutters ten minutes to the lady of the house, whom he infers to be the mother of the young lady he has come to visit, and never discovers his mistake till the lady informs him of it. It is also certain that his entering a parlor is a signal for every one else to leave it. So there is no corner wherein he can shrink and hide his timidity. His appearance is also a signal for all the prettiest girls to get together—and giggle. And he would sooner face death at the cannon's mouth than dare to brave the battery of those sparkling eyes. So he talks to the deaf aunt. Or, worse still, he goes to the house of the loveliest girl he knows, with whom, indeed, he has been secretly in love these six months; creeps up the stoop with shaking knees, and rings the bell to the lively tune of his palpitating heart; runs the butler down as he opens the parlor-door, makes rather a sudden entrance into the drawing-room—to find Miss Beauty attended by nine other beauties, all her dearest friends, who are receiving with her. Nine gigantic bouquets, and nine rosebud faces stare him full in the face.

"Oh, Mr. Bashful! So glad to see you! Let me present my friends, Miss Rose, Miss Thorn, Miss Berry, Miss Snow, Miss Winter, Miss Star, Miss ——" till the poor man loses what feeble wits nature has vouchsafed him, and feels sudden deafness coming on. He hasn't the courage to face one of them, but makes a kind of comprehensive bow, dropping his eyes to the ground—to find he has worn his goloshes in, and hasn't turned down his pants! Of course there is no one else in the room—there never is. So those eighteen pairs of eyes have nowhere else to rest except on the most conspicuous feature of his toilet. As he is not asked to sit down, he hasn't a chance to hide those features beneath the rounds of a friendly chair.

"Are you making many calls, Mr. Bashful?"

"Ah, no—that is—yes, quite a good many. Ah, that is—so so—yes, I'm very well, thank you; so is ma."

"I don't see how you ever get through with all your calls——"

"Ah—he he! we don't, you know; we—ah, we skip. I—ah—was afraid I couldn't get here. We—yes—you see we're smart; we never stay long at the stupid houses. Ah—yes—I must be off now; great hurry—great. Ah—good-day—many happy returns!" And he backs himself out to back down on the stately mamma, who comes from the sofa behind him to bid him good-by.

How much is left of that young man after the door is closed on him for one brief second? If the nine beauties were nine dissecting surgeons, or nine analytic chemists, they would not leave less of him to be disposed of by the next discoverer.

"Oh, girls, did you see his pants?" asks No. 1.

"And his goloshes?" says No. 2.

he knows us apart. But here comes somebody else. Oh, such a swell! Gorgeous turnout!" And the whole nine fall into position.

The next comer happens to be, indeed, the last sweet thing in swells, who is so inflated a swell as to be a bloat. Who is so stiffened with a sense of his grandness, his bow is only a condescending nod; whose pomposity struggles into utterance through so dense an air of "haw-haws" and "hems," that one only catches the "Ah, by Joves!" and "'pon my word, you knows." Who stands and faces those nine beauties, looking at them through his one eyeglass, as if they were nine fillies for sale; and who is sure to stare the prettiest out of countenance. His gestures seem to suggest the handling of a whip and rein, and his attitude, when he sits down, the box-seat of a four-in-hand. His conversation, such as there is of it, is full of polo, pigeon-shooting and the racecourse. He never makes calls, of course. "It isn't any longer the thing, you know; just dropped in to say 'Ta-ta,' and see how crushing you all looked." He squeezes the hands of the entire nine, excepting Miss Mole's, who is certainly rather plain, and contrives to get the beauty off in a corner, where he gets very close to her, holds her hand all the time, pretending to say good-by, and never says it; whispering things in her ear it is very certain her mother might, with reason, object to. Of course the girl listens. She always does to the slow, poisonous talk of the fast man. After he has gone, she joins the other envious eight in roars of laughter at his grand airs and diminutive small-talk, but any one of them would give their pet bangle to drive on the top seat of his great black-and-yellow coach. They would even go further. For a woman before now has been known to shrug a satirical shoulder in the face of a fool—and then marry him! And the prettiest girls are always the quickest to fledge their matrimonial wings and fly at call.

And Heaven bless us, but how pretty the girls are in the bravery of their New Year's splendor! They are pretty enough with their wonderful complexions, with their still more wonderful eyes telling a man a thousand bewildering things; with their bright, vivacious, flirtatious talk, and their irresistible witcheries of manner and action, to drive a man into a chronic fever of rapturous enchantment without the aid of diaphanous draperies, or jeweled settings.

But when a complexion of roses and snow is brought out against a background of celestial blue; when dark eyes flash like stars through the night of black draperies shot with gold; when the soft, curving outlines of a beautiful arm or a dimpled shoulder, are brought into bolder relief by nestling in a nest of pink satin or lace frills; when on the fairest throat in the world there sparkles a diamond rose, and in watching the prismatic light shooting like tongues of flaming color from the petals of the gems, a man's eyes would never be a man's eyes if they did not watch much longer the white light that rests on the snowy unclad surface of the beautiful neck, and traces lingeringly the soft creases in the full throat, and the lovely lines that run from throat to rosy cheek; when added to all the heightening aids of ravishing toilets and luxurious settings, the girls themselves are a thousand times more bewitching and irresistible, putting on the whole armor of their seductive graces, and charms and sorceries, radiating consciously their brightest light, for the most charming woman is a hundred times more charming when she knows she is charmingly dressed; and when a man has to run the gauntlet from ten in the morning till midnight of such dangers to heart and peace of mind as these—wherewith shall he find the strength to meet them? It is certain that the last of virtues expected of him is constancy. He must, for that day at least, forswear fidelity to any one special type, and he might as well start out with a private understanding with his *sitter Eye*—it can scarcely be expected of him he should be true to any one special woman. For whether he acknowledge it or not, his heart will be playing truant every half-hour; and whether Pagan or Christian, he will at least be reveling in an ecstatic foretastment of Mahomet's paradise.

But, of course, the day, with all its pleasures, has its trials as well. There is no moment in life when a perverse Fate does not have a chance to play a man a shabby trick, or the giant Circumstance cannot find an opportunity to trip him up. And a day as crowded with incident, adventure, strange occurrences, and unexpected events as New Year's, must see all sorts of *contretemps* and disappointments.

Not one of the least of these trials is to have planned the whole day so as to spend a long hour with "one you love." You are sure to choose the twilight hour—the hour of dusk, favorable to dusky whispers; the hour of melting light, suggestive of melting moods. You go, and enter to find the adorable charmer has already appropriated that hour, and is flirting desperately with young Snooks in the very darkest, deadest corner; and their voices can't be heard five feet off. You stay an hour, hoping every moment Snooks will be off; and are left to entertain the cousin from Massachusetts, who discourses upon the "eternal verities."

Or you make up your mind to have a festive, flirtatious half-hour with an old flame, now married, but in whose eye there still lurks the suggestion of a flirtatious possibility, a possibility heretofore prevented from becoming a fulfillment by the barrier of a jealous husband. You find her alone, more than charmed to see you—so charmed, indeed, that she blushes and gives your hand a tender pressure; and you both are soon in a paradise of soft looks and still softer utterances, when the door is flung open, and the husband appears "just in time to see how things are going on," and just in time to prevent their going on.

Or you go to see the prettiest married woman you know, who looks so pretty you wonder you didn't marry her yourself; who is all smiles and coquettish glances, and all hostess—till the baby cries, and then she is all mother. She dashes upstairs, while you are left to the tender mercies of maiden aunts, who fasten on you with the tenacity of barnacles, and never give you a moment's chance to to say a sweet word or two to the younger sister, who is looking all sorts of pleasant things at you from a very beautiful pair of deep blue eyes.

There are some calls a man makes from the purely physical man point of view. Of course you never in the world would think of calling on Mrs. Stout if it were not that you were sure of finding there the best buffet in all New York. Certainly you would scarcely be drawn there on the strength of her charms, unless you look on women from the Persian point of view, and consider their charms going up as the scales go down. But old Stout, *père*, knows what good wine is, and has the best French cook in town. Theirs is one of the houses where a bow to madame is an entrance fee to a Delmonico repast; and you always arrange it so that you get there just about dinner-time. After a good half-hour's call—on the dinner-table—you make your farewell bow on Mrs. Stout, assuring her you have had a charming call, and go out, feeling like a *pate-de-foie-gras*.

You then are equal to calling upon Mrs. Grandee, who receives you in state, seated on a raised dais, a sort of miniature throne. Before you reach her celestial highness you go through a good many hands. If you are in your own coach—and you had better never have been born than come there in a hack to meet the contemptuous glance of the magnificent footman—your carriage door is opened by that august personage. You go up the stoop under a covered awning, and the front door is solemnly opened by the solemn butler. Buttons takes your hat, monsieur's valet—whom you mistake for a fellow-caller—with his immaculate toilet and *boutonnière*, brushes you off, and a man in livery opens the parlor door and announces you. You had never been proud of Smith as a name, thinking, however, its lack of distinction redeemed by the old family name of Fitzgerald before it. But plain Smith, uttered in a loud tone of voice by a gorgeous individual in livery, does not produce a very aristocratic impression. There are a semi-circle of chairs ranged about the high sofa upon which the most fashionable, the most inapproachable, the very *ton* of *tons* is seated, and you make your bow to her majesty, Mrs. Grandee (whose husband is the largest pork merchant on 'Change). She receives you with a glacial smile, two glacial fingers, and a glacial request that you be seated. For some ten minutes you subject yourself to this process of social petrifaction, in which time the subject of the weather has been exhausted—the opera has been touched upon, and then left in a frozen state of indifference, and the interest in the coming Patriarch's Ball has been successfully congealed.

The only way to get rid of a disagreeable conviction that premature ossification is setting in, after you leave this palace of Swelldom, is to go next door to the Uproars, and the transition is like a sudden plunge from the inaccessible height of a social Olympus to the extravaganza of an *opera bouffe* performance.

The Uproars are not only the jolliest girls in town, they also enjoy the questionable reputation of being the fastest. Upon your entering you perceive a very strong odor of tobacco, which proceeds from the dining-room, where some twenty young men are taking wine and an after-wine cigarette. So are two of the Misses Uproars, pretending the cigarette smoking is only for a lark, but puffing it in a way that suggests many previous larks. There is a tremendous noise. Every one is laughing their loudest—people always do at the Uproars. One of the girls is singing a song from "La fille de Madame Angot," to half-a-dozen enraptured—and boozy—young men. They all applaud vociferously when she gives a Tostée fling to her saucy head and looks very wickedly—French, she calls it—out of her dark, dangerous eyes. Mamma Uproar talks louder than any one, and ends by giving you a good slap on the shoulder, in her gushing delight at seeing you.

"Don't the girls look handsome, now?"

"Never saw them look better, and how magnificently they are dressed." And so they are—below the waist. There are always a great many men at the Uproars and very few women, for the men's sisters and wives never call.

Of course the longest and pleasantest and most satisfactory calls are on the Bonhomies. Their parlors are always full, but are never crowded. There is a good deal of laughter and talking going on here, too, but the laughter is always within the bounds of good-breeding, and the talking is all in the refined tone of culture. Mrs. B. is, if anything, handsomer than her daughters, and quite as charming—the sort of woman a man thinks he could endure, and even grow fond of, as a mother-in-law. They all have a way of making you feel perfectly at home in the best bred, most pleasant manner possible. No matter how much of a stranger you go in, you are on a friendly footing before you go out. There is no danger of falling here into conversational pitfalls, and the weather is never mentioned, nor no numerical comparison of calls made and received. You vaguely feel, as you listen to Miss Beatrice Bonhomie's bright, intelligent conversation, and watch the beautiful play of expression on her young, fair face, that somehow that is the sort of face a man might be proudly grateful to have beside him in the journey of life. And as you walk slowly down the stoop after a good hour's talk, you feel a tender something about the heart—a something that makes you wish you were a better man—and a richer one.

All the experiences, naturally, do not lie with the men. It is emphatically the Ladies' Day; and the real honors of it, as well as most of the anxiety and many of the annoyances, rest with them. I suppose there is not the woman who does not believe on New Year's that her dress is really the handsomest worn, if she does not allow herself to be equally deluded by the pleasing fiction she is the most beautiful of her sex. The mirror of truth is the only mirror she does not look into that day; and they are all dimmed by the breath of flattery. American men are not given to the utterance of pleasing and graceful compliments but once a year they do seem to feel they must "make an effort," and, even if the flatteries are a little too open and the compliments too direct to compare favorably with a Frenchman's subtle gallantries, at least they have the priceless gift of pleasing those to whom they are uttered. A woman always believes she is pretty when she feels pretty, and she doesn't mind being told so in broad Anglo-Saxon.

Not the least of the trials on this great day comes through and because of the elaborate and ornamental fig-leaf. The dress—the subject of lengthy, interminable discussions with Madame Leveligown, comes home at midnight, New Year's Eve—and doesn't fit. Can't be gotten together, in fact, being a quarter of a yard too small. Miss Rosalie Killjoy, your bosom friend, whom you asked as long ago as last Summer to receive with you, comes in a flaming scarlet gown extinguishing your pale rose as if it were a leaf in the fire.

But perhaps the highest point of martyrdom is reached in the hair-dressing process. Of all women in the world, the most in demand and the least to be depended upon on this day of days are these despots of the crimping-pins. The difficulty arises from the fact that every woman, young or old, mother or maid, insists upon her head being dressed at precisely the same hour every other one appoints. Curling-tongs has fifty heads to dress in a morning, and each one of the fifty heads has stipulated nine o'clock as the hour she is to come—and then vowed heaven's vengeance—and what is more to be dreaded, a withdrawal of custom, if if she fails. What is Curling-tongs to do? She takes the usual refuge of her day, she promises everything and fulfills what she can.

Some of the fair ones are roused at dawn from their beauty sleep, and sit five mortal hours in an immovable, upright position, for fear of getting out of curl.

Others are kept waiting till long past noon, all dressed but their heads, which present a somewhat curious contrast, like that of a wild Indian *coiffure* adorning the head of a Parisian doll. The dolls, being human, have gone through some six hours of suspense, expectancy, hope and despair, not leaving out several violent attacks of rage and temper. And losing one's temper is never conducive to heightening one's beauty. It is noticeable that in houses where Curling-tongs play Madame this trick, the husbands go out remarkably early and the children discover unexpected delights in the attic.

The trials and martyrdoms, indeed, human flesh—feminine human flesh, that is—will undergo on New Year's day is only another proof of the talent for suffering the fair sex possess. They will go through any, if they can only come out beautiful. There is no sacrifice they will not make, except the sacrifice for common sense's sake.

They will stand from ten in the morning till midnight in high-heeled shoes, half a dozen sizes too small, and smile in the teeth of torture in a way to make an ancient martyr groan in admiration.

They will shiver in a low-necked dress, with a thermometer at thirty, and bite their lips and pinch their arms and cheeks, between calls, to present a rosy and flushed appearance.

They will run into debt at Madame Levellgown's for that love of a dress, and screw and economize for a half-year to pay for it—if it ever be paid for.

Among the many comedies played the one oftenest seen is the play of human passion, in its various acts. There is jealousy abroad—poor Miss Passée being quite ignored, all the men going mad over her younger sister, Rosebud. Or love in Miss Constance's breast has been pricked all day with the needles of hope and the pins of expectancy each time the door opened, hoping young Near-to-the-Point will come in. When he does—he talks to Miss Flirt, whose mother would ask because her rich brother is devoted to Sister Decoy.

Perhaps the worst infliction the women have to endure is the bores. If there is ever a day when bores are abroad, when they seem to infest the very air, it is on New Year's. And they are of all kinds, varieties, species and orders. There is the bore who never sits down. He is the youth who makes three hundred calls—and walks. There are the bores who, once having sat down, never get up. They are always the ones who assure you—as they settle themselves back in the cushions of the sofa—"that they know when they are well off," and they do everything except take themselves off. There are the learned bores, who get you up in a corner to ask you if you heard the last theory in regard to molecular action, and there is young Soft-eyes coming in, and only politeness restrains your molecular action from leaving Mr. Pedant to flirt his theories in the air.

"Have you read my last address at the Megatherium Society on Prehistoric Man, Miss Curley-head?"

Ah, yes, and you very cordially wish he had belonged to that distant period of history.

Then there is the poetical bore, who has called on the six young ladies that most resemble his six-feet flowers, and informs you before Mr. Sneer, who is laughing at him before his very face—that you are the violet of that poetic bouquet. When there is a pause, and Mr. Sneer having gone, he sits close to you on the sofa, with eyes fixed on the ceiling, and asks if you don't think, in silence, two congenial souls taste sweetest converse—and ends by pulling out his *sonnet* of verses—soon to be printed in the Eastville *Star*, and to be called "Sonnet to the Soul of the Sunflower?"

There is the brainless bore, who always sends you such magnificent flowers; you must be civil to him, however; and they are always so magnificent and so numerous, there is no room for poor Ardent's small basket, which is almost out of sight, to purchase which young Ardent has gone without a desert to his frugal repast, and smoked inferior cigars for the past fortnight.

And so the play goes on. Scenes shifting and players coming and going, but the same acts acted, and the same song sung only in different keys and by different voices.

The day wanes at last; you get a moment's rest after dinner, and then dress for a ball, for with happy ingeniousness the indefatigable American has invented the giving of balls as a wind-up of this twelve-hours' strain, and you dance the cotillion till two in the morning, beginning the year as you will end it, with worn and aching limbs and a sense of supreme prostration. And the curtain rolls down on some thousands of aching heads and worn-out bodies, too tired by far to think over the triumphs of the day, or dream soothing satisfaction from the proud sense of having had more calls than you could count.

BOWMAN BLAKE.

THE WONDERFUL CAVE OF LURAY.

By H. C. HOVEY.

BY rail from Harper's Ferry to New Market—by stage over the lofty Massanuttens, in a storm that bowed the tall pines—by a skiff through the driftwood and foam of the swollen Shenandoah—thus we pushed on to Luray, Virginia. We put up at the best hotel, kept by a hearty old Virginian, whose only failing is an undue partiality for newspaper correspondents. How he piled our fireplace with hickory logs, and our table with homely but ample cheer!

Incredible as it may seem, it is yet true, that on the 13th of August, 1878, some men pulled up a brier patch, turned over some loose stones, and found a cave worth $50,000. The hill is honeycombed by cavities, though none of them have yet been found to open into each other. Sink-holes abound, each having a central orifice into some abyss.

On a fine day the scenery is highly picturesque; Luray, and Hawksbill Valley, in the foreground, flanked by the Massanutten range and the Blue Ridge, some of whose peaks are from 3,000 to 4,000 feet in altitude.

Wearing overalls and stout boots, with a haversack full of fireworks and conveniences, we took our tin reflector, with its three candles, and announced ourselves ready. Besides the proprietors, we had the company of several gentlemen whose attentions were appreciated, particularly those of Major Brand and Dr. Miller.

A stone staircase leads into the cave. Within are plank walks, bridges and stairways, wherever needed in the portion open to visitors. We had liberty, and used it, to examine every nook and cranny thus far explored; and in doing so we had to do some perilous climbing.

The entire area, so far as known, can scarcely exceed ten miles. Yet it took us six days to traverse all the galleries, chasms, ramifications and side-shows, and our space will not allow even an inventory of the marvels beheld. A cursory glance must suffice. Assoon as our eyes grew accustomed to the change of light, we see that we have entered a noble vestibule. It is lighted by a chandelier, as are also several other large rooms. Every niche is full of grotesque imagery. Ten paces from us stands Washington's Pillar—a white column, twenty-five feet high and ninety feet around. It is singularly fluted and grooved. A clear pool reposes at its base. A row of colossal turtles stand along the wall. On the right are the rugged rocks over which Campbell led the first band of explorers. On the left is Specimen Avenue; then Stebbins Avenue, named for the man who originally suggested the cave-hunting business. It has numerous corridors, chambers, domes and pits, besides several fine basins. Silver Lake is clear as crystal, and very deep. In a lonely moat, near the end of the avenue, stands the Leaning Tower. Its weight became too great for the limestone ledge on which it was built, although three feet thick, and when this gave way, the tower fell into the lake right end up, but tilting, like that at Pisa.

At one point on our way back, Mr. Campbell, who acted as our guide, lifted a slab showing us an aperture, through which we might descend into four rooms in a lower story, the basement of the cave, so to speak.

Safely again in the vestibule, we pursue our way to Muddy Lake, formerly crossed by a boat, but now bridged. The approach is underneath fringed galleries, marking where the cave-floor once lay; but each tier fell in its turn, being undermined and weakened. The fragments now lie in irregular piles, or else buried amid the rubbish.

Our attention is directed to strange outgrowths like the roots in a vegetable garden; and next to a cascade apparently petrified in the act of tumbling down the rocks. Long, slender pillars uphold the rocky roof.

At the end of the bridge, going under a pretty arch, we are in the fish-market. Folded formations hang in rows along the wall, looking surprisingly like an exhibition of various kinds of fish. You could almost believe them to be real bass and perch, waiting to be baked or broiled. Climbing a hill, rising fifty feet above Muddy Lake, we note the temperature as 63 degrees, the highest in the cave, the average being 58 degrees, and that without regard to the weather outside. The air is pure and wholesome everywhere. In certain localities a draft is perceptible, but usually the atmosphere is quiet and still, so far as motion is concerned. It is not still in the sense of freedom from noise, for the dripping water for ever plays fairy-like melodies. A chasm yawns at our feet. It is the Valley of Death. In its depths lies a skeleton imbedded in the calcareous deposit, exposing, however, a sufficient number of bones and teeth to justify anatomists in pronouncing them to be those of a person between fourteen and eighteen years of age. So much sentimentalizing was done over the melancholy fate of this unknown youth that it caused a reaction, and occasioned sundry unseemly jests, one of which was a legal notice to the coroner to hold an inquest over the remains. Stonewall Avenue conducts us to the Three Lakes and several large rooms profusely decorated. Its chief attraction is Baird's Cascade, named for our friend the Major, to whose *Herald* letters the public is indebted for the earliest accounts of this natural wonder. The cascade is not, as one might suppose from that term, a real waterfall, but a beautiful precipitation of mottled and milk-white carbonates, for whose formation ages have been required.

Retracing our steps, we drink at the Fairy Spring, a lovely lake basin of the purest water, environed by sharp stalactites, like dragon's teeth to warn off intruders. Half the basin is frozen over by a stony film, exactly like a sheet of ice, and the interior is lined with crystals.

The Imperial Spring is much larger; being thirty feet long and sixteen deep. It lies in an exquisite grotto girt with brown pillars, between which a milky cascade gushes over the rocks below; touch it, and the film vanishes, for it is stone, hard as alabaster, and with good reason—it *is* alabaster equal to that of the Isle of Paros. Countless stalactites hang around us on every side. They are stone icicles. Running water wore away crevices once made by earthquakes, till they became chasms; and these grew to be caves. By chemical action, aiding this work of excavation, dissolved limestone wound its large quantities be carried away through the outlet of the subterranean stream. But wherever the water ceased to run, and merely dropped, the carbonate of lime would be deposited by slow evaporation. Thus, little by little, long pendants would grow down from the ceiling, and blunter masses rise from the floor. These are the stalactites and stalagmites that figure so largely in all cave

Digitized by Google

descriptions. They often meet in mid-air uniting to form pillars. They are frequently stained by various pigments, but often are spotless white. If in any way interrupted in their growth, it gives nature an occasion for playing a thousand fantastic tricks, mimicking the form of every animal in the forest and every flower of the parterre.

What a queer-looking place we now have entered! It is the Elfin Gamble. The floor is chalky. The roof is bare limestone. The space between is only four or five feet. Trenches are dug to accommodate mortals. But we choose to ramble where the elves and Virginia kobolds must have been before us. Stooping creeping, crawling, we stray in every direction, and by scattering our lights, get some idea of these immense galleries, all under one roof, with an unbroken span of from five hundred to six hundred feet. Plainly this was once a magnificent hall, though now so nearly filled up with débris. On the further side of this wide area we find ourselves on the brink of Pluto's Chasm, said to be five hundred feet long, seventy-five deep, and forty wide, with a corresponding rift above it of nearly equal dimensions. Opposite us is another of those petrified cascades, beautiful beyond description. There are times when adjectives grow insipid, and interjections lose their customary vigor. Threading our way to the right, amid very old and decayed pillars like stumps and logs, where a great freshet has been, we come to the Balcony, a projection overhanging the junction of the great chasm with a long and beautiful hall called Elysium. The drapery of the balcony is singularly delicate. Imagine a number of costly scarfs hanging side by side; some of them white as snow, and others with many-shaded stripes of brown. They hang in as graceful folds as so many cashmere shawls. Holding a light behind them, they are seen to be translucent, and the wavy lines are brought out very distinctly.

The southern end of Pluto's Chasm is crossed by a bridge, around which we see what one of our party called a *cheval-de-frise* of stalagmites. There also stands, by itself, Proserpine's Pillar, half brown and half white, and in the adjacent glen the spectral column is dimly seen. Passing between clay banks on the left and bulky bulwarks on the right, we pause a moment to admire the splendors of Oberon's Grot, and the fairy tracery of Titania's Vail, and still again to consider the beauty of another creamy cascade—and then reverently enter the majestic gateway of Giants' Hall, a portion of whose glorious scenery is pictured in this number.

A curtain of fifty feet high and thirty wide seems to have been swept aside for our reception. But the giants make themselves invisible, and we look in vain for Goliath or Giant Grim. A fallen column, like a prostrate oak of the forest, lies across our path, and broken by its fall. This enormous stalactite in its prime, centuries ago, must have been more than forty feet long, for it is half that as it lies there in decay. What floods once swirled here making havoc! The water-eaten relics of those olden times contrast finely with the choice creations of later years, as if nature had improved on herself. Could anything, for instance, be more beautiful or thoroughly artistic than that archangel's wing, just behind the fallen column? Look again, at the prim sentinels around the Saracen's Tent, on the left, guarding softly-draped figures, Oriental and voluptuous beyond a sybarite's dream.

The path winding past the Tent leads to Rhodus Lake, sparkling with nymad crystals; near which are deep rifts no mortal has yet explored to the bottom, though Campbell has bravely tried to do so. This road to the right ascends through the Hollow Column, forty feet high, to most remarkable galleries entirely above the Giants' Hall, the distance from the ceiling of one to the floor of the other being one hundred and sixty feet. The Bridal Chamber, not far from the Hollow Column, was one of the fairest spots in all the cave, until its alabaster floor was stained and marred by vandal footsteps.

The Organ—who credited that marvel at first? Yet there it is, with its fifty-six gilded pipes, great and small, and its crowning cornice. Tunes can be played on it by skillfully striking the different stalactites. One of our own party, by a little experimenting, played for us the "Sweet By-and-By," "My Maryland" and "Yankee Doodle." The Chimes are musical stalactites like those of the Organ, fewer in number but far more powerful. Their bell like and musical sounds can be heard far away.

Following the main path around a storied column called the Tower of Babel, we behold a sublime grouping of ponderous pillars. That on the right, thirty feet high, is the Empress Column, with rich flutings and carvings, dark-shaded near the ground, growing white as it rises, and the upper portion becoming a lovely pink. The Sultana, near by, is less finely tinted, perhaps, but is very symmetrical. It is surmounted by a head wrapped in a turban. A lower pillar bears the image of an Indian squaw; still another lifts aloft a crowing chanticleer.

Shafts, domes, minarets, slender and lofty spires, shoot upward from amid great blocks of limestone and carlands of red clay. Here is the resemblance of a mosque. There are monstrous knives, fifty feet long, hollow till coming to an edge thin as paper, but thickening above. A section was once broken off, but it has utterly disappeared. We saw a slender stalagmite, fifteen feet long and six inches through, hugging the bank with no visible means of support. But grandest of all is the Double Column standing amid the Naiad's Bath. It comprises a stalactite fifty feet long and a stalagmite thirty feet high, that, instead of becoming one solid pillar, simply embrace each other. The former tapers down in long, unbroken grooves from the roof to the floor; the latter rises in successive stories with rows of tiny pillars supporting them.

Winding in and out among huge rocks and formations, now lovely and then majestic, and again ludicrously grotesque, we soon reach the broad passage admitting us to the Pavilion, and really enjoy its level floor of solid planks. This is a room a hundred feet in diameter, with many alcoves, and on occasion it is lighted by chandeliers. We illuminated it by fireworks, of which we made a liberal use everywhere. A ball was advertised to be held here on Christmas. The music must have sounded finely through these echoing halls.

Beyond the Pavilion are beauties equal to any yet mentioned. Collins's Grotto, in which lies the snowball spring, bears the name of one of the most zealous explorers and graphic describers of the cave, and contains formations that would be cheap at a thousand dollars apiece, if they could be set down unbroken in New York City. Up that ladder and over those stubby scalagmites is the way to Campbell's Hall, boasting stalagmitic gems unrivaled for beauty. We voted to name the finest one the Mermaid. Imagine a white-capped column, strung with beads, incased in scales, and garlanded with roses, standing in a sea of milk with floating bubbles, the whole girt with a mossy edge.

We have now rapidly described all of the cave that is open to the public, and much that is not as yet. The intention is in due time to make it all accessible. Before leaving the Pavilion let us view the Coral Cascade, which is water this time and not alabaster. This elegant cascade is a succession of ten undulating terraces varying from three inches to three feet in height. Each terrace is a crystalline basin, with the outer surface curved like a casket, and it overflows into the basin next below. Here, beneath the pointed vault, bristling with stalactites, let us pledge, in this pure beverage, the success and lasting fame of Luray Cavern.

A SECRET MARRIAGE
AND
ITS CONSEQUENCES.

BY THE DUKE DE POMAR,

AUTHOR OF "THE HONEYMOON," "THROUGH THE AGES," "WHO IS SHE?" "FASHION AND PASSION," ETC.

BOOK THIRD.
THE MYSTERIOUS HEIRESS.

CHAPTER I.—(CONTINUED.)

LADY VICTORIA—that lady's daughter—comes forward and speaks for the first time.

"I can guess what you mean, but I am sure it is not true; for if such were the case she would have been brought up as a Roman Catholic."

As the group of people to whose conversation we have been listening begins to disperse and divides into smaller groups, I think I will seize the opportunity to say a word or two about young ladies in general, taking Lady Victoria Fitz-Charles as an example, as she has remained standing alone, and at a little distance from the rest; for this young lady, like many others in London society, has given herself up to one of the most pleasing delusions which the artificial life fashion obliges them to lead has fostered. No doubt, like many others, this talented lady has been led to believe that in England there exists a vast number of young noblemen of fortune whose desire to marry is so great, that any well-born girl, gifted with a fair face and possessing a few accomplishments, has only to bide her time in order to make a grand marriage. Accordingly, these young girls are in no particular hurry to get husbands, and, graciously waiting to see who will bid the highest for them, prefer talking and laughing with men who amuse them, but whom they would never dream of marrying, whilst they are cold and distant in their manner to those men amongst whom they would be only too glad to choose a husband.

Lady Victoria is one of these. She is the only daughter of a duke; she has the *entrée* to any drawing-room in Europe, and, owing to her rank, good looks, and talent, she is everywhere welcomed and looked up to; but so convinced is she that she has only to throw her handkerchief to marry the man she chooses, that she allows the years to roll on, and enjoys life to the utmost, heedless of the future. Did ever duchess and her daughter enjoy themselves as much as Lady Victoria and her daughter? Spending season after season in going to balls, concerts, and operas, and the Winters in visiting at splendid country-houses, conferring the honor of their society upon all who have the courage to ask them to their castle or mansion; every now and then taking a voyage to some outlandish country, and thus waiting from year to year for the expected appearance of Prince Charming, carefully abstaining from accepting any offer which does not wholly satisfy her aspirations. For has she not already settled in her own mind the sort of existence to which she is entitled—the house, the horses, the rank, the wealth, and the husband necessary for her? Perhaps the talented Lady Victoria, like many other less highly favored young ladies, considers herself a victim to men's treachery, and has been deceived in the hopes she had been led to entertain about this young duke or that rich earl; but she is too much of a woman of the world to allow her mind to dwell on the past, and though she may write about true love, it is very much to be doubted whether she actually believes in the existence of such a thing. And so, while she is still waiting for the Prince Charming of her dreams to come in all the blaze of his fine titles and immense estates to carry her off, she laughs at every ordinary mortal who approaches her, and is resolved to make the most of her freedom; but years roll on, and as the Prince Charming does not appear, the Lady Victoria begins to look anxiously about her, and her good-natured mother is forced to confess that the chances of his ever coming at all are getting fewer and fewer every day.

It is, perhaps, on this subject that she is thinking at the present moment, for, instead of following her friends, who have walked into the adjoining conservatory, she stands alone in the centre of Lady Oddcum's back drawing-room musing to herself. Presently her quick eyes chance to discover, in the crowd that fills the front drawing-room, a face well known to her—a sudden change comes over her, her eyes flash with pleasure, and turning round to her mother, who is standing not very far from her, she says:

"He is here—in the next room. I am glad we came."

"Who? the Duke of Glamour! Indeed, let us go to him at once. How flushed you are, Vic! Try and look composed. I know he particularly dislikes women who get excited. Like all your really clever fellows, the duke is somewhat taciturn and rather shy in his manner. Come, I will speak to him first."

And making their way through the crowd, Lady Victoria and her mother soon leave the back drawing-room. But we must not follow them now, for Miss Oscott, that other interesting young lady whose acquaintance we have just made, is still standing near the door of the conservatory, talking to Lord Kingsford, and their conversation is worth us pausing to hear.

"To us Catholics," she is saying to Lord Kingsford, "I think that Miss Reymond is a most interesting person. I hear that Lady Rollingford is going to make her her heiress."

"Indeed."

"Yes; I had it from very good authority—from Monsignore Beretta himself."

Lord Kingsford begins to look interested, for the heiress of the Rollingfords is not to be despised, even by a peer.

"And you think that such a thing is likely?"

"Oh, yes; Lady Rollingford is very fond of her; and, besides, who else has she to leave her large fortune to?"

"There is her brother, Lord Inganess; and, besides, I have often heard that she is not so very fond of her adopted daughter as people suppose."

"That is strange; surely she must have liked her very much to have adopted her! Yet I, too, have heard that report."

Miss Oscott is a young lady very much after the same pattern as Lady Victoria. She, too, is no longer very young, but, like her, she is perfectly contented waiting for *her* Prince Charming; and though she converses freely enough with Lord Kingsford, I do not believe she would ever dream of marrying him—even if the thought of asking her ever passed through his head—any more than that she would dream of becoming the wife of any of the other numerous young men who pay their respects to her in order to get invitations to her parties.

She is the eldest daughter of Sir Charles Oscott, one of the oldest baronets in the kingdom, and her father being a widower, she has the management of the house, and decides as to who is worthy of being invited to it. She has thus become one of the principal leaders of the Catholic party, and it is, perhaps, on this account that she is displaying so much interest in the mysterious Miss Reymond, whose origin and antecedents no one in society is able to make out.

For a short time she continues conversing to the young Catholic peer about the mysterious heiress, when, her eyes wandering in the direction of the front drawing-room, her glance is also arrested at the sight of the man whose appearance produced such an effect upon Lady Victoria and her mother.

"That is the Duke of Glamour, is it not?" she asks her companion.

"Which—the tall fellow with the tawny beard? Yes."

"Monsignore Beretta tells me that he entertains great hopes of his becoming a Catholic."

"The monsignore has been telling you a great many things."

"Oh, but he is almost sure of *him*; and I believe he is actually the richest man in England."

"It will be a great thing, doubtless, for the Catholic Church."

"I wish you would introduce him to me—of course you know him?"

"Yes, and I shall be charmed to do so. You can ask him to your ball on Friday."

"Does he like balls?"

"I believe he does; but one seldom meets him out. I wonder he came here to-night."

"That is the very man we were talking about just now—Lord Inganess, Lady Rollingford's brother."

"Why, he looks quite a young man. Surely he is not her eldest brother?"

"Yes; but you see Lady Rollingford was the eldest of the family, and, besides, although Lord Inganess looks so very young, he is past thirty. I shall be only too glad to introduce them both to you at any time."

"No time like the present," says Miss Oscott, walking on towards the front drawing-room. Lord Kingsford follows, but ere he has reached the place where our old friend Lord Inganess and his companion are standing, he sees, sitting alone on a sofa, the Hon. Mrs. Dalmaine, looking sweetly from under her long brown eyelashes towards him, and the temptation is too great for him to resist.

"I beg your pardon, Miss Oscott," he says, "but I must say a word to Mrs. Dalmaine. I will join you directly."

"Well!" that young lady exclaims, very much disconcerted; but seeing that her companion has left her, and has already taken possession of the empty seat by the fascinating Mrs. Dalmaine, she approaches Madame Mirandalta, a lady whose society she much affects lately, and who has just entered the room, and tries to console herself at her disappointment of not being introduced to the duke by abusing Mrs. Dalmaine and Lord Kingsford to her heart's content.

Let us now approach the fortunate mortal who has succeeded in interesting two such exclusive and supercilious young ladies as Lady Victoria Fitz-Charles and Miss Oscott.

As Lord Kingsford remarked, he is a tall, handsome man, with tawny hair and beard, and has large, thoughtful eyes, that seem as if they had been made to look into the very soul of things. He is talking with Lord Inganess, and seems very much interested in his conversation.

Our old friend Westra is now a tall, elegant-looking man of about thirty, but who, on account of his fresh northern complexion, light mustache, and slight figure, does not look more than five or six-and-twenty. The brilliant promise of the boy has been more than fully realized in the man, and, indeed, it would be difficult to find a handsomer or more pleasing one in any *salon* in Mayfair.

"This is an agreeable surprise, Glamour," he is saying; "I had no idea that I should find you here." He made the acquaintance of the wealthy young duke at Oxford, and a great friendship had subsisted between them ever since. "There are some rather pretty girls here to-night."

The duke casts a hasty glance round the room, and, after a pause, says:

"Yes; but I find that young ladies are so much alike nowadays, that one can scarcely interest oneself in any one of them in particular. By-the-by, I have heard a great deal lately of this girl your sister, Lady Rollingford, has adopted. What is she like?"

"Oh, Louisa Reymond! She certainly is a very striking-looking girl. Don't you know her?"

"I have not met her yet; I so seldom go to parties. But, perhaps, you can tell me her true history?"

"Her true—what?"

"Her true history."

"Well, I am sure I don't know. By Jove! I wish I did, for that question, as you say, has become quite general now, and is put to me at least a dozen times a day."

"Don't you know?"

"No; for ever since I first came from Westra she has been living with my sister, and I have never known her by any other name than Miss Reymond, though I know her most intimately, and like her very much."

"You do not mean to say that you never had the curiosity to ask your sister about her?"

"Oh, yes; I have often asked her, but she has never given me a decided answer. I believe she is a French girl, to whom my sister took a great fancy when quite a child in Paris, and whom she adopted soon after her husband's death."

"Have you never asked Miss Reymond herself?"

"Oh, she does not know any more than I do."

"She does not know herself? How strange! How mysterious!"

"I do not see anything strange or mysterious about it. My sister, who felt very lonely after her husband's death, liked the child, and so adopted her, in order to have some interest in life. Surely there is nothing so very peculiar in that."

"Yet some people seem to think it most mysterious, I assure you, and all sorts of stories are invented about it."

"I know it; and I suppose that you, like the rest, are dying to fathom the supposed mystery? Well, she is a charming girl, and I am sure you will like her very much. She certainly is not like the ordinary run of young ladies. She is handsome, unaffected and clever, and you will get on capitally with her, I am sure. I must take you to Rollingford House one of these days; but I am afraid you will be greatly disappointed if you expect to find anything extraordinary; for, in spite of what the world says, there is nothing whatever strange or mysterious about Louisa Reymond."

"Indeed," his friend says, with a disappointed look, which Lord Inganess perceives, and which makes him smile.

"Yes, it is a pity, certainly, that we cannot make her a little more interesting. You see, Society may talk as it likes, but it cannot alter people's natures. If you are bent, however, on making the acquaintance of an extraordinary woman—of a woman who is unmistakably strange and mysterious—I think I know one who will just suit you."

"Ah!"

"She certainly is an extraordinary woman; and, though she is no longer young, I am sure she will interest you. She is the wife of an American General—in fact, no other than Garibaldi's celebrated American—and her name is Mrs. Champion."

"Mrs. Champion!" exclaims the duke, very much astonished.

"Well, yes; I used to know her once—in fact, I knew her very intimately. I was with her in Italy, and the last time I saw her was in Rome; but I thought that she had been killed since then."

"She was with Garibaldi during the Italian wars, and I believe she was wounded once."

"Dorothea! The divine Dorothea, as we used to call her. Surely she cannot be alive. Perhaps we are talking of different people."

"No; her name is Dorothea; I think we must both mean the same person."

"And where does she live?"

"At present she is living in a house near Hampstead—Liberty Hall the general has most characteristically christened it. It is a curious old house, and they give the most delightful garden-parties during the Summer months. In the Winter they go to the shires for the hunting."

"I will go and see her to-morrow. I wish I had known this before!"

Just at that moment Lady Victoria and her mother succeed in approaching them, after having made the most violent efforts to get through the crowd.

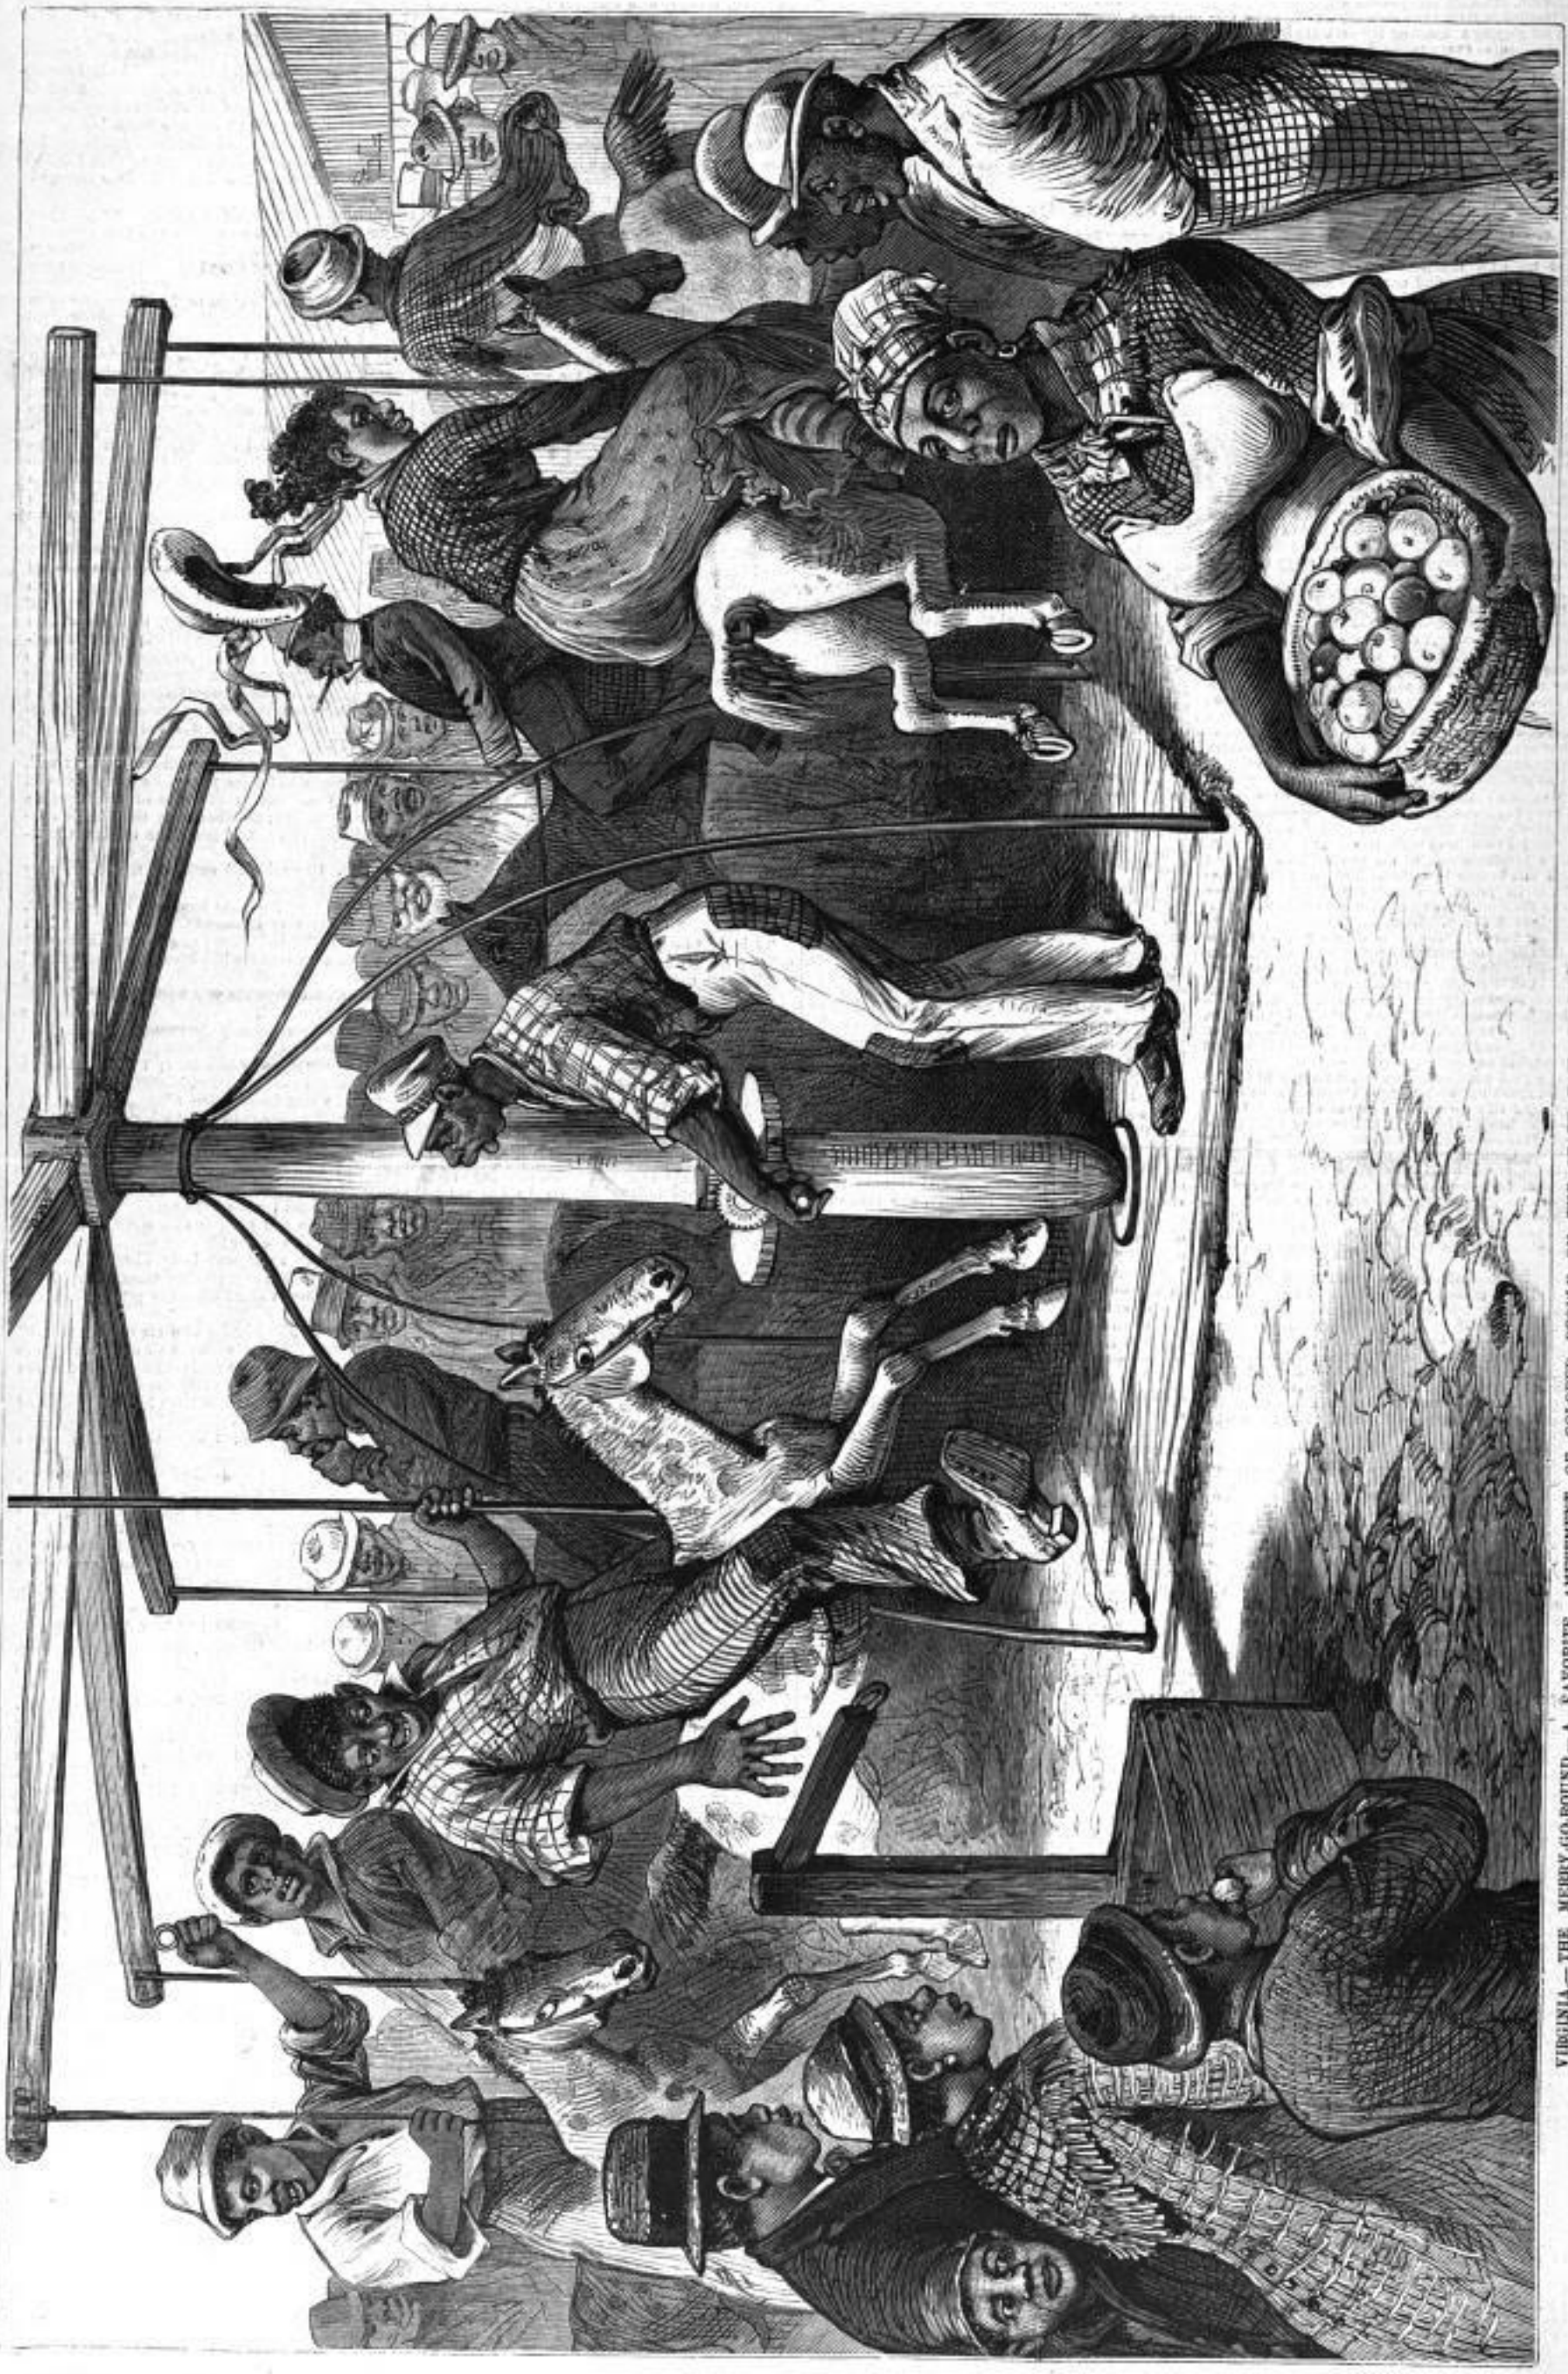
"Who are these ladies who are bowing to us?" the young duke asks, with the air of a man who is suddenly called from a soul-stirring reverie, to the uninteresting events of every-day life.

"Why, don't you know them?—the Duchess of Warrington and her daughter."

"Ah! to be sure; I suppose I shall have to speak to them."

"How do you do, duke?" the duchess says, holding out her hand.

"We had no idea you would be here," adds Lady Victoria; and the duchess taking Lord Inganess aside with a masterly manœuvre, the charming young lady succeeds in engrossing the wealthy duke in a long *tête-à-tête*.



CHAPTER II.—THE DUKE OF GLAMOUR.

THE Duke of Glamour, the fortunate possessor of at least a dozen time-honored titles and as many princely estates, is a young man of about six-and-twenty, good-looking, highly prepossessing, and endowed with a mind peculiarly adapted to the reception of new truths, and a noble heart perhaps a trifle too impressionable. He was left an orphan at an early age, and since then has passed his time, first at a private tutor's, afterwards at the University of Oxford, and latterly in traveling; so that as yet he is personally but little known in the gay world of Mayfair, though his name is already in every one's mouth, and his first appearance in London has been hailed by all with more than the usual display of interest.

But from childhood he has lived so exclusively in the world of ideas, that the world of facts seems trivial and unimportant to him. He has dwelt, as it were, almost entirely within himself; and now that he is beginning to take an active part in society, it is not to be wondered at that he should consider that society frivolous and uninteresting when compared to the lofty thoughts which, until quite lately, have been his only companions. Nor are the traps which anxious chaperones and manœuvring mothers are continually laying for him, and the eagerness of men who would win his friendship at any cost, particularly calculated to make him all at once a devotee of fashion; and his existence has been so long objectless and purposeless, so far as actual life is concerned, that when at last an object and an aim are forced upon him he can scarcely deal with them, and gropes about vainly in search of a motive outside of himself that shall guide his thoughts into the path he fain would tread, if he only knew how to find it. It is not, however, that he is incapable of passionate energy, nor when anything of importance has to be decided he can make up his mind as well as any other man, and act accordingly.

But it is that, with him, imagination being so

strong—in ordinary cases to think of a thing becomes better than doing it, and consequently thought to him, with its easy perfection capable of everything, because it can accomplish everything with ideal means, is vastly more attractive and satisfactory than deeds, which must be worked out, at best, with imperfect instruments, and must always fall short of the lofty conception that went before them.

The duke, therefore, though in heart disliking society, and knowing himself to be infinitely above its commonplace conventionalities, is not able to free himself from its chains, and has almost unconsciously become one of its slaves.

It has been the same thing, also, with religion; for he is of a temperament particularly religious, and that must have for the foundation of his religion a strongly-rooted faith; but, unfortunately, this very power of clear, unprejudiced discernment, with which nature has so bountifully endowed him, has stood all his life in the way of his adopting any particular faith. Born of Protestant parents, and brought up in a Protestant university, his sentiments and the longings of his heart have, however, almost from his youth, inclined him to the doctrine of the older faith; and he would have become a Catholic long ago if he could only have convinced himself that such a course would have no disadvantages; but, as he is always analyzing his own feelings and motives, he can never make up his mind to take such a decisive step.

It is an inherent peculiarity of a nature like that of the Duke of Glamour that it should be conscious of its own defects, and that, therefore, it should endeavor to find in another the strength, not of will, but of action, which he finds wanting in himself. This is the reason, no doubt, why he was drawn, while still a mere youth at Oxford, to seek the society of a person like Lord Inganess—a man gifted with a firm will and noble nature, and with that highest of all qualities, a thoroughly manly instinct, always clear and ready, that never drags its anchors for any wind of opinion or fortune, but grips all the closer to the realities of things when it has to fight in order to attain its final object.

Inganess was a true son of Scotland—one of those men thoroughly kind and good-natured, affectionate yet undemonstrative, whom we love and admire, without asking to know precisely why, and whom we can believe capable of great things, without having had any test of actual achievement, because we feel their manhood is a constant quality, and not a mere accident of circumstance or opportunity.

Since their final departure from the university, the two friends have not met often, it is true, for their natural characteristics rendered their various paths in life distinctly opposite; but their friendship has not suffered, for all that, and Glamour still recognizes in Inganess the solid steadiness of purpose which he misses in himself, while Inganess is forced to recognize now more than ever the loftier qualities of a nature like that of his old schoolfellow, which time and experience have developed to a great degree; and now in the world of fashion and business, as before in the world of learning and amusement, the young duke fills the place of a feminine spirit to Inganess, revealing him to himself, not only by what he says, but by a constant claim upon his superior strength of will. The few words he had spoken at Lady Oddicum's reception had reopened a page of Glamour's inner life, which that young man had been led to believe, from certain events that had afterwards taken place, it would never have been his lot to reperuse.

Soon after he quitted Oxford he met, by accident—or, perhaps, by fate—our old friend, Mrs. Champion, and, as was but natural, his own ardent, earnest, imaginative nature could not but sympathize at once with the peculiarly gifted character of a woman who was so eminently possessed of these very characteristics, which, carried to the extreme by her, had rendered her a patriot and a fanatic.

Her mind had fascinated his mind; her nature had developed his nature, and for a time the young duke had become an ardent admirer and follower of the divine Dorothea.

He had accompanied her to Italy, and had been with her and her husband during the second siege of Rome; but, having lost sight of her afterwards, and having been led to believe that she was killed during one of the attacks, he had inquired no more about her, and his ever-changing thoughts had led him since to alter all his opinions, and to think very seldom, if ever, of the extraordinary woman who had for a time exercised such a magical influence over him.

It was from his old friend Inganess that he first heard her name mentioned since his return to England, and, her memory once reawakened, he could not but think of her, and even the brilliant conversation of Lady Victoria Fitz-Charles was unable to drive Mrs. Champion from his mind.

The whole night he dreams of her; he sees her as he saw her first, when himself almost a lad—a tall, handsome woman, full of life and energy—a beautiful enthusiast—the most lovable woman he remembers. He then sees her a few years later—the genius of Italy—supreme in the meridian of life—a poetess and a sibyl, with a face full of majesty and Olympian repose, a truly Phidian countenance, with large, dark-gray eyes that seem to flash with inspiration. She is staying with him at Castle Muriel, and he has become a slave to her wildest fancy. The vision changes, and now she appears before him as the divine Dorothea—the leader of men, the famous patriot, who has sacrificed her family, her fortune, her name—everything, to attain the freedom of her adopted country, and who is ready to sacrifice even her life to render it happy and prosperous; the wondrous being who can calm and control the most uncivilized and passionate of men by the mere magic of her voice, and who can lead them on to battle and to fame.

This picture is too deeply rooted in his heart to vanish like the rest. The day after Lady Oddicum's party the Duke of Glamour orders his T-cart at an earlier hour than usual, and takes his seat in it half-dreamily, and paying no attention to what is going on around him. At last, after passing through a long lane which winds along by gently undulating grassy slopes, studded with countless primroses and buttercups, he arrives at a large, handsome iron gate, on which is written "Liberty Hall." His heart gives a bound, he checks his spirited horse, and, passing through the open gates, he finds himself in a small but exquisite garden, rich in rare shrubs and rarer trees, and large baskets of flowers of the most brilliant hue.

A large old-fashioned mansion of red brick, completely hidden in some places by creeping ivy, and which might have been built in the reign of Queen Elizabeth, though it must have undergone various, though no doubt useful, repairs, since her day, stands before him, looking dark and gloomy, yet so thoroughly English that an air of "comfort" and "home" pervades it from the large oriel windows of the ground floor to the lofty slanting roof of gray-colored slate. He gets down, and, giving the reins to the groom, mounts the stone steps that lead to the front door, and rings the bell. A servant in livery appears, and, by his accent, Glamour at once recognizes him to be an Italian, and before he has spoken two words he learns that he has not made a mistake, and that this is indeed the home of Mrs. Champion. He enters a snug little drawing-room overlooking an immense lawn, on which two large military tents have been erected, and beyond which two or three valuable horses are quietly grazing.

At last a door opens, and a lady enters the room. She is elegantly dressed, and is still handsome, though her figure has become much developed; the serene classical face is certainly that of Mrs. Champion, and the statuesque features that so eminently characterize it could not belong to any other woman; yet the celestial fire of inspiration which once illuminated that face, and which he so well remembers, is gone: the keen eyes seem changed, they no longer burn with divine fire, they look colder, harder, perhaps more human, but certainly not so beautiful. For a moment he hesitates, discomfited, disappointed—he is sorry that he came. Can that fashionably dressed, modern English matron actually be the divine Dorothea?

But she speaks, and the sound of her voice at once brings back to him the long-treasured image of the woman he remembers; the everyday-looking woman of the world vanishes, and, as if by magic, she becomes transformed into the genius of Italy, the sibyl of the past, the being whom he once almost worshiped—the divine Dorothea.

She welcomes him warmly, and a long conversation ensues. He finds her, however, only the shadow of the idol he once worshiped. They discuss religion, Italy, and his marriage, and at length she shows him through the great rooms of her house, in one of which he is surprised by the apparition of a girl of sixteen, whom she calls her daughter—Bella—lovely as a picture. Then, recurring again, to the subject before discussed, Mrs. Champion says:

"You ought to be married; and I was thinking of a very handsome and accomplished girl, a friend of mine, who would just suit you; and she is a Catholic, too. But perhaps you know her already, her name is Miss Reymond."

"Miss Reymond! Lady Rollingford's adopted daughter, you mean, of course. Ah, indeed!—no, I do not know her; and although I have often heard of her. I do not think that I have ever met her. You know how seldom I go to balls and parties; but perhaps you may be able to tell me her history?"

"I wish I could; but although I cannot tell you who she is, I will introduce you to her if you like. Lady Rollingford is an old friend of mine, and I am sure she will only be too glad to know you. I will call for you to-morrow at three, and take you on to Rollingford's house. I wonder if you will fall in love with Louisa?

(To be continued.)

SIMON SEYMOUR'S HEIR.

THE 15th of August, 1876, was my sixty-fifth birthday. I was passing it friendless and alone in a little town on the borders of the wilderness; waiting with a score of others for the stage that left once a day for Saranac Lake.

The handbook of the Rev. W. H. H. Murray had been my constant companion during a long trip from the Black Hills to New York, and when disappointment after disappointment overtook me, my thoughts ran on the perfect peace of balsamic pines, and the heaven on earth for the tired soul which (according to Murray) awaited me in the Adirondacks.

Mine had been a hard experience. I had slaved through a poverty-stricken boyhood; I had been tied to a desk in early manhood and middle age, till, wearied with overwork and small returns, I had joined an adventurous party of younger spirits and gone to the Black Hills with the first rush thither for gold.

There I had passed a rough life for two years, till, by a "fluke," as the Deadwood sport, my partner, termed it, we had made our fortunes.

I tarried not to increase the unexpected windfall, but with dreams and longings for peace and quiet comfort, went back to the States, where some few relatives dwelt.

It is unnecessary to relate the story of my return. I was not a prying, suspicious man, but accident led to my hearing myself discussed by the family to which I belonged, when, in full conclave, my belongings and their expectations were duly canvassed.

After that disastrous hour, every fond word and smile—and there were plenty bestowed upon me—roused a spirit of distrust. I sighed for the days when there was nothing to gain by being civil to Simeon Seymour. I shed a bitter tear over the grave of old Aunt Hepsey Turner, remembered for the only disinterested affection that ever fell into my life. When I was an overworked, ill-fed boy of twelve, and living on sufferance with my hard old Uncle Marden, one day, for some shortcoming, he gave me an unmerciful beating in his barn. I laid like one dead, praying for death, when compassionate Hepsey Turner stole me away and nursed me for weeks.

She had been dead many years, poor woman, and all trace of her family was lost. I had nothing to remain for, and I suddenly announced my intention of spending the Summer in the Adirondacks.

"As if you had not had enough of wild life out in Deadwood and the Black Hills!" said Mrs. Marden, my fashionable cousin.

"It wouldn't be so bad an idea if you take Charley with you," assented the widow Seymour, who was the relict of my half-brother, and mother of the heir expectant.

"You might take Carrie and I, Nunky," chimed in the silvery voice of Lou Barnett, who, though only a half-cousin, addressed me affectionately as "Nunky."

Alas for their hopes! That silvery voice had been heard advising her mother to indulge in some extravagance, since "the old Hunker with that liver complaint couldn't last till Spring!"

And the festive Charles, already trading on his prospects, had heartlessly counted up with Mrs. Marden the probable length of days I might keep them out of their own!

"I shall go alone."

This I said solemnly, to their united surprise and discomfiture.

And I made my arrangements accordingly. There was wild dismay in the camp I was leaving. There was a mysterious meeting of the interested—a sort of *lunatico inquirendo*.

There were plans laid for my detention, and projects broached for my incarceration as an imbecile.

But in the midst of the excitement I was gone.

Quietly, without an argument, giving them no opportunity for remonstrance or appeal.

But after I was many hours away they received a document in which, mildly but firmly, I stated my decision in regard to them.

"Whatever fortune I did not spend before my death"—so I wrote—"would go to found an asylum for the amelioration of the condition of wealthy old gentlemen, and to provide greater security against rapacious relations."

Having fired this parting shot, my short-lived resentment was over, and bitter disappointment took possession of my heart. It seemed so hard to find, after all my dreams, a lone and loveless old age must be my portion.

And so the 15th of August came, and found me, as I have said, soured in temper and uncertain in purpose, lounging away my sixty-fifth birthday on the piazza of the Ausable Hotel, Keeseville.

"Are there any places of interest in the neighborhood?" I asked of the cheery landlord.

"I should say so. Have you never heard of the Ausable Chasm?" he replied.

"Never."

"More's the pity, then; it's as rare a show as those famous Falls at Niagara, I do believe."

The day hung heavy on my hands, and after a moment's preparation I was placed in charge of a village Jehu and on the road for the much-boasted "chasm."

"It deserves all mine host has said of it," was my verdict when, after descending hundreds of steps, roughly fashioned at irregular heights, and wedged into the terrible fissure which, not more than three feet wide, cleft the earth to a depth of two hundred feet, I stood at last on the level rock at bottom; far and wide spread out the wondrous chamber, a merry stream of water rushed across the place, the grim rocks stretched far away up, and gazing through the narrow passage by which the grotto was alone accessible, a terrible sense of horror accompanied the thoughts I could not restrain:

"What if that snake-like passage through which the far-off sky dimly shines should shut its slender throat and swallow me away for ever from sinister motives, from avaricious designs, from scheming interests, from the world?"—in truth, of such was my world composed.

As I thus mused I felt a longing to get back to the sunlit field of clover surrounding the entrance to the Ausable Chasm; in fact, I had started toward the rude ladders leading out, when a musical voice broke the silence.

"It's a strange freak of nature, isn't it?" asked the voice.

I turned with a start of surprise, and beheld a man of two-and-twenty lay stretched out on the moss-padded rocks beside the little spring.

He was poorly dressed, a well-worn, ill-fitting suit of brown linen, clumsy and broken boots, a straw hat thrown off beside him, jagged at the edges and innocent of a band, and withal he had the air of a gentleman, and a fine, dashing gentleman at that.

I said something of the surprise his voice had occasioned, and as he struggled to a sitting position and rallied me on my sudden and visible effort to leave the place, I sat down to learn more of my new acquaintance.

"This is not my first nor my fortieth visit to the Chasm," he said. "I've been sketching here in a small way, off and on, for a month."

"An artist?" I asked.

"No; a poor devil of a dry-goods clerk, but I have a taste for daubing, and I pinched together a few dollars and promised myself a Summer in the Adirondacks. I got thus far, and changed my mind."

"That's odd."

"Well, no. There's a perfect rush to the lakes this year; a guide is an impossibility. 'Guides have riz,' one of the Keeseville farmers said this morning, and are demanding $5 a day. It's very picturesque hereabouts; perhaps a quiet month here will do me full as much good as a more extended trip."

Then perceiving a large portfolio, I begged to see his sketches, and I was delighted, being quite a judge in matters of art. I turned over but a few of his pictures before I recognized my friend was a genius as well as a very handsome fellow.

"You are too clever an artist to waste your time behind a dry-goods counter," I said.

"I'm too sensible a chap to undertake to feed three mouths with my paint-brush, dearly as I love it," he replied.

"Three?" I asked.

"A sister turned thirteen, and a grandfather turned three score."

It was growing quite dark when, assisted by my new acquaintance, we scrambled up the detachment of ladders and reached the clover-field over head.

At the hotel we parted. I had insisted he should ride to the village with me.

"Won't you come in and have some dinner?" I asked.

But he lightly lifted the broken hat from the dark curly head, and declined the invitation.

"At all events I will see you again," I said. "I shall stay over Sunday now, and make an early start Monday."

A sudden thought struck me. What a help it would be to this fine young fellow to purchase some of his pictures. True, I had no use for them; but he was such a charming lad, and so much in need of the dollars that weighed so heavily on my happiness.

This intention I imparted to him, and never shall I forget the look of gratitude with which it was received.

"Shall I bring you some completed pictures to-morrow? They are not much—I do not expect much for them; but a trifle just now is quite a fortune to me."

He spoke eagerly, and a bright flush swept across his boyish face at his presumption.

I urged him to bring all he could part with, as I had an idea of starting a gallery of American artists.

And so, joyfully on one side, and much interested on the other, we separated for the night.

"I see you've got acquainted with John Masters," said the landlord, that evening. "A better lad never lived. He takes care of a blind grandfather and a sister. He works early and late: he's a wonderful good boy—and my girl there thinks so. But John will never amount to much; he's got this painting fever so hard; and I won't hear of anything in that quarter."

I glanced across at the village belle and beauty, who stood laughing merrily at a window near us; and the unmistakable spirit of match-making rose within me.

I bided my chance, and then slipped up to Miss Mattie when business called her thrifty father away.

"I want your advice on a matter you know more about than I, probably," I began.

The bright-faced girl looked up at my gray head, and listened gravely.

"I am going to purchase some sketches and pictures from John Masters to-morrow. Will you give me the benefit of your taste?" I continued.

In an instant she was interested. "Going to buy Mr. John Masters's pictures!" How glad she was; and she promised eagerly to seek my parlor when he came.

"I don't know at what hour," I said; "but will send for you."

"No, no," she cried; "I shall see him come in, and know without your sending."

Then she stammered, and stopped and blushed crimson; and I felt as sure as any old duenna'er, that my young man was not going to die of unrequited affection.

What a pretty picture they made in that dull country parlor next day, bending their youthful heads over a collection of boards and canvases.

"There, Mr. Seymour; I think that view on the lake is a nice companion to this one of the Chasm," said Mattie, placing the canvases side by side.

"So do I," I retorted: "and I must have that pair as well as the four we have already selected. Now, my friend John, put your price on them."

This demand confused the young pair very much, and to give them time to arrange their schedule of prices, I took up a little "interior," and went over by the window.

It was the old story of the unwilling boy (painted so well by Wilkie, I believe), standing before his grandam, his reluctant hands outstretched within a skein of yarn, which is being lazily wound into a ball.

It was a very good copy, and the face of the boy was plainly a portrait of my young artist.

But the old woman. Where had I seen that kind, gentle, old face before?

In an instant I remembered the old yellow house, and the sharp-tongued woman who had rescued me from a cruel relative's beating, and sheltered me for weeks, till I was strong enough to run away, with the money she gave me.

Here was the same face—older, sadder, but not to be mistaken by the heart which bore upon its grateful tablets the memory of but one friendly countenance.

I knew I betrayed in my manner the great interest I felt in the picture, for John Masters answered, in a surprised sort of way, my eager questions.

"The little picture is a copy, but the faces are my feeble attempts at portraiture. The boy's is that of my own, and the other a recollection of my dear old grandam."

"And her name?"

"Was Hepsebeth Turner: and my blind grandfather, who——"

But I waited to hear no more. The good woman who had lived in my memory as my patron saint; over whose ill-kept grave I had ordered the erection of the handsomest monument money could construct; whose family, according to the representations of my family, was dead or scattered past the finding—must have smiled with joy at the reception I gave John Masters's words.

"Why, God bless you!" I cried. "You shall be my son—you shall have every dollar I possess; we will live together, and you shall marry Mattie!"

And Mattie blushed and simpered, and John could not restrain his tears, as I pictured my lonely, ill-treated youth, and the one gleam of comfort and sympathy that I owed to his dead relative.

Did I bless the delay at Ausable Village? A thousand times a day, I believe. And when, three weeks after, in the mighty woods of the Adirondacks, we sketched out a plan for the future, I found that in finding John Masters I had discovered a happiness that would endure till the end.

It was the greatest triumph and joy I ever knew, a few years later on, to introduce my adopted son and his wife, Mattie, to the scheming Mrs. Seymour, and Lou and Carrie Barnett; to witness their astonishment at seeing the grandson of poor old Hepsey Turner proclaimed heir to my hard earnings; and feel my declining years were to be softened by unselfish love and the prattle of

Digitized by Google

fond children; for as I write this closing sentence, a stout little fellow, just out of petticoats, waddles in. I ask him, "What do you want?"

"To play horse with grandpa."

"And what's the little driver's name?"

"Simon Seymour Masters."

And so with Simon Seymour Masters on my back, I leave my literary labors, to become for a time a vicious, hard-mouthed horse—to prance and rear, and finally be reduced to gentle trots and amiable ambles, by the caresses and cries of my little Rarey—the grandson I never would have had but for that blessed Ausable Chasm.

THE MERRY-GO-ROUND DURING STATE FAIR WEEK.

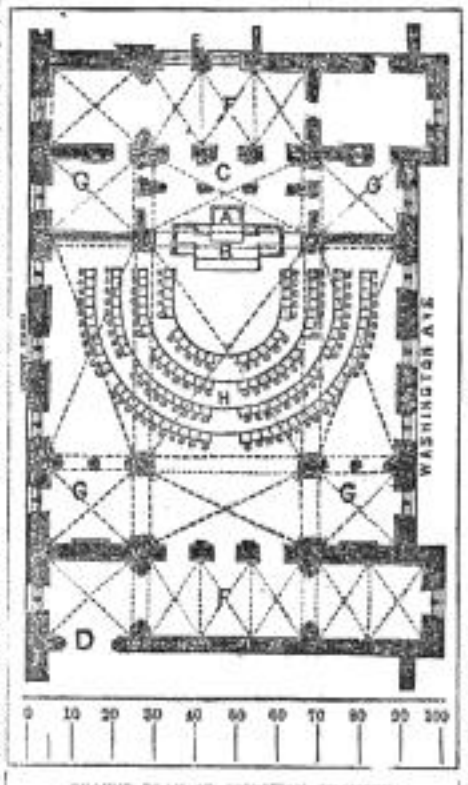
WHILE a State Fair in the South has peculiar attractions for all classes of citizens, to the colored people it affords an opportunity for enjoyment that is not a part of other events. Beyond the engrossing interest in the racing and trotting of horses, they care little for the specimens of animal nature and man's handicraft which compose the general list of novelties. The fair season opens to them a round of frolic and limited dissipation arranged by their own committee for their own "set." Eating and drinking, betting, swamping and story-telling, banjo-playing, cake-walking and dancing, occupy the greater portion of their time; while, for a breathing spell, they patronize the "Merry-go-Round," which develops all the humor of their nature. When seated on the wooden chargers they are turned as rapidly as the joints of the "man at the wheel" will allow, they indulge in a kind of horse-talk wonderfully wise, and unknown to any long-established course. Not only can they enter themselves for a steeple-chase, sweepstakes, hurdle-race, or the grand cup, for a diminutive fee, but they may at the same time participate in the excitement of a tournament of the knights, conscious that the fair ones of their set will not be a whit behind the white belles in applauding and honoring him who carries off the ring, even if the forefinger is used instead of the medieval lance. The purveyor of favorite edibles sagaciously keeps herself well to the front to catch the ready pennies. Little notice is taken of white visitors beyond a badgering in the dialect of the plantation, the spot being regarded by the colored people as their own particular province while the fair lasts.

A PALACE FOR NEW YORK LAW-MAKERS.

THE ASSEMBLY CHAMBER IN THE NEW CAPITOL.

THE State Capitol at Albany, which has been occupied for the last time, was erected in 1808 from the proceeds of a great State lottery. Seventy Legislatures have met in it, have passed laws for the government of a community which in that period has increased from less than 1,000,000 to more than 4,500,000 souls, and in wealth in still greater proportion. It will now be demolished and the site laid out as a part of the park in front of the new and massive capitol. In a few days the Legislature will be called to order in the magnificent building, the Assembly meeting in its own hall, and the Senate occupying temporarily the apartment designed for the Court of Appeals. When the present Commissioners took hold of it, in 1875, about $7,000,000 had been spent, and the structure had risen above the ground floor only a few points. Latterly, instead of carrying the work forward equally in all its parts, the present Commissioners have wisely restricted themselves to one section of the building, and the result is that the portion of the structure in which the Assembly Chamber and the room for the Court of Appeals are situated is finished, while the remainder of the work is only so far completed as the requirements of the advanced stages on the other parts have made necessary. The amount expended by the present Commissioners is about $3,000,000, making the total cost, so far, about $10,000,000. These figures may indicate the sum which will have been expended when the entire work shall be actually finished, and which cannot be far from $16,000,000.

The building is so vast and the halls so elaborately finished and decorated that our present space will permit of a notice of



THE ASSEMBLY CHAMBER

only. The extreme dimensions of this apartment are 140 by 84 feet. In the centre of this space stand the four columns which support the ceiling. These inclose a space which may be roughly put at 45 by 55 feet in area. On these columns rests the central vault of the roof, the keystone of which is 56 feet above the floor. The square spaces on either side of this gallery are walled out of the chamber, and the spaces under them are vaulted lobbies. Thus, nearly all of the space between the two columns at that end of the chamber and the exterior wall is excluded from the room. The platform on which stands the Speaker's desk is a recess formed by the advancement of the masses on either side of the central bay. Behind the Speaker's desk are three arched openings, divided by coupled columns, and intended to be closed by drapery. The wall above the openings behind the desk is carried up to the front of the gallery, and is enriched at the top by elaborate tracery. There is no woodwork anywhere except in the doors and furniture of the chamber. At the eastern end of the room is a deeply-recessed bay, corresponding to that at the western end. This, also, is filled with galleries, and the corners of that end of the room are filled with two square masses, supported by columns. Above, these are finished with stone screens, behind which are seats for visitors, while below are panelled ceilings, richly-carved; fireplaces inclosed in elaborately carved stone are built against the wall of the space thus inclosed. The columns of the main entrance carry a stone screen which forms the front of the gallery above, and is finished at the top with flowing tracery. The vaults which abut on the main vault of the chamber are five feet lower at the apex, and their ridges rise about five feet from either end.

The room is lighted by four large windows on either side, filled with clear glass. Above these are blank spaces left to be filled with bas-reliefs, and above this another line of five windows, filled with glass painted, or stained with a soft, warm, uniform tint. Above these is another line of openings, and above these, in the arched spaces formed on the wall of either side of the room by the sweep of the vaults, are the pictures just finished by Mr. William Hunt. The prevailing hue of the stone walls, vault, pillars, and screens, is gray. It would be cold but for the free use of color and gold employed by the architect. The great pillars, however, are of polished red granite, four feet in diameter, with marble capitals. Here and there are spaces of blank wall, and the lesser columns are left with only their own carving; and this work in stone is a marvel of delicacy and vigor wherever it is used throughout the building. The ceiling is composed of several varieties of stone, the hues being bluish gray, yellowish and buff, with a pink suggestion. The ribs of the arches are of a cold, gray stone, left in undecorated strength. The vaults are banded with incised ornaments of conventionalized leaves, the incised parts being colored, and the bands following the courses of the stonework. Bands of gold ornament the edges of the decoration, which is in blue and red. The effect of this is novel, the feeling being Oriental rather than Western. The vast windows are to be draped with curtains of tapestry in two shades of gold, and the furniture of the room is to be in mahogany and crimson leather. All this will furnish a solid substratum of dark color, the effect of which will be to subdue the brighter tints above.

THE PAINTINGS IN THE ARCHES.

In the arches of this chamber are spaces, semicircular in shape, 16 feet high at the apex and 45 feet wide, and about 40 feet above the floor. These are filled with paintings by William Hunt. On the north wall is painted "The Flight of Night," a composition which has engaged the attention of the artist, at intervals, for many years. This may be supposed to be suggested by the flight of the dark ages, the revival of learning and the arts, and the general awakening of the world, which mark the era immediately preceding the discovery of America. In the picture, the Queen of Night, seated on a chariot of clouds, is drawn by three spirited steeds, black, red, and white, down the western sky. Behind her drifts, in a wind-blown mantle, a sleeping mother and her child; and, behind these, and low in the sky, the red dawn is breaking. A black attendant, nude, with inverted and expiring torch, guides the horses as they plunge downward, his hand lightly laid upon the head of one. The composition is spirited and bold, and the color is superb. The horses occupy the most conspicuous part of the picture, and are wonderful examples of power in modeling. The white horse, nearest the spectator, is so admirably foreshortened that he seems starting out of the work. The figure in the chariot is, perhaps, less fortunate, as it might have been less suggestive of Aurora in its girlish beauty, and more queenly in its pose. Nevertheless, the picture, with its companion, is such an immense advance beyond anything of the kind ever attempted before in this country, that no fair critic will carp at any of its inevitable deficiencies. "The Discoverer," on the opposite wall, represents the voyaging discoverer standing in a boat which rises lazily to the lift of the sea. Fortune holds the helm with one hand, while with the other she trims the sail. Hope is at the prow, her fair, bright face turned towards the West. Faith, burying her face in her hands, floats beside, and Science, half rising from the wave, upholds the chart. The Discoverer, a realistic figure, half draped and half in armor, is evidently bent on subjugation as well as discovery. He is an armed man. He stands in the centre of the composition, his arms folded in his mantle, and his gaze thoughtfully bent before him. The drawing of the attendant figures is superior to that of this central figure. These float, and the movement of the whole is grandly expressed.

GROUND PLAN OF ASSEMBLY CHAMBER.

A. Speaker's chair. B. Clerk's desk. C. Reporters' gallery over. D. Public entrance. E. Speaker's entrance. F F. Lobbies (galleries over). G G. Galleries over. H. Members' seats. The dotted lines represent the vaulting.

NEW CONFEDERATE MONUMENTS

AT MEMPHIS, TENN.

ON the 5th of June last a monument to the memory of the Confederate dead was dedicated in Elmwood Cemetery, Memphis, Tenn., in the presence of 5,000 spectators, after the graves of a large number of soldiers and sailors had been decorated with flowers. On the crest of the beautiful hill on the slope of which the Confederate dead are buried the monument stands. Around its base, and far down the crest of the hill and into the valley, the little white headstone grave-markers rise above the blades of grass, and peep from beneath the waving white-topped clover. The following is the detailed description of the monument: A molded base, five feet six inches square, one foot ten inches high. On the front of the same are cut, in raised, polished letters, the words "Confederate Dead." On the back of the same is the following inscription: "*Illis Victoriam Non Immortalitatem Fata Negaverunt.*" On the base rests a molded base, four feet four inches square and eleven inches high, with column plinths at the angles. Then comes a die, three feet two inches square and two feet three inches high, recessed at the corners for the shafts. The faces of the die are highly polished—polished shafts, carved capitals and molded bases. The upper portion of the die is four feet two inches square and two feet five inches high, with a Gothic arch and panel on each side, and with a carved wreath in relief. On each spandrel the four corners are molded. Then comes a molded and carved cap, five feet square and one foot three inches high. Above this cap is a molded column base, three feet nine inches square and one foot eight inches high, with the Tennessee State and the Confederate States arms in high relief. Above these coats-of-arms and beneath the trophy are the words "*Deo Vindice*," in relief. The shaft is three feet square at the bottom and two feet two inches square at the top, and sixteen feet long, with a trophy of flags and arms at the base of the shaft in high relief and garlands in low relief—all polished. The frieze is molded, and has stars in full relief between the moldings. On top of all this is the capital, three feet four inches square and one foot seven inches high, richly carved. Surmounting all is a finial two feet two inches square and two feet eight inches high, composed of cannon balls.

The dedicatory address was delivered by General W. Y. C. Humes.

AT DANVILLE, VA.

The monument at Danville, Va., the last capital of the Confederate States, was dedicated on September 3d last, the oration being delivered by Captain John S. Wise. There was a long procession of military, secret and social organizations.

The monument was the work of a New York sculptor. Its site is an elevated knoll in Green Hill Cemetery, in the southeastern suburbs of the city. The approach from Lee Street, which bounds the cemetery on the north, is by a wide avenue of easy grade, and to the eye the monument presents an appearance moderately imposing but strikingly tasteful and touching. Around the base are buried the remains of over five hundred Confederate soldiers, gathered from other burial places and interred here in circular trenches without tombstones. From the mound on which the monument stands there is a lovely view of the surrounding country varied by hill and dale and an occasional glimpse of the silvery river. To the northeast the United States Cemetery is the striking feature of the landscape, with its verdant slopes dotted with marble tablets, marking the resting-place of 1,326 Union soldiers, high above which float the Stars and Stripes. Around the knoll from which rises the Confederate monument stand a few scattered pines. The monument is entirely of Virginia granite, highly polished. Its base is seven feet square; it contains eighty-one cubic feet, and weighs over seven tons. The faces of the die are four feet by five, and each bears a tablet of smooth, polished granite containing an inscription. The shaft is four-sided and rises gracefully from the pedestal. The height of the whole structure is twenty-four feet, but the effect is increased by a turf-covered mound on which it stands, and which raises the height to thirty feet.

On the north side of the shaft, just above the cornice, is a medallion of General R. E. Lee in standard bronze, with the name "General Robert E. Lee" beneath it. Below this, on the tablet, is the inscription:

Confederate Dead.
Memorial Tribute
Of Virginia's Daughters
To the Fallen Brave.
Danville, Virginia,
1878.

On the opposite side is a similar medallion of Stonewall Jackson, with the name General Thomas J. Jackson beneath it; and below this on the tablet is the inscription:

They Died
As Men Who Nobly Contend
For the Cause of
Truth and Right.
"They safely lie and sweetly sleep."

On the side facing west there is no medallion, but the inscription on the tablet is as follows:

Patriots!
Know that these fell
In the effort
To Establish Just Government
and
Perpetuate Constitutional Liberty.
Who Thus Die
Will Live in Lofty Example.

On the side facing east there is likewise no medallion, but only the following inscription, adapted from Tacitus (Life of Agricola), on the tablet:

Quidquid ex his amavimus
Quidquid mirati sumus,
Manet mansuramque est in
Animis hominum, in
Aeternitate temporum, fama
Rerum.

The Semaphore in Bosnia.

During the recent occupation of Bosnia by Austrian troops the country was so unsettled that ordinary telegraphy was impossible, and recourse was had to field signaling. A large equilateral triangle, which can revolve on a pivot, is set up in some conspicuous spot and well guarded. This is covered with a linen cloth, upon which figures are painted somewhat in the fashion of a clock face, the figures representing the letters of the alphabet. The chief officer of the station, holding in his hand the dispatch to be transmitted, dictates to the operator the symbols or letters which he is to signal. As fast as the message is signalled from the original station it is reproduced in similar fashion upon a similar apparatus at the next station. Meantime, an observer at the original station reads this copy through a telescope as fast as it is reproduced and reports it aloud so that the chief officer may note and correct errors, if any. A further portion of a message is not signalled until it has been ascertained that the portion already sent has been accurately copied.

St. George's Chapel, Windsor.

THE backs of the oaken stalls or canopied seats allotted to the Knights of the Garter in St. George's Chapel, Windsor, are covered with small brass plates, engraved with the arms and titles of knights, past and present, to whom the respective stalls have been allotted. On the 21st of November, the Garter King-at-Arms went to Windsor and hung the banners and helmets above the stalls of Lords Salisbury and Beaconsfield, and also affixed the inscribed plates. That of Lord Beaconsfield bears the words: "*Du très noble et puissant Seigneur*, BENJAMIN, *Comte de Beconsfield, Vicomte de Hughenden, Chancelier de Sa Majesté en son Conseil Privé, Premier Commissaire pour l'exécution des offices de Grand Trésorier de l'Echiquier en la Grande Bretagne et de Grand Trésorier en Irlande, Chevalier du très noble Ordre de la Jarretière.*" The new knight's motto is "*Forti Nihil Difficile.*" It is curious that, as the Order of the Garter was not founded until near 300 years after the Norman Conquest, all edicts connected with it should have been put into French. The knights' stalls at Windsor are ordinarily occupied by any one who gets an order for a place from the Dean or Canons, or, which is just as good, conciliates the verger. Earlier in the century there were twelve canons, who consequently had but a month's duty a year, and each had a house and salary of from $4,000 to $5,000 a year. Now there are but four. The Canons of Windsor are usually selected by reason of their connection with the royal family, and the canonries are pretty much at the disposal of the Queen herself. So, also, with the Deanery. The present Dean is Dr. Wellesley, nephew of the great Duke. He has a spacious residence and a salary of $10,000 a year. The chapel is now in admirable order, the service excellently performed, and everything maintained at a very high standard.

Siberia.

SIBERIA is a territory covering about six times the area of England and Scotland. It contains a great number of penal colonies scattered at long distances from one another, and differing much in the degrees of discomfort they offer to their inhabitants. The colonists are divided into three categories—those who live at their own expense and are allowed to have their families with them; those who are supported by Government, but are suffered to eke out their small pittance by acting as servants to the richer colonists or working at trades; and, thirdly, those who are employed at hard labor on public works or in the mines. The miners are supposed to be the worst offenders, and their punishment is tantamount to death by slow torture, for it is certain to kill them in ten years, and ruins their health long before that.

Female Physicians in Russia.

THE question of women medical practitioners is not yet settled in Russia. On the 29th of October last the right of women who had completed a course of medical training to practice medicine in the empire was brought formally under the consideration of the Sanitary Council attached to the Ministry of the Interior. After prolonged discussion the Council unanimously resolved as follows: "Although the right to practice medicine by the female students of the medical faculty has not to the present been recognized by the legislative authority, having regard to the evidence now submitted by the professors, that these students are fully competent to exercise the medical profession, the Sanitary Council will itself endeavor to obtain from the Government the authorization necessary for them to enter upon practice."

Facts about Afghanistan.

THE greatest length of Afghanistan is 750 miles, the least 540, while its greatest breadth is 550 miles, and its least 370; so that it is rather larger than the whole of the United Kingdom put together. It is mountainous all through, with a series of elevated flat-bottomed valleys. It has no large rivers, and those it contains are generally fordable at all seasons. The climate varies: at Ghuzni it is extremely severe in Winter, the thermometer sinking to ten or fifteen degrees below zero, while it always begins to freeze in October. At Cabul in the middle of October the thermometer is always below zero at night, while from June to September the climate is very hot. At Candahar it is also hot in Summer, but in Winter the climate is perfect, as is also that of Quettah. All the so-called roads are shockingly bad, and there are no bridges. The population is about 5,000,000, entirely Mohammedans, almost exclusively of the Sunni creed. The regular army consists, for Cabul, of 31,000 men; Candahar, 18,000; Herat, 22,000—total, 71,000, of whom 45,000 are irregular horsemen.

The following table of distances may be useful to those who have not large maps at command, or a proper knowledge of their use:

Cabul to Quettah, 379 miles; Cabul to Balkh, 355 miles; Cabul to Merv, 440 miles; Cabul to Herat, 219 miles; Cabul to Peshawur, 192 miles; Cabul to Candahar, 316 miles; Cabul to Ghuzni, 86 miles; Cabul to Edwardesabad, 209 miles. Candahar to Quettah, 147 miles; Candahar to Ghuzni, 232 miles; Candahar to Herat, 367 miles. Quettah to Herat, 513 miles; Quettah to Mooltan, 290 miles; Quettah to Ghuzni, 293 miles. Peshawur to Jellalabad, 87 miles. Kohat to Ghuzni, 264 miles; Kohat to Thull, 66 miles; Kohat to Kurum Fort, 90 miles. Edwardesabad to Thull, 42 miles; Edwardesabad to Kurum Fort, 99 miles; Edwardesabad to Ghuzni, 239 miles.

The King Killers.

TWO PIECES of manuscript were found in the house of the cook Passananto, who attempted to kill the King of Italy. One was a half-sheet of paper, covered on both sides with writing in blue ink. The other was a notebook of small octavo size, containing a number of entries, written with the same ink. The latter contained the heads of Passananto's scheme for the regeneration of the world. A prefatory fiyleaf commences in this manner: "Dear brothers, men of the whole world, it belongs to you to solve the problem of society and the universe. The first step toward the happiness of mankind must be taken by immediate slaughter of all emperors, kings and princes." All occasions of war between the "national families" must be removed, and as a first step to this the reforming cook demands "the abolition of generals." The third class of men who would stand in the way of the inauguration of a "perfect economy of national families" are prefects, gendarmes and policemen. The punishments with which retail dealers are threatened are remarkably ferocious. All eatables are to be sold at a fixed price, but the articles on sale may be ranged in three classes—good, better and best—so that every purchaser of meat, butter, bread, or other food may choose according to his taste and his purse. The author of the scheme is no Communist, but a champion of the rights of property. Thieves, adulterators, coiners, cheats, and similar criminals, are to be "thrown into the flames." "Robbers and cheats who are able to produce extenuating circumstances are to be punished by a milder death." Trades unions are to be obligatory. Every citizen is to pay a monthly contribution into the three public banks of health and wealth—the commercial, the provincial and the universal. The Universal Republic will fix the amount and the kind of payment which each class of citizen is to render. The civil list will, apparently, be a very big affair. Every one will have a "right either to work or to be pensioned." Passananto declares in one passage in this notebook that he venerates "Christ as the model of steadfastness," and "Brutus (which Brutus?) as the model of self-denial and courage."

SENATOR TELLER,

CHAIRMAN OF THE BLAINE INVESTIGATING COMMITTEE.

HENRY M. TELLER, Chairman of the Senate Committee on the investigation of the elections in the Southern States, appointed on the adoption of Mr. Blaine's resolution, was born in Allegany County, N. Y., May 23d, 1830. He studied law, was admitted to the Bar in his native State, and has since practiced his profession. In 1858 he removed to Illinois, and thence in 1861 to Colorado. On the admission of Colorado as a State, he was elected as a Republican to the United States Senate, taking his seat December 4th, 1876, and being re-elected on the 11th of the same month for the long term. Previous to this he had never held any political office. His term will expire March 3d, 1883. He is Chairman on the Committee of Civil Service and Retrenchment, and a member of the Committees on Claims, Railroads, and the one appointed to take into consideration the state of the law respecting the ascertaining and declaration of the result of the election of President and Vice-President of the United States.

NEW MARION COUNTY COURT HOUSE, INDIANAPOLIS.

THE Court House of Marion County, Ind., at Indianapolis, was occupied for the first time in July, 1877, having been constructed and furnished at a cost of about $1,300,000.

The extreme length is 387 feet by 137 feet in width and 96 feet in height from ground line to top of entablature. The stone used for the exterior walls is a light drab limestone, quarried in Indiana, with columns of Scotch granite. The other materials of construction are brick and iron, no wood being used, which, with iron doors and shutters, makes the New Court House thoroughly fire-proof. The entrances are three in number, being at the east and west ends, and also on Washington Street front. These lead into finely proportioned vestibules, opening to the grand corridor. The vestibules at the ends are 16 by 56 feet and 17 high, and the corridor 170 feet in length by 30 in width and 90 feet from floor to apex of dome-light. Galleries around the second and third stories afford, with vestibules at each end, entrance to the different stories.

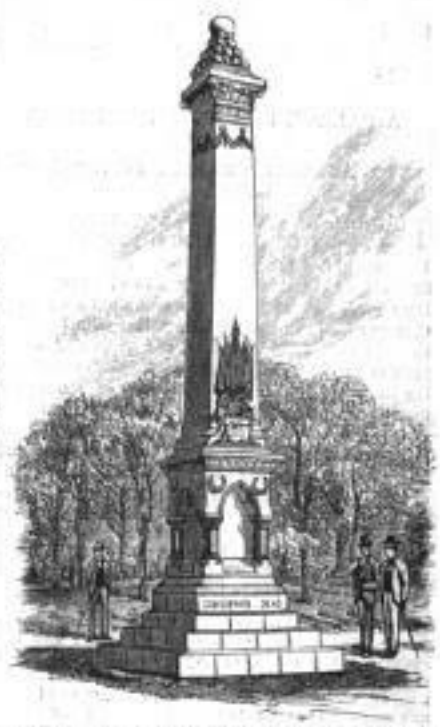
On the first story are located the offices of the county clerk, treasurer, sheriff, county commissioners, etc., which are of most ample proportions, and conveniently arranged en suite. These offices are finished and furnished in a style corresponding with the magnificence to be seen on every hand throughout the building.

The second story is 15 feet in height, except the court-rooms, which run through two stories, reaching a height of 30 feet clear. These rooms are simply marvels of architectural elegance, and have to be seen to be appreciated, as no description we could give in our limited space would do the subject justice. The size of these rooms are: Criminal Court Room, 70 x 50; the others, 56 x 41 feet; midway around three sides of each runs an ample gallery.

Upon reaching the third story of the corridor an unbroken view is had of its whole length, which enables the visitor to form a true conception of its stately proportions. Here is had an unbroken view of the entablature and cornice, supported by innumerable life-sized caryatides, between which, in the frieze, are bull's-eye windows, which furnish light to the corridors in the mansard story. These openings are converted into panels, and formed in such a manner as to give a very happy effect.

The mansard story, which is gained by means of ample iron stairways in the end halls, contains five large rooms, which may be used for special court-rooms, with innumerable smaller rooms, which can be used for any required purpose.

One of the most noticeable objects about the court-house is the great clock, which is worthy of the grand edifice in which it is placed. The clock is on the main tower nearly 150 feet above the sidewalk. The dials, which are over 10 feet in diameter, are illuminated at night, and there is scarcely a moment at any time at which some one is not looking up to the great clock for the correct time.



HON. HENRY M. TELLER, CHAIRMAN OF THE SENATE COMMITTEE ON SOUTHERN ELECTIONS. FROM A PHOTOGRAPH BY CHAS. BOHM.

SCHLIEMANN FINDS THE CITY OF ULYSSES.

DR. SCHLIEMANN has been digging over the island of Ithaca, and flatters himself that he has found the Homeric capital, where the wise Ulysses dwelt. It is not in the valley of Polis, where it has been located hitherto, but on the rugged sides of Mount Aetos, whose top he finds has been leveled off and extended by filling in above cyclopean walls so as to afford space for a mansion and courtyard, while some 2,000 houses, he estimates, were contained within cyclopean walls built around and down the hill. Some of these houses were cut from the rock, and some were built of the massive masonry, whose stones are greater than those of Mycenæ and Tiryns. He has found the ruins of 100 of the houses more or less well preserved; some of but one room, others of four or six chambers. Dr. Schliemann found a few fragments of pottery, like that from the two most ancient cities of Troy; some broken tiles, with curious ornamentation, and two inscribed with characters not yet deciphered. He wonders that he found anything at all, because the steep slope rendered the accumulation of débris impossible, and the rains have washed the remnants of ancient industry into the sea centuries ago. Dr. Schliemann found several things described by Homer, as the grotto of the nymphs, and at the southeast end of the island the very pig-stys of Eumæus, the divine shepherd.

"THE FALLEN LEAVES." BY WILKIE COLLINS.

Published exclusively in this Journal by special arrangement with the Author.

THE PROLOGUE.

(Concluded.)

VI.

JOHN FARNABY, posted at the garden paling, suddenly lifted his head and looked towards the open window of the back parlor. He reflected for a moment—and then joined his female companion on the road in front of the house.

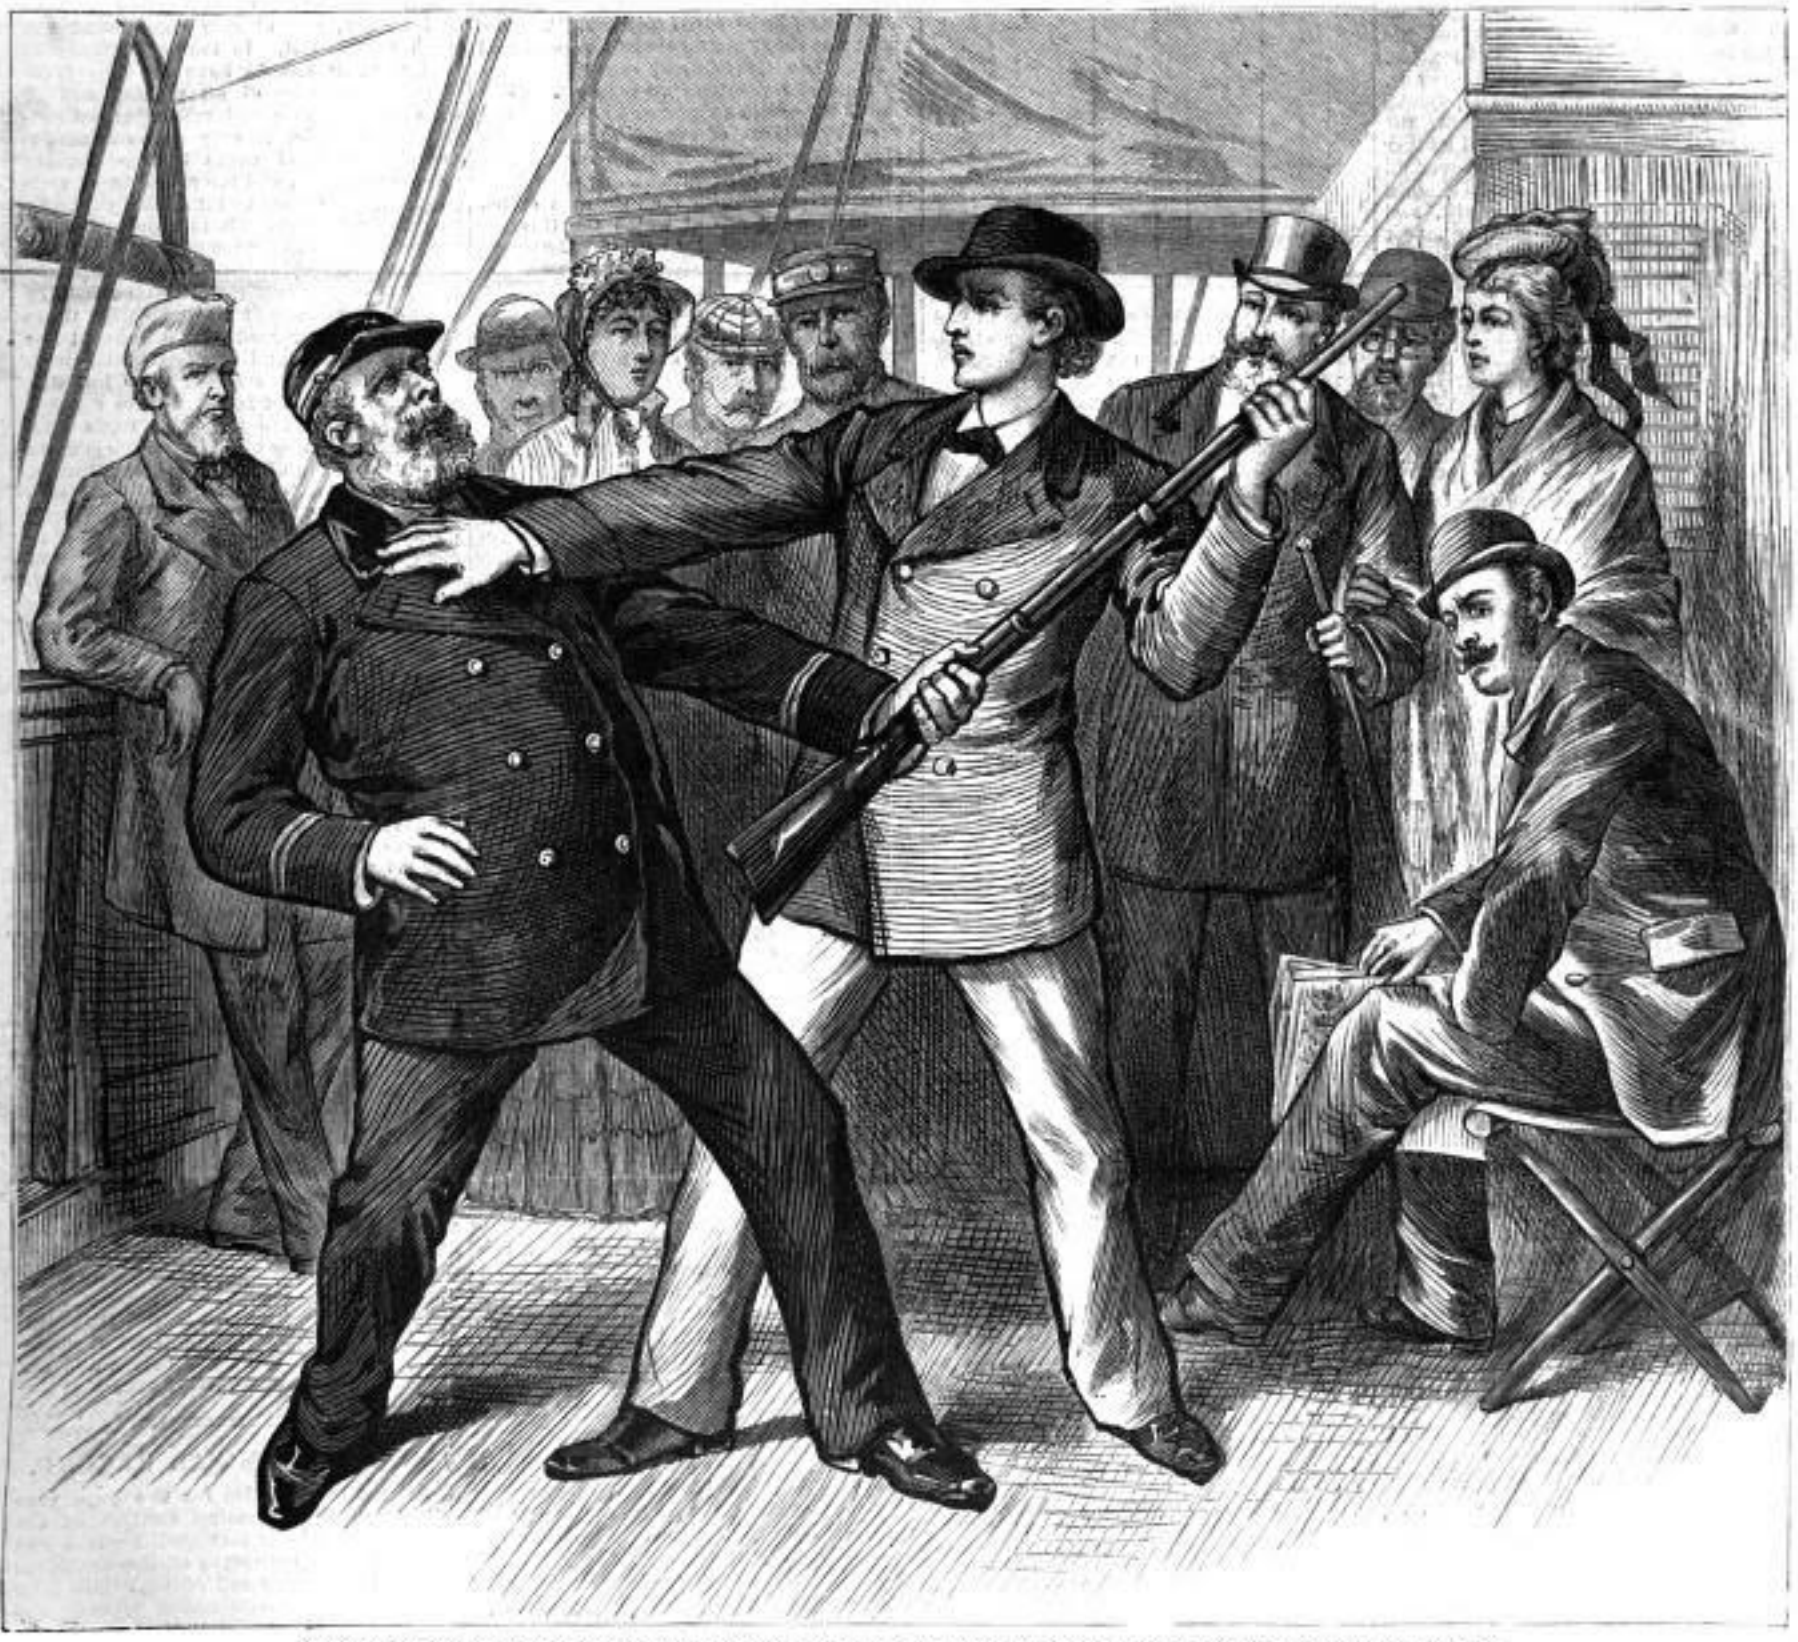
"I want you at the back garden," he said. "Come along!"

"How much longer am I to be kept kicking my heels in this wretched hole?" the woman asked, sulkily.

"As much longer as I please—if you want to go back to London with the other half of the money." He showed it to her as he spoke. She followed him without another word.

Arrived at the paling, Farnaby pointed to the window, and to the back garden door, which was left ajar. "Speak softly," he whispered. "Do you hear voices in the house?"

"I don't hear what they're talking about, if that's what you mean?"



"I don't hear, either. Now mind what I tell you—I have reasons of my own for getting a little nearer to that window. Sit down under the paling, so that you can't be seen from the house. If you hear a row, you may take it for granted that I am found out. In that case, go back to London by the next train, and meet me at the terminus at two o'clock to-morrow afternoon. If nothing happens, wait where you are till you hear from me or see me again."

He laid his hand on the low paling, and vaulted over it. The linen hanging up in the garden to dry offered him a means of concealment (if any one happened to look out of the window), of which he skillfully availed himself. The dust-bin was at the side of the house, situated at a right angle to the parlor window. He was safe behind the bin, provided no one appeared on the path which connected the patch of garden at the back with the patch in front. Here, running the risk, he waited and listened.

The first voice that reached his ears was the voice of Mrs. Ronald. She was speaking with a firmness of tone that astonished him.

"Hear me to the end, Benjamin," she said. "I have a right to ask as much as that of my husband, and I do ask it. If I had been

FRANK LESLIE, EDITOR AND PUBLISHER.

NEW YORK, JANUARY 18, 1879.

IMPORTANT NOTICE.

A special artist and a descriptive writer, from FRANK LESLIE'S ILLUSTRATED NEWSPAPER, *accompany the party of New York and Chicago merchants on their visit to Mexico with a view to the establishment of business relations with that country. The illustrations, which will appear from week to week, are to consist of the most interesting subjects connected with the expedition, while the description will be accurate, vivid, and deeply interesting. As both the illustrations and reading matter are intended to develop the commercial relations between the two countries,* FRANK LESLIE'S ILLUSTRATED NEWSPAPER *will obviously be the best medium for the acquisition of information on this all-important and engrossing subject.*

RESUMPTION ACCOMPLISHED.

"MAKE our money as good as gold," said Senator Sumner, "and the gold of the world will come to our assistance, helping all the demands of business, and adapting the currency to the occasion. Make our currency as good as gold, and the national example will be above reproach, while the wantonness of speculation will give place to the just transaction of an honest commerce. The same familiar paper will circulate, but changed from a lifeless corpse to a living soul, recognized and honored wherever credit is known." After many years of weary waiting and a fierce struggle with hostile influences, the people of the United States find themselves in possession of a currency as "good as gold." With resumption accomplished, the country in its financial history has reached the ground it occupied seventeen years ago. The event is one which may well provoke universal rejoicing. The merchant, the farmer, the mechanic and unskilled laborer have equal cause for gratulation over an event which secures the national honor, permanently fixes the public credit, and gives to every man and woman an honest dollar in exchange for property or service.

Now that the Government has begun the redemption of its legal-tender notes with gold, it may not be amiss, perhaps, to take a retrospective view of the financial situation forced upon the country by an unwise and most unhappy war. In view of the threatening attitude assumed by the Southern States, Congress passed an act, March 2d, 1861, authorizing the issue of $35,000,000 in Treasury notes. These notes were to be receivable for all debts due the United States, including customs, and made redeemable at any time within ten years. The Act of July 17th, 1861, authorized the issue of $50,000,000 non-interest bearing Treasury notes, payable on demand. By Act of March 12th, 1862, the amount was increased to the extent of $100,000,000, but only $50,000,000 in all were issued. The Act of July, 1861, also authorized a loan of $250,000,000, a portion of which was to consist of Treasury notes, bearing interest at the rate of 7 3-10 per centum per annum, and payable three years after date. The amount issued was $140,694,750. The Act of February 25th, 1862, authorized the Government to issue $150,000,000 of United States notes, made payable to bearer. These notes were not to bear interest, and were made legal-tender for all purposes except payment of duties on imports and interest on the public debt; $150,000,000 more of the same character of notes were authorized by Act of July 11th, 1862, and an additional $150,000,000 by the Act of March 3d, 1863.

Certificates of indebtedness, bearing interest at the rate of six per cent., were authorized by the Acts of March 1st, and May 17th, 1862. The amount issued, as per Treasury statements, was $561,753,241.

The Congressional Act of March 3d, 1863, authorized the issuance of $400,000,000 of one-year Treasury notes and $100,000,000 two-year notes, such notes to bear interest not exceeding six per cent., and made payable in legal-tender notes. Amount issued, $210,920,000.

Compound interest-bearing notes to the extent of $400,000,000 were authorized by the Act of March 3d, 1863, of which sum only $262,595,440 were issued.

By Act of June 30th, 1864, Congress authorized the issuance of $200,000,000 Treasury notes of denominations not less than $10 each, the same to bear interest at the rate of 7 3-10 per cent., if not redeemed on or before the expiration of three years. The Act of March 3d, 1865, authorized a loan of $600,000,000, or Treasury notes similar to the foregoing, all of which were issued in the shape of notes.

More than thirteen years have rolled away since the passage of the last-named Act, and of all the vast sums authorized by Congress, only about $346,000,000 of the legal-tenders are outstanding, and these, at last, are exchangeable for gold. The ability of the country to meet and pay so much of its indebtedness forms the lighter shade of the financial picture.

As already pointed out, the Government issues of paper aggregated $225,000,000 during the year 1861. This paper went into circulation along with the paper of the banks, and swelled the volume of currency to more than double the amount which the whole country had been using in 1860. The strain was far too great for the maintenance of the bank and Government notes at par. The Government was wholly incompetent to redeem in gold, and the banks were unable to take care of their own issues together with the irredeemable notes issued by the Treasury Department. To speculate as to what might have been the result had the legal-tender notes been withheld would now be a mere waste of time. Suffice it to say that the banks of New York, Boston and Philadelphia, after giving the Government valuable financial aid during the whole of 1861, found themselves unable to go on after that period and maintain specie payment. Suspension followed as a necessary consequence, and although the year 1862 opened with paper currency at par, before it came to a close a dollar in gold was worth thirty-four cents more than a paper dollar. In February, 1863, a coin dollar possessed a purchasing power equal to $1.72½ in currency, and in July, 1864, one dollar in gold equaled $2.85 in paper.

The following table—valuable for future reference—furnishes the currency price in dollars of one hundred dollars in gold, and the gold price in dollars of one hundred dollars in currency, averaged by years, from 1862 to 1878:

Years.	*Currency Price of $100 Gold.*	*Gold Price of $100 Paper.*
1862	$113.3	$88.3
1863	145.2	68.9
1864	203.3	49.2
1865	187.3	53.5
1866	140.9	71.0
1867	138.2	72.4
1868	139.7	71.6
1869	133.0	75.2
1870	114.9	87.0
1871	111.7	89.5
1872	112.4	89.0
1873	113.8	87.9
1874	111.2	89.9
1875	115.1	86.9
1876	111.5	89.6
1877	104.7	95.5
1878	*[illegible]	*99.0

The first premium, so-called, on gold was quoted in January, 1862, the figure standing at 105. It was not until February, 1877, that the premium reached this point again, at which time it was quoted at 104¼. The highest premium during the year was 102¾ in January. It fluctuated at merely nominal rates during succeeding months, and closed at par before the year ended.

Notwithstanding the suspension of specie payments, matters went on as merry as marriage-bells from 1862 to 1873. Business moved briskly, speculation flourished, men made and squandered fortunes, and few or none apprehended the coming of an evil day. The crash came at last, and the country awoke to the fact that an inflated irredeemable currency was an evil which ought to be eradicated. The Forty-fourth Congress, elected in 1874, fresh from their constituencies, enacted the Resumption Law, and fixed January 1st, 1879, as the date of its operation. The men of business who managed to escape financial ruin, together with the banks, began to shape their affairs to meet the new order of things; and at last resumption is an accomplished fact. It came as quietly as the snowflake falls. In spite of opposition and evil prophecies it has come to the country without creating the slightest disturbance to business or the least excitement in commercial circles. Now that men can exchange greenbacks for gold, they don't care for the metal. There is no run upon the banks or the Treasury. On Thursday, the first day of resumption by the Government, the Sub-Treasury in this city received about $400,000 of gold, and paid out little more than $132,000. Gold certificates to the amount of $300,000 were sent in and exchanged either for currency or Clearing-house certificates. Banks sent in gold and received certificates representing Government legal-tenders, and individuals, as a matter of choice, received the greenback currency. Resumption, as we have ever contended, was something to be desired rather than dreaded. It was the one national blessing needed to raise the country from bankruptcy and ruin to prosperity and happiness. It has come as a New Year's gift to our people. The vocation of the gold gambler is gone, and the poor man's dollar is equal to that of the "bloated bondholder."

During a period of sixteen years we have been using a currency having no specie basis. A generation has grown up within the time, who practically know nothing of the uses of gold and its need as a regulator of currency. The time of waiting has been long, and yet we have accomplished more than did England under like circumstances. For nearly a quarter of a century—from 1797 to 1821—specie payment remained suspended in that country, and when at last resumption came to her people, it was a hard and grinding resumption. It has been well said that national suspensions are "big things" and oftener end in repudiation than resumption. England, France, and the United States have set the world an example which makes the name of each a synonym for honor and integrity. On the other hand Russia, has been suspended about sixty years, and may not resume within a century to come. Austria has been suspended nineteen years, and Brazil quite half a century. The present Governments of Spain and Turkey, in all human probability, will never resume.

But while we have successfully achieved resumption, we might have reached that result at a much earlier date had our Government and people been as wise as those of France. During our war troubles Congress authorized the Government to issue its own notes free from interest. At the same time the national banks were constituted and given authority to issue bills equivalent to the security deposited, less ten per cent. Not so with our revolutionary ally. When France became involved in war with Germany, her Government authorized the Bank of France to increase its issue from $280,000,000 to $640,000,000. This increase the Government borrowed. In consideration of this loan the bank, with no adequate specie reserve, was permitted to issue legal tender and loan it at interest. The Government repaid its loan to the bank as quickly as possible, and so fast as the notes were paid in the bank authorities canceled them. Had the same policy been pursued here, we should have arrived at resumption years ago, and the croaking of the Greenbacker would never have been heard in the land.

In paying the heavy indemnity—five milliards of francs—exacted by Germany, France displayed equal wisdom. The demand was for prompt payment in gold and silver. The Government offered its five per cent. *rentes*, or bonds, to the public, and almost the entire amount of $1,640,000 was taken by citizens of France at an average price of 83 per cent. When the second loan was offered in 1872 the subscriptions were thirteen times greater than the sum called for, in consequence of which the Government was compelled to divide the *rentes* among the subscribers *pro rata*. The French *rentes* can be had in denominations of 100 francs—equal to $20—and upwards. Our own Government, borrowing an idea from French experience, is now making use of the same in popularizing the four per cent. bonds. The French people suffered heavily in the payment of war indemnity, but the American people have borne quite as heavy a burden in the loss of purchasing power in their currency. France avoided that grave mistake, and has been the gainer thereby.

Now that the country has reached resumption, and our financial condition is bettered thereby, the people should demand that Congress repeal the foolish, if not downright dishonest silver Act of February 28th, 1878. The experience of the past year has given plain indication that the country has no need for silver save for subsidiary purposes. If the people could dispense with silver dollars when silver was dear, surely they do not need them now when silver is plenteous and cheap. From 1864 to 1868, both years inclusive, the Government only coined full silver dollars to the extent of $229,000. In the International Monetary Conference, held at Paris in 1867, the statement that we possessed a double standard was disproved by showing of the total silver coinage by the United States mint of $136,351,512 of silver, only $4,366,340 consisted of the full dollar of 412½ grains, while $131,985,472 consisted of its subdivisions reduced seven per cent. in weight, and not a legal-tender beyond five dollars. During the five years, ending with 1868, this now strangely venerated "dollar of our fathers" bore a premium of three per cent. Then no patriots were found lauding and clamoring for the ancient historical dollar. Why? Because the game would not pay. Without pursuing this matter further, we will simply add that, as a first-class commercial nation, the United States does not require a double standard, nor can the people afford to use fraudulent silver dollars for the accommodation of the so-called bonanza kings of the Pacific Coast.

* Closed about the middle of December at par.

THE ELECTION INQUIRY.

THE maintenance of the purity of the suffrage and of the orderly methods of free speech is not a question of partisan politics. It belongs to the domain of primary duties into which no suggestion of prejudice or passion, no bitterness of faction, can by any possibility enter. The protection of every voter in the full enjoyment and exercise of the right to cast his ballot without restraint or intimidation is a fundamental obligation, the evasion or neglect of which must lead, inevitably, to disaster both to the individual and the State. If a single citizen may be coerced or terrified by any method either not to vote at all or to vote otherwise than he desires, and the act of compulsion is permitted to go unchallenged, the rights of all other citizens are endangered, and there can be no security that the will of an audacious minority, embodied in brute force, will not become paramount in the public administration to the voice of the majority declared through constitutional forms—thus making an end of government "of the people, by the people, and for the people."

Close upon the heels of the late State elections official statements were laid before the President charging that "in various parts of the Union, especially in certain portions of the States of Louisiana, South Carolina, Texas and Virginia, there were instances of unlawful combination and violence intended to prevent a free and peaceful advocacy of candidates for Congress, and that upon the day of election deliberate frauds were resorted to in voting and canvassing the votes, often accompanied by threats and intimidation." It was added that "the canvass and election were accompanied in the State of Louisiana by a series of cowardly and cruel murders, the only apparent motive for which was to prevent the colored people from exercising their right of suffrage." The Attorney-General, communicating these reports to the Executive, stated further that the attempt to bring to justice the violators of the law "had been followed by systematic persecution of United States officers and of witnesses who had been called to testify in regard to the transactions complained of," this persecution in some instances taking the form of brutal violence.

It was upon this state of facts, or alleged facts, that the Senate raised a committee to investigate the whole subject of violence, fraud and intimidation in elections, both South and North. The committee, embracing gentlemen of undoubted fairness and ability, has already commenced the work assigned it. In the performance of that work it should have the hearty co-operation of men of all parties, and of all national, State and municipal authorities, upon whom it may call for assistance. The good name of the country has been tainted, and the principle of self-government brought into disrepute, by the statements which it is proposed to investigate. It is imperative that we should know the precise truth. If there has been, anywhere, an organized conspiracy against the freedom of the ballot, those who were concerned in it should be brought to just and condign punishment. This can only be reached by a full discovery of the exact facts. If the charges are false, and have no better basis than partisan prejudice or passion, the country should have the benefit of that disclosure. Especially is it due to the Southern States that they should be given an opportunity, by a thorough and impartial inquiry, to clear themselves of the accusations brought against them. Their future prosperity, industrially and commercially, depends upon the establishment of absolute security for every citizen in all his rights and interests. They can never fully utilize their enormous resources so long as any uncertainty exists as to the maintenance of law and justice everywhere within their limits. An honest investigation, going to the bottom of the political situation in those States, will vastly facilitate their development if the crimes charged against them shall be shown to have no existence. If the evils actually exist, then their discovery will also, in the end, contribute to the advantage of the country, in the opportunity which will be afforded for their correction and the elimination of the elements which foment them.

There is, apparently, in some quarters, a disposition to belittle and obstruct the inquiry now in progress. Partisans apprehensive of its influence upon this or that political interest, or one or another partisan organization, seek to embarrass the committee, and in one or two reported cases have spirited away witnesses whose testimony was regarded as important. There can be but one opinion among right-thinking citizens as to proceedings of this character. They are utterly indefensible on whatever ground considered, and Republicans and Democrats alike, who care more for country than party, should assert their influence in support of the committee which is charged with the solemn trust of vindicating the freedom of the ballot and the integrity of American institutions.

A YEAR'S CRIMINAL RECORD.

THE police statistics for the past year furnish an interesting exhibit of the criminal side of our metropolitan life, and the causes and character of the principal offenses against law and order. The total number of persons arrested during the year was 78,441, of whom about two-thirds were males. Sixty-five per cent. of all arrests were for drunkenness and disor-

Digitized by Google

derly conduct, and a large proportion of the remainder were for offenses committed by intoxicated persons. The only conspicuous crimes against property were the Stewart vault robbery and the burglary at the Manhattan Bank. The number of burglaries, comparatively trifling in extent, was 540; felonious assaults with firearms and other dangerous weapons were numerous, and in many instances of a serious nature. There were about 160 arrests for embezzlement and 190 for false pretenses. The trial of larcenies for the year was 5,400.

Of the whole number of persons arrested only twenty per cent. were unable to read and write, and a majority were natives of the United States. The Irish are second on the list, and are followed by the Germans. The English come next, then the French, and then natives of the British Provinces. The Scotch follow, and are succeeded by Chinese, Austrians, Russians, Turks, Poles, Swedes and Danes. The greatest number of crimes were committed by persons under the age of twenty years and by those between twenty and thirty. All trades and professions are represented among those arrested, but the largest number is made up of persons without occupation, laborers, abandoned women, bartenders, clerks, servants, housekeepers, peddlers and drivers. Many actors and actresses were imprisoned during the year. About a dozen clergyman also helped to swell the throng of criminals. Merchants figure conspicuously on the records as well as musicians, painters, printers, tailors and firemen, and even policemen, detectives and deputy-sheriffs have been arrested for various offenses. A number of lawyers were charged with more or less serious crimes, and several of them were convicted of felonies and sent to State Prison.

EVENTS IN EUROPE.

PARISIANS have made the most of the snow and ice which this severe Winter has supplied them with more plentifully than any since the "terrible and bloody Winter of the war." The ugly wooden sheds, with which for a fortnight at the close of the year they habitually disfigure the Boulevard des Nations and its neighboring Boulevard des Italiens have not only exhibited the usual variety of toys for New Year's, but have been covered with an unusual drapery of white. The gay promenaders, wrapped up in all kinds of furs, from the costly marton to the imitative seal-skin, have tried to imagine that they were in Russia instead of "sunny France"—so called, perhaps, because the sun so rarely shines there in Winter. The Champs Elysées have been transferred into the perspective Newski, and the Seine into the Neva. Skating and sleigh-riding are rare delights at Paris, and few except Russians and Americans keep skates and sleighs ready for seizing the brief opportunity for enjoying in the Champs Elysées and avenues of the Bois de Boulogne these favorite pastimes of colder climates; but seldom have such pastimes been more fully enjoyed in Paris than during this season. Nor does Paris now lack for a bewildering variety of indoor entertainments. The traditions of old *salons*, where witty conversation and elegant manners were the rule, may be gradually disappearing from the French capital. But although many more invalids than formerly are driven away from it in Winter, and it is become fashionable for certain families of reactionary political sympathies to pass the most inclement months of the year at their châteaus in the country, or at Nice and elsewhere further south, and to vote Parisian society under the Republican *régime* altogether degenerated, there is probably more prejudice than reason in the complaint so loudly uttered by censors of this stamp. If there were no other parlors to frequent in Paris than those of the wealthier members of its American colony, which Dumas and Sardou, and, in his turn, Pailleron (with his very successful play, "L'Aye Ingrat," at the Gymnase), travesty and satirize, if not libel, on the French stage, one could not be at a loss as to where to spend a social evening agreeably.

The court of the Queen of England and Empress of India is now in mourning on account of the recent death of the lamented Princess Alice. Virtually, it has never been out of mourning since the father of the princess, the late Royal Consort, died, by a strange coincidence, just seventeen years to a day before her. Perhaps it is partly, therefore, that it is so doleful and dull to the Duchess of Edinburgh as to make it difficult to persuade her to visit England even for a few weeks. She is averse to leaving her father, the Czar, whom she idolizes, and it is evident that she does not love the English Court. Nor does the latter love her, although it is intimated that after the Marquis of Lorne, the husband of her sister-in-law, the Princess Louise, shall have served his term of five years as Viceroy of the Dominion of Canada, the Duke of Edinburgh may be pushed forward as his successor, with a view to seeing what chances he might have of becoming King, after being Viceroy of the Dominion. Another Viceroy is said to be in training in the British Royal Family—the Duke of Connaught, who will possibly become Viceroy of Ireland next year. It is added that the Prussian princess whom he is to wed is as amiable as she is pretty. Prince Leopold, the youngest son of the Empress-Queen Victoria, resembles his father in refinement and mental qualities more than does any one of his brothers or sisters. He wishes to take orders in the Anglican Church, but he has already such High Church notions that it is feared by some of his royal relatives that he might go further and die a Cardinal of Rome, like the last of the Stuarts. That would be as awkward for a son of the Head of the Church of England, the Queen, as it seems, to Catholic eyes, for Her Majesty to wear Henry VIII.'s old title of Defender of the Faith. Prince Leopold is to be made Duke of York.

The Czar and the Czarewitch celebrated, at St. Petersburg, on the 1st of January, the anniversary of the passage of the Balkans by the Russian army. Notwithstanding the proud memories of the day, the Czar's emotions must have been somewhat gloomy on this occasion, in view of the changed position of Russia, and also of the menaces which have been whispered against his life and against the lives of all European monarchs during the past year. The Czar has just received a mysterious communication announcing that sentence of death has been pronounced upon him by a secret council. On the other hand, the death-warrant of Moncasi, who tried to assassinate the King of Spain, was reluctantly signed by the latter on Thursday last and executed on Saturday. It is significant, if not conclusive, that political assassins are dreaded everywhere in Europe, except in the French Republic

---

"PHILLIPS'S ELITE DIRECTORY OF PRIVATE FAMILIES FOR 1879" fully maintains the character acquired by previous issues of this work. It contains the names of 26,000 householders, and of all the leading and trustworthy business houses in the various branches of retail trade, and as a visiting and shopping guide, possesses peculiar interest and value. Every lady, and gentleman as well, will find it, in a dozen ways, practically indispensable. It is tastily printed, of convenient size, and is sold at six dollars per copy.

THE commission appointed to settle the affairs of the Freedmen's Bank in Washington appear to understand the art of taking care of themselves at other people's expense. It appears that in four years these commissioners have drawn in salaries $39,558, have paid $31,378 to attorneys and $64,289 to agents, and have incurred other expenses amounting to $183,526. A sum nearly equal to one-half of the dividends paid out has thus been consumed in expenses alone—that is to say, it cost over $75,000 a year to run this broken bank, or to eat up the little that was left by the thieves after the alarm had been sounded. Congress should put an end to this luxurious style of management forthwith.

THE perils of mining are well illustrated by the report of the deaths and accidents during last year in the eastern district of the Wyoming coal fields. The report shows that the number of persons killed in the mines was 38; the number injured by non-fatal accidents 189, and that by these deaths 18 widows and 68 orphans were left unprovided for. During 1877 40 men were killed in the mines of the district, leaving 29 widows and 134 orphans. In the same year 174 persons were injured in various ways. The number of casualties has been materially diminished by the strict enforcement of the Act relative to the ventilation of mines, but they are still much greater than they should be, and all possible precautions which experience may suggest should be adopted by mine-owners for the protection of the lives of those who pursue their perilous work in the recesses of the earth.

THE politicians of Ohio are already actively discussing the question of the next Governorship. The Democracy, eager to obtain control of the State preparatory to the next Presidential contest, very generally demand the nomination of Senator Thurman, whom they regard as their strongest champion, while among the Republicans the drift, for the same reason, appears to be favorable to the nomination of Secretary Sherman. The contest, with these distinguished gentlemen as leaders of their respective parties, would possess a national interest, and the result, whatever it might be, would secure to Ohio an exceptionally strong administration. It may be doubted, however, whether Mr. Thurman will consent to risk his chances for the Presidency by acquiescing in the demands of his party that he shall lead what seems to be a forlorn hope for a position of no special dignity.

AMONG the more important Bills now before Congress is one abrogating all grants of public lands to railway and telegraph corporations, in which such corporations have failed to comply with the conditions upon which the grants were made. Should the Bill become a law, 127,247,061 acres of land will be saved to the Government and people. This land, at the minimum price of $1 per acre, will yield to the Treasury the sum of $508,988,204; and it would seem that there ought to be no doubt as to the action of Congress on so important a proposition. Among the grants which it is proposed to abrogate is one of 42,000,000 acres to a wild-cat Southern railroad which never had a real or substantial existence. It is high time that the policy of voting away the public domain for the benefit of individual speculators and greedy corporations should be arrested, and that in all cases where the conditions of grants have not been complied with, the lands should be recovered by the Government and opened up to public settlement.

THE accumulation of unsettled claims in the Pension Bureau, and the growing difficulty of obtaining trustworthy testimony as to the real disabilities of the claimants, has led the Commissioner to recommend the passage of a law which he believes will obviate the defects of the present system. Under this system the average time required for the adjustment of claims, including about nine months' delay in the office of the Surgeon-General, is three and a half years, while a great number of cases have lain unarranged for ten or fifteen years. This is not only a grave injustice in all cases, but in a great portion of them a practical denial of the benefits which the people desired, and Congress intended to be enjoyed by the soldiers and their widows and children. The remedy proposed by the Commissioner is to divide the country into fifty or sixty districts, and send into each district a commission, to consist of a surgeon and a competent clerk, to travel from place to place in the district and examine pensioners and claimants and collect the testimony in the claims. Such a commission would generally visit each county in the district once or twice each year, thus affording every claimant an early and easy opportunity to present the testimony in his case, and in this way greatly increasing the facilities of the claimant for prosecuting his claim. The number of unsettled claims at this time is 120,000.

THE statistics of the Post-office Department afford an excellent illustration of the growth of the country in population and intelligence. Within the last ten or fifteen years the postal facilities have improved five hundred per cent., and letters are now transmitted in about half the time that was required ten years ago over the same distance. In 1867 the mails were carried over routes aggregating 34,015 miles; in 1877 over routes aggregating 74,546 miles. The mails are carried twice as often over most of the routes, and in some cases three times as often as they were ten years ago. In 1867 the service cost $3,812,000. In 1877 it cost $9,053,000. In this comparison we should consider, also, the amount of mail matter handled, which was more than twelve times as great in 1877 as it was in 1867. It will thus be seen that the cost of the service has not grown in anything like a proportion to its extent. Twelve times as much mail is carried two and one-third times the distance, more than twice as often, at about two and one-half times the expense. The increase in the number of stamps used since the first year of their introduction has been enormous. Then barely one million were issued yearly; since 1863 the issue of stamps has increased on the average about 100,000 a day, or more than 30,000,000 yearly. In the fiscal year ending last Summer the number of stamps amounted to 744,071,518, and their value aggregated $20,562,463. The entire number of stamps issued for sale since 1847 amounts to 9,719,308,527, enough, if put end to end, to go around the world six times at the equator, and their aggregate value reaches $280,327,363. The total number of postal cards issued since 1873 is 751,249,500, of which nearly one-third were issued last year.

FRANK LESLIE'S NEWSPAPER.

THE great new publishing house of Frank Leslie, in Park Place, hums with the enterprise which he puts into everything he undertakes. His business, always active, has received a fresh impulse from an engagement he has been fortunate in making with Wilkie Collins for the production of a new novel from that author. It is called "The Fallen Leaves," and has received the advanced stamp of high favor from English critics who have seen the manuscript and proofs. It will appear January 1st, 1879, on the day of its publication in England, in FRANK LESLIE'S ILLUSTRATED NEWSPAPER. This pictorial journal has extraordinary merits, artistic and literary, and does not require such additional attractions to insure its popularity. But the experienced publisher wisely determines to err, if at all, in the direction of a glut rather than of a scarcity of good things.—*New York Journal of Commerce.*

NEWS OF THE WEEK.

Domestic.

THE Mexican excursion party, embracing representatives of thirteen States, left Chicago January 4th.

SECRETARY SHERMAN has issued a call for $10,000,000 of 5-20 bonds of 1865, consols of 1867, for redemption.

GENERAL SHERIDAN has made a long and formal reply to Secretary Schurz, specifying instances of the mismanagement of the Indians by the agents of the Indian Bureau.

THE new State capitols of Connecticut at Hartford, and Michigan, at Lansing, were occupied for the first time on New Year's Day.

THE Cabinet has decided that Secretary Evarts should open negotiations with the Chinese Government, looking to the modification of the Burlingame Treaty.

FORMAL charges against Register Leow of New York have been preferred to Governor Robinson by the Committee of the Bar Association, for exacting illegal fees

CORNELIUS J. VANDERBILT has filed in the Surrogate's office a petition for the executors under Commodore Vanderbilt's will to show cause why they shall not be removed.

DR. ALONZO GARCELON was elected Governor of Maine by the Legislature on January 2d, as there was no election by the people in September. All the nominees of the Democrat-Greenback caucus were chosen.

BISHOP WHITTINGHAM, of the Protestant Episcopal Diocese of Maryland, is seriously ill at his residence in Baltimore, and grave fears are entertained by his friends, for he has been ailing for some time past, and is seventy-three years old.

GOVERNOR MCCLELLAN has declined to summon the Court of Appeals to consider the case of Benjamin Hunter, who procured the murder of Armstrong to secure the insurance upon his life, and the execution will take place on January 10th.

THE First Presbyterian Church, Quincy, Ill., was destroyed by fire on January 2d—loss, $60,000; and the Second Baptist Church, St. Louis, on the 3d—loss, $100,000. Both were new buildings and had not been dedicated. The Chicago Post Office Building was burned January 4th; the mails and part of the valuables were saved; total loss, $200,000. On the 5th, the public library at Bingham, Mass., consisting of 5,000 volumes, was destroyed. On the 4th the Academy of the Holy Angels, at Buffalo, N. Y., was burned to the ground; loss, $65,000.

ON January 2d and 3d there was a general fall in the temperature all over the country, accompanied in many places by a furious storm of wind and snow. The thermometer marked 26° below zero at Yorktown, D. T.; 10° below at Wilkesbarre, Penn; 3° above at Newport, R. I.; 7° above at Richmond, Va.—a fall of 40° in seven hours; 32° below in exposed quarters, and from 15° to 20° below in the suburbs of Chicago; zero at Washington and Philadelphia, and 5° above in New York City, the lowest point touched in ten years. Railroad, ferry, and street traffic was stopped altogether in some sections, and greatly impeded in many others.

Foreign.

SIXTY-FOUR Republicans and fifteen Conservative Senators were elected in France on January 5th.

AN attempt is to be made to establish direct communication by steamers between Halifax and Havana.

JUAN MONCASI, who attempted to assassinate the King of Spain last October, was executed at Madrid, January 4th.

THE Cornish Bank at Truro, Cornwall, established 110 years ago, has suspended, with liabilities estimated at $5,000,000.

GENERAL ROBERTS has notified the Afghan occupants of the Kuram Valley that they will henceforth be under British sway.

GENERAL GRANT, accompanied by Minister Noyes, received the freedom of the city of Dublin on January 3d, and was entertained at a banquet.

A THIRTY-EIGHT-TON gun has burst during practice on the British man-of-war *Thunderer*. The vessel's turret was destroyed, seven men killed and forty wounded.

THE Council of the Russian Empire has approved the new rates of taxation proposed by the Minister of Finance affecting stamps, liquors and cotton, other than Asiatic.

KARAGEORGEWITCH, the Servian pretender, has been charged with a plot to assassinate Prince Milan, and warrants are out for the arrest of himself, his son and six other persons for high treason.

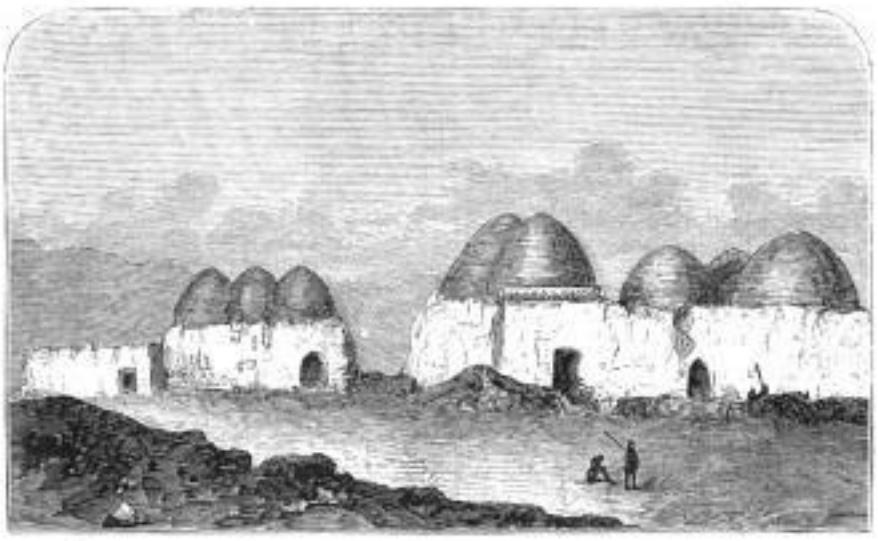
THE Japanese steamer *Tecushima Maru*, running between Osaka and Deva, has been blown up by an explosion of gunpowder in her cargo, and eighty-three of her passengers and crew were drowned.

A PLAGUE has appeared among the Cossacks of Astrachan. The sufferers are isolated. Many doctors have been summoned to their relief, but of 195 persons attacked since the 1st inst., 143 have died.

LEO XIII. has addressed a letter to the Archbishop of Cologne professing friendship for the German Government. The latter insists that the Catholic clergy shall receive their education in Germany alone.

IT is understood that there is a general reorganization of tradesmen in London to resist an extension of the number of working hours, and that there is a large amount of funds available to support the resistance.

THE Oldham cotton-strike has terminated. At a conference between the employers' and operatives' committees, the latter unconditionally accepted the proposed reduction. It was expected that work would be fully resumed on the 6th.



THE recent sudden thaw has caused numerous floods in England and Scotland. At Nottingham the flood is the greatest which has occurred for fourteen years. The country around Darlington and Wrexham is flooded for miles. Much damage is reported at Berwick and Aberdeen.

THE Berlin Town Court has decided that Dr. Strousberg was bankrupted in consequence of the outbreak of the French war and of unforeseen losses, and that he is therefore, not blamable. The court approved the agreement of the creditors to accept three per cent. in settlement of their claims.

THE Veterinary Institute at Kharkoff, Russia, where the students' agitation originated, will be removed outside the town; the Technical Institute at Tschugujeff will be closed altogether, and the Medical Academy will not permit deliberations by the students without permission. Many of the students arrested for participation in the recent disturbances have been banished to Siberia.

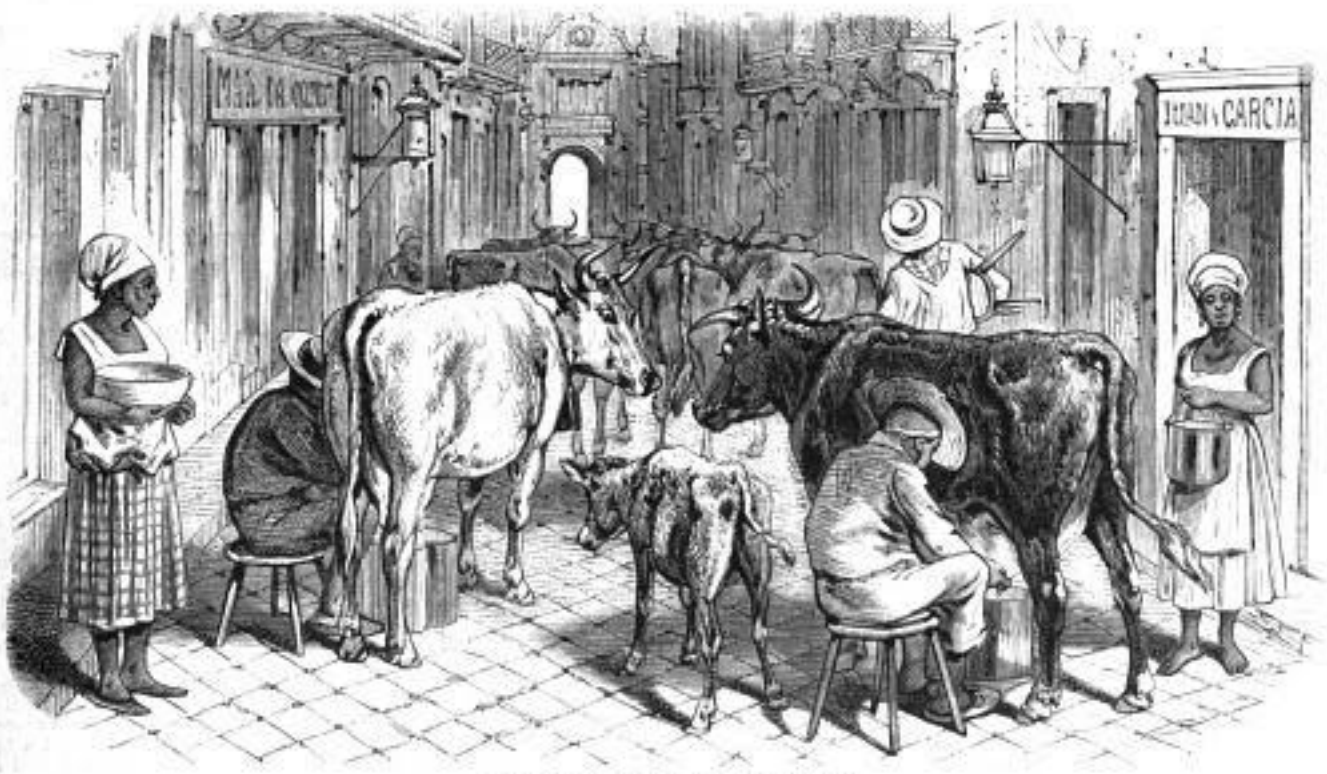
WASHING HORSES.—EARLY MORNING SCENE AT THE "POINT" LA PUNTA, HAVANA.

SCENES IN HAVANA.

THE proprietors of horses at Havana, at rosy morn and dewy eve, send their steeds to water to a place called La Punta—a shallow beach, situated beneath the fort. I have never beheld so remarkable a collection of animals, displaying, like Mr. Winkle's celebrated *Rosinante*, immense symmetry of bone. To sit on the bastion, or on one of the guns of the fort, and watch these lean and hungry-looking animals saunter into the wavelets, to the shrill cries of attendants arrayed in the scantiest of scanty attire, is about as pleasing a way of whiling away a morning hour as can be readily imagined. The cool breeze from the ocean fans the cheek, the white-sailed craft passing dreamily on the mirror-like sea are ever things of beauty, and their tranquil gliding affords a vivid contrast to the kicking, prancing, plunging horses, and the excited, gesticulating, earnest riders. It is no uncommon thing to see these equestrians unhorsed and flung bodily into the water, while not a few, availing themselves of the opportunity, prefer wading with their chargers until the water reaches up to their armpits. I have seen as many as a hundred horses in the pool at a time, and some of them, I am free to confess, worthy of Fifth Avenue or Rotten Row. The sentinels at the fort pause in their "weary rounds" to gaze on the animated scene, while the interchange of chaff between the riders is a source of intense delight to the onlookers.

To those accustomed to the lightning-like express a baggage-wagon at Havana suggests a leap backward into the middle of the sixteenth century. The patient, starry-eyed oxen are employed instead of the rapid thoroughbred, and in place of the light wagon hung upon springs that might be tempered to a lady's watch, a cumbrous, creaking, heavy, iron-patched wooden shed, inverted, is used, with wheels so broad as to defy even bog or quicksand. Into this unwieldy vehicle, boxes, valises, portmanteaus, the time-honored carpet-bag, together with *impedimenta* of every sort, shape, size and description are packed, while in front, perched on a ledge, sits the languid driver, his terrible goad in one hand, the reins in the other.



The yoke beneath which the oxen bend is very weighty, while the reins are attached to a ring in the nose. A prod from the steel-tipped goad with the not unmusical cry of "*Oi da*" seems to be quite sufficient for driving purposes, the patient brutes obeying in cumbrous fashion the commands of the guide. A bucket of water hangs in front, but I have seldom seen the weary animals treated to a seething draught from out its depths.

It would have been lucky for the unfortunates who were compelled to swallow the swill milk—that hideous fraud, so fearlessly shown up in the columns of this journal some years ago—if the Cuban custom of sending round the cows

A HAVANA BAGGAGE-WAGON.

existed in New York at that date. In Havana the cows are driven from street to street, the tinkling of the bells around their necks announcing their coming. As they approach, the helps emerge from the various habitations armed with bowls and cans; the cow is then stopped, and the man, seating himself upon a four-legged wooden stool, which he carries underneath his arm, calmly proceeds to milk the animal in the presence of the buyer, while an interchange of "nods, looks and wreathed smiles" takes place, followed by a gossip lasting during the operation of filling the vessel with the creamy liquid. I have seen goats driven about in this way even in Barcelona, the Manchester of Spain, but cows never.

A CUBAN METHOD OF INSURING FRESH MILK.

ASTRONOMICAL EVENTS IN 1879.

THERE are two eclipses of the sun, one on the 22d of January and the other on the 19th of July, both of which are annular, and neither of which is visible to this country. There is also a slight partial eclipse of the moon December 28th, a part of which may be seen by the inhabitants of the Pacific Coast.

Mercury, at the beginning of the year, will be in the morning sky, but owing to its great southern declination will not be easily seen. It will be visible for a few evenings towards the end of March, somewhat to the north of Venus and lower down. It may also be seen in the morning sky about the 9th of September, but cannot well be seen at any other of its periods of elongation.

Venus, having passed its superior conjunction with the sun on December 5th, 1878, will become visible in the evening sky about the middle of January, and will be in conjunction with Jupiter on the 23d of that month, being about one degree south of the latter at the time of setting, on that evening. The beauty of the scene will be enhanced by the presence of the new moon, which will be in conjunction with both planets on that day. Passing Saturn, March 2d, Venus will remain in the evening sky until September 23d, the date of inferior conjunction with the sun, but will scarcely be seen throughout September, owing to its southern declination, but will be bright in the morning sky during the remainder of the year.

Mars will be visible only as a morning star for the first half of the year. It will be in conjunction with Jupiter on the 9th of May, and with Saturn on the 30th of June, being within eighty seconds of a degree of that planet. As this conjunction will occur in the afternoon, the two bodies, which would appear to the naked eye as one, will not be seen. Mars will arrive at opposition on the 12th of November, and though not so brilliant as in 1877, will blaze brightly in the evening sky during the latter part of the year, approaching sufficiently near the

earth to render its satellites visible—a pamphlet on the motions of which may be obtained on application to the National Observatory.

Jupiter will come to opposition on the 31st of August in the constellation of Aquarius, being at its furthest point east nearly in line with the western side of the Square of Pegasus, and about equidistant from mark 60 of that constellation and Fomalhaut.

Saturn, with the exception of the first month, will be in Pisces throughout the year, coming to opposition on the 5th of October, being about two hours east of Jupiter.

Uranus will be in Leo, 4 deg. or 5 deg. east of Regulus, during the year.

Neptune is in Aries, being in opposition on the 3d of November, and in conjunction with Mars on the 14th of August.

A NOCTURNE.

THE whispering glades are glad;
Yesterday nature was sad,
Now the beetles boom through the air,
And orchard blossoms out there
Are fresh and fragrant and fair,
My queen.

The storm is over and gone;
White moonbeams lattice the lawn;
The tears of the sorrowful dead
Must sometimes cease to be shed,
And smiles shine through overhead,
My queen.

Let us drift out into the sea
From the troubles and toils that be,
Where the soft, strong wash and flow
Of the wind-borne waves as they go
Make murmurous melody low,
My queen.

Where the winds are the wings of Love
And brood as an amorous dove,
If the chords of my perfect bliss
Throbbed forth in a fervent kiss,
Would you deem it so far amiss,
My queen?

Such joy could never remain,
Such rapture tarry with twain;
With you held close to my breast
I could find us an endless rest
Under the curled foam crest,
My queen.

There is worse than death that devours,
Life yet for a little is ours;
And though but a breath or a span
Are the days of the life of a man,
Whatever Love will, Love can,
My queen.

JOHN MORAN.

THE FALLEN LEAVES.

By WILKIE COLLINS.

(*Continued from front page.*)

bent on nothing but saving the reputation of our miserable girl, you would have a right to blame me for keeping you ignorant of the calamity that has fallen on us——"

There the voice of her husband interposed sternly. "Calamity! Say disgrace, everlasting disgrace."

Mrs. Ronald did not notice the interruption. Sadly and patiently she went on:

"But I had a harder trial still to face," she said. "I had to save her, in spite of herself, from the wretch who has brought this infamy on us. He has acted throughout in cold blood; it is his interest to marry her, and from first to last he has plotted to force the marriage on us. For God's sake, don't speak loud! She is in the room above us; if she hears you it will be the death of her. Don't suppose I am talking at random; I have looked at his letters to her; I have got the confession of the servant-girl. Such a confession! Emma is his victim, body and soul. I know that she sent him money (*my* money) from this place. I know that the servant (at *her* instigation), informed him by telegraph of the birth of the child. Oh, Benjamin, don't curse the poor, helpless infant—such a sweet little girl! Don't think of it! don't think of it! Show me the letter that you brought here; I want to see the letter. Ah, I can tell who wrote it! *He* wrote it. In his own interests; always with his own interests in view. Don't you see it for yourself? If I succeed in keeping this shame and misery a secret from everybody—if I take Emma away, to some place abroad, on pretense of her health—there is an end of his hopes of becoming your son-in-law; there is an end of his being taken into the business. Yes! he, the low-lived vagabond who puts up the shop-shutters, *he* looks forward to being taken into partnership, and succeeding you when you die! Isn't his object in writing that letter as plain to you now as the heaven above us? His one chance is to set your temper in a flame, to provoke the scandal of a discovery and to force the marriage on us as the only remedy left. Am I wrong in making any sacrifice, rather than bind our girl for life, our own flesh and blood, to such a man as that? Surely you can feel for me, and forgive me, now. How could I own the truth to you, before I left London, knowing you as I do? How could I expect you to be patient, to go into hiding, to pass under a false name—to do all the degrading things that must be done, if we are to keep Emma out of this man's way? No! I know no more than you do where Farnaby is to be found. Hush! there is the door-bell. It's the doctor's time for his visit. I tell you again I don't know—on my sacred word of honor, I don't know where Farnaby is. Oh, be quiet! be quiet! there's the doctor going up-stairs! don't let the doctor hear you!"

So far, she had succeeded in composing her husband. But the fury which she had innocently roused in him, in her eagerness to justify herself, now broke beyond all control. "You lie!" he cried furiously. "If you know everything else about it, you know where Farnaby is. I'll be the death of him, if I swing for it on the gallows! Where is he? where is he?"

A shriek from the upper room silenced him before Mrs. Ronald could speak again. His daughter had heard him; his daughter had recognized his voice.

A cry of terror from her mother echoed the cry from above; the sound of the opening and closing door followed instantly. Then there was a momentary silence. Then Mrs. Ronald's voice was heard from the upper room calling to the nurse, asleep in the front parlor. The nurse's gruff tones were just audible, answering from the parlor door. There was another interval of silence, broken by another voice—a stranger's voice—speaking at the window, close by.

"Follow me up stairs, sir, directly," the voice said in peremptory tone. "As your daughter's medical attendant, I tell you in the plainest terms that you have seriously frightened her. In her critical condition, I decline to answer for her life, unless you make the attempt at least to undo the mischief you have done. Whether you mean it or not, soothe her with kind words; say you have forgiven her. No! I have nothing to do with your domestic troubles; I have only my patient to think of. I don't care what she asks of you, you must give way to her now. If she falls into convulsions, she will die—and her death will be at your door."

So, with feebler and feebler interruptions from Mr. Ronald, the doctor spoke. It ended plainly in his being obeyed. The departing footsteps of the men were the next sounds to be heard. After that there was a pause of silence—a long pause, broken by Mrs. Ronald, calling again from the upper regions:

"Take the child into the back-parlor, nurse, and wait till I come to you. It's cooler there, at this time of day."

The wailing of an infant, and the gruff complaining of the nurse, were the next sounds that reached Farnaby in his hiding-place. The nurse was grumbling to herself over the grievance of having been awakened from her sleep. "After being up all night, a person wants rest. There's no rest for anybody in this house. My head's as heavy as lead, and every bone in me has got an ache in it."

Before long, the renewed silence indicated that she had succeeded in hushing the child to sleep. Farnaby forgot the restraints of caution for the first time. His face flushed with excitement; he ventured nearer to the window in his eagerness to find out what might happen next. After no long interval, the next sound came—a sound of heavy breathing, which told him that the drowsy nurse was falling asleep again. The window-sill was within reach of his hands. He waited until the heavy breathing deepened to snoring. Then he drew himself up by the window-sill, and looked into the room.

The nurse was fast asleep in an armchair; and the child was fast asleep on her lap.

He dropped softly to the ground again. Taking off his shoes and putting them in his pockets, he ascended the two or three steps which led to the half-open back-garden door. Arrived in the passage, he could just hear them talking up-stairs. They were no doubt still absorbed in their troubles; he had only the servant to dread. The splashing of water in the kitchen informed him that she was safely occupied in washing. Slowly and softly he opened the back-parlor door, and stole across the room to the nurse's chair.

One of her hands still rested on the child. The serious risk was the risk of waking her, if he lost his presence of mind and hurried it.

He glanced at the American clock on the mantelpiece. The result relieved him; it was not so late as he had feared. He knelt down to steady himself as nearly as possible on a level with the nurse's knees. By a hair's-breadth at a time he drew the child away from her, leaving her hand resting on her lap by degrees so gradual that the lightest sleeper could not have felt the change. That done (barring accidents), all was done. Keeping the child resting easily on his left arm, he had his right hand free to shut the door again. Arrived at the garden steps, a slight change passed over the sleeping infant's face—the delicate little creature shivered as if it felt the full flow of the open air. He softly laid over its face a corner of the woolen shawl in which it was wrapped. The child reposed as quietly on his arm as if it had still been on the nurse's lap.

In a minute more he was at the paling. The woman rose to receive him, with the first smile that had crossed her face since they had left London.

"So you've got the baby!" she said. "Well, you *are* a deep one."

"Take it," he answered, irritably. "We haven't a moment to lose."

Only stopping to put on his shoes, he led the way toward the more central part of the town. The first person he met directed him to the railway-station. It was close by. In five minutes more the woman and the baby were safe in the train to London.

"There's the other half of the money," he said, handing it to her through the carriage-window.

The woman eyed the child in her arms with a frowning expression of doubt.

"All very well as long as it lasts," she said. "And what after that?"

"Of course I shall call and see you," he answered.

She looked hard at him, and expressed the whole value she set on that assurance in four words:

"Of course you will!"

The train started for London. Farnaby watched it, as he left the platform, with a look of unfeigned relief.

"There!" he thought to himself, "Emma's reputation is safe enough now! When we are married we mustn't have a love-child in the way of our prospects in life."

Leaving the station, he stepped at the refreshment-room and drank a glass of brandy-and-water.

"Something to screw me up," he thought, "for what is to come."

What was to come (after he had got rid of the child) had been carefully considered by him on the journey to Ramsgate.

"Emma's husband that-is-to-be"—he had reasoned it out—"will naturally be the first person Emma wants to see when the loss of the baby has upset the house. If Old Ronald has a grain of affection left in him he must let her marry me after *that*!"

Acting on this view of his position, he took the way that led back to Slains Row, and rang the door-bell as became a visitor who had no reasons for concealment now.

The household was doubtless already disorganized by the discovery of the child's disappearance. Neither servant nor landlord was active in answering the bell. Farnaby submitted to be kept waiting with perfect composure. There are occasions on which a handsome man is bound to put his personal advantages to the best use. He took out his pocket-comb and touched up the arrangement of his whiskers with a skilled and gentle hand. Approaching footsteps made themselves heard along the passage at last. Farnaby put back his comb and buttoned his coat briskly.

"Now for it!" he said, as the door was opened at last.

THE END OF THE PROLOGUE.

THE STORY.

CHAPTER I.

SIXTEEN years after the date of Mr. Ronald's disastrous discovery at Ramsgate—that is to say, in the year 1872—the steamship *Aquila* left the port of New York, bound for Liverpool.

It was the month of September. The passenger-list of the *Aquila* had comparatively few names inscribed on it. In the Autumn season the voyage from America to England, but for the remunerative value of the cargo, would prove to be for the most part a profitless voyage to ship-owners. The flow of passengers, at that time of year, sets steadily the other way. Americans are returning from Europe to their own country. Tourists have delayed the voyage until the fierce August heat of the United States has subsided, and the delicious Indian Summer is ready to welcome them. At bed and board the passengers by the *Aquila* on her homeward voyage had plenty of room, and the choicest morsels for everybody alike on the well-spread dinner-table.

The wind was favorable, the weather was lovely. Cheerfulness and good-humor pervaded the ship from stem to stern. The courteous captain did the honors of the cabin-table with the air of a gentleman who was receiving friends in his own house. The handsome doctor promenaded the deck arm-in-arm with ladies in course of rapid recovery from the first stomachic consequences of traveling by sea. The excellent chief-engineer, musical in his leisure moments to his fingers' ends, played the fiddle in his cabin, accompanied on the flute by that young Apollo of the Atlantic trade, the steward's mate. Only on the third morning of the voyage was the harmony on board the *Aquila* disturbed by a passing moment of discord—due to an unexpected addition to the ranks of the passengers, in the shape of a lost bird!

It was merely a weary little land-bird (blown out of its course, as the learned supposed); and it perched on one of the yards to rest and recover itself after its long flight.

The instant the creature was discovered, the insatiate Anglo-Saxon delight in killing birds, from the majestic eagle to the contemptible sparrow, displayed itself in its full frenzy. The crew ran about the decks, the passengers rushed into their cabins, eager to seize the first gun and to have the first shot. An old quartermaster of the *Aquila* was the enviable man who first found the means of destruction ready to his hand. He lifted the gun to his shoulder, he had his finger on the trigger, when he was suddenly pounced upon by one of the passengers—a young, slim, sunburnt, active man—who snatched away the gun, discharged it over the side of the vessel, and turned furiously on the quartermaster. "You wretch! would you kill the poor, weary bird that trusts our hospitality, and only asks us to give it a rest? That little harmless thing is as much one of God's creatures as you are. I'm ashamed of you—I'm horrified at you—you've got bird-murder in your face; I hate the sight of you!"

The quartermaster—a large, grave, fat man, slow alike in his bodily and mental movements—listened to this extraordinary remonstrance with a fixed stare of amazement, and an open mouth from which the unspat tobacco-juice trickled in little brown streams. When the impetuous young gentleman paused (not for want of words, merely for want of breath), the quartermaster turned about, and addressed himself to the audience gathered round. "Gentlemen," he said, with a Roman brevity, "this young fellow is mad."

The captain's voice checked the general outbreak of laughter.

"That will do, quartermaster. Let it be understood that nobody is to shoot the bird—and let me suggest to you, sir, that you might have expressed your humane sentiments quite as effectually in less violent language."

Addressed in those terms, the impetuous young man burst into another fit of excitement:

"You're quite right, sir! I deserve every word you have said to me; I feel I have disgraced myself." He ran after the quartermaster, and seized him by both hands. "I beg your pardon; I beg your pardon with all my heart. You would have served me right if you had thrown me overboard after the language I used to you. Pray excuse my quick temper; pray forgive me. What do you say? 'Let bygones *be* bygones?' That's a capital way of putting it. You're a thorough good fellow. If I can ever be of the smallest use to you (there's my card) let me know it; I entreat you let me know it." He returned in a violent hurry to the captain. "I've made it up with the quartermaster, sir. He forgives me, he bears no malice. Allow me to congratulate you on having such a good Christian in your ship. I wish I was like him! Excuse me, ladies and gentlemen, for the disturbance I have made. It sha'n't happen again—I promise you that."

The male travelers in general looked at each other, and seemed to agree with the quartermaster's opinion of their fellow-passenger. The women, touched by his evident sincerity, and charmed with his handsome, blushing, eager face, agreed that he was quite right to save the poor bird, and that it would be all the better for the weaker part of creation generally if other men were more like him. While the various opinions were still in course of expression, the sound of the luncheon-bell cleared the deck of the passengers, with two exceptions. One was the impetuous young man. The other was a middle-aged traveler, with a grizzled beard and a penetrating eye, who had silently observed the proceedings, and who now took the opportunity of introducing himself to the hero of the moment.

"Are you not going to take any luncheon?" he asked.

"No, sir. Among the people I have lived with we don't eat at intervals of three or four hours, all day long."

"Will you excuse me," pursued the other, "if I should like to know *what* people you have been living with? My name is Hethcote; I was associated, at one time of my life, with a college devoted to the training of young men. From what I have seen and heard this morning, I fancy you have not been educated on any of the recognized systems that are popular at the present day. Am I right?"

The excitable young man suddenly became the picture of resignation, and answered in a formula of words, as if he was repeating a lesson:

"I am Claude Amelius Goldenheart. Aged twenty-one. Son, and only child, of the late Claude Goldenheart, of Shedfield Heath, Buckinghamshire, England. I have been brought up by the Primitive Christian Socialists at Tadmor Community, State of Illinois. I have inherited an income of five hundred a year. And I am now, with the approval of the Community, going to London to see life."

Mr. Hethcote received this copious flow of information, in some doubt whether he had been made the victim of coarse raillery, or whether he had merely heard a quaint statement of facts. Claude Amelius Goldenheart saw that he produced an unfavorable impression, and hastened to set himself right.

"Excuse me, sir," he said, "I am not making game of you, as you seem to suppose. We are taught to be courteous to everbody, in our Community. The truth is, there seems to be something odd about me (I'm sure I don't know what), which makes people whom I meet on my travels curious to know who I am. If you'll please to remember, it's a long way from Illinois to New York, and curious strangers are not scarce on the journey. When one is obliged to keep on saying the same thing over and over again, a form saves a deal of trouble. I have made a form for myself—which is respectfully at the disposal of any person who does me the honor to wish for my acquaintance. Will that do, sir? Very well, then, shake hands, to show you're satisfied."

Mr. Hethcote shook hands, more than satisfied. He found it impossible to resist the bright, honest, brown eyes, the simple, winning, cordial manner of the young fellow with the quaint formula and the strange name.

"Come, Mr. Goldenheart," he said, leading the way to a seat on deck, "let us sit down comfortably, and have a talk."

"Anything you like, sir—but don't call me Mr. Goldenheart."

"Why not?"

"Well, it sounds formal. And, besides, you're old enough to be my father; it's my duty to call *you* Mister—or Sir, as we say to our elders at Tadmor. I have left all my friends behind me at the Community—and I feel lonely out here on this big ocean, among strangers. Do me a kindness, sir. Call me by my Christian name: and give me a friendly slap on the back if you find we get along smoothly in the course of the day."

"Which of your names shall it be?" Mr. Hethcote asked, humoring this odd lad. "Claude?"

"No. Not Claude. The Primitive Christians said Claude was a finicking French name. Call me Amelius, and I shall begin to feel at home again. If you're in a hurry, cut it down to three letters (as they did at Tadmor), and call me Mel."

"Very good," said Mr. Hethcote. "Now, my friend Amelius (or Mel), I am going to speak out plainly as you do. The Primitive Christian Socialists must have great confidence in their system of education, to turn you adrift in the world without a companion to look after you."

"You've hit it, sir," Amelius answered coolly. "They have unlimited confidence in their system of education. And I'm a proof of it."

"You have relations in London, I suppose?" Mr. Hethcote proceeded.

For the first time the face of Amelius showed a shadow of sadness on it.

"I have relations," he said. "But I have promised never to claim kindred with them. They are hard and worldly, and they will make you hard and worldly too. That's what my father said to me on his death-bed."

He took off his hat when he mentioned his father's death, and came to a sudden pause—with his head bent down, like a man absorbed in thought. In less than a minute he put on his hat again, and looked up with his bright, winning smile.

Digitized by Google

"We say a little prayer for the loved ones who are gone when we speak of them," he explained. "But we don't say it out loud, for fear of seeming to parade our religious convictions. We hate cant in our Community."

"I cordially agree with the Community, Amelius. But, my good fellow, have you really no friend to welcome you, when you get to London?"

Amelius lifted his hand mysteriously. "Wait a little!" he said—and took a letter from the breast-pocket of his coat. Mr. Hethcote, watching him, observed that he looked at the address with an expression of unfeigned pride and pleasure.

"One of our brethren at the Community has given me this," he announced. "It's a letter of introduction, sir, to a remarkable man—a man who is an example to all the rest of us. He has risen, by dint of integrity and perseverance, from the position of a poor porter in a shop, to be one of the most respected mercantile characters in the City of London."

With this exordium, Amelius handed his letter to Mr. Hethcote. It was addressed as follows:

To John Farnaby, Esq.,
Messrs. Ronald & Farnaby,
Stationers,
Aldersgate St., London.

(To be continued.)

MOLL PITCHER AT MONMOUTH.

MOLL PITCHER was one of the true heroines of the American Revolutionary War, and no account of the battle of Monmouth is complete without the record of her part in it. The battle was one of the most bitterly contested of all the struggles of that war. It was fought June 28th, 1778, at Freehold, in Monmouth County, New Jersey. The American forces were under command of General Washington, and the British under Sir Henry Clinton, who had evacuated Philadelphia ten days previous, with the intention of marching towards New Brunswick, and embarking by way of the Raritan River. In this intention he was frustrated by the American army, which was encamped at Valley Forge. Washington, hearing of Sir Henry Clinton's movements, sent out a force to intercept him. Sir Henry Clinton changed his route, and on the evening of June 27th was encamped on the high ground near Monmouth Courthouse. The American advance was at Englishtown, about five miles distant, under General Lee, the main body of the army being three miles in the rear. Early on the morning of the 28th Lee's division and the rear-guard of the British came in conflict. Lee intended to hold his position until the main body came to his assistance, but his men became demoralized, and began a disorderly retreat. It was charged that Lee shared the demoralization of his men, and when Washington, coming up with the main body, met him in retreat, he, with a severe rebuke, ordered him to rally his men and return to the field. This occasion is said to have been the only time that General Washington ever uttered an oath. The battle lasted all day, and resulted in a victory for the Americans. During the night the British silently retreated.

The intense heat of the day was fatal to many of the soldiers of both armies, yet, notwithstanding the heat, smoke and blood of the battle, Moll Pitcher stepped forward among these heroes and took a place in history from which she can never be dislodged.

When the British attacked the regiment of Livingston and Varnum's brigade, which lined a hedgerow that stretched across the open field in front of a causeway over a morass, the scene occurred which is depicted in our engraving. Moll Pitcher was the wife of a cannoneer. She was a sturdy camp-follower, about twenty-two years old. During the action her husband was managing one of the field-pieces, and she was constantly employed in bringing him water from a spring near by. A shot from the enemy killed the brave cannoneer, and the officer in command, having no one to fill his place, ordered the piece to be withdrawn. The intrepid wife saw her husband fall to the earth, and heard the order given by the officer.

"Not so," cried she. "I will take his place and avenge his death." She sprang to the piece, and there in the thick of the battle she loaded and fired with all the coolness and bravery of a veteran. The skill and courage she displayed attracted the attention of all who saw her. All day long she held her post, firing shot after shot into the ranks of the British.

The next morning after the battle was over, covered with dirt and blood, she was presented by General Greene to Washington, who, admiring her courage and coolness, gave her the commission of sergeant, and by his recommendation her name was placed on the list of half-pay officers for life. But this distinction did not satisfy the enthusiastic soldiers who had witnessed her valor.

They dubbed her Captain Molly, which title she bore for the rest of her life. The French officers, who were charmed with her bravery, made her many presents. She would often pass along the French lines, with her cocked hat, and the admiring soldiers would almost fill it with money.

The Battle of Monmouth was not Moll Pitcher's first experience under fire. She was in Fort Clinton, on the Hudson, when it was attacked by the British about nine months before the Monmouth Battle. When the Americans retreated from the fort, as the enemy scaled the ramparts, her husband dropped his match and fled. Molly caught it up, touched off the piece and scampered off. It was the last gun fired by the Americans in the fort.

Soon after the Battle of Monmouth, where her husband was killed, she left the army and retired to a place between Fort Montgomery and Buttermilk Falls, on the Hudson, where she lived till her death. She was usually attired in the petticoats of her sex, over which she wore an artilleryman's coat. She was a stout, red-haired, freckled-faced Irishwoman, with a handsome piercing eye. Unfortunately, after the death of her husband, she fell into evil ways, and her death was in consequence of her dissolute habits.

Where it Never Rains.

IN Peru, South America, rain is unknown. The coast of Peru is within the region of perpetual southeast trade-winds, and though the Peruvian shores are on the verge of the great southeast boiler, yet it never rains there. The reason is plain. The southeast trade-winds in the Atlantic ocean first strike the water on the coast of Africa. Traveling to the northwest, they blow obliquely across the ocean until they reach the coast of Brazil. By this time they are laden with vapor, which they continue to bear along across the continent, depositing it as they go, and supplying with it the sources of the Rio de la Plata and the southern tributaries of the Amazon. Finally they reach the snow-capped Andes; here is wrung from them the last particle of moisture that a very low temperature can attract. Reaching the summit of that range, they now tumble down as cool and dry winds on the Pacific slope beyond. Meeting with no evaporating surface, and no temperature colder than that to which they were subjected on the mountain-tops, they reach the ocean. Thus we see how the tops of the Andes become the reservoir from which are supplied the rivers of Chili and Peru.

Turkish Prisoners from Russia.

THE Turks are now receiving back their prisoners from Russia. Several thousand men arrive at Constantinople every week. They are well clad and well fed, and all wear enormous boots which emit a powerful odor of Russia leather. The returned prisoners say that the Russians at first issued to them rations of black bread such as their own soldiers use, but the Turks would not touch it. The Russians then provided white bread expressly for the Turks. The only complaint which the men make is that they were taken to an unearthly region where the night is only three and a half hours in length, and that there they were set at road-building with wages of ten cents per day of eighteen hours. They seem to have thrived on this regimen, as there is not a battalion in the Turkish Army which can compare in appearance of sturdy health with these returned prisoners. The generals who have the misfortune to be given up by the Russians are not quite glad to see their native land. A detachment of troops is always on hand at the landing, and when a general arrives he is arrested without ceremony and marched to the War Department, where they all will have to be tried by court-martial. Two court-martials sit permanently, one to try officers defeated in Europe and the other for those of Asia. If the progress of these courts in future is at their present speed many accused persons will naturally die before the arrival of their turn for trial.

A New Theory Regarding Mummies.

HAVING observed that Egyptian mummies could be divided into two classes, one embracing those bodies which had been embalmed intact, and the other including those bodies which had been eviscerated, Dr. Gamelbach, a Swedish chemist of repute and professor in the University of Upsal, has formed the opinion that the mummies of the first class are not really dead, but are only in a condition of suspended animation; though, unfortunately for historians, the secret of bringing them again to life has been lost. In support of this theory, he adduces the results of his own researches and experiments, one of which consists in submitting a snake to a process, the details of which are of course kept secret, which petrifies it. In this condition it has been laid aside for a year or two at a time, and it is then restored to life by some equally mysterious vivifying process. This has now been going on about fifteen years, and the snake does not seem to dislike it. Dr. Gamelbach is said to have applied to the Swedish government for leave to experiment on a condemned criminal, the understanding being that if the experiment is successful the criminal shall receive pardon, because of the service thus rendered to science, and, possibly, to humanity.

Dr. Draper and the Rumford Medal.

THE history of the Rumford Medal Fund held in trust by the Royal Society, and the awards made by this body, are too well known to need repetition; but it is not equally well known that a similar medal fund was founded in the United States by Rumford, and is held in trust by the American Academy of Arts and Sciences. The medals were to be awarded for "the most important discovery or improvement relating to light and heat that had been made during the preceding two years in any part of America." The awards of the American Rumford medals have been made few and far between, and, until 1876, may be said to have been given for inventions rather than discoveries. At this date the medal was awarded to Dr. Draper (as the medal itself records) "for researches on radiant energy." Had he been a European there can be little doubt that he would have received one of our English medals years ago, and that his name would have been in the same list with those of Leslie, Fox Talbot, Fresnel, and Faraday. As it is, he has the honor of being the first recipient of the American Rumford medal which has ever been awarded for pure scientific research.

A Singular City.

CAPTAIN JOHN CODMAN, in a letter from Oneida, on the line of the Utah and Northern Railroad, in process of construction from Ogden to Montana, says: "Oneida is a walking town. It jumps along as the road progresses. Hotels, houses, stores, saloons, stables and all other buildings are put up in sections, marked and numbered. When the active superintendent, Mr. Dunn, gives the order, the whole town is taken to pieces in two days, packed on the train and with all its inhabitants moved along to the next stopping-place. New streets are then laid out, and a new city formed of the old materials, springs into life, flourishing until fifty miles more of railroad is completed. Then it jumps again. Thus it will continue to jump till the traveling municipality is merged in the permanent city of Virginia or Helena, at whichever of them the road may terminate. It is satisfactory to its managers that it pays a fair interest on its cost."

Notes on Germany's Progress.

THE present population of Germany proper, or of all the territory comprehended in what is now known as the German Empire, is estimated in round numbers at 45,000,000. Of these, according to a late census, 37,800,000, including 500,000 Jews, are Germans; 2,450,000 are Poles, 140,000 Wends, 50,000 Czechs, 150,000 Lithuanians and Courlanders, 150,000 Danes, and 220,000 French and Walloons. The Poles live exclusively in the east and northeast of Prussia; the Czechs in Silesia, about Oppeln and Breslau; the Wends in Silesia, Brandenburg, and Prussian Lusatia; the Lithuanians and Courlanders in East Prussia; the Danes in Sleswig; the Walloons in Rhenish Prussia, around Aix-la-Chapelle; the French partly there, and partly in the newly-acquired Provinces of Alsace and Lorraine. There are in the Empire twenty-one universities, of which the best known are at Berlin, Halle, Bonn, Erlangen, Leipsic, Göttingen, Heidelberg, Jena and Königsberg. Fourteen are Protestant—that is, they teach Protestantism in the department of theology—(the other departments of the universities are law, medicine, and philosophy); four are Roman Catholic, and three—Bonn, Breslau, and Tubingen—are mixed. There are sixteen polytechnic institutions, likewise; some five hundred gymnasia or high schools, a large number of special schools, and over fifty thousand elementary schools. The attendance of children at school for at least four or five years being compulsory in nearly all the German States, the proportion of persons who cannot read and write is exceedingly small.

PICTORIAL SPIRIT OF THE EUROPEAN ILLUSTRATED PRESS.

Scenes in Afghanistan—The Bolan Pass, Quettah, and Kelat.

These are mainly sketches from the districts traversed by the divisions of Generals Biddulph and Donald Stewart on its way to Quettah. As the British are on very good terms with the Khan of Beloochistan he has allowed their troops to pass freely over his territory, and, indeed, by virtue of a treaty, they have occupied the frontier town of Quettah for the past two years, and it is this town, which borders on Afghanistan, which has been made the base of General Biddulph's operations. Quettah, which is also called Shawl, is a walled town built on the slopes of a large hill, which is crowned by the citadel. Their occupation of Quettah was one of Ameer Shere Ali's great grievances, as the Afghans claim sovereignty over the district. One of the illustrations depicts the fort of Candahar, and which is one of the chief cities of Afghanistan, being situated about two hundred miles south of Cabul. The climate is much milder and healthier than Quettah and its surroundings. It stands in the midst of a fertile and well-watered plain, and General Stewart is anxious to secure it for his troops' Winter quarters. The town contains some 30,000 inhabitants (principally the Ducranee tribe), and is a place of considerable military strength, it being there that, amid all the disasters of the last Afghan war, the British maintained their ground. The third illustration will give some idea of the general features of the Afghan village houses. They are usually surrounded by a mud wall, curiously slit and pierced, so that it may be defended by musketry in case of attack, and over its summit rise a number of mud domes, on whose tops may generally be seen a few women and children. These are the roofs of the little rooms in which an Afghan family live during the day.

The T'Kindt-Fortamps Case.

This great trial for embezzlement upon the Bank of Belgium, to the amount of $4,000,000, which has been dragging its slow length along in the Assize Court at Brussels for several weeks, came to an end by the jury returning a verdict convicting the accused. They found T'Kindt guilty of 149 acts of theft by seven votes against five. They, moreover, gave replies in the affirmative to the questions whether the prisoner was guilty of the Bordeaux forgery, the stealing of papers, and embezzling by manipulation of the current accounts of the bank; and a negative reply to the question of guilt in the matter of the coupons, the robbery of letters, and forgery in the current accounts. M. Fortamps, the governor of the bank, was found guilty of repurchasing the shares of the bank. T'Kindt was sentenced to fifteen years' solitary confinement, and Fortamps to one year's imprisonment and a fine of 6,000 francs. A dense crowd had collected in all the approaches to the court during the deliberations of the jury, and it was feared that disturbances might break out. A hundred gendarmes were accordingly stationed in front of the Palais de Justice to maintain order, and all access to court was forbidden. Immediately on judgment being pronounced, however, the crowd quietly dispersed. Our engraving is taken at the time when the prisoners' counsel addressed the court on behalf of their clients.

The Visit of the King of Italy to the Military School of Modena.

During King Humbert's late tour through his dominions, after his escape from the assassin's knife, he visited the military school of Modena, and thoroughly inspected the cadets. His Majesty pronounced himself greatly pleased with the appearance of the young soldiers, and, at the close of the inspection, addressed a few words of congratulation to the assembled aspirants to military fame. Thanks to the beneficial effects of these military schools, the Italian army is rapidly becoming one of the best trained of all European armies.

Sketches from Australia.

One of the great obstacles to the development of the Queensland gold fields, is the hostility displayed by the blacks to the miners who come amongst them in search of the precious metal. On the Palmer these treacherous foes have lately been very troublesome, and several of the enterprising prospectors have fallen victims to their clubs and spears. The scene which has been chosen by our artist depicts an occurrence that is unfortunately but too common. The man in the foreground, whose bronzed countenance and swarthy features show him to be no new chum at the wash-pan, has, assisted by his mate, pitched their rough tent in the centre of a clump of trees, which serve to protect them from the fierce rays of the mid-day sun. For some days their operations have been progressing undisturbed, but the alarm has just been given of the approach of the dusky foe. Hastily dropping the pans that they have been working with, they rush to the tent, and prepare to defend their home. In these times their arms are always kept loaded. Snatching their rifles, they quietly await the approach of the invader. The war-cry becomes louder and louder, and some eight or ten naked blacks are seen approaching with threatening gestures, brandishing their spears aloft. As the leader of the attack comes wildly on, and is preparing to discharge one of his weapons with the unerring skill of his race, the miner hits his rifle and takes a steady aim. A good patch of alluvial diggings has recently been discovered in the Maryborough District, the spot being situated not far from Berba, and designated "Possum-hill Rush," from the prospector being an old digger known in the neighborhood as "Possum Jack." The engraving which we give represents the prospector's claim, with "Possum Jack" on the plank, bucket in hand, and his mates engaged in working out the hole. The surrounding country promises to be worth further development, and a memorial from the miners and residents in the surrounding district has been presented to the Minister of Mines, asking him to reserve the whole of the remaining unalienated lands within the Maryborough mining district, drawing the line north of Hockin Banyah, by East Charlton to St. Arnaud. This the Minister has consented to do. The first lifeboat constructed for the Victorian Humane Society was launched from Edwards' boat sheds, on the south bank of the River Yarra, on Saturday, May 20th, by his Excellency Sir G. F. Bowen. Both banks of the river, as well as Prince's Bridge, were densely crowded with ladies and gentlemen, the number being estimated at 5,000.

AT HOME AND ABROAD.

—TENNESSEE begins the new year with a debt in bonds and interest of $24,274,017.

—ONE thousand magistrates are to be elected by the next Legislature of North Carolina.

—THERE are five Chinese opium dens in Oakland, Cal., patronized by white men and women, and sixteen frequented exclusively by Chinamen.

—THE South Carolina Legislature has refused to put on the statute book the law against a negro marrying a white woman which obtains in Rhode Island.

—THERE are 272 telephone stations under the direction of the German post-office authorities. The instruments work perfectly over lines fifty kilometres long—say thirty-two miles.

—THE other day there was a barrel of Johannisberg wine sold at Cologne for 56,000 florins. At 1,600 bottles to the barrel, it was estimated that this wine brought about $17.50 to the bottle.

—TEXAS has 1,700 convicts, of whom some 500 are kept in prison, and the rest are hired out to work on railroads and farms. One, undergoing a life sentence, is hired by his wife, and lives comfortably at home.

—ACCORDING to a statement of the Greek Minister of War, Greece has 745 officers on active service in the army, and the effective force of the navy for 1879 is fixed at 2,244 men, of whom 185 are officers and 292 sub-officers.

—PROFESSOR GORINI is superintending the erection of a funeral pyre on a site belonging to the Cremation Society near London. The pyre is on the system which has been approved in numerous cremations at Milan and other places in Italy.

—THE Baltimore Health Department has just done a sensible thing in sending to each school in the city a circular insisting that no child should be allowed to return to school after diphtheria or scarlet fever without the certificate of a physician.

—THE total cotton spindles in the North are now estimated at about 2,900,000, and in the South at 600,000, or a total in the country of say 10,500,000. Of the 48,000,000 spindles employed in the manufacture of cotton in 1876, the United States had in round numbers 10,000,000, and Great Britain 40,000,000.

—A NATIONAL MUSEUM OF HYGIENE has been established in London. It is designed to contain objects relating to every branch of sanitary science. The Queen has contributed fifty pounds sterling to the fund, and Sir William Jenner, M. D., the distinguished physician of the royal family, is the chairman of the executive committee of the institution.

—IN the list of converts to the Roman Catholic Church published in the *Whitehall Review* are 200 from Oxford, 150 from Cambridge; from Trinity College, Dublin and London University jointly, only 10; 85 of the army, 14 of the navy, 45 of the bar; 13 peers, 14 peeresses, 19 sons and 28 daughters of peers, 78 other titled ladies and 35 titled men—in all 1,500.

—IN regard to the approaching exhibition at the Grosvenor Gallery, the London *Academy* hears that a very remarkable series of Italian drawings are to be lent for exhibition from the library of Christ Church, Oxford. The collection contains some exquisite specimens of Leonardo da Vinci, Andrea Mantegna, Raphael and Giorgione. The early Florentine school is also said to be well represented.

—A NUMBER of politically and otherwise prominent men in France and in Belgium have of late years, it is stated, become Protestants, declaring that they do not accept the Protestant faith on their own account, but make the change only to save their wives and children from the influence of the Roman Catholic priests. This class of conversions goes now by the name of "changement d'inscription religieuse." The movement has gained recently even in Corsica.

—ATTENTION is being directed to Professor Soetbeer's accounts of the amount of gold recently quarried and washed in Russia. According to this German scholar, the average value of the gold found in that country has risen to $23,250,000 a year. This being about half the sum required for payment of interest abroad, it must in time improve the financial position of the country. Professor Soetbeer is justly regarded as one of the most trustworthy authorities on finance.

—THE annual production of tallow in Russia about ten years ago, was officially estimated at 160,000 tons, of which one-half was exported and the rest locally consumed. There are in the empire upwards of 700 large tallow-melting establishments, employing about 7,000 workmen. There are 600 candle factories, employing 2,500 people; 220 soap works, giving employment to 1,200 workmen, and 13 steam works, employing 2,100 men. The total value of the products worked up in Russia from tallow exceeds $16,250,000.

—SOME time ago the Emperor of Russia granted a charter to the University for Women, and the Russian Minister of War has now officially taken up the subject of training lady doctors for army practice. This measure has been decided upon in consequence of the proof given in the late war of the utter inability of the regular medical staff to cope with the enormous number of sick and wounded. Classes for the instruction of female medical students, to eventually become members of the army medical staff, will soon be formed at St. Petersburg.

—THE See of Durham, which Dr. Baring has just resigned, and which Dean Stanley has declined to accept, is not only one of the richest in the Anglican episcopate, but it possesses very interesting historical associations. The successor of St. Cuthbert is something more than one of the highest and best paid ministers of the English Church. He sits on the throne of the old Prince-Bishops of Durham, who once exercised regal sway over the territory of their diocese. Till the reign of Henry VIII. writs in Durham ran in the bishop's name, and offenders were tried for breaking "the bishop's peace"—not the king's. As late even as the reign of William III. what is now called "the County Palatine of Durham" was styled "the Bishopric of Durham." Archbishops are not entitled to encircle their mitres with a ducal coronet, but the Bishop of Durham is, in compliment to the old palatine right of his predecessors.

—To make shoe-pegs enough for American use consumes annually 100,000 cords of timber, and to make our lucifer matches 300,000 cubic feet of the best pine are required every year. Lasts and boot trees take 500,000 cords of birch, beech and maple, and the handles of tools 500,000 more. The baking of our bricks consumes 2,000,000 cords of wood, or what would cover with forest about 20,000 acres of land. Telegraph poles already up represent 800,000 trees, and their annual repair consume 300,000 more. The ties of our railroads consume annually thirty years' growth of 75,000 acres, and to fence all our railroads would cost $45,000,000, with a yearly expenditure of $15,000,000 for repairs. These are some of the ways which American forests are going. There are others, our packing boxes, for instance, cost in 1874 $12,000,000, while the timber used each year in making wagons and agricultural implements is valued at more than $100,000,000.

A CLASS-ROOM OF THE NORMAL AND AGRICULTURAL INSTITUTE—A CLASS RECITATION.

EDUCATING THE INDIANS AT HAMPTON, VA.

THE Government experiment in educating Indians is full of interest. Some four years ago the Indian Department captured in Northern Texas a number of chiefs and young braves. Many of them were directly charged with murdering white settlers and shooting soldiers, but others, by far the majority, were held on general principles, and taken to Florida. Old Fort San Marion at St. Augustine, known in army reports as Fort Marion, was used as their prison. They were kept under the supervision of Captain R. H. Pratt, United States Army, an officer of many years' experience upon the frontier. In the course of time the savages became accustomed to their compulsory life, and learned the duties of the soldier. They were clothed in the uniform of the United States artillery, with non-commissioned officers of their own race, and soon acquired great proficiency in tactics. Schools were opened at the fort, at which they learned to read and write. At length, certain visitors, learning that the Government proposed disbanding and returning to their tribes the body of prisoners, offered to educate a young brave. In this manner it transpired that seventeen of these nomads were enrolled with the colored students of the Hampton (Va.) Normal and Agricultural Institute. Their progress and eager desire to learn claimed the attention of the President and Indian Department, and Captain Pratt was ordered in August last to proceed to the northern agencies, chiefly on the Missouri River, and gather a number of young Indians of both sexes for educational purposes. It was a comparatively easy matter for the captain to recruit boys, but almost every attempt to induce parents to part with their female children resulted in failure, as squaws are too useful in work. Spotted Tail and Red Cloud bitterly opposed the proceeding. He succeeded, however, in collecting a party and conveying them to Hampton. They are composed chiefly of Sioux, with a few Mandans, Arickarees and Gros Ventres, and their ages range from ten to twenty-five years.

It is understood that these students will receive three years' schooling at Hampton, the Government paying $167 per annum for the tuition, board and clothing of each individual. A large proportion of the youths have received considerable instruction at the post or episcopal mission schools upon the frontier. One young fellow surprised everybody by playing such familiar sacred airs as "Nearer, my God, to Thee" from the notes upon a piano. At Hampton, mechanical and agricultural instruction form an important portion of the system of education. Several are learning the carpenter trade. One is assistant to the engineer, and one bright boy, who acts as interpreter, is to stand at the case in the printing-office of the Institute. All the males work, in common with their negro fellow-students, upon the farm at stated times. The long hair which graced every head upon arrival has been cropped, good "white man's" clothes substituted for the blankets in which they arrived, and eventually they will be uniformed in neat suits of gray similar to those worn by the "old Indians," as the first group from St. Augustine are called by the teachers. Careful reports of Indian progress will be made to the Government from time to time.

A YOUNG BRAVE AS ENGINEER.

FIRST LESSON IN ARITHMETIC.

RICH DOCTORS.

DR. WOLLASTON gained £30,000 by his discovery of the malleability of platinum; but, for the most part, the wealthy physicians are not to be found among the philosophers. Harvey, who, though munificent in his gifts while living, left £20,000 at his death,

is only an apparent exception, for he basked in Court favor and had a great practice. Dr. Radcliffe left £50,000 to Oxford, besides endowing richly other foundations. Dr. Cockburn, in 1729, married an earl's daughter, and gave her a jointure of £50,000. Dr. Mead's and Dr. Fothergill's professional receipts during the same period for several years averaged £6,000 or £7,000. Also, in the same generation, Dr. Bamber's earnings bought the considerable Essex estate which a descendant carried into the family of Lord Salisbury. Dr. Baillie's income in the first quarter of the present century for many years reached £10,000. Dr. Battie founded scholarships, and left £100,000 in 1776. But the great physicians even long ago lived familiarly with kings and nobles. They were as well accepted socially in the centuries when they lived in Aldergate Street and Hatton Garden and St. Mary-le-Bow as now that they have annexed May Fair and Harley and Wimpole Streets.

A SECRET MARRIAGE AND ITS CONSEQUENCES.

BY THE DUKE DE POMAR,

AUTHOR OF "THE HONEYMOON," "THROUGH THE AGES," "WHO IS SHE?" "FASHION AND PASSION," ETC.

BOOK THIRD.

THE MYSTERIOUS HEIRESS.

CHAPTER III.—ROLLINGFORD HOUSE.

SOME years ago when Mrs Champion was still a young woman, and before the trials, suffering and privations she has since undergone had left their traces on her statuesque countenance, and before the subsequent reaction had transformed her into the middle-aged everyday-looking lady she now is, she met the Duke of Glamour during one of her visits to England, while the Italian campaign was still going on, and her mind was still as full as ever of the heroic thoughts which rendered her such a very striking and fascinating woman. Her heart had at once warmed towards him, and she had soon begun to feel for him, if not quite the same regard she had before felt for Frank Reymond—for she was now older, and her range of experience had been considerably enlarged—at least an affection, which, if I may not call platonic, I shall call motherly. This young man, so rich, so noble, so handsome, possessed of such splendid mental faculties, and endowed with a sensitive and affectionate disposition, and a true and tender heart, interested her beyond measure; and as she was a woman who felt it almost incumbent upon her to devote her own loving heart to some one, as she had devoted her mind to a cause, she centred all her thoughts upon him, and for a time she became his guardian angel and protectress. No ideas of love ever came to embitter this new affection of her heart, as they had embittered the affection she had formerly felt for Frank Reymond, and consequently she can look back with pleasure upon the links that connected them in the past.

Later events separated them, and the all-absorbing thoughts that occupied her during those harrassing and momentous days had almost driven him from her mind; but now that he once more crosses her path, all her old affection for him reawakens in her heart, and she again feels that it is her duty to look after him, and to assist, if possible, to secure his future happiness.

It is this feeling that prompted her to talk with him of Louisa Reymond.

If she could only bring those two together! If she could only make them husband and wife!

It is true that no ties of relationship connect her to either of them, yet she feels that, after her own children, they are the beings she most loves in the world. Is not one the child of the only man she had ever really loved? and is not the other the same noble-minded, sensitive lad she had once imagined might in time occupy the place left vacant in her heart by Frank's death? She had promised beside the dead body of Frank Reymond to look after his daughter, and to do all in her power to promote her happiness; and ever since that day her thoughts have been with the poor child, even when away in Italy, working and fighting for the cause of freedom. Louisa has grown to love her and to feel confidence in her, although she feels, as indeed does almost every one else, that Mrs. Champion's strange nature is a mystery which she cannot solve; and Lady Rollingford, who still dreads Mrs. Champion more than she would care to confess to herself, has begun to look upon the frequent visits to Rollingford House as a sort of necessary evil, and to submit to them with a smiling countenance, knowing how highly her husband had esteemed her.

Rollingford House, of which I have so often spoken in the course of this book, and to which I am now going to convey my readers for the first time, is a fine old mansion, one of the very few truly stately private residences now in existence. It stands within a large courtyard, and is shut out from the square, to which it has given its name, by two handsome iron gates.

The suit of splendid drawing-rooms, worthy of an Italian or a Spanish palace, is the rendezvous of fashionable society. It is a fine Spring morning, and a brilliant sun is shining on the ancient pile as Mrs. Champion and her young friend drive up to the door. They are ushered by a footman in livery into one of the apartments on the lower floor, the paneled walls of which are decorated with the portraits of English heroes. The noble lady of the house soon enters, and after the usual form of introduction has been gone through, and the stereotyped commonplaces that inevitably follow have been duly exchanged, the three seat themselves near one of the windows, which overlook the carefully laid-out garden, and converse together, as if they had been old friends.

Lady Laura Rollingford has not altered much since we last saw her. Time has dealt kindly with her, and although she is no longer a young woman, she looks almost handsomer now than when we first met her. She looks at Glamour with her keen, stern eyes, that have lost none of their penetrating intensity, and wonders what can be the reason that has prompted Mrs. Champion to bring him to her house; for she knows that lady too well to think that she would do anything without a purpose, especially anything in which she is concerned. Yet his high rank and well-established position gives her confidence, and she is able to converse with him almost as freely as if she had not been introduced by Mrs. Champion. Her greatest dreams of ambition have been more than realized; and the eldest daughter of the poor Scotch nobleman, who seemed to have been born only to reign over a small house in an unknown island of the far north, has now become one of the most influential leaders of society, and her power is as real and tangible in the modern world of fashion as that of her famous ancestors, of whom she is still proud, was over the islands and seas of the north in the Middle Ages.

Yet at times strange doubts came before her—intangible, invisible ghosts of the dead past, which embittered her brightest hours. Of Marie Gautier she has heard nothing for years; she seems to have gone out of her life as mysteriously as she came into it, and now she no longer fears that she will cross her path again. But Marie's daughter, Louisa, is always beside her, and though every one believes that she is fondly attached to this adopted daughter of hers, at times she cannot help dreading her looks; imagining she sees in them the spirit of her unfortunate mother, who cries for vengeance with thrilling, though unspoken menaces. They have not been sitting there very long before this young lady herself makes her appearance.

As Lord Inganess remarked, there is nothing peculiar or strange about her. She is a good-looking girl, rather tall and dark, but graceful and smiling, and there is enough of her mother about her to render her strikingly handsome at first sight. When examined critically, however, perhaps she is not really handsome. Her flashing eyes, so bright and deep, would certainly seem cold but for the dark rich lashes which shade them. The noble brow would also seem a trifle too broad and massive, and her cheeks and lips might also be a shade too pale, and her hair of too undecided a color for perfect beauty. But there is nobility in her arched brows and Southern features, just as there is grace and dignity in her well rounded figure. And her rich olive complexion, that might be a defect in many handsomer faces, in reality adds a new charm to her countenance, while her youth, health, and vivacity impart to it lustre and bloom. Altogether her especial beauty may be considered more as that of expression than of feature; but this peculiarity renders her scarcely less attractive, and from the first moment he sees her, Glamour feels that he is in the presence of a woman who would exercise a great control over him if he only gave her the chance.

Their interview, of course, is not very momentous; they talk a good deal, but only on commonplace topics, which offer a young lady but few opportunities to display her talents to advantage. Yet she speaks, upon the whole, well and to the purpose, and Glamour, who particularly dislikes triviality, and what goes by the name of wit amongst young ladies, begins to think that he has never met such a charming girl.

When they rise to depart, Lady Rollingford approaches the duke and informs him that she is giving a morning party on the following Wednesday, and that she will be charmed if he will honor it with his presence; and, promising to return on that day, he and Mrs. Champion leave Rollingford House.

"Well, what do you think of Miss Reymond?" Mrs. Champion asks, as soon as they are once more sitting in her landau and driving along under the beautiful old trees of the noble square.

"I think that she is a very superior girl."

"I am so glad she has impressed you favorably. She is, indeed, a charming girl, as good as she is handsome, and it is wonderful how unspoiled she is, considering how immensely rich she expects to be."

"Oh, she is an heiress? Indeed, I was not aware of that."

"Yes, at Lady Rollingford's death she will come into all her property, which, as you doubtless know, is very large."

"Are you quite sure of that? Lady Rollingford has many brothers and sisters. One of them, Inganess, is a great friend of mine, and I have always understood that at her death the Rollingford estates would go to him."

"No; I am quite sure of what I say. Miss Reymond is Lady Rollingford's sole heiress."

"Well, you may be better informed than I am; as the late lord left everything to her, I should suppose she can do what she likes with the fortune."

"Miss Reymond will have it all, believe me."

"And she is a Catholic?"

"Yes."

"How strange! But you, who seem to take such an interest in her, ought to be able to tell me at least her real name."

Mrs. Champion looks confused, and lowers her eyes so as not to meet his penetrating gaze. After a moment she says:

"If you care very much to know, perhaps I could find out for you some day."

CHAPTER IV.—A MORNING PARTY.

WE are again in the sumptuous saloons of Rollingford House. In a magnificent apartment, amidst a crowd of elegantly attired ladies who are discussing the latest scandals of the day, and a greater number of men than one generally sees at morning parties, we recognize the Duke of Glamour and his friend Lord Inganess.

"So you have come after all, old fellow—beautiful house, is it not?" the latter is saying to the former.

"It is indeed charming. I had no idea that there could be such a beautiful mansion in the very heart of London."

"I suppose you have already been introduced to my sister, and doubtless also to Miss Reymond?"

"I have had that pleasure."

"Well, what do you think of the young lady? Of course you are already in raptures about her, as every one else is, I believe."

"I do not think that I am likely to go into raptures about any woman, but certainly I think she is very good-looking." And then he added, "Do you admire Miss Reymond?"

"I admire her very much; I think she is the brightest and loveliest girl that I have ever seen; it makes one young and gay to look at her; but thank God I am not in love with her."

"Thank God! and why thank God?"

"Because I do not believe that she would ever care for me. I am so much older, so very different altogether. Do you think that she would ever fall in love with an old fogy like me—she who is all light and sunshine?"

"I never knew you were an old fogy before! Ah! Inga, how little you know yourself! Now I could very well imagine that she would not care for me; but you are just the sort of fellow a girl like that would be most likely to fall in love with."

Presently Lady Boursetile approaches them; she is elegantly attired and is looking more blooming than ever, as, playfully extending a couple of primrose-colored fingers to be pressed, she puts a sudden end to the conversation.

"Will you give me your arm, duke, to the other end of the room? I want to introduce you to a young lady who is very anxious to make your acquaintance."

"Indeed! and pray who is she?"

"Miss Oscott, Sir Charles Oscott's daughter, a very pretty girl, with fair hair. Come, you will excuse us, Lord Inganess."

And taking the young duke's arm she marches him off right across the rooms to the other end of the house.

Miss Oscott is standing near a doorway with her father, a tall, well-built man, whose figure seems too perfect to be natural, and whose whiskers are gracefully combed out on each side of his blushing countenance, as if he had intended them to resemble Lady Boursetile's sunny ringlets. As that lady and her young friend come up to them, Miss Oscott's head is turned another way, and some minutes elapse before she becomes aware of their presence.

"Oh, how do you do, Lady Boursetile?" she says, shaking hands with her.

"Very well, my dear, very well. I want to introduce a friend of mine to you, my dear."

Miss Oscott turns round, and looks at the Duke of Glamour as any young lady of fashion would dare to look, yet without recognizing him.

"Who is he, pray? Ah," and then she adds in a whisper, meant, I suppose only to be heard by that lady, "I wish you would not introduce him; I do not like his appearance at all—he looks snobbish!"

Any one but Lady Boursetile would have been embarrassed, considering that the poor fellow whom she had brought up to present to Miss Oscott, and of whom this young lady has spoken so rudely, is standing within a yard of them, and must have heard her remark; but Lady Boursetile, ignoring that cause for embarrassment exists, and as if nothing had happened, presents them to each other with a perfectly composed face, while mischief sparkles in her bright eyes.

Miss Oscott, very much amazed, glances superciliously at the duke, then turns her back upon him to Lady Boursetile's great astonishment.

"Don't you find a great mixture of people here?" the young lady says, after a pause, moving away, and carefully holding her fan between herself and the objectionable-looking person.

The countess goes up to her and whispers something in her ear.

"You don't say so! Oh, how stupid of me not to have recognized him! How rude he must have thought me!" she exclaims; and, turning round again with a sweet smile delightful to behold, she approaches Glamour, and, to make him forget her late rudeness, now addresses the rest of her conversation entirely to him. "My father gives a ball on Friday, duke. Do you care for balls?—So glad you do! Will you honor us with your presence? Oh, thank you! It will not be a grand affair—only a small dance; but I think small dances are always so much pleasanter than large balls. Let me introduce you to him."

Glamour bows in silence to Sir Charles, and, whether he is aware or not of the extraordinary change which the mention of his name has produced in that proud young lady's manner towards him, not a smile, however faint, is visible on his pale, handsome face.

"Well, what do you think of Miss Oscott? Lady Boursetile asks a few minutes later, when that young lady and her would-be youthful papa have left them.

"I think her very peculiar, I must confess."

"Oh, you must excuse her; the poor thing did not know who you were. It was my fault; I should have told her your name before introducing you, only as she herself begged me the other day to present her to you the first time we met. Of course I imagined that she knew you by sight."

Once more taking his arm, Lady Boursetile continues her promenade through the crowded saloons, every now and then bestowing graceful little signs of recognition to her friends.

"How pretty Miss Reymond looks to-day. She certainly is one of the nicest girls here," she says, presently, calling Glamour's attention to that young lady, who had just passed them, leaning on the arm of a fair man.

"She is exceedingly handsome, and her dress suits her admirably," he adds, following her with his eyes until she is completely out of sight.

"I wonder, if it were known who her father was, whether people would take such an interest in her?"

"I think that no one could help admiring her, even if her pedigree were as well known as yours or mine."

"Just what I heard the Prince say, the other day."

"There is something very charming about her, though I think her chief attraction consists in her being unlike the generality of young ladies."

Miss Reymond certainly does look wonderfully well this afternoon. There is a bright flush on her cheek and a brilliancy in her dark eyes which greatly enhance her peculiar charms, and, as Glamour has remarked, her dress suits her admirably.

A long train of pale-pink silk, here and there relieved with bows of dark-red velvet, and a dark-red velvet hat, which would have been most trying to almost any other lady in the house, seems made on purpose to heighten her rich Southern beauty. She is leaning on the arm of a tall, handsome man, whose stalwart figure, sunny face, blue eyes and light mustache contrast admirably with her olive complexion and dark hair, and she looks unusually bright and happy.

"So you approve of morning parties, Mr. Cassilis?" she is saying.

"Yes, I approve of all parties where I have the pleasure of meeting you," he answers, readily, and a blush of pleasure suffuses her face.

"What a delightful house this is! I wonder if our strict country women would think it wrong if we were to take a stroll together through the rooms beyond?"

Louisa hesitates for a moment; she is afraid of committing herself; she has not known this man long, and she knows but too well how soon scandals are invented in Mayfair. But the tender glances of those bright eyes—blue as the glimpse of heaven seen for the first time—are too irresistible. His tall, fine form and bright, kind face give her confidence, and a thrill of pleasure, never before felt, makes her cling all the closer to his arm. Without waiting for an answer he leads her to a room less crowded than the others, and which is decorated in the Egyptian style. She seems to tread on air, and listens with a sort of rapture to all he says—a happy flush is on her cheek, a happy light in her eyes.

For a long time they walk up and down this room, talking on various topics, which, though commonplace in themselves, the peculiarity of the circumstances under which they are discussed renders most interesting.

And what is passing in their minds the while? Into hers, at least, we may venture to peep, and I may tell you that the predominating feeling is astonishment at the flood of rapture which for the first time fills her youthful heart.

Louisa Reymond is in many respects a peculiar girl. Brought up from childhood at Rollingford House, and associating with grown-up people almost from her cradle, she has already acquired that disdainful air and manner that are peculiar to women of fashion, but which, as a rule, they only adopt in after-life, when experience has taught them how necessary they are. Though every one has long ago acknowledged her claim to reign in the world of fashion, that world of fashion has but few charms for her; and though almost every man in it has felt, or feigned to feel, a passion for her, she has been until now unable to reciprocate it, and her heart is as yet untouched. Perhaps it is the inward consciousness of her awkward position which has caused her to mistrust the attentions she received. Perhaps it is that her heart aspires to an affection nobler and more genuine than any that has yet been offered her—who can tell? She does not know herself; she knows only too well what she does *not* feel, but she cannot explain, even to herself, what she *does* feel. Yet her most ardent desire is to be married, for she knows that marriage alone will secure her a position in society and render her independent of Lady Rollingford's charity; but unfortunately, as yet, she has not met any man whom she can conscientiously say she would like as a husband. The gay and brilliant young men who daily pay court to her are but too often flirts, who only think of amusing themselves at the expense of a poor girl. Those whom she might be led to think in earnest are merely foppish prigs, and tiresome. Yesterday the intellectual air, the noble mein, the lofty rank of the Duke of Glamour inspired a hope that he might prove more genuine and entertaining than the rest. Mrs. Champion had told her what an impression she had made upon him, and even hinted that she might become his bride. But to-day she has once more met him, and her hopes have fallen to the ground. He has approached her and conversed with her, it is true, but in a cold, indifferent way, and the usual nonsense flowed from his lips in the same dreary, weary drawl which society considers good-breeding.

Rupert Cassilis, she is forced to confess to herself, is actually the first man who has inspired her with anything more than suspicion and caution; but she's not a girl to trust too much to first impressions—she has lived too long in the world for that—and even his devoted attention and looks of undisguised esteem, she tries to persuade herself, are only to be attributed to a mere momentary admiration.

Their conversation, however, flows on without restraint, and gradually becomes more and more personal.

"Do you know, Miss Reymond," he says, "that you remind me very much of a certain woman for whom I once entertained a very great admiration?"

"Indeed; and who is she—do I know her?"

"I dare not tell you; I fear you might be offended; and yet she is acknowledged by everybody to be one of the most beautiful women in the world."

"You are certainly determined to make me vain. But would you tell me her name? It is cruel to excite my curiosity like this, and then refuse to gratify it."

"She is an actress."

"An actress!"

"I knew you would be offended, and you are right, perhaps, for, after all, she is no doubt but made up to look what you really are; but I suppose I must tell you her name—Madame de Fleurville."

"Madame de Fleurville." Louisa reflects, slowly. "She is a French actress, is she not? No, I have never seen her, but I have often heard of her."

"You are not offended with my daring to compare you to her?"

"Oh, no; on the contrary, I suppose I ought to feel highly flattered, for I have always understood that she is a most beautiful woman."

They talk of other things, and presently she feels her hand tightly clasped in his, and, in accents which betray too much real emotion to be offensive to any woman, he says:

"I am going to take upon me the liberty of giving you a little piece of advice. Believe me, Miss Reymond, my words are prompted, not by

Digitized by Google

mere curiosity, but by a strong feeling of sympathy for you, and which causes me to look upon you with the greatest interest."

She is trembling all over. What is he about to say? He is not going to speak of love, surely?

"Why do you not tell the world who you really are? Why do you not make your real name known? Of course this is no business of mine, you will say, and no one can possibly find fault with you for taking the name of your adopted mother as your own; but, believe me, the question of who you are is the favorite theme of conversation everywhere, and many a story, and even scandal, is invented to fill up the void." His words, kindly meant as she feels them to be, have inflicted a deep wound in her heart; she turns deadly pale, and suddenly withdrawing her hand from his arm—

"My true name!" she repeats to herself.

"Surely you are not offended with me?"

"No," she whispers, after a pause. "Yes, your words have greatly wounded me; but as you have been so very frank with me, I will be equally so with you. I have not told any one my real name because—because I do not know it myself."

"You do not know it yourself! Impossible!"

"Yes, it is strange, very strange, but such is indeed the case. I have never known any mother but Lady Rollingford, nor any home but this; and my real name and antecedents are Lady Rollingford's secret."

"And she has never told you?"

"Never!"

It is now his turn to be astonished; the handsome Rupert is puzzled and perplexed, and scarcely knows what to think.

"Let us return to the drawing-room," she says, taking his arm once more; "people will begin to wonder what has become of me!"

"Tell me first that you are not offended with me, that you forgive my indiscretion?"

"I have no reason to feel offended. I have nothing to forgive, for I believe your words were really prompted by friendship and not by mere curiosity."

He looks at her earnestly for a moment, and then, taking her hand in his, he raises it to his lips and kisses it in the foreign fashion. She is much too bewildered to take offense, and before she knows exactly what has happened she finds herself in a crowded saloon, surrounded by countless friends and admirers; but Rupert Cassilis has left her, and she feels that he has taken her peace of mind with him.

(To be continued.)

THE GREAT LURAY CAVE.

THE entrance to this vast and eccentric formation of nature is by a stairway of some thirty feet, which leads to an apartment six feet high by three wide. A massive rock, fashioned by natural agencies into a well-finished archway, surmounts the low and narrow passage. From this apartment a descent of ten feet more takes the visitor into a vast chamber, nearly one hundred feet square by forty high, with a level floor. Save the large masses of stalactites which hang here and there in clusters, the ceiling is of smooth limestone, while the walls reflect every conceivable color of stone, shaped into all kinds of flutings and columns. Here passages open in every direction, enabling the visitor to enter all the great chambers and examine the lakes, cascades, chasms, pillars, towers, and other curiosities mentioned in our last issue. On every side of the vestibule of the grand theatre are beautiful pillars and columns, looking as if they had been sculptured from the purest white marble. A few steps further and the auditorium is reached. The best view is obtained at a point where the visitor appears to be standing in the orchestra circle, with the pit at the feet, while way beyond is the stage. Three tiers of galleries stand out from the jewel-sparkling walls, and a perfect organ, with fifty-six gilded pipes, great and small, and crowned with a handsome cornice, is disclosed. Each of the pipes is capable of sustaining vibrations without injury, and when struck by the knuckle or a light cane, emits its peculiar tone, either sharp or grave. In many instances the sounds are wonderfully clear, resembling the tones of a bell, and being sustained for several seconds. The largest and continuous stalactites are from thirty to fifty feet in length, and give out sonorous notes when struck sharply. When the pipes are struck, one after the other, a succession of tunes, like the chiming of silver bells, is produced. It is not impossible that, if the various pipes are tested and marked, a musician will be able to play almost any tune upon them.

The Pavilion is a room one hundred feet in diameter, with many alcoves. A board floor has been laid for the series of balls that is to be held there during the Winter. The inaugural ball was held on Friday, December 27th, beginning at eleven o'clock in the morning and closing at four in the afternoon. The vast chamber was illumined by chandeliers and various lights, and the effect was such that every participant was led for the moment to believe he was indulging in a beguilings of a dream of fairy festivity. The admittance to the cave was one dollar for adults and fifty cents for children, with a charge of twenty-five cents extra to dancers to defray the expense of instrumental music.

SOME STATISTICS OF 1878.

THE trade returns of Chicago for 1878 exhibit a most gratifying result. The receipts of breadstuffs reached the enormous aggregate of 124,856,193 bushels, an increase of 35,920,780 bushels over 1877. Of this, the wheat receipts were 29,301,220 bushels, and shipments, 25,033,741 bushels. The number of hogs received was 6,339,656, and the value of the whole hog product was $55,500,000. The value of the live stock received in Chicago was $98,400,000, being an increase of $5,200,000 over 1877. The increase in the value of the manufactures of the city over 1877 is $22,000,000. The total of the wholesale sales in 1877 was $276,500,000, and of the like sales in 1878, $280,000,000. The values given are in currency. Reduced to gold the value for 1878 is $277,000,000; for 1877, $265,100,000; showing an increase in coin value of $12,800,000. A general review of the entire business of the city, including produce, wholesale and manufactures, shows a grand increase in coin value of $55,000,000 over 1877. The average decline in prices since a year ago has been about 17 per cent.

In Milwaukee, in 1878, there was also a remarkable increase of the grain and live stock trade. The receipts of cheese reached the enormous aggregate of 13,263,000 pounds, an increase of nearly 5,000,000 pounds over those of 1877. The receipts of wheat were 21,100,000 bushels; of flour 2,266,000 barrels. The shipments of flour were 2,620,000 barrels.

The footing of the exports and imports at Boston for the year 1878 shows in a striking manner the revolution which has taken place during the past two years in the relative importance of exports and imports at every large port. The exports from that port during the year 1878 were valued at $49,938,465, against $43,563,229 during the year 1877; an increase of $6,375,236. The value of the imports during 1878 was $36,610,759, and in 1877, $47,720,664; a decrease of $11,109,905. In 1877 the imports exceeded the exports $4,157,435. Thus a balance against us in 1877 has changed to a balance of $13,327,706 in our favor in 1878.

Upwards of 13,000,000 pounds of codfish and 11,000,000 pounds of halibut from the Banks, and 23,000,000 pounds of codfish from George's, were landed at Gloucester, Mass., during the year just closed.

The annual statement of the precious metals produced in the States and Territories west of the Missouri River, including British Columbia, and the receipts in San Francisco from the west coast of Mexico during 1878, shows the aggregate products to be as follows: Gold, $38,956,231; silver, $38,746,391; lead, $3,452,000; the total being less by $17,267,132 than for 1877. California shows an increase in gold of $2,068,000, but a decrease in silver, etc., of $1,323,000. Nevada shows a total falling off of $16,398,341, the yield from the Comstock being only $21,295,043, as against $37,911,710 for 1877. Montana shows a marked increase, all in silver.

During the past year 917 failures were reported in this city, with liabilities to the amount of $63,358,493, and assets valued at $18,695,531. This exceeds the record of any former year, but the large number is mainly due to the repeal of the Bankrupt Act, for during the last quarter the failures have been fewer than usual. Most of the weak firms have been wiped out, and the prospect in trade for the coming year is much brighter than a year ago. The largest number of failures was in the liquor trade and among the bankers and brokers, forty being ascribed to each. The liabilities of the bankers and brokers amounted to the large sum of $4,939,801, while their assets were only $559,073. The largest amount of liabilities in any single trade was among the carpenters and builders, the total being $9,246,352, while the assets were only $272,224.

The number of arrivals of vessels from foreign ports at New York during the past year is 7,348, an increase over the number in 1877 of 1,104, and over that in 1876 of 1,617. One-third of the arrivals were American vessels, and another third British vessels, there being 28 more of the former than of the latter. In 1877 the difference was 95 in favor of America. Vessels of 20 other nationalities arrived, Norway being third on the list, the number of Norwegian vessels in 1877, 600, having increased by one-half.

The number of business failures officially announced in Great Britain and Ireland during the year 1878 was 15,059, of which 2,643 were in the financial and wholesale and manufacturing branches of trade, and 12,416 among retail trades, professional pursuits, builders, publicans, working classes, etc., against 2,172 and 8,850 under the respective headings in 1877, showing an increase of 4,037 failures last year over the preceding year.

A Remedy for Hydrophobia.

THE Cologne *Gazette* says: "The alarming frequency of cases of hydrophobia gives renewed interest to a case which was cured in the Franciscan Hospital of St. Maurice, near Münster, in Westphalia, in 1874. Of the fact that this was really a case of hydrophobia the attending physician, Dr. Offenberg, seems to leave no reasonable doubt. After trying morphine and chloroform in vain, recourse was had to the Indian arrow-poison, *curare or urari*. Within the course of four hours two decigrammes of the poison, divided into seven portions, were injected under the skin of the patient. The spasms now became less frequent and weaker, and had nearly ceased within nine hours after their first occurrence. The patient finally recovered her health."

A Perilous Alpine Adventure.

THE *Berner Tageblatt* gives an account of a perilous adventure which recently befell two English tourists: "Mrs. Wainwright, described as an English lady, accompanied by her brother-in-law, Mr. Wainwright, attempted the ascent of the Piz Palur, a mountain of the Bernina group. They took with them two guides, brothers—Hans Grass and Christian Grass. The climbers, who were corded together, after leaving the central peak took a westerly direction towards another peak. Christian Grass went first, next to him followed Mr. Wainwright, then came Mrs. Wainwright, and the rear was brought up by Hans. A thick fog came on. Christian, either confused by the semi-obscurity, or not exercising sufficient caution, went too near an *arête* (edge of snow), when the snow suddenly gave way under his feet, and he fell down a precipice, dragging with him in his fall the English lady and gentleman. But the rope was strong, and Hans Grass is a man both stout of heart and of gigantic strength. As he saw his brother disappear he drew himself instinctively backward, and, by sheer force of muscle and will, held the three lost ones suspended in the air. Nevertheless, the position was a sufficiently terrible one. Strong as he was, he was not strong enough to drag from the abyss two men and a woman—to stir, to yield an inch even, might be certain death to all—and they were far beyond the reach of human aid. Nothing but prompt courage and ready wit could save them. He shouted to his brother, dangling at the end of the rope, ice on both sides of him, snow above him. The brother answered; he was alive, unhurt, and ready to help if means of help could be devised. Hans told him to cling to the icy slope, cut steps in it and mount, and he quick about it, for he did not think he could hold on more than half an hour longer. Fortunately, Mr. Wainwright had kept his ax. He handed it to Christian, and the guide set about cutting the steps as Hans had suggested. After many difficulties and almost superhuman exertions, he succeeded. He contrived to crawl up to the edge of the crevasse; his brother gave him a hand; then the two uniting their strength, pulled up Mrs. Wainwright and her brother-in-law, and all four, not seriously the worse for the frightful adventure, but devoutly thankful for their hairbreadth escape, got down from the mountain and returned to Pontresina.

SCIENTIFIC INTELLIGENCE.

Sir W. Armstrong uses the electric light in the picture gallery of his residence at Craigside, about eighteen miles from Newcastle-on-Tyne.

A German Paper asserts that prussic acid only causes suspension of life at first, and that one who takes it can be restored to animation by the pouring of acetate of potash and salt, dissolved in water, on the head and spine.

The Total Population of the globe, according to Behm & Wagner's *Bevölkerung der Erde*, fifth publication, just issued, is 1,439,145,300, distributed thus over the great land divisions: Europe, 312,398,480; Asia, 831,000,000; Africa, 205,219,300; Australia and Polynesia, 4,411,500; and America, 86,116,000.

"Nature" gives a description of an electric spark pen which has been invented by M. Bailey, of Paris, for rapidly producing engravings on copper or zinc. The light of the spark is said to be sufficient for the artist even when he works in a dark room, and the pen is stated to be as manageable as an ordinary pencil.

Dr. T. Lauder Brunton calls attention to the fact that the reason why some persons when puzzled scratch their beards is that they excite certain nerves which are connected with the heart, and thus stimulate the circulation. He says some Germans strike the sides of their noses, which has an effect upon the nerves somewhat like that of snuff.

Dr. J. M. Anders maintains that a large proportion of the vapor of the atmosphere may be accounted for through the process of transpiration from plant life when there is about from 25 to 30 per cent. of woodland in a country, and, on this ground, considers that the practice of forest culture should be highly commended as a means of improving atmospheric conditions.

At the University of Cambridge, England, mechanical workshops have been fitted up with machinery for construction of instruments and apparatus to be employed in philosophical research. Good workmen have been employed as teachers. Several university men, who intend becoming engineers, have become members of the classes now formed for regular instruction in the use of tools and machine construction.

Professor F. V. Hayden says that on the east side of Wind River Peak, Wyoming Territory, and on the east base of Fremont Peak, the remains of the huge glaciers which once covered the region have been discovered. On the west side of Wind River range the moraines and glaciated rocks were found on an immense scale. He thinks that on this side a glacier must have formerly existed having a length of eighty miles and a width of twelve miles, with arms extending up the gorges of the streams to the very water divide.

Chloral an Antidote for Strychnia.—Mr. J. Sinclair Holden writes to *Nature* that, having occasion to banish some mice from a pantry, he placed on the floor at night a slice of bread spread over with butter in which was mixed a threepenny packet of Battle's vermin killer, which contains about a grain of strychnia along with flour and prussian blue. The following morning he was roused by the servant telling him that a favorite Skye terrier was lying dead. He found that the mice had dragged the slice of bread underneath the locked door, and that the dog had thus got at it and eaten part equal to about one-sixth of a grain of strychnia; it lay on its side perfectly rigid; and an occasional tetanic spasm showed that life was not quite extinct. Mr. Holden, fortunately having notes of some experiments made by direction of the British Medical Association on the antagonism of medicines, in which it was conclusively proved that a fatal dose of strychnia could be neutralized by a fatal dose of chloral hydrate, and that the minimum dose of the latter for a rabbit was twenty-one grains, he at once injected under the dog's skin forty-five grains of the chloral in solution, his dog being about twice the weight of a rabbit. In a quarter of an hour dancing the dog was dead, as the spasms had ceased, and it lay apparently lifeless, he moved it gently with his foot when it at once struggled to its feet, and shortly after staggered to its usual corner by the parlor fire; it took some milk, and, except for being quieter than usual, seemed nothing the worse for the ordeal it had passed through. That the fatal effects of a poisonous dose of strychnia was thus counteracted so successfully by what was a poisonous dose of chloral, given hypodermically, is an interesting fact verifying the experiments of the Medical Society. An overdose of chloral has been known to bring on convulsions not unlike those that are produced by strychnia, and it has been found that strychnia was a remedy in such cases. The action of these two powerful agents is thus shown to be reciprocal. The remedy is a heroic one in both instances and can only be applied in extreme cases. To the layman who has not the fear of the regular medical profession to cloud his vision, there is something suggestive of homeopathy in these researches on the reciprocal action of strychnia and chloral.

The Modern Source of Saltpetre.—The origin of saltpetre is a subject which has vexed the minds of several generations of chemists. Nitrate of potassium or saltpetre, is found in nature as a white crust, appearing on certain rocks and walls, and even upon the surface of the soil; from this mode of occurrence the name "saltpetre" or rock salt, is doubtless derived. The largest natural source of saltpetre is afforded by certain soils in India. Soil having a white film of salt on the surface is collected from the neighborhood of houses, drains and stables; the soil is washed with water, and the nitre crystallized from the solution. With this Indian saltpetre many countries have been, till quite recently, almost exclusively supplied. The countries of Continental Europe, next having access to no considerable a natural source of nitre, have been obliged from early times to produce it for themselves. At first the earthen floors of cottages and stables were collected, washed, and nitrate of potassium obtained by treatment with wood-ashes and crystallization; but the inconvenience of collecting such material, and its general poverty in nitre, soon led to attempts at producing saltpetre by artificial means. To Glauber, a chemist of the seventeenth century, apparently belongs the credit of first preparing nitre artificially. The process, as carried out in the present day, is in outline as follows: Soil, containing more or less of vegetable mold and carbonate of calcium, is mixed with a certain proportion of stable manure or other refuse animal matter, and dispersed in small heaps, care being taken that the mass of soil and manure shall be sufficiently porous to insure its free admission of air; these heaps are protected from rain, and are from time to time watered with stable sewage. At the end of two or three years the earth is sufficiently rich to be worth extracting. This tedious process for manufacturing nitre has, during the last few years, been superseded to a considerable extent by the treatment of Peruvian nitrate of sodium with the chloride of potassium obtained from the Stassfort mines, by which nitrate of potassium and chloride of sodium are produced. Although artificial nitre beds are still common in Sweden, France and Switzerland, they cannot come into competition with the last-named native source. Not only is nitrate of potassium made from the deposit at Stassfort, but carbonate of potassium is also produced in such quantity as to materially affect the trade in Russia and American potash. It now looks as if in a few years all the saltpetre and carbonate of potassium would be derived from the apparently inexhaustible German mines.

PERSONAL GOSSIP.

THE Hon. Marshall P. Wilder has been elected President of the New England Historical Society.

ROBERT W. MACKEY, ex-State Treasurer of Pennsylvania, died at Philadelphia, January 1st.

THE Corporation of Dublin has presented ex-President Grant with the freedom of the city.

THE Edinburgh *Scotsman's* London correspondent says Dean Stanley contemplates revisiting America shortly.

COUNCILOR-OF-STATE SCHMITT has been appointed Director of the Police Department of the Czar's private Chancelery.

HENRY VINCENT, a well-known English lecturer and Radical is dead. He lectured in various places in the United States in 1868 and 1869.

COMPTROLLER OLCOTT expects a surplus of more than one million dollars of receipts by the State of New York over the expenditures for the present fiscal year.

THE Princess Mary of Liechtenstein, formerly Miss FOX, the adopted daughter of Lord Holland, and the authoress of several works, died recently in Syria.

THE United Congregational Church and Society of Newport, R. I., have unanimously voted to invite to the pastorate the Rev. Henry J. Van Dyke, Jr., of Brooklyn.

THE late Colonel Henry L. King, of Albany, has left $20,000 by his will to purchase the first gift of adornment ever bestowed upon that city. It is to be a fountain in the public park.

MR. W. W. CORCORAN, of Washington, who has just passed his eighty-first birthday, is exceedingly well, manages his business thoroughly, and enjoys his evening whist as much as ever.

IT is said that Mrs. Don Cameron will remain at Harrisburg for the Winter, while Miss Cameron, who is her stepmother's senior, will take charge of her father's establishment in Washington.

THE Right Hon. Richard Assheton Cross, the English Home Secretary, has refused the application of Mrs. O'Donovan Rossa, to allow her husband to return to Ireland on account of his health, which is much shattered.

JUDGE CHARLES T. SHERMAN, formerly United States Judge of the Cleveland District, died suddenly January 1st. He was a brother of Secretary Sherman and General Sherman, and father of Senator J. Donald Cameron's wife.

MR. HENRY IRVING has manfully begun a theatrical reform which has long been needed in London: he has abolished fees altogether. Nobody will hereafter be called upon to pay for programmes—in short, "no fees of any kind will be permitted."

ROSZA LANDON, the Hungarian robber, whose exploits from 1836 to 1870 gave him a romantic hold on the population, lately died in jail. He is the man of whom it is said: "He stole an Archbishop in 1868, a railway train in 1869, and a nunnery in 1870."

MRS. HARRIET GROTE, authoress, widow of George Grote, the historian of Greece, is dead. She was the authoress of a "Memoir of Ary Scheder," published in 1850; "Collected Papers in Prose and Verse," published in 1862; and of a sketch of Mr. Grote's personal life, which was published in 1873.

M. VICTOR JULIAN has announced his reverence for Paul de Cassagnac, and has not only made him his heir but has offered him 50,000 francs to contest his re-election to the Chamber. M. Julian was formerly director of the sugar refinery of St. Louis. An earnest Bonapartist, he some years ago made a will in favor of the Prince Imperial. What induced him to change it is not known, but it is certain that M. de Cassagnac is now sole heir to his fortune, something like 2,000,000 francs.

EX-GOVERNOR ONSLOW STEARNS, of New Hampshire, who died on Saturday, December 28th, was a prominent member of the Republican party in New Hampshire. He was nominated for Governor there in 1869, and was elected by a majority of 3,173 votes over Mr. Bedell, the Democratic candidate. In 1870, Mr. Stearns was renominated, and, although there were three other tickets, he received 1,253 votes more than all of them, the number cast being as follows: Stearns, 34,912; Bedell (Dem.), 25,023; Flint (Labor Reform), 7,309; and Burrows (Prohibitionist), 1,167.

THE Vatican organ publishes a letter from the Pope to the Archbishop of Cologne. The Pope says that from the commencement of his Pontificate he has desired peace between princes, peoples and the Church. He has turned his thoughts in preference towards the noble German nation, but God alone knows whether the work is near success. He declares he will continue in the path hitherto pursued, appeals to the governor bishops to obey all laws not contrary to their faith, and concludes: "We must pray God to lead the noble and powerful Emperor of Germany and his advisers to show more disposition towards good will." The letter is dated December 24th.

PROFESSOR NORDENSKJOLD, who directs the Swedish polar expedition in the north polar waters, has written a letter to a friend in which he gives a highly interesting account of the village of Chaborova, Nova Zembla, inhabited by Samoledes, from whom, with considerable difficulty, he obtained specimens of their gods, which for the most part resemble large dolls. Although converted to Christianity, these curious people retain many of their old customs, and sacrifice on their altars to gods. A Russian who lives in Chaborova in Summer for trading purposes took the professor to see one of these altars in a cavern, which is regarded as sacred. Although the Archimandrite had destroyed it thirty years ago, and had raised a cross on its site, the Samoledes have found in the neighborhood evident traces of recent sacrifices to the gods, whose images were placed around.

ALEXANDER MANSELIS VEDDER, M. D., a well-known physician of Schenectady, and ex-Mayor of that city, died at the residence of his brother, Dr. M. B. Vedder, in New York, December 29th, after an illness of three months. Dr. Vedder was graduated from Union College in 1833, being then in his nineteenth year. After a short career as teacher he began the study of medicine, and received his diploma from the University of Pennsylvania in 1839. He served a short time as resident physician in the Blockley Hospital of Philadelphia, and then began to practice in his native city. He was the first American physician to publish an article on Bright's disease, and speedily became noted in Central New York as an authority in diseases of the chest. In 1840 he was appointed lecturer on anatomy and physiology in Union College; shortly afterwards professor. This position he filled for nearly twenty years. In 1846 he was elected Mayor of Schenectady. In 1876 he was a delegate to the International Medical Congress at Philadelphia. He wrote a number of articles on various medical subjects, which were widely circulated.

PERU.—ASSASSINATION OF EX-PRESIDENT PARDO IN THE CORRIDOR OF THE SENATE CHAMBER, AT LIMA, NOVEMBER 16TH.—FROM A PHOTOGRAPH BY COURRET & CO.

THE ASSASSINATION OF THE EX-PRESIDENT OF PERU.

ON the 16th of November last, Don Manuel Pardo, ex-President of the Republic of Peru, leader of the political party now dominant in the country, and President of the Senate, was assassinated at the door of the passage leading to the Senate hall, in Lima, by Sergeant of the Guard Melchor Montoya, who fired the fatal shot from his rifle. Señor Pardo almost instantly fell to the ground, his lungs being pierced, and, despite the efforts of a corps of physicians, expired from hemorrhage in less than an hour. The assassination produced a great commotion in Lima. Señor Pardo was widely popular, and national mourning was decreed for a period of five days, during which all business was suspended. The funeral was one of great magnificence.

On the day after the fatal occurrence the Ministers of the Government, who were called together, were interpellated by Congress, and it is understood from the revelations made that the country was undermined by conspiracy, which, however, had been discovered in time to crush it. The President of the Council stated that the Government was in possession of data proving that the murder of Don Manuel Pardo was not an isolated deed, but formed part of a vast plan of conspiracy. In view of these circumstances the Chambers at once resolved, by a majority of 114 against 3, to invest the Government with extraordinary powers, ordering the suspension for sixty days of Articles 18, 20 and 29 of the Constitution, referring to individual rights, which are equivalent to the law of *habeas corpus*. Various arrests were made, among them the two companies of the "Pichincha" battalion on guard at the Chambers at the time. From the preliminary declarations of some of the prisoners it is discovered that the sergeant who shot Señor Pardo was the one to whose lot it fell to commit the deed.

The assassin, Sergeant Montoya, is twenty-two years of age, of medium stature, and of a purely Indian type. His face is devoid of expression, and reveals none of the characteristics of a great criminal. He has been seven years in the "Pichincha" regiment, has always done his duty, and never gave the slightest reason for supposing him capable of committing such a crime.

Don Manuel Pardo was forty-seven years of age at the time of his untimely taking off.

THE NEW CHAPEL OF THE CHURCH OF THE PILGRIMS, BROOKLYN.

THE new Pilgrim chapel, just erected by the Church of the Pilgrims, at Henry and Degraw Streets, Brooklyn, was dedicated, December 15th, with imposing exercises. The Pilgrim Mission originated in a Sunday service commenced by Mr. Albert Woodruff under a tree in State Street, among men and boys of the vicious class. Its first session was held May 30th, 1847, and the first building occupied by it was Freeman's Hall, corner of Columbia and Amity Streets. In 1853 the name was changed to the Warren Street Mission. It became a part of the Church of the Pilgrims in 1875, and George A. Bell was then appointed superintendent. The corner-stone of the new chapel was laid July 10th, 1878. The building covers a plot 100 by 88 feet, and has accommodations for about 1,100 persons. It has been designed by its architect, J. C. Cady, of this city, for both Sunday-school and church services. For the former the entire building is available, while for the latter purpose a series of class-rooms which surround three sides of the auditorium may be readily separated from it by screens of glass and wood. There is provision in the class-rooms for 350 adult persons, and they are so separated that each can take advantage of the exercises best fitted for them. Moreover, all these departments may unite in the general exercises of the school while in their own rooms. The auditorium is forty feet in height, and has on three sides a continuous range of windows, in stained cathedral glass, affording abundant light and ventilation. The interior colors are rich, growing gradually lighter towards the ceiling. The kitchen and library are in a wing at the rear of the class-rooms, and are admirably arranged for the special ends they have in view. The library furnishes room for 2,000 books, though the present catalogue of the chapel embraces only 500 volumes.

A fine organ fills an apse back of the pulpit. The building is in the Italian Gothic style, the exterior of Philadelphia brick, terra cotta and brown stone. The cost of the chapel will be about $35,000. A campanile about 100 feet high rises from the street corner, and marks the religious home of several hundred families in that neighborhood.

NEW YORK.—NEW CHAPEL OF THE CHURCH OF THE PILGRIMS IN BROOKLYN.

VOYAGE OF THE "OKORESTA."

THE yacht *Okoresta*, which left Cleveland, Ohio, a year ago last September, in charge of Captain F. W. Edmunds and Mr. John Inman, has arrived home, after having made a trip of over five thousand miles. The vessel is a schooner-rigged boat of about four tons burden, thirty-two feet long, nine feet beam, and draws sixteen inches of water. The crew consists of Captain F. W. Edmunds and J. N. Inman (who is a relative of the Inman family of ocean steamer fame). The route taken was from Cleveland to the Ohio River, to Cairo *viâ* the Ohio, to New Orleans, to Pensacola, to St. Augustine. About six months were pleasantly spent in the Flowery State, its bays, inlets and rivers, and few men have had better opportunities to see the wonders of that beautiful land than Captain Edmunds.

Leaving St. Augustine, the voyage northward was made inside, except about 200 miles of outside sailing. Starting from Jacksonville, the captain made for Cape Roman, through Tybee Pass to Bogue Inlet, Borne Sound, Core Sound, Pamlico, Croatan and Albemarle Sounds, Dismal Swamp Canal, Chesapeake Bay, Delaware Canal, Delaware Bay and River, Raritan Canal to New York, the Hudson and Erie Canal to Buffalo; thence by Lake Erie to Cleveland.

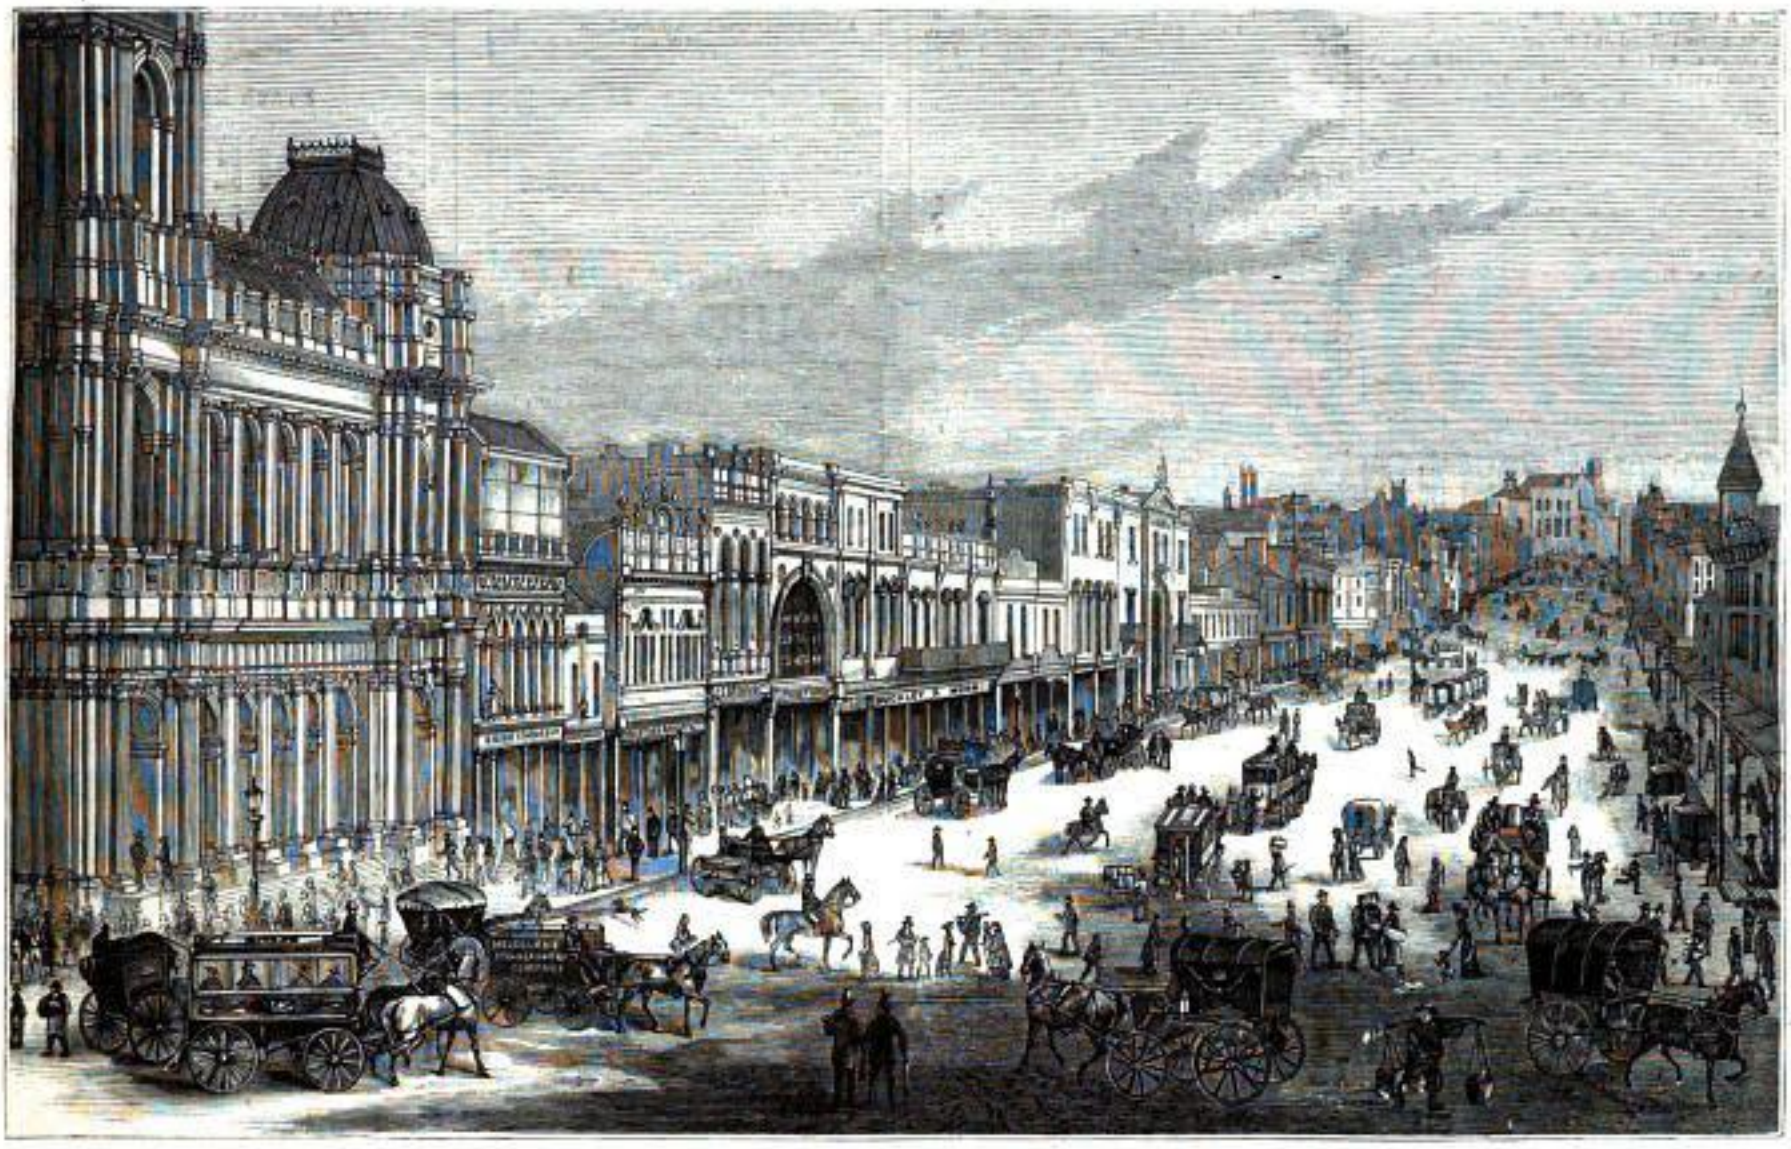
The following table shows the distance traversed by Captain Edmunds:

Points.	*Miles.*
From Cleveland, via Ohio Canal, to Dresden	178
Dresden to Marietta, Ohio	97
Marietta to Cincinnati	200
Cincinnati to Cairo	532
Cairo to Port Eads	1,003
Port Eads, via Southwest Pass, to Pensacola	200
Pensacola to Jacksonville	1,100
Pensacola and Tampa Bay	214
Cape Roman to Cape Fear	75
Cape Fear to Elizabeth City	250
Dismal Swamp Canal	30
Chesapeake Bay	160
Chesapeake and Delaware Canals	14
Delaware Canal to Bordentown	110
Bordentown to New York	60
New York to Troy	160
Troy to Buffalo	345
Buffalo to Cleveland	175
Total distance	5,083

The actual running time during their absence was only about four months.

EXHIBIT OF THE WHEELER & WILSON COMPANY AT PARIS.

WHEN samples of the best products of all nations are brought together for inspection and comparison, with a view to determining the relative and absolute merits of the various exhibits, to be certified by the verdicts of juries composed of the most competent judges in every department of the sciences and the arts, a decisive and unmistakable declaration of superiority in favor of any important product over all others of its kind is a matter upon which to congratulate the producer, and a just ground of national pride.



At the Exposition Universelle, Paris, 1878, there were some 52,000 exhibits. The number of awards, comprising 133 grand prizes, some 2,500 ordinary gold medals, and a multitude of silver and bronze medals and honorable mentions, aggregated about 30,000.

Of the grand prizes nine only were awarded to exhibitors from the United States, of which one was for a species of labor-saving machinery which, in relieving millions from drudgery, has proved a

AUSTRALIA.—VIEW OF BOURKE STREET, A COMMERCIAL CENTRE OF THE CITY OF MELBOURNE.—SEE PAGE 362.

rich blessing to the human race. We refer to the sewing-machine and the exhibit of the Wheeler & Wilson Manufacturing Company.

After the success of the company at Paris in 1867, Vienna in 1873, and Philadelphia in 1876, their recent overwhelming and decisive victory at Paris is not surprising, but none the less gratifying on that account.

At this Exposition, extraordinary measures were taken to secure judges of the highest qualifications and unquestionable impartiality, to subject all machines and processes to the most thorough and exhaustive tests, and to adopt every safeguard against the making of awards upon any other grounds than the real merits of the exhibits. The fact that out of some eighty exhibitors of sewing-machines from all the world, Wheeler & Wilson received the only grand prize, as is authoritatively shown by the subjoined certificate, would seem to place the superiority of their machines above all others beyond question.

Inasmuch as the art of sewing by machinery owed its origin and development almost exclusively to American genius, it is particularly gratifying to know that an American firm is still leading the world in this department of manufactures by producing machines which the highest possible authorities declare *the best* in the world, after many thousands of persons in the sewing-rooms and workshops of every country have long known the fact from actual use of the steady-going little thread-carrier.

Paris, 8th November, 1878.

I have examined the official list of awards at the Universal Exposition, as published by the French

FRANCE.—EXHIBIT OF SEWING MACHINES BY THE WHEELER & WILSON COMPANY AT THE PARIS EXHIBITION.

Authorities, and find that only one Grand Prize was awarded for Sewing-Machines; that was given to the Wheeler & Wilson Company of New York.

The Grand Gold Medal and Diploma were delivered to me at the Palais de l'Industry, October 21, and by me at once given to the representative of that company at the Exposition. (Signed) R. C. McCORMICK, Com. General.

THE CITY OF MELBOURNE, AUSTRALIA.

MELBOURNE, the prosperous capital of Victoria, is situated on the banks of the Yarra-Yarra River, about nine miles from its mouth, at the upper end of the large estuary of Port Phillip. The population of Melbourne is about 200,000. The streets are mostly laid out at right angles, wide, straight, and running the whole length and breadth of the town. They are macadamized in the middle, well drained, mostly flagged at the sides, and lighted with gas.

In the original plan of the city, lanes—alternating with the main streets—were left to afford back entrance to the houses; but as the value of property increased, these lanes were occupied by merchants and tradespeople, became independent streets, and now form a very unsightly feature in the older portion of Melbourne. The town is generally well built of brick and stone. Among the prominent buildings are the two Houses of Parliament, the custom-house, the treasury, the post-office, the free library, with a museum of art and reading-room, several theatres, and an elegant club-house. In commerce, Melbourne ranks as the first port in the British Colonies, an importance due to the gold discoveries of 1851. Besides gold, the chief exports are wool, tallow, hides, and other kinds of raw produce. The principal trade is with England, but that with the United States is not inconsiderable. Our illustration represents Bourke Street, one of the principal streets in Melbourne.

FUN.

CAN the man who shreds cabbage be arrested for cold-slawing?

QUESTION to be asked of a man in the Rogues' Gallery: Are you often taken that way?

WHEN does a showman display a confused knowledge of vehicular distinctions?—When he calls "A car-a-van."

HER FIRST SUNDAY AT CHURCH.—Little girl—"Nurse, please give me a penny to give to the organ-grinder; he's coming round begging with a dish."

IT is no longer fashionable to have two sofas in the parlor. But you would not offend a pair of lovers if you were to take all the furniture out of the parlor—save a big rocking-chair.

THE old people have all the good eyes. Young men here wear eye-glasses as young men in Montana wear revolvers, and young men in Chicago carry samples of cordwood for canes.

SOFT-HEARTED.—*Grandpapa* (to Tommy, who has just been castigated by his mamma)—"And you know, Tommy, it really pains mamma more than it does you!" *Tommy*—"Oh, yes, I know it does! She says so! It hurts her hands."

"I MEANT to have told you of that bucket of coal I left at the bottom of the stairs for you to carry up, Harry," said his wife from the upper landing, when she heard a fall and some tall swearing. "Never mind; I've found it," replied he.

"THERE," said the shopman, pointing to a beautiful *Aperçue*, "there's a fine centrepiece." "Cent-apiece?" gasped old Mrs Bagster, who stood near—"cent apiece? You may wrap up two of them for me, if you please, Mr. Smith"—adding, satto voce, "I'd no idee them things was so cheap."

EXTRACT from an Irish letter: "That was a plaxin' Chris'mas joke on Teddy Grady. He axed his feyther wud' ould Nick fill any shtockin he hung up, no maither how big it was, an' his feyther said 'Av coorse,' an' so he shticle wan of his feyther's an' hung it up, an' whin Teddy kim down in the mornin' he found the ould gintleman shtin' plump up on the manteipiece, an' the shtockin' well filled wid his fut, an' Teddy got the fill of the shtockin' about forty-sivin toimes roight in the small of his back, an' the nixt mornin' he luked as if he'd been shlapin' in a nesht of porcupines."

TELL us not in mournful numbers that this life is but a dream, when a girl that weighs one hundred gets outside a quart of cream—and then wants more.—*Elmira Gazette.* Life is real, life is earnest, and the girls know what they need, but on cream they are the durndest set to show their grit and greed. No encore.—*New York News.* Let us, then, be up and doing, with a heart for any fate; but never let us go a wooing girls that want a second plate. How's that?—*Newsboy.* Lives of such girls all remind us, as we float adown the stream, that the boys who come behind us will have to pay for lots of cream. N-e-x-t!—*Yonkers Gazette.* Be not like dumb driven cattle, be a hero in the strife; never with her mother battle, save the ice-cream for your wife. Proceed!

H. BALDWIN, of Monroe City, Ind., writes under date of Dec. 3d, 1877, that his wife used Dr. Pierce's Favorite Prescription with wonderful results. It effected her entire cure, after several physicians had failed. The many similar letters positively affirming that the Favorite Prescription had cured the diseases and weaknesses peculiar to women, induced Dr. Pierce to sell it under a guarantee. Ladies need no longer submit to useless and painful local treatment, as the Favorite Prescription is a safe, sure and speedy cure. Hundreds who had been bed-ridden for years have been restored to perfect health by its use.

A MOVEMENT of great benefit and importance to the inventive and industrial interests of the country has been inaugurated by Messrs. Fred. J. Hoyt & Co., 733 Broadway, New York. They have opened two elegant show-rooms as a "Museum of Patents" and "Inventors' Headquarters," where patentees and capitalists may meet and adjust their mutual interests, without cost to either party, unless a sale is effected, in which case the firm receive a commission on the business done. In this way the world is quickly supplied with articles of merit and invention, giving merit a proper reward.

THE most popular lunch-room in New York is that of the St. Nicholas Hotel, which, in food, service, appointments and fair prices, is without an equal. Add to these attractions its central location, and its daily throng of customers is readily explained.

THE ISMAN STEAMSHIP COMPANY were awarded a gold medal for the model of their steamship *City of Berlin*, exhibited at the Paris Exposition. The recent trip of the *Berlin* to this port was one of the shortest ever made.

CATARRH AND ITS CURE.

REV. T. P. CHILDS publishes to-day a wonderfully accurate description of the causes of Catarrh, and the results from inattention to the first symptoms of this terrible disease. From the details given of his method of cure, it seems to be easily applied and very simple in its action. Inhalation is evidently the most rational and sensible way of reaching any disease of the air passages; Mr. Childs's application of this principle in medicine, together with the knowledge of the inhalants to be used, have given him his wonderful success in the treatment of Catarrh and Bronchitis. To judge from the published statements of some of his patients, the medicines Mr. Childs contrives to place, by the use of his inhalers, just where it is needed, must be most powerful and searching in its character to produce such surprising results. None need feel any hesitancy in placing their case in Mr. Childs's hands for treatment. The number and character of the certificates, as well as the favorable notices from well-known publishers, who have carefully examined the subject, must dispel every doubt in regard to his reliability. We would call especial attention to the advertisement, and request a careful perusal of the facts as set forth.

FRANK LESLIE, Esq.: I suffered for years from severe, dangerous and chronic dysentery, which defied all medical skill. For a year past I have used the Gluten and Gluten Wafers of the HEALTH FOOD CO. They have about subdued my malady, and I feel better than I have for years. I could not be induced to give up these admirable Foods.
LANCASTER GUILD, Baltimore, Md.

INDIGESTION, DYSPEPSIA, nervous prostration, and all forms of general debility relieved by taking MERSMAN'S PEPTONIZED BEEF TONIC, the only preparation of beef containing its *entire nutritious properties*. It is not a mere stimulant like the extracts of beef, but contains blood-making, force-generating and life-sustaining properties; is invaluable in all enfeebled conditions, whether the result of exhaustion, nervous prostration, overwork, or acute disease; particularly if resulting from pulmonary complaints. CASWELL, HAZARD & Co., Proprietors, New York.

SAVE YOUR FUEL.—From one fifth to one-third of the usual amount of coal bills can be saved by the use of fire-proof non-conducting Asbestos Coverings on hot air and steam-pipes, boilers, heater pipes in dwellings, etc. The genuine can be procured only of the H. W. Johns Manufacturing Company, 87 Maiden Lane, New York, patentees and manufacturers of Asbestos Paints, Roofing, etc.

Easy Shoes.—Superior quality for gentlemen at reduced prices. EUGENE FERRIS & Son, No. 61 Nassau Street, West Side.

Keep your Bird in health and song by using SINGER'S PATENT GRAVEL PAPER. For sale by druggists and cage-dealers. Depot, 562 Hudson St., New York.

At Reasonable Rates—Money on Life and Endowment Insurance Policies and Mortgages; same bought; insurance of all kinds effected with best companies. J. J. HASKICH & Co., 165 & 167 Broadway.

$10 to $1,000 invested in Wall St. Stocks makes fortunes every month. Book sent free explaining everything. Address, BAXTER & CO., Bankers, 17 Wall St., N. Y.

AN ANTONIUS STRADIVARIUS CREMONENFIS (Facsimile) VIOLIN.

For only $7.50.

With Violin Box, Bow, Ebony Keys, Italian Strings. A Complete Teacher for the Violin, with 1,400 pieces CHOICE SELECTED MUSIC.

We have in stock a few very choice Violins of the above make, that we think have had the misfortune—owing to a heedless Violin dealer—to have been **modernized**; namely, repolished, thus removing the "**poverty-struck**" look so highly prized by professional Violinists. The reasonable has made them, without **any exception, the most beautiful Violins we ever saw.** These Violins have always been famous for their artistic model and graceful outlines; and as the repolishing has served to bring out all the rich elegance of the wood, shadings from almost black to a rich chestnut hue, words are inadequate to describe the **Masterpiece of Art** they present. Fortunately the sacred Antonius Stradivarius is still visible on the inside, so that the gold glory and engraved name is still unimpaired; and as a year's use will remove the **new** look, it is an **unheard of** chance to secure a **great bargain** for much less than the cost of an ordinary Violin. N. B.—The Violin will be sent in the most complete order. No expense has been spared in the arrangement of the outfit, even to the most minute detail, as we intend this shall be our **greatest offer**, one that any **Musical Instrument House** may well be proud of. So perfect are all the details, that all that is necessary is to rosin the bow, and the Violin can be used at once. Address **C. W. Story, 20 Central Street, Boston, Mass.**

A GOOD PLAN

The most profitable way for operating in stocks is by uniting capital of various sums in combining or pooling orders of thousands of customers and using them as *one mighty whole*, which is done so successfully by Messrs. Lawrence & Co., Bankers, 57 Exchange Place, N. Y. City. By this co-operative system each investor is placed on an equal footing with the largest operator, and profits divided pro rata among shareholders every 30 days. $10 invested makes $90 or 5 per cent. on the stock during the month—$50 returns $350 or 7 per cent., $100 pays $1,000 or 10 per cent., and so on according to the market. The firm's new circular (mailed free) contains "Two unerring rules for success in stock operations," and explains everything. All kinds of Stocks and Bonds wanted. New Government Loan supplied. LAWRENCE & CO., *Bankers and Brokers*, 57 Exchange Place, N. Y. City.

TRANSPARENT CARDS, 40 designs. Your name elegantly printed on 40 cards and sent in a neat case for only 10 cents. TURNER & Co., Ashland, Mass.

CHATTERBOX.

A Charming Monthly Periodical for Young Folks.

THE JANUARY NUMBER NOW READY.

In presenting the above Monthly Publication to the young folks, we have three objects in view:

I. The improvement of the mind.

II. The diffusion of knowledge.

III. To provide good, healthy and interesting literature for the young.

The "CHATTERBOX" is composed of a choice variety of sketches, written in a clear and forcible manner, and its numerous illustrations are of a superior and interesting character.

Each sketch will convey either a moral or useful information.

The purest tone and language will prevail throughout its pages, and we shall be able to present our juvenile friends with that which has long been wanting—a periodical that will interest and at the same time instruct the children.

Its small cost (10 cts. monthly, or one dollar a year) places it at the command of every household.

Send 10 cts. for specimen copy, which will be sent postpaid by return mail.

Frank Leslie's Publishing House,

53, 55 & 57 Park Place, New York.

Imitation Gold Watches.

SANDALINE

(Compound Fluid Extract Sandalwood.) **Price, $1.00.**

The **Great Remedy** for all **local** and **chronic complaints** of whatever nature—no matter of how long standing or how deeply seated. This remarkable specific contains the **original juices** of the **Sandal Tree,** extracted by the most costly and delicate process known to chemistry, discovered during long professional service in India. The effects are quick, positive, **sure,** and it is prescribed by the **best physicians,** in the **most complicated cases.** Disease is a tree that has many branches and much foliage, but all proceed from **one trunk** and tap root. **Sandaline** strikes at the **original source,** and thus **eradicates all disease** from the system. This is the Secret of its great success. My aim is to furnish the American public a Remedy that is both **speedy and economical.** No one can afford to let ill health run its course, when **help is within reach.** I will deposit **$10,000** with any responsible bank, for a case that **Sandaline** will not **radically cure,** used as I prescribe. Supplied through Druggists or direct. Thousands of written testimonials on record of truly wonderful cures, open to inspection of all. Correspondence or personal calls receive prompt attention at our parlor offices.

READY JANUARY 13TH.

Opening with so many threads of mystery, the reader's interest is excited to follow a story which, in the hands of such an able novelist, must be throughout intensely dramatic.

The contrast of the two girls, three families, each with its grief, and a fugitive who can never appear but as another, fix the attention and awaken sympathy.

To interest the public in this story exaggeration is not required, for every reader of this remarkable production cannot fail to be completely engrossed by its perusal.

THE LATEST INVASION OF MEXICO.

CATARRH

Thousands suffer without knowing the nature of this almost universal complaint. It is an alteration of the head. Its indications are hawking, spitting, weak inflamed eyes, frequent soreness of the throat, dryness and heat of the nose, matter running from the head down the throat, often ringing or deafness in the ears, loss of smell, memory impaired, dullness and dizziness of the head, often in the first stages, but more commonly in its advanced stages, attended with pains in chest or left side, and under the shoulder blades. Indigestion usually attends Catarrh; a hacking cough and colds are very common; some have all these symptoms; others only a part. Very little pain attends Catarrh, until the liver and the lungs are attacked in consequence of the stream of pollution running from the head into the stomach.

All persons thus affected take cold easily, and frequently have a running of the nostrils; the breath sometimes reveals to all around the corruption within, while the patient has frequently lost all sense of smell. The disease advances covertly, until pain in the chest, lungs or bowels, startles him; he hacks and coughs, has dyspepsia, liver complaint, and is urged by his doctor to take this or that; perhaps cod-liver oil is prescribed. Perfectly ridiculous! The foul ulcers in the head cannot be reached by pouring such stuff into the poor, jaded stomach. The patient becomes nervous; the voice is harsh and inarticulate; he feels disheartened; memory loses her power, judgment her seat, gloomy forebodings hang overhead; hundreds, yes, thousands, in such circumstances, feel that to die would be a relief, and many even do cut the thread of life to end their sorrows.

THOUSANDS ARE DYING

In early life with consumption, who can look back a few years—perhaps only months—when it was only catarrh. Neglected, when a cure is possible, very soon it will transform the features of health and youth into the dark, pallid appearance; while the hacking cough, the excess of blood gushing from the lungs, or night sweats, all significantly proclaim it *is too late: and thus a neglected catarrh ends in the consumptive's grave.*

NASAL CATARRH.

Sometimes the disease only affects the membranes lining the nasal passages, and they may be easily reached and cured by simple means. But when it is located in the *frontal sinus*, or in the *posterior nares*, or if it has entered the eustachian tubes, and it is injuring the ears, then nothing but finely medicated vapor can effectually reach it and destroy it. And certainly, after it has affected the throat and bronchial tubes, as all well-read physicians will readily admit, nothing can be relied on to effect a permanent cure but the inhalation of properly medicated vapor. In the same manner that we breathe common air, we can inhale and breathe a medicated air; and it is perfectly simple, any one can see, thus to treat diseases of the *throat, bronchial pipes and lungs*. How much better this method by which remedies are conveyed directly to the seat of the disease, than to resort to the uncertain and too frequently *misdirected action* of medicines taken into the stomach.

AMONG WOMEN catarrh is very common. The decrees of fashion compel women to go from the dry atmosphere of furnace-heated houses, into the open air, with the head but poorly protected. Many suffer keenly from bronchitis and difficulties of the throat and lungs.

TEACHERS IN OUR SCHOOLS are greatly subject to this fearful malady. Confinement in close, ill ventilated school rooms; the over heated atmosphere, charged with the steaming poison exuding from the bodies of the not always over clean children, breed this disease with fearful rapidity.

LAWYERS IN THE COURT-ROOM and judges on the bench, from the same general cause, are too often afflicted in the same way.

MINISTERS OF THE GOSPEL, after leaving the pulpit, over-heated with the strain of their mental and physical effort, neglect sufficient precaution, and a cold is the result. This neglect opens the way to catarrh, and to a possible loss of voice. I have suffered so keenly myself that I cannot urge upon public speakers too strongly the necessity of removing this disease when a cure is possible.

MY EXPERIENCE.

Eighteen years of terrible headache, disgusting nasal discharges, dryness of the throat, acute bronchitis, coughing, soreness of the lungs, raising bloody mucus, and even night sweats, incapacitating me for my professional duties, and bringing me to the verge of the grave—ALL were caused by, and the results of *Nasal Catarrh*. After spending hundreds of dollars, and obtaining no relief, I compounded my CATARRH SPECIFIC AND COLD AIR INHALING BALM, and wrought upon myself a *wonderful cure*. Now I can speak for hours with no difficulty, and can breathe freely in any atmosphere. At the calls of numerous friends, I have given my cure to the public, and have now thousands of patients in all parts of the country, and thousands of happy fellow-beings whose suffering I have relieved. My cure is *certain, thorough and perfect*, and is indorsed by EVERY PHYSICIAN who has examined it. If I can relieve my fellow-beings, as I have been relieved, of this loathsome disease, which makes the possessor as once disgusting to himself and others, I shall be satisfied, and feel that I have done my little towards removing the ills of mankind.

T. P. CHILDS.

TESTIMONY OF OTHERS.

FROM THE CHANCELLOR OF THE UNIVERSITY OF NEBRASKA.

T. P. CHILDS.—*Dear Sir:* I think you have the true theory and practice for the cure of Nasal Catarrh, and also for the treatment of the respiratory organs. My throat is now so well restored that I lecture daily without difficulty, and I find no difficulty whatever in preaching. You are at full liberty to use my name for the benefit of others. Yours very truly,

E. B. FAIRFIELD, D.D., LL.D., Lincoln, Neb.

JUDGE J. COLLETT, of Lima, O., writes: "You well remember how terribly Catarrh had taken hold upon me at the time you were at my house, making me offensive to myself and to all around, and withal suffering day and night. I am cured; head free, air passages all open, and breathing natural. I express to you again what I said in a recent letter, 'A thousand thanks to you for so sure a remedy, and so very cheap.'"

MR. T. GILLESPIE, of Woodworth, Kenosha County, Wis., writes: "I must say that I never had a medicine take hold of my Catarrh by the root, and root it out, as this has."

MR. THOMAS J. DAILY, of Homer, Champaign County, Ill., one of the worst cases I ever had under treatment—who was six months bed-fast, and nearly blind, one eye utterly destroyed by Catarrh, nose and face much disfigured and throat and lungs in a critical state, writes, June 21st, 1878:

"DEAR MR. CHILDS: I have used your Catarrh treatment that my brother, B. O. Daily, of your place, kindly sent me, now over three months, and almost all this time in hopelessness, as it seemed I must die. By-and-by it began to take effect, and I began to have hope. I improved rapidly, soon could sit up, passages of the head began to open, throat and bronchial tubes grew better, cough ceased, and now I can see to write. I now expect to get well and go about my business again. I owe you a great debt of gratitude. Indeed, I owe my life to your treatment. Very truly your friend, THOMAS J. DAILY."

Mr. Daily is now (September 10th) in Troy, looking quite well; almost every vestige of Catarrh has disappeared.

The following names have been selected from thousands in my possession. If desired, any of them can be consulted by letter or otherwise:

W. L. Wilson, Troy, Pike County, Ala.
Rev. W. I. Tillinghurst, Bloomer, Wis.
T. G. Grant, Greenville, Ala.
A. J. Cowles, Beloit, Rock County, Wis.
Wm. H. Gaylor, Fort Plain, Montgomery Co., N.Y.
Mrs. O. W. Lake, McZena, Ashland County, O.
Amanda Fisher, Freeport, Stephenson County, Ill.
J. M. Leslie, Brady, Indiana County, O.
Rev. J. L. Pettigrew, Raymond, Hinds County, Miss.
Samuel T. G. Bigelow, 10 La Grange St., Worcester, Mass.
Rev. P. W. Free, Waterford, Erie County, Pa.
Rev. T. Gillespie, Woodworth, Wis.
Alonzo Bennett, Jackson, Jackson County, Mich.
Miss Flora Weber, Urbana, Champaign County, Ill.
Rev. J. Lentz, Kanawha Court House, W. Va.
Rev. W. R. Lathrop, Harleville, Ind.
Mrs. J. A. Humphrey, Franklin, Pa.
Calvin Teegarden, Griffinsville, Iowa.
James White, Elk County, Kan.
J. J. Hancock, Irvanville, Irvan County, Ga.
Isaac Hill, Kirkville, Wapello County, Iowa.
J. Z. Burnett, St. Francisville, Clark County, Mo.
Mrs. A. T. Stewart, Sturgis, Ind.
W. S. Sandal, Willis, Montgomery County, Texas.
J. Morton, Collinsville, DeKalb County, Ala.
Rev. A. J. Gaiss, Waterford, Mass.
T. B. Rose, Matteson, Coles County, Ill.
Rev. J. W. Terrell, Roanoke, Howard County, Mo.
Mrs. J. A. Thornton, Michigan City, Ind.
Chas. B. Day, Peoria, Peoria County, Ill.
F. M. Mitchell, Fittsten, Me.
J. Grist, Hoopeston, Vermillion County, Ill.
G. W. Dalbey, Shelbyville, Texas.

WHAT THE EDITORS KNOW OF T. P. CHILDS.

The publishers of the *Congregationalist*, with multitudes of other people, are somewhat suspicious of patent medicines, as a rule, and when we received the advertisement of Mr. Childs, we at first declined its insertion; but on making inquiry, we received such satisfactory replies, and one especially from a well-known Congregational pastor, not far from Rev. Mr. Childs's, the proprietor of the medicine, that we withdrew our objections.—*Congregationalist*, Boston.

While not supposing that all cases of catarrh will be cured, by the prescription advertised, the publishers of the *Illustrated Christian Weekly*, after diligent inquiry, have reasons to believe that it has in many cases proved effectual. We do not ordinarily insert medical advertisements.—*Illustrated Christian Weekly*.

The medicine Mr. Childs contrives to place, by the use of his inhalers, just where it is needed, must be most powerful and searching in its character to produce such surprising results. Many of our leading lawyers, divines, and prominent business men have tried this remedy with wonderful success. There is no doubt of the efficacy of this method. We know Mr. Childs as an honest, Christian man.—*Gazette*, Cincinnati.

Mr. Childs gives a very strong description of this most annoying and loathsome disease. A number of testimonials from well-known publishers and others throughout the country seems to indicate that his peculiar manner of treatment is worthy of investigation by those thus afflicted. The physician who is able to relieve suffering humanity of such painful ills is most assuredly entitled to the thanks and patronage of the world at large.—*Andrews' Banner*, Cincinnati.

CONCLUSION.

It is now a well-established fact that Childs's Catarrh Specific, for thoroughness, completeness and efficiency, has no equal in the world. Everything known to be good for Nasal Catarrh in all its horrid forms in the head, throat and bronchial tubes, arranged into one complete system of treatment. Two kinds of inhalants and two fine inhalers go with each full course of medicine.

Do not trifle with some cheap thing, which at best can afford but temporary relief, while the roots of the vile disease are left to strike deeper and deeper. Be in earnest and thorough, or do nothing! Write at once and say what paper you saw this in. Circulars, price-lists, and all necessary information can be had by addressing (with return stamp),

REV. T. P. CHILDS, Troy, Ohio.

FLORILINE!

"FLORILINE"—FOR THE TEETH AND BREATH,

Is the best liquid dentifrice in the world. It thoroughly cleanses partially decayed teeth from all parasites or living "animalculæ," leaving them pearly white, and imparting a delightful fragrance to the breath.

THE FRAGRANT "FLORILINE"

removes instantly all odors arising from a foul stomach or tobacco smoke. Being partly composed of honey, soda, and extracts of sweet herbs and plants, it is perfectly harmless and delicious as sherry.

Prepared by **HENRY C. GALLUP, No. 493 Oxford Street, London, England,** and retailed everywhere.

MAGIC LANTERNS

And **STEREOPTICONS**, all prices. **VIEWS** illustrating every subject for **PUBLIC EXHIBITIONS, Etc.** *A profitable business for a man with small capital.* Also **MAGIC LANTERNS** for home amusement. 74-page catalogue *free.* **McALLISTER,** Manufacturing Optician, 49 Nassau St., N. Y.

ANTI-FAT

ALLAN'S ANTI-FAT is the great remedy for Corpulence. It is purely vegetable and perfectly harmless. It acts upon the food in the stomach, preventing its being converted into fat. Taken in accordance with directions, it will reduce a fat person from two to five pounds per week.

"Corpulence is not only a disease itself, but the harbinger of others." So wrote Hippocrates two thousand years ago, and what was true then is none the less so to-day. Sold by druggists, or sent, by express, for $1.50. Quarterstones, $4.00. Address,

BOTANIC MEDICINE CO., Prop'rs, Buffalo, N.Y.

ROYAL BAKING POWDER

ABSOLUTELY PURE!

The ROYAL BAKING POWDER is a pure Cream of Tartar powder. Recommended for its wholesomeness by eminent chemists. Sold only in cans, by all Grocers. *Beware of the injurious Alum Powders!* Do not buy Baking Powder loose, as it is almost sure to contain alum.

NELSON'S GELATINE

IS THE BEST.

A DELICIOUS JELLY made with the greatest facility in a few minutes.

FOR SALE BY ALL GROCERS.

Every Man HIS OWN PRINTER. THE EXCELSIOR **$3 Press** Prints labels, cards, etc. (Self-inker $5) Larger sizes for business, pleasure, young or old. Catalogue of Presses, Type, Etc., for 2 stamps. **KELSEY & Co.** Meriden, Conn.

THE EXECUTION SCENE IN THE BURLESQUE OF "FAIR ROSAMOND."

THE HARVARD BURLESQUE.

NEVER did a more delighted audience assemble in the crowded Union League Theatre than that which came on Thursday evening, January 2d, to greet the young graduates of Harvard in their "Burlesque of Fair Rosamond." Heralded as the performance was by legends of their past success, smiled on by fashion, and arrayed with all the care that the band of lady managers could bestow, of course much was expected; but the brilliant success was still a surprise. The fun, the gayety, the security and the telling puns, good songs and exceedingly graceful dancing, were really admirable. There was none of that miserable suspense, that feeling of hair-creeping fear with which an audience generally awaits the performance of amateurs. It was active, prompt and enchanting from the first.

The grace of these young men recalled the pictures on an antique frieze. It was the idyllic grace of old Homer's time, the grand, free movement of youth and health and beauty. Nothing more graceful than Mr. Sheafe's dancing can be conceived. Mr. Nat Curtis, too, was pre-eminently successful and elegant, and through it all was that air of *gentlemanliness* which is the crowning feature of good acting in burlesque. The comic genius of the evening, however, was Mr. Sigourney Butler, who, as *Queen Eleanor*, showed talents which might give him a great reputation on the burlesque stage, did he not prefer the more humdrum career of a lawyer. Mr. Sprague as the *Schoolmistress* was very funny, and Mr. Arthur Sherwood as the *King* was grand, stately and graceful, singing one or two delightful songs with great *aplomb*, and dancing in the true Majilton style, for which his long legs eminently fitted him. All the parts were well taken and well done. As for *Fair Rosamond*, she was so beautiful that *King Henry's* infatuation was easily accounted for; it quite proved that the drama in old Greek days, and in those of Shakespeare, may have been as facinating as now, for if men can play women's parts so well as Mr. Farnsworth played *Rosamond*, and could look so like the siren, it is no wonder that when *Kynaston*, in the days of Charles II., played, people said that he was the most beautiful woman in the house.

The whole performance was opened and improved all through by the excellent amateur band, the inception and execution of which the ladies owe to Mr. A. A. Hayes, who has given it much time and attention. It was without doubt better than most professional orchestras, and did great credit to the leader, Mr. Vogrevitch.

To hear such amateurs as the Kobbe Brothers, Mr. Paris, Mr. Hayes, Mr. Gordon, Mr. Templeton Strong, and Messrs. Thomas, Grey, Smith, Shelton, Swan, Lewenberg and Halliday is a treat. It is also astonishing as a proof of the high musical culture of New York that such a thing can be done unpremeditatedly by amateurs. The waltz, "Last Spiel," was never better played at Baden-Baden.

Mr. Arthur M. Sherwood was incorrectly stated as the author—it is really by Bornand. He had furnished the poetry (?) for six songs, and had taken, of course, a great interest in the play, but would disclaim, probably, any further claim to authorship. He did arrange several of the scenes and made some very atrocious puns, besides playing the *King*. It is to Mrs. Sherwood, however, that the chief credit for this very successful affair is due, she having inspired and directed it throughout with exceptional vigor and skill. The healthful, cordial support given to this burlesque by New Yorkers the kindly feeling, and the pleasant criticism of the press, will ever be cordially remembered by those of the committee particularly interested.

The performance was repeated on the evening of the 3d and the afternoon of the 4th, the object being to raise funds to enable the Harvard crew to go to London to meet the Universities' crews in the regatta of next Summer. The patronage at the performances was so liberal that Harvard will surely be represented at Henley.

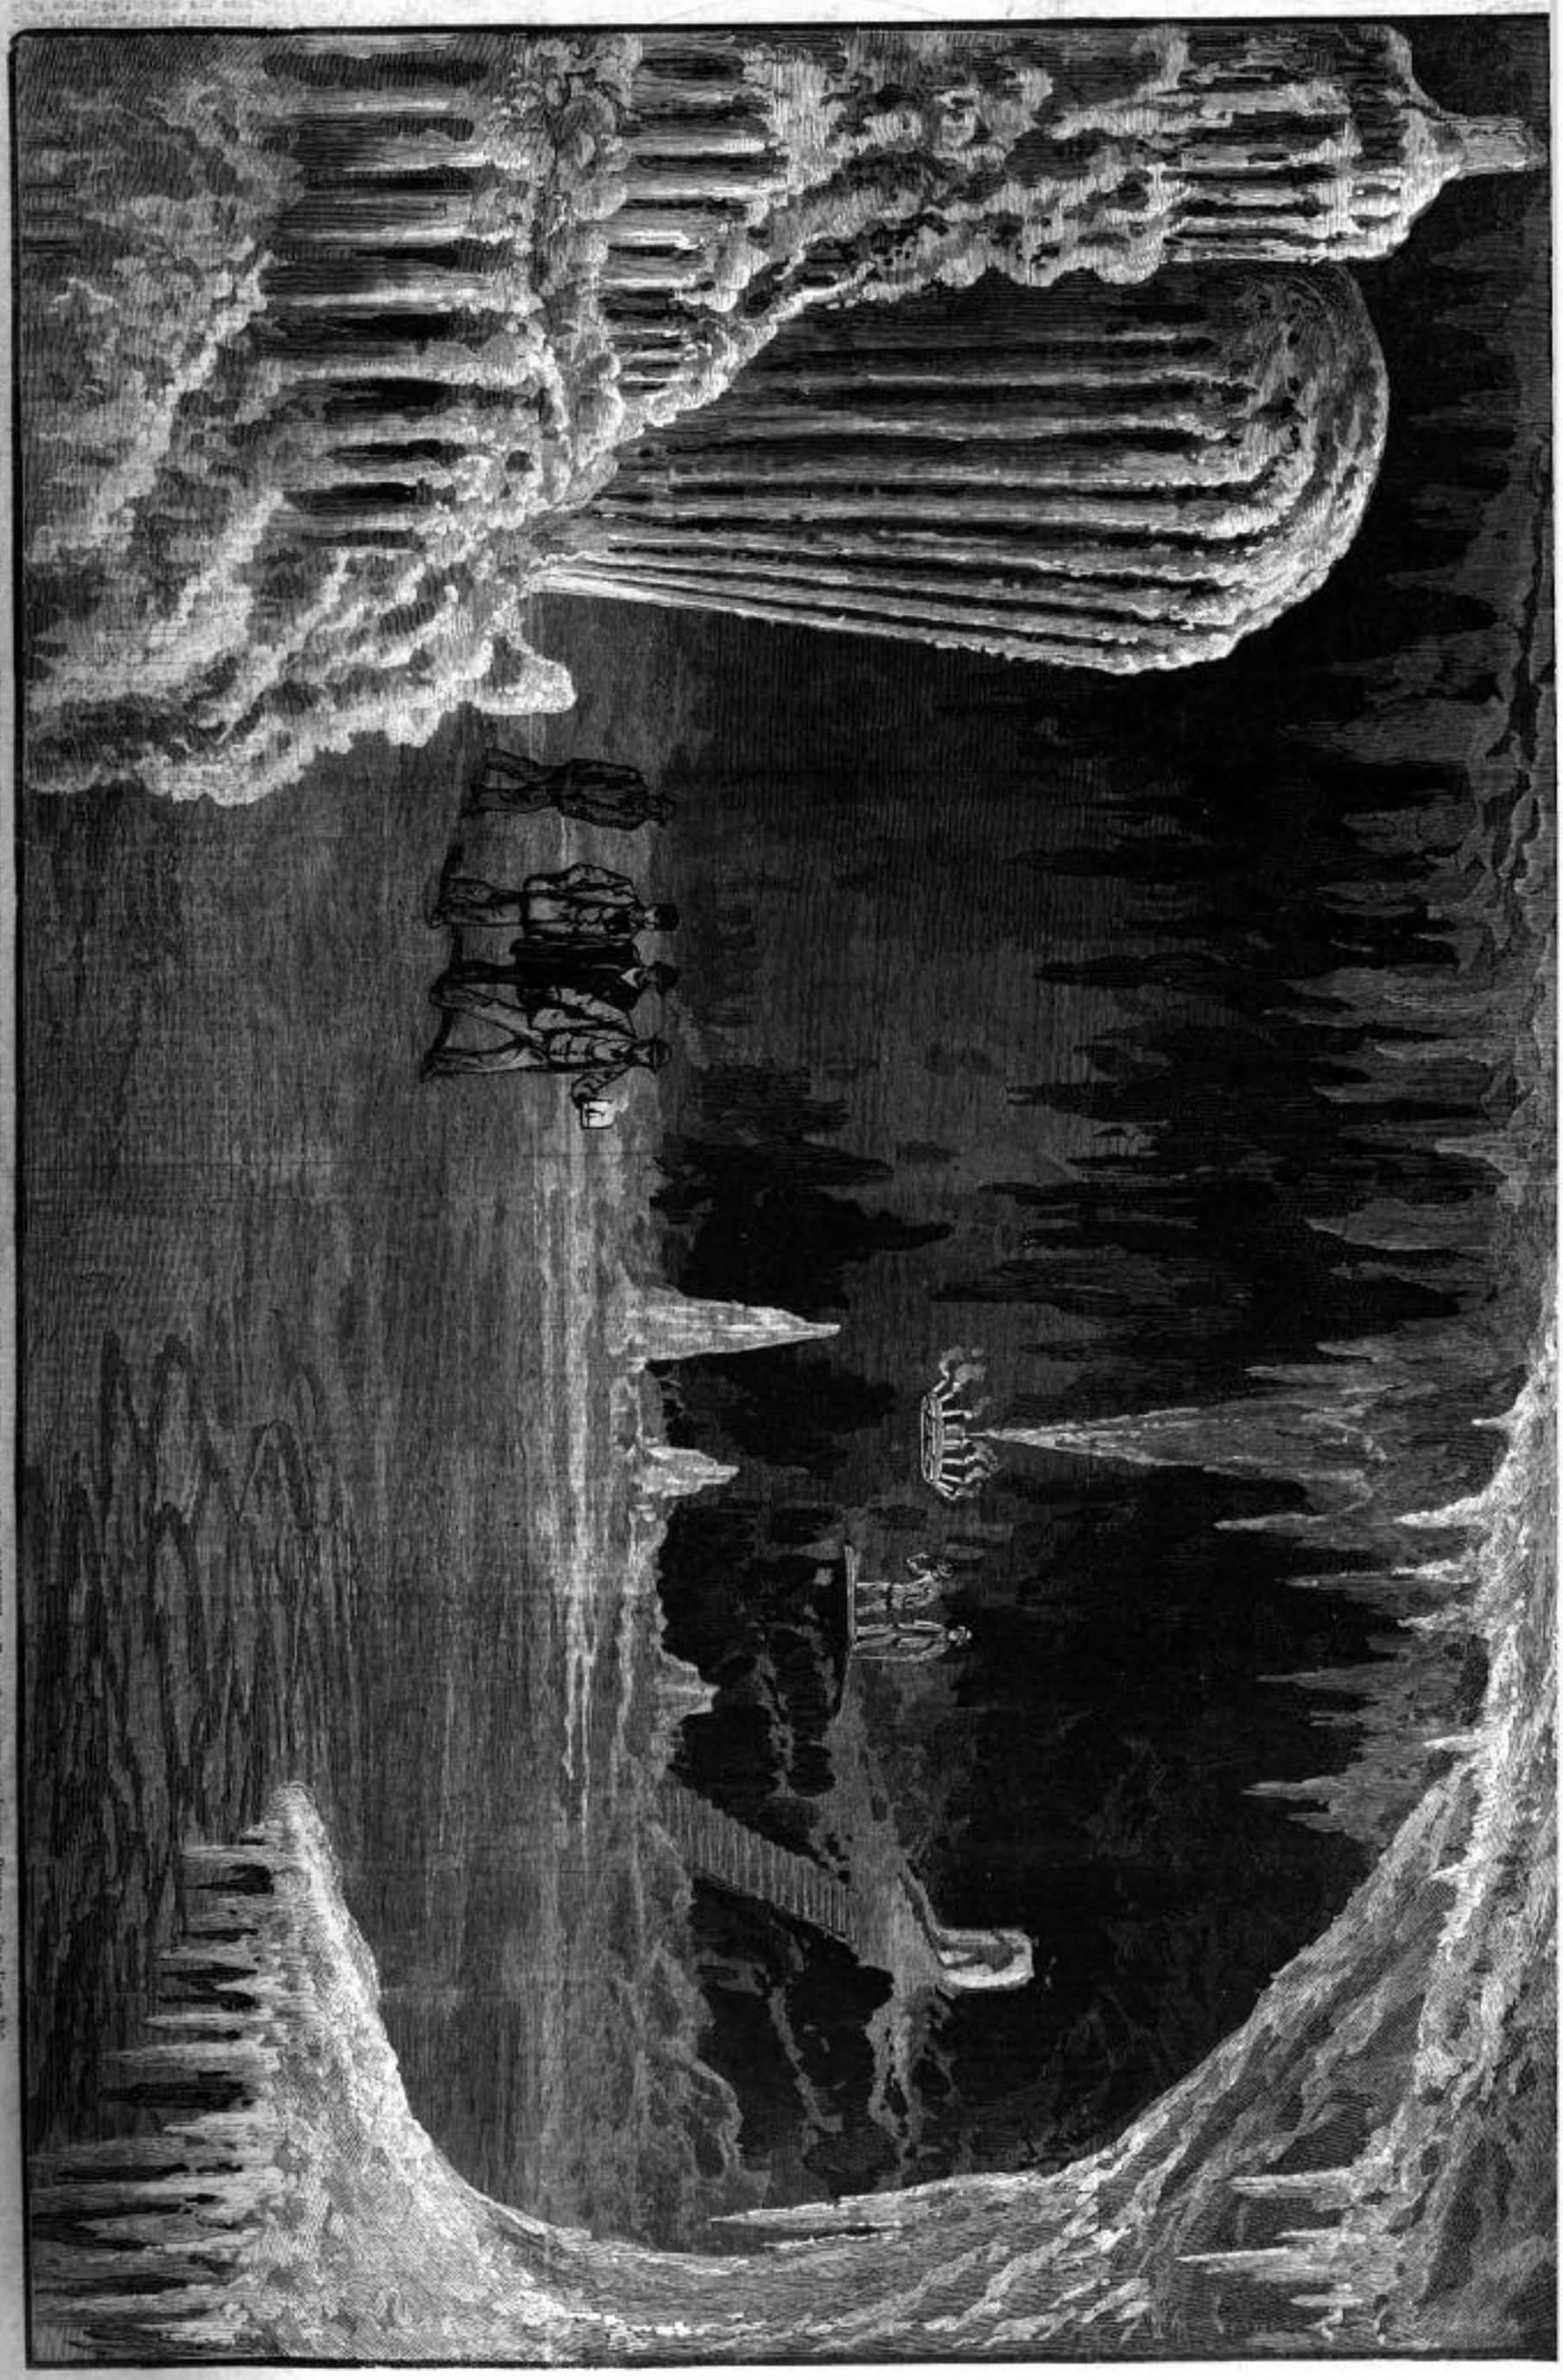
NEW YORK CITY.—PERFORMANCE OF "FAIR ROSAMOND" BY THE BURLESQUE ACTORS OF THE CLASSES OF 1877-78 OF HARVARD COLLEGE, AT UNION LEAGUE THEATRE, JANUARY 2D AND 3D.

REMARKABLE FEAT OF MEMORY.



ONE of the most remarkable feats of memory is not recorded in the books, though it came before the public in a singular manner in January, 1847. At Sydney, Australia, a prisoner set up as his defense on trial an *alibi*, claiming to have been at the time that the complainant was robbed at home in his own hut listening to the recital of Horace Walpole's novel, "The Old Baron," which a man named Lane had, with other novels, committed to memory, the matter of time being disposed of by the declaration that Lane's recitation took two hours and a half. The Attorney-General declared that this was incredible, whereupon Lane clearing his throat began, "In the time of King Henry, when the good Duke Humphrey returned from the wars in the Holy Land, where he had been sojourning for a number of years, there lived"——and had recited several pages when the Attorney-General told him to stop—he was quite satisfied. But the counsel for the defense was not, and insisted that as the veracity of his witness had been questioned, the witness should be allowed to set himself right, also to prove the allegation as to time by writing the whole novel. "Do you expect me to take it all down as evidence?" stammers the Chief Justice, in great dismay, and finally a compromise was arrived at, and Lane gave a chapter from the middle of the story and its conclusion. The prisoner was acquitted.

THE LATE CALEB CUSHING.

CALEB CUSHING was born in Salisbury, Essex County, Massachusetts, in January, 1800. He was graduated at Harvard, studied law and was admitted to the bar at Newburyport. In 1825 he was elected a representative from Newburyport in the Lower House of the Massachusetts Legislature, and supported the then Republican Party. In 1829 he visited Europe on a tour of pleasure, and on his return, two years later, wrote a book on Spain, and one on the French Revolution of 1830. In 1833 he re-entered the Massachusetts Legislature, and in 1835 he was elected from the Essex North District of Massachusetts to Congress, where he served four consecutive terms, acting with the Whig Party until President Tyler came into power, when he sided with the Administration, and henceforth supported the Democratic Party. Failing to be confirmed in 1843 as Secretary of the Treasury, for which office he had been nominated by President Tyler, he was sent as Commissioner to China, where he negotiated our first treaty with that Empire. Mr. Cushing warmly defended the Mexican war, and failing to induce the Massachusetts Legislature to aid in equipping a volunteer regiment, he furnished the requisite sum himself, became colonel, and proceeded to the seat of war, where he was promptly made brigadier-general. In 1847, while still in Mexico, he was nominated for Governor of Massachusetts, but was defeated. Mr. Cushing, in 1850, in the Legislature of his native State, was active in opposing the election of Mr. Sumner as United States Senator, and the coalition between the Free Soil and the Democratic Parties. Two years Mayor of Newburyport, and one year Justice of the Supreme Court of Massachusetts, he was appointed United States Attorney General by President Pierce in 1853, and held that position four years. He served again in the Massachusetts Legislature in 1857, 1858 and 1859. Mr. Cushing presided over the Democratic Convention held in Charleston in 1860 for the nomination of a Presidential ticket, and during the eventful war period which soon succeeded held aloof from public affairs, but was known to be in sympathy with the Union cause, and on several occasions was intrusted with legal business by the Administration. In 1866, President Johnson, with whose policy the veteran politician was more or less in accord, appointed him Commissioner to codify the laws of Congress. In 1872 he was appointed counsel of the United States before the High Tribunal of Arbitration at Geneva, and he published on his return a history of that tribunal. Mr. Cushing had long enjoyed extensive practice, as a lawyer, holding briefs in the most important cases coming before Supreme Courts of the United States. His counsel had been sought frequently on grave international questions, and he enjoyed the reputation of being one of the best informed men of the country on the political history of the United States, as well as their relations with foreign nations. He was one of the most proficient linguists in the world.

In December, 1873, he was appointed Minister to Spain, and while at that court displayed great skill and good judgment in the adjustment of difficulties arising out of the detention of the *Virginius*. He succeeded not only in securing the surrender of the vessel, but also in obtaining indemnity to all sufferers by the illegal proceedings of the Cuban Government, or to the heirs of those who were executed. The sum of $77,000 was secured by our Government for this purpose, and up to November 16th, 1877, about $38,000 had been disbursed to those entitled to compensation. Mr. Cushing was nominated in January, 1874, for the office of Chief Justice of the Supreme Court of the United States, but subsequently the nomination was withdrawn. Since then Mr. Cushing had been engaged prominently in public affairs. He was nominated for Attorney-General for Massachusetts at the last election on the Butler ticket, but positively refused to be a candidate.

THE LATE HON. CALEB CUSHING.—FROM A PHOTOGRAPH BY F. THORPE, ARTIST, WASHINGTON, D. C.

REV. DR. W. I. BUDINGTON.

REV. DR. WILLIAM IVES BUDINGTON, who on the 7th of December tendered his resignation as pastor of the Clinton Avenue Congregational Church, in Brooklyn, has long occupied a prominent position among divines. Born at New Haven in April, 1815, graduating at Yale in 1834, and completing his theological course at Andover in 1839, he was, in April, 1840, ordained as pastor of the First Congregational Church of Charleston, Mass., where he remained until 1854. In that year he went to Philadelphia, and for a brief period officiated at the Western Presbyterian Church, leaving there to accept the pastorate of the Clinton Avenue Church, Brooklyn, in 1855, when the Society was organized. The erection of so large a church, so far from the thickly settled parts of the city, was a subject of much comment at the time; but since then ten large churches and several smaller ones have sprung up within a radius of half a mile. During this growth of the city, Dr. Budington has been actively identified with the interests not only of that section, but of the whole city, State and nation. The members of his congregation and many others speak of him as possessing remarkable eloquence, sympathy and responsiveness.

Last May, Dr. Budington was affected with cancer in the left portion of his lower lip. By the advice of his physician a partial excision was made, which it was hoped would prove sufficient. When partially recovered, Dr. Budington went to Europe to pass the Summer, and in London found the disease returning, and had a second operation performed by eminent surgeons, who wrote that the symptoms were favorable for a complete recovery. In October last he returned in good spirits, and worked for a short time, when he found that the disease had not been eradicated. A complete excision of the affected part was then made, a triangular piece being removed from the lip. Since the operation he has been doing well, and a complete recovery is anticipated; but to this end complete rest is necessary and for this reason, greatly to the regret of his charge, he has withdrawn from the pastorate. His congregation received the announcement of his withdrawal with great sadness and regret, but it is understood that their importunities will not induce a change in his purpose.

NEW YORK.—REV. DR. WILLIAM IVES BUDINGTON, OF BROOKLYN.—FROM A PHOTOGRAPH BY RAWSON.

HOME OF THE LATE BAYARD TAYLOR.

"CEDARCROFT," the residence of the late Bayard Taylor, at Kennett Square, Chester County, Penn., was built in 1860, after plans furnished by himself. He took great pride in his home and the 200 acres of ground that surrounded it, as well as the ancient building not far off, in which he was born, January 11th, 1825, and which was destroyed by fire a few months ago. At the "housewarming" he had a large company of friends and neighbors about him, and as a special celebration a piece called "Love at a Hotel," written jointly by himself and R. H. Stoddard, was performed. He had long held most decided views about a building for dwelling purposes, and in drawing the plans for his new home he utilized the impressions and convictions he had gained during his extensive travels. His house was designed to possess the highest hygienic properties—to be absolutely healthful. Its many windows gave admittance to vast floods of sunlight, the air had uninterrupted liberty within and without its walls, ventilation and drainage were thorough—withal, there were liberal æsthetic arrangements, and nothing seemed to have been omitted to make "Cedarcroft" a happy, healthful home. And yet, in his merry way, he often complained that he had carried his sanitary ideas to such general execution that he could scarcely find space on the walls for a picture, or on the floor for an easy-chair.

Mr. Taylor had spent a large sum of money upon his house and grounds, and was surprised at the increase in the cost of maintaining them. On his last return from abroad he was alarmed at the great decrease in the valuation of real estate, and set about with redoubled vigor to repair his losses. It is believed that the wonderful amount of work he performed from that time to his appointment as Minister to Berlin—writing and lecturing—brought upon him the principal of the bodily afflictions which terminated in his death on the 19th of December last, at the age of fifty-three years.

PENNSYLVANIA.—RESIDENCE OF THE LATE BAYARD TAYLOR, KENNETT SQUARE, CHESTER COUNTY FROM A PHOTOGRAPH BY MONROE.

A ROBBER KING.

THE Hungarian papers announce the death, in the prison of Szamos-Ujvar, of the celebrated bandit, Rosza Sandor, known in Hungary as the "Robber King." He was born in Szejdin in 1813, and both his father and grandfather were robbers by profession. His achievements, however, soon eclipsed those of his family, and he was admired as much as he was feared. The reckless courage with which he attacked the police, and even military escorts, on the high road in broad daylight, his generosity toward the poor and his gallantry toward women made him a sort of national hero. Some thirty years ago few people of the wealthier class ventured to travel in Hungary without paying him tribute. His bands were well armed and organized, and the *szegény legények* (poor fellows), as the bandits were called in those days, found sympathizers and accomplices among the peasantry. He was first imprisoned in 1836, but escaped in the following year by the assistance of his mistress, a peasant woman named Kati, whose husband he had killed by blowing his brains out with a pistol. During the revolution of 1848 Rosza Sandor was pardoned by Kossuth, and he then organized a free corps which did good service against the Government troops. After the suppression of the rising Sandor resumed his former career. He did not again fall into the hands of the authorities until 1856, when he was betrayed by one of his companions. After the trial, Sandor was sentenced to be hanged, but the sentence was commuted to imprisonment for life. He remained eight years in the fortress of Kufstein, and was then set at liberty in virtue of a general amnesty. But he soon resumed his old pursuits. In 1868 he attacked, with some of his companions, a railway train at Feiegyhaza. The Government sent a body of troops, under Count Gedeon Raday, to capture him, and four years later he was again brought before the criminal tribunal, together with a number of his accomplices, among whom were several magistrates and high civil functionaries. He was again sentenced to death, and the sentence was again commuted to imprisonment for life. The prison to which he was then sent is the one in which he died.

"THE FALLEN LEAVES." BY WILKIE COLLINS.

Published exclusively in this Journal by special arrangement with the Author.

CHAPTER II.

MR. HETHCOTE looked at the address on the letter with an expression of surprise, which did not escape the notice of Amelius. "Do you know Mr. Farnaby?" he asked.

"I have some acquaintance with him," was the answer, given with a certain appearance of constraint.

Amelius went on eagerly with his questions. "What sort of man is he? Do you think he will be prejudiced against me, because I have been brought up at Tadmor?"

"I must be a little better acquainted, Amelius, with you and Tadmor, before I can answer your question. Suppose you tell me how you became one of the Socialists, to begin with?"

"I was only a little boy, Mr. Hethcote, at that time."

"Very good. Even little boys have memories. Is there any objection to your telling me what you can remember?"

Amelius answered rather sadly, with his eyes bent on the deck:

"I remember something happening which threw a gloom over us, at home in England. I heard that my mother was concerned in it. When I grew older, I never presumed to ask my father what it was; and he never offered to tell me. I only know this: that he forgave her some wrong she had done him, and let her go on living at home—and that relations and friends all blamed him, and fell away from him, from that time. Not long afterwards, while I was at school, my mother died. I was sent for, to follow her funeral with my father. When we got back, and were alone together, he took me on his knee, and kissed me. 'Which will you do, Amelius,' he said: 'stay in England with your uncle and aunt? or come with me all the way to America, and never go back to England again? Take time to think of it.' I wanted no time to think of it; I said, 'Go with you, papa.' He frightened me by bursting out crying; it was the first time I had ever seen him in tears. I can understand it now. He had been cut to the heart, and had borne it like a martyr; and his boy was his one friend left. Well, by the end of the week we were on board the ship; and there we met a benevolent gentleman, with a long, gray beard, who bade my father welcome, and presented me with a cake. In

FRANK LESLIE'S
ILLUSTRATED NEWSPAPER,
53, 55 & 57 PARK PLACE, NEW YORK.
FRANK LESLIE, EDITOR AND PUBLISHER.

NEW YORK, JANUARY 25, 1879.

IMPORTANT NOTICE.

A special artist and a descriptive writer, from FRANK LESLIE'S ILLUSTRATED NEWSPAPER, *accompany the party of New York and Chicago merchants on their visit to Mexico with a view to the establishment of business relations with that country. The illustrations, which will appear from week to week, are to consist of the most interesting subjects connected with the expedition, while the description will be accurate, vivid, and deeply interesting. As both the illustrations and reading matter are intended to develop the commercial relations between the two countries,* FRANK LESLIE'S ILLUSTRATED NEWSPAPER *will obviously be the best medium for the acquisition of information on this all-important and engrossing subject.*

CAUTION.

Subscribers, in ordering our publications, should be careful to write the name of FRANK LESLIE *in full, and direct their letters to 53, 55 and 57 Park Place, New York, from which address all our publications are issued. We have no connection with any publications which do not have the name of* FRANK LESLIE *in full at their head.*

PROGRESS OF FISCAL IDEAS.

OUR enlightened contemporary, the New York *Nation*, in recently commenting upon the resumption of specie payments in the United States, dropped the remark that the Government, after the 1st of January in this year, will have entered "on the performance of an entirely new function—that of a bank of issue, which is," it adds, "a novelty in finance." The "novelty" in the case, now that resumption is an accomplished fact, should not, we opine, be found in the mere *banking* function assumed by the Government, for this innovation was adventured in the year 1862, when the Government for the first time turned itself into a "bank of issue," and proceeded to issue its notes without any capital except the faith and credit of the nation.

Under the resumption of specie payments it would be more accurate to say that the Government proposes to discharge the *duties* as well as to exercise the *rights* pertaining to a bank of issue, and it remains to be seen whether the Secretary of the Treasury, in addition to his other engrossing cares, will be able to combine in his single person the faculties of a great bank president and of a great bank cashier. As the present incumbent of the Treasury Department expresses his entire confidence in the provisions with which he is armed for the maintenance of specie payments, now that they have been resumed, we hope that those who question his abilities as a financial administrator will not be swift to impeach the wisdom of his measures, for this late opponent of specie resumption ought to be among the last to question the talent of our Secretary of the Treasury for managing a "bank of issue," seeing that they clamored only a few months ago for "unlimited greenbacks" to be issued under his direction, or at least for a number equal to the present volume of the national bank currency. A Secretary who should have been equal to the requirements imposed by such an enlargement of his banking functions ought to have had the shoulders of Atlas, the eyes of Argus, and the hands of Briareus.

The Comptroller of the Currency in his late report has well explained that with the existing relations between the Treasury Department and the National Banks, it would seem almost impossible that resumption shall fail, for the former holds an amount of coin which is equal to more than forty per cent. of the entire issue of the legal-tender notes, while the banks hold nearly one-third of the volume of these notes. If, therefore, the banks co-operate with the Treasury, as it is their interest to do, there is no room for the creation of "Black Fridays" in the gold market; and even if this co-operation should not be universal, it could not, he argues, affect the general or ultimate result, for if any considerable portion of the legal-tender notes be exchanged for coin at the Treasury and be withdrawn from use, the notes will become scarce and the coin be forced into circulation to supply the requirements of business, and thus fill the gap.

Now that we have reached the present stage of advanced progress in the management of the national currency and the national finances, it would be an interesting chapter in our political annals to review the steps by which the nation has been led to the adoption of fiscal agencies and ideas which at different epochs in our history have provoked the deepest dissension. With the Secretary of the Treasury presiding over a "bank of issue" at Washington, and with a large mass of his political opponents in the South and West sighing, a few months ago, for the unlimited extension of his prerogatives in this direction, it would seem that the old horror of a "United States Bank" has been pretty effectually quelled in the national breast. The only amazing thing is that the men who lately were most anxious to concentrate "the money power" of the country in the hands of the Secretary of the Treasury alone should profess such panic fears of the same "money power" when it is distributed between the Secretary and two thousand independent national banks scattered throughout the country!

The movement for a national fiscal agent to be employed in regulating the currency and in managing the finances of the country may be said to have begun in the first Congress of the United States, when on the 9th of August, 1790, the House of Representatives directed Alexander Hamilton, then Secretary of the Treasury, "to prepare and report such provisions as, in his opinion, might be necessary for establishing the precise credit." In pursuance of this instruction that great financier made a report on the 14th of December following, and recommended it with a plan for the institution of a national bank. Such a bank as he then contemplated was actually chartered in 1791. By the limit fixed in the original act of incorporation the legal existence of this bank was to cease on the 4th of March, 1811, and before that date the directors sought a renewal of their privileges at the hands of Congress. It was not, however, until 1816 that a Bill was passed for this purpose in such shape as to secure the approval of President Madison. The subsequent struggle of President Jackson against the perpetuation of "the monster" (as he was in the habit of styling the United States Bank) is too well-known to call for narration under this head. But the debates of that period would be most instructive reading to the men who now affect so much claim at "the money-power" which is "incarnated" to-day in the national banks. The same spectre was then conjured up with which to frighten the people from their prosperity, but the strong moral and political forces which are organic in our body politic have at last prevailed over the delusion of financial folly and fanaticism.

THE TRADE NEEDS OF NEW YORK.

THE proposition of the New York Central Railroad Company to establish a line of freight steamers between this city and European ports is hailed with lively satisfaction in commercial circles. By many it is believed that this new enterprise will largely assist in building up the commerce of New York, operating, as it is expected, as a partial offset to the fine terminal facilities of Boston, Philadelphia and Baltimore. We trust sincerely that these pleasant anticipations may be realized; but it is yet to be seen whether the city will reap any real benefit, beyond the port charges which these Vanderbilt steamers may pay from time to time. New York needs something more than the mere chartering of a few ocean steamers by a private corporation to insure a recovery of former prosperity. It is an increase of business, and not of tonnage, which will establish the commercial supremacy of this city, and add to its power and wealth. A few facts will make this clearly apparent.

Ignoring the period covered by the financial panics and general disruption of business, we find that, in the twelve years ending with 1872, the tonnage of vessels which entered American ports from foreign countries increased more than 50 per centum. In proof of this we produce the annexed figures:

Number of tons entered in 1872	7,168,106
Number of tons entered in 1860	4,999,884
Total increase in tons	2,768,222

Of the whole amount of tonnage in 1860, 1,973,812 tons entered the port of New York, and 3,969,339 tons in 1872. It thus appears that, while the ocean tonnage entered at this port more than doubled in the twelve years referred to, the gain at all other ports only aggregated 772,655 tons. It is obvious that at no time during the period named did the commercial interests of this city suffer from a lack of vessel tonnage. But how fared her business interests from 1860 to the close of 1872? The story may be briefly told. In 1860 the whole imports of the country, gold value, amounted to $362,166,254, of which 64.5 per cent. entered at this port. The entire imports for 1872 reached a gold valuation of $640,338,766, of which New York received 65.3 per cent. These figures, official in character, demonstrate conclusively that while the tonnage entering at this port from abroad increased more than 100 per cent., the importations only increased 60.8 per cent.

Again, the exports of the country in 1860 reached $373,189,274, while in 1872 they were $549,219,718, both years reckoned in currency. The share of New York was 34.4 per cent. of the whole in 1860, and 49.2 per cent. in 1872, a gain of only 01.4 per cent. per annum. Surely we are justified in asserting that increased trade rather than tonnage is the more important to success at the present time.

It is insisted by some that Mr. Vanderbilt's ocean line will greatly benefit the grain trade of this city. It is to be hoped that it will, for in other days New York has suffered in this direction. Still adhering to the period anterior to the panic, consider the following tables, showing the exports of wheat, wheat flour, and corn, for the years 1862 and 1872, which exhibits plainly the disadvantages under which New York has labored. The exports for 1862 were as follows:

	WHEAT. Bushels.	FLOUR. Barrels.	CORN. Bushels.
Whole Exports..	37,289,572	4,892,013	18,904,896
From New York	28,164,879	3,508,967	14,113,962
From other Ports	9,124,693	1,422,166	4,788,938

The exportation of the foregoing articles for the year 1872 were as subjoined:

	WHEAT. Bushels.	FLOUR. Barrels.	CORN. Bushels.
Whole Exports..	26,423,080	2,614,535	34,491,610
From New York	17,889,037	1,158,035	18,331,147
From other Ports	8,534,053	1,376,500	16,160,511

As compared with 1860, the export of wheat fell off to the extent of 10,866,492 bushels in 1872, of which loss 10,275,842 bushels was at the expense of New York. The flour exports were 2,367,418 barrels less in 1872 than in 1860. The difference to this city was 2,120,432 barrels. The exportation of corn in 1872 exceeded the exportation of the same cereal in 1860 by 15,586,752 bushels. Of this grain only 4,215,567 bushels enured to the benefit of New York, while Boston, Philadelphia, Baltimore, and other ports, profited to the extent of 11,371,567 bushels.

As a seaboard city, New York enjoys natural advantages peculiarly her own. But to make these advantages subservient to the creation of wealth they need to be supplemented by improvements demanded alike by the spirit and wants of the times. This is the era of steam, and vast trunk lines stretching across the continent exert an important influence both upon internal and external trade. Only one of these trunk lines has a terminus in this city. Its great rivals come to the shores of the Hudson, and have their present termini in New Jersey. If New York would effectually dispose of all domestic rivalry, and become not only the commercial mistress of America but of the world, her people must utilize the whole of these trunk lines by making a terminus for all of them on this side of the river. To tunnel the Hudson at an expense of ten, twenty, or even one hundred millions of dollars would prove a mere *bagatelle* when compared with the advantages to be derived from such an undertaking. This, however, is not the only required improvement. Among the pressing necessities of the hour we may mention the further improvement of our wharves and water front, the erection of elevators and of substantial warehouses upon permanent piers, also the construction along a new extension bulkhead line of a double-track railway, for the purpose of furnishing the trunk lines with direct access to elevators, storehouses and vessels lying at our wharves on both the Hudson and East Rivers. These several improvements must be accomplished if New York desires to control the commerce of the Union. It is true that these things will involve expenditure, but the very want of the terminal facilities we have named is costing vast sums of money annually, independent of any loss of trade. The amount of merchandise of all sorts conveyed through our streets and over our wharves, including the shipments of jobbers and manufacturers to the interior, the receipts from other parts of the country, and our exports and imports similarly conveyed, make a yearly aggregate of fully 13,000,000 tons. The cost of handling and carting this tonnage, exclusive of lost time, and losses from damage and theft so frequent under the present system, amounts to no less a sum than $26,000,000 per annum, which sum equals 6 per cent. on an investment of $433,000,000.

If New York shall fail to provide the terminal improvements at which we have barely hinted, and otherwise utilize her great opportunities, the fault will be ours alone if the sceptre of commercial supremacy shall be wrung from our grasp.

THE TENTH FEDERAL CENSUS.

THE Census Bill introduced in the House by Representative Cox, of this city, contains some interesting features. The Superintendent of the Census is to be appointed by the President, the clerical force by the Secretary of the Interior, and one or more Supervisors for each State and Territory, the whole number not to exceed 150, are to be nominated by the Executives of the several States. The work of taking the census is to begin on the 1st day of June, 1880, and must be concluded in a month. In New York and other cities of over ten thousand inhabitants it is to be taken within a fortnight, so as to make it as near a photograph as it can be of the condition of the country. The special expert work is to be done by agents selected by the Superintendent. The Bill provides for the collection, in careful detail, of facts relative to the transactions of railroad corporations, their capital, business, length of lines, debts, the number of acres of land derived from public grant remaining unsold—in short, a complete detailed statement of the affairs of each road, including its business liabilities and assets. Provision is also made for obtaining like information from express, telegraph, life insurance, and fire and marine insurance companies. Mining, manufacturing, agricultural and fishing statistics are likewise provided for. The social statistics shall contain inquiries relating to the public indebtedness of cities, counties and towns, and of the ownership of the public debt of the United States, by whom owned, and the respective amounts, and such additional inquiries respecting the same, as well as respecting public paupers and criminals, as shall be deemed necessary. The cost of the census is limited to $3,000,000, as against $3,360,000 expended in 1870. The Bill proposes a subvention to any State or Territory which at the intermediate five years may take a census with similar blanks and schedules and report to the Secretary of the Interior, the Government in such case to pay half the cost, which, in view of the saving of $360,000 in the decennial census, it can well afford to do. Such a plan would have some obvious advantages. The delays in the publication of the results of the decennial censuses often render them comparatively useless as data for legislators and those interested in social science; but with a system of intervening censuses under direction of the States, this difficulty would be largely obviated, and the statistics gathered would soon acquire an accuracy and coherency vastly increasing their value for all purposes to which they can be applied.

The Bill, as a whole, appears to be an improvement upon those of previous years, especially in its provisions that the more important statistics shall be gathered, largely, by men of experience, and that the enumerators shall be named by the local authorities in each State and Territory. This last provision will make the work as non-partisan as possible; but for that very reason it is to be feared that it will encounter the opposition of the Congressional politicians.

EVENTS ABROAD.

THE first month of 1879 has been rendered memorable by an event of the highest importance to Europe and the world at large. This is no less than the establishment, on a positive and durable basis, of the French Republic—a republic at once conservative and progressive, and strong both to master factious opposition at home and to repel attacks from abroad. The elections of January 5th, in more than forty departments, have accomplished the partial renewal of the Senate in such a way as to secure in it a Republican majority of nearly sixty, almost a threefold realization of Gambetta's hopeful prediction of the result. Not only has this issue decided the composition of the French Senate, but it has put an end to the latent discord which had long existed between that body on one side and the Chamber of Deputies and the Cabinet on the other. The Republic will be all the stronger in the hour of its triumphs if its adherents shall maintain the same spirit of moderation and tolerance wherewith they have hitherto surprised, disappointed and baffled its inveterate foes. The latter cannot be expected, even while ostensibly yielding to their inevitable fate, to abandon, immediately, their habitual intrigues to recover their lost hold upon popularity and power. They still have opportunities for mischief left which they will not fail to seize to the detriment of the Republic. Moreover, some Republican extremists will continue to be dissatisfied with the victory of Gambetta and his following, whom they sneer at as "Opportunists" in politics, and will cherish the belief that the safety of the French Republic can never be permanently assured

until there be established in France what they claim Thiers meant by the words *La République Economique*—namely, as Deputy Talandier explains it, a state of society in which not only political but social equality shall reign. But, meanwhile, the superb tranquillity with which France has awaited, since October 20th, the crisis of January 5th and has now passed through it, is a striking proof of the progress achieved by the French democracy in its political education. It shows how well France has learned to govern itself.

Not only the generosity and justice but the growing strength of the French Republic is attested by indications that a day of general amnesty is at hand, and particularly by the full pardon just accorded to twenty-four Communist exiles in New Caledonia for their services against the insurgents in that colony. It is also a creditable sign of an approaching era of good feeling that increasing interest is taken in a society at Paris, the object of which is to find employment for liberated political convicts. This society acts altogether independently of party affiliations. A fine monument to the memory of Berryer, the illustrious Legitimist orator, will somewhat console his surviving friends for the recent defeat which they shared with Orleanists and the remnant of Bonapartists at the Senatorial elections. And Frenchmen of every party must be proud of the successful termination of the threatened difficulties of the French Government with the Bey of Tunis, and of the encouraging prospects of Algeria and of other French colonies in Africa. By-the-way, the unwonted interest which Italy and other Continental Governments, as well as Great Britain, are now taking in schemes for colonizing and civilizing Africa is one of the most remarkable signs of the times.

Both the Parisians and theatre-goers belonging to the various foreign colonies—and especially to the American colony—in the French capital are still nightly flocking to the representations of M. Pailleron's "L'Age Ingrat," at the Gymnase. No small amount of scandal has been occasioned by the fact that the principal heroine of the play is recognized by everybody as a portrait caricature of the eccentric Madame Ratazzi, Princess Bonaparte by birth, whom M. Pailleron thinly enough disguises as an American, although she might pass for a French, English, Italian, or any other but an American woman, notwithstanding the early flirtation which gossip attributes to her with at least one distinguished American diplomatist. M. Pailleron, however, has been deservedly lashed by Parisian critics for exceeding all bounds in aiming to take petty vengeance for having had to pay ten francs two years ago at a charitable entertainment given by Madame Ratazzi, whom M. Gaillardet eulogizes as the incarnation of benevolence. The dramatist, with inconceivable grossness, names her Madame Ratatouille.

Barely space enough is left to allude to the wedding, on January 7th, of that royal old reprobate, the King of Holland, with the Princess Emma of Waldeck-Pyrmont, whom, it is to be hoped, he will treat with more delicate consideration than he used to treat his late amiable and accomplished queen; to the costly gift of jewels which the Berlin shopkeepers are already clubbing together to present to the Emperor and Empress of Germany at their golden wedding on the 11th of next June; to the Belgian princess whom the Spanish newspapers have picked out as the new bride of widowed King Alfonso; to the crowds of mourners who thronged the Pantheon at Rome on the 9th of January, the anniversary of the late King Victor Emmanuel; to the death of Espartero, who, from a wheelwright's son and a student for the priesthood, became a Spanish *grandée* of the first class, Duke of Victory and Regent of Spain, and who might have been King of Spain had he not declined the crown in 1869 on account of his great age and his lack of heirs; to the prolonged financial and industrial troubles in Great Britain; to the Czar's anxieties on account of the refractory university students; and, finally, to the encyclical letter which Pope Leo XIII. has just issued against Socialism.

JOAQUIN MILLER'S NEW PLAY.

THE production of Joaquin Miller's new drama, "Mexico," which will take place at the Grand Opera House, New York City, Feb. 10th, promises to become one of the great events of the present dramatic season. The play, based on a story of interest, is full of startling incidents and picturesque situations. Its action is rapid, and its language highly poetic—fully worthy of "the Poet of the Sierras," and the author of the "Danites." The object of the play is to illustrate Mexican and American life during the reign of Maximilian, and introduces several prominent personages of that eventful period. The characters are sharply drawn and skillfully grouped around the heroine of the play, a young, wealthy, ardent and beautiful Mexican lady, devoted to the Empire, and in love with the hero, an American soldier of fortune. The villain is a Mexican general, and the comedy element is represented by an American consul and an Irish emigrant and his sweetheart. The fact that Miss Von Stamwitz, the renowned young tragedienne, the sparkle of whose beauty is only equaled by the brilliancy of her talent, assumes the principal rôle of *Dolores*, will certainly greatly contribute to insure the success of the drama. The play affords excellent opportunities for the display of scenery, and it is understood that the management of the Grand Opera House will mount it in splendid style. A full view of the city of Mexico, with volcanoes in the background and a real waterfall in the great bridge scene of the third act, will be the principal features of the scenic display.

GOVERNOR TALBOT of Massachusetts made a remarkable proposition in his inaugural message. It was that he will surrender a part of his salary, although it cannot be touched by law, if the Legislature can be thereby induced to retrench generally in salaries and other expenditures. Will wonders never cease?

SOME of the financial tinkerers at Albany have already renewed the assault upon the State "Resumption Law," which requires taxes to be paid in gold after the 1st of January of the present year, and provides that all contracts thereafter made shall also be paid in gold, unless some other metal or currency is specified in the contract as the medium of payment. It is to be hoped that the Legislature will be content to "let well enough alone."

THE internal revenue receipts for the last fiscal year amounted to $104,660,781, one-half of which was returned by the four States of New York, New Jersey, Ohio and Illinois. The latter State leads all others in the amount of revenue paid, her total being $19,667,786, nearly five millions in excess of New York, which comes next on the list. The sixteen Southern States pay together twenty-six and one-third millions, or about one-fourth of the revenue, which corresponds nearly with their relative population in the expected aggregate of the next census. The six New England States aggregate $3,594,682.39, or about one half of the revenue paid by Virginia.

THE United States Supreme Court has just given a decision in a case brought up on appeal from the Courts of Utah, which, if carried to its logical conclusion, must speedily put an end to polygamy. The court holds that polygamy is not shielded by the clause of the Federal Constitution which prohibits interference with religious belief; that the plea of religious conviction is not a valid defense; that Congress did not step outside the limits of its constitutional powers in passing laws for the suppression of polygamy in Utah, and that the judgment of the Superior Court of that Territory sustaining the Congressional Act must be affirmed. Now let the local courts and juries proceed to deal with this abomination as it deserves.

MUCH of the pernicious legislation of Congress in the past has been consummated in the last hours of the session, when, in the prevalent confusion jobs are pushed through without scrutiny, and measures passed of which members are for the most part entirely ignorant. Senator Edmunds proposes to stop this sort of thing by passing a joint resolution that no Bill which shall have passed either House shall be sent to the other after 12 o'clock, midnight, of the 1st of March, and that no Bill or resolution shall be presented to the President of the Senate for signature after 12 o'clock, midnight, of March 2d, and that this resolution, if concurred in, shall not be repealed without a vote of three-fourths of the members present. Thousands, if not millions, of dollars would be saved to the Treasury at every session if that resolution could be made a part of the law of Congress.

THE "wild Irishmen" who compose the Council of Cork have achieved immortality. They refused to extend the hospitalities of the city to General Grant, because, as they allege, he had insulted the Irish people in America by setting up the "No Popery" cry. General Grant has lived a rather conspicuous life, and his deeds have not escaped minute scrutiny during the last fifteen years; but it will be news to the people of this country that he ever said a word or committed an act in the least degree disrespectful to the Roman Catholic or any other religion. The Town Council of Cork have evidently forgotten that two of General Grant's most intimate friends in the army, and the highest officers now in the service, were both Catholics. They forget, too, that in insulting the ex President they insult the people whose bounty has more than once fed starving Ireland. It is a gratification to know that the people of Ireland very generally denounce the discourteous and illiberal action of the Corkonian authorities.

RESUMPTION of specie payments has been followed by a marked revival in the re-funding operations of the Government. On January 6th the subscriptions for the four per cents amounted to $11,093,550, the largest sum ever subscribed for in a single day. A significant feature of these subscriptions was that a large proportion were for bonds of small denominations—showing that persons of moderate means, now that our financial policy is settled, are very largely seeking investments in these securities. Another fact which has special interest in this connection is that, instead of diminishing the stock of coin in the Treasury, as was expected, the resumption of specie payments has increased it. At the close of the first three days of the new *régime* the coin balance in the Treasury was larger by nearly $5,000,000 than it was at the opening of business on the 2d, without any increase of customs receipts or other coin revenue. This results from people taking legal-tender notes instead of coin for the interest on their coupons, and asking for legal-tenders in exchange for coin.

IT is the fault of a great many public documents that the reader is compelled to wade through a wilderness of verbiage to find a single idea. The inaugural message of Mayor Cooper is a striking exception to this rule. Through and through, it is the document of a business man who carries into official life the business methods which have given him success and fortune. Brief, clear, and direct, every proposition is stated in the fewest words possible, and with a precision that defies misconception. All of the suggestions of the message look to a reduction of expenditure and taxation, the largest possible utilization of the natural resources and advantages of the city, and an efficient, enlightened, and economical administration of the public business. Among other statements of the message, which will command almost universal assent, is the following:

"There are too many city officials, and their salaries are in many instances excessive. To equalize compensations, to get rid of sinecures and unnecessary officials, is a duty demanding immediate attention. Compensations should be adjusted to the character of the labor and responsibilities imposed. Where a discretion is vested in the local authorities, that discretion should be exercised in the interest of the public. Where salaries and offices, needless though they may be, are anchored in provisions of law, legislation alone can bring relief. Where the compensation of present incumbents is protected by the Constitution, provision should be made for reducing the emoluments of their successors. The heavy expenditures involved in the administration of justice in this city form a serious item in the burden of taxation. No good citizen will desire to embarrass the courts by insufficient appropriations, but these expenses can be reduced without detriment to the public service."

It is to be hoped that Mayor Cooper may have the cordial support of the Common Council, and all other branches of the City Government, in the policy which his message so satisfactorily outlines.

IN his letter, resigning the position of Government Director of the Union Pacific Railroad, Mr. Charles Francis Adams, Jr., states very clearly and forcibly the difficulties which surround that position. It is impossible, he says, for any one to discharge satisfactorily the duties of a Government director under the present laws. These duties involve a thorough knowledge of the whole subject of railroad construction and management, the closest and most painstaking attention to detail in the annual inspections of the property in which the Government is so largely interested, and a constant humiliation of the official in the fact that he is at all times the guest of the corporation he is expected to supervise. Mr. Adams says on this point:

"To a person in any way sensitive it is far from pleasant to be the guest of a corporation; to eat and sleep and live at its expense; to accept every possible attention and hospitality from its officers, and meanwhile to keep careful note of every point open to criticism, and when the time comes to speak openly and truthfully, no matter how much what is said may hurt. Neither is it agreeable to do a public duty faithfully and at the same time to accept the money of one who suffers from the performance of the duty even though that one be a corporation. Yet the Government director who does his duty must, under the law as it now stands, either do this or go wholly unpaid. As long as this system continues, it is practically inevitable that services of a purely formal character can only be looked for. The active Government director is at best but an honorable spy."

The report of the Government directors which this letter accompanies, criticises the management of the Union Pacific as illiberal, especially in the matter of local freights. The directors argue that this road, in view of the extremely liberal aid it has received from the Government and its success as a commercial enterprise, should be judged by the highest standards known to the railroad system of the country, and state that, measured by this standard, its deficiencies are many and apparent. At the same time they say that the property, instead of deteriorating, is being brought up with steadiness, though slowly, to a fair degree of average excellence.

NEWS OF THE WEEK.

Domestic.

THE Potter Committee have decided to investigate the cipher telegrams.

THE House of Representatives has rejected the Bill for the relief of the William and Mary College.

IT is believed that the Army Reorganization Bill will fail to pass at the present session of Congress.

WISCONSIN has a debt of $2,500,000, and the value of taxable property in the State is $1,000,000,000.

THOMAS G. ALVORD was elected Speaker of the New York Assembly for the third time in his life on January 9th.

JUDGE BARRETT has granted an injunction restraining the Tammany Society from initiating 147 newly elected members.

BENJAMIN HUNTER was hanged at Camden, N. J., January 10th, in a bungling manner and while in a comatose state.

THE Teller Committee on Investigation of recent elections is holding open sessions in the Custom House at New Orleans.

BOTH Houses of the Louisiana Legislature suspended business on January 7th to receive the American industrial deputation now en route to Mexico.

IN his annual message Mayor Prince of Boston reports the debt of the city to be $13,192,897.44, exclusive of the water debt which is $12,911,273.98.

JUDGE HUNT, of the United States Supreme Court, has been stricken with paralysis, and a Bill is to be introduced into Congress to retire him on full pay.

HON. GUSTAVE SCHLEICHER, Member of Congress from Texas, and Chairman of the Committee on Railroads and Canals, died in Washington, January 10th, aged 55.

THE Connecticut Legislature met in joint convention at Hartford, January 9th, and elected the Republican State ticket, headed by Charles R. Andrews for Governor.

ACCORDING to the annual report of the State Treasurer of Pennsylvania the public debt on December 1st last was $21,586,200, having been reduced during the fiscal year $1,046,193.45.

THE annual report of the State Comptroller of New York says there is now no debt upon the State of New York except the canal debt, which, after deducting the sinking funds, amounts to but $8,009,031.82.

A CONCURRENT resolution to amend the Constitution so as to make the canals free, and another to reduce the salaries of Senators and Assemblymen to $1,000, have been introduced into the Legislature at Albany.

THE Government has brought suit at San Francisco against the Central Pacific Railroad Company to recover $10,000 for refusal of defendants to render a statement of their business to the Auditor of Railroad Accounts.

THE Illinois Legislature met January 10th. The Governor's message shows the total balance in the State Treasury to be $1,991,899; the receipts for the past two years, $6,619,771; and the disbursements $6,538,628.

THE House Committee on Education and Labor has made a report condemning Chinese immigration, and favoring the Bill which forbids the master of any vessel to bring more than fifteen Chinamen at one time to the United States, under a penalty of $100 fine for each passenger and imprisonment for six months.

A BAND of hostile Cheyennes imprisoned at Fort Robinson, Nebraska, who were to be taken back to their agency in the Indian Territory, escaped from the prison room, January 9th, and took to the prairie. The guards immediately started in pursuit, killed forty of the fugitives, and at last accounts a strong cavalry force was searching after the remainder.

Foreign.

GENERAL TODLEBEN has ordered the evacuation of Dobrudja to begin on January 12th.

MEXICO will soon enter the Postal Union, the Senate having approved the regulations.

IN Peru the President has organized a new Cabinet and suppressed an insurrection in the army.

CONSIDERABLE excitement has been created in London over reports of Lord Beaconsfield's severe indisposition from gout.

THOMAS G. CUNNINGHAM, a fugitive forger of Wilkesbarre, Penn., has been arrested in Rio Janeiro, and will be brought home.

THE French Government has given one year's notice of the termination of her treaties of commerce with Austria, with a view of concluding a new one.

TURKEY'S Minister of Finance has threatened to resign unless the Council of Ministers immediately takes measures for the relief of the financial difficulty.

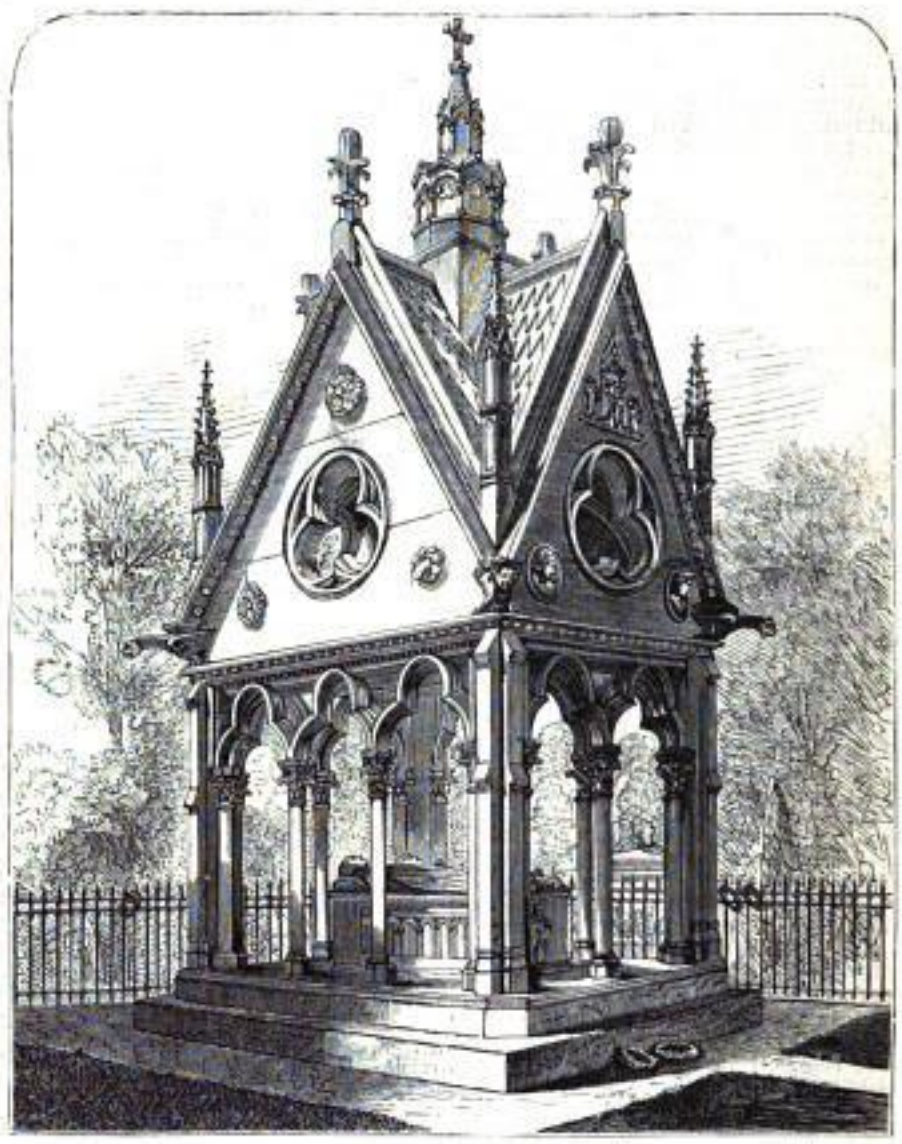
THERE are reports that Yakoob Khan is disposed to make friendly arrangements with the British Government. General Stewart is said to have marched through the city of Candahar.

IT is announced that the Spanish Government will shortly make a contract for a large amount of Virginia and Kentucky tobacco, the delivery to begin next May and continue until the end of July, 1881.

THE library of the Birmingham and Midland Institute at Birmingham, England, containing 80,000 volumes, was burned on January 11th. It contained the most complete Shakespearean collection in the world, numbering 8,000 volumes.

THE new French Cable Company has been constituted. The capital is 52,000,000 francs, and the number of shares 84,002. The company proposes to lay two cables, one from Brest to Cape Cod, and the other from Land's End to Nova Scotia—both by the way of St. Pierre.

THE Pope has sent to the Bishops of the Catholic Church a very important encyclical letter, in which he speaks at length of the condition of the Church, the Holy See and society, explains what he has already done and what remains to be done, and calls upon them to combat Socialism, Communism and Internationalism by preaching the principles of the Church.



AN outline of Prince Bismarck's Bill providing for Parliamentary discipline is published. It gives the power of punishing any member of the Reichstag for language deemed improper, in the hands of a committee composed of the two vice presidents and ten members, who shall meet at the order of the president, or on motion of twenty members. The punishments which may be inflicted are specified. It has created great excitement in Germany.

THE FALLEN LEAVES.

BY WILKIE COLLINS.

(Continued from front page.)

my ignorance, I thought he was the captain. Nothing of the sort. He was the first Socialist I had ever seen; and it was he who had persuaded my father to leave England."

Mr. Hethcote's opinions of Socialists began to show themselves (a little surly) in Mr. Hethcote's smile. "And how did you get on with the benevolent gentleman?" he asked. "After converting your father, did he convert you—with the cake?"

Amelius smiled. "Do him justice, sir, he didn't trust to the cake. He waited till we were in sight of the American land—and then he preached me a little sermon, on our arrival, entirely for my own use."

"A sermon?" Mr. Hethcote repeated. "Very little religion in it, I suspect."

"Very little indeed, sir," Amelius answered. "Only as much religion as there is in the New Testament. I was not quite old enough to understand him easily—so he wrote down his discourse on the fly-leaf of a story-book I had with me, and gave it to me to read when I was tired of the stories. Stories were scarce with me in those days; and, when I had exhausted my little stock, rather than read nothing I read my sermon—read it so often that I think I can remember every word of it now. 'My dear little boy, the Christian religion, as Christ taught it, has long ceased to be the religion of the Christian world. A selfish and cruel pretense is set up in its place. Your own father is one example of the truth of this saying of mine. He has fulfilled the first and foremost duty of a true Christian—the duty of forgiving an injury. For this, he stands disgraced in the estimation of all his friends; they have renounced and abandoned him. He forgives them all, and seeks peace and good company in the New World, among Christians like himself. You will not repent leaving home with him; you will be one of a loving family, and, when you are old enough, you will be free to decide for yourself what your future life shall be.' That was all I knew about the Socialists, when we reached Tadmor after our long journey."

Mr. Hethcote's prejudices made their appearance again. "A barren sort of place," he said, "judging by the name."

"Barren? What can you be thinking of? A prettier place I never saw, and never expect to see again. A clear, winding river, running into a little blue lake. A broad hill-side, all laid out in flower-gardens, and shaded by splendid trees. On the top of the hill, the buildings of the Community, some of brick and some of wood, so covered with creepers and so encircled with verandas that I can't tell you to this day what style of architecture they were built in. More trees behind the houses—and, on the other side of the hill, cornfields—nothing but cornfields rolling away and away in the great yellow plains, till they reached the golden sky and the setting sun, and were seen no more. That was our first view of Tadmor, when the stage-coach dropped us at the town."

Mr. Hethcote still held out. "And what about the people who live in this earthly Paradise?" he asked. "Male and female saints—eh?"

"Oh dear, no sir! The very opposite of saints. They eat and drink like their neighbors. They never think of wearing dirty horsehair when they can get clean linen. And when they are tempted to misconduct themselves, they find a better way out of it than knotting a cord and thrashing their own backs. Saints! They all ran out together to bid us welcome like a lot of schoolchildren; the first thing they did was to kiss us, and the next thing was to give us a mug of wine of their own making. Saints! Oh, Mr. Hethcote, what will you accuse us of being next? I declare your suspicions of the poor Socialists keep cropping up again as fast as I cut them down. May I make a guess, sir, without offending you? From one or two things I have noticed, I strongly suspect you're a British clergyman."

Mr. Hethcote was conquered at last; he burst out laughing. "You have discovered me," he said, "traveling in a colored cravat and a shooting-jacket. I confess I should like to know how."

"It's easily explained, sir. Visitors of all sorts are welcome at Tadmor. We have a large experience of them in the traveling season. They all come with their own private suspicion of us lurking about the corners of their eyes. They see everything we have to show them, and eat and drink at our table, and join in our amusements, and get as pleasant and friendly with us as can be. The time comes to say good-by—and then we find them out. If a guest who has been laughing and enjoying himself all day suddenly becomes serious when he takes his leave, and shows that little lurking devil of suspicion again about the corners of his eyes, it's ten chances to one that he's a clergyman. No offense, Mr. Hethcote? I acknowledge with pleasure that the corners of your eyes are clear again. You're not a very clerical clergyman, sir, after all—I don't despair of converting you, yet!"

"Go on with your story, Amelius. You're the queerest fellow I have met with, for many a long day past."

"I'm a little doubtful about going on with my story, sir. I have told you how I got to Tadmor, and what it looks like, and what sort of people live in the place. If I am to get on beyond that, I must jump to the time when I was old enough to learn the Rules of the Community."

"Well—and what then?"

"Well, Mr. Hethcote, some of the rules might offend you."

"Try!"

"All right, sir. Don't blame me; *I'm* not ashamed of the rules. And now, if I am to speak, I must speak seriously on a serious subject; I must begin with our religious principles. We find our Christianity in the spirit of the New Testament—not in the letter. We have three good reasons for objecting to pin our faith on the words alone, in that book. First, because we are not sure that the English translation is always to be depended on as accurate and honest. Secondly, because we know that (since the invention of printing) there is not a copy of the book in existence which is free from errors of the press, and that (before the invention of printing) those errors, in manuscript copies, must as a matter of course have been far more serious and far more numerous. Thirdly, because there is plain internal evidence (to say nothing of discoveries actually made in the present day) of interpolations and corruptions, introduced into the manuscript copies as they succeeded each other in ancient times. These drawbacks are of no importance, however, in our estimation. We find, in the spirit of the book, the most simple and most perfect system of religion and morality that humanity has ever received—and with that we are content. To reverence God, and to love our neighbor as ourselves—if we had only these two commandments to guide us, we should have enough. The whole collection of Doctrines (as they are called), we reject at once, without even stopping to discuss them. We apply to them the test suggested by Christ Himself; by their fruits ye shall know them. The fruits of Doctrines, in the past (to quote three instances only), have been the Spanish Inquisition, the Massacre of St. Bartholomew, and the Thirty Years' War—and the fruits, in the present, are dissension, bigotry and opposition to useful reforms. Away with Doctrines! In the interests of Christianity, away with them! We are to love our enemies; we are to forgive injuries; we are to help the needy; we are to be pitiful and courteous, slow to judge others, ashamed to exalt ourselves. That teaching doesn't lead to tortures, massacres, and wars; to envy, hatred and malice, and for that reason it stands revealed to us as the teaching that we can trust. There is our religion, sir, as we find it in the Rules of the Community."

"Very well, Amelius. I notice, in passing, that the Community is in one respect like the Pope—the Community is infallible. We won't dwell on that. You have stated your principles. As to the application of them next? Nobody has a right to be rich among you, of course?"

"Put it the other way, Mr. Hethcote. All men have a right to be rich—provided they don't make other people poor, as a part of the process. We don't trouble ourselves much about money; that's the truth. We are farmers, carpenters, weavers, and printers; and what we earn (ask our neighbors if we don't earn it honestly) goes into the common fund. A man who comes to us with money puts it into the fund, and so makes things easy for the next man who comes with empty pockets. While they are with us, they all live in the same comfort, and have their equal share in the same profits—deducting the sum in reserve for sudden calls and bad times. If they leave us, the man who has brought money with him has his undisputed right to take it away again; and the man who has brought none bids us good-by, all the richer for his equal share in the profits which he has personally earned. The only fuss at our place about money that I can remember was the fuss about my five hundred a year. I wanted to hand it over to the fund. It was my own, mind—inherited from my mother's property, on my becoming of age. The Elders wouldn't hear of it; the Council wouldn't hear of it; the general vote of the Community wouldn't hear of it. 'We agreed with his father that he should decide for himself, when he grew to manhood'—that was how they put it. 'Let him go back to the Old World; and let him be free to choose, by the test of his own experience, what his future life shall be.' How do you think it will end, Mr. Hethcote? Shall I return to the Community? Or shall I stop in London?"

Mr. Hethcote answered, without a moment's hesitation, "You will stop in London."

"I'll bet you two to one, sir, he goes back to the Community."

In those words, a third voice (speaking in strong New England accent) insinuated itself into the conversation from behind. Amelius and Mr. Hethcote, looking round, discovered a long, lean, grave stranger—with his face overshadowed by a huge felt hat. "Have you been listening to our conversation?" Mr. Hethcote asked, haughtily.

"I have been listening," answered the grave stranger, "with considerable interest. This young man, I find, opens a new chapter to me in the book of humanity. Do you accept my bet, sir? My name is Rufus Dingwell; and my home is at Coolspring, Massachusetts. You do not bet? I express my regret, and have the pleasure of taking a seat alongside of you. What is your name, sir? Hethcote? We have one of that name at Coolspring. He is much respected. Mr. Claude A. Goldenheart, you are no stranger to me—no sir. I procured your name from the steward, when a little difficulty occurred just now about the bird. Your name considerably surprised me."

"Why?" Amelius asked.

"Well, sir—not to say that your surname (being Goldenheart) reminds one unexpectedly of the Pilgrim's Progress—I happen to be already acquainted with you. By reputation."

Amelius looked puzzled. "By reputation?" he said. "What does that mean?"

"It means, sir, that you occupy a prominent position in a recent number of our popular journal, entitled *The Coolspring Democrat*. The late romantic incident which caused the withdrawal of Miss Mellicent from your Community has produced a species of social commotion at Coolspring. Among our ladies, the tone of sentiment, sir, is universally favorable to You. When I left, I do assure you, you were a popular character among us. The name of Claude A. Goldenheart was, so to speak, in everybody's mouth."

Amelius listened to this, with the color suddenly deepening on his face, and with every appearance of heartfelt annoyance and regret. "There is no such thing as keeping a secret in America," he said, irritably. "Some spy must have got among us; none of *our* people would have exposed the poor lady to public comment. How would you like it, Mr. Dingwell, if the newspaper published the private sorrows of your wife or your daughter?"

Rufus Dingwell answered with the straightforward sincerity of feeling which is one of the indisputable virtues of his nation. "I had not thought of it in that light, sir," he said. "You have been good enough to credit me with a wife or a daughter. I do not possess either of those ladies; but your argument hits me, notwithstanding—hits me hard, I tell you." He looked at Mr. Hethcote, who sat silently and stiffly disapproving of all this familiarity, and applied himself in perfect innocence and good-faith to making things pleasant in that quarter. "You are a stranger, sir," said Rufus; "and you will doubtless wish to peruse the article which is the subject of conversation?" He took a newspaper slip from his pocket-book, and offered it to the astonished Englishman. "I shall be glad to hear your sentiments, sir, on the view propounded by our mutual friend, Claude A. Goldenheart."

Before Mr. Hethcote could reply, Amelius interposed in his own headlong way. "Give it to me! I want to read it first!"

He snatched at the newspaper slip. Rufus checked him with grave composure. "I am of a cool temperament myself, sir; but that don't prevent me from admiring heat in others. Short of boiling point—mind that!" With this hint, the wise New-Englander permitted Amelius to take possession of the printed slip.

Mr. Hethcote, finding an opportunity of saying a word at last, asserted himself a little haughtily. "I beg you will both of you understand that I decline to read anything which relates to another person's private affairs." Neither the one nor the other of his companions paid the slightest heed to this announcement. Amelius was reading the newspaper extract, and placid Rufus was watching him. In another moment, he crumpled up the slip, and threw it indignantly on the deck.

"It's as full of lies as it can hold!" he burst out.

"It's all over the United States by this time," Rufus remarked. "And I don't doubt we shall find the English papers have copied it, when we get to Liverpool. If you will take my advice, sir, you will cultivate a sagacious insensibility to the comments of the press."

"Do you think I care for myself?" Amelius asked, indignantly. "It's the poor woman I am thinking of. What can I do to clear her character?"

"Well, sir," suggested Rufus, "in your place, I should have a notification circulated through the ship, announcing a lecture on the subject (weather permitting) in the course of the afternoon. That's the way we should do it at Coolspring."

Amelius listened without conviction. "It's certainly useless to make a secret of the matter now," he said; "but I don't see my way to making it more public still." He paused, and looked at Mr. Hethcote. "It so happens, sir," he resumed, "that this unfortunate affair is an example of some of the Rules of our Community which I had not time to speak of, when Mr. Dingwell here joined us. It will be a relief to me to contradict these abominable falsehoods to somebody; and I should like (if you don't mind) to hear what you think of my conduct from your own point of view. It might prepare me," he added, smiling rather uneasily, "for what I may find in the English newspapers."

With these words of introduction he told his sad story—jocosely described in the newspaper heading as "Miss Mellicent and Goldenheart among the Socialists at Tadmor."

CHAPTER III.

"NEARLY six months since," said Amelius, "we had notice by letter of the arrival of an unmarried English lady, who wished to become a member of our Community. You will understand my motive in keeping her family name a secret; even the newspaper has grace enough only to mention her by her Christian name. I don't want to cheat you out of your interest, so I will own at once that Miss Mellicent was not beautiful, and not young. When she came to us, she was thirty-eight years old, and time and trial had set their marks on her face, plainly enough for anybody to see. Notwithstanding this, we all thought her an interesting woman. It might have been the sweetness of her voice; or perhaps it was something in her expression—a sort of patience and kindness that seemed to blame nobody and to expect nothing—that took our fancy. There! I can't explain it; I can only say there were young women and pretty women at Tadmor who failed to win us as Miss Mellicent did. Contradictory enough, isn't it?"

Mr. Hethcote said he understood the contradiction. Rufus put an appropriate question: "Do you possess a photograph of this lady, sir?"

"No," said Amelius; "I wish I did. Well, we received her, on her arrival, in the common room—called so because we all assemble there every evening, when the work of the day is done. Sometimes we have the reading of a poem or novel; sometimes music, or dancing, or cards, or billiards, to amuse us. When a new member arrives, we have the ceremonies of introduction. I was close by the Elder Brother (that's the name we give to the chief of the Community) when two of the women led Miss Mellicent in. He's a hearty old fellow, who lived the first part of his life on his own clearing in one of the Western forests. To this day, he can't talk long without showing, in one way or another, that his old familiarity with the trees still keeps its place in his memory. He looked hard at Miss Mellicent, under his shaggy old white eyebrows; and I heard him whisper to himself, 'Ah, dear me! Another of the Fallen Leaves!' I knew what he meant. The people who have drawn blanks in the lottery of life—the people who have toiled hard after happiness, and have gathered nothing but disappointment and sorrow; the friendless and the lonely, the wounded and the lost—these are the people whom our good Elder Brother calls The Fallen Leaves. I like the saying myself; it's a tender way of speaking of our poor fellow-creatures who are down in the world."

He paused for a moment, looking out thoughtfully over the vast void of sea and sky. A passing shadow of sadness clouded his bright young face. The two elder men looked at him in silence; feeling (in widely different ways) the same compassionate interest. What was the life that lay before him? And—God help him!—what would he do with it?

"Where did I leave off?" he asked, rousing himself suddenly.

"You left Miss Mellicent, sir, in the Common Room—the venerable citizen with the white eyebrows being suitably engaged in moralizing on her." In those terms the ever-ready Rufus set the story going again.

"Quite right," Amelius resumed. "There she was, poor thing; a little, thin, timid creature, in a white dress, with a black scarf over her shoulders, trembling and wondering in a room full of strangers. The Elder Brother took her by the hand, and kissed her on the forehead, and bade her heartily welcome in the name of the Community. Then the women followed his example, and the men all shook hands with her. And then our chief put the three questions, which he is bound to address to all new arrivals when they first join us. 'Do you come here of your own free will? Do you bring with you a written recommendation from one of our brethren, which satisfies us that we do no wrong to ourselves or to others in receiving you? Do you understand that you are not bound to us by vows, and that you are free to leave us again if the life here is not agreeable to you?' Matters being settled so far, the reading of the rules, and the penalties imposed for breaking them, came next. Some of the rules you know already; others of smaller importance I needn't trouble you with. As for the penalties, if you incur the lighter ones, you are subject to public rebuke or to isolation for a time from the social life of the Community. If you incur the heavier ones, you are either sent out into the world again for a given period, to return or not as you please; or you are struck off the list of members, and expelled for good and all. Suppose these preliminaries agreed to by Miss Mellicent with silent submission, and let us go on to the close of the ceremony—the reading of the Rules which settle the questions of Love and Marriage."

"Aha!" said Mr. Hethcote, "we are coming to the difficulties of the Community at last?"

"Are we also coming to Miss Mellicent, sir?" Rufus inquired. "As a citizen of a free country in which I can love in one State, marry in another, and be divorced in a third, I am not interested in your Rules—I am interested in your Lady."

"The two are inseparable in this case," Amelius answered, gravely. "If am to speak of Miss Mellicent, I must speak of the Rules; you will soon see why. Our Community becomes a despotism, gentlemen, in dealing with love and marriage. For example, it positively prohibits any member afflicted with hereditary disease from marrying at all; and it reserves to itself, in the case of every proposed marriage among us, the right of permitting or forbidding it, in council. We can't even fall in love with each other, without being bound, under penalties, to report it to the Elder Brother; who, in his turn communicates it to the monthly council; who, in their turn, decide whether the courtship may go on or not. That's not the worst of it, even yet! In some cases—where we haven't the slightest intention of falling in love with each other—the governing body takes the initiative. 'You two will do well to marry; we see it, if you don't. Just think of it, will you?' You may laugh; some of our happiest marriages have been made in that way. Our governors in council act on an established principle; here it is in a nutshell. The results of experience in the matter of marriage, all over the world, show that a really wise choice of a husband or a wife is an exception to the rule; and that husbands and wives in general would be happier together if their marriages were managed for them by competent advisers on either side. Laws laid down on such lines as these, and others equally strict, which I have not mentioned yet, were not put in force, Mr. Hethcote, as you suppose, without serious difficulties—difficulties which threatened the very existence of the Community. But that was before my time. When I grew up, I found the husbands and wives about me content to acknowledge that the Rules fulfilled the purpose with which they had been made—the greatest happiness of the greatest number. It all looks very absurd, I dare say, from your point of view. But these queer regulations of ours answer the Christian test—by their fruits ye shall know them. Our married people don't live on separate sides of the house; our children are all healthy; wife

Digitized by Google

beating is unknown among us; and the practice in our divorce court wouldn't keep the most moderate lawyer on bread and cheese. Can you say as much for the success of the marriage laws in Europe? I leave you, gentlemen, to form your own opinions."

Mr. Hethcote declined to express an opinion. Rufus declined to resign his interest in the lady. "And what did Miss Mellicent say to it?" he inquired.

"She said something that startled us all," Amelius replied. "When the Elder Brother began to read the first words relating to love and marriage in the Book of Rules, she turned deadly pale; and rose up in her place with a sudden burst of courage or desperation—I don't know which. 'Must you read that to Me?' she asked. 'I have nothing to do, sir, with love or marriage.' The Elder Brother laid aside his Book of Rules. 'If you are afflicted with an hereditary malady,' he said, 'the doctor from the town will examine you, and report to us.' She answered, "I have no hereditary malady.' The Elder Brother took up his book again. 'In due course of time, my dear, the Council will decide for you, whether you are to love and marry or not.' And he read the Rules. She sat down again, and hid her face in her hands, and never moved or spoke until he had done. The regular questions followed. Had she anything to say, in the way of objection? Nothing! In that case, would she sign the Rules? Yes! The time came for supper and music. She excused herself like a child. 'I feel very tired; may I go to bed?' The unmarried women in the same dormitory with her anticipated some romantic confession when she grew used to her new friends. They proved to be wrong. 'My life has been one long disappointment,' was all she said. 'You will do me a kindness if you will take me as I am, and not ask me to talk about myself.' There was nothing sulky or ungracious in the expression of her wish to keep her own secret. A kinder and sweeter woman—never thinking of herself; always considerate of others—never lived. An accidental discovery made me her chief friend among the men: it turned out that her childhood had been passed, where my childhood had been passed, at Shedfield Heath, in Buckinghamshire. She was never weary of consulting my boyish recollections, and comparing them with her own. 'I love the place,' she used to say; 'the only happy time of my life was the time passed there.' On my sacred word of honor, this was the sort of talk that passed between us, week after week. What other talk could pass between a man whose one-and-twentieth birthday was then near at hand, and a woman who was close on forty? What could I do, when the poor, broken, disappointed creature met me on the hill or by the river, and said, 'You are going out for a walk; may I come with you?' I never attempted to intrude myself into her confidence; I never even asked her why she had joined the Community. You see what is coming, don't you? I never saw it. I didn't know what it meant, when some of the younger women, meeting us together, looked at me (not at her), and smiled maliciously. My stupid eyes were opened at last by the woman who slept in the next bed to her in the dormitory—a woman old enough to be my mother, who took care of me when I was a child at Tadmor. She stopped me one morning, on my way to fish in the river. 'Amelius,' she said, 'don't go to the fishing-house; Mellicent is waiting for you.' I stared at her in astonishment. She held up her finger at me; 'Take care, you foolish boy! You are drifting into a false position as fast as you can. Have you no suspicion of what is going on?' I looked all round me, in search of what was going on. Nothing out of the common was to be seen anywhere. 'What can you possibly mean?' I asked. 'You will only laugh at me, if I tell you,' she said. I promised not to laugh. She, too, looked all round her, as if she was afraid of somebody being near enough to hear us; and then she let out the secret. 'Amelius, ask for a holiday—and leave us for a while. Mellicent is in love with you.'"

(To be continued.)

THE NEW CAPITOL AT ALBANY.

THE RECEPTION IN HONOR OF ITS OPENING.

THE reception in celebration of the opening of the new Capitol at Albany, on the evening of January 7th, was an occasion of great brilliance and interest. At least 10,000 persons visited and inspected the magnificent building during the evening, including a large number of the most prominent officials and citizens of this and other States. Upon entering, the visitors were ushered into the cloak-rooms, whence they ascended the principal staircase, made brilliant with lights, into the Court of Appeals corridor, the splendor of its carmine and gold relieved by boxes of great green-leaved plants which filled the embrasures of the windows. This was the dancing hall for this reception, and its ample and unobstructed floor of 150 feet long fitted it admirably for the purpose. The musicians were placed at one end, and the lookers-on found scanty standing room at the other. In the Governor's Room, which opens upon this corridor, were the reception committee, headed by the Mayor of Albany and composed of its first citizens, waiting to welcome the guests of the city. From here, by another door leading into a smaller corridor, the guests passed out, without jostling or interference, and took their way to the Court of Appeals, occupied as the Senate Chamber. The decoration of this room, the great oaken beams of the ceiling and the heavy oaken wainscoting, deepened with solid reds and unrelieved by gold, is of a more sombre richness, and needs the flood of light which is secured to it by day to be seen to the best advantage. Beyond this again the stream of sightseers poured, went on into the room of the Lieutenant-Governor, a vaulted chamber decorated in green and gold, and thence, returning to the grand stairway, passed up the three flights to the galleries of the Assembly Chamber. It had been intended to try the electric light in this room, but the fear of failure was too great. As it was, the room was the most brilliant show which Albany has ever seen, perhaps the most brilliant of its kind which has ever been seen in this country. Numerous temporary brackets, upholding no end of gas jets, shed a flood of light upon the frescoed walls and sparkled among the gilded tracery of the vaulted ceiling with fine effect. It was not the beauty of the Chamber itself, however, that made every promenader tarry, but the galaxy of beauty with which it was set off. The semicircular rows of seats sparkled with rows of ladies in all the glory of full toilet. Every seat was taken by the fair ones, and their gloves, fans or opera cloaks ornamented the desks usually devoted to the storage of documents with red tape ties. Close at hand stood the gallant escorts of the ladies, ready to do their bidding. A bevy of young girls had taken possession of the Speaker's elevated position, and were using it as an observatory from which to spy out and signal to their friends upon the floor. The galleries were filled mostly with ladies and gentlemen of more advanced years, who preferred to look on at a distance. Music was furnished by Gilmore's Band. One of the most interesting and pathetic sights was that of Thurlow Weed, who sat nearly the whole evening through in the stenographer's chair in front of the Clerk's desk, and doubtless thought, as most who looked upon him did, that the sceptre had passed from him with the abandonment of that old Capitol within which, for more than half its long history, he had exercised almost an unbroken sway. Governor Robinson arrived at about 9:30 o'clock with the members of his military staff, whose uniforms lent their share to the picturesqueness of the scene. Though neither of the Senators of the State was present, Postmaster-General Key represented the Federal Government, and among others present were ex-Governor Hoffman and Mrs. Hoffman, President Barnard, of Columbia College, Chief Judge Church, Judge Andrews and Judge Miller of the Court of Appeals, with the ladies of their families, Collector Merritt; General Daniel E. Sickles, General Harney, U. S. A., General Henry W. Slocum, General H. A. Barnum, General J. R. Hawley, General McQuade, Elliot C. Cowdin; ex-Secretaries of State Homer A. Nelson and G. Hilton Scribner; Chauncey M. Depew and David Dudley Field. There was a large party from Boston, among whom were Edward Everett Hale, Rev. Phillips Brooks and Charles Eliot Norton. Every prominent point in the State had its representatives except Buffalo. The legal profession, the literary profession, the clergy, the mercantile, banking and manufacturing interests, the education and the agriculture of the State were all represented, and by their real representatives.

A supper-room was established in a tent raised in the court, and was densely thronged. Three tables, each something less than one hundred feet long, were laid in the most tasteful manner. Among the decorations on each of the two side tables stood a monster floral vase six feet high, copied after the antique in shape, and composed almost wholly of camellias. On the middle table the most striking piece was an enormous game patty, surmounted with a cooked pheasant, the wings and feathers of which had been restored, so that it seemed about to fly.

The occasion was one which will long be remembered by all who participated in it.

TEMPORARY CHAMBERS OF THE STATE SENATE.

In a previous issue we have given a description of the grand Assembly Chamber and paintings. During this session the Senate will occupy the chambers designed for the Court of Appeals, which are on the first floor of the building. The corridor, which is 140 feet by about 20, opens on the Central Court, from which it is lighted by seven large windows. In point of decoration it is perhaps the most successful, and certainly the most sumptuous, piece of work in the building. It is divided into bays by transverse arches, and the ceiling of each bay is a groined arch in brick, plastered. The floor is covered with encaustic tiles, and the walls are wainscoted with the same material framed in sandstone. The faces of the piers and arches are red, with the moldings at the angle gilded. The walls have a ground of red, carrying an ornament of yellow framed in gold, and the ceiling is decorated with blue, red and umber on a ground of gold. The ornament is minute, and the "tone" of the place is produced, as in Oriental work, by the combination in small quantities of positive colors. The effect of the room will be cooled as well as heightened by the green of growing plants, a box of which will be placed in each of the windows. The subordinate rooms on this floor, which are to serve as committee-rooms, are for the most part colored with plain tints. One, however, which was prepared for the temporary use of the Governor, is more elaborately treated. The walls are covered with deep tints, the upper belt filled with geometrical ornament; an iron girder which traverses the ceiling is solidly gilded, the iron beams which carry the brick arches of the ceiling are gilded also, and the arches are covered with a damask of blue upon blue.

The Court of Appeals, this Winter to be the Senate Chamber, is about sixty feet square and twenty-five high. It is divided, however, into the court room proper, which occupies about two-thirds of its area, and the space allotted for spectators, which takes up the other third. The division is effected by a line of polished granite columns bearing an arched marble wall. The room is lighted on the north side by three windows, and the bench will be at the north end where the desk used by the Lieutenant-Governor in the old Capitol has been temporarily erected. The division of the room has given it a much more agreeable form than it otherwise would have had, and the disposition of the parts greatly helps the effect of it. The walls are wainscoted in sandstone, and the wall-screen for ten or twelve feet above this is paneled in unvarnished oak, which already begins to look rich and mellow, and will grow richer and mellower with time. The panels are filled with carving in diaper, and the walls over the screen are painted in diaper upon a ground of red. The ceiling is very deeply paneled in oak, and carried upon a system of beams and brackets, the beams diminishing in size from the great girders, supported by braces, which rest upon the wall over the columns. The panels are carved in foliage. Even as it is, without its fittings or its furniture, the court-room has the character of dignity, retirement and sober richness which should belong to such a place.

The Romantic Career of a Pennsylvania Boy.

NEARLY forty years ago, in South Huntington township, Westmoreland, Pa., lived John Hinton. He was an orphan boy, rude and uneducated, and had wandered there from the neighborhood of Masontown, Fayette County. With no known relatives, he was kicked about from one family to another till manhood. Enlisting then in the regular army, he served in the Florida war. At its close he helped to escort the Cherokees beyond the Mississippi. From Indian Territory he went to New Orleans and shipped as a common sailor on a vessel bound for the East Indies. At the city of Madras, on the western shores of the Bay of Bengal, he deserted, and enlisted in a British regiment. He served many years, and during the memorable Sepoy rebellion was noted for his daring bravery. At his discharge he was presented with a gold medal by the Governor-general himself. He is next heard of traveling in a caravan from Delhi westward across the Indus River, through Afghanistan and Persia, to Turkey and back. In time, from trading, he became immensely wealthy and was the owner of five caravans, containing over 13,000 horses and camels, and fifty elephants. In 1864 he visited Cabul, the capital of Afghanistan, for copper, great quantities of which are there mined and smelted. His magnificent retinue attracted the attention of the Ameer, and he was invited to an audience—an honor never before received by a Christian. A present of a 100 of his best horses and a three-tusked elephant made the Ameer his eternal friend. When yearly it was followed by similar presents, besides camels and merchandise, John Hinton had the monopoly of trade from the summits of the Hindoo Koosh Mountains to the confines of Beloochistan, and in real power was second only to the Ameer himself. About 1870 he was made military commander of the district of Herat, and in 1774 suppressed a local rebellion to the great satisfaction of his sovereign. Trained in the arts of war among the savages of North America, and among the superstitious natives of India, where he became thoroughly familiar with British soldiers and resources, together with his years of service as the idolized commander of the Mohammedan tribal armies of Afghanistan, amounting to tens of thousands of half-civilized men, he is to-day the ablest soldier of Asia. Desperate from a knowledge of the studied diplomatic chicanery of the representatives of the Empress of India, with whom from fear of treachery he refuses to treat, as well as the Ameer, bribed with millions of Russian roubles, he will lead the armies of the followers of the Prophet to victory or to death.

PICTORIAL SPIRIT OF THE EUROPEAN ILLUSTRATED PRESS.

Waiting for the Elephants.

This sketch depicts some of the difficulties the British troops have to encounter in their march forward into Afghanistan. The country is exceedingly rugged throughout, and the best roads consist of mere mountain paths or the beds of dried-up torrents, so that the transport of artillery by simple horse power is a task of considerable difficulty, and frequently of utter impossibility. In our sketch a desperate effort has been made to get some field guns through a narrow defile, but the attempt has hopelessly failed, and a messenger has been sent to the rear to hasten forward the elephants—those valuable monsters whose traction powers are almost priceless in the present campaign.

Free Instruction in Dressmaking in Paris.

M. J. Ferry, the Mayor of the Ninth Arrondissement, Paris, has recently organized a course of instruction in the schoolrooms of the town-hall, which has for its object the spreading of the true principles of dressmaking among the lower and middle classes of Paris. The instruction is gratuitous, and is given every Friday from five to six o'clock in the afternoon. To be admitted it is only necessary for the scholar to sign her name in the Ninth Arrondissement; and already there are about 130 signatures, and a regular attendance of from 60 to 70 every week. The scholars are both women and young girls, of fifteen years and upwards. They are divided into two degrees; the first a lower degree, receiving instruction at the blackboard, upon which they describe the indications of height, breadth, length, etc., under the direction of a teacher. After these lessons are repeated a number of times for each garment, they become fixed in the mind of the pupil, who must be able to take, without hesitation and in the proper order, all the measures necessary for any garment. When a sufficient degree of experience has been acquired the pupil is advanced to the second grade, and cut patterns, which are critically examined and corrected by the teacher. It is only after a certain degree of dexterity is acquired that the pupil is given a piece of cloth to cut according to the pattern, and then when the different pieces are basted together the defects are detected and remedied. The course of instruction lasts for ten months, from October to the following August. It is under the direction of Madame Grandhomme herself, the author of a system of dress-cutting. The salaries of the teachers and all the expenses of the school are paid out of the funds of the school treasury.

Restored Tomb of Abelard and Heloise.

Tourists to Paris will find renewed interest in the ever-romantic history of Abelard and Heloise, in consequence of the recent restoration of the celebrated tomb. Abelard dying first, was buried by Heloise at the Abbey of the Paraclete, of which she was abbess, and upon her death the remains of the lovers were not separated. In 1792 the Paraclete was sold and the bodies were removed to the church of Nogent-sur-Seine. Eight years later they were exhumed and placed in the garden of the Musée Français in Paris, and in 1817 were deposited in the cemetery of Pere la Chaise, at Paris, beneath a canopy which had been erected over the remains of Abelard at the priory of St. Marcel, shortly after his death in 1142. The reclining statues were made from casts taken from the skulls. It is scarcely possible that one out of ten pleasure travelers has visited Paris since 1817 without making a pilgrimage to the celebrated tomb. In its restored condition it will be more attractive than ever.

The Late Ministerial Crisis in Italy.

On the 11th of December last the Italian Chamber of Deputies, by a vote of 257 to 185, rejected an order of the day expressing confidence in the ability of the Government to maintain order with liberty. The ministry resigned, and the King asked Signor Cairoli, who had saved his life when the attempt to assassinate him was made in Naples, to form another Cabinet. The President of the Council, after several ineffectual efforts, reported his inability to harmonize the conflicting political elements, when the King bade Signor Depretis, ex President of the Council, undertake the task. On the 17th he succeeded in completing a new Cabinet, drawing the members exclusively from the left. The new ministry consists of Signor Depretis, President of the Council, Minister of the Interior and Minister of Foreign Affairs, *ad interim*; Signor Tajani, Minister of Justice; General Mazè de la Roche, Minister of War; Admiral Ferreri, Minister of Marine; Signor Mezzanotte, Minister of Public Works; Signor Magliani, Minister of Finance; Signor Coppino, Minister of Public Instruction; and Signor Majorana-Calatabiano, Minister of Agriculture.

Return of the Emperor to Berlin.

On Thursday, December 5th, the Emperor William and Empress Augusta, returned in state to the royal palace in Berlin, after his Majesty's convalescence. The route from the railway station was densely crowded with people who gave them an enthusiastic reception. The trades societies and public bodies generally paraded past the palace, and their Majesties, in response to the acclamations of the multitude, appeared on the balconies of the palace and bowed their thanks.

AT HOME AND ABROAD.

—THE Hungarian deficit for 1879 is estimated at 22,802,398 florins.

—THE public schools at Mitchell, Ind., have been dismissed on account of the prevalence of scarlet fever.

—THE French Consul at Tunis has received telegraphic orders to demand the requisite satisfaction from the Bey.

—THE annual sale of pews in Plymouth Church, Brooklyn, January 7th, realized $40,721, being $3,517 in excess of last year's receipts.

—THE *Japan Mail* states that an astronomical observatory is to be established within the precincts of the Geographical Bureau of Tokio.

—DIPHTHERIA is raging at Vienna and in some districts of Hungary. In one town of 20,000 souls 2,135 cases and 927 deaths are reported.

—THE Liverpool authorities will apply for the right to produce and supply light by means of electricity, to the exclusion of all other persons or corporations.

—THE State line steamship *State of Louisiana*, from Glasgow for New York, which went ashore in Lough Larne on December 24th, went to pieces on January 4th.

INDIANA'S school fund amounts to $9,000,000, and $4,000,000 are given every year by the people to keep up the schools, while the school property is valued at $12,000,000.

—IN the State of Bolivia an experimental survey is being made by an American engineer, Mr. Scherzer, of Pennsylvania, for a railway to tap the balsam districts above Tolo.

—THE number of condemnations for crimes in Prussia is steadily increasing. In 1873 there were 11,692 convictions; in 1874, 12,844; in 1875, 12,126; in 1876, 13,197; and in 1877, 14,849.

—FEMALE artists are invading the domain of art in France in formidable numbers. In 1874 there were 286 female exhibitors at the Salon; there were 312 in 1875, 446 in 1876, 648 in 1877, and 762 in 1878.

—THE total annual consumption of cotton in Great Britain is about 1,250,000,000 pounds. About one-fifth of this quantity is worked into goods suitable for home consumption; the remaining four-fifths are converted into goods suitable for export.

—THE Consul at Wurtemburg calculates that Americans spend $100,000,000 annually in Europe, their average stay being two years. There are 7,000 students scattered over the Continent; 500 at Stuttgardt, 500 in Hanover, 1,900 in Paris, 700 in London.

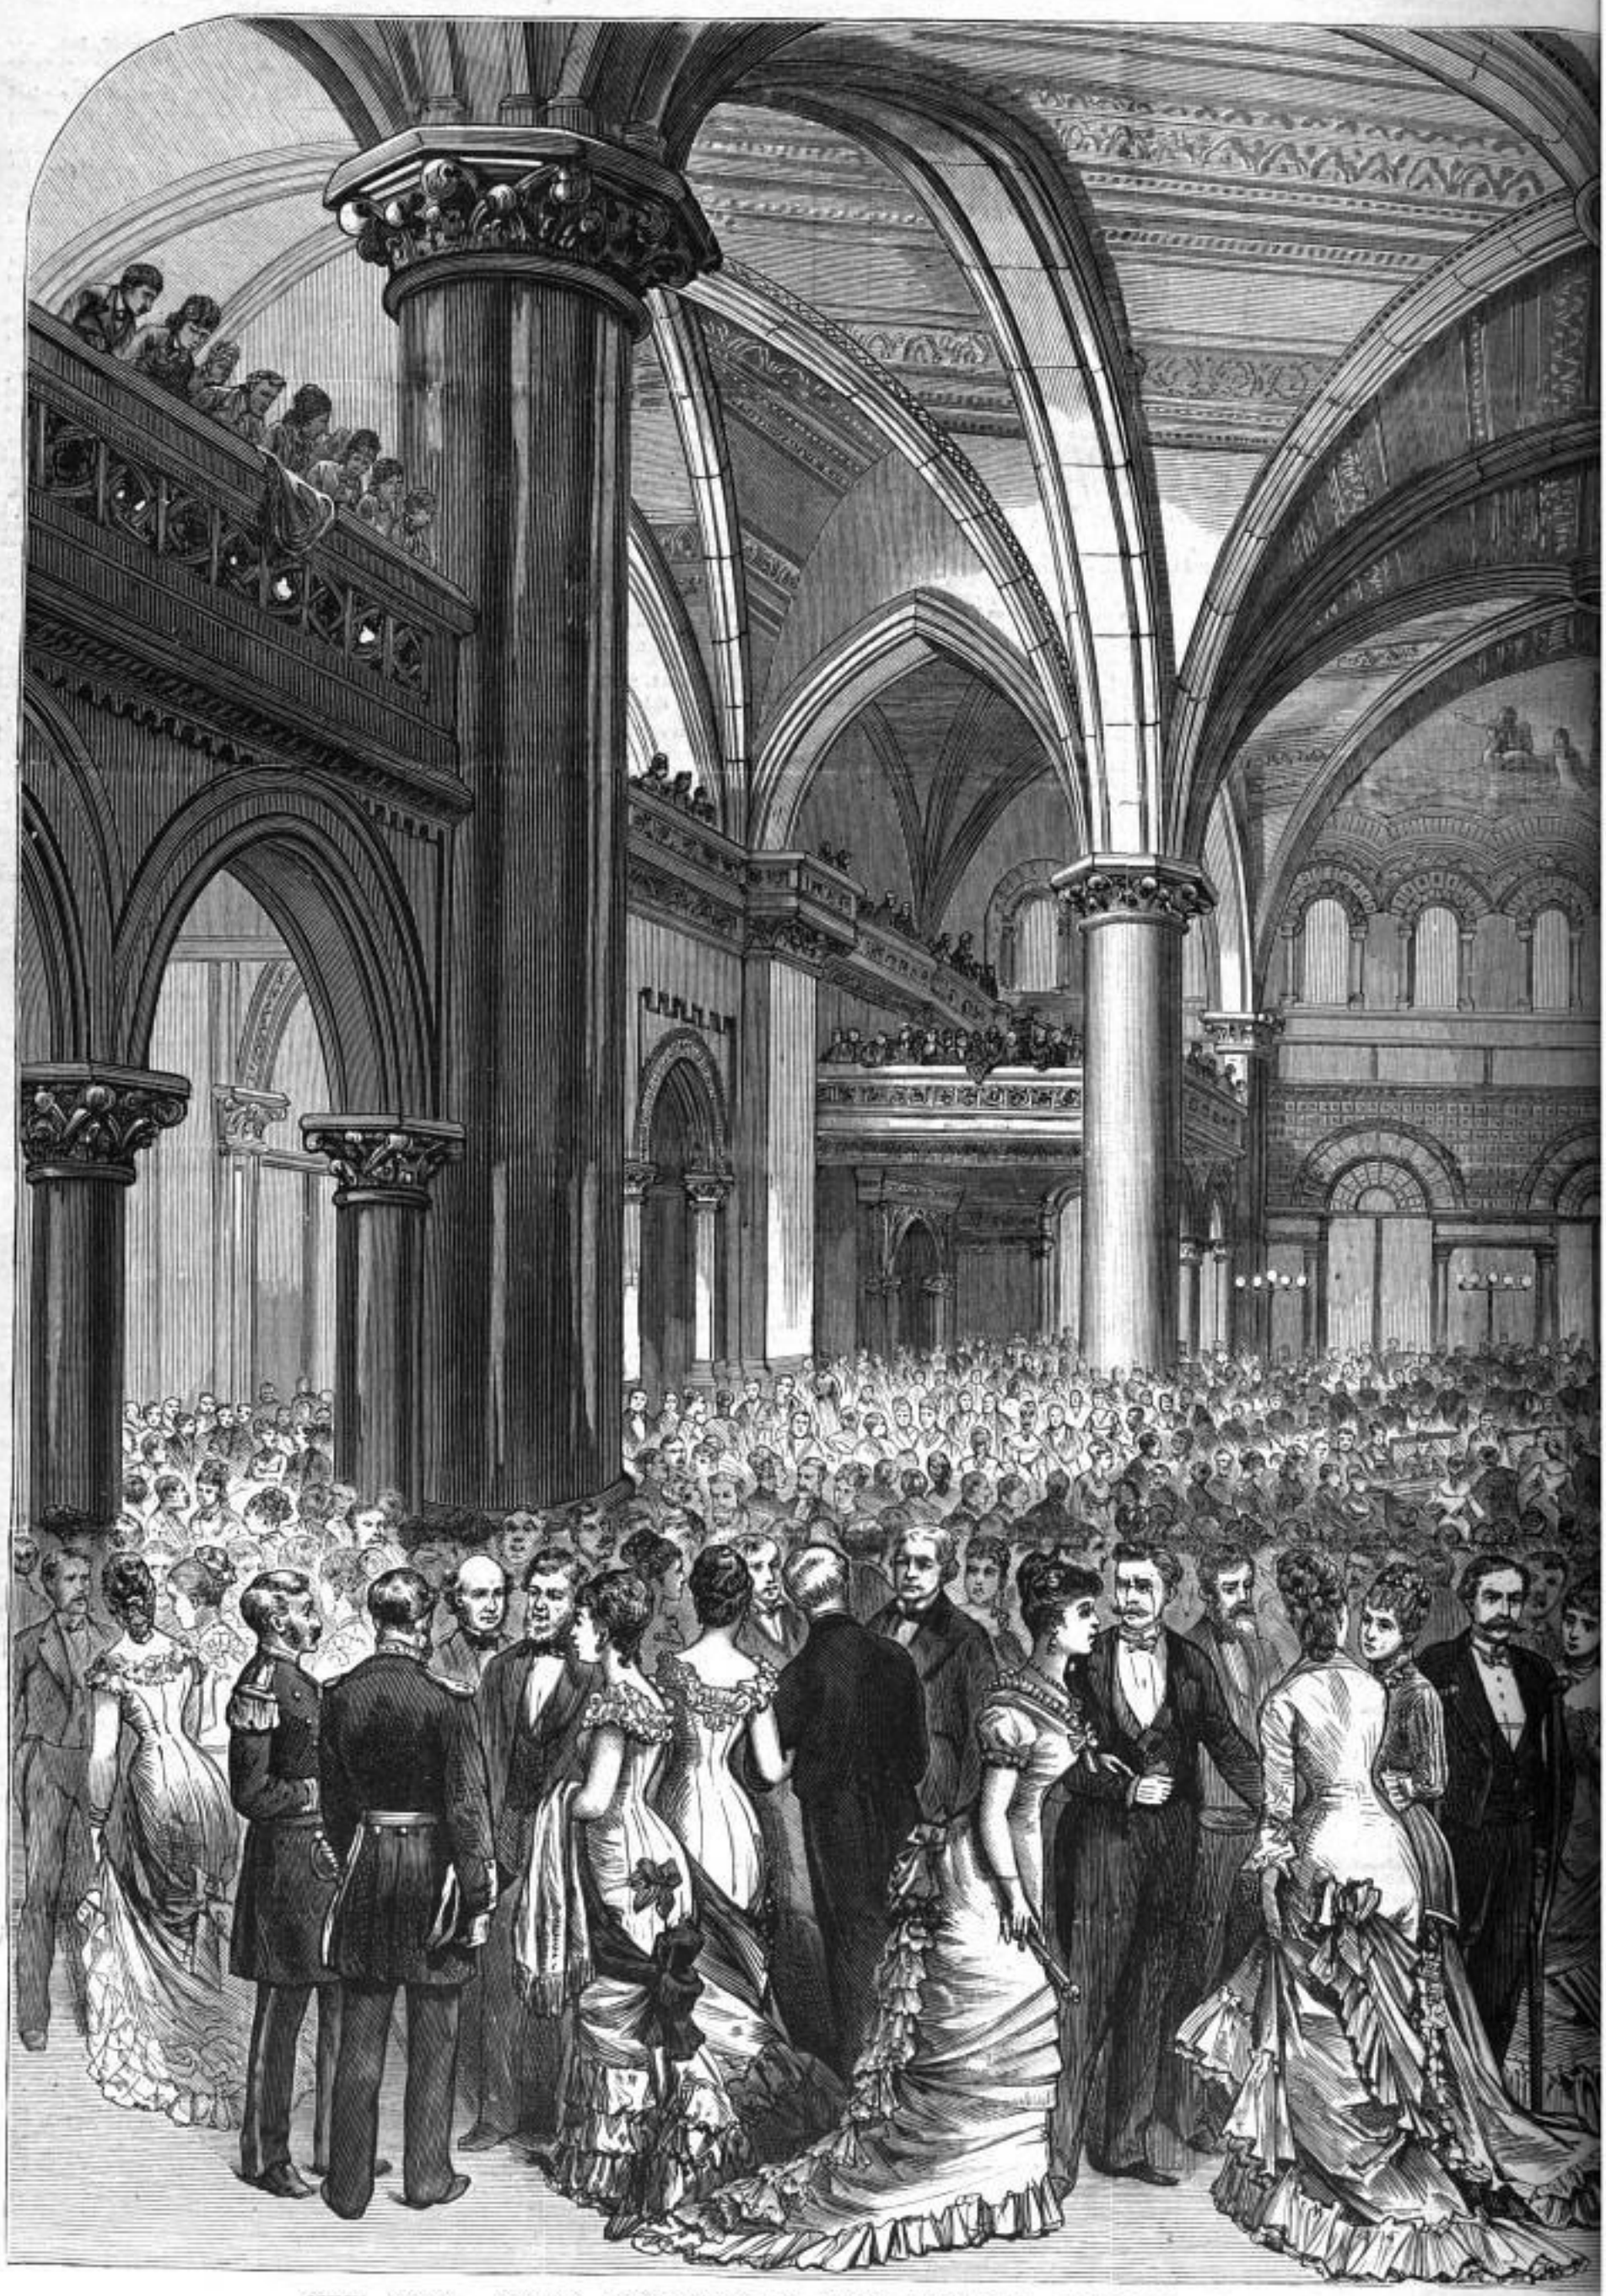
—THE plague at Astrakhan is assuming serious proportions. Fugitives have carried the contagion to three adjacent villages. Quarantine has been proclaimed throughout the district of Enotaievsk. There have been 400 deaths from the disease up to January 4th.

—THE Hoodlum fraternity of San Francisco dates from 1862, and now comprises some six hundred members, composed chiefly of half-grown boys. All are not criminals, but the leaders are as a rule. They have a regular system of passwords and signals, and a slang dialect, which is, however, sparingly used, lest the police acquire its terms.

—THE ax given to Mr. Gladstone on his sixty-ninth birthday is an exact copy of the American ax he uses in his woodcraft. The head is of solid sterling silver, weighing eighty ounces, and bears the following inscription: "Presented to the Right Hon. W. E. Gladstone, M. P., by a few admiring friends." The handle is of ebony. The ax is inclosed in a case of polished oak, lined with velvet.

—IN the ancient city of Prague, in Bohemia, there is a venerable Jewish synagogue, its walls so thick with grime as to be absolutely black. The synagogue must be lighted in midday. A superstitious piety forbids its cleaning. There is a tradition that somewhere on the walls—the precise spot was unknown—the name Jehovah is inscribed, so that if the walls were cleaned it might be rubbed out.

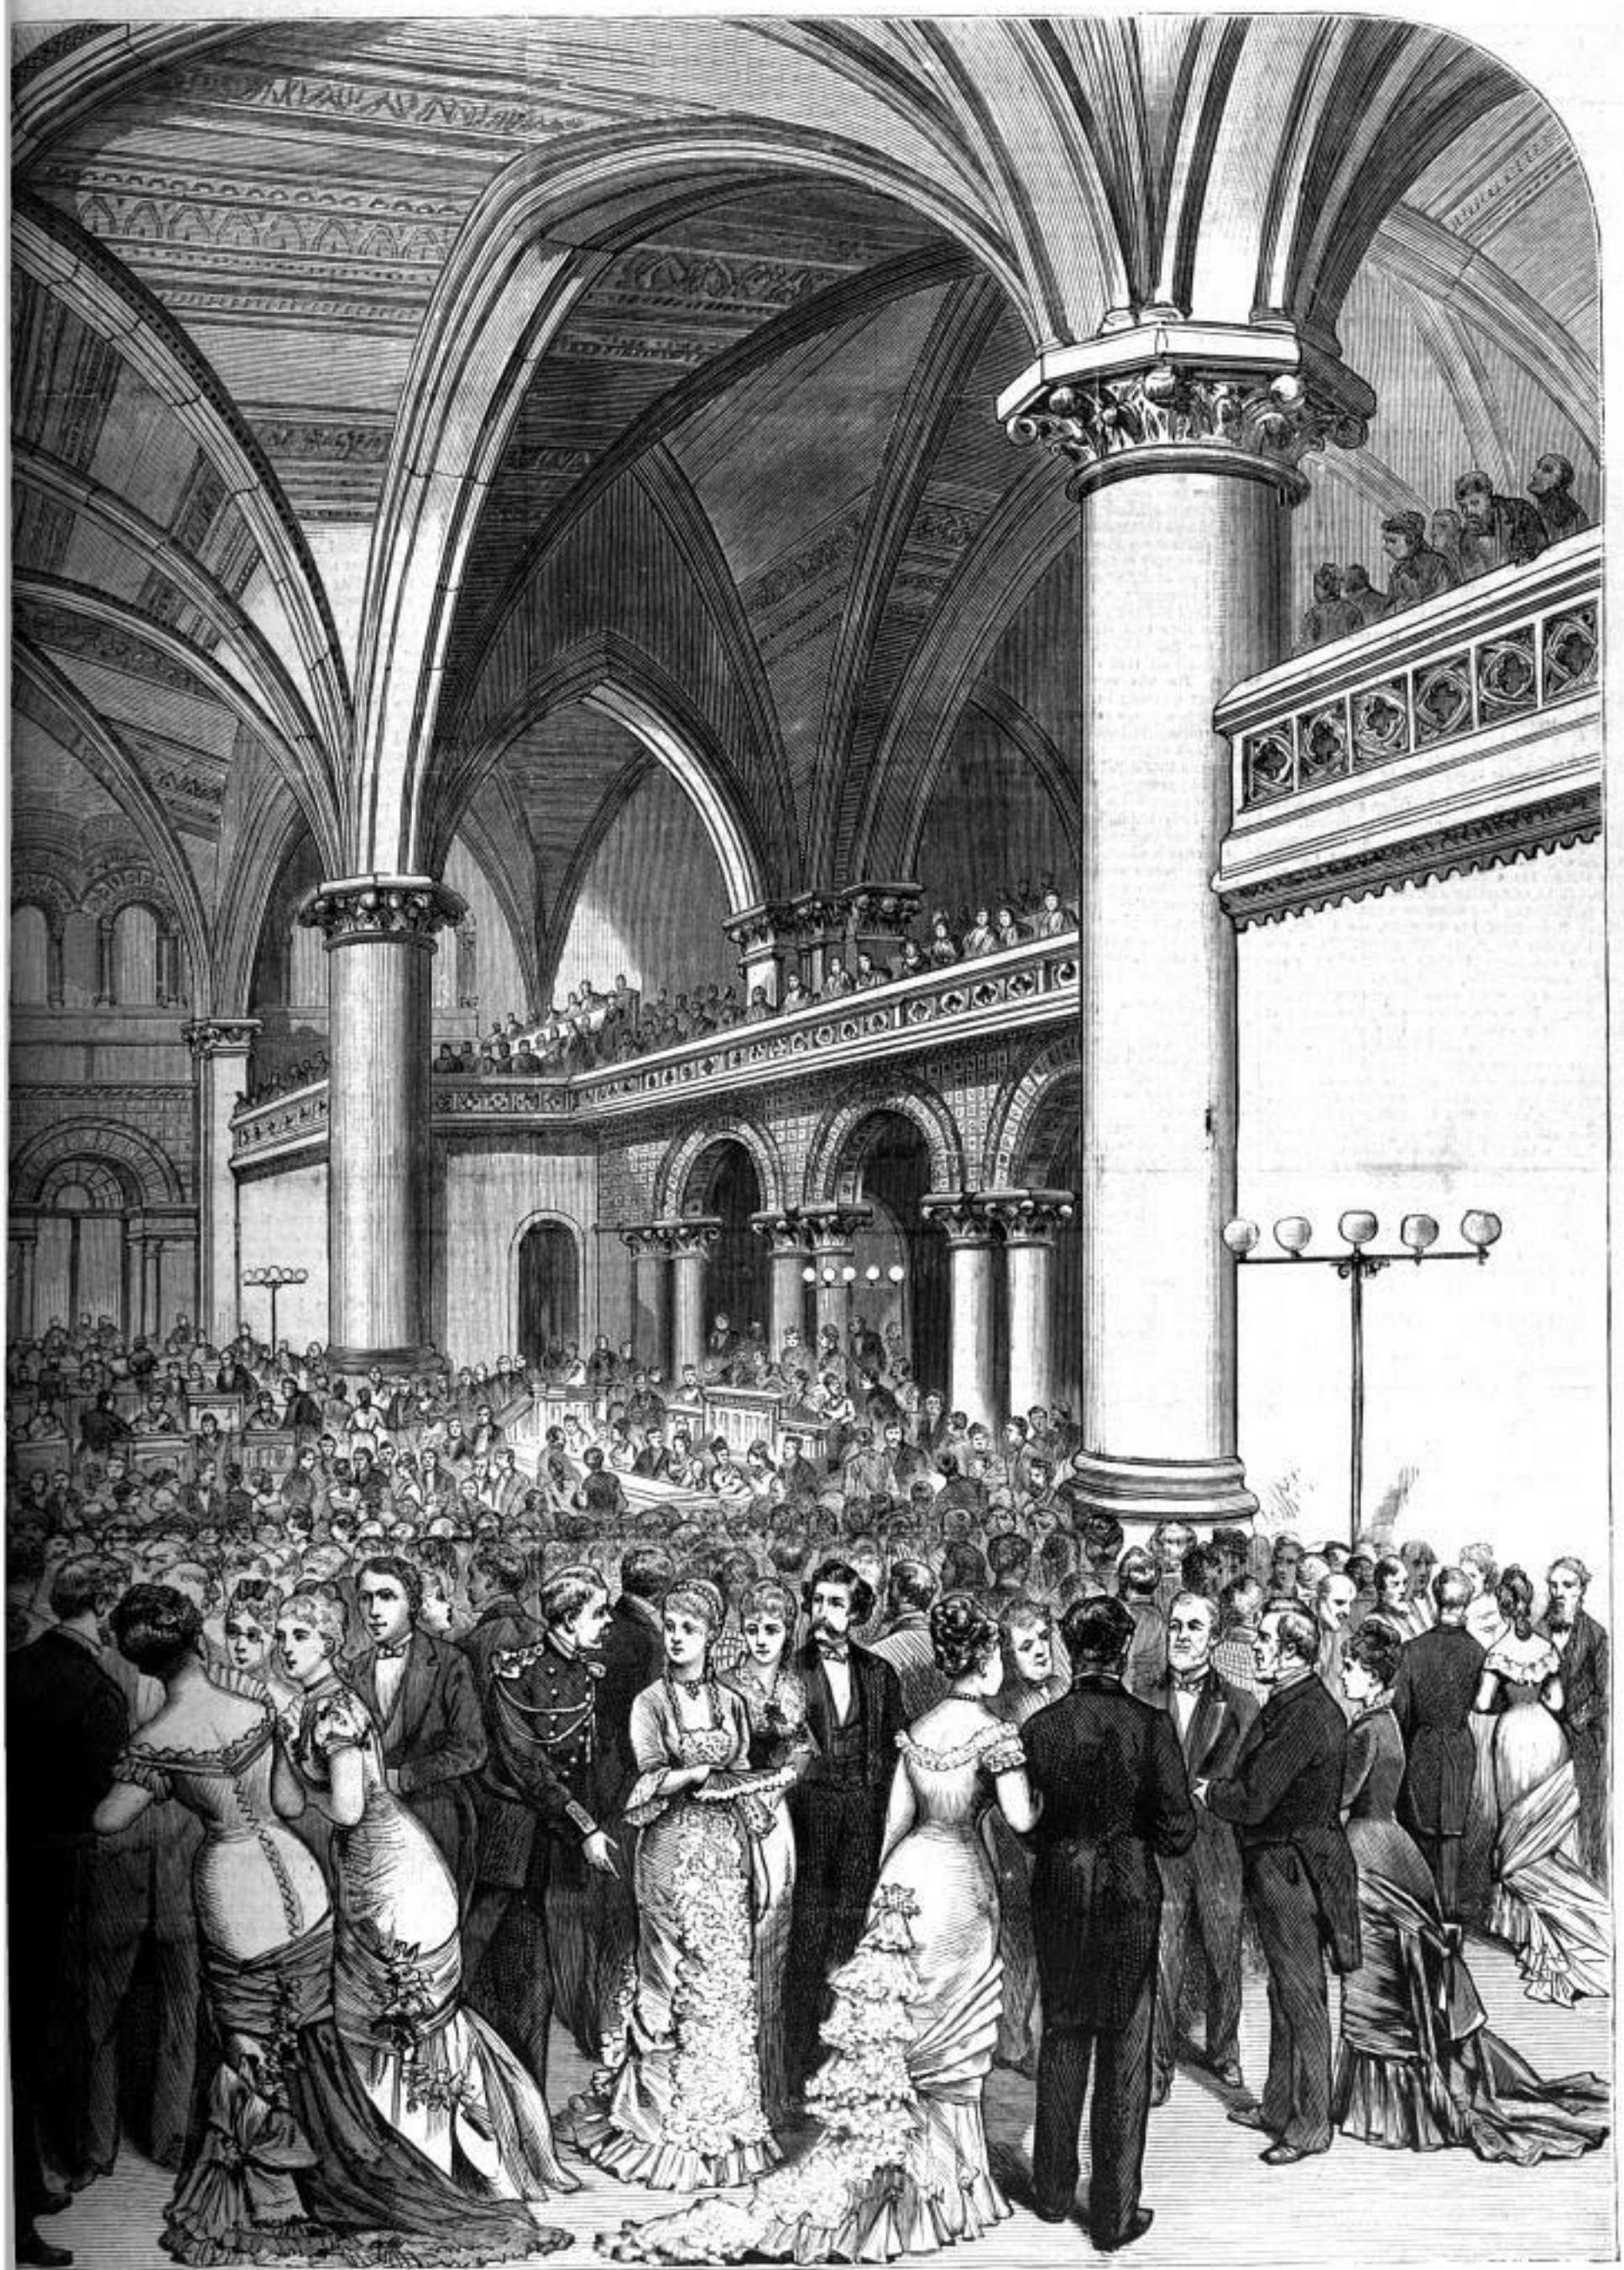
—THE area of land in Germany upon which the tobacco plant is cultivated exceeds 50,000 acres. Prussia, Bavaria, the Duchy of Baden, Alsace and Lorraine being the countries which grow the most; and the average yield is about 3,300 pounds to the acre. About 50,000 tons of tobacco leaf are imported into Germany every year and about 1,250 tons of prepared tobacco, while the exports of German tobacco do not exceed 4,000 tons.



—THE debt of Pennsylvania amounts to $21,586,200, having been reduced $1,068,899 during the past year. Maine has a debt of $4,815,905. The debt of Tennessee, including unpaid interest, amounts to $24,274,017. Governor Porter, in his annual message to the Legislature, recommends a settlement with the State's creditors at fifty cents on the dollar. The total funded debt of Ohio is $6,476,805. The total local debt is $41,205,840, to which is to be added an irreducible debt composed of school and other trust funds amounting to $4,260,984.

—AT the very time that in France Emile de Girardin and his party are asking for the abolition of the penalty of death, and even that of imprisonment, replacing them both by a retired life in the country, the Swiss, on the other hand, have awakened to the fact that doing away with capital punishment is not unmixed good. They are now petitioning the Federal Assembly that it should be re-established, and allege that, if it is not, society will be disarmed against the convict condemned to hard labor for life; and further, that the population will take the law into their own hands, and have recourse to the American system of lynching.

—THE Wesleyans of England have set on foot a movement to build in various parts of the country 100 chapels a year for the next ten years. Towards this scheme two wealthy laymen—Sir Francis Lycett and Mr. William Mewburn—have each promised £10,000. A grant of £45,000 is also to be made in aid of the movement from the Wesleyan Thanksgiving Fund. The Wesleyans have chapels or preaching rooms in 5,000 places in England and Wales, and provide accommodation for religious worship for one in thirteen of the entire population, but it is calculated that there are more than 9,000 places, with a population of 5,000,000 of people, where no Wesleyan services are held.



—ROSE cultivation is in Southeastern France a considerable industry. The perfume manufacturers in the department of the Alpes Maritimes consume annually 6,000 hundred weight of roses, and the neighborhood of Grasse and Cannes is thickly studded with rose farms; 30,000 bushels are planted in one hectare (two and one-half acres), and a good bush yields for about twelve years. May is the harvest time. During the Summer the field takes care of itself. In Fall it is carefully weeded and manured, the manure consisting exclusively of offal from the perfume factories and other vegetable matter. Such a hectare planted with rose-bushes and in good cultivation is worth 10,000 francs, and brings in, in an average year, a profit of twenty-four per cent.

TO A SCRAP OF SEAWEED.

NEGLECTED flower that in the ocean blooms,
Poor exile from the fragrant groves of earth,
What sorrow rises in thy salt perfumes,
To what sad thoughts thy humble charm gives birth?

Tossed by the tempest and the fluctuant tide,
The vulgar plaything of the slimy eel;
Crushed by the vessel's keel or cast aside,
What bitterness thy injured heart must feel!

Thy lovely sisters blush on field and lawn,
The lily, pink, and rose are kin to thee,
Yet thou art destined, from grim night till dawn,
To hide thy envy in the turbulent sea!

Alas, none know why thou wert strangely torn
From leafy woodlands and rich orchards bleak,
Nor why thou shouldst not have been sweetly born
A tuberose to grace my darling's breast!—

Unless the Eternal, in His august might,
A sacred cage for thy beauty found,
And made thee to fulfill some sacred rite,
Upon the ghastly foreheads of the drowned!

F. S. SALTUS.

A SECRET MARRIAGE
AND
ITS CONSEQUENCES.

BY THE DUKE DE POMAR,

AUTHOR OF "THE HOUSEHOLD," "THROUGH THE AGES," "WHO IS SHE?" "FASHION AND PASSION," ETC.

BOOK THIRD.

THE MYSTERIOUS HEIRESS.

CHAPTER V.—WHO ARE MY PARENTS?

"WHO are my parents?" exclaims Louisa Reymond that evening, when all the guests have departed, and she is at last free to ponder over the events of the day alone in her room, while she is supposed to be dressing for dinner.

"Who are my parents?" Often and often has she put this momentous question to herself, but never perhaps with so much anxiety and anguish as this evening. The words of Rupert Cassilis have shown her a glimpse of the outside world; she can think of nothing else, and her soul is filled with mortification and wounded pride.

Lady Rollingford has no right, she thinks, to hide from her her name and origin. Who she really is she scarcely dares to imagine; some peasant-woman's child, a child of sin perhaps! Yet to know the worst were better than this uncertainty. How can she ever hope to marry if she has not a name to sign in a marriage certificate? Of course, as Lady Rollingford's adopted daughter every one respects her, and is kind and considerate towards her; but she feels that this respect, this kindness, and this consideration, however genuine, are at best but well-meant charity.

The world calls her Miss Reymond, and some even entitle her the Honorable Miss Reymond; but this name jars on her ear, and she feels that, after all, she is but an impostor, and that at any moment some disclosure may put an sudden end to her career.

Many a time has she begged Lady Rollingford—ay, with tears in her eyes, tears of pain and humiliation—to reveal to her the secret of her birth, but Lady Rollingford has ever remained inexorable.

"I would not tell you a lie, child, and I cannot tell you the truth," has ever been her answer, and not a word, not a clew has she ever been able to obtain from her.

This evening, when she descends the stately old staircase and enters the drawing-room below, her face is flushed and her large almond-shaped eyes sparkle with a light which only great excitement can give.

Lord Inganess is in the drawing-room; his sister has asked him to remain to dinner, and when Louisa enters she finds him sitting there by the window, looking over a book while waiting for the ladies. It still wants half an hour to dinner-time, and Louisa knows that Lady Rollingford will not make her appearance until the last moment. Many a time has she been on the point of asking Lord Inganess about her origin. He is her benefactress's brother; surely he must know the secret of her birth! And he has always been so kind and considerate towards her. His fair, open face and manly brow give her courage; she feels sure that he will not deceive her; her heart tells her that she can trust him, and on the impulse of the moment she approaches, and taking a seat near him plunges at once into the subject, as a drowning man driven to desperation would plunge into the deepest water to put an end to his anguish.

"Who are your parents?" he says, looking her full in the face with his kind blue eyes, when she has done speaking. "Believe me, Louisa, if I knew, I would not hesitate a single moment in telling you, for I think with you, and indeed I have always thought, that you should know."

She wrings her hands in despair and grows deadly pale.

"You do not know! Oh, Inganess, Inganess, I believe you—you would not deceive me; but tell me, have no suspicions ever crossed your mind? Have you never had any idea as to who and what my parents are? Do tell me all you know. When did your sister first speak about me to you?

Inganess is greatly moved by her pleading accents; he cannot resist that uplifted face, those imploring eyes; he takes her hand in his and answers:

"I was such a boy when my sister adopted you that I can scarcely remember what she said at the time; since then she has always refused to give me the slightest information about you. You see that I can tell you but little, yet, as you seem so in earnest, so anxious to learn who you are, I will confide to you a suspicion that sometimes crosses my mind, but to which I trust you will not attach more importance than it really deserves."

She is all ears and attention, but her heart beats so loud that it is with difficulty she can catch his words.

"When I was a little boy at Inganess—my father's place in Westra, you know—we had a governess for a short time who made a great impression upon my youthful mind; she was a Frenchwoman, and at the time, I remember quite well, I thought her the most beautiful woman I had ever seen; she was tall and dark, and she had large black eyes that seemed to penetrate into one's very soul. Often and often, since you have grown up, I have imagined that I could trace a remarkable resemblance between you. As I gaze upon you the memory of those days comes back to me, and I see the likeness more and more clearly; so much so that I have often thought that in some way or other you must be connected with that woman."

"What has become of her? Have you seen her lately?"

"No; I have not set eyes on her these twenty years; and once, when I asked my sister what had become of her, she told me that she was dead."

"And is there nothing beyond this personal resemblance that leads you to connect me in your mind with her?"

"Yes; her religion—for, like you, she was a Roman Catholic."

"Are you quite sure?"

"Quite sure, for I remember well how annoyed my father used to be about it."

"You give me a clew. Ah, but tell me, how do you account for Lady Rollingford adopting me if I were indeed that woman's daughter?"

"I have never thought much about that; but if you are so very anxious, I will tell you what has struck me at different times as accounting for my sister's adopting you. First of all, you must know that Lord Rollingford was staying with us almost all the time that Marie Gautier was at Westra; that was before he married Laura, and before any one imagined that they were in love with each other. He was very fond of our governess; I recollect quizzing her about it at the time; and, strange to say, she ran away suddenly one day, and her departure had such an effect upon him that he was taken dangerously ill, and became a different man from that day."

"And you suppose, then, that I am Lord Rollingford's daughter by that woman, and that afterwards Lady Rollingford adopted me through her love for her husband?"

Inganess is silent.

"This seems probable enough. I remember Mrs. Champion saying once that I had the Reymond features."

"Mrs. Champion! Ah, *she* would no doubt be able to tell you a great deal more than I can, for, now I recollect, she was at Inganess at the time, and also that she seemed very intimate with Frank Reymond."

"I will ask her. Ah, Inganess, you have given me plenty of food for thought. If this leads to the discovery of my parents, I shall owe you a debt of gratitude which I shall never forget."

Lady Rollingford enters the room at this moment, and any further conversation on the subject is impossible.

Later on that same evening, when Lord Inganess had taken his departure, and Louisa is alone in the drawing-room with Lady Rollingford, her feelings overpower her, she can no longer control them, and falling at her feet she bursts into tears.

"Why, child, what is the matter?" says Lady Rollingford, surprised, yet kindly enough.

"I cannot bear it—I cannot bear it any longer; have pity on me!"

"The vapors again! Oh, Louisa, how can you be so foolish! But I suppose you can't help it, it is your nature. Pray let me know what it is that you cannot bear any longer."

Louisa is trembling all over. "I want to know who I am," she cries, rising and throwing back the raven locks that have fallen over her face.

"You are Miss Reymond, my adopted daughter; is not that enough? Do not think that you will succeed in persuading me to reveal the name of your father. You will never learn anything from me."

"You are cruel!"

"Cruel! Ungrateful child! how can you speak thus to me—to me to whom you owe everything? What would you have been but for me, I should like to know?"

"You will not tell me who were my parents?"

"I cannot."

"Answer me just one question, then. Am I or am I not Lord Rollingford's child?"

"You Lord Rollingford's child! What on earth has put that into your head, Louisa?"

"Something that your brother and Mrs. Champion have told me."

It is now Lady Rollingford's turn to tremble. Can her brother know her secret? Will Mrs. Champion break her word, and reveal to Louisa the fatal mystery of her birth? She dreads even to look at her. That it should have come to this! Often and often has she suspected that her brother entertained vague suspicions of the truth; but how vague or how well founded she has never been able to discover. And Mrs. Champion, that terrible woman! she certainly knows her secret; and though she had bribed her to keep it, she recollects with dismay that the cunning woman never actually swore to do so.

"Am I, or am I not, Lord Rollingford's child?"

The question staggers her; she fears to tell a lie, and yet she would sooner die than reveal the truth.

"I only ask for one word. Am I, or am I not, Lord Rollingford's illegitimate child?"

Illegitimate child! In this addition of a single word Lady Rollingford sees at once a loophole whereby to escape, without injury to her conscience, and yet without revealing her secret.

"If any such thought troubles you, dear Louisa, dismiss it at once from your mind. Although I cannot tell you who your parents were, this one point I can settle for you at once—you are not my husband's illegitimate child."

CHAPTER VI.—BELLA CHAMPION.

GENERAL CHAMPION is having his breakfast in one of the large, old-fashioned rooms of his suburban residence.

Being a strong man, full of life and animal spirits, and younger than his wife, of course one can scarcely expect him to take much interest in her hobbies now, though for so many years of his life he has been more her slave than her lord and master, and has accompanied her to Italy, helped her in all her secret conspiracies, and even fought like a hero to please her.

Mrs. Champion has given up the world of action now, and taken to that of ideas; she devotes the greater part of her time to reading abstruse philosophical works, and studying what a hundred years ago would have been called "occult sciences;" her health is no longer what it once was, and the reaction caused by the sedentary and monotonous life she now leads, after the existence of adventure and perpetual excitement to which she had previously been accustomed, has greatly injured her constitution.

Mrs. Champion, on her side, has lately become, unconsciously to herself, passionately fond of her husband. Having felt but little love for him at the time of her marriage, she has only become attached to him in after life, and learnt to love him as her passion for the "cause" she had adopted cooled down.

Their bright-eyed elfin child Bella has become the connecting link between them; she smooths away all their little differences, for her brilliant, sparkling, noble disposition has made her the life and soul of Liberty Hall.

The general had returned home at a very late hour, and when his wife, who had sat up for him, met him with expostulations, he got as usual into a rage, told her she was a fool, and refused to give her any explanations. He is now having his breakfast, and is by this time quite ready to make it up with her, and to be coaxed into a good temper again.

He is not permitted to remain long by himself in the dining-room. He has scarcely been there ten minutes before his daughter makes her appearance, and, with an irresistible smile, takes a seat beside him.

Bella is his favorite child, she has been his constant companion ever since she was a baby in arms; it was he who first taught her to ride and to row, and he knows that in the eyes of this lovely girl he is the *beau ideal* of a father and a man. But this morning the pleasure of seeing her is marred by a conscious feeling that he has not behaved well, and that she has come to scold him, and to make him go and apologize to her mother—for the clever girl seldom permits him to see that in all these little differences it is always on his side that her sympathies are enlisted.

"I calculate you have come to read me a lecture, Bella," he says, kissing her fondly, yet with an impatient look on his face. "Bella, my girl, let me advise you to mind your own business; you are growing up to be just such another as your mother."

"And is this not my business?" she says, archly. "I should like to know what either of you would do without me. Bah! don't you think it is awfully silly to go on like this, father?" And then, "By-the-by, mother is waiting for you; won't you go to her and make it up? she is so unhappy—come!" she says, while a look of imploring love shines in her bright eyes. "It is unmanly to be cross; you are the stronger of the two, and should be the first to yield."

The gay badinage of the girl has succeeded at last in dissipating his bad temper, and, as usual, her arch smile and loving manner have produced their effect—a pang of remorse shoots through the gallant officer as he thinks of his own unworthiness; and giving her a kiss he rises and enters the room where Mrs. Champion is waiting for him, ready to make up for the misery he has caused her the previous night, and to apologize for his ill temper.

Mrs. Champion receives him with a smile, and their little quarrel is settled without her having uttered a single word of reproach; she is jealous of her husband, yet she is aware that this feeling must remain as deeply buried in her breast as were her early yearnings and dreams about Italy.

They are still conversing together in the drawing-room when Lord Inganess is announced. He has come to beg Mrs. Champion to take her daughter to a great ball which is to be given on the morrow at Preston House.

"The Duchess of Northland has heard a great deal about Miss Champion," he says, "and she is very anxious to see her; and last night at the Queen's Concert she asked me, knowing how intimate I was here, to try and induce you to take her to Preston House to-morrow."

"The duchess is very kind," Mrs. Champion answers, looking, as she often does now, with dilated eyes straight in front of her, as if she saw something beyond the person she is addressing. "I feel highly flattered, of course. But Bella is not out yet, and, besides, I do not want her to go to balls in town; she sees quite as much society as is good for her at home."

That young lady and her father had now left the room. Inganess takes a seat near Mrs. Champion, and whispers something in her ear.

"Will he, indeed? Well, I am glad. It will do him good to go a little more into society than he has hitherto done. Miss Reymond will be there, of course?"

"Yes. Do you think there is any chance of his falling in love with her?"

"It would be the best thing that could happen to him; she is just the sort of a girl I should like him to marry. You know her, perhaps, better than I do—have you any idea what sort of impression our friend has made upon her?"

"I should say a favorable one; but then he is just the sort of fellow a girl like that would admire; his peculiar turn of mind goes well with her own sentiments," he answers, with that manly openness which, in Glamour's eyes, constitutes his great charm.

"Do you think he will end by becoming a Catholic, or not? You are his most intimate friend, as he told me the other day."

Inganess shakes his head.

"Monsignore Beretta has a great hold over him just now," he says, thoughtfully.

"The monsignore is a deep man!"

"You dislike priests?"

"I dread them; I have good reason to dread them. But I would not mind so much his turning Catholic now if such a change in his faith could bring about his marriage with Louisa Reymond."

"I see; yet you are a Protestant yourself, and are devoted to the enemies of the Pope," he says, casting a glance at a portrait of General Garibaldi which hangs opposite to him.

"I have lived long enough in the world to discover the virtues and faults of both religions. I bear no ill-will towards the Catholics; and I know Glamour well enough now not to fear any great danger, either to himself or his property, if even he should become one."

"He would be much happier if he were married."

"To Miss Reymond?"

"Well, yes; why not? We are their best friends; let us unite in trying to bring this about. It will be the best thing in the world, believe me, for both of them."

"If you think so, Mrs. Champion, I am quite ready to help you: I will speak to both of them about it and see what I can do. Louisa has been almost a sister to me for many years. I like her, and her strange position pains me very much; and there is nothing I should like better than to see her Duchess of Glamour."

CHAPTER VII.—AT THE BALL.

THE gorgeous saloons of Preston House have seldom looked more brilliant. We are at a great ball given by the beautiful and amiable Duchess of Northland, and most of our friends are enjoying her almost royal hospitality.

On the top landing of the palatial staircase, resplendent with Venetian gold and decorated with priceless paintings, we perceive the Count and Countess Sartorius, and their pretty niece, Mademoiselle de Robertoff, talking with our friend Rupert Cassilis. They have been standing there for some time leaning over the banisters, and passing in review the various guests as they ascend and descend the staircase, and passing more or less well-deserved criticisms upon them in that quiet, facetious manner which nowadays does duty for wit and humor.

"How charming Lady Vic looks this evening!" the countess remarks, gazing through her gold-rimmed eyeglasses at the tall, graceful figure of Lady Victoria Fitz-Charles, on whose brow sparkles a large diamond ornament in the shape of a crescent, and who is now making her way up the stairs, accompanied by the duchess, her mother, and followed by a crowd of young men, who hover about her as butterflies flutter round an unusually dazzling flame.

"What shoulders! As perfect as a statue by Phidias."

"Yes, she looks for all the world like Diana gone astray—in the woods, of course!" says Mademoiselle de Robertoff, perhaps a trifle annoyed because amongst these attendants of Lady Vic's she has recognized one or two favorite partners of her own.

"And almost ready for the bath," Rupert adds, bestowing upon her one of his sweetest smiles.

"Look, look, Clara!" exclaims the countess; "Lady Rollingford and her daughter are coming up the staircase. What a sweet gown Miss Reymond has on! I do not think I ever saw her looking better."

All eyes are turned towards these ladies, and for a moment our two friends are silent.

"Miss Reymond is certainly one of the handsomest girls I know,' Rupert Cassilis at last remarks.

"Ah, so you admire her!" Count Sartorius says, with a knowing glance towards his wife.

"Everybody admires her," replies the young fellow, rather confused.

"What is her true history?"

"Mademoiselle de Robertoff, how can you ask such a question? You know as well as I do that nobody has yet been able to discover her parentage."

"I thought that perhaps you might have been cleverer than the rest, you have had so many more opportunities."

"I think it is the very mystery that surrounds her that makes her so interesting," the countess says, putting up her eyeglass again to examine her more closely.

"I must go and pay my respects to Lady Rollingford," says Cassilis, after a pause. "I will see you afterwards in the ballroom. By-the-by, mademoiselle, don't forget that the third dance from this is ours."

"I have changed my mind, M. de Cassilis," the saucy young lady answers; "I don't think that I shall give it to you."

"You have surely not gone and engaged yourself to some one else?"

"Perhaps. But please don't trouble yourself about me. I daresay Miss Reymond will be able to give you as many dances as you choose to ask her for; ta-ta!"

But Rupert Cassilis does not hear these last words, for he has already left the group, and is now making his way through the crowd towards Lady Rollingford and her adopted daughter, who have by this time succeeded in mounting the staircase, and are entering the ballroom.

"I think that you are very hard upon this poor young fellow, Clara," the count says, approaching his niece.

"He likes it."

"Do you like him?"

"Well, yes; he amuses me. He seems very much struck with Miss Reymond."

"What a good marriage *that* would be for him! She will be immensely rich one of these days, I hear," says the countess, dropping her eyeglass and coming closer to them.

"I wonder if she likes him?"

"Oh, yes. Look at them now," the count says, calling their attention to young Cassilis, who has now reached Miss Reymond and is talking to her, whilst she seems very much interested in his conversation.

"Would you really like Rupert Cassilis to marry Miss Reymond?" Mademoiselle de Robertoff now asks her uncle.

"Clara, you talk as if you could bring this marriage about if you chose."

"Perhaps I can," the saucy girl answers, with a toss of her pretty head.

Digitized by Google

"And how?"

"Ask me no questions. Monsignore Berretta is coming to lunch with us to-morrow, is he not?"

"Yes: but what on earth has that to do with Rupert's marriage?"

"More than you think, uncle. The monsignore is a great hand at match-making. I shall talk to him about it, and you will see. What odds will you give me that before a year is out our friend is engaged to Miss Reymond?"

The young lady in question has by this time finished her dance with the fascinating Cassilis, and has returned to Lady Rollingford's side. But she is not destined to remain long there, for the Duke of Glamour has already found his way to her, and has engaged her for the next waltz.

The more Glamour sees of Louisa the more he admires her utter self-forgetfulness, and likes the quaint, and at times even melancholy, tone that runs through her conversation. Her peculiar style of beauty, too, pleases his fancy.

That she possesses talents foreign to most young ladies has never been questioned. She is an adept in almost all the accomplishments of the day. She can play and sing and draw as well as the best, and converse in French and Italian better than most young ladies of her age. But her real tastes have perhaps carried her out of the regular routine of the usual feminine accomplishments. As a child she was unusually quick at learning, and her governess, and the numerous masters Lady Rollingford provided for her, with a tender mother's solicitude, could not set her lessons fast enough. She has been born with an inherent taste for art and music, a great love for literature and learning, and constant study has developed and perfected these tastes.

Glamour has seen her now several times, and each time he has left her more and more convinced that she would make just the sort of wife he requires. But he is a man who can but seldom make up his mind, and who requires a motive outside of himself that shall marshal his thoughts for him, and guide his faculties into the path of action.

This evening at Preston House he ventures, carried away by the music and the excitement of the scene, to speak to her more openly than he has ever before had the courage to do. At the end of their dance he has taken her to the refreshment-room with the excuse of getting her an ice, and, after a few moments, they seat themselves in a corner of the now deserted room—for the dancing has begun again, and the couples have all returned to the ballroom—and there they remain conversing together in a low, confidential tone for such a long time, that Mademoiselle de Robertoff, who catches occasional glimpses of them from a distance, concludes that they are in love, and begins to fear that her new *protégé*, Rupert Cassilis, will have but few chances of winning the mysterious heiress's affections.

Their conversation, however, can scarcely be called a flirtation, though both of them are fully aware in their hearts that a higher motive than the mere amusement of the moment prompts it. They talk a great deal about art and architecture, and Glamour, who is very fond of discussing such topics, speaks with enthusiasm of Rollingford House.

Presently she mentions Castle Muriel, of which she has heard so much, and inquires whether that ancient seat of his family is indeed such a perfect specimen of Gothic architecture as it is generally supposed to be. Glamour loves his home, and the very mention of its name is enough to interest him, and he describes it to her with enthusiasm. Yet his mind is evidently preoccupied, and even in speaking of Muriel his words acquire a significance in her ears that cannot but lead her to suppose that he is thinking of her when describing the beauties of the place and the elegance of the apartments, in which he ends by saying that in spite of all their grandeur he feels at times very lonely by himself, and longs for a congenial companion to share them with him.

"Do you like the country?"

This abrupt question startles her so much that she cannot answer for a moment. Not half an hour before Rupert Cassilis has asked her this very question, and almost in the same tone of voice; and, by a very common association which we are all often led to give to ideas, the mere thought of the baronet's youngest son drives away from her imagination the picture she has been drawing of Muriel, and of the happy life she might lead there as Duchess of Glamour, and takes her back to the previous half-hour, when Rupert Cassilis had his arm around her waist, and was whispering sweet nothings in her ear; or, rather, it takes her still further back—to the bright Summer evening in the Egyptian room of the Rollingford House, when she was first made aware of his feelings.

The dark, thoughtful face of Glamour vanishes from her sight, and instead of the lovely scenes he has been describing to her, and of the serene and placid life of comfort and intellectual intercourse she has pictured to herself while listening to him, she sees the tall, handsome figure of Rupert Cassilis; she sees his fair, sunny, manly face; hears once more his merry good-humored laugh, and forgets all about Muriel and the advantages of becoming a duchess.

"You do not seem to hear me," Miss Reymond," he says, astonished at the sudden change that has come over her; "I asked you if you liked the country."

His voice brings her once more back to herself; she rises quickly, and with a sigh, as if she had been dreaming and forgetting for a moment the scenes around her.

"I heard what you said well enough, duke," she answers. "I am very fond of the country, but I prefer to live in a city; London, or indeed any other great capital—Paris for instance. I love Paris—but I was thinking," she adds, slowly, "that I am engaged for the next dance. I must go, or my partner will never find me. I promised to be in the ballroom in time for it."

Glamour can scarcely conceal his disappointment.

"Who is your partner?"

"Mr. Cassilis."

And without saying another word she takes his arm, and they proceed to the ballroom, where she soon leaves him to join her new partner.

The duke is at once annoyed and disappointed. It is clear that Miss Reymond does not care for him. He feels sure now that she prefers Cassilis; and yet how sweet and amiable she had been to him! How well she spoke, and how pleased she seemed with the description he had given her of his home! He is quitting the ballroom, determined to leave Preston House at once, and to return home, there, in the solitude of his study, to read a few chapters of the Hebrew Bible he so delights in studying before going to bed, when Lady Boursetile approaches him, and detains him with her merry ever-fluent tongue.

Shortly after Inganess comes up to them and interrupts their conversation.

"I want to speak to you, Glamour, when you are disengaged," he says; and a few seconds afterwards the two friends are seen talking together upon what seems to be a most interesting subject.

(To be continued.)

THE TAMMANY SOCIETY BALL,
JANUARY 8TH.

THE ball of the Tammany Society at Tammany Hall, in Fourteenth Street, on the evening of the 8th instant, in celebration of the anniversary of the Battle of New Orleans, was a very pleasant and successful affair. The company was not large, but it was of a high character, and entirely worthy of the occasion. It was composed mainly of the leading men of Tammany Hall and the ladies of their families, but there were also many others not specially identified with the society or the political party. Most of the ladies on the floor were elegantly dressed, while in the score of boxes arranged for the occasion and in the balcony were hundreds of ladies in bonnet and rich Winter attire. The decorations of the hall were of a pleasing character, and all the more striking because so seldom seen in the Tammany Building. Among the more interesting decorations were the battle-torn and stained flags which the Tammany regiments of various wars—1812, the Mexican, and the war for the Union—have borne. The windows were draped with lace curtains and lambrequins made of the national colors. On the walls and at the sides of the windows were seals of the States. The alcove at the rear of the platform was concealed by folds of crimson silk, framed with gold-embroidered scarlet silk, shaped into a pointed arch. Within this arch, and pinning the crimson curtains, was the broad seal of New York. In a niche above the arch was a bust of Jackson on a pedestal, covered by a blue silken banner, on which was inscribed, in golden letters, the legend: "The wise, the brave, the good." The niche was draped with scarlet, embroidered with gilt tinsel. The front of the gallery at the southern side of the room was adorned in the same manner; and a fringe of the gilt-embroidered scarlet material hung in front of the capitals of the columns supporting the gallery. The entrances to the ballroom were curtained with crimson silk, and at either side of each entrance was a vase of greenhouse plants. The platform was almost concealed from view by plants, palms, ferns, a few rose-bushes, and intricate designs of greenery.

The ball was followed by a banquet, at which speeches were made by ex-Senator Doolittle of Wisconsin, Hon. Chauncey M. Depew, Henry L. Clinton, and others.

THE GREAT SNOW BLOCKADE.

THE snow-storm of the first week in January, in whatever part of the country it prevailed, was the severest that had occurred in many years. New York State suffered particularly, and it is a remarkable fact that while Watertown, Oswego, Rochester and Syracuse, with their suburbs, were being snowed under, snow was falling to an unusual depth in various parts of England, Scotland and Switzerland, Berne and Geneva experiencing the most noticeable paralysis of business. In Central New York the storm began on January 2d, and ceased on the evening of the 6th, a heavy wind prevailing during its continuance. The Western Division of the New York Central Railroad, extending from Buffalo to Syracuse, was absolutely closed to travel for four days. Between Syracuse and New York the track was comparatively open, and trains from the metropolis reached the centre of the State on time. As the snow presented an insurmountable obstacle to progress westward, all the trains were laid up at the depot at Syracuse.

On Friday, 3d, the Atlantic Express attempted to leave Rochester for New York. A snow-plow was sent ahead to clear the track, and the train moved out of the depot drawn by nine locomotives. When it arrived at the Sand Cut, near Fairport, and ten miles east of Rochester, the snow-plow jumped the track, and the express train, which was following close behind, ran into it. At that point the passenger tracks are on an embankment several feet above the old tracks. Five of the engines drawing the express were thrown down this embankment, and the cars were wrecked. The engineer of the first engine, who resides in Buffalo, was buried under the wreck of his engine and instantly killed. Conductor John Holmes was seriously injured. Mr. Clough, road-master, had his leg broken, and two firemen and five passengers were seriously injured. When the news of the disaster reached Rochester, a wrecking-train, drawn by six engines, was dispatched to the scene of the wreck, but all six of the engines jumped the track before reaching Fairport. All Friday night and Saturday the snow fell thick and fast, and the wind blew a terrific gale. Both the wrecks were in a short time almost completely buried in the huge drifts of snow. All attempts on Saturday to reach the wrecks from Rochester proving futile, on Sunday morning a train was made up in Syracuse, consisting of eight engines, a wrecking car, and a derrick-car, with a large force of men, and started for the wreck. On board were Henry Watkeys, master mechanic; Mr. Palmer, Assistant Superintendent, and other officers of the road. At Jordan the train ran off the track, but was soon got on again. It reached the wreck at Fairport about five o'clock on Sunday night, and the work of clearing the tracks and removing the wreck was at once begun.

This experience was the most severe of any that has been made public, although, in a smaller degree, the blockade of passenger and freight trains was quite common throughout the State. On Monday, 6th, traffic was partially resumed, and by Tuesday night the schedule time was made.

Where trains were laid up in the rural districts provisions were obtained from neighboring farmhouses, whose owners, it must be said, drove very hard bargains. In the passenger-coach of a train stalled some ten or twelve miles from Syracuse for several days were a number of ladies. The snow had drifted over the car, and the passengers found it impossible to get out in search of provisions. Curtains were improvised, and one end of the car was used for a sleeping-room for the ladies. When relief came, in the form of an extortionate farmer, they procured an extra amount of food and fuel. On Sunday divine service was held in the car.

In some instances the male passengers left the cars on a forage for wood and food, and in others the stoves were utilized for cooking purposes. When the first anxieties had passed away the snow-bound travelers, whether in the cars from which they could not escape, or in the depots and farmhouses in which they had taken refuge, set about devising plans of amusement with which to while away the long hours, and amateur magicians, comedians, tragedians, and operatic singers were greeted with an amount of applause they would not receive elsewhere. Card-playing was the rule, and the man with the latest joke or the best story out was welcomed to the social amenities of every set.

Although none of the detained passengers would knowingly put themselves in the way of a repetition of their experiences during these eventful four days, they will retain in pleasant memory many of the jollities that were developed during the siege.

SCIENTIFIC INTELLIGENCE.

M. Marche proposes to ascend the river Benue, and to explore the country between the Shari and the Congo. He will leave Paris in February next.

A New Botanical Society has just been formed at Munich. The president is Professor Robert Hartig, and the vice-president Dr. Arnold, an eminent lichenologist.

Dr. Crevaux, the explorer of French Guiana, has reached the source of the Oyapok, and crossed the range which separates Oyapok from the Amazon basin.

Herr Albert Kuppers, an eminent sculptor at Bonn, has just finished the model of a statue to be erected in memory of Professor Jacob Noggerath, the well-known mineralogist.

The Chinese are about to commence the erection of a line of telegraph from Tientsin to Taku at the mouth of the Pei-ho, and also to make the necessary surveys for another line between Tientsin, Paoting fu, and Peking.

Birds build their nests in the seaweed which grows and floats with the Gulf Stream, and in many instances are found 1,000 miles from any land. This weed is sustained by pods grown upon it, which act as air-floats.

The Latest News from Dr. Gerhard Rohlfs informs us that he is at Tripoli, under the protection of the French consul. He was to proceed to Wadai on December 15th, and was daily expecting rich presents from the Emperor of Germany, which he was instructed to offer to the new sultan of this remote kingdom.

Proposed Railway Across Australia.—An expedition has been organized by the proprietors of the *Queenslander* newspaper for the purpose of making a flying survey of the territory between Blackwell (Queensland) and Port Darwin, North Australia, a distance of 1,400 miles, with the view of determining the character of the country and the practicability of constructing a transcontinental railway. It was expected that the party would be fully equipped and start from Blackwell on July 12th, 1878.

Artificial Feldspar.—Messrs. Fouqué and Levy have succeeded in making artificial crystals of oligoclase, labradorite and albite. The process consists in causing feldspar to fuse in a platinum crucible placed in a Schlossing furnace, subsequently to place the ingot before a Bunsen blast, and maintain it for forty-eight hours very nearly at the point of fusion. By means of this biscuit process the vitreous mass changes its structure and crystallizes in all the details and forms of the natural mineral.

Only one Element after All.—Professor Lockyer, after three years of spectroscopic study of the stars, comes to the conclusion that the so-called elements in our globe are compounds after all. According to the new theory the supposed elements are different conditions of condensation of one fundamental substance, probably hydrogen. Mr. Lockyer promises to give a full report of the experiments and inductions which have led him to this astounding result. It has always been a favorite theory of Ralph Waldo Emerson that there was but one substance in the universe, and it would be extraordinary if he were to be sustained by the observations of scientific men.

The Salt Deposits of Germany.—Borings made in different parts of North Germany have proved beyond denial that the assertion made by several eminent geologists that a mighty deposit of salt stretches from the Lüneburger Heide to the coast of the Baltic, is perfectly correct. The deposit begins near Lüneburg, passes underneath the Elbe, and extends right across the Grand Duchy of Mecklenburg. Another branch goes in the direction of the Duchy of Holstein, *viâ* Segeberg to Elmshorn and Heide. Borings at Lutzkeen have now reached a depth of 456 meters (1,500 feet), and the thickness of the deposit now reaches 130 meters (426 feet), and the bottom has not yet been reached.

A Revolution in Guns.—It appears to be by no means unlikely that the celebrated Krupp gun, with which the whole of the German artillery is at present armed, will be superseded, if not immediately, at all events before very long, by another weapon. Experiments have, it is well-known, been lately made in the foundry at Spandau with bronze steel, prepared by the Uchatius method, and these have been so successful that, according to the Berlin correspondent of an Austrian military paper, the inspector-general of the German artillery has definitely decided to adopt it as a material for the manufacture of ordnance, and, in the first instance, has ordered several siege guns to be made of the new compound, the secret of the preparation of which appears to be now very generally known. The guns which are to be thus manufactured are to have a calibre of 12 centimetres, but will be superior to the Austrian pieces with the same bore, as arrangements will be made to allow a larger charge of powder to be used. In well-informed circles, the correspondent adds, the construction of these guns is looked upon as the first step towards the complete substitution of bronze steel for steel ordnance in the Germany army. Meanwhile, exceedingly satisfactory experiments have been made on the range at Steinfeld, near Vienna, with two recently constructed 15-centimetre bronze steel guns. The Austrian Minister of War, the President of the Technical Committee, General Uchatius, and a large number of artillery officers, were present on the occasion, and excellent practice was made with the new weapons at 2,000 metres range. The same committee determined that bronze steel may be profitably employed for the construction of rifles, the only drawback being that with the metal prepared as at present, the weight of the arm is increased one-eighth. The experiments of the English Admiralty have also shown that sheathing of phosphor bronze withstands the action of sea water nearly three times as long as the best copper sheathing; it is, however, very expensive, and a substitute has been prepared in Austria, composed of phosphor tin instead of phosphor copper, as the proper alloy for making the bronze. The proportions of 95 per cent. tin and 5 per cent. phosphorus was found to give good results and to be much cheaper than the material ordinarily used.

PERSONAL GOSSIP.

GENERAL LONGSTREET has accepted the Postmastership at Gainesville, Ga.

IT is said that Bayard Taylor's Goethe collection of rare volumes will shortly be sold.

THE Italian Mint has just produced a new five-franc piece with the head of King Humbert.

THE marriage of the Duke of Connaught will not, it is stated on good authority, take place until after Easter.

THE Italian Ministers Depretis and Majorano, seeking re-election on taking office in the new Cabinet, have been returned by large majorities.

THE Judges of the United States Supreme Court, with their families, it is said, will pass the month of February in a pleasure trip to Galveston, Texas.

SENATOR SARGENT'S two daughters have both studied medicine; and the elder, having been graduated, is practicing her profession at the Freedman's Hospital, in Washington.

A REUTER dispatch from Constantinople says Suleiman Pasha's appeal has been rejected. He has been degraded and exiled for life, and now appeals to the Sultan for pardon.

THE announcement that Dr. W. B. Carpenter is about to retire from the post of Registrar of the University of London will be received with general regret. He has filled the office for twenty-three years.

MADAME ADELINA PATTI, who is now at Berlin, is suffering from an accident to one of her knee-caps, which causes much anxiety to her friends. Her physician says that amputation of the limb may become imperative.

DR. STROUSSBERG, the famous "railway king" and bankrupt, has arranged an amicable settlement with his creditors. He offers 3 per cent. in liquidation of the claims raised against him, amounting in all to $18,500,000.

SAFVET PASHA, the new Turkish Ambassador to Paris, has asked the Sultan to be allowed to remain in Constantinople, and has been authorized to postpone his departure. It is possible that another ambassador may be appointed.

MESSRS. THOMPSON, Hyde and Curtis, of the Class of 1879, and Taft and Rogers, of the Class of 1880, will probably be the only men who rowed at New London last Summer who will be on the Yale University crew of this year.

THE King of Holland was married to Princess Emma of Waldeck-Pyrmont, January 7th, with great solemnity. The Duke of Saxony and Prince William of Wurtemburg were the witnesses. Prince Henry of the Netherlands, brother of the King, was unable to be present on account of illness.

DR. GARCELON, the new Governor of Maine, not only received the lowest votes cast for any candidate there last September, but he is even in agreement with the minority of his own party in the State on the currency question, being a hard money man and not afraid to call the cheap silver dollar a fraud.

HENRY VARLEY'S Tabernacle, at Melbourne, will, if completed in accordance with the plan, have a seating capacity of 5,000. Its central hall will be an amphitheatre in style, with a large coffee-house in front. The buildings around it will provide comforts for a workingman's club. It is proposed to spend £20,000.

MISS MARTHA ATALANTA LUMPKIN, daughter of a distinguished Governor of Georgia, has just been married at Athens to Mr. T. M. Compton. She is fifty years old, and he ten years her senior. The bridal tour was to Atlanta, a city to which the bride has twice stood sponsor: it was first named Marthasville, for her first name; then Atalanta for her second; gradually the "a" was dropped, and Atlanta, the Gate City, became and will remain.

MR. STEPHEN MASSETT (Jeems Pipes of Pipesville Major, State of California), walked in upon us last week, all the way from New Zealand and Australia, having come via Mexico and Central America. He is off now for the "Cape of Good Hope" and India, and we expect to hear next that he is lecturing in the wilds of Africa, or giving his graphic, popular and unimitable readings, and singing his charming ballads at the North Pole. Success attend the "wanderer" and "Drifter about" wherever he may go, say we!

BRIGADIER-GENERAL C. J. STOLBRAND, late of the Army of the Tennessee, who was one of the most accomplished officers of artillery in General Sherman's Army, has been knighted by the King of Sweden and Norway. His Majesty also conferred upon him the "Order of the Sword." Accompanying the appointment is a richly jeweled insignia bearing the following inscription: "C. J. Stolbrand, *Pro Patria*." This is the first instance where such honor has been conferred by the King of Sweden upon a Swedish American.

MR. JOHN JACOB ASTOR has lately presented to to the Astor Library some very valuable books. One of these, costing $15,000, is an early printed book, the first edition of the Catholicon of Johannes Balbus de Janua, dated 1460—a treatise on grammar and rhetoric and a Latin dictionary—the printing of which is attributed to Gutenberg. Another valuable early work is a German Bible, the earliest one with date, printed by Lanter, of Augsburg, in 1477—a fine example of early printing with Gothic type. Another rare work is a beautiful Greek manuscript of the apostolic epistles, in quarto, of the eleventh century. This is in very fine preservation, and is from the collection of the late Duke of Sussex.

THE Princess Louise, who has extremely simple tastes, is described as walking much more than driving about the neighborhood of Rideau Hall. She tramps through the mud with stout boots, and it is said always carries a small cane. A correspondent of a Canadian newspaper says that "a few days ago she was seen suddenly to stop before a small tin shop. She saw something in the window which attracted her attention, and, after observing it for a moment, walked into the very humble place. Now, what do you suppose had struck her fancy? A small tin tea-pot! A little, common thing, with a capacity of about one cup, and worth about twenty-five cents. She bought it, and, I was told, put it in her pocket."

AMONG recent obituary notices are the names of the following prominent people: Joseph Nash, English painter and instructor of the Queen, Prince Consort and many members of the royal family, aged 71; Cardinal Fabio Asquini, the closest companion of Pope Pius IX. during his leisure hours, aged 76; Petros Brysakis, historical painter of Munich, aged 64; Ludwig Schneider, author and reader to the Emperor of Germany, aged 73; Admiral Andrew Drew, of the British Navy, aged 86; Jean Jacques Scherer, ex-President of Switzerland, aged 53; Lady Catherine Whyte Melville, mother of the author who died a few weeks ago, aged 85; Judge Balcom, of Binghamton, N. Y., aged 80; General Robert Burn, colonel commandant of the British Royal Artillery, aged 86; Professor Jackson, of the Glasgow University, aged 80; Don Espartero, ex-Regent of Spain, aged 86; and Congressman Hartridge of Georgia.

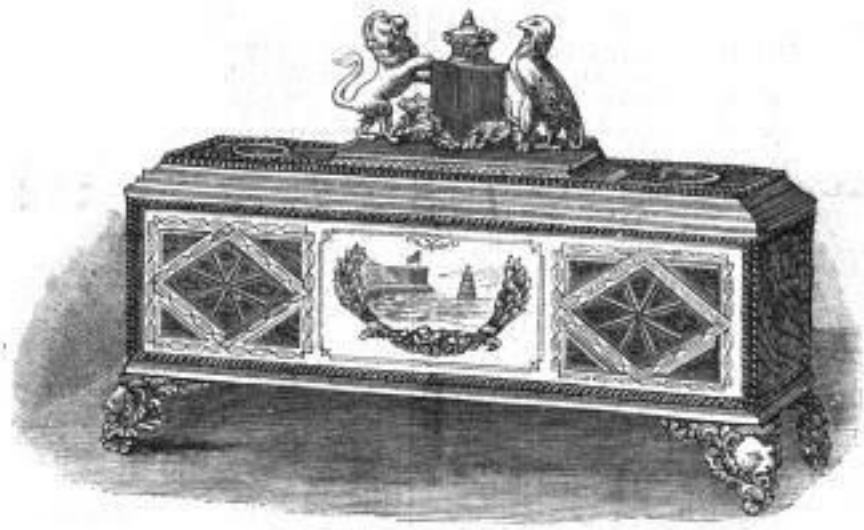
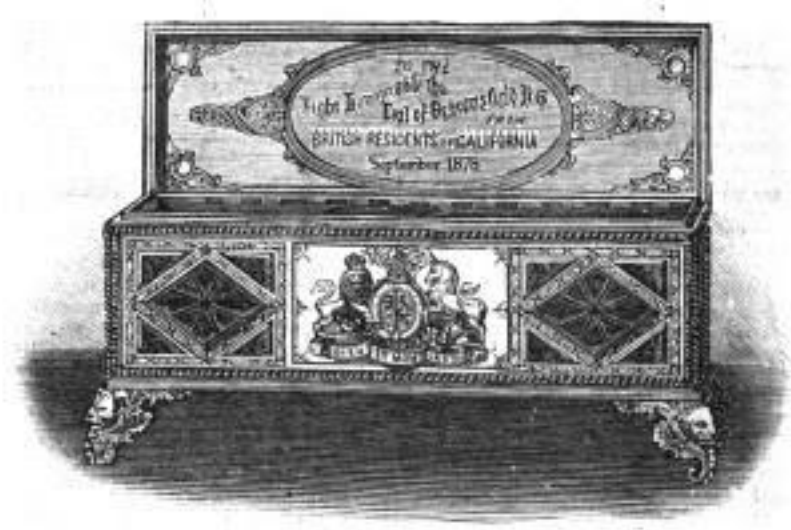
THE LATE MORTON McMICHAEL.



HON. MORTON McMICHAEL, who died at his residence in Philadelphia, January 6th, was one of the marked men of his time. In the city where he had so long lived he was in the highest sense a leader and a representative. His talents were peculiarly versatile. His conspicuous characteristics were—an easy address, an unusual command of language, a faithful memory, and perfect composure under the most trying circumstances; courage in every emergency, as proved by his manly bearing in the riots of 1844, when he repeatedly risked his life in the effort to secure public peace; and thorough familiarity with every topic of the day, whether of art or politics, finance or religion.



Mr. McMichael was born in Burlington County, New Jersey, October 20th, 1807, was educated at the University of Pennsylvania, and having devoted himself to the study of the law, was admitted to the Philadelphia Bar in 1827. He became interested in politics at an early age, and soon after becoming a lawyer was elected as Alderman. This position he occupied for many years, during which time he made a good reputation as a lawyer. In 1843 he was elected Sheriff of Philadelphia, and served as such until 1846. In 1866 he was elected Mayor of the city, and held that office three years. Between the periods of these public trusts Mr. McMichael became the editor of the *North American*, of which he was sole proprietor from 1851 to 1870, when he relinquished the active control to his sons. He was twice a Presidential Elector on the Republican ticket. He was also for a considerable time the President of the Philadelphia Union League. In June, 1872, he was Temporary Chairman of the Republican National Convention which renominated Grant for the Presidency. Subsequently he was the mover of the nomination of Henry Wilson for the Vice-Presidency. Mr. McMichael in 1876 refused the office of Permanent President of the Cincinnati Convention, which was offered him by the organizing committee of that body. In 1874 Mr. McMichael made a trip of two months to Europe to recruit his health, and in 1875 he was one of the Board of five Pennsylvania managers of the Centennial Exhibition appointed by Governor Hartranft. The following year he was made Doctor of Laws by the University of Pennsylvania, from which institution he had been graduated nearly fifty years before.

Philadelphia is possibly indebted to Mr. McMichael more than to any other man for the perfection of Fairmount Park, a work in which he took the greatest interest, and of which he was, as President of the Commissioners, for a time the active manager. No other citizen of Pennsylvania has filled a larger space in the public eye during the last thirty years, and there is no one who will be so greatly missed as this genial old-school gentleman, whose force of character, sound judgment, broad grasp of principles, accurate knowledge, large tolerance of opinion, adherence to right, quick perception of all that was humorous, and appreciation of all that appealed to the feelings, commended him equally to the high and low.

THE LATE HON. MORTON M'MICHAEL, EX-MAYOR OF PHILADELPHIA, AND EDITOR OF THE "NORTH AMERICAN."—FROM A PHOTOGRAPH BY GUTEKUNST.

CASKET PRESENTED TO THE EARL OF BEACONSFIELD BY THE BRITISH RESIDENTS IN CALIFORNIA.

CALIFORNIAN TESTIMONIAL TO THE EARL OF BEACONSFIELD.

THIS casket has been subscribed for by a number of British residents in California, and contains an address expressive of their high appreciation of "the brilliant statesmanship which the Earl of Beaconsfield evinced during the late European crisis, and the interest and pride with which they have watched the successive triumphs which his genius has won for their beloved country." It was taken to London by Mr. W. G. Harrison, who, accompanied by several members of Parliament on December 14th, went to Downing Street for the purpose of making the presentation to the Premier. The receipt of the news of the death of Princess Alice had, however, reached his lordship that morning, and he therefore wrote a letter asking the deputation on that account to defer their meeting, a request which was of course readily complied with, several of the deputation expressing their deep sympathy with Her Majesty in her bereavement. The deputation again attended at Downing Street, by appointment, on the 19th, when the presentation was made, and Lord Beaconsfield expressed his thanks in a gracefully worded speech. The casket, which is the work of Messrs. Anderson and Randolph, of San Francisco, is made entirely of Californian materials. The body is of silver, and the ornamentation of gold and polished gold quartz. One side bears the Royal arms in mosaic relief, and the other presents a view of the harbor of San Francisco, while at one end is represented in relief an English soldier and a Goorkha, and at the other a British sailor and a Sepoy, with the mottoes "Defense, not Defiance," and "Ready, Ay, Ready." On the lid are the arms and supporters of Lord Beaconsfield, done in gold, with mosaic panels, composed of cut and polished plates of gold and silver ores, and stones found on the Pacific coast. The address which the casket contains was engrossed and illuminated in London, and the whole is inclosed in a handsome case of Californian maple.

GENERAL D. C. McCALLUM.

GENERAL DANIEL CRAIG McCALLUM, who died at his residence in Brooklyn, N. Y., December 27th, of congestion of the lungs, was born in Scotland in 1815, but came to this country while yet a child, and settled with his parents in Rochester, N. Y. There he learned the carpenter's trade, and for some years was an architect and builder. In 1851 he invented the arch-truss bridge known under his name, and soon after came to New York, where he employed himself as a bridge-builder. In 1855 he was appointed General Superintendent of the Erie, but left that road in 1857 to superintend the construction of bridges of his design, and was also consulting engineer of the Atlantic and Great Western. In 1862 he was made a colonel in the army and assigned to duty in connection with transportation, and early in 1864 was made brigadier-general and placed in charge of all military railroads, an extremely arduous and responsible work. He retired, after his work had closed, with the rank of brevet major-general, and lived in comparative seclusion except for a time, when he was Inspector of the Pacific Railroads. General McCallum's work during the war was one of peculiar difficulty and requiring great executive ability, and he rendered very valuable service to the Government.

As an illustration of the nature and magnitude of the work accomplished in the military division of the Mississippi alone, in supplying General Sherman's army, it may be mentioned that there were laid or relaid 433 miles in length of track. There were built or rebuilt over eighteen miles in length of bridges. There were in use 260 locomotives and 3,383 cars. There were employed 17,635 men, and the whole expenses reached the enormous sum of $29,062,781. So much money was surely not spent for nothing. At one time there were employed in the department 24,964 men. From first to last General McCallum operated 2,106 miles of road, and made use of 419 locomotives and 6,330 cars. Of bridges, he built in all, 137,405 lineal feet, or over 26 miles. Of track, he laid or rebuilt 641 miles. The expenses of the department are scarcely less suggestive. They reached the high figure of $42,462,155.

THE LATE GEN. D. C. M'CALLUM, DIRECTOR OF MILITARY RAILROADS DURING THE REBELLION.—FROM A PHOTO. BY E. M. FASSETT, CHICAGO.

FIRST PRESBYTERIAN CHURCH, CLINTON, N. Y.

THE new building of the First Presbyterian Church Society, of Clinton, Oneida County, N. Y., is of blue limestone, trimmed with cut stone from Onondaga County, and in its architecture represents both the Gothic and the Roman styles. It is 66 x 90 feet on the ground, and 40 feet high from the water-table to apex of roof. The chapel in the rear is 35 x 65 feet on the ground. The tower is on the northwest corner, from which a stone spire rises to the height of 160 feet from the ground and is relieved of a spindling look, by a belt of cut stone ornamentation about two-thirds of the way up, and similar ornaments near the bottom. At the base of the spire, and on the four sides of the tower, are circular windows which are intended for dials of a clock.

The front is marked by two wide entrances, with semicircular arches. Above this is a belting course of cut stone. Above this again, is an indented semicircular arch, defined by cut stone, and in the centre

NEW YORK.—FIRST PRESBYTERIAN CHURCH, CLINTON.—FROM A PHOTOGRAPH BY CARPENTER.

Digitized by Google

of this is a rose-window. On the northeast corner is another tower, surmounted by a smaller tower with Gothic windows and dome. This relieves the building of the one-sided appearance it would otherwise present. Besides the front entrances, there are others of similar size in the towers on the east and west sides, giving ample access to the vestibule. The characteristic feature of the sides of the building are the windows, with semicircular arched tops, and the heavy buttresses between them. It is here that the cut stone trimmings appear to the best advantage. The general appearance of the building is that of strength.

The audience room is 62x72 feet in size, 35 feet in the clear, and 35 feet in the clear in the centre of the nave. The nave is in the form of a semicircular arch, with a square indentation at the crown. The chancel occupies a recess 24 feet wide, with semicircular arched ceiling 28 feet high. Handsome frescowork is seen at every glance in this room, the style of decoration corresponding with the architecture of the church and its furniture, the circle and quarter foil predominating. There are four memorial windows in this room.

At the west side of the church is a double door communicating with a hall leading to the chapel. In this hallway is a small private room for the pastor. The chapel is very light and cheerful. The colors in the frescoing are a little more pronounced. At the west side two rooms are partitioned off by double doors, set with ground glass. These rooms are for the use of the Bible class and infant department. The doors can be opened, throwing the three rooms into one. The room is wainscoted, carpeted, and lighted in the same style as the church. In the rear are three large memorial windows. The entire cost of the building and furniture and memorial windows is about $40,000. Rev. T. E. Hudson, D.D., is the present pastor of the church.

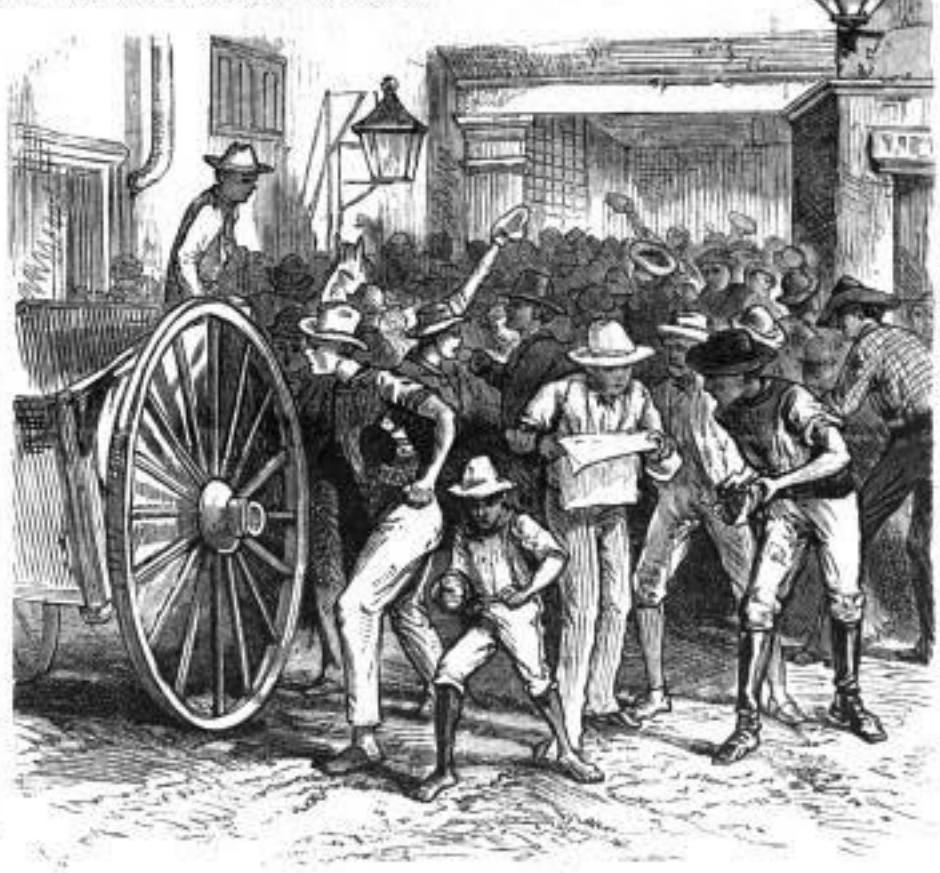
SCENE AT THE DRAWING OF THE HAVANA LOTTERY IN THE COURT OF THE OLD CUSTOM HOUSE.

SCENES IN HAVANA.

THE Royal Havana Lottery is one of the principal institutions of the Cuban capital. It is under the immediate supervision of the Government, to which it yields annually several millions, and is conducted on a simple and just plan by appointed Government officers. During the many years of its existence there has never been a breath of suspicion against the integrity of the general management. The price of the tickets at the Government offices is usually twenty dollars each, and in proportion for fractions, the tickets being printed in sheets, each of which contains some ten and some twenty sub-divisions of the respective number for the convenience of purchasers. Sellers abound in the streets and places of resort, who dispose of them at a small advance on the Government price, and not infrequently the coupons or sub-divisions are used in making "change," being considered as good as money.

The prizes and numbers are each inscribed on small hemispheres of ivory of equal size, and for the purpose of drawing these are placed in large opaque hollow globes, all the prizes in one and all the numbers in the other. On the day of drawing the globes are placed on an elevated stage in the court-yard of the old Custom House, where the proceedings take place in full view of the assembled crowd.

Two boys, with hand and arm incased in a tight-fitting black glove and sleeve, attend the large globes, and after these have been turned with a crank several times, through a small opening constructed for the purpose, one boy withdraws one of the inscribed hemispheres from the globe containing the numbers, while the second boy draws from the other globe one of the hemispheres containing prizes. They present the drawn hemispheres to the officers seated on the rear of the platform, who note them down, and the boys then advance simultaneously to the front of the platform, one calling out the number he has drawn, holding it up in his hand, and the other calling the prize he has drawn. The hemispheres are then deposited, numbers and prizes side by side, on a frame prepared for the purpose, which, when the drawing is completed, is covered with a glass, locked, and placed in the court-yard for public inspection.



During the drawing of the lottery, the scene is one of most intense excitement and one in which the whole gamut of the human passions is vigorously portrayed. The lust of gold shines in every face, a delirious craving, a wild, nameless look, such as one was wont to behold at Baden-Baden at the moment the croupier cried, "*Le jeu ne va plus*," and the little ball that held the very life-blood of the crazed players tip, tip, tipped round in its chance-laden bed.

A mad, eager, gesticulating crowd surges round the Custom House, awaiting the announcement of the winning numbers. The doctrines of chance are discussed, stories are told to greedy ears of lucky hits, marvelous gains, of dreams, of omens, of auguries. The peasant and the planter jostle one another in this race for gold. A hush falls upon the assemblage when the official appears, calm as the telegraphic messenger who hands us the worst or the best of news with the same imperturbability. Oh, the joy, despair, envy and hatred that stamp every countenance as the results are declared to the wait-

A WATER-SIDE EXPRESS.

THE LOTTERY IN THE CALLE SARRIELO.

CUBA.—SCENES IN HAVANA—INCIDENTS OF A WINTER RESIDENCE IN THE CUBAN CAPITAL.—FROM SKETCHES BY WALTER YEAGER.

Digitized by Google

ing multitude. Several instances are on record, and others are constantly occurring, of persons in the lowest stage of society realizing large fortunes by the Havana lottery. A negro slave once won the great prize, and a common sailor, undergoing imprisonment, became the winner of a considerable sum. A young German who had gone there to commence business, and found his finances reduced to a low ebb, purchased with his last money a lottery ticket, which, at the next drawing, gave him a fortune. Most of the mercantile houses are regular subscribers, and hundreds, if not thousands, purchase tickets regularly every month. Many, of course, never recover the worth of their money, and it should not be supposed that success always attends the purchasers. In the Calle Barrillo the scene during the drawing of a lottery is one that would delight the heart of a modern Hogarth. An eager and excited crowd, mixed in character, exhibits its joy and its anguish in the wildest and roughest way. The happy possessor of a copy of the sheet containing the winning numbers runs the risk of being literally torn limb from limb, and its acquisition proves a source of no inconsiderable danger. The lottery mania possesses the entire population of Havana, and for weeks before the special drawing its chances are in everybody's mouth, from the small boy to the grandsire, from the blue-blooded planter to the veriest street mendicant.

Picturesque as a gondola is the water-side express. A great, broad, almost flat-bottomed boat, with a rude awning, consisting of a piece of coarse matting or canvas laid up on hoops, beneath which are piled the special *impedimenta*, such as valises, traveling cases, etc., etc., while above are deposited miscellaneous wares, from a crate of vegetables, gorgeous in color, to a bag of flour. The bow, as a rule, is reserved for casks, and 'midships sits the oarsman, who languidly plies his oars, while his mate, instead of assisting him at "hurrying up" the craft, leans against the piled-up baggage in an attitude that would cause a member of the Neapolitan *lazzaroni* to expire from sheer envy. The waters are crowded with these expresses, and, in the evening and when the hush of night is creeping across the bay, strains of music steal from the deeply-laden craft, rich melodies, and possessing a charm all Havaneque.

VIADUCT ACROSS THE CUYAHOGA RIVER, CLEVELAND, OHIO.

TOWERING high above factory chimneys, above many-storied warehouses, above the tapering masts of good ships locked in the death-like embraces of ice, linking one steep bank of the Cuyahoga River with the other, and spanning its broad valley, stands the superb structure of stone and iron, the recent opening of which to public traffic marks an era in the history of the young and vigorous city of Cleveland. The bridge over the Cuyahoga has been as stoutly contested as that by Horatius in the days of old. In 1836 the Legislature of the State of Ohio granted charters to two cities—the city of Cleveland on the east side, the city of Ohio on the west side of the river. The Clevelanders were ambitious of absorbing Ohio, and the citizens of Ohio determined not to be annexed. The old wooden bridge was the scene of many a bloody fray. It witnessed frays from both cities; it beheld skirmishes with shot-guns, and bludgeons, and stones; it was blown up by gunpowder; it was sunk into the river; its underwork was burnt and its masonry destroyed. In hall and in council the vexed question was fiercely discussed, but, in the end, the march of progress proved too much for the burgesses of the city of Ohio, and to-day the pedestrian saunters along a roadway such as Baron Haussmann would pause to admire, and a Lon lon cockney inadvertently compare to that upon his much prized Thames Embankment. Seven teams could drive abreast along its carriageway, while an army could march by fours on its spacious footwalks, on either side. Its width from "out to out" is 64 feet, 42 feet roadway and 11 feet sidewalk on each side. I timed myself in crossing it, and, walking at "a fair round pace," fourteen minutes brought me from one extremity to the other. From its starting-point at the intersection of Superior and Water Streets, on the east side of the river, to its terminus at the intersection of Pearl and Detroit Streets on the west side, is 3,211 feet, or nearly two-thirds of a mile. Superior Street is the Broadway of Cleveland, and this magnificent *coup-d'œil* adds considerably both to the appearance and to the value of the much frequented thoroughfare. Commencing at the eastern point of the crown of the hill at Superior Street, the viaduct for 150 feet is constructed of heavy stone-retaining walls, filled in with earth and paved. Next comes the iron work. Three 50 foot spans of 50-inch iron plate girders, succeeded by two 145-foot spans, and one 160-foot span of double intersection Pratt truss. The height of the truss in the 145-foot spans is 18 feet 6 inches from centre to centre of chords, and that of the 160-foot span, 20 feet. The western end of the 160-foot span rests on the first river pier, about 65 feet from the east bank.

There are 332 feet between this first pier and the first arch of the mason-work on the west side. This space is spanned by a swing or drawbridge, at about 150 feet from the west bank of the river. The height of the truss in the draw is 30 feet in the centre and 20 feet at the ends. The total weight of the iron in the fixed spans and the draw is 1,440 tons; the weight of the draw and turn-table is 685 tons. The stone pivot-pier on which the draw turns stands partly in the water at the edge of the west bank. Between the two piers there are 130 feet of clear water-way. The draw, which is the heaviest though not the largest in the world, is moved by steam. The masonry of which the west side of the viaduct is constructed is 1,379 feet in length, consisting of ten arches, eight of 83 feet span and two of 97 feet span. To Pearl Street, the remainder of the road, partly embankment and partly excavation, 80,500 perches of stone have been used in the masonry of the viaduct. The river piers and the first nine arches on the west side have pile foundations in the driving of which 277,000 lineal feet—between 55 and 56 miles—of piling were used. The floor of the draw is 68 feet above ordinary water level, its width 46 feet—a 32-foot roadway and two 7 foot sidewalks.

It is scarcely necessary to say that the viaduct has cost money. The estimated expenditure is calculated as $2,151,400, to meet which viaduct bonds have from time to time been issued to the amount of $2,115,000. The toll and management of the bridge is at present greatly exercising the city fathers, and it is supposed the following rates will be charged: Every person, except employés and passengers on street-cars, one cent for each transit over the viaduct or any part thereof; one cent each animal, except street-car horses; while each street railroad using it will be charged $6,000 per annum.

The view from the viaduct was *bizarre*, as, leaning upon its handsome iron railings, I gazed around me. Out on my right lay Lake Erie, a mass of greenish-white ice touching a greenish-white sky. Away beneath me were ships, such as Doré has so weirdly sketched in the "Ancient Mariner," "all hugged in icy kisses"; factories, houses, streets, all in miniature. In front, St. Malachai's Church "topped the neighboring hill." On my left, the snow-clad heights, and under them the scooped-out valley planted with mills and storehouses, and intersected by railways innumerable. As in the case of the Holborn Viaduct in London, new and handsome buildings are already springing up, and the Atwater Block, as seen on the extreme left of our illustration, is a very pronounced specimen of the architecture much in vogue when "Anne was King." The Cleveland Viaduct is a supreme success, and, ere many years roll over, 250,000 of the inhabitants of the Forest City may lay claim and title to pass over this magnificent triumph of engineering skill and output of a commercial activity destined to promote her to the very front rank of the splendid cities in the Union.

FUN.

NO TRUE gentleman will ask a lady if her coral jewelry is made of sealing-wax.

PASSENGER (waiting): "How long is the next train to Cuppleham?" *Porter*: "As long as this 'ere platform, if it don't get smashed in half afore it gets 'ere."

A LADY asked the judge what she would say in court if she were asked her age. The blunt jurist replied, "Say, madam, what I believe would be the truth, that you are not yet come to the years of discretion."

LAWYER: "How do you identify this handkerchief?" *Witness*: "By its general appearance, and the fact that I have others like it in my pocket." *Lawyer*: I don't doubt it at all; I had more than one of the very same sort stolen.

A COUNTRY clergyman was a good deal astonished one day by the jollity of the mourners at the "breakfast" of a funeral, and was gravely told in explanation, "Bless you, sir, they're not laughing—they're only dissembling their grief."

TWO HISTORIANS have a quarrel, and indulge in some slight mutual recrimination. "You're a plagiarist, sir!" "Sir, you're a liar!" "I say you're a plagiarist, sir!" You say in your history of France that Louis XIV. died in 1715, exactly the date that I've given in mine!"

"IS THE doctor in?" asked an anxious-looking young man. "No, sir," replied the person addressed, "but you can leave an order on the slate. Is it a very urgent case?" "Well, yes," the young man said, "rather urgent, I think. Just as I started away from home my youngest brother was falling out of a second story window."

THE HEIGHT OF OBSTINACY.—A sick man lying on his right side, motionless, almost dead, receives a visit from a friend. "How, my poor fellow! No better?" "No. The doctor says that if I move, even if I turn over, it will kill me." "Oh, nonsense! I can't believe it." "Can't believe it?" "No." "Well, see!" And he turns over in a rage and dies promptly.

A WEE laddie was brought before one of the Glasgow bailies, who, after reading him a lecture, asked, "Where did you learn so much wickedness?" "Do you ken the pump in Glassfort Street?" "No," said the bailie. "Weel, then, do you ken the pump in Briggate?" "Yes, sure," was the reply. "Weel, then, ye may gang there, and pump as long as ye like; but I'm hanged if ye pump me!"

A GOOD story is being circulated in the clubs of Paris and London of the Duke Décazes and a well-known London horsedealer. The former had occasion to buy a pair of carriage-horses, and repaired to the latter, who trotted out a pair of magnificent steppers. "The price?" asked the duke. "Five hundred guineas," said the dealer. "Oh! that is not half my figure," was the reply. "I shall not look at anything under £1,000." "I can manage to suit your lordship with one," remarked the astute dealer, and directed the groom to take away the pair, with certain further directions, delivered sotto voce. Away went the man, returning in five minutes with a noble stepper. "There, my lord, he's worth 500 guineas every inch, and I couldn't take less!" The duke looked at the animal, expressed his delight, and wrote out a check for the amount. "But how about a match?" quoth he. "In three days I can produce a beauty to match him exactly," responded the dealer. "Do," said the duke; and in three days the former had sold his original pair for a thousand guineas. This is verse a few pounds.

THEOLOGICAL students reason that if there be counterfeit money there must be genuine; so, if there be infidels, there must also be Christians. If this be true of money and religion, will not the same rule apply to "put up" medicines? Do not the cheap and worthless nostrums prove that there are genuine and meritorious "put up" medicines? The great popularity of Dr. Pierce's Golden Medical Discovery has resulted in the manufacture of many shoddy alterative and tonic remedies, but one after another these have disappeared, the proprietors having found that, no matter how loud they advertise, success depends upon merit. In South America, as well as in this country, the Discovery is the standard remedy for all scrofulas and eruptive diseases. It acts promptly on the stomach, liver and blood, toning up, regulating and purifying the system. It speedily allays all bronchial irritation, and cures the most stubborn cough or cold in half the time required by any other remedy.

CATARRH AND ITS CURE.

CATARRH is a disease so disgusting and dangerous in its tendencies that we do not wonder that persons are horrified when they find themselves subjects to its insidious attacks. Can catarrh be cured? Among the thousand and one so-called cures is there one remedy that can be depended upon? From reports, certificates, and representations from those who have found in Dr. M. W. Case's Carbolate of Tar a remedy, we are led to direct the attention of our readers to the following facts: Dr. Case is a highly educated physician, of extensive experience and large practice, which is rapidly extending throughout the whole country. Many years ago he perfected a system of treating diseases by inhalation so perfect and so satisfactory as to elevate inhalations as a mode of treatment to the highest point of honor in the medical profession.—COM.

NO OTHER hotel has ever succeeded in satisfying its guests, and making them perfectly comfortable and at home, as well as the St. Nicholas, of New York.

I HAVE been living very largely of late on the Gluten and Brain Food of the Health Food Company of 74 Fourth Avenue, New York, and my health has greatly improved. The fearful constipation has entirely disappeared, and I have gained in flesh at the rate of one-half pound per day.

EUGENE ADAMS,
Brattleboro, Vt.

A $375 ORGAN FOR $97.

MR. DANIEL F. BEATTY, of Washington, New Jersey, appears to be determined that all who care to have pastor organs can get them, for he will sell, for a limited period, an instrument which is equal in every way to the kind usually sold for $375 for the very much reduced price of $97. If this invitation to the public from Mr. Beatty is responded to in the spirit that it is made every home in the land will very soon have in it a musical advertisement of this unrivaled New Jersey organ-builder. Mr. Beatty has recently made an extended tour through Europe, and he expresses himself as confident of having learned many things that will profit the purchasers of the organ he proposes to sell at one-quarter the price usually obtained for a handsome instrument of the class to which his belongs. It had as well be borne in mind by those considering the offer that it is only good for a limited period, and the low price is to induce people to buy the organ in order that the manufacturer may show to the public the peculiar excellences which it possesses. See his advertisement.

TO MANUFACTURERS.—A saving of from 25 to 33 per cent. of customary outlays can be effected by use of the Asbestos Liquid Paints, Roofing, Boiler Coverings, etc. Samples and full particulars will be sent free by the H. W. Johns Manufacturing Company, 87 Maiden Lane, New York, who are the most extensive manufacturers in this line in the world.

Easy Shoes.—Superior quality for gentlemen at reduced prices. ECCLESS FERRIS & SON, No. 81 Nassau Street, West Side.

Keep your Bird in health and song by using SIEGEL'S PATENT GRAVEL PAPER. For sale by druggists and cage-dealers. Depot, 462 Hudson St., New York.

For sale by Druggists.

THE

ADVANTAGE

OF HAVING A

Maine Non-Forfeiture Law Policy

IN THE

UNION MUTUAL LIFE INS. CO.

In 1864 and 1865, Capt. Charles L. Gardiner, of Chelsea, Mass., insured in the Union Mutual Life Insurance Company, of Maine, for $6,000, on two ordinary Life policies, payable at death provided the premiums were paid annually, *according to the terms of the contract.*

On the 24 day of July, 1877, Capt. Gardiner had his policies changed to the form now used by the Company, which gives the benefit of the Maine Non-forfeiture Law.

On the 11th day of September, 1877, he sailed from Boston as master of the good ship "Iceland," on a voyage to Calcutta. The ship and all on board were lost at sea. The premiums due July 27th, 1867, and August 24, 1877, were not paid, and by the terms of the original policies this would have worked a *forfeiture of the entire insurance*; but under the new policies which had been graciously offered by the Company, the insurance would have been continued in force more than three years, or until November, 1880, notwithstanding the non-payment of the premiums due in 1877; and the fact of the death being established to the satisfaction of the Company, the full amount of the policies was paid on the 25th day of October, 1878.

Results of Three Annual Premiums Paid on a Thousand-Dollar Policy Issued at Age of 30.

$58.10 on the ordinary Life Plan secures	3 years' and 212 days' insurance.	Compare these Endowments with Ordinary Life Plan.
91.08 on 20-Payment Life Plan secures	7 years' and 230 days' insurance.	
103.10 on 10-Payment Life Plan secures	9 years' and 48 days' insurance.	
146.91 on 10-Payment Life Plan secures	12 years' and 163 days' insurance.	
$12.74 on 10-Year Endowment secures	13 years' and $158.13 in cash at age 60.	Compare these Endowments with 10, 15 & 20-Payment Life Policies.
208.43 on 15-Year Endowment secures	10 years' insurance and $9.59 in cash at age 45.

In writing please state you saw this in the English FRANK LESLIE'S ILLUSTRATED NEWSPAPER.

CATARRH

Is a terrible disease. Its fearful effects are corruption running down the throat, weak eyes, deafness, loss of voice, loss of smell, disgusting odors, nasal deformities, and finally consumption. Thousands, not knowing the great danger in neglecting this disease, die with consumption. In a few years or months it may rapidly develop, and quick consumption announce it is **too late.**

CONSUMPTION The terror of humanity that yearly carries thousands to an untimely grave, not sparing the young, the talented, nor the beautiful.

ASTHMA which makes life so miserable its victims almost wish for death.

Minister's Sore Throat, Catarrhal Deafness, and

BRONCHITIS the advance guard heralding the near approach of consumption.—For these and all Pulmonary Diseases, **Dr. M. W. Case's Treatment** by the use of his

CARBOLATE of TAR INHALANTS

IS PLEASANT, THOROUGH, AND SUCCESSFUL. **SATISFACTION always GUARANTEED.**

Balsams and cordials of the most healing and soothing properties are so combined with Pine Tree Tar that the mere breathing vaporizes them into a dense smoke. This is inhaled—taken right to the diseased parts. **No heat, no hot water,** simply *inhaling or breathing* it, and you feel its healing power at once. As the oils and balsams condense on the air passages and lungs, their capacity is wonderfully enlarged and the hollow chest soon becomes rounded and full.

HOME TREATMENT sent to any part of the United States or Canada, to be returned if not satisfactory. To consumptives beyond the possibility of cure the Inhalants always give great relief, and often cure cases considered hopeless. CATARRH is readily cured by breathing the vapor and forcing it into the diseased cavities of the head and out of the nose, and *is the only method* by which this terrible and almost universal disease can be permanently cured. For terms, call or write.

Dr. M. W. CASE, S. W. Cor. Tenth and Arch Sts., Philadelphia.

When writing, please name this paper. Cut out and keep for reference.

CHAMPLIN & CO., Proprietors, Buffalo, N. Y.

A GOOD PLAN

The most profitable way for operating in stocks is by uniting capital of various sums in combining or pooling orders of thousands of customers and using them as *one mighty whole*, which is done so successfully by Messrs. Lawrence & Co., Bankers, 57 Exchange Place, N. Y. City. By this co-operative system each investor is placed on an equal footing with the largest operator, and profits divided pro rata among shareholders every 30 days. $10 invested makes $30 or 3 per cent. on the stock during the month—$50 returns $150 or 7 per cent., $100 pays $1,000 or 10 per cent., and so on according to the market. The firm's new circular (mailed free) contains "Two unerring rules for success in stock operations," and explains everything. All kinds of Stocks and Bonds wanted. New Government Loan supplied. LAWRENCE & CO., *Bankers and Brokers*, 57 Exchange Place, N. Y. City.

Imitation Gold Watches.
$5, $10, $15, $20 and $25 each; Chains $2 to $12 to match. Jewelry of the same. Sent C.O.D., by Express. Send stamp for Illustrated Circular. COLLINS METAL WATCH FACTORY, 320 Broadway, N. Y. Box, 3286.

40 Fashionable PERFUMED CARDS, no 2 alike, name in Gold and Jet, 10c. FRANKLIN CO., Northford, Ct.

OPIUM!

Frank Leslie's
SUNDAY MAGAZINE
(REV. CHARLES F. DEEMS, D.D., LL.D., EDITOR.)

THE CHEAPEST SUNDAY MAGAZINE IN THE WORLD!

THE FEBRUARY NUMBER NOW READY.

OPINIONS OF THE PRESS.

"The cheapest and best magazine of the kind ever published, giving for three dollars more than fifteen hundred large, double-columned pages and over seven hundred woodcuts, not all of the highest art, but all interesting, and many of them instructive in foreign manners and scenery."—*Christian Register*, Boston.

"This magazine, published in New York, has attained a record position among the religious monthlies."—*Christian Statesman*, Philadelphia.

"Dr. Charles Force Deems conducts the magazine with excellent taste and judgment. The articles treat a great variety of subjects, and are all good of their kind. The illustrations are profuse, and in many cases convey information as well as give simple pleasure."—*Orange* (N. J.) *Journal.*

"For real worth, in its profuse illustrations and entertaining and profitable reading matter, it is, in our opinion, far ahead of all competition. Considering the tendencies of the age, and the overflowing abundance of the light, vain and positively hurtful in magazine and newspaper literature, the SUNDAY MAGAZINE rises in importance as an agent of good to all the families of the land."—*Central Protestant*, Greensboro, N. C.

"It is ably conducted, always being filled with choice selections and original articles from the ablest magazine writers. If parents desire a thoroughly orthodox magazine, they need go no further than Frank Leslie's, New York, and get this one."—*Assembly Herald*, Fairport, N. Y.

"It is emphatically a family magazine, and ought to be in every household where intelligence and virtue obtain. It offers a table of contents at once varied, appetizing and instructive. Its illustrations are very numerous, and the publication is of unrivaled cheapness."—*Wilmington* (N. C.) *Morning Star.*

"It is only two years old, and yet it is one of the most extensively circulated magazines in the United States. . . . All ages and classes can find something suited to interest and please. Dr. Deems, the editor, is making his mark upon the age."—*St. Louis Observer.*

CONTENTS:

Prominent among the DESCRIPTIVE ARTICLES are: "A Day with the Lebanon Shakers," by Annette S. Bassett, graphically describing a visit to this singular Community, and summarizing the leading points of their system of religious faith. The article is profusely illustrated. "The Pagoda of Sobramanyen at Tanjore"; "Jaffa," (the Ancient Joppa) in Palestine, etc. In the DEPARTMENT OF FICTION is the continuation of the admirable serial, "David Fleming's Forgiveness," and the conclusion of "In Mischief Again." Among the shorter stories are "One Life," by Ella T. Dunaway; "The Story of Miles Phillips," by A. H. Guernsey; "A Well-Spent Day," by Mary E. Porter; etc., etc. ESSAYS by Augusta Browne Garrett; "Hints for a Sunday-School," by F. W. Upham, LL.D.; "Anticipations of Scientific Truth in Scripture"; "Take God at His Word"; "The Rock of Ages and its Author," by Rev. William Aikman; "The Altar in the House," etc., etc. Among other very interesting SERIOUS are "Beppo's Picture," "The Light of His Eyes," "The Sergeant and the Parson," "Loving One's Neighbor," "The Gray Mare is the Better Horse," "A Sunday with the Mississippi Negroes," by Alexander Clark, D.D., etc., etc. POEMS by Charles D. Warner, Elizabeth Cummings, Rev. A. A. Lipscomb, Byron A. Brooks, etc., etc. The Rev Dr John E. Edwards contributes a number of characteristic anecdotes of the late Bishop Early of Virginia. The topic of the sermon by the editor is "The Kingdom of God." He also gives his Popular Exegesis. The miscellaneous departments contain even more than the usual variety of subjects, and abound with entertainment and valuable information.

128 Quarto Pages. Nearly 100 Engravings.

Annual Subscription Price, $3; Single Copies, 25 Cents, Postpaid.

ORGAN BEATTY PIANO

BEST IN USE

A $375 13-Stop Parlor Organ for only $97.00.

The price of this **beautiful** Grand Parlor Organ is $375, or, in other words, this is about the price asked for such an instrument by the **monopolists'** agents. I have been offering it at wholesale at **$105** as my very lowest net cash price. I am determined that all shall see my celebrated instruments and judge for themselves, and therefore I offer this beautiful, neat design to the readers of this paper for only **$97.** Order the instrument, and **PAY ONLY AFTER YOU HAVE TESTED IT AT YOUR OWN HOME.** Don't want the money until you are entirely satisfied. This is a very fair offer for you.

Description of this **magnificent** instrument is as follows: **Beatty Organ, Style No. 2,100.** A beautiful **Celtic** style of architecture in this case strikes the eye of the connoisseur, and stamps it at once as the most beautiful case extant. Dimensions: **Height,** 74 inches; width, 48 inches; depth, 24 inches; weight, boxed, over 350 pounds. **Three (3) Sets of Reeds. Five (5) Octaves. Thirteen (13) Stops.** (1) **Grand Organ;** (2) Principal Forte; (3) Dulcet; (4) Diapason; (5) Hautboy; (6) Principal; (7) Vox Humana; (8) Flute; (9) Violin; (10) Dulciana; (11) Echo; (12) **Vox Celeste;** (13) Clarionet. **Beatty's Celebrated Grand Organ** Knee Swell, and Beatty's New and Improved Double Acting Knee Swell.

The case of this instrument is solid walnut, full French veneer, and finished in the **highest style of art.** The musical combination excelled by none. All things considered, it is the most desirable style that can be selected. I challenge its equal. Regular Retail Price asked for such an instrument by the Monopolists' Agents, about **$375.** I will sell this beautiful Organ to the readers of this paper, in order to have it introduced, boxed and delivered on Cars, for only **$97.00.**

Please send your order by letter or telegraph. **No money required until you are entirely satisfied.** Pay for the Instrument only after you have fully tested it at your own home. If it is not as represented return it at my expense, I paying freight charges both ways. This certainly is a fair offer. I positively will not deviate from this price. **Fully warranted for 6 years.** I want this instrument introduced; hence this unparalleled offer. Remember, I have no agent, but sell direct.

You can order direct from this advertisement, which will not appear again. Nothing can be saved on this instrument by correspondence. **Order at once!** If you do not want one yourself, order one and make your friend a handsome present. Every Beatty Organ, when introduced into a new locality, sells others, **as it is a standing advertisement.** Please remember the above unparalleled offer is only good for a limited period only, and is made solely with a view of introducing this superb instrument. Trusting that by offering it at this very low price I shall induce very many to buy this beautiful new style, thereby building up a demand that will eventually repay me for this sacrifice. **New Rosewood Pianos, $125, $135, $145, and upward.** Large Illustrated Newspaper about cost of Pianos and Organs **sent free, postpaid.** Address,

DANIEL F. BEATTY, Washington, New Jersey, U.S.A.

PLEASE SHOW THIS OFFER TO YOUR NEIGHBORS.

ROYAL BAKING POWDER

Absolutely Pure.

The Royal Baking Powder is a Pure Cream of Tartar Powder.

Indorsed and recommended for its wholesomeness by such eminent chemists as Dr. Mott, New York; Dr. Hayes, Boston; Professor Genth, Philadelphia, etc. Sold only in cans, by all Grocers.

Beware of the injurious Alum Powders. Manufacturers and Dealers urge you to buy them, because they can afford to sell them at 20 cts. a pound, and double their money.

Do not buy Baking Powder loose, as it is almost sure to contain alum. The continued use of alum produces griping, constipation, indigestion, headache, and dyspepsia; affects the blood, causes pimples on the face, etc.

CHARLES GRAEF, 65 Broad Street, New York. **Sole Agent for** F. COURVOISER & CURLIER FRERES' COGNACS. Pommery "Sec" Champagnes. HENKELL & CO., HOCK WINES, JOURNU FRERES' CLARET WINES.

ILLUSTRATED NEWSPAPER

Entered according to the Act of Congress, in the year 1879, by FRANK LESLIE, in the Office of the Librarian of Congress at Washington.

No. 1,218—Vol. XLVII.] NEW YORK, FEBRUARY 1, 1879. [PRICE 10 CENTS. $4.00 YEARLY. $2 WEEKLY $1.00

MADAME ANDERSON'S PLUCKY WALK.

MADAME ANDERSON completed her extraordinary task of walking 2,700 quarter-miles in that number of quarter-hours in Mozart Hall, Brooklyn, at ten o'clock on the evening of January 13th, having started on the track at eight o'clock on the evening of December 16th. Her last quarter-mile was made in 2:37¾, the quickest time of the entire walk. Little attention was attracted at first by her plucky intention, as few persons but herself and husband believed she could maintain her walk for more than a week. As she trudged on, however, day after day and week after week, the crowd of spectators increased, so that on the night of the finish, the hall, built to accommodate but 800 people, was packed with 2,000, while a like number remained outside, only restrained from attempting to enter by the determined action of the police.

MADAME ANDERSON IN HER WALKING COSTUME.

SINGING HER LAST SONG.

Throughout the long tramp Madame Anderson remained cheerful, chatty and physically well. She ate frequently and drank largely of port wine and moderately of champagne. She fell into a sound sleep almost the moment her head touched her pillow, and was aroused readily at the end of her very brief rests. For a few moments she would appear somewhat dazed, but she forced wakefulness either by playing on a piano or singing, in which accomplishments she is quite proficient. Frequently in making her rounds at night she would amuse herself by blacking the faces or noses of spectators close to the track, who had become fatigued watching her, and dropped off into sound slumber. Her husband, trainer and physicians kept uninterrupted watch over her, and shared in the wonderment of thousands of spectators at the exhibition of her great endurance.

The wagers on this performance were many and heavy, those laid during the last days having been for very considerable sums, and fears were entertained, during the closing hours of the walk, by her friends, that foul play might be attempted, to prevent the madame from accomplishing her task. That is one reason why one of her intimates walked every quarter with her for the last two days. On Monday afternoon this anxiety was redoubled by the senseless canard published in a Brooklyn paper, to the effect that bouquets drugged with chloroform had been presented to the madame.

CHALKING FACES OF SLEEPING VISITORS.

She herself testified that this story was utterly without foundation; nevertheless, she was not allowed to handle any of the numerous bouquets and baskets of flowers presented to her in the evening, but they were taken in charge by those walking with her. Her escort was also increased, and from seven o'clock until the finish one man walked in front of her, one behind, and one beside her, over every lap, while others stationed every few yards kept the track clear.

During the entire evening Madame Anderson was sustained by the most intense and scarcely to be suppressed excitement. At times she walked at a tremendous pace, almost running around the track, with pale face and clinched teeth. At the close of the next to the last quarter she sprang from the track to the platform, and mounting the elevated perch of the scorers seated herself in a chair.

[Continued on page 393.]

FINISHING THE LAST QUARTER-MILE IN 2:37¾.

THE PEDESTRIENNE BORNE AWAY IN BLANKETS AT THE CLOSE OF THE WALK.

FRANK LESLIE'S
ILLUSTRATED NEWSPAPER.
53, 55 & 57 PARK PLACE, NEW YORK.
FRANK LESLIE, EDITOR AND PUBLISHER.

NEW YORK, FEBRUARY 1, 1879.

IMPORTANT NOTICE.

A special artist and a descriptive writer, from FRANK LESLIE'S ILLUSTRATED NEWSPAPER, *accompany the party of New York and Chicago merchants on their visit to Mexico with a view to the establishment of business relations with that country. The illustrations, which will appear from week to week, are to consist of the most interesting subjects connected with the expedition, while the description will be accurate, vivid, and deeply interesting. As both the illustrations and reading matter are intended to develop the commercial relations between the two countries,* FRANK LESLIE'S ILLUSTRATED NEWSPAPER *will obviously be the best medium for the acquisition of information on this all-important and engrossing subject.*

CAUTION.

Subscribers, in ordering our publications, should be careful to write the name of FRANK LESLIE *in full, and direct their letters to 53, 55 and 57 Park Place, New York, from which address all our publications are issued.*

ADMINISTRATIVE QUESTIONS.

WE have, on a former occasion, endeavored to explain the grounds on which we base the opinion that the politics of the future must, in the main, be determined by questions of administration. Such questions must needs require an entirely different order of talents from those which have heretofore entered into the constitution of the "average politician." Questions of administration result from a complex of facts and of principles, so related to each other that the facts cannot be rightly interpreted without a knowledge of the principles they involve, and that the principles involved cannot be rightly applied without an accurate and thorough knowledge of the facts which form the subject matter of discussion. And hence it is that questions of this kind call for patience of investigation and breadth of knowledge combined with sound theoretical opinions and a judicial temper—qualities which are rarely found even when considered singly, and which are still more rarely seen in their due co-ordination and logical combination.

It is this consideration which should make the contemporary critics of Congress and the Administration a little more tolerant of the hesitations and incertitudes which wait so conspicuously on the settlement of two or three great questions—questions of legislative and executive adjustment—which are now pending before the public. Prominent among these questions we may cite the "Indian Problem," the regulation of the army, and the management of the Western surveys. Upon each and all of these topics there is a wide difference of opinions, determined in part by an honest conflict of judgment, and also determined in part by a conflict of competing jurisdictions and of personal as well as official prepossessions. That pattern of mild and amiable knighthood, the good Sir Roger de Coverly, was in the habit of excusing himself from forming definite opinions upon a large variety of topics by alleging that there were a good many things as to which "a great deal might be said on both sides," and he must be a most careless or a most opinionated observer who will not admit that the questions we have named are susceptible of a like classification.

We confess that, after much reading of the accusations brought by General Sheridan and other army officers against the management of the Indian Bureau, and after a careful consideration of the arguments formulated in defense of the Bureau by Mr. Secretary Schurz and his subordinates, we have been left in a disagreeable state of doubt with regard to the true solution of the difficult problem presented by the relations of the Indian to the frontiersman who perpetually encroaches on his reservation, to the agent who sometimes abuses his trust, to the army officer who sometimes abuses his power, and to the whole Government, which acknowledges its responsibility in the premises without being able to cope with the practical difficulties of the vast and complicated problem. The only thing which seems clear in the imbroglio is that Secretary Schurz has already instituted many reforms in the management of the Indian Bureau, and that he seems sincerely anxious to do his full duty in a most embarrassing situation.

Among the various measures propounded for a reorganization of the army by the Burnside Committee, by Mr. Atkins and by Mr. Hewitt, there is undoubtedly a wide room for much contrariety of opinion, and we shall not venture to offer any judgment of our own upon a question whose proper settlement must so largely depend on the views of professional experts. But with regard to the remaining problem we have indicated—the three independent surveys of the Western Territories, at present conducted by Professor Hayden, Major Powell and Lieutenant Wheeler, under different departments of the Government—we have no difficulty at all in reaching a practical conclusion which seems enforced by every sound consideration of public economy; for these surveys, as at present conducted, are without *ensemble* in their operations, are projected on different scales of observation, and sometimes impinge on each other, to the confusion of the public records, and with a "wasteful and ridiculous excess" of public expenditure. A committee of the National Academy of Sciences—a jury of experts without rivals in the country—has pronounced in favor of remitting these surveys to the control of the Coast Survey, for this branch of the public service, in pursuance of its special aims, has already entered upon the triangulation of the interior of the continent, and hence all the work of the other surveys should be made auxiliary to its operations. In this way a great economy of expenditures could be effected, and the hydrographic survey of the coast would be brought into correspondence with the geodetic survey of the main land.

OUR EDUCATIONAL METHODS.

IN his message to the New Jersey Legislature, Governor McClellan advocates the establishment of technical schools as part of the educational system of the State. He says:

"It would appear to be a sound proposition that, having reached the limit of the subjects as to the necessity of which all agree, further progress in education should, in a great measure, be regulated by the probable future pursuits of the majority of the pupils in the different localities. For example, in an agricultural region, where most of the boys will probably become farmers, it would seem natural to turn their studies in the direction of farming pursuits. They might be taught enough of the fundamental principles of the science of agriculture to enable them afterwards to pursue the study of agricultural chemistry and economy—enough of the principles of mechanics to enable them to learn how to detect the difference between a good and bad machine, enough of the principles of engineering to enable them afterwards to learn the best method of draining, and the use of materials in rural constructions, etc. So, in the large cities, where manufactures and the mechanic arts flourish, their instruction might well be turned in those directions without in any case attempting to convert the public into technical schools. I can see no harm, but much good, as probably resulting from devoting a little time in the public schools to the practical instruction of the girls in some of those branches of domestic industry which can be easily taught, and are most certain to prove useful to them in the households over which they will eventually be called to preside. The purpose of public school education ought to be to furnish the boys and girls with the tools of education, and teach them how to use them in educating themselves in their various pursuits in life. It is clearly good political economy in the State which educates its children, to make that education tend, in some measure at least, to the benefit of the commercial and other industries of the state."

The suggestions here made are certainly worthy of consideration, not only in New Jersey, but by the friends of education everywhere. It cannot be denied that our educational methods are capable of vast improvement in the direction indicated. Heretofore, whether in school or college, there has been but one course of educational training for boys. The system of mental discipline has been the same, whether the boys were, as men, to become professors or brokers, merchants or farmers, scholars or manufacturers. There has been little attempt made to give a boy, during his educational course, such a system of study as would be of direct benefit or practical use to him in his future career. The education and the career, in other words, have been treated as two separate and distinct things. The question of what a boy is to do after he leaves school has had far too little to do with the course of study he pursues while in it. From the age of thirteen to twenty-two his best intellectual efforts have been given to the acquirement of certain knowledge which can scarcely be of any available use when he comes to face a business world and earn a business man's livelihood.

It has been urged, and with much eloquence of argument, that the real benefit arising from a classical collegiate course is to be found in the discipline it gives the mind. But can this training be obtained in no other way? Clearness of thought, logical strength, and vigor of intellect, can be attained by following any systematized or organized course of study. The acquisition of an exhaustive knowledge of the German and French languages will prove quite as good mental discipline as writing weak imitations of Greek hexameters. And in favor of the pursuit of the former, as a matter of linguistic knowledge and intellectual training, there is the unanswerable argument of immediate use and illimitable future enjoyment.

The truth is, neither the time nor the hour permit the continuance of former educational inconsistencies. The vast increase of scientific facts, the accumulation of intellectual baggage in all departments, necessitate the policy of special training for special ends. That system of education which best insures a preparation for those special ends is at once the highest and most beneficial. The boy should be trained with a view to what the man is to be. If a boy of eighteen decides upon a professional career (and if there be any real promise of future ability or preference, there will be strong hint of it then), he should be afforded all possible classical advantages. It is safe to say he cannot have too much education of whatever kind. But if a business career is to be adopted, it is sheer waste of money, time and brains for a boy to be put through the same course of study which would fit him for a scholarly or professional life. The man of affairs should have the education of a man of the world. His school and college courses should aim to prepare him for his future as a business man, and to lay the intellectual and æsthetic foundations which will enable him to enjoy his leisure when he has earned it. He cannot afford to spend the most impressionable years of his life in learning things he only learns to forget.

In following a scientific curriculum, there can be no such risk of wasted energies. Modern science is not learning found only in the pages of its text-books. Its best treasures are written by the Everlasting Finger on earth and sky. It is the knowledge wrested from this handwriting that has given the impulse of progress to modern living and modern commerce. The whole machinery of life rests upon the principles of applied science. Manufactures, machinery, inventions, mining interests, agriculture, the mechanical arts, are all results of scientific research and successful experiment. How can a business man, a manufacturer, a farmer, or a man engaged in working mines, afford to do without a thorough knowledge of physics, biology, chemistry, geology, and the other practical sciences? And what educational course is of any real worth which does not furnish him with a thorough knowledge of these sciences? For the highest education is that which is the best preparation for a man's active life, and that best preparation is found in the study of science in its modern developments.

FINANCIAL LEGISLATION.

THE House of Representatives has passed a Bill authorizing the issue, in exchange for legal money of the United States, of certificates of deposits of the denomination of $10, bearing interest at the rate of three per cent., and convertible at any time, with accrued interest, into the four per cent. bonds authorized to be issued, the money so received to be applied only to the payment of the 5-20 bonds. Some opposition to the Bill was offered by members who either did not or would not understand it; but General Garfield showed that it was another step in the process of popularizing the refunding policy—that, in a word, it proposes to make it possible for the honest man who may save a few dollars to become interested in the public securities; and upon this explanation the Bill was passed by a vote of 117 to 72. Mr. Garfield referred, with effect, to the circumstance that the credit of France derives its chief strength from the fact that 5,000,000 Frenchmen hold the Government bonds; and then, looking straight at General Butler, added, amid the hearty applause of the House, that "the day on which 3,000,000 Americans become holders of United States bonds, the occupation of those gentlemen who seek to array labor against capital, and the poor man against the bondholder, will be gone."

The House has also passed a Bill providing that United States notes shall be received in payment of duties on imports. An effort was made to introduce a proviso that such notes shall be thus receivable only while they are equivalent to coin, but the proposition was rejected. The measure, without this proviso, is regarded by many as embodying a menace to the policy of resumption. There are other indications that the opponents of that policy do not mean to abandon their hostile attitude, but it can scarcely be possible that Congress will so far defy public sentiment as to enact any measure looking to the arrest of the movement in the direction of financial security and business stability.

Another Bill has been passed by the House authorizing the Secretary of the Treasury to exchange directly at par 4 per cent. bonds for 5-20 bonds now outstanding and uncalled, and in making the exchange to allow three months' interest on the bonds surrendered. The purpose and effect of the Bill appear to be to give to any individual holder of 5-20 bonds the same privilege that is now extended to national banks which are designated depositories, and its passage is virtually an approval of Secretary Sherman's refunding operations.

OUR COMMERCIAL RIVALS.

WHILE some of our business men are felicitating themselves upon the establishment of the new line of ocean freight steamers between this city and European ports as an event of much significance, it is well not to forget that our commercial competitors are also actively increasing their facilities. Baltimore has a line of steamers to Bremen and one to Liverpool, and, besides, has two lines of railway, both reaching into the grain-producing regions of the West, which claims to be able to put freights in their holds cheaper than the same thing can be done in any other part of the country. In addition to this, we learn that the Baltimore and Ohio Railroad Company is preparing to open a line of steamships between Baltimore and Barrow-in-Furness, an ancient English seaport, fifty miles northwest of Liverpool, which has recently been rejuvenated by a new railway and some extensive iron and steel works. A half-dozen iron steamships are being built on the Clyde, and will be fitted up especially with a view to the prosecution of the cattle export trade. Each steamer, it is understood, will have a transporting capacity for 1,500 head of cattle. In anticipation of this new line, the Baltimore and Ohio Company contemplates the erection of the extensive stock-yards which have been projected for several years. The new line is also intended to develop the export trade in horses, which has already attained considerable proportions. Meanwhile, at Philadelphia, in addition to a line of steamships plying between that port and Europe, another is about to be established between there and Amsterdam, while Boston proposes to run a line of eight new iron steamers to Liverpool additional to that recently opened, each vessel to be of three thousand tons capacity. It is thus apparent that our rivals for the foreign trade are in dead earnest in their efforts, and mean to utilize their opportunities to the utmost. Currents of trade, however, cannot be permanently diverted by artificial devices on the part of our rivals so long as our great natural advantages shall be properly employed, and it can scarcely be doubted that the fierce competition to which our mercantile interests are now exposed will stimulate them to increased enterprise and activity in the direction of a full development of these advantages. In point of fact, New York's proportion of the import trade of the Atlantic Coast is now larger than it has been at any time since 1870, being 79.43 per cent., while in exports, though it has fallen since that year, it is greater by 1.93 than it was one year ago.

THE DISTRESS IN ENGLAND.

THE decline of British trade affords a theme of constant comment for the leading journals of the "tight little Isle." All deal with the subject in a spirit of commendable candor. Thus the *Week* admits that the iron trade is practically lost to Great Britain for ever, the Americans, instead of buying abroad, having gone into business on their own account, and as competitors with those from whom they formerly drew their supplies. "In 1872," says the *Week*, "the Americans bought iron and steel of us to the value of close upon $56,000,000. This amount had sunk in 1877 to less than $12,500,000. Everybody will at once see that this is a tremendous falling off. We go to the official returns of the United States for these figures, and therefore there can be no possibility of mistake about them. In all other things which the Americans bought of us there has been a similar falling off. In 1872 they purchased cotton manufactures of us to the value of $25,000,000 (in round figures); in 1877, only $7,750,000. We have not made proportionate gains in any other market."

The cause of the widespread distress which now prevails all over Great Britain is chiefly found in the statements here made. England is declining because we, as her chief competitor, are rapidly advancing in all the elements of prosperity. In ten years our iron production has increased twelvefold. Every ton of ore produced has been so much taken from England. British iron, once the largest item of our imports, will at no distant day be entirely driven out, and we shall be sending our manufactured iron to the British market. This decay of a great interest affects a vast mass of English laborers. Then as to the cotton manufacture, before referred to, not a great while ago England had a virtual monopoly of that industry. She purchased our raw cotton and sent it back to us in cloth, the industry attaining prodigious proportions. She had a

Digitized by Google

market in India and China from which, as from ourselves, enormous profits were derived. Tens of thousands of operatives found remunerative employment in her factories and mills. Now the United States make their own cotton into cloth and are beginning to supply England. In China our cloths are so much better than the English that we are taking the market. English mills are imitating our American trademarks so as to secure a Chinese trade. In India the natives are building cotton-mills and making their own cloth. Thus the three great markets in which England has so long been supreme are lost to her, and, with the loss of her trade, the men who have worked in cotton are reduced to idleness and starvation.

The picture of the prevalent distress in the industrial centres, presented by the English journals, is sad and pitiable in the last degree. All classes of the population are affected by it. In many of the towns of Scotland and England crowds of able-bodied men throng the places of business begging for bread, and on every side soup-houses and relief-stores are being established. In Birmingham the suffering is almost without precedent; in Warrington expert workers in wire are breaking stones at eighteen cents a day; all through the Trent region, in Staffordshire, where the lowest form of industry flourishes, the depression is frightful in its scope and effects; in Leeds the boatmen are utterly destitute, and the silk operatives are idle; in Wolverhampton bread and oatmeal are distributed to hundreds daily; in the Manchester districts, the centre of one of the richest, most populous and most industrious sections in England, "the trade depression, poverty and distress, hangs like a cloud." The want is so widespread in that city, that at one agency alone, in a single day, relief was asked for 10,800 souls.

What is to be the outcome of this terrible condition of affairs? Where lies the remedy? These are questions which provoke wide discussion in the British newspapers and among British publicists. The balance of opinion seems to be that the only effective relief will be found in the emigration of the surplus population of the working and operative classes. Letter-writers all agree that the emigration from England will hereafter be much larger than ever before, and that it will be the emigration of the better class. Men of property, or of business, who have about enough for an eldest son, with portions for the daughters, consider that the best career for the other boys is in the colonies or the States. "Strong efforts," says a correspondent, writing from London, "are making by the Government and private enterprise to direct this emigration to Canada and Australia. But Canada is cold and Australia is far away, and the burden of it will go to the United States. A wise policy on the part of the United States, the Western State Governments and the railways, would add to our population hundreds of thousands of the best men in England—men of sense and character"—whose introduction into our national life would be of the very highest value to our interests as a people. Possibly the problem of the development of our vast territorial area beyond the more populous belt of States is to be solved by the influences from without, which the existing depression and distress in Great Britain have set in motion. Meanwhile, we may well be thankful, seeing how bleak and dark are the prospects of English trade and English labor, that our sun is again mounting the sky, and that for us light is once more shining all along the hills.

THE INDIAN MASSACRE.

IT is to be hoped that Congress will not delay its proposed inquiry into the recent massacre of Cheyenne Indians at Camp Robinson, in Nebraska. To permit so monstrous a butchery to pass unchallenged would be a reproach to the humanity of both the Government and people. These Cheyennes, driven to desperation by unfair treatment, refused to go to the wretched reservation, a thousand miles away, to which they were assigned and from which they had once escaped. Rather than quit the scene where "their parents are buried and their children were born," they determined to die together. Breaking from the fort, they overpowered the guard, and sought to get free. The troops rallied from the barracks, and making no attempt to capture the fugitives peaceably, shot down thirty of them in the frozen snow—the victims including eight squaws and two children. Those who escaped were pursued by the cavalry, and killed remorselessly as opportunity offered, the pursuit being abandoned only when it was found impossible to capture or slaughter any more of the flying "savages." Fifty-two warriors in all were taken, and at last accounts were confined in the fort prison.

At the time of the outbreak the Indians were almost naked and suffering intensely. Clothing had been promised, but the promise had not been kept. Government promises to the red men seldom are. And because, freezing and starving, these poor unfortunates made a struggle for liberty, they were deliberately butchered by the soldiers of the Government which had first practically expelled them from their lands, and then broken the pledges which it had given them to induce a peaceable acquiescence in the ejectment. By all means, let Congress probe this shameful affair to the very bottom.

THE EUROPEAN SITUATION.

THE political situation in France is now the leading topic of European interest. It is a difficult one, of course, as must always be expected when great parties change places, and especially for the one which passes from opposition to power. A signal advantage, indeed, is possessed by the Republican party in France in the fact that its adversaries, who have hitherto, for the most part, held the reins, were really a party of opposition, while claiming to be, and virtually being, the Government. They were secret or avowed enemies of the form of government chosen by the people, and, as it were, imposed on the nation by manifest destiny. Many of them were all the time intriguing to overthrow it. And there was something as unjust as illogical in having Royalists and Imperialists administer the offices, great and small, of the French Republic. It is perfectly natural that the French people, seeing their Republic established anew on a sound and durable basis by the result of the late Senatorial elections, should want to put Republicans in the offices so long held by anti-Republicans. They want to govern themselves in fact as well as in name, and through their own trusted agents. And this they mean to do. It is particularly of vital importance that the ministry of war and the great military commands should be intrusted to men loyally favorable to the Republic. Modifications should be made as soon as convenient in the same direction throughout France in the magistracy, although an immediate wholesale change may be impossible. To make the changes which are requisite and indispensable is no easy task, and the differences of opinion among Republicans themselves on the subject render the task still less easy. These differences were illustrated the other day when the Ministerial declaration was received with freezing silence in the Chamber of Deputies, but warmly greeted with cheers by all factions of the Left in the Senate. The situation is, then, difficult. But it cannot be so critical as Paris correspondents of London newspapers make it seem. Across the narrow British Channel there is still a chronic inability to understand Frenchmen; but across the wide Atlantic the latter ought to be understood well enough not to be suspected of madness, and of readiness to fling themselves again into the vortex of revolution, simply because they wish to have the French Republic administered by Republicans. Let us hope that the same union and discipline which won the recent Republican victory in France may be maintained.

That the French Republic is now strong enough to be generous and conciliatory is patent from the fact that President MacMahon has just signed decrees pardoning thousands of Communists. That it is also strong enough to have recovered its former foreign prestige was brilliantly exemplified a few days ago at Tunis, when Ben Ismail, the Prime Minister of that regency, repaired, in full uniform and accompanied by a numerous *suite*, to the French Consulate, and, on behalf of the Bey, tendered a full apology for recent offenses complained of by the Government of the French Republic. The Consul was surrounded by all of his staff and the officers of the French fleet stationed off Tunis, when he received Ben Ismail.

At Paris all trace of the International Exhibition of 1878 has by no means yet disappeared. The palace will continue to crown the hill of Trocadéro. We are told that several new museums are to grow out of the vast temporary museum on the Champs de Mars: an educational museum, to include everything connected with schools and teaching that the Exhibition contained; an ethnological and ethnographic museum, to provide these new studies with the scientific elements of comparative observation. There is a talk of organizing an enormous industrial museum in the galleries of the Champs de Mars, where the machines would be seen at work. The Central Union of Arts has opened a museum of industrial art in the Pavillion de Flor, on the model of the Kensington Museum; and M. Viollet le Duc has started a plan for a popular theatre, with very low entrance fees, where the actors and actresses of the subsidized theatre would play the best pieces and operas in their repertoire.

In Germany, according to the true picture drawn by an intelligent French observer, there is misery among the people and a deficit in the budget, and "the Government wrings from the Chambers a discontented adherence to iniquitous laws that are applied with a violence and arbitrariness worthy of the Second French Empire." Bismarck's latest act of despotism is an effort to obtain a Bill to authorize the opening of private letters on the frontier, and it should make him as unpopular everywhere as a similarly infamous measure once made Sir James Graham, the British Postmaster-General. The Russo-Turkish treaty has been signed at Constantinople. Hard times have reached Switzerland.

THE new United States Senator from Colorado, Professor N. P. Hill, has been for several years actively identified with the mining interests of that State. He was formerly Professor of Chemistry in Brown University, and, after visiting mines in several countries to inspect smelting processes, located in Colorado as superintendent of the largest smelting works in the world, the profits of which are said to be nearly three millions of dollars per annum. He is an ardent Republican, a man of marked ability, and will, no doubt, worthily fill the seat vacated by Senator Chaffee, whose retirement is understood to be due to failing health.

IT must be a delightful thing to be Speaker of the Assembly at Albany. For several days after his election to that office, Mr. Alvord was obliged to remain in hiding in order to escape the importunities of persons anxious to get "good places" on the committees. It has been hinted that the Speaker's real object in remaining in concealment was that he might the better, with the few "Ring" politicians whom he admitted to his councils, fix the committees satisfactorily to the corporation and other interests which helped him to his election; but that, of course, is a slander. It is not to be believed for a moment that the tricks which so often polluted the old Capitol will be permitted to tarnish the purity of the new.

SEVENTY millions of United States six per cent. bonds have been called in since the last day of December, and the subscriptions to the four per cents continue at a rate which will make other calls certain and speedy. Abroad, our securities are every day growing in favor. In London the six per cents are quoted at 103¼, the fives at 108¾, and the four-and-a-half per cents at the same figure. The anomaly of a six per cent. bond being worth less than one of five per cent. is a curious feature of the market; but it is accounted for by the fact that holders, realizing that the former are likely to be soon called in, are hastening to realize on those they hold before the premium disappears, and then reinvesting in those which possess a permanent and stable quality as an element of value.

SECRETARY SHERMAN is receiving a good deal of commendation in connection with the resumption of specie payments to which he is not entitled. He has done his whole duty in enforcing the law fixing a definite day for resumption; but he vigorously protested, when in the Senate, against that provision of the Act, and his financial record, while a member of that body, was full of glaring inconsistencies. Ever since he has been Secretary of the Treasury he has coquetted with delusions, which all friends of sound money regarded with apprehension. By all means, let Mr. Sherman have all the credit to which he is entitled, but, in honoring him, let us see to it that we do not rob of their just laurels the men in both branches of Congress who, all through the bitter financial struggle, stood firmly for honest money and the fulfillment of the nation's pledges, and so at last made resumption possible.

THE opponents of the national banking system will find in the last report of Comptroller Knox, of the United States Treasury, some statistical tables which are well worth their attention. These tables compare the ratio of capital to liabilities in banks in the United States and Great Britain, and they show that our banks offer a security and possess a stability which, to say the least, are not exceeded by similar institutions in England or Scotland. Mr. Knox shows that, while the ratio of the capital reserve fund and undivided profits of our national banks to their liabilities is 54 73-100 per cent., the ratio of capital and undivided profits to liabilities of the banks of Great Britain from which reports are received is only 23 7-100 per cent. These figures tell their own story. There can be no doubt at all that our banking system, no matter how savagely it may be assailed by politicians of a certain sort, is incomparably the best we have ever had. It is the first and only one that has ever made the note-holder absolutely secure, and the losses of other creditors have been proportionately smaller than under any other system. The party that shall attempt its destruction, without proposing anything better, will certainly go to the wall.

NEWS OF THE WEEK

Domestic.

THE Brooklyn Board of Aldermen have voted to pay no more money for the Bridge until New York pays its quota.

CHIEF JUSTICE CHARLES P. DALY was re-elected President of the American Geographical Society at the annual meeting, January 14th.

THE Senate has passed the Bill relative to arrears of pensions, which will add some $15,000,000 to the Treasury expenditure on pension account.

THE Senate Elections Committee have decided to report in favor of admitting Mr. B. T. Corbin to the seat now occupied by General M. C. Butler, of South Carolina.

THE jury in the case of Mrs. Cobb charged with Wesley W. Bishop with having poisoned her husband, brought in a verdict of murder in the second degree, on January 16th.

MEMORIAL services were held in the hall of the House of Representatives, on the evening of January 14th, in honor of the late Professor Henry, Secretary of the Smithsonian Institution.

FUNERAL services over the remains of the late Congressman Schleicher of Texas, were held in the Hall of the House of Representatives, on January 13th, the Senate participating in a body.

CHARLES SHARPE and James McDonnell were hanged at Mauch Chunk, Pa., January 14th, for a Mollie Maguire murder committed in 1862, and thirty seconds after the drop fell a reprieve was received from the Governor.

A FIRE destroyed the Building, on Broadway and Grand Street, on the night of January 14th. Loss on stock $1,500,000; on building, $500,000; insurance $1,813,452. One fireman was killed and another seriously injured.

THE General Term has reversed Justice Barrett's decision and ordered a mandamus to issue compelling the Comptroller to issue bonds and pay over to the trustees of the East River Bridge the amounts of two calls for $500,000.

THE runaway Cheyenne Indians, who escaped death by capture in the recent fight with Federal troops after breaking jail at Fort Robinson, Nebraska, are still at large, supposed to be *en route* to the camp of the Sioux at the Pine Ridge Agency.

DELEGATES from various civilized tribes of the Indian country now in Washington to oppose the proposed incorporation of the Indian Territory into the Territory of Oklahoma assert boldly that if the Government undertakes to organize this new Territory without the consent of the Indians, in the interest of railroad corporations, it will have another huge war on its hands.

PROFESSOR N. B. HILL has been elected United States Senator in Colorado; O. H. Platt in Connecticut; ex-Governor Vance in North Carolina; General James Shields for the short, and George G. Vest for the long, term in Missouri; while in Illinois General John A. Logan has received the Republican nomination; in Wisconsin forty-eight ballots have been had in the Republican caucus without a result, the leading candidates being Senator Howe, ex-Senator Carpenter and Mr. Keyes, the latter being ahead at last reports.

A FIRE on the night of January 17th destroyed three large wholesale drygoods houses at Nos 58, 60, 62, 64, 66 and 68 Worth Street, and Nos. 66, 68, 70 and 72 Thomas Street. The stocks of nineteen large drygoods firms were wholly destroyed, involving a loss estimated at over a million. The firms which suffer the greatest loss are Walkinshaw & Voigt, whose stock was valued at over a million; and Van Valkenburgh & Leavitt, whose loss was placed at $500,000. No accurate estimate of the losses of the other firms could be gained. The block was regarded by insurance men as the one upon which the heaviest risks were placed of any in the city.

Foreign.

PRESIDENT MACMAHON has signed a decree pardoning 1,300 Communists.

THE French Senate has elected M. Louis Joseph Martel, who was nominated by the Left, President of that body.

IN the event of failure of the financial schemes now under consideration, it is said the Turkish Government will resort to a forced loan.

AN explosion took place in the Dinas colliery, in the Rhondda Valley, Wales, on January 13th, while sixty men were in the pit. No rescue had been effected at last accounts.

THE trial of Passannante, for the attempted assassination of King Humbert, has been postponed until February, his counsel having requested an examination into his mental condition.

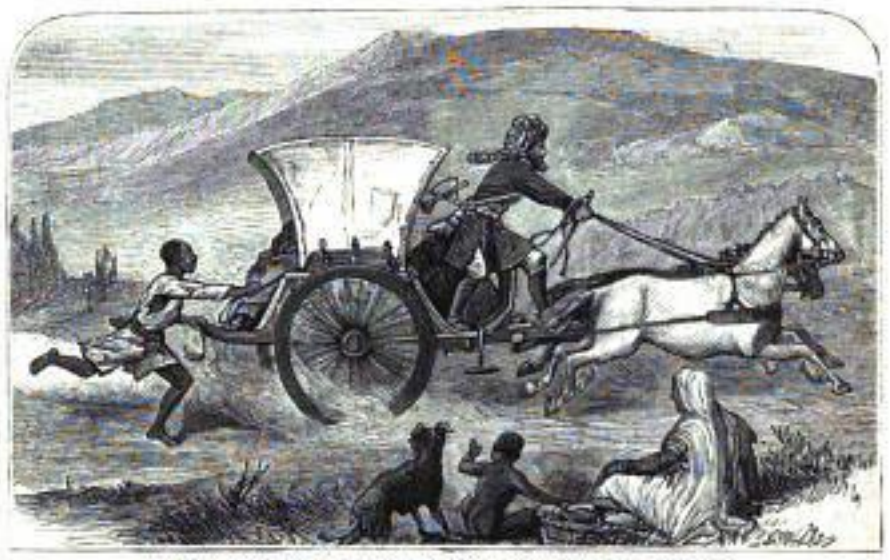
THE Governments of Germany, Great Britain, France, United States, Italy, Belgium, Spain and Portugal are said to have agreed to the rules drafted at Berlin to prevent collisions at sea.

CAPTAIN-GENERAL MARTINEZ CAMPOS has paid out of his own pocket $400,000 in paper currency, to be distributed among the various charitable societies on the King's Saint-day, the 23d of January.

IT is said in Berlin, in reference to the projected Russian loan, that European capitalists will only supply the money if the Russian armies in Turkey are withdrawn, and Russia forbears to engage in a fresh war in Asia.

THE umpire in the wages dispute in the Cleveland and North of England iron trade has decided that the men must accept the reduction. The colliers in the Barnsley district are bringing out their tools from the mines, having determined to reject the arbitration scheme. Several of the collieries are idle.

AT a dinner given at the Palais de l'Elysée, the residence of President MacMahon, in honor of ex-President Grant, on January 16th, among the invited guests were General Grant and family, Mr. Washington and wife, General Noyes and wife, Miss King, Miss Stevens, the members of the Chinese Embassy, the representatives of San Salvador, Buenos Ayres, Chili, Guatemala, Peru, Colombia and Uruguay, and a number of French generals and admirals.



IN the French Chamber of Deputies on June 16th, M. de Marcere, Minister of the Interior, read the Ministerial declaration. It says that the Senatorial elections are a striking indication of the adhesion of the people to the Republican policy. It alludes favorably to the work of the Berlin Congress, and hopefully to the execution and results of the Treaty of Berlin. It refers to the pardons of Communists already granted, and promises a further extension of clemency.

INTERIOR OF THE FISH-MARKET IN THE CITY OF HAVANA.

SCENES IN HAVANA.

THE quaint street represented in our illustration is extremely picturesque. The balconies of old Spain, the zealously guarded windows, so friendly to watchful duellas, so hostile to amorous caballeros, the hanging windows, all remind one of the country of the Cid. The omnipresent mule is attached to a rude cart on which the baskets of fish are packed by the bold speculators, who have just invested at the adjoining market-place. The harness of the mule is in itself a picture, while the lazy, graceful attitudes of the vendors of the fish are such as Gustave Doré would love to paint.

One of the most animated sights it is possible to conceive is the interior of the fishmarket at Havana. A long counter, placed at an angle, contains fish in compartments—fish of the most extraordinary shapes and the most wondrous colors. Talk of the iridescence of Idalian glass! the fish in the Havana market give forth tints rivaling the opal for lustre and sheen, while as regards form, we have it here in its infinite variety. The Babel of tongues as one enters is almost deafening—dusky housewives haggling over bargains, darkeys engaged in animated discussion, while the venders declaim at the uttermost pitch of their lungs the admirable and surpassing qualities of their glittering wares. The fish is weighed in a scales suspended from the roof, and the most scrupulous care taken to give good and honest measure.

The bay behind the fish-market is Venetian in aspect. The boats laden with their many-tinted cargoes, the picturesque attire of the fishermen, the latticed market-place, the mirror-like waters laving the stone steps, and, above all, the vertical sun shining down in unsurpassing lustre! It is here that the fish for supplying the city of Havana is landed. Boats continually come and go; fishermen, laden with heavy baskets containing their finny prey, pass up and down the steps, while at early morn after the night-haul the waters are as solid land with the tightly packed boats.

MADAME ANDERSON'S PLUCKY WALK.

(Continued from front page.)

Hushing the cheers and yells with which she was greeted, she announced that she wished to sing a farewell song. Amid the silence that followed she sang, but with considerable effort, three verses of a song entitled, "Nil Desperandum." The bell ringing just as she finished, she hurried down and into the dressing-room amid tremendous applause. As, three minutes later, the bell again rang, calling her to the track for the last time, she darted from the little doorway before its sound had ceased, and started off at a terrific pace, determined to beat 2:40, the best recorded time made by one of her male friends some days before. The band tried to play "Don't Get Weary," but its loudest discords were drowned by the deafening cheers and yells that were kept up during the next three minutes. The women yelled with the men, and became frantic in their excitement. The air was white with the fluttering of handkerchiefs, and the scene presented has seldom been equaled in Brooklyn. As the bell was rung for the last time, announcing that but one more lap remained to be walked, the plucky woman increased her speed with a tremendous effort, and came flying down over the homestretch with a face absolutely devoid of color, eyes fixed, and teeth clinched. The pace was a run rather than a walk, and as she finished she was lifted into a chair on the platform in the last stages of exhaustion. The frenzied cheering was hushed for a moment as the scorer announced that the quarter was the fastest of the entire walk, and had been made in 2:37½, and then it was renewed, louder, if possible, than before. At the close she tendered her thanks to the spectators in a brief biographical speech, and was then carefully wrapped in blankets and driven away for a well-earned resting spell.

SCENE AT THE END OF THE FISH-MARKET.

THE LURAY CAVE.

DOUBLE COLUMN IN THE NAIAD'S BATH.

AN inspection of the Giant's Hall alone, in the newly discovered cave at Luray, Va., will amply repay the expense, time and fatigue of a long journey. Grand in its proportions, entrancing in its sparkling ceiling and walls, as it is, it displays within its area a host of attractions, any one of which may be well denominated a wonder. A fallen column, that must have been forty feet long, lies across the path just beyond the entrance, showing clearly the break made centuries ago in its fall. Shafts, domes, minarets, as well as slender and lofty spires, shoot upwards from amid great blocks of limestone and carloads of red clay. The Sultana column with its turbaned head, the Empress column with its graceful and correct fluting, and the Tower of Babel, a storied mass of singular carvings, beautiful and grand as they are, appear quite dwarfish beside the Double Column which rises from the Naiad's Bath. It comprises a stalactite fifty feet long, and a stalagmite thirty feet high, that, instead of becoming two pillars, are merged into one, without, however, losing their individual peculiarities of form and colors. The stalactite tapers down in long unbroken grooves from the roof to the floor, while the stalagmite rises in successive stories with rows of tiny pillars supporting them. Viewed singly or in comparison with the other columns, this one will rivet the attention of the tourist for hours. Seen from different points

of the Hall, with fingers of variously colored formations protruding here and there, and knobs and clusters flashing brilliantly in the glare of the torch or other light, the Giant's Hall is without a peer among the grand phenomena of nature.

THE FALLEN LEAVES.

By Wilkie Collins.

CHAPTER IV.

"MELLICENT is in love with you."

Amelius looked at his companions, in some doubt whether they would preserve their gravity at this critical point in his history. They both showed him that his apprehensions were well founded. He was a little hurt, and he instantly revealed it. "I own to my shame that I burst out laughing myself," he said. "But you two gentlemen are older and wiser than I am. I didn't expect to find you just as ready to laugh at poor Miss Mellicent as I was."

Mr. Hethcote declined to be reminded of his duties as a middle-aged gentleman in this backhanded manner. "Gently, Amelius! You can't expect to persuade us that a laughable thing is not a thing to be laughed at. A woman close on forty who falls in love with a young fellow of twenty-one——"

"Is a laughable circumstance," Rufus interposed. "Whereas a man of forty who fancies a young woman of twenty-one is all in the order of nature. The men have settled it so. But why the women are to give up so much sooner than the men is a question, sir, on which I have long wished to hear the sentiments of the women themselves."

Mr. Hethcote dismissed the sentiments of the women with a wave of his hand. "Let us hear the rest of it, Amelius. Of course you went on to the fishing-house? And of course you found Miss Mellicent there?"

"She came to the door to meet me, much as usual," Amelius resumed—"and suddenly checked herself in the act of shaking hands with me. I can only suppose she saw something in my face that startled her. How it happened, I can't say; but I felt my good spirits forsake me the moment I found myself in her presence. I doubt if she had ever seen me so serious before. 'Have I offended you?' she asked. Of course I denied it; but I failed to satisfy her. She began to tremble. 'Has somebody said something against me? Are you weary of my company?' Those were the next questions. It was useless to say No. Some perverse distrust of me, or some despair of herself, overpowered her on a sudden. She sank down on the floor of the fishing-house, and began to cry—not a good hearty burst of tears—a silent, miserable resigned sort of crying, as if she had lost all claim to be pitied, and all right to feel wounded or hurt. I was so distressed that I thought of nothing but consoling her. I meant well, and I acted like a fool. A sensible man would have lifted her up, and left her to recover herself. I lifted her up, and put my arm round her waist. She looked at me as I did it. For just a moment, I declare she became twenty years younger! She blushed as I have never seen a woman blush before or since; the color flowed all over her neck as well as her face. Before I could say a word, she caught hold of my hand and, of all the confusing things in the world, kissed it. 'No!' she cried, 'don't despise me! don't laugh at me! Wait, and hear what my life has been, and then you will understand why a little kindness overpowers me.' She looked round the corner of the fishing-house suspiciously. 'I don't want anybody else to hear us,' she said; 'all the pride isn't beaten out of me yet. Come to the lake and row me about in the boat.' I took her out in the boat. Nobody could hear us certainly; but she forgot, and I forgot, that anybody might see us, and that appearances on the lake might lead to false conclusions on shore."

Mr. Hethcote and Rufus exchanged significant looks. They had not forgotten the Rules of the Community, when two of its members showed a preference for each other's society.

Amelius proceeded. "Well, there we were on the lake. I paddled with the oars—and she opened her whole heart to me. Her troubles had begun, in a very common way, with her mother's death and her father's second marriage. She had a brother and a sister—the sister married to a German merchant, settled in New York; the brother comfortably established as a sheep-farmer in Australia. So, you see, she was alone at home, at the mercy of the stepmother. I don't understand these cases myself; but people who do tell me that there are generally faults on both sides. To make matters worse, they were a poor family; the one rich relative being a sister of the first wife, who disapproved of the widower marrying again, and never entered the house afterwards. Well, the stepmother had a sharp tongue—and Mellicent was the first person to feel the sting of it. She was reproached with being an incumbrance on her father, when she ought to be doing something for herself. There was no need to repeat those harsh words. The next day she answered an advertisement. Before the week was over, she was earning her bread as a daily governess."

Here Rufus stopped the narrative, having an interesting question to put. "Might I inquire, sir, what her salary was?"

"Thirty pounds a year," Amelius replied. "She was out teaching from nine o'clock to two—and then went home again."

"There seems nothing to complain of in that, as salaries go," Mr. Hethcote remarked.

"She made no complaint," Amelius rejoined. "She was satisfied with her salary; but she wasn't satisfied with her life. The meek little woman grew downright angry when she spoke of it. 'I had no reason to complain of my employers,' she said. 'I was civilly treated and punctually paid; but I never made friends of them. I tried to make friends of the children; and sometimes I thought I had succeeded—but, oh, dear, when they were idle, and I was obliged to keep them to their lessons, I soon found how little hold I had on the love that I wanted them to give me. We see children in books who are perfect little angels; never envious or greedy or sulky or deceitful; always the same sweet, pious, tender, grateful innocent creatures—and it has been my misfortune never to meet with them, go where I might! It is hard world, Amelius, the world that I have lived in. I don't think there are such miserable lives anywhere as the lives led by the poor middle classes in England. From year's end to year's end the one dreadful struggle to keep up appearances, and the heart-breaking monotony of an existence without change. We lived in the back street of a cheap suburb. I declare to you we had but one amusement in the whole long weary year—the annual concert the clergyman got up in aid of his schools. The rest of the year it was all teaching for the first half of the day, and needlework for the young family for the other half. My father had religious scruples; he prohibited theatres, he prohibited dancing and light reading; he even prohibited looking in at the shop-windows, because we had no money to spare and they tempted us to buy. He went to business in the morning, and came back at night, and fell asleep after dinner, and woke up and read prayers—and next day to business and back, and sleeping and waking and reading prayers—and no break in it, week after week, month after month, except on Sunday, which was always the same Sunday; the same church, the same service, the same dinner, the same book of sermons in the evening. Even when we had a fortnight once a year at the seaside, we always went to the same place and lodged in the same cheap house. The few friends we had led just the same lives, and were beaten down flat by just the same monotony. All the women seemed to submit to it contentedly except my miserable self. I wanted so little! Only a change now and then; only a little sympathy when I was weary and sick at heart; only somebody whom I could love and serve, and be rewarded with a smile and a kind word in return. Mothers shook their heads, and daughters laughed at me. Have we time to be sentimental? Haven't we enough to do, darning and mending, and turning our dresses, and making the joint last as long as possible, and keeping the children clean, and doing the washing at home—and tea and sugar rising, and my husband grumbling every week when I have to ask him for the house-money. Oh, no more of it! no more of it! People meant for better things all ground down to the same sordid and selfish level—is that a pleasant sight to contemplate? I shudder when I think of the last twenty years of my life!' That's what she complained of, Mr. Hethcote, in the solitary middle of the lake, with nobody but me to hear her."

"In my country, sir," Rufus remarked, "the Lecture Bureau would have provided for her amusement on economical terms. And I reckon, if a married life would fix her, she might have tried it among Us by way of a change."

"That's the saddest part of the story," said Amelius. "There came a time, only two years ago, when her prospects changed for the better. Her rich aunt (her mother's sister) died; and—what do you think?—left her a legacy of six thousand pounds. *There* was a gleam of sunshine in her life! The poor teacher was an heiress in a small way, with her fortune at her own disposal. They had something like a festival at home, for the first time; presents to everybody, and kissings and congratulations, and new dresses at last. And, more than that, another wonderful event happened before long. A gentleman made his appearance in the family circle with an interesting object in view—a gentleman, who had called at the house in which she happened to be employed as teacher at the time, and had seen her occupied with her pupils. He had kept it to himself, to be sure, but he had secretly admired her from that moment—and now it had come out! She had never had a lover before; mind that. And he was a remarkably handsome man; dressed beautifully, and sang and played, and was so humble and devoted with it all. Do you think it wonderful that she said Yes when he proposed to marry her? I don't think it wonderful, at all. For the first few weeks of the courtship the sunshine was brighter than ever. Then the clouds began to rise. Anonymous letters came, describing the handsome gentleman (seen under his fair surface) as nothing less than a scoundrel. She tore up the letters indignantly—she was too delicate even to show them to him. Signed letters came next, addressed to her father by an uncle and an aunt, both containing one and the same warning: 'If your daughter insists on having him, tell her to take care of her money.' A few days later a visitor arrived—a brother, who spoke out more plainly still. As an honorable man, he could not hear of what was going on without making the painful confession that his brother was forbidden to enter his house. That said, he washed his hands of all further responsibility. You two know the world, you will guess how it ended. Quarrels in the household; the poor middle-aged woman, living in her fool's Paradise, blindly true to her lover; convinced that he was foully wronged; frantic when he declared that he would not connect himself with a family which suspected him. Ah, I have no patience when I think of it—I almost wish I had never begun to tell the story! Do you know what he did? She was free, of course, at her age, to decide for herself; there was no controlling her. The wedding-day was fixed. Her father had declared he would not sanction it; and her mother in law kept him to his word. She went alone to the church, to meet her promised husband. He never appeared; he deserted her, mercilessly deserted her—after she had sacrificed her own relations to him—on her wedding-day. She was taken home insensible, and had a brain fever. The doctors declined to answer for her life. Her father thought it time to look at her banker's pass-book. Out of her six thousand pounds she had privately given no less than four thousand to the scoundrel who had deceived and forsaken her! Not a month afterwards he married a young girl—with a fortune, of course. We read of such things in newspapers and books. But to have them brought home to one, after living one's own life among honest people—I tell you it stupefied me!"

He said no more. Below them in the cabin voices were laughing and talking, to a cheerful accompaniment of clattering knives and forks. Around them spread the exultant glory of sea and sky. All that they heard, all that they saw, was cruelly out of harmony with the miserable story which had just reached its end. With one accord the three men rose and paced the deck, feeling physically the same need of some movement to lighten their spirits. With one accord they waited a little, before the narrative was resumed

CHAPTER V.

MR. HETHCOTE was the first to speak again.

"I can't understand the poor creature's motive in joining your Community," he said. "To a person of any sensibility her position, among such relatives as you describe, must have been simply unendurable after what had happened. How did she hear of Tadmor and the Socialists?"

"She had read one of our books," Amelius answered; "and she had her married sister at New York to go to. There were moments, after her recovery (she confessed it to me frankly), when the thought of suicide was in her mind. Her religious scruples saved her. She was kindly received by her sister and her sister's husband. They proposed to keep her with them to teach their children. No! the new life offered to her was too like the old life—she was broken in body and mind; she had no courage to face it. We have a resident agent in New York; and he arranged for her journey to Tadmor. There is a gleam of brightness, at any rate, in this part of her story. She blessed the day, poor soul, when she joined us. Never before had she found herself among such kind-hearted, unselfish, simple people. Never before—" he abruptly checked himself, and looked a little confused.

Obliging Rufus finished the sentence for him. "Never before had she known a young man with such natural gifts of fascination as C. A. G. Don't you be too modest, sir; it doesn't pay, I do assure you, in the nineteenth century."

Amelius was not as ready with his laugh as usual. "I wish I could drop it at the point we have reached now," he said. "But she has left Tadmor; and, in justice to *her*—after the scandals in the newspaper—I must tell you how she left it, and why. The mischief began when I was helping her out of the boat. Two of our young women met us on the bank of the lake, and asked me how I got on with my fishing. They didn't mean any harm; they were only in their customary good spirits. Still, there was no mistaking their looks and tones when they put the question. Miss Mellicent, in her confusion, made matters worse. She colored up, and snatched her hand out of mine, and ran back to the house by herself. The girls, enjoying their own foolish joke, congratulated me on my prospects. I must have been out of sorts in some way—upset, perhaps, by what I had heard in the boat. Anyhow, I lost my temper, and *I* made matters worse next. I said some angry words, and left them. The same evening I found a letter in my room. 'For your sake, I must not be seen alone with you again. It is hard to lose the comfort of your sympathy, but I must submit. Think of me kindly as I think of you. It has done me good to open my heart to you.' Only those lines, signed by Mellicent's initials. I was rash enough to keep the letter, instead of destroying it. All might have ended well, nevertheless, if she had only held to her resolution. But, unluckily, my twenty-first birthday was close at hand, and there was talk of keeping it as a festival in the Community. I was up with sunrise when the day came, having some farming-work to look after, and wanting to get it over in good time. My shortest way back to breakfast was through a wood. In the wood I met her."

"Alone?" Mr. Hethcote asked.

Rufus expressed his opinion of the wisdom of putting this question with his customary plainness of language. "When there's a rash thing to be done by a man and a woman together, sir, philosophers have remarked that it's always the woman who leads the way. Of course she was alone."

"She had a little present for me on my birthday," Amelius explained—"a purse of her own making; and she was afraid of the ridicule of the young women if she gave it to me openly. 'You have my heart's dearest wishes for your happiness; think of me sometimes, Amelius, when you open your purse.' If you had been in my place, could you have told her to go away when she said that, and put her gift into your hand? Not if she had been looking at you at the moment—I'll swear you couldn't have done it!"

The long, lean yellow face of Rufus Dingwell relaxed for the first time into a broad grin. "There are further particulars, sir, stated in the newspapers," he said, slyly.

"Damn the newspapers!" Amelius answered.

Rufus bowed, serenely courteous, with the air of a man who accepted a British oath as an unwilling compliment paid by the old country to the American press. "The newspaper report states, sir, that she kissed you."

"It's a lie!" Amelius shouted.

"Perhaps it's an error of the press," Rufus persisted. "Perhaps you kissed *her*?"

"Never mind what I did," said Amelius, savagely.

Mr. Hethcote felt it necessary to interfere. He addressed Rufus in his most magnificent manner. "In England, Mr. Dingwell, a gentleman is not in the habit of disclosing these—er—these—er, er——"

"These kissings in a wood?" suggested Rufus. "In my country, sir, we do not regard kissing, in or out of a wood, in the light of a shameful proceeding. Quite the contrary, I do assure you."

Amelius recovered his temper. The discussion was becoming too ridiculous to be endured by the unfortunate person who was the object of it.

"Don't let us make mountains out of molehills," he said. "I did kiss her—there! A woman pressing the prettiest little purse you ever saw into your hand, and wishing you many happy returns of the day with the tears in her eyes, I should like to know what else was to be done but to kiss her. Ah, yes, smooth out your newspaper report, and have another look at it! She *did* rest her head on my shoulder, poor soul, and she *did* say, 'Oh, Amelius, I thought my heart was turned to stone; feel how you have made it beat!' When I remembered what she had told me in the boat, I declare to God I almost burst out crying myself—it was so innocent and so pitiful."

Rufus held out his hand with true American cordiality. "I do assure you, sir, I meant no harm," he said. "The right grit is in you, and no mistake—and there goes the newspaper!" He rolled up the slip, and flung it overboard.

Mr. Hethcote nodded his entire approval of this proceeding. Amelius went on with his story.

"I'm near the end now," he said. "If I had known it would have taken so long to tell—never mind! We got out of the wood at last, Mr. Rufus; and we left it without a suspicion that we had been watched. I was prudent enough (when it was too late, you will say) to suggest to her that we had better be careful for the future. Instead of taking it seriously, she laughed. 'Have you altered your mind since you wrote to me?' I asked. 'To be sure I have,' she said. 'When I wrote to you I forgot the difference between your age and mine. Nothing that we do will be taken seriously. I am afraid of their laughing at me, Amelius, but I am afraid of nothing else.' I did my best to undeceive her. I told her plainly that people unequally matched in years—women older than men, as well as men older than women—were not uncommonly married among us. The council only looked to their being well suited in other ways, and declined to trouble itself about the question of age. I don't think I produced much effect; she seemed, for once in her life, poor thing, to be too happy to look beyond the passing moment. Besides, there was the birthday festival to keep her mind from dwelling on doubts and fears that were not agreeable to her. And the next day there was another event to occupy our attention—the arrival of the lawyer's letter from London, with the announcement of my inheritance on coming of age. It was settled, as you know, that I was to go out into the world, and to judge for myself; but the date of my departure was not fixed. Two days later, the storm that had been gathering for weeks past burst on us—we were cited to appear before the council to answer for an infraction of the Rules. Everything that I have confessed to you, and some things besides that I have kept to myself, lay formally inscribed on a sheet of paper placed on the council table—and pinned to the sheet of paper was Mellicent's letter to me, found in my room. I took the whole blame on myself, and insisted on being confronted with the unknown person who had informed against us. The council met this by a question: 'Is the information in any particular false?' Neither of us could deny that it was in every particular true. Hearing this, the council decided that there was no need, on our own showing, to confront us with the informer. From that day to this I have never known who the spy was. Neither Mellicent nor I had an enemy in the Community. The girls who had seen us on the lake, and some other members who had met us together, only gave their evidence on compulsion—and even then they prevaricated, they were so fond of us and so sorry for us. After waiting a day, the governing body pronounced their judgment. Their duty was prescribed to them by the Rules. We were sentenced to six months' absence from the Community; to return or not as we pleased. A hard sentence, gentlemen—whatever we may think of it—to homeless and friendless people, to the Fallen Leaves that had drifted to Tadmor. In my case it had been already arranged that I was to leave. After what had happened, my departure was made compulsory in four-and-twenty hours; and I was forbidden to return until the date of my sentence had expired. In Mellicent's case they were still more strict. They would not trust her to travel by herself. A female member of the Community was appointed to accompany her to the house of her married sister at New York; she was ordered to be ready for the journey by sunrise the next morning. We both understood, of course, that the object of this was to prevent our traveling together. They might have saved themselves the trouble of putting obstacles in our way."

"So far as you were concerned, I suppose?" said Mr. Hethcote.

"So far as she was concerned, also," Amelius answered.

"How did she take it, sir?" Rufus inquired.

"With a composure that astonished us all," said Amelius. "We had anticipated tears and entreaties for mercy. She stood up perfectly calm, far calmer than I was, with her head

Digitized by Google

turned towards me, and her eyes resting quietly on my face. If you can imagine a woman whose whole being was absorbed in looking into the future; seeing what no mortal creature about her saw; sustained by hopes that no mortal creature about her could share—you may see her as I did when she heard her sentence pronounced. The members of the Community, accustomed to take leave of an erring brother or sister with loving and merciful words, were all more or less distressed as they bade her farewell. Most of the women were in tears as they kissed her. They said the same kind words to her over and over again: 'We are heartily sorry for you, dear; we shall all be glad to welcome you back.' They sang our customary hymn at parting—and broke down before they got to the end. It was she who consoled *them!* Not once, through all that melancholy ceremony, did she lose her strange composure, her rapt mysterious look. I was the last to say farewell; and I own I couldn't trust myself to speak. She held my hand in hers. For a moment, her face lighted up softly with a radiant smile—then the strange preoccupied expression flowed over her again, like shadow over a light. Her eyes, still looking into mine, seemed to look beyond me. She spoke low, in sad, steady tones. 'Be comforted, Anselius; the end is not yet.' She put her hands on my head, and drew it down to her. 'You will come back to me,' she whispered—and kissed me on the forehead before them all. When I looked up again, she was gone. I have neither seen her nor heard from her since. It's all told, gentleman—and some of it has distressed me in the telling. Let me go away for a minute by myself, and look at the sea.

(To be continued.)

NATIONAL MILITIA CONVENTION.

RECEPTION OF THE DELEGATES BY JUDGE HENRY HILTON.

A CONVENTION of delegates representing the militia of the several States met at the Seventh Regiment Armory, in this city, on the 16th instant, to consider the subject of reorganizing the militia of the United States on a uniform and coherent basis. Adjutant-General C. H. Barney, of Rhode Island, was made chairman. A draft of an Act to be submitted to Congress was presented, and after consideration, finally adopted. One of the principal articles of the proposed Act provides for the assignment of adjutants of regiments, or assistant-adjutant generals of brigades and divisions, from the active or retired list of the army, by the Secretary of War. This section was received with considerable enthusiasm, as being a good thing for the National Guard to have an officer who had been educated as a soldier, and understood an officer's duties, as the colonel a lieutenant, or the "business manager" of the regiment. Another section which was received with much favor provides for the annual encampment of a portion of the militia of each of the several States, and that a portion of the annual appropriation should be set aside for this purpose. It was proposed in a general discussion that a convention should be held similar to the one now in session every year, and that an association be formed from the convention having a proper constitution and by-laws.

On the evening of the 16th the delegates attended a reception given by Judge Henry Hilton at his residence, No. 7 West Thirty-fourth Street. Some wore their military uniforms, while others whose States do not support a uniformed militia were attired in evening dress. The arrangements for their entertainment had been made in the most lavish manner. Every room from the main floor to the upper stories was thrown open and brilliantly lighted. Two committees met the guests in the vestibule. The rooms were all tastefully decorated with choice flowers uniquely arranged in chains along the edges of the mantels and heavier articles of furniture, on the highly-polished chandeliers, and over the larger paintings with which the walls were nearly covered. Here and there was a large Japanese vase containing a growing palm or tapioca plant. On each centre-table was a basket of flowers arranged with a pillow-like surface, and around every basket was a row of button-hole bouquets, which were supplied to guests. Judge Hilton received his guests in the main drawing-room, as they were severally presented to him by Mr. Henry Clair, Mr. Charles Shelley, or his sons. So large was the throng that involuntarily a line was formed, which passed in at one entrance, paid its respects to the host, and defiled out at another door. In the third story Lander's Band performed choice selections from the latest operas throughout the evening. Supper was served at an early hour, and the table of choice viands was kept well supplied until the last of the guests had departed. The menu was provided by Delmonico, and the table decorations were of decidedly warlike-looking confectionery. At the head of the table was a piece representing a fort, defended on four sides by miniature cannon, and surmounted by shields bearing the letters "N. G. S. N. Y." At the foot of the board was a candy *épergne* with double stand, at its summit being a full-size cavalry helmet with flowing horse-hair plumes of the regulation color—yellow. On a side-board was a miniature "headquarters" tent, also wrought in confectionery. It was surrounded by four sentries, who were represented as being "on guard." The colonel's table, containing writing materials and works on the tactics, stood in the centre of the tent. There were several large oval baskets of flowers placed in position about the room, and at a side-board champagne from Judge Hilton's private cellar was dispensed in foaming glasses. Judge Hilton's private bedroom had been set apart for the display of the new and elegant trophy, valued at $1,000, which the Judge presented for competition by military teams last year. It is not quite finished, but was mounted on wires for exhibition last evening, and formed a flank for the large bronze "Inter-State trophy" on one side, while the Centennial Palma formed the other flank piece.

There were nearly 500 persons present during the evening, and, although the reception was intended to be a military affair, there were many prominent members of the Bar, merchants, and representatives of the Judiciary present. Cardinal McCloskey and Vicar-General Quinn sent their cards. Among the guests were General Hancock and staff; Captain Ward, commandant of Governor's Island; General A. E. Burnside, General M. T. McMahon, General Alexander Shaler and Staff; General Frederick Vilmar and staff; ex-Governor Rice, of Massachusetts; ex-Governor Hoffman, Judge Joseph F. Daly, Judge Henry E. Davies, General Quincy A. Gillmore, Rev. Dr. E. H. Chapin, Augustus Schell, Judge Noah Davis, and many others.

The Wealth of France.

M. VACHER, Vice-President of the Paris Statistical Society, has just prepared a *memoire* upon the public and private wealth of France, which is full of interest. The property of the State—that is, the palaces, the offices of the several ministries, with all their appurtenances, and the navy, but not the reconstructed war *materiel*, as to which M. Vacher thinks it best to give no information, and not the paintings, statues, and other objects of art in the Louvre and elsewhere, which, of course, cannot be valued—is stated to be worth £171,120,000. The value of the highways he estimates at the enormous sum of £305,100,000. The property in mortmain, in which is included the immovable property of the local authorities, hospitals, charitable institutions, and religious bodies, is estimated at £122,445,718. Thus the total public property enumerated is valued at £598,675,318, say six hundred millions sterling. An official conjecture for the corresponding items in Great Britain is four hundred millions. Passing to private property, we find that lands are estimated at £6,264,960,000; houses at £627,000,000; mineral waters at £4,800,000; fisheries, £1,840,000; shipping, £21,200,000; industrial businesses at about £552,320,000; money, £240,000,000; gold and silver ornaments, £20,800,000; Stock Exchange securities, £910,000,000, giving a total of £8,672,120,000. Adding the public property, we arrive, according to M. Vacher, at £9,270,000,000 as the gross total of the capital value of all kinds of French wealth, public and private. M. Vacher points out that the great increase of wealth in France has been since 1846. Previously to that year the accumulation of capital was very slow; since then it has been increasingly rapid. The cause, as was observed by Mr. Giffen, is the discovery of gold in California and Australia. The vast production of the metal has raised prices, and thus swollen values. No doubt, too, the construction of railways and the application of steam to navigation gave an immense impetus to commerce. The opening up of new countries, the vast emigration from Europe, the settlement of the Western States of America and of Australia, the adoption of free trade by England, and other influences, have all tended in the same direction.

Manufacturing Progress in the South.

ACCORDING to a carefully prepared statement of General L. P. Walker of Alabama, that State has 2,118 factories, working 8,249 hands, with a capital invested of $5,714,032, paying annually in wages $2,227,968, and yielding annually in products $13,040,644. Florida has 630 factories, working 2,749 hands, with a capital invested of $1,679,930, paying annually in wages $989,592, and yielding annually in products $4,685,403. Georgia has 3,846 factories, working 17,871 hands, with a capital invested of $13,930,125, paying in wages $4,844,568, yielding annually in products $31,196,115. Louisiana has 2,857 factories, working 30,071 hands, with a capital invested of $18,313,974, paying in wages $4,593,470, yielding annually in products $24,161,995. Mississippi has 1,731 factories, working 5,941 hands, with a capital invested of $4,501,714, paying in wages $1,579,428, yielding annually in products $8,154,758. South Carolina has 1,584 factories, working 8,141 hands, with a capital invested of $5,400,418, paying in wages $1,543,715, yielding annually in products $9,858,081. Texas has 2 319 factories, working 7,927 hands, with a capital invested of $5,284,110, paying in wages $1,787,385, yielding annually in products$ 11,517,302. Aggregate number of factories, 14,884; aggregate number of hands employed, 80,948; aggregate capital invested, $54 824,303; aggregate wages paid annually, $17,514,516; aggregate annual value of products, $102,615,108.

A Rich Man's Attempts to Make a Will.

THE city of Geneva has only just missed having left to it a legacy considerably richer than the heritage bequeathed to it by the late Duke of Brunswick. Count Potocki, who died a few months ago at his house in the Avenue Friedland, Paris, had an income of $400,000 a year from real estate alone, and $800,000 from life annuities which he had purchased from various life insurance companies. As the count lived to be eighty-four years old, this speculation proved very successful, so far as he was concerned. Though he was on good terms with his only son, Nicholas, he could not bear the idea of having an heir, and desired much to leave all his vast property in trust for charitable purposes; but, as the French law would not allow him to do this, he came a short time ago to Geneva, with the intention of bequeathing his fortune to the city, as the Duke of Brunswick had done. He found, however, that the Code Napoleon rules also in Geneva, and there no more than in France can a man make his own will. Then he went to England, got himself naturalized, and made a will, in which he cut off his son with a shilling, and left all else that he had to be divided among a number of philanthropic institutions. But, as it was evident that his end was approaching, his friends prevailed upon him to alter his testamentary dispositions in favor of his son, who had never given him cause of offense. Count Nicholas, therefore, inherits all his father's wealth—$400,000 a year, besides personal property of almost untold value. The late Count Potocki was the husband of the beautiful countess of that name, once a celebrity in the musical world, and known as the friend and benefactor of Chopin.

The Convict Camps of Georgia.

THE system of hiring out convict labor on lease contracts is but little understood at the North, and many inquiries are made concerning the value of the leases. Several of the lessees say that there is nothing in it, and some of them certainly seem anxious to get out of it. A one-twelfth interest in it, we understand, was sold a year ago for $1,500. A one-third interest in one camp (one-ninth of the whole) was offered at $5,000. Captain Nelms says that he thinks an able-bodied convict is worth $70 a year. This would make the 1,200 worth $84,000 a year, from which the $25,000 deducted would leave about $60,000 per annum net to the lessees. This runs for twenty years. Captain Nelms says if he had fifty convicts on a farm under this lease for twenty years he would retire from public life and get rich. The highest price ever paid for convicts as yet is $50 per head. This is paid by Mr. Smith Barnwell, who is said to be anxious to keep them at that rate. One of the lessees leased his convicts to another at $20 apiece, net, above the price to the State. In Texas the convicts bring $70 a head per annum, and Tennessee about $60 per head. In Kentucky the Keeper works them and pays $12,000 to the State above all expenses. At present the rate paid to Georgia is about $22.50 per head. As the number increases the *per capita* decreases. Captain Nelms thinks it will go to probably 1,700 men, and not much higher. He does not think it will ever reach as high as 2,000. It is probable that the *per capita*, through the lease, will average $45 to $47.50. At this rate there will be a probable profit of $30 to $50 *per capita* for all the convicts who can be kept at work. It is said that they are successful in farming. If this is so, work can be provided for them all. Captain Nelms says that Mr. Lockett made 1,200 bales of cotton with one hundred convicts, besides enough corn, peas, potatoes, etc., to do them. He estimates that Colonel Lockett must have cleared $25,000 to $30,000. But there is no telling what the lease is worth without looking over the books of the lessees. There is a general feeling in all the Southern States of giving appropriations to the system of out-door leasing. The system will doubtless be generally abolished as rapidly as possible. In Texas, a new penitentiary, to hold 1,000 convicts, is just being finished, and another one is authorized by the Constitution. The old one holds 400 convicts, so that 1,400 of the 1,700 can be housed next year.

PICTORIAL SPIRIT OF THE EUROPEAN ILLUSTRATED PRESS.

The Funeral of Princess Alice.

The funeral of the much-lamented Princess Alice (Grand Duchess of Hesse Darmstadt), took place at Darmstadt on December 16th. Our present number contains two illustrations of the ceremony—one showing the Prince of Wales and Prince Leopold placing wreaths on the coffin in the family mausoleum at Rosenhohe; the other the funeral procession passing through the Ernest Ludwig Platz. The chapel to which the body had been removed on the previous evening was thrown open in the morning to the public, and large numbers of persons visited the chapel and laid flowers around the catafalque. Between one and two o'clock those who were invited to the funeral service assembled in the chapel. Among these were the members of the diplomatic body in Darmstadt, the ministers of the Grand Duke, and the members of the Diet. When these had assembled, some members of the Grand Ducal family, the Prince of Wales, Prince Leopold, Prince Christian, the Grand Dukes of Mecklenburg and Baden, and others, arrived at the church, and were conducted to the seats allotted to them. At the close of the service a procession was formed, which accompanied the hearse to the family mausoleum at Rosenhohe. The streets through which the funeral procession passed were lined with spectators, who preserved a respectful silence as it moved by. On the arrival of the corrége at the mausoleum the Prince of Wales, Prince Leopold, and Prince Christian, with the Marquis of Hertford, representing the Queen of England, were found to be awaiting it; and whilst the bands performed sacred music the coffin was removed into the little chapel, where a prayer was offered up by Court Chaplain Bender. The Prince of Wales accepted the expressions of sympathy and condolement offered by those by whom he was surrounded, simply acknowledging them by shaking hands. The niche in which the coffin was placed was covered with floral offerings.

The Afghan War.

One of the greatest obstacles the British troops have had to encounter in their advance through the Khyber Pass has been the bands of marauding Afridis, who, while shunning open fighting, and carefully keeping out of the way on the approach of any formidable detachment, lose no opportunity of swooping down upon an isolated outpost or straggling party, or upon an insufficiently protected baggage train, and carrying off the horses or camels. In the sketch a rather valuable booty has been manfully secured, and the marauders, perceiving a strong column of troops in the neighboring valley, have rightly conjectured that it is "time to be off," and to hide their plunder in one of the numerous strongholds with which the neighborhood abounds. General Roberts left Kohat to drive sixty miles into Thull in what is known in these parts as a Murree cart. A kind of low dog car that is, with a pair, or sometimes three, sorry tats, or ponies, abreast; sometimes these have some blood in them, and, when once they have stopped jibbing from the first rubs of the breast harness on their galled shoulders and withers, they will settle down into a good gallop and keep it up over the villainous tracks they have to cross for the whole of their five miles' stage. The driver is a picturesque looking Sikh generally, with flowing turban, black beard, leather-thonged whip, gaiters, and battered bugle, with which he warns the carts and camels off the road. We have spoken frequently of the employment of elephants by the English artillerists in their present campaign, and have illustrated the vast utility of these animals in the mountain warfare. Our present engraving gives a clearer idea than any of the previous ones of the dependence placed upon the elephant in a critical moment, as well as of the narrow roads leading through the rugged defiles of the Ameer's country. It would be next to an impossibility to keep the number of horses necessary to haul the heavy Armstrong guns upon their feet in such localities as the one shown.

Scenes in Australia.

The patrons of Colonel Delancy Kane's beautiful "Tally Ho" coach, and of Cobb & Co.'s lumbering vehicle would be vastly surprised could they exchange for a single trip the conveyances and routes of travel. Instead of the delightful scenery, splendid roads and exhilarating air that New Yorkers are charmed with, either on the trip to Pelham Manor, or Tarrytown, coaching parties in New South Wales have such an execrable experience that it would seem impossible for anything save the severest necessity to induce them to indulge in such travel. There can be no delicious romance in being plunged into a bag and having to wallow or be carried through a sticky, slimy substance to more fixed earth. On our own two favorite courses there are no disguised ruts, no muddy troughs, no miry terrapins, no Styx to cross—pleasure, comfort, luxury, the greeting of villagers, the merry tra-la-la-s of the horn mark the entire progress. Contrasting the two pictures, it will strike New York coachers as a feeble attempt at consolation when Australians characterize such a scene as is illustrated "quite a ludicrous incident." The ancient game of bowls is still a favorite pastime in Great Britain and her colonies, and nowhere are home customs more strictly and thoroughly carried out than in the growing cities of Australia. In Melbourne, both the North and South sections, bowling-greens are abundant and are admirably kept. The "alleys," as an American would call them in the somewhat similar game of ten-pins are laid out on closely shaved turf, watered and frequently rolled, and surrounded by a shallow trench. It is believed that the Dutch learned the game from the English and introduced it into New York, at the end of Broadway, near the Battery, the spot still retaining the name of Bowling Green. Our illustration shows the latest addition to the already numerous bowling greens around Melbourne, at St. Vincent Place, Emerald Hill. The ground is splendidly situated and in close proximity to the new Rochester Terrace.

AT HOME AND ABROAD.

—THE Russian trade route to China is more dangerous than ever. Another Russian caravan has been robbed.

—THE Minister of Chili in Paris has made a request to have his country admitted to the General Postal Union.

—THE Russian Government contemplates making the island of Sagtaelien the future place of deportation for Nihilist offenders.

—ON an average 686 bodies are annually taken to the Paris Morgue, and some eighty per cent. of those are recognized by their families.

—THE Russian authorities are secretly deporting to Siberia, without trial, a large number of persons concerned in the Nihilist movement.

—A GALE on the coast of Galicia and Portugal has caused great destruction of small craft. Seventy fishermen and others are reported drowned.

—IT is strongly rumored in Russian official circles that one of the groups in Polynesia will shortly be occupied by Russia as a cruiser station for the Pacific.

—CAREFUL estimates place the number of freight cars that were blockaded on various lines between Chicago and New York during the recent storm at 15,000.

—IT is reported that Germany has formally complained at Vienna in regard to the tone of the comments in the Austrian press on the Reichstag Discipline Bill.

—PROVIDENCE, R. I., enacted that lodgers at her station-houses in 1878 should work for their entertainment, and the number of lodgers diminished from 5,191 to 1,363.

—THE Russian Embassy at Teheran is striving its utmost to prevent English capitalists from receiving any concessions for the public works that the Shah is desirous of having executed in Persia.

—THE question relative to the receptions at the marriage of the Duke of Cumberland has been settled by the Danish Minister giving most emphatic assurances of the friendly settlements and pacific policy of his Government.

—THOSE churches in Paris which illegally levied fees to visit crypts, shrines, domes, etc., have been compelled to cease doing so. The Republicans insist on the laws being sternly obeyed by all. Thus the Pantheon is now free.

—THE Swedish Government is so much alarmed at the large development of the Russian torpedo and gunboat flotillas in the Baltic, that it has resolved upon the construction of a number of vessels of the same description next Spring.

—A COURT-MARTIAL is to be held on Captain Lindesay Brine, of Her Majesty's ironclad *Invincible*, to investigate the collision which occurred recently between that vessel and the ironclad *Alexandra* while manœuvring in Turkish waters.

—THE passengers arriving in New York from foreign ports last year numbered 121,369, an increase over 1877 of 24,148. There is an increase in aliens over 1877 of 21,011; a decrease from Germany of 2,482, from England of 3,232, from Ireland of 32.

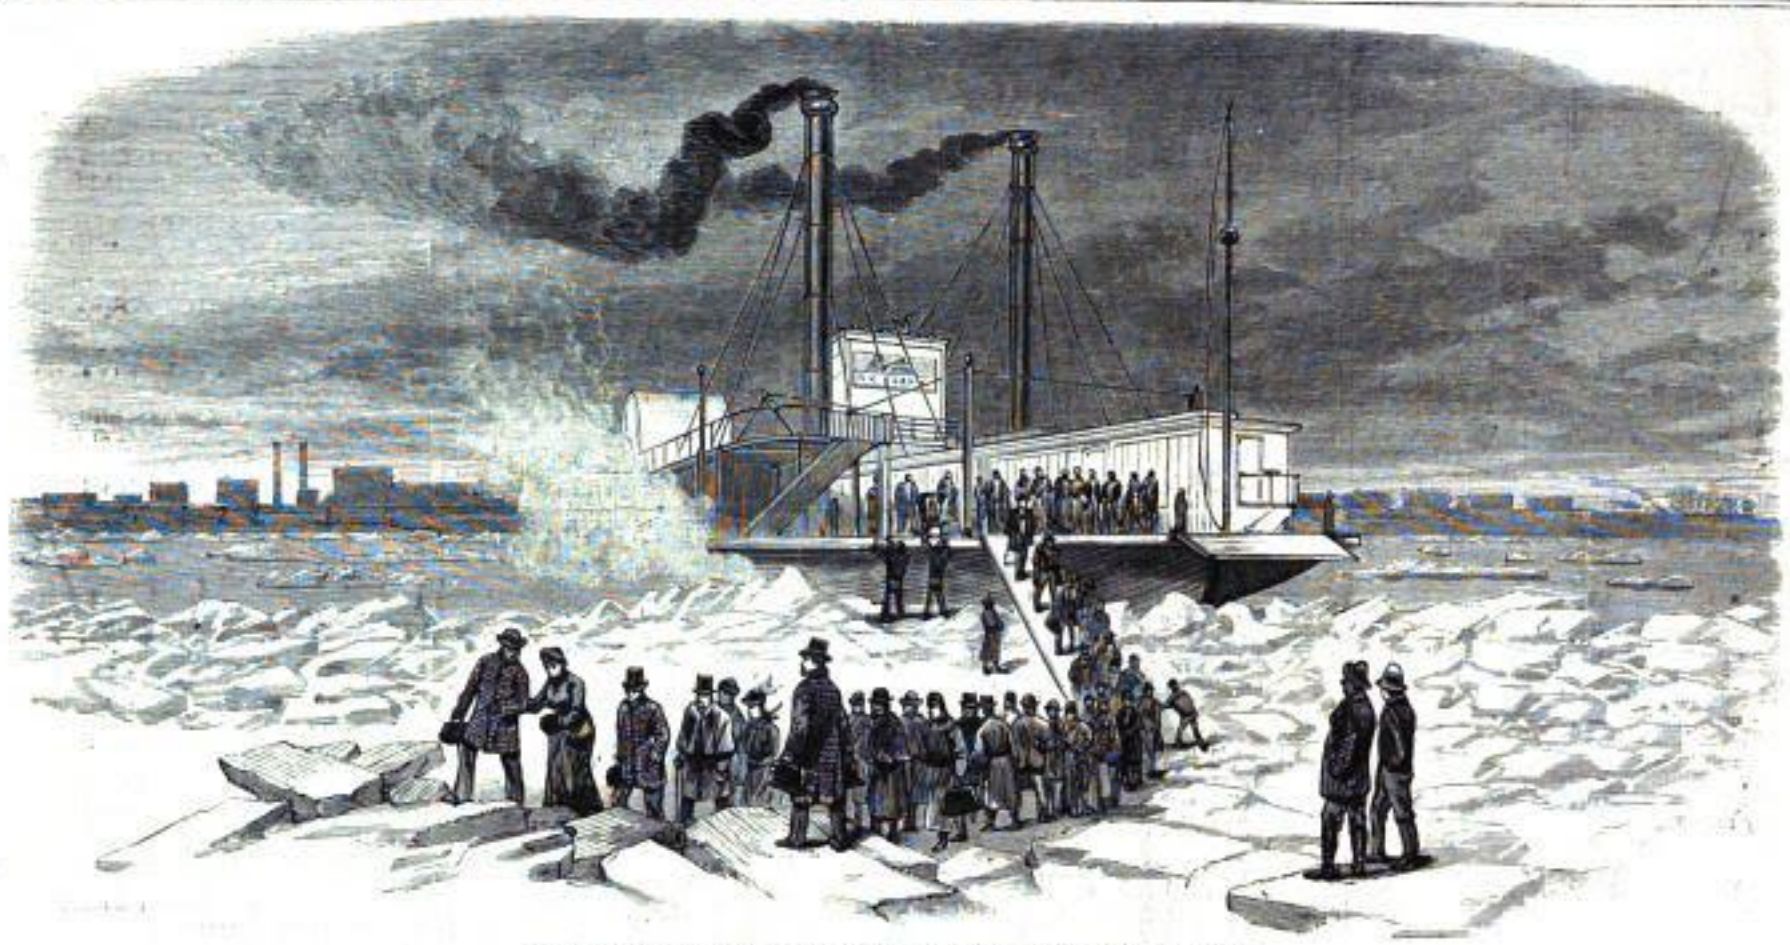
—THE Women's Art Museum Association, of Cincinnati, was incorporated January 13th. It is intended to aid in the development of every possible form of art industry, and will be similar in object and detail to the South Kensington Museum in London.

—IN Mecklenburg-Schwerin capital punishment had been virtually abandoned for twenty years, the Grand Duke having uniformly commuted all sentences, but owing to the increase of serious crimes this practice has been given up, and one execution has already been performed.

—THE London *Post's* Berlin dispatch says that an understanding exists between the Great Powers to insist upon the evacuation of Eastern Roumelia by the Russians within the time appointed by the Treaty of Berlin, even if the International Commission should not have completed its labors.

—THE Brazilian Budget for 1879-80 estimates the expenditures at 121,000,000 milreis and the revenue at 101,000,000 milreis. The deficit will be met by new taxation. The Government proposes the extinction of all monastic Orders and the application of their property to the redemption of the national debt.

—COLLECTOR MERRITT, of New York, has received from the Department of State a copy of an official decree issued by the Belgian Minister of the Interior forbidding the importation of cattle, sheep, hogs, meat, or hides into Belgium from other countries unless satisfactory evidence can be given that they have not passed through Germany. The reason given is the prevalence of typhus among ruminant animals in the latter country.



—THE *Madras Mail* states that great progress is being made in the cultivation of cinchona in the Wynaad, and that nearly a million plants have been taken there this year from the Neddiwattum estates, and this is in addition to what is obtained from the extensive chinchona nurseries on all the coffee estates. All the poorer parts of these are being planted with chinchona, which is found to thrive well where coffee will not grow.

—CONNECTED with the Roman Catholic Church in India, Ceylon, Burmah and Siam, there were, in 1877, 23 vicars apostolic, 21 bishops, 1,098 priests, 1,088,309 professing members of the various churches, besides 1,422 schools, containing 51,494 pupils. The greater part of the natives professing the Roman Catholic faith are descended from the converts made by the Jesuit missionaries of the seventeenth and eighteenth centuries.

—GENERAL KAUFMANN is about to establish at Tashkend a college for Oriental languages, at which all those Indian languages will be taught, the acquisition of which is obligatory upon persons entering the Indian Civil Service. The next measure will be, no doubt, to render these languages obligatory for the officers of the Turkestan army, who will thus be able some day, when the invasion of India is attempted, to lead the troops of the recalcitrant Indian feudatories to victory against the British.

—THE Winter season of Texas usually lasts from the first of December to the middle of February, and its most distinguishing feature is the "northers," a periodical wind totally unknown in other States. They occur on the average twice a week and last a couple of days. They are preceded by a warm, close, summerish atmosphere, and during their continuance the temperature not unfrequently touches 12°. The cold is the severest imaginable, not steady, as in the North, but of a keen, searching, biting description.

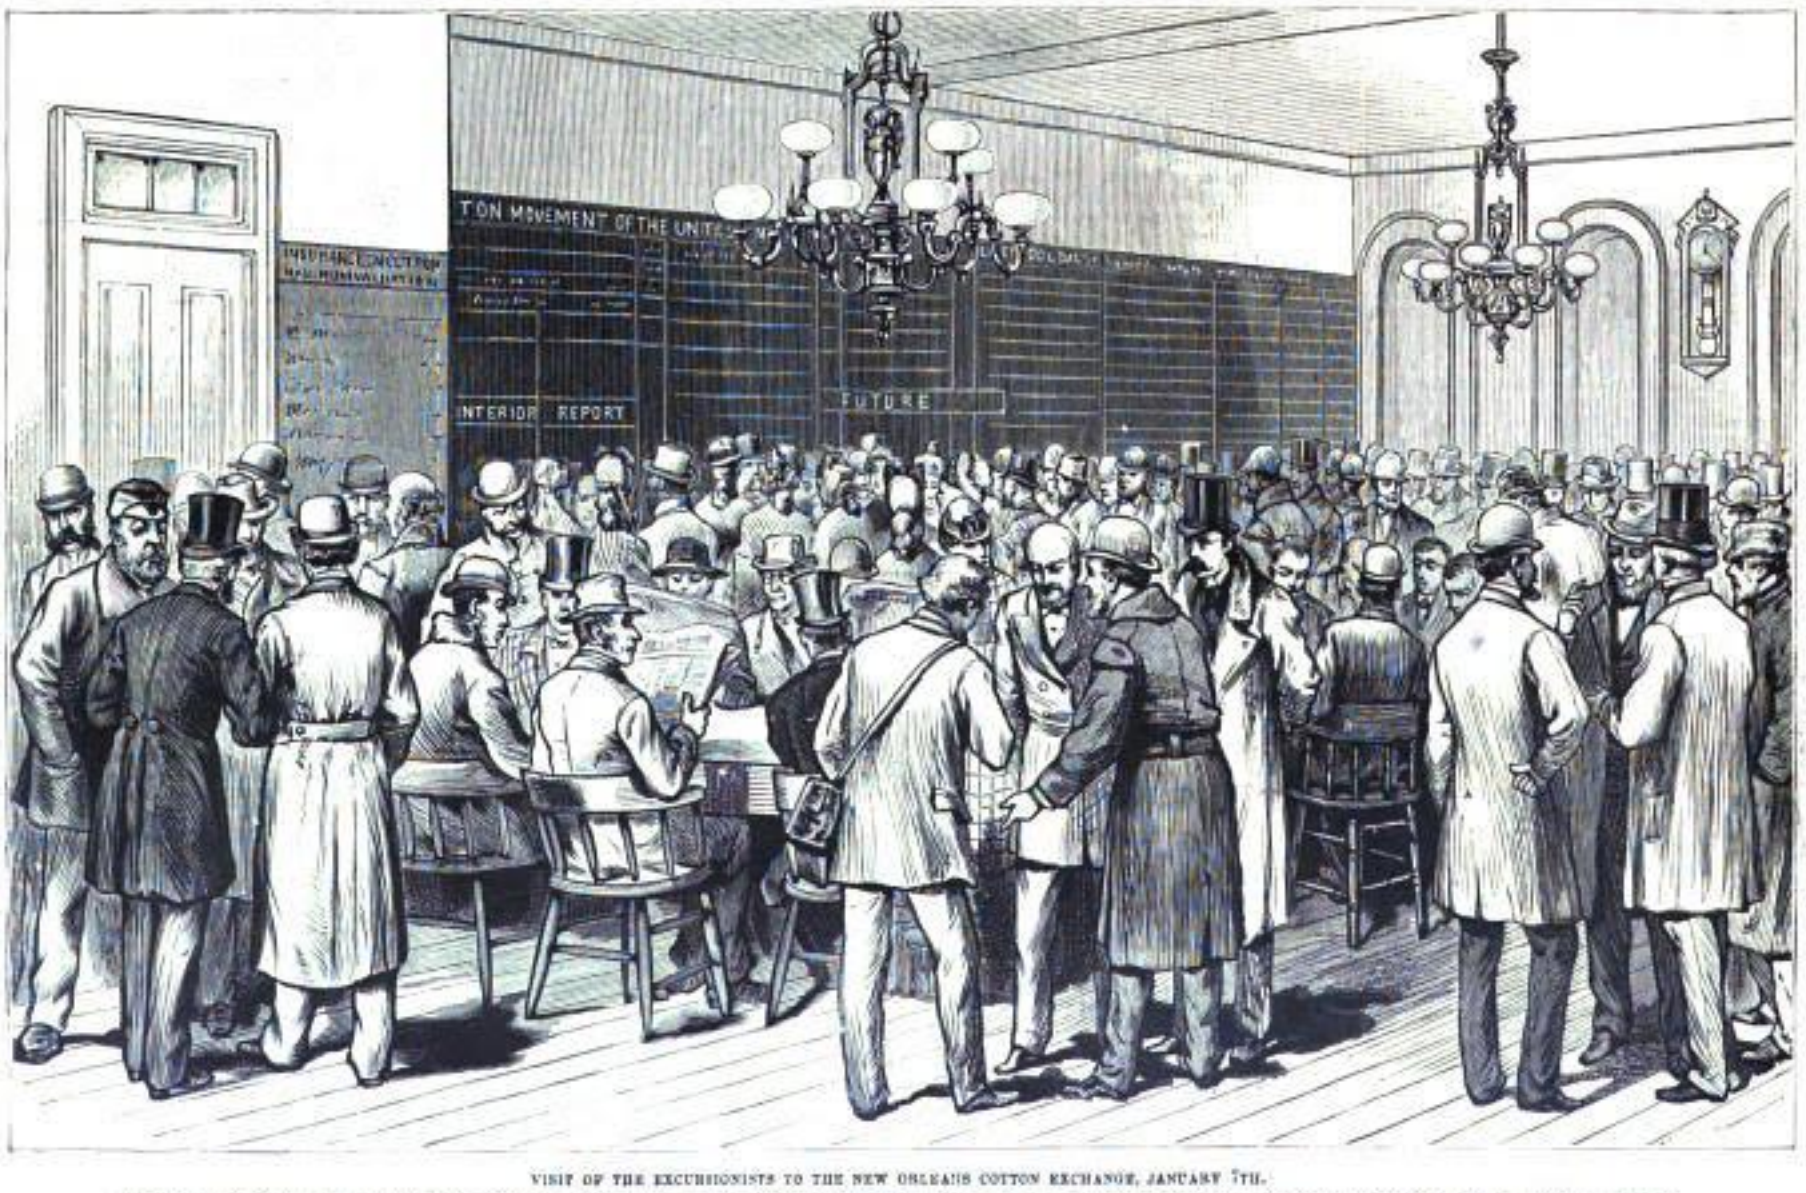
CROSSING THE OHIO AT CAIRO, ILL.—THE EXCURSIONISTS DISEMBARKING ON THE ICE.

THE

COMMERCIAL EXPEDITION TO MEXICO.

INCIDENTS OF THE FIRST WEEK OF THE TRIP.



WE, the commercial conquerors of Mexico, *alias* the American Industrial Deputation to that country, took our departure from the city of Chicago, after a banquet given to us by Mr. Potter Palmer, of the Palmer House, at seven o'clock on the evening of Saturday, the fourth day of January, one thousand eight hundred and seventy-nine. What mattered it to us that the General Post Office was on fire, and eighteen engines throbbing their vitals away in a hopeless attempt to subdue the flames? What mattered it to us that the thermometer marked eleven degrees below zero, and that noses and ears were pounced upon by an eager and a nipping air? We were *en route* to the tropics, to vertical sunlight, whose sheen and dazzle neared "the white radiance of eternity," to skies deeply, darkly, desperately blue; to the perfumed shades of banana and orange-trees,

DEPARTURE OF THE EXCURSIONISTS FROM THE OLD ILLINOIS CENTRAL DEPOT, CHICAGO, JANUARY 4TH.

to the land of ethereal and suggestive laziness, to the very birthplace of *dolce far niente*. Some twenty carriages conveyed us to the depot of the Illinois Central Railway, where special Pullmans awaited the party, and a special moon, young, artless and innocent, shed silvern and brand-new dollar beams upon the ruined archway which still points to that awful epoch in the history of Chicago when the great fire laid the Garden City in ghastly and hopeless ruins. Had the weather been less severe, our "send off" would have risen to the dignity of a public display, but King Frost, as though begrudging our escape from his vise-like grip, bade all good citizens of Chicago remain within doors, and our departure was as noiseless as though an ordinary way-train were starting for Hyde Park. We numbered seventy souls, under the joint command of Mr. George S. Bowen and Colonel David V. Whiting. To the former, so well known in Chicago as the foremost man in every scheme tending towards the development of the industrial resources of this great country, is due the credit of building

MIDDLE AGE.

All over! Ay, I look at mine own hand,
That quite has lost the lissom grace of youth,
But if its living pulse I understand,
Fit yet to hold its own for love or truth;
Scarce meet for pretty pledge or kiss of lover,
Yet fond and firm for clasping in another.

Over and done! I sit before the glass,
Drawn full into the sunshine's ruthless glare,
I see the crowsfoot where the soft bloom was,
The silver threads set in the bright brown hair;
My mirror never flashed me beauty back,
So now, perchance, I have the less to lack.

And yet for all it's over, in the face
That gazes sad and patient back on me,
I fancy love might read some quiet grace,
Some touch of matron calm serenity.
The eyes that live on children's lips for years,
Gain something surely from their smiles and tears.

Must it be over? One by one they flash,
To their own place, these cherished stars of ours,
Daring the storm in courage blind and rash,
Seeing no serpent coiled among the flowers;
Leaving us stranded on the lonely shore,
Where the long waves chant, "Never, never more."

They will not, may not, cannot come again;
The bond is snapped, and the great current sweeping
Each little boat on to the mighty main,
Over each barrier in its fury leaping,
Bears them in its resistless might along,
For wreck or haven, gain, loss, prize, or wrong.

For us, it all is over; though sometimes
We feel old power pulse our being yet.
"Past, past!" the voice of Fate around us chimes,
Past, aim and dream, vain struggle, or regret!
Put by the mirror, let the hand alone,
The last card has been dealt, the game is done.

A SECRET MARRIAGE
AND
ITS CONSEQUENCES.

By the Duke de Pomar,

Author of "The Honeymoon," "Through the Ages," "Who is She?" "Passion and Passion," Etc.

BOOK THIRD.
THE MYSTERIOUS HEIRESS.

CHAPTER VIII.—MONSIGNORE BERRETTA.

PERHAPS it will be impossible for men of duller fibre, men whose lives have not been wholly devoted to wide travels of imagination, as that of Glamour has been, to comprehend, or even to credit, the strange peculiarities of a mind like his.

To him the affairs of life have indeed become almost a part of himself; he sees things more clearly and feels them more intensely than most men, and, though a profound thinker, who is always studying himself, the events of life appeal to him more directly than to men possessing a cold, calculating intellect; and thus the smallest and most insignificant events affect at once the most secret recesses of his soul, and cease to be mere objective phenomena that can reach no deeper than the external perceptions.

Before he met his friend in the crowded saloons of Preston House he had almost decided on abandoning all thoughts of Miss Reymond, but a few words from Inganess made him change his mind. A new hope has entered his heart, a new desire has taken possession of his soul; he feels now that Louisa is, indeed, the one woman he could love and marry, and he is determined to try his luck. If he is not actually capable of deliberate energy, because the impulse must then come from within, and must be reasoned out and resolved into its component parts, for this very reason he is, perhaps, more able to act under passionate energy than most men when the occasion presents itself suddenly and from without.

I have already said that Glamour has a strong feeling in favor of the Roman Catholic Church, but he cannot conscientiously bring his mind into the state of subjection necessary to accept its doctrines. He cannot make up his mind to renounce for ever his own responsibility, though he knows well that his reasonings and eternal hesitations can produce nothing but indecision and vexation of spirit, and every day of his life he feels more and more the need of rest for his soul; and, weary and heartsore, he will fain cast himself, with all his burdens, into the arms of the mighty mother Church that claims to be the representative of man's Creator upon the earth.

Amongst the priests to whom he had been drawn by this new longing of his soul after the true faith there is one—a certain Monsignore Berretta—who has succeeded, perhaps, more than any other man in the world—excepting, perhaps, his old friend Inganess—in winning his regard and affection. His fascinating manners and eloquent address charmed the young duke from the first, and almost unconsciously he has accustomed himself to look up to him for advice and counsel as to a superior being, who, to the great knowledge he possesses of the world, adds the graces and spiritual gifts of a divine.

Considering the great influence which Monsignore Berretta has acquired over the young duke, it is not surprising that the morning after his conversation with Inganess at Preston House he should speak about Miss Reymond to him, and ask for his ever-welcome advice on the subject.

The monsignore is often in the habit of breakfasting with Glamour, and it chances, as luck will have it, that a few hours after his last meeting with the charming but mysterious Miss Reymond he should be sitting opposite to monsignore at the breakfast-table, talking over the events of the previous night.

The Italian, knowing the importance of making a convert of such a man as Glamour, is deeply interested in anything that may exercise an influence over his impressionable nature; and while he appears to be engaged in sipping a cup of fragrant coffee, and apparently paying but little attention to the frank expression of opinions which he nevertheless cleverly encourages in his young friend, he obtains a clear idea of Glamour's views of the people he daily meets in society, and of the impression, favorable or otherwise, which they have produced upon him.

"You admire this Miss Reymond, then?" he says, after a pause, looking at him with a keen, penetrating glance.

"I admire her very much," the duke replies, frankly. "You, who seem to know everything, will perhaps be able to tell me her true origin."

"If I know nothing whatever about her, I assure you; yet, if you are very anxious to know, I think I might, perhaps, find out. Do not rise, I beg of you—you want some toast; let me ring for it."

Glamour remains silent for a few seconds, during which a servant brings in the toast required.

"Of course I could not think of marrying a woman whose name even I do not know," he says, after a time, and as if still lost in some reflections of his own.

"I am glad to see that at last you think of marrying, and that your thoughts are fixed on a Catholic young lady. If you will allow me, duke, I will go to Lady Rollingford and endeavor to find out for you all about her."

"Do you think Lady Rollingford will tell you?"

"Yes, if she knows that it is your grace who sends me."

"Ah, monsignore, you always come to my rescue; how shall I ever be able to repay you for all the trouble you take on my account? You can understand what a delicate matter this is, and how difficult it would be for *me* to make such inquiries; and yet I owe it to myself to know for certain *who* the lady is whom I am thinking of making my wife."

"Make your mind easy, Glamour, and leave it all to me; if any one in this world is able to discover the true name and parentage of this Miss Reymond, believe me I am that man. I will go to Rollingford House this very afternoon. Of course you understand that you will hazard nothing by my taking this step, and that it will oblige you in no way to marry the young lady, if at any future time you happen to change your mind."

CHAPTER IX.—TO LOVE, OR TO BE LOVED.

"DO I love him, or do I not love him?" asks Louisa Reymond of herself, perhaps more thoughtfully than passionately, and as if she would fain solve the mystery by meditating upon the events of the past few days, and the effect they have produced upon her.

She is sitting quite alone in her pretty little bedroom in Rollingford House, and she has just learnt that Monsignore Berretta has been there to make some inquiries concerning her—sent by the Duke of Glamour.

What Lady Rollingford has answered she does not know, and in truth seems to care but little. "If Glamour loves me," she no doubt thinks, "he is sure to be satisfied with any explanation my adopted mother may choose to give him." The great question which engrosses her mind is whether she loves him enough to marry him or not.

That he is in every way a very superior man she does not question for a single moment, and that their tastes and opinions are upon the whole most congenial she is also convinced. But, then, are these sufficient reasons to justify her marrying him? Is it an exact counterpart of herself that she requires in the man to whom she would unite herself?

She admires Glamour, let me do her the justice of saying, ten thousand times more than she does Rupert Cassilis; she is fully aware of his high intellectual gifts, and of the nobility of his nature. And she is by no means a girl to despise the noble name, lofty rank, and immense wealth of the Duke of Glamour; but still she cannot deny that she experiences a rapture in the attentions of Rupert compared to which the eloquent language and earnest looks of Glamour seem cold and unsatisfying.

Which of the two does she love? She feels her heart is only too ready to pronounce itself in favor of the handsome Cassilis, but her head has not lost any of its power yet, and her reason tells her plainly enough which of the two will make the better husband.

The next day there is a garden party at Liberty Hall. Mrs. Champion, although she still retains a great deal of her old antipathy to society, is a most hospitable woman, and for the sake of her daughter she keeps open house, and at least once a week gives a party, to which she good-naturedly expects all her friends to come without any formal or special invitation. Louisa, at this turning-point of her life, feels perhaps more than ever she has felt before the need of a sincere and experienced friend who will advise and direct her. She knows that Mrs. Champion is her true friend, and she feels convinced that she will give her disinterested advice; and knowing that she is sure to find her at home on this day, she persuades Lady Rollingford, after some difficulty, to take her to Liberty Hall.

There is dancing going on in the great hall, and the sprightly Bella hovers about like a little fairy queen amongst the dancers, giving directions to one, whispering a few words to another, making a bet with this man and bestowing an angry look upon that one, and flirting with every one in the room. A gayer or pleasanter scene it would be difficult to find on this warm Summer evening. But Louisa is too much perplexed by her thoughts to care much for the pleasures of the moment, and refusing to dance, and even to go with Glamour to the tent where refreshments are served out in almost princely abundance, in the garden at the back of the house, she seeks Mrs. Champion, whom she finds sitting by herself in a distant room at the further end of the building, and looking, as usual, lost in deep thought. Taking Mrs. Champion at once into her confidence, and opening her heart to her, as she had shrunk from doing even to good Lady Rollingford, who is always so kind to her, she begs for advice in her present dilemma.

"I have known Glamour for many years," that lady says, and looking, as is her custom, with dilated eyes at nothing in particular. "He is without exception the best young man I have ever met; the highest aspirations fill his soul; he would not do a base action, no, not to save his life; he is the very soul of truth and honor. And when he says that he loves you, you may be sure, Louisa, that he does so with all his heart and soul."

The girl cannot help blushing, perhaps more from a sense of gratified vanity than from any loftier feeling.

"He has never told me that he loves me," she says; "at least not in so many words," she adds, her confusion increasing visibly.

"But you have strong reasons to suspect he does? Well, I too have thought before this that he loved you, and you cannot tell how happy this confirmation of my hopes from your own lips has made me."

"I do not doubt for a moment, Mrs. Champion, that he loves me," Louisa exclaims, a new idea suddenly dawning upon her. "It is not likely that a man of his rank and fortune would think of marrying a poor girl like me, without even a name, if he did not really love me; the question is, whether *I* love him enough to marry him."

Mrs. Champion starts back: the idea had never entered her head that any one could dislike her favorite, or remain indifferent to his love.

"I should like to love the duke, believe me; for no one in the world could appreciate the honor he perhaps thinks of doing me more than I do. But at times I fear I am unworthy of his love, and that I shall never be able to return it as he deserves it should be returned."

A long silence followed these words, during which both ladies seem as if lost in their own thoughts. Perhaps while Louisa is thinking of the future, and wondering what her fate will be, Mrs. Champion is musing on the past, and feeling the truth of her own words. No one has loved more than she has, and yet how little happiness she has been able to derive from the passions she has felt! How unsatisfactory after all has been her career, triumphant as it has seemed to all outward appearances!"

"There is one more question which I wish to ask you, Mrs. Champion," Louisa says, breaking the silence, and approaching for the first time the subject nearest her heart. "Do you think that I could in honor marry a man like the Duke of Glamour without bringing a blot upon his noble name?"

Mrs. Champion looks at her in surprise. "You mean on account of the mystery that surrounds your birth and parentage?"

Louisa flushes scarlet, and bows assent.

"Undoubtedly; your birth, I assure you, is as noble as his own."

"You know who I am, then! Oh, Mrs. Champion, Mrs. Champion! I always suspected that you knew this dreadful mystery; take compassion upon me, and tell me all you know."

"I cannot. It is true that through very strange circumstances I became acquainted with Lady Rollingford's secret, but I have given her my word of honor never to reveal it, even to you."

"Am I then never to know who my father was?"

There is so much sadness in her voice as she says this, and she looks so overwhelmed with misery and shame, that Mrs. Champion cannot help being moved.

"Marry the Duke of Glamour, become independent of Lady Rollingford, and I promise you that one day you shall learn the mystery of your birth."

CHAPTER X.—THE DAWN OF LOVE.

BELLA CHAMPION has been dancing with Lord Inganess, and while her mother has been conversing with Louisa Reymond in her own private room at the other end of the house, that saucy young lady has been having it all her own way in the ballroom.

Taking her partner's arm after the dance, she has gone with him to the lawn in front of the building, and with that charming freedom of manner and speech which so characterizes her, and which renders her so irresistible, she listens to him with undisguised pleasure as, continuing a conversation in the solitude of the garden, which has doubtless been begun in the crowded ballroom, he says:

"Then you don't think a fellow a complete nonentity who fishes in Summer, shoots in Autumn, and hunts in Winter, and makes these things the great business of his life?"

"Oh, dear, no; I don't consider any manly sport frivolous. Ah, if you knew how tired I am of great clever people! I hate heroes and patriots and strong-minded females, and all that."

"You pretend to despise heroes, and yet I am sure you will miss their society when you leave this house."

"I shall never leave this house—at least as long as father wants me. I really do not know what he would do without me; no, I must never leave him."

Inganess feels confused; he is beginning to realize at last how dear this little girl is to him, and yet he scarcely dares to approach the subject nearest to his heart. He has come to the conclusion that she is a girl very different from the general run of girls; but whenever he begins to speak to her seriously a terrible recollection flashes upon him of her strong sense of humor, and of the merry light he has often noticed in her bright brown eyes; and then it occurs to him that if he did attempt to play the lover she would only laugh and think him a fool, even if she had the kindness of heart not to say so openly.

"I wish," Bella says presently, "I had been born a boy, that I might go round the world and seek adventures; how jolly it would have been!"

"I think you would soon get tired of that sort of life, and long for some one to love you and take care of you."

"Father will always love me."

"Ah, but I mean a fellow you might marry."

"Marry! what nonsense you are talking to-day, Lord Inganess! as if any one would ever think of marrying me!"

"And why not? I am sure there is not a prettier girl in England."

"*Really, now*, do you think that I am pretty—prettier than other girls?" she inquires with some coquetry, yet with glowing cheeks and downcast eyes, for it is the first time she experiences the feeling that she is no longer a child, and his words both please and frighten her."

"Indeed you are, Bella; has no one ever told you so before?"

"Oh, yes; but somehow or other I never believed it before, at least I didn't seem to care. I hate girls. I hate to be called a pretty girl. I wish I were a boy."

"You like boys? Ah, I fear you will never care for a middle-aged man like me," he says, with a sigh that startles her, attempting at the same time to take her hand.

"Nonsense!" she says, drawing away her hand and looking him straight in the face with childlike defiance. "You may talk rubbish if you please till the blessed millennium, of which mother is always talking, and which I dare say will never come, but just you keep off that nonsense! Love indeed!"

And bestowing upon him a look which, however, has more of playful mischief in it than of anger, she turns away from him and hurries back to the house.

Inganess, very much puzzled, follows her in silence, wishing himself at that moment at the other side of the globe.

"I have not offended you, have I?" she says presently, turning her pretty face towards him, and looking at him with eyes that betray more than she would care to acknowledge of what is passing in her heart. "Come, I will give you another waltz, if you like."

(To be continued.)

THE COMMERCIAL EXPEDITION TO MEXICO.

INCIDENTS OF THE FIRST WEEK OF THE TRIP.

(Continued from page 396.)

up and successfully launching the expedition; to the latter—for Mr. Bowen was compelled by the pressure of important business engagements to leave us at Jackson City—is relegated the control and management of the expedition, an office for which, up to the hour of writing, by his *sunnier* temper and *fortifier in re*, he would seem to possess a combination of admirable qualifications.

The object of the expedition is now so well known that it scarcely demands more than a passing comment. It is simply to increase the export trade of this country and create a market for American manufacturers. We have been taught that if prosperity in this country is to be permanent, the product of our lathes and looms, our spindles and our furnaces, must be utilized in foreign trade equally with the products of the soil, and the outcome of our flouring-mills and our packing-houses. As a result of this lesson American cotton goods have competed successfully in England with those of home manufacture, both in price and quality; while in hardware, cutlery and firearms, Birmingham and Sheffield have met their match. This progress, under exceptional difficulties, had led earnest thinking capitalists to conclude that if our manufactures can outrival those of European countries in their own markets, we can enter the race with them for the trade of other foreign countries. In furtherance of this idea the eyes of our commercial centres have now turned to Mexico, a country of 1,030,442 square miles, with a population of 9,376,079 inhabitants. The export trade from this country to Mexico does not exceed the miserable sum of $6,200,000 per annum, being an average of sixty-six cents per capita of the population, while that of our other neighbor, Canada, reaches $27,000,000 or $3 per capita of the population. Of course the wants of people living in a tropical climate are not so numerous as those of the inhabitants of a more northern one. They require less food and lighter clothing, but such food as they require in the shape of meats, canned fruits, flour, etc., *can*, and *should be*, furnished by the United States—the cotton and cloth goods, as well as the boots and shoes should have the stamp of American manufacture; all the classes of hardware and saddlery used in Mexico should be American, while the machinery necessary for the full development of its untold mineral wealth should originate from American workshops and foundries. All these and other benefits too numerous to mention, cry the commercial centres, will certainly accrue to our commerce and manufactures in the event of a vigorous movement being made to open up a commercial highway between the two republics. An increased export trade from the United States to Mexico means an increased import trade from Mexico to this country. The United States demands an increased market for its manufactures, and Mexico furnishes an available market for increased manufacturing production, and at this moment the intelligence of Mexico is on the *qui vive*, eagerly desirous that a new life should be infused into her industries and her agriculture. Mexico is an empire territory, with a capacity to sustain an empire population. Look at her immense natural resources—her mines of gold, silver, zinc, tin, copper and iron; her soil, upon which corn, cotton, tobacco and coffee may be grown; her forests, from which enormous stores of mercantile timber and wood can be drawn. All she requires is stability in her Government, industry in her midst, and an outlet to her internal commerce; and with a view to discussing this question, of such grave importance to the United States, the American Industrial Deputation are *en route* to the capital of the country of the Montezumas. We are a jury empanelled to try a very interesting commercial case.

When we had explored the somewhat gloomy depths of the cars, and had succeeded in digging out our respective sleeping sections, we gradually commenced to thaw, and with the magic word "Mexico," to file away those angles which, like quills on the fretful porcupine, stick out on every side against acquaintances whom the swift current of the hour fairly forces into intimacy. "Do you speak Spanish?" "What time does it take to cross the Gulf?" "Is there any fear of banditti?" "Are you armed?" "Will it be terribly warm?" "I wonder what *pulque* tastes like?" "They say that the señoritas are pretty as pictures," were the observations that cropped up on every side; and one gentleman who had at some remote period paid a flying visit to Mexico, and whose facts would scarcely bear the pressure of a rivet, came to be regarded as the Sir Oracle of the party, and to receive the delicate attentions of cognac and cigars in exchange for a few vague generalities, which left the querists in a condition of hazy and helpless imbecility. We are armed to a man with "Prescott's History of the Conquest of Mexico." The possessor of a guide-book is an individual to be placed even above the region of envy, while the happy proprietor of a Humboldt becomes more or less of a hero.

Upon Sunday morning we breakfasted—save the mark—at Centralia. After a fierce wrestle with this

Digitized by Google

too substantial meal a meeting was called by Mr. Bowen, of which the following organization was the outcome:

OFFICERS OF THE AMERICAN INDUSTRIAL DEPUTATION TO MEXICO.

President, ex-Governor John F. Fisk, Kentucky; Vice-President, O. M. Burke, Ohio; Treasurer, Hon. John Black, Wisconsin; Secretary, Byron Andrews, Chicago; General Manager, Colonel David V. Whiting, Illinois; Council of War, Orville C. Dewey, West Virginia; Wood M Knight, Pennsylvania; John F. Cahill, Missouri; Colonel Thomas Cooper, Illinois; Hon. S. T. Merrill, Wisconsin; E. F. Weeks, Minnesota; T. H. Broughurst, Indiana; James Gordon, Ohio; F. C. Rogers, New York; A. T. Birchard, Iowa; Henry Gillum, Texas; A. Langdon, District of Columbia; Hon. J. F. Fisk, Kentucky. Physicians and Surgeons, John A. Rice, M. D., Wisconsin; R. W. Hazlett, M. D., West Virginia. Reception Committee, Colonel David V. Whiting, Illinois; Edward Peters, Missouri; C. D. Holton, Michigan; F. K. Parsons, New York; C. W. Ogleberry, West Virginia; Baggage Master, Willis Easley.

Twelve States are represented, and their representatives nicknamed the Twelve Apostles. Iron is largely to the front, as is also machinery, especially agricultural, since the Mexicans still sow, furrow and reap as did the Aztecs when meek and morbid Montezuma held the sceptre in his paralyzed and nerveless grasp. We have distillers and brewers—a Milwaukee firm sending a cask of its renowned lager to President Diaz. We have railroad contractors and capitalists, builders and framers, chemists and druggists, confectioners and florists, doctors and engineers, archæologists and artists, capitalists and carpet-baggers, tailors and brokers, dry goods men and liquor dealers, real estate dealers and "sky" merchants, editors and reporters, artists and authors, and we have, heaven bless them! nine ladies in the party. Fain would I dwell upon the charms of our voyageuses—fain linger o'er a subject so fraught with all that—suffice to say that America will in no way suffer when brought into comparison with Mexicana.

What an olla podrida, a dish containing a little of everything, in our party! We have hard-fact men, who herd together and speak solemnly and rapsingly. We have gloomy men who refuse interchange of ideas upon any subject save that of murder and rapine along the line of railway from Vera Cruz to the capital. We have chirpy, talking men, who announce to us the condition of the thermometer every twenty minutes, and who perpetually suggest sketches to our artist, and subjects for the pen of the writer. We have young gentlemen faultlessly arrayed in ulsters of marvelous design, and patterns wonderful to behold. These youths are showy in short-collar, cigar and cognac. They emulate the rôle of Don Juan, and look forward to a campaign amongst the senoritas, such as the Master of Leporello never dreamed of in his wildest fungi ings. We have nine gentlemanly young fellows, too, modest, self-possessed, courteous and good company. We have our funny man, and our heavy villain. We have the man who is always writing, and the man who whistles. Our president, Hon. J. F. Fisk, is evidently reserving himself for his brother president, Diaz. Our vice-presidents are on duty, especially Mr. Cahill, who seems to know everybody, while everybody would appear to know him. Our treasurer, Hon. John Black, of Wisconsin, has a famous case-bottle, ay, famous as that belonging to Mr. Bob Sawyer, from which the Immortal Mr. Pickwick took so many and such prolonged pulls. When the treasurer passes along the car, his passage is like that of a comet—he is followed by a tail, and always in the direction of the ice-water. Our historian, Horatio N. Rust, is strong on pyramids and Aztec inscriptions, while his colleague, our physician, Dr. Rice, is also a profound archæologist, having spent several years amongst the fiercest Indian tribes in search of prehistoric data. Of the personnel of the remainder of the party I shall speak in a further communication. Misfortune makes us acquainted with strange bedfellows, and I look forward to the trip across the Gulf to make me thoroughly acquainted with my fellow-passengers.

At Cairo we struck the ice laden Ohio, and an ice-bound dinner. The great problem so difficult of solution was attempted here. Given eighty guests, with double-edged appetites, and three waiters driven to the verge of desperation, how long will it take to serve the eighty guests through the medium of three frantic attendants?

The crossing of the Ohio was a source of considerable head-wagging and cogitation. The nervous man of the party spoke dismally of floating ice that would crush in the sides of an armor-plated ship, like so much egg-shell, announcing the transit a physical impossibility, while others less apprehensive, but somewhat imbued with the sentiments of the croaker, became suddenly grave, earnest and taciturn. The sun was setting behind blood-red bars, the moon was silvering in a pale, blue sky, the stars had commenced to throb when the railroad transfer boat commenced to crunch her way through the ice, like a huge monster eating through its crystallized food. The scene was intensely picturesque, and one not easily to be forgotten. The woods on the opposite shore were dyed in a purple seldom seen save in the heather-clad mountains of bonnie Scotland, while the light apple-green of the water showed dreamily against the creamy white snow. Crunch! crunch! crunch! and slowly, but surely, we crash through the ice, until its packed condition rendered further progress impossible. A few black forms that had appeared on the opposite heights now approached, bearing pails laden with coal-ashes, which they cast on a very rude and uneven track to deaden the slippiness; a gangway coated with gravel was lowered from the still snorting steamer, which we cautiously descended, and like recruits at a funeral, proceeded in single file to slip, slide, jerk, stagger, and stride to *terra firma*, where the steam-cars and an impatient engine awaited us.

"We'll soon get away from the snow!" "The Sunny South is upon us!" "A few miles now, and we'll be in the sub-tropics!" were the exclamations uttered by pinched and quivering lips, for the crossing of the Ohio "at five below" caused the veriest Laplander of the party to shake and shiver in his shoes. Young ladies made entries in their diaries bidding gushing farewells to the beautiful snow, but we awoke on Monday morning to find nature's shroud still with us, and the cold still suggestive of wraps and stoves and heat at any cost. We awoke, too, to find the St. Louis contingent, a dozen good men and true, on board the cars, having waited for us at Jackson something like thirteen hours.

The St. Louis contingent could not understand why the executive should have been elected before their arrival, and without their being consulted, for St. Louis loveth not Chicago. They proposed establishing a small republic of their own; but oil having been thrown upon the troubled waters, peace was, after some little grumbling, finally established. We breakfasted at Granada—that is, we would have breakfasted, but for the strange and somewhat unfortunate accident of the food having frozen to the plates. There was quantity, from quail on toast to bacon on eggs; but it was the least of the Barmecides. We were in the stone period, and no person, save the archæologists, broke fast.

We sped slowly onwards, the white snow with us always. How black the darkeys looked against it, how soiled and draggled the mules, standing by dozens at the railway stations, while their riders thawed at the stoves. At Calhoun the station was in flames, reminding me of the line from Vittoria to Irun during the hapless Carlist war. The sorry attempt at breakfast developed amphibiously laden luncheon-baskets, and I do verily believe that I ate six or seven luncheons—one either way don't make much difference—while the enterprise of the proprietor of FRANK LESLIE'S ILLUSTRATED NEWSPAPER, in sending me with an artist to "do" the expedition, was applauded *con amore*. The tropical foliage, flashing by us and silvered by the moonlight, showed us that we were in the sub-tropics, and the fever-haunted lagoons and dank and terrible marshes, that we were nearing the Crescent City. Half-after-nine on Monday night and we slowed into the station, just fifteen hours behind time.

"This is Sunny South!" was the universal exclamation as the shivering party gathered round the stove at the St. Charles, and in truth it was raw, and damp, and marrow-chilling. Not for many years has such weather been experienced in New Orleans, the stereotyped oldest inhabitants failing to recall severity so unexampled, so continuous. It was pitiful to see the rosebuds all frozen to death on their stems, victims of misplaced confidence, and that most charming of all promenades, Canal Street, deserted save by a few doubled-up pedestrians, who hurried beneath the continuous veranda much more in the New York rush than in the New Orleans lounge.

A deputation from the Cotton Exchange, headed by Mr. Lafitte, waited upon us at eleven o'clock on Tuesday morning, to tender a reception at the Exchange. Mr. Lafitte also offered to act as cicerone to the Houses of Legislature then in session. At one o'clock we started for the Houses, marching in twos, to the intense bewilderment of the good citizens, especially of the French section, who gesticulated freely, and commented somewhat severely upon our personal appearance. We paid our respects to Governor Nichols, who received us in the large hall, the background consisting of a very fine picture representing the memorable battle of New Orleans. The Governor, having shaken hands with each and all of the party, courteously conducted us to the Senate, and from thence to the House of Representatives.

"What is the clerk engaged in reading?" I asked of a colored member. The official was droning an unintelligible litany from an immense scroll.

"Well, you see, sir, the Governor's Message is being spun out now, and it amounts just to this—the Governor is trying to tell us how he has made such a blamed mess of it," was the reply.

From the House of Representatives we marched to the Cotton Exchange, this inner heart of the South, through which her very life-blood beats, strong, vigorous and healthy. It is an oblong apartment of unpretentious appearance, one particular wall being obliterated by immense blackboards inscribed by cabalistic words and figures, dead to the outer world as the characters in a Coptic manuscript. New York, Liverpool, New Orleans, each have boards allotted to them — exports, imports, Southern ports, Northern ports, interior movements, monthly payments, also claim special tablets. Then come figures in chalk that would set a Babbage insane, yet simple as A. B. C. to dapper clerks, who come to cast one short, sharp glance at "Spots" and "Futures," the price of gold at that particular moment on the Paris Bourse, in London and in Liverpool. My brain reeled again as I endeavored to follow the courteous secretary, Mr. H. G. Hester, in his explanations of dull, heavy and brisk markets, of losses of seventeen-twentieths, owing the sneezing of the Khedive of Egypt, or rises of four-fifteenths on account of the Emperor of Russia's having called for a second cup of coffee. One fact I carried away, and an astonishing one, namely, that the cotton crop for 1878 has reached a total of 4,773,865 bales, averaging in weight 473 pounds per bale, against 4,474,069 bales in 1877, averaging 468 pounds per bale, an excess in bales of 299,796, and in pounds of 164,384,359. I noticed a certain dark-eyed, low-shouldered, sallow-complexioned, close-looking class of men lounge in and out of this room, almost listlessly, and I was informed that those were types of the Southern planters. The early part of Wednesday proved propitious; the air, though "muggy," was soft and warm, and for a few moments the sun peeped out to take a peep at Canal Street, alive with pedestrians, for was it not the 8th of January and the sixty-third anniversary of the day when Jackson, at the head of a few rude hunters and frontiersmen of Kentucky and Tennessee, with a few battalions of Louisianians, met in battle on the plains of Chalmette the veterans of Wellington's army—men who had fought in the Peninsular War against Soult, Massena and Napoleon—and defeated those veterans more severely than any army of modern times has ever been beaten? A thick, muggy rain, and a thick, muggy atmosphere, thoroughly English, "choked off" the parade, and the few gray-coated warriors who put in an appearance seemed part and parcel of the drizzle and the mud.

The Enormous Crops in 1878.

THE December report of the Department of Agriculture shows that the corn crop for 1878 is some 30,000,000 bushels larger than that of 1877. The oat crop is somewhat in excess of that of 1877, making it the largest ever raised in this country. The average yield per acre is, however, less than in 1877, and the quality in most of the States is inferior. There is no material change in the barley crop from 1877, except that California increased her acreage from 450,000 to 650,000 acres and almost doubled her yield per acre. The total product for the year will be in round numbers 42,000,000 bushels against 34,500,000 bushels in 1877. The rye crop is about one-sixth larger than in 1877, but the quality of the crop is inferior in the New England (except Connecticut) and Southern States, while in the States of the West, Northwest, and Pacific slope it is superior, except in Illinois and Nebraska. The potato crop shows a large decline as compared with 1877, though the average was about the same, the difference being less than one per cent. The average yield of the whole country will be 69 bushels per acre against 94 bushels in 1877, making a total product in round numbers of 124,000,000 bushels for 1878, against 170,000,000 in 1877. The hay crop is twenty per cent. greater than last year. Sorghum is receiving increased attention, especially in the trans-Mississippi States and Territories. In Stearns County, Minn., a variety called amber cane is reported as yielding as high as 300 gallons of syrup per acre. Delaware County, Iowa, manufactured 100,000 gallons of syrup during the year, and found a home demand for the whole. The tobacco crop is larger, and exceptionally good.

SCIENTIFIC INTELLIGENCE.

The Holborn Viaduct in London was recently experimentally lighted by electricity. The viaduct consists of several series of large vaults, sewers and subways, all of which were perfectly lighted.

Signor Carlo Guarmani, the well-known Arabian traveler, points out in a recent letter that the Arab Bay, which the Italian Government purchased some time ago, is choked up with sand, and entirely unsuited for a commercial port or naval station.

Excavations are now in progress on the Limberg, in the Bavarian palatinate, which will lead to important results for prehistoric investigation, inasmuch as they are directed to the elucidation of the much contested question regarding the constructors and former inhabitants of the Ringwall, near Dürkheim.

A Singular Project is on foot at Paris. M. Camille Flammarion, having published a number of articles to prove that the moon is not destitute of inhabitants, has been led to the idea of constructing a reflecting telescope which will be powerful enough to see them. He is now busy organizing a committee to collect the necessary funds.

M. Bardoux has reorganized the French Central Society of Agriculture, which will be styled the National Society of Agriculture. It will be composed of eighty-two ordinary members, ten foreign members, one hundred and fifty corresponding members in France and Algeria, and fifty foreign corresponding members. The President of the Republic is to be *ex-officio* the patron of this Society, and the Minister of Agriculture and Trade the honorary president.

A Scheme for the extension of meteorological observations throughout Russia is now being discussed by the Russian Government. The Central Meteorological Institution will be located at St. Petersburg. Provincial meteorological institutions will be created in connection with each Russian university, and these provincial institutions will have under their superintendence all meteorological stations of their respective districts, which stations will be largely increased in number.

Pure Hydrogen Gas.—Hydrogen gas when made from zinc, iron or other metals, is usually considerably contaminated. It has been found that this difficulty can be remedied by passing the gas through a mixture composed of 10 parts of bichromate of potash, 5 parts sulphuric acid and 100 parts water. By the use of this mixture hydrogen, free from the compounds of arsenic, antimony, sulphur, carbon and silicon, may be obtained.

Spontaneous Ignition of Hydrogen by Finely Divided Zinc.—In dissolving zinc in hydro-chloric acid, F. W. Hoffmann has observed explosions on the surface of the liquid in the vessels employed. These phenomena he describes in a recent paper, and explains them by the supposition that the gas in its evolution throws up small portions of zinc, rendered porous by the action of the acid, and that these finely divided particles coming in contact with the air act like spongy platinum, causing the gaseous mixture to explode.

The Bindings of Books Injured by Gas.—Prof. Wolcott Gibbs of Harvard University, in a letter referring to the conclusion which he once arrived at, that the bindings of the books of the public library were injured by the products of coal gas combustion, now expresses the opinion that his judgment was wrong. He has examined the books of the College and the Athenæum libraries, where gas is not used, and finds the binding in the same condition. It has been suggested by a binder of experience that the trouble in these cases is due to the poor quality of leather used and to defects in the tanning.

Separation of Antimony and Arsenic.—One of the most difficult problems in analytical chemistry has always been the separation of arsenic from antimony. In the last number of Liebig's *Annalen*, Professor Bunsen presents a new method intended to supersede that hitherto employed, which was discovered by him a number of years since, depending on the treatment of the combined sulphides with sulphurous acid. In the new process the sulphides are dissolved in potash and subjected to the action of chlorine. A quantity of a saturated aqueous solution of sulphureted hydrogen, sufficient to precipitate the antimony, is then added, and from the filtrate the arsenic acid is precipitated on heating by a long-continued stream of sulphureted hydrogen gas.

The Electric Light in 1670.—About the year 1670 Dr. Wall, of England, first observed the existence of electric light, and suggested the resemblance between electricity and lightning. He had a rude machine made out of a solid stick of sulphur, which, on revolving, gave out a phosphorescent light, and all of his energies were at first applied to the invention of an improved apparatus for rendering this light available for illuminating purposes. Otto Von Guericke also had the same idea in his mind, and all of the early physicists were intent on finding some way of rendering the new light available. The discovery of electro-magnetism, followed by the invention of the telegraph, diverted the attention of investigators into different paths. Recently, however, the whole world has started off in search of electric light, with every prospect of bringing it under control.

The Future of the Phonograph.—Dr. William F. Channing predicts a startling future for the phonograph. The sheet of tin-foil or other plastic material receiving the impressions of sound will be stereotyped or electrotyped so as to be multiplied and made durable. The cylinder will be made of material plastic when used and hardening afterwards. Thin sheets of paper-maché, or of various substances which soften by heat, would be of this character. Having provided thus for the durability of the phonotype plate, it will be very easy to make it separable from the cylinder producing it, and attachable to a corresponding cylinder, anywhere or at any time. There will doubtless be a standard of diameter and pitch of screw for phonotype cylinders. Friends at a distance will then send to each other phonotype letters, which will talk at any time in the friend's voice when put upon the instrument. How startling, also, it will be to reproduce and hear at pleasure the voice of the dead! All of these things are to be common, every-day experiences within a few years. It will be possible, a generation hence, to take a file of phonotype letters, spoken at different ages by the same person, and hear the early prattle, the changing voice, the manly tones, and also the varying manner and moods of the speaker—so expressive of character—from childhood up! These are some of the private applications. For public uses, we shall have galleries, where phonotype sheets will be preserved as photographs and books now are. The utterances of great speakers and singers will there be kept for a thousand years. In these galleries spoken languages will be preserved from century to century with all the peculiarities of pronunciation, dialect and tongue. As we go now to see the stereoptic on, we shall go to public halls to hear these treasures of speech and song brought out and reproduced as loud as, or louder than, when first spoken or sung by the truly great ones of the earth. The ease with which the phonotype cylinders may be stereotyped or electrotyped and multiplied has been spoken of. Certainly, within a dozen years, some of the great singers will be induced to sing into the ear of the phonograph, and the electrotyped cylinders thus obtained will be put into the hand-organs of the streets, and we shall hear the actual voice of Christine Nilsson, of Miss Cary, or even of Jenny Lind and Alboni, ground out at every corner! The warbling of birds, the talking of parrots and the various hum of insects and sounds of nature at different periods can also be stored up for reproduction at will. The picture is a startling one, but nevertheless true.

PERSONAL GOSSIP.

KATE FIELD has raised three thousand dollars for the Shakespeare Memorial fund.

IT has been decided at Rome to accept the resignation of Archbishop Purcell, of Cincinnati.

MR. LLOYD BRYCE and Miss Cooper, daughter of Mr. Edward Cooper, Mayor of New York, are to be married at Easter, in Grace Church.

THE death is announced on Christmas Eve, at the advanced age of eighty-nine, of Mrs. Lucy Anderson, who was for many years pianist to Her Majesty.

THE late Caleb Cushing's will will soon be probated. It is supposed that he left property worth $1,000,000, much of it being land in the South and West.

MR. EZEKIEL, the Hebrew sculptor, has made a bust of Christ, which is said to be beautiful and impressive. The face is strictly Jewish in type and full of spiritual expression.

THE KHEDIVE has expressed his desire to appoint several English officers to important posts in his army. It is at present uncertain whether His Highness's request will be granted.

LEO XIII. has decided to take energetic measures in order to prevent the Society of Jesus from interfering in ecclesiastical matters in Belgium and France. Instructions have been sent to the apostolic Nuncios on this subject.

MR. JOHN I. VAN VALKENBURGH, of Columbia County, is another old member of the New York Legislature who has been overlooked in recent references to the veterans of that body. He represented Columbia in 1820. He is now ninety-seven years old, and bright and clear of mind.

A REMARKABLE improvement has taken place in the health of Dean Stanley in consequence of his recent tour in the United States. In appearance and manner he is many years younger than he was before he left England. It is, therefore, not surprising that he should contemplate recrossing the Atlantic at no very distant date.

FATHER CURCI, the eminent theologian, is at work on his great commentary on the Scriptures, in which he will incorporate the aggregate teachings of German biblical writers. He has been kindly received by Monsignore San Felice, the Archbishop of Naples, who has given him all the facilities needed for prosecuting his labors.

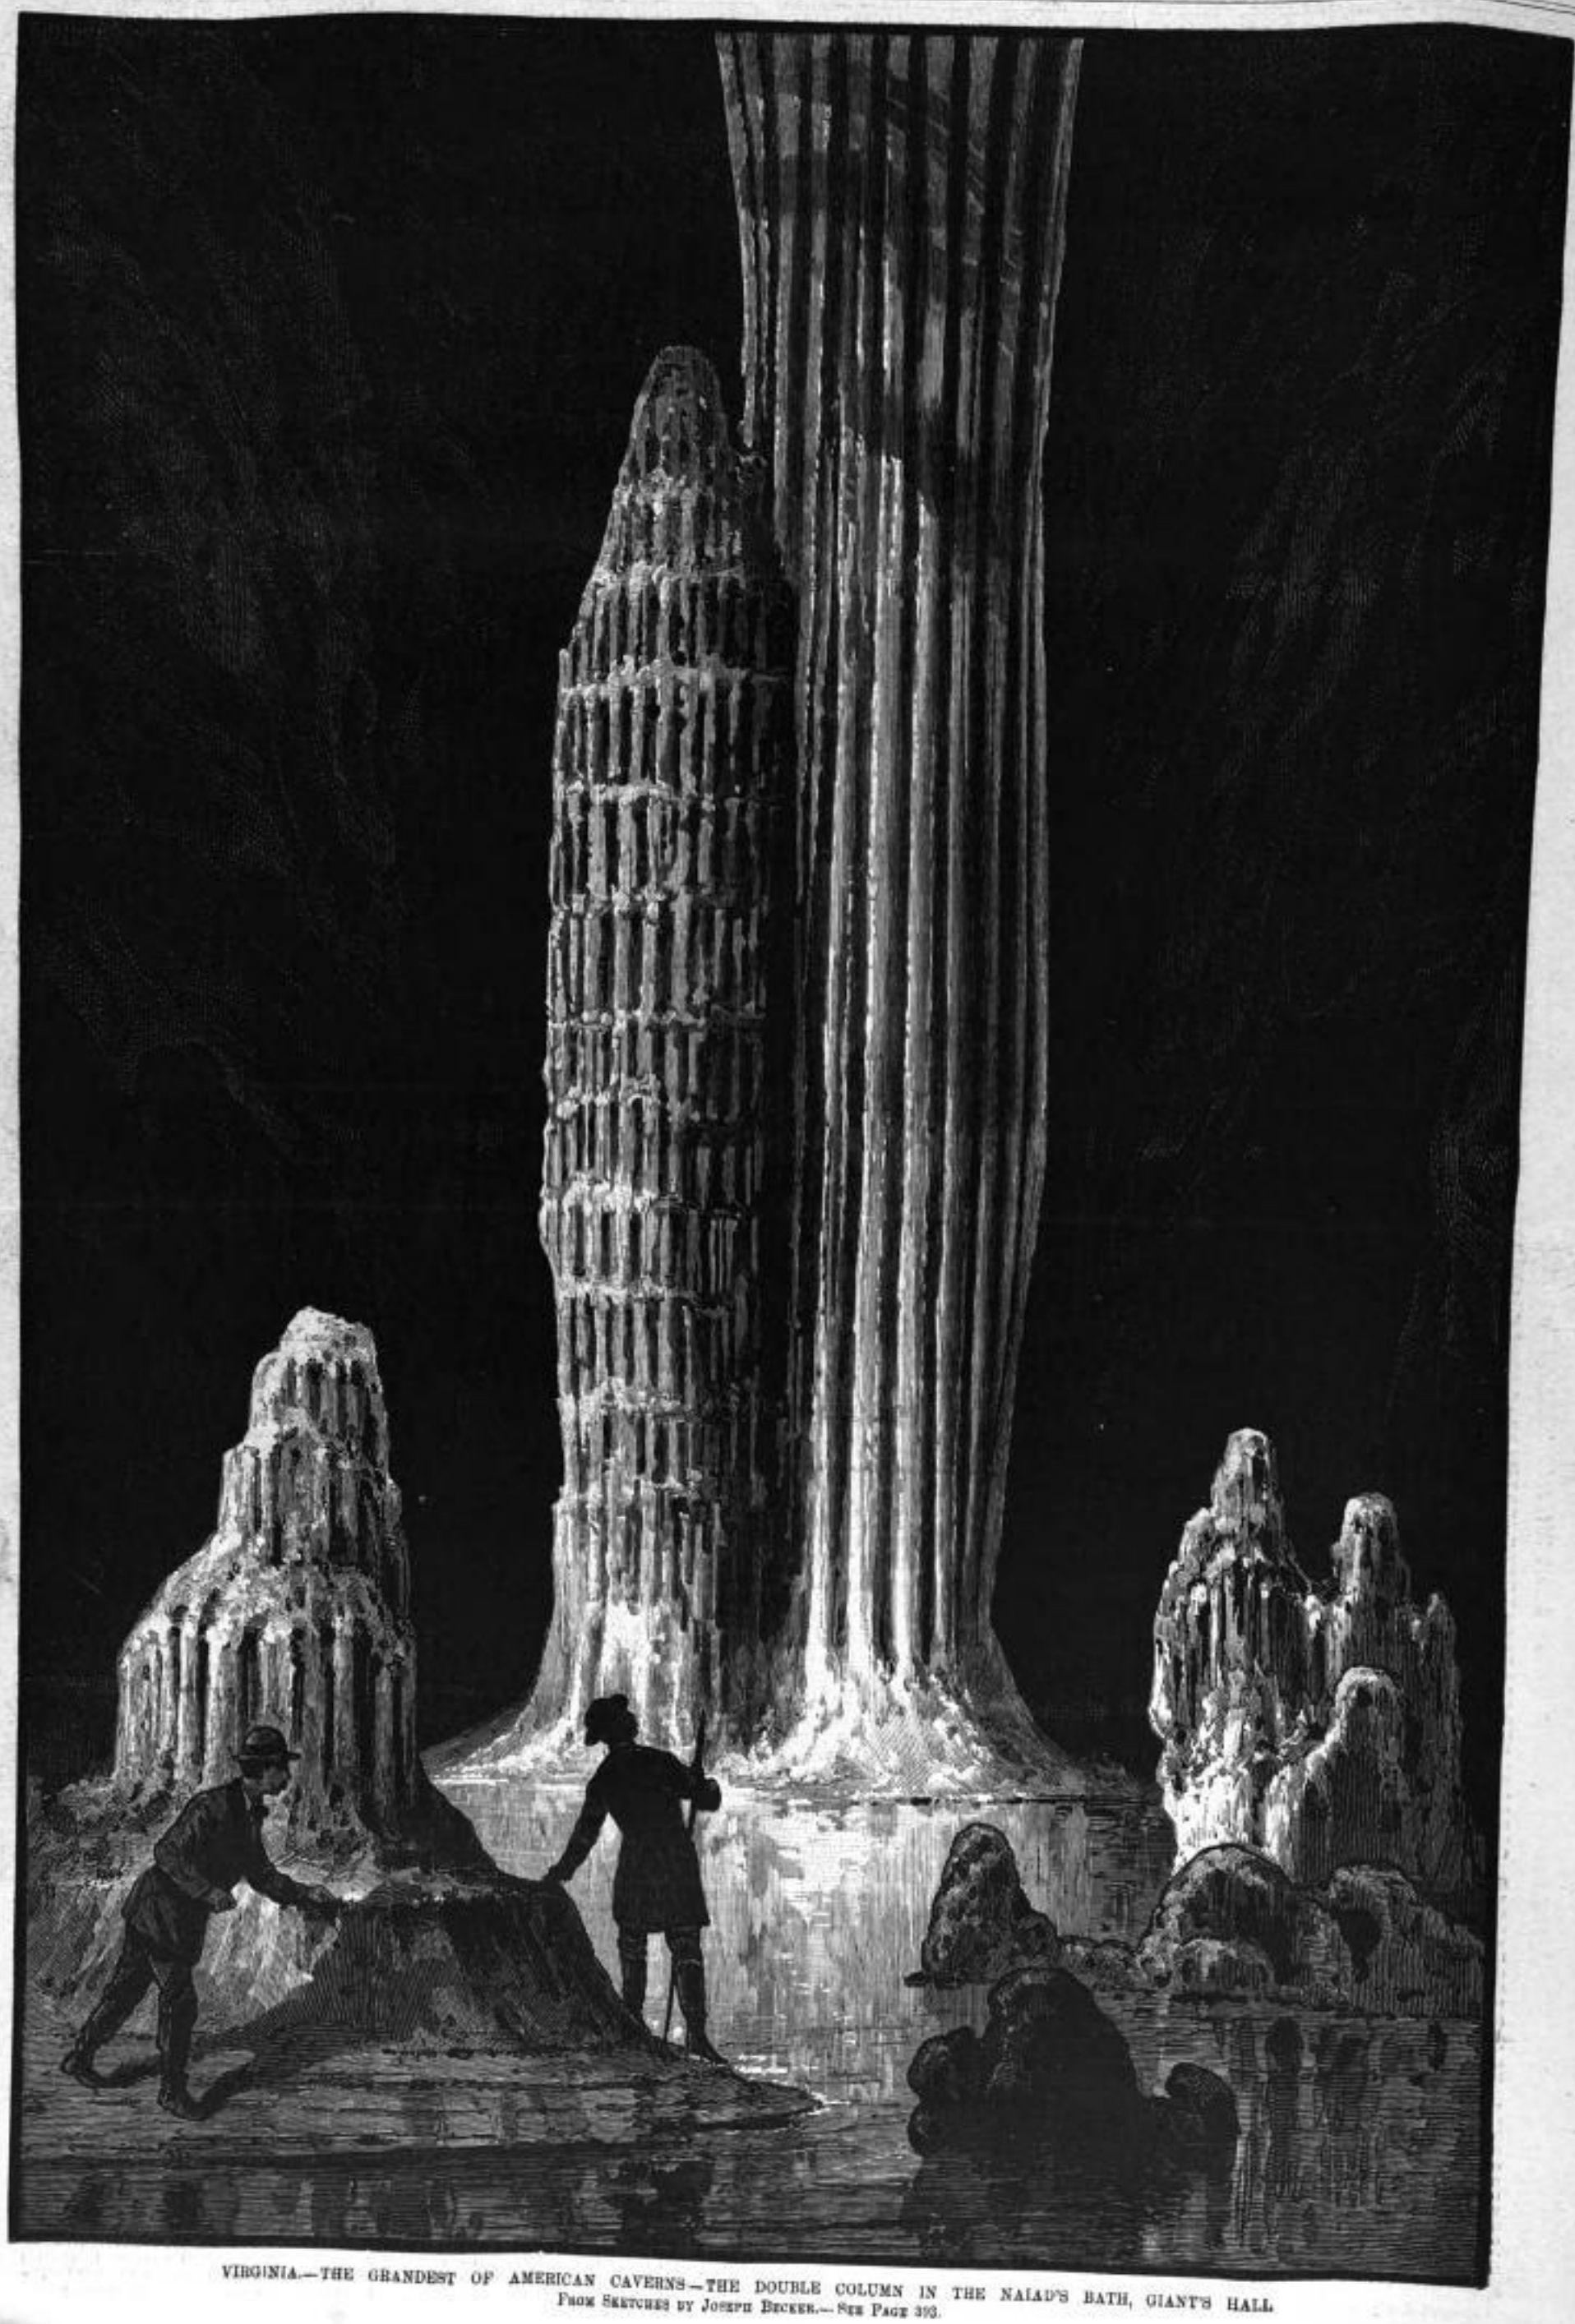
THEEBAW, the new King of Burmah, was educated by an English missionary, and has chosen for his Prime Minister a man who has visited both England and France. The new monarch signalized his accession by abolishing, in so far as foreigners are concerned, the rule of the court which compelled every one to remove his shoes in the royal presence.

GOVERNOR CHARLES B. ANDREWS of Connecticut was born at Sunderland, Mass., in 1836, and graduated at Amherst with General Francis A. Walker, professor at Yale College. The Governor's mother is still living at Montague, aged seventy-four, and still takes an active interest in public events, and especially in all matters concerning the success of her son.

IT is announced that the betrothal of the Archduke Rodolphe, Prince Imperial of Austria, and the Princess Marie Mathilde Victoire Caroline of Saxony, has been decided, and will take place shortly. The young princess was born on March 19th, 1863, and she is the daughter of Prince George of Saxony, brother of the king and of the Infanta Marianne of Portugal.

PRINCE HENRY of the Netherlands, brother of King William, died January 13th. He was born June 13th, 1820. He held the position of Lieutenant Admiral and Commander-in-Chief of the Navy, and was also a member of the Cabinet Council. He was also Lieutenant-Representative of the Grand Duchy of Luxembourg. He married Amalia, Princess of Saxe Weimer, who died in 1872.

QUEEN VICTORIA has had the kindly custom for many years of receiving at Osborne House on Christmas Eve the poor old people and children of the adjacent villages, and of presenting to them in person gifts of food and clothing. This year the Queen's bereavement led her to complete seclusion, and her benefactions were dispensed by the pretty little hands of Princess Beatrice. The poor old women of the neighborhood were presented with dresses, the boys received good warm scarfs, and the girls shawls, the young people being also regaled with cake.



IT is said that there are nine estates of the Carpenter family now held by the Court of Chancery in England, estimated to be worth $200,000,000. The Carpenters of Rhode Island and Massachusetts have made desperate efforts to convince the Lord Chancellor of the solidity of their claims, but that functionary inexorably refuses to recognize them, and so the Long Island Carpenters are now going for his lordship. At present they are hampered by a missing link in the shape of the family Bible of Timothy Carpenter, an ancient volume bound in leather and brass, and filled with family records.

THE REV. J. B. Thomson, in command of the main body of the London Missionary Society's Expedition, reached Lake Tanganyika on the 23d of August, seventy-three days after his departure from Mpwapwa. The great African chief Mirambo furnished a small escort, whose presence exercised a moderating influence upon the demands for tribute put forward by Katumlumpula and the lord of the Malagarazi ferry, the former being satisfied with fifty six cloths, the latter with forty-four yards of calico and six pounds of beads. The expedition experienced but few of the difficulties which other travelers had to encounter.

IT appears that the late Dr. Frazer, of Hampstead, has made a bequest in his will leaving the large sum of $50,000 to the Senatus Academicus of Edinburgh, for founding bursaries, etc., for medical students at the university. "but," runs his will, "having learnt that the horrible and atrocious practice prevailed there of performing unspeakably cruel operations and experiments on living animals, he now, by his will, canceled the bequest, and desired to benefit the Scottish Society for the Prevention of Cruelty to Animals to a similar extent, since he could not reconcile it with his feelings to encourage, however remotely, the practice of vivisection."

A LETTER from Peking states that the Viceroy Li Hungchang has entered into a contract with Mr. Arnold Hague, of New York, an able geologist and mining expert, for the purpose of prospecting the gold, silver, and other mines in the north of China. Mr. Hague is expected to start shortly from Tientsin for the mining regions. The just published Consular Report from Canton also states that General Fang, a well-known military officer, has been instructed to arrange for an immediate supply of European machinery to be used in local mines. It appears to be thought that there is great likelihood of the early working of coal and other mines in the provinces of Chihli, Hunguei, Kwangsi, and Szechuen.

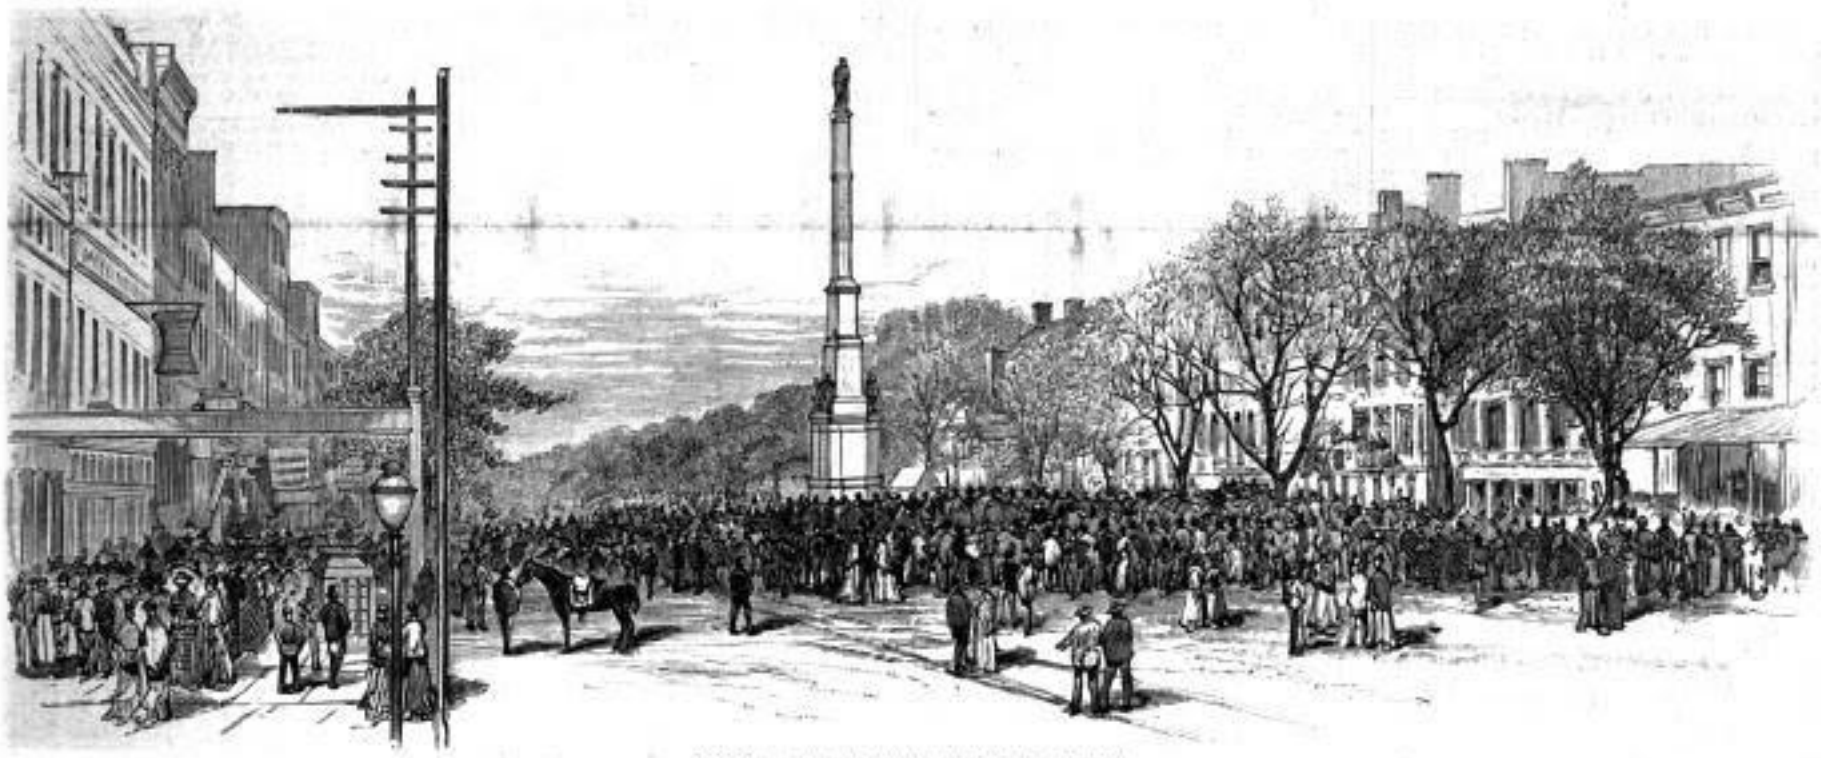
SIX-CORD SPOOL COTTON.



As it is one of the missions of the press to correct all statements prejudicial to truth or the interests of the public, we are glad to perceive in a recent number of the *United States Economist* an article which places in proper light the clearly won title of Messrs. J. & P. Coats and Mr. Clark to the first place in this country touching the manufacture of what is commonly called six-cord spool cotton.

At the great Paris Exposition just closed, the Messrs. Coats, who have most extensive works at Pawtucket, R. I., as well as in Europe, entered into competition with all the world for the highest award in relation to this cotton, and received the gold medal, while the Willimantic Linen Company was awarded for the same exhibit a silver medal only. The judges in the case were men of the highest honor and the soundest practical judgment. In the Official Catalogue of the awards, page 146 to 151, Group IV., Class XXX., it is set forth that the only recipients of GOLD MEDALS for threads and cotton fabrics were Ashworth & Son, Brook & Brothers, Clark & Co., and J. & P. Coats, all of England, and Wallaert Brothers, France, involving the distribution of just FIVE GOLD MEDALS. There were twelve other competitors noticed in this branch of industry, among whom were the Willimantic Linen Company, Hartford, Conn., who received a SILVER medal, and Semple & Sons, of Mount Holly, N. J., who received a BRONZE medal. From this decision there is no appeal; nor can any description of trickery or special pleading alter the verdict delivered before the congregated world, so to speak, in Paris, and by a committee selected with the utmost care and with the fullest regard to their probity and their fitness to pronounce upon the relative merits of the various cottons submitted to them.

It is not seemly, by any subterfuge or dishonest coloring, to attempt to mystify the action of this committee, or the preference expressed by their awards to the five manufacturers just named. It were fruitless, in any company, to attempt to argue the general public into the belief that a BRONZE or a SILVER medal is as valuable or as significant of excellence as a GOLD one. Coats and Clark have extensive manufactories in this country, as well as the Willimantic Linen Company, and hence our special desire that each should occupy the position assigned to it by the tribunal to whom all three had voluntarily appealed. Beyond this we have no interest to gratify, and here we leave the subject with an intelligent and just public.

FRANCE.—EXHIBIT OF MESSRS. J. & P. COATS'S SEWING COTTON AT THE PARIS EXPOSITION.

GEORGIA.—THE CONFEDERATE MONUMENT, AUGUSTA.

HONOR TO THE BRAVE.

THE Confederate monument erected in Augusta, Ga., through the efforts of the Ladies' Memorial Association, and unveiled on the 31st of October last, is one of the most notable structures of its kind in the United States. It stands in the middle of Broad Street, near the Globe Hotel, in the most conspicuous place, and in the centre of the business part of the city. The base is Georgia granite, twenty-two feet square, and the monument itself of the finest white Italian marble, imported free of duty by Act of Congress. The total height is seventy-six feet. At the top of the first section, twenty feet from the base, stand in bas-relief there was a debt of $100,000 upon it. This sum was raised last Spring, and on Sunday, May 26th, the payment of the debt was celebrated by a large congregation. The pastor, Rev. Edward L. Clark, is an expert carver, and the handsome frieze of plaster which surrounds the ceiling and the ornamental caps and brackets attached to the main pillars are the work of his hands. His study is in the top of the western tower, and is full of curiosities, a Bengal tiger's skin covering the floor. The fireplace and book-shelves, which run up twenty feet to the ceiling, and the staircases leading to the upper shelves, as well as the furniture, are carved in intricate designs out of solid oak by the pastor.

NEW YORK CITY.—EX-JUDGE JOSIAH SUTHERLAND.—FROM A PHOTO BY SARONY. SEE PAGE 402.

CHURCH OF THE PURITANS.

THE Presbyterian Church of the Puritans, on Fifth Avenue and One Hundred and Thirtieth Street, New York, is a building of massive white marble, erected in the Gothic style. Elaborately carved oak is employed for the pews, wainscoting and pulpit, and a deep scarlet carpet matches the upholstery of the pews and chancel. A private stairway, out of sight of the congregation, leads to a room in the chancel part of the building, furnished with easy-chairs and lounges, and known as the invalid chamber. It was provided for the benefit of the aged and sick who cannot undergo the fatigue of sitting throughout the service in a pew. The cost of the building was about $250,000, and at the dedication

NEW YORK CITY.—CHURCH OF THE PURITANS, FIFTH AVENUE AND ONE HUNDRED AND THIRTIETH STREET.

Digitized by Google

at the corners life-size statues of Generals Lee, Stonewall Jackson, Thomas R. R. Cobb and W. H. T. Walker. Lee and Jackson represent the Lost Cause, Cobb the State of Georgia, and Walker, Richmond County. On the next section are the coat-of-arms of Georgia and the Confederate States. The obelisk rises proportionately with tasteful ornamentations from this section to the cap, which is surmounted by the statue of a private Confederate soldier, heroic size, at rest. The inscriptions are these:

East side:

"Our Confederate dead."

West side:

Erected A. D., 1878,
By the Memorial Association of Augusta,
In Honor of
The Men of Richmond County,
Who died in
The Cause of the Confederate States.

North side:

In Memoriam.
No nation rose so white and fair,
None fell so pure of crime.

South side:

Worthy
to have lived and known
Our Gratitude;
Worthy
to be hallowed and held
in tender remembrance;
Worthy
the Fadeless Fame which
Confederate Soldiers
won,
Who gave themselves in life
and death for us;
For the Honor of Georgia;
For the Rights of the States;
For the Liberties of the People;
For the Sentiments of the South;
For the Principles of the Union;
As these were handed down to them
By the Fathers of our Common Country.

The oration at the unveiling was delivered by Colonel Charles C. Jones, in the presence of an immense concourse of people, and a large military force, headed by the band of the Thirteenth United States Infantry, stationed at Atlanta. The monument, which cost $17,331, is considered a marvel of cheapness, but the work was done very low, and much expense was spared by the Congressional action admitting the foreign materials free of duty.

HON. JOSIAH SUTHERLAND.

JUDGE JOSIAH SUTHERLAND was born at Stamford, Duchess County, in 1807. He entered at and graduated from Union County, Schenectady, and began the study of law with Huntington & Kirkland, at Waterford, and Bushnell & Stebbins, at Hudson. He was admitted to practice in 1828, and opened an office in Livingston, Columbia County. Shortly after his admission he was appointed District Attorney of Columbia County, and held that office continuously for twelve years.

In 1838 Judge Sutherland moved to Hudson, and took an active part in what were known as the Anti-rent troubles, being attorney and counsel for the vast Livingston estates in Columbia County. He was elected a member of the Thirty-second Congress, and served out his term.

In 1851 Judge Sutherland moved to New York City, and formed a partnership with the late Judge Claudius L. Monell. In the Fall of that year he was elected a Justice of the Supreme Court, in this district, for a term of six years, to fill a vacancy caused by the resignation of the late James R. Whiting.

The term having expired, Judge Sutherland was in November, 1863, unanimously re-elected for the full term of eight years, no candidate being nominated in opposition to him. At the expiration of the term, Judge Sutherland returned to the practice of law in this city, and during the year which followed was appointed by the Legislature Chairman of a Commission to pass upon the legality of a large number of city contracts, in regard to the payment for which there was a controversy between the contractors on one side, and the Comptroller, Andrew H. Green, on the other.

In November 1872, Judge Sutherland was elected City Judge for the full term of six years, to succeed Hon. Gunning J. Bedford, whose term of office had expired.

Shortly before the expiration of this term, a few weeks ago, Judge Sutherland was the recipient at the hands of the Bar of this city of the highest compliment ever paid to a retiring judge in our city, in the form of an immense meeting in the General Term Room of the Supreme Court, at which most eulogistic resolutions were adopted, and remarks made by judges and leading members of the Bar.

Judge Sutherland has again resumed the practice of the law at No. 42 Pine Street in this city, in connection with Mr. F. M. Scott, who was his partner in 1872.

NEW BOOKS.

A NEW American novel, entitled "His Heart's Desire," has just appeared from the press of J. B. Lippincott & Co., of Philadelphia. The author is not known, but he has done his work cleverly. The book shows a good deal of dramatic power, and the plot is unfolded with genuine artistic skill. It is hinted that the upper circles of New York society furnish the characters and scenes of the book, but these possess no features or characteristics which may not be found in the social life of any large community. The same house has just issued an interesting book called "Thirty Years at Sea." Lovers of adventure, and persons especially who find a peculiar charm in sea tales, will be well repaid by perusal of this volume, which is not only well written, but furnishes much information concerning strange lands and peoples.

A Tree that Yields Food, Wine and Oil.

MR. E. LOCKWOOD, who was for several years a magistrate in Monghyr, India, has described in the Journal of the Linnean Society the economic uses of the mahwa tree, which he speaks of as "a fountain yielding food, wine and oil" to the inhabitants of the country where it grows. This tree (the *Bassia latifolia* of botanists) grows in the plains and forests of Bengal, and attains a height of forty to fifty feet, with numerous spreading branches, forming a close, shady, rounded crown. Standing on the Kharakpoor hills, 250 miles northwest of Calcutta, a hundred thousand of the trees are visible in the plains below. They might be mistaken for the mango, but while the mango is uncertain in its yield, the crop of the mahwa never fails. The part eaten is the flowers, which are sweet-tasting and succulent, and fall in great profusion during March and April. The natives collect these, dry them, and store them as staple articles of food. Each tree yields two or three hundred weight of the corollas; so that the total yield in the Monghyr district alone, it is estimated, cannot fall short of 100,000 tons. The nourishment is good, for the Santhals, who use it largely, are plump and happy. The mahwa had its share in alleviating the Indian famine, and during the scarcity which prevailed at Behar (1873–4) the crop, which was unusually abundant, kept thousands of poor people from starvation. The flowers are still more useful for feeding cattle; and again the same recommendation may be advanced, that while the potato, maize and barley are uncertain in their crop, there has never been a season when these edible corollas have been known to fail. Their keeping powers are excellent; a ton, dried and put into sacks, was exported, and, examined after two years' time, was found to be undamaged. The tree furnishes a hard and strong timber used for carriage wheels, etc. The seeds yield a greenish-yellow oil, used for burning in lamps, making soap, and for culinary purposes. The flowers, in addition to their use as food, are now largely employed in the distillation of a strong-smelling spirit, resembling whisky, and which is consumed in great quantities by the natives. This liquor, when fresh, proves very deleterious to Europeans. The mahwa is considered by the Bheels as essential to their very existence, and this fact is taken advantage of by the Government in dealing with refractory tribes; it is only necessary to threaten the destruction of their mahwa trees to bring them to submission. Some of the English papers believe that there is a possible commercial future for the economic products of this tree, especially for its oil, which is said to be worth $175 per ton in India.

FUN.

A SWINGING board in front of a shop is a bad sign in windy weather.

FIVE barrels of coal to a poor widow is worth two boxes of sermons on charity.

BOSTON girls say to the men who offer themselves, "Beau 's is you, yes,"—*N. Y. Commercial Advertiser*. New York girls reply, "Cents is you, yes."—*Boston Advertiser*. Doubtless the Hartford girls answer, "Assets you, yes."

"I'D like you to help me a little," said a vagrant, poking his head into a country store. "Why don't you help yourself?" asked the proprietor. "Thank you, I will," said the tramp, picking up a bottle of pickles and two loaves of bread, and then vanishing.

"PLEASE draw upon the blackboard an interrogation point," said a teacher to one of her pupils. "Can't make a good one," replied the boy. "Draw a boot-buttoner," said the teacher, "that will answer." The boy took the crayon and drew a hairpin. Sharp rebuke by the teacher. Other scholars smile.

NEW WINE IN OLD BOTTLES.—*Facetious Old Party*: "How long do you say that wine has been bottled, waiter?" *Waiter*: "Fourteen years, sir. *Facetious Old Party*: "Lor, I didn't know flies would live as long as that." *Waiter*: "Flies, sir?" *Facetious Old Party*: "Yes, I mean that one kicking about in the bottle." Waiter collapses.

"WH-O-O-P! Glory enough!" shouted a schoolboy to his companions yesterday morning, as he proceeded to give them the news. "Eight teachers snowed in and no school this week. How is that for high?" Up went several hats, and up went indescribable yells that would doubly discount the wildest Indian war-cry ever uttered.

PROFESSIONAL JEALOUSY.—*Lady of the House* (to greengrocer in waiting): "Parkins, what does this mean?" *Greengrocer to Waiting* (who has taken more than a drop too much): "Mean, m'm? It means as I'm off! Fitch and blood can't stand the phrases they lavishes on that there bird. It's all Turkey—Turkey—Turkey—and, dooce take 'em, not one word for my vegetables!"

A COLORED clergyman within the limits of our fair city stepped into a grocery store on State Street recently, and, accosting the proprietor, said: "Our church is out ob communion wine." "Very well," said the accommodating dealer, "about what are you going to want?" "Well," responded the colored wearer of the white neckcloth, "we hahn't got 'nuff communion wine to las' de year fru, and some of de ladies ob de congregashun hab expressed a predrunce for gin."

BUSINESS FAILURES.

LACK of judgment causes fully fifty per cent. of all business men to fail, earlier or later. Do not an equal proportion of physicians fail to cure from the same cause? At the Grand Invalids' and Tourists' Hotel, Buffalo, N. Y., Dr. Pierce, through the skill attained by his several specialists, each having devoted years to a special department of medical science, is able to cure a large per cent. of cases hitherto considered incurable. Many physicians, in view of the superior advantages of this model sanitarium, bring there stubborn, obscure, complicated and surgical cases for examinations, operation and treatment. Full particulars given in the "People's Common Sense Medical Adviser," an illustrated work of over 900 pages. Price, post-paid, $1.50. Address the Author, R. V. Pierce, M. D., Buffalo, N. Y.

We call attention to the "Advantage of having a Maine Non-forfeiture Law Policy in the Union Mutual Life Insurance Company," as illustrated by the claim of $6,000, which has just been paid to the widow of the late Captain Charles L. Gardiner, on a policy which had lapsed for the non-payment of premiums, but on which the whole insurance was saved by the provision of the non-forfeiture law and the express terms of the policy issued by the company.

The Union Mutual makes a special feature of the non-forfeiture law and its definite policy contract, by which it aims, and so far as we see effectually, to give retiring members equities and rights of which, under the former practice of life insurance companies, they have been unjustly deprived. The company is one of the oldest in the country, having commenced business in 1849. During the twenty-nine years, ending December 31st, 1878, it has returned its members over fifteen millions of dollars ($15,135,137,35), as follows: On 7,618 death claims, $5,545,224.62; on endowments paid at maturity, or discounted and paid before maturity, and annuities, $1,224,712,63; for cash dividends on policies in force (the company has no stock capital), $3,852,156.27, and on surrendered policies purchased and lapsed notes cancelled, $4,403,012.13; while its present accumulated assets, after the payment of these large sums to policy-holders, exceed seven million dollars, including, by the New York standard of valuation, a surplus over all policy and other liabilities of more than seven hundred thousand dollars. Its annual income from premiums and interest is nearly two million dollars. These figures in themselves indicate a sound and healthy condition.

The recently published December monthly statement for the year 1878 shows that it has been one of uniform prosperity in every department of its business. As compared with 1877, its losses by death were nearly one hundred thousand dollars less, and its expenses were reduced nearly as much more. The sums paid out for expenses in 1878 were nearly three hundred and fifty thousand dollars less than in 1876, the ratio of expenses to income having been reduced over twelve per cent. in two years. During 1878 alone it paid its policy-holders more than two millions of dollars in death claims, matured and discounted endowments, policies purchased, dividends and notes canceled. Every just claim has been promptly paid when due, and the amount and character of these payments, the improved quality and value of its investments, the low rate of its mortality, and the large reduction of the expenses incurred in the management of its affairs, afford abundant reason for satisfaction on the part of those directly interested in the success of this institution, and are a demonstration of the value of life insurance, and of the soundness and safety of the theory of the business when affairs are ably and honestly managed.

THE MUTUAL LIFE INSURANCE COMPANY.

AT a meeting of the Board of Trustees of the Mutual Life Insurance Company of New York, held recently, the protest of one hundred and thirty-two policy-holders against the thirty per centum discount to new policy-holders was presented by the President. Also a memorial from more than six thousand policy-holders, representing more than eight thousand policies, approving the management, and requesting the continuance of the present system. On the recommendation of the President, the protest and memorial were referred to a special committee, selected by the board, consisting of A. H. Rice, William E. Dodge, Samuel D. Babcock, George S. Coe, Martin Bates, William A. Haines, and F. H. Cossitt, to whom the whole subject was referred, with instructions to report at the next regular meeting in February. The committee will afford to all persons interested ample opportunity to be heard.

INDIGESTION, DYSPEPSIA, nervous prostration, and all forms of general debility relieved by taking MENSMAN'S PEPTONIZED BEEF TONIC, the only preparation of beef containing its *entire nutritious properties*. It is not a mere stimulant like the extracts of beef, but contains blood-making, force-generating and life-sustaining properties; is invaluable in all enfeebled conditions, whether the result of exhaustion, nervous prostration, overwork, or acute disease; particularly if resulting from pulmonary complaints. CARNRICK, HAZARD & Co., Proprietors, New York.

A MOST novel business card has been issued by the ST. NICHOLAS HOTEL in the shape of beautifully engraved miniature fans, which are greatly in demand by the ladies for albums, etc. They consist of marine and landscape views, and are exquisite in design and execution.

THE Collins antidote for the opium habit is very highly commended by thousands who have been cured by it. The value of a remedy which really saves the opium-eater, without suffering or inconvenience, cannot be measured by any ordinary language.

ORIENT MINE, GOLD HILL, NEV., Jan. 4th, 1879.
I have applied H. W. Johns' ASBESTOS DOUBLE AIR CHAMBER COVERING to our pipes, and it gives perfect satisfaction. I consider it the very best covering introduced on the "Comstock," and I can apply it at less than half the cost of cements or any other material.
Yours truly,
M. C. FOOT, Chief Engineer.

OPHIR MINING CO., VIRGINIA, NEV., Jan. 6th, 1879.
Having used these goods, I fully concur in Mr. Foot's opinion. JAMES BROWN, Chief Engineer.

GRATEFUL—COMFORTING.

EPPS'S COCOA.

"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of well-selected cocoa, Mr. Epps has provided our breakfast-tables with a delicately flavored beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—See article in the *Civil Service Gazette*.

THE

ADVANTAGE

OF HAVING A

Maine Non-Forfeiture Law Policy

IN THE

UNION MUTUAL LIFE INS. CO.

In 1864 and 1865, Capt. Charles L. Gardiner, of Chelsea, Mass., insured in the Union Mutual Life Insurance Company, of Maine, for $6,000, on two ordinary Life policies, payable at death provided the premiums were paid annually, *according to the terms of the contract*.

On the 24 day of July, 1877, Capt. Gardiner had his policies changed to the form now used by the Company, which gives the benefit of the Maine Non-forfeiture Law.

On the 11th day of September, 1877, he sailed from Boston as master of the good ship "Iceland," on a voyage to Calcutta. The ship and all on board were lost at sea. The premiums due July 27th, 1877, and August 24, 1877, were not paid, and by the terms of the original policies this would have worked a *forfeiture of the entire assurance*; but under the new policies which had been gratuitously offered by the Company, the insurance would have been continued in force more than three years, or until November, 1880, notwithstanding the non-payment of the premiums due in 1877; and the fact of the death being established to the satisfaction of the Company, the full amount of the policies was paid on the 29th day of October, 1878.

Results of Three Annual Premiums Paid on a Thousand-Dollar Policy Issued at Age of 30.

$68.10 on the ordinary Life Plan secures	8 years' and 212 days' insurance.

ISSUED JANUARY 13TH.

Opening with so many threads of mystery, the reader's interest is excited to follow a story which, in the hands of such an able novelist, must be throughout intensely dramatic.

The contrast of the two girls, three families, each with its grief, and a fugitive who can never appear but as another, fix the attention and awaken sympathy.

To interest the public in this story, exaggeration is not required, for every reader of this remarkable production cannot fail to be completely engrossed by its perusal.

In the same number of FRANK LESLIE'S CHIMNEY CORNER was also begun:

THE LARGEST, CHEAPEST AND MOST COMPREHENSIVE MAGAZINE IN THE WORLD!

Frank Leslie's

POPULAR MONTHLY.

THE FEBRUARY NUMBER NOW READY.

WHAT THE PRESS SAYS.

"We have received this truly elegant and above all price, valuable periodical for January. It is larger than most of the monthlies, and is a book of itself, containing 120 pages, with over 100 artistic engravings, touching upon and illustrating a great variety of subjects both foreign and domestic. It is one of the most valuable magazines that reaches our table, and as a present to a lady friend would possess a periodical value that would be fresh and welcome through the entire year."—*Carthage (Mo.) Patriot.*

"FRANK LESLIE'S POPULAR MONTHLY for January presents attractive contents. The illustrations are especially fine. Frank Leslie's periodicals have become very popular with the reading public, and deservedly so, for no pains or expense are spared to make them the leading literary publications of the day. The new volume of FRANK LESLIE'S POPULAR MONTHLY commences with this number, and all lovers of legitimate literature should subscribe."—*Daily Leader,* Bloomington, Ill.

128 Quarto Pages; Over 100 Engravings, and Chromo Frontispiece

CONTENTS:

DESCRIPTIVE ARTICLES: "How Carnival is Kept: Scenes in Rome, Vienna, in the Tyrol and the Bavarian Alps, New York, Louisville (Ky.) New Orleans," etc., 14 Illustrations; "Santo Domingo, and the True Story of Samana Bay," by Mrs. William Leslie Cazneau, illustrated; "Rice: In the Fields and Mills of South Carolina," by Jennie Haskell, illustrated; "Some Modern Regicides," by Alfred H. Guernsey: Description of attempts on the life of royal and other distinguished persons, 16 illustrations; "The Northern Lights," by Geo. W. Von Tunzelmann; "Lobster Salad," by Greville Fennelly, etc., etc., etc.

THE SERIAL NOVEL "Norman Desborough's Son," by Frank Lee Benedict, is continued; "Mizpah," by Theo. Gift; "Loaning a Lover," by Esther Searle Kenneth; "A Strange Dilemma," by Walter Edgar McCann; "Queenie's Kiss"; "Doomed," by Eliz W. Pierce; "About a Silver Bell," by Frank H. Converse, etc., etc.

FLORILINE!

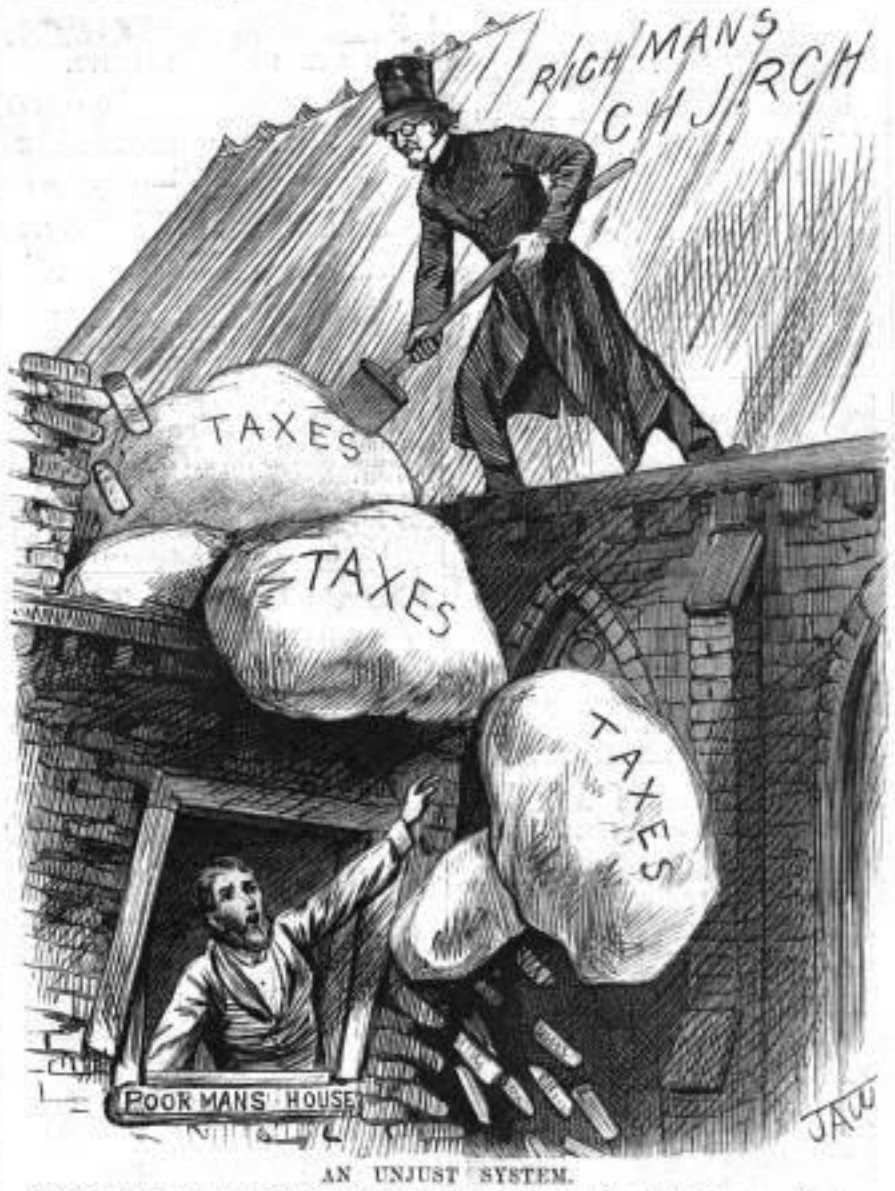
"FLORILINE"—FOR THE TEETH AND BREATH,

Is the best liquid dentifrice in the world. It thoroughly cleanses partially decayed teeth from all parasites or living "animalcule," leaving them pearly white, and imparting a delightful fragrance to the breath.

THE FRAGRANT "FLORILINE"

removes instantly all odors arising from a foul stomach or tobacco smoke. Being partly composed of honey, soda, and extracts of sweet herbs and plants, it is perfectly harmless and delicious as sherry.

Prepared by **HENRY C. GALLUP, No. 493 Oxford Street, London, England,** and retailed everywhere.



ANTI-FAT

ALLAN'S ANTI-FAT is the great remedy for Corpulence. It is purely vegetable and perfectly harmless. It acts upon the food in the stomach, preventing its being converted into fat. Taken in accordance with directions, **It will reduce a fat person from two to five pounds per week.**

"Corpulence is not only a disease itself, but the harbinger of others." So wrote Hippocrates two thousand years ago, and what was true then is none the less so to-day. Sold by druggists, or sent, by express, for $1.50. Quarter-dozen $4.00. Address,

BOTANIC MEDICINE CO., Prop'rs, Buffalo, N.Y.

Every Man HIS OWN PRINTER, THE EXCELSIOR $3 Press Prints labels, etc. (Self-inker $5) Larger sizes for business, pleasure, young or old. Catalogue of Presses, Type, Etc., for 3 stamps. KELSEY & Co. Meriden, Conn

AN UNJUST SYSTEM.

Can that be a just or equitable system which imposes the burden of taxation upon the poor man's house and exempts from tax the church of the rich man?

SCIENTIFIC!

Sea Foam is double the strength of any other baking powder. It is on that account the cheapest. It does not contain alum or ammonia, nor is it adulterated with starch or flour to make it cheap. Commended by physicians, chemists, scientific men, and every housekeeper who has ever given it a trial. Absolutely pure and perfectly wholesome beyond question or doubt—neither alum or other adulteration.

ROYAL

BAKING POWDER

ABSOLUTELY PURE!

The ROYAL BAKING POWDER is a pure Cream of Tartar powder. Recommended for its wholesomeness by eminent chemists. Sold only in cans, by all Grocers. *Beware of the injurious Alum Powders!* Do not buy Baking Powder loose, as it is almost sure to contain alum.

NELSON'S GELATINE

IS THE BEST.

A DELICIOUS JELLY made with the greatest facility in a few minutes.

FOR SALE BY ALL GROCERS.

MAGIC LANTERNS

And **STEREOPTICONS**, all prices. **VIEWS** illustrating every subject for **PUBLIC EXHIBITIONS, Etc.** *A profitable business for a man with small capital.* Also **MAGIC LANTERNS** for home amusement. 74-page catalogue *free.* **McALLISTER,** Manufacturing Optician, **49 Nassau St., N. Y.**

A KEY THAT WILL WIND ANY WATCH AND NOT WEAR OUT.

SOLD by Watchmakers. By mail, 30 cents. Circulars free. J. BIXBY & Co, 38 Dey St., N.Y.

THE NEW JUVENILE MONTHLY.

FRANK LESLIE'S CHATTERBOX.

A publication expressly designed to entertain, amuse, and, at the same time, improve the mind of the youthful reader by imparting **Valuable General Information.** The 48 quarto pages contained in each number are filled with pleasing stories and tales, interesting descriptive articles, natural and scriptural history, adventures of youthful heroes, poetry, etc., etc. The pages abound with **Beautiful Engravings,** illustrative of a large portion of the contents. The "**CHATTERBOX,**" therefore, will doubtless be heartily welcomed by families, and prove a **Source of Infinite Amusement** to the children.

THE CRISIS IN GERMANY.

THE situation in Germany is full of interest. Discontent has become almost chronic. The ruling powers and the people are drifting into direct antagonism. On the one hand, relief is sought by means of conspiracy and lawless violence; and order is maintained on the other by assumptions of authority which are in flat opposition to the spirit and principles of freedom. It cannot be denied that there are elements at work in German politics which are full of menace to the tranquillity of the state.

He would have been a daring man who should have predicted at the close of the Franco-German War the present condition of affairs. Then Germany had come forth triumphant from two great wars. She had humbled Austria; she had crushed France. In one case, at least, the indemnity money must have gone far to defray the actual expenses of the conflict. This was much, but it was not all. German unity, so long the object of German ambition, had become an accomplished fact, and German vanity had been flattered by the restoration of the empire and the re-establishment of the throne of Otho and Frederick of the Red Beard. To all the surrounding nations Germany had become the object of envy. A new and mighty nation had, so to speak, been born in a day. A great and unrivaled military power had sprung up in the centre of Europe. Thoughtful men asked themselves the question whether this new power would assert its energies for good or for evil—whether, satisfied with what it had accomplished and what it had won, it would restore the sword to its scabbard and give itself up to the prosecution of the arts of peace, or whether, elated with success, it would yield to the temptation of conquest and proceed in the destructive work of war. No one dreamed, however, that in so brief a period after this high tide of success Germany would be in a condition not dissimilar to that in which France found herself on the eve of the first great revolution. Least of all did any one conceive it to be possible that at the beginning of the year 1879 the relative positions of France and Germany should have become so completely changed—the one, in spite of all her suffering and sorrow, in spite of the destruction of her property and the exhaustion of her treasury, steadily consolidating the Republic and enjoying an internal tranquillity and a material prosperity not surpassed by any other nation; the other, notwithstanding her proud triumphs and her large indemnity, suffering from great financial depression, from stagnation in all branches of trade and industry, the people in almost open revolt against the Government, and the Government, on the other hand, seeking to protect itself and to preserve order by the enactment and enforcement of laws which are wellnigh Draconic in their severity. It is a striking and suggestive contrast.

It might prove an interesting as well as a profitable study to inquire into the causes which have produced results so different in the respective countries. Some of these causes it would probably be difficult to discover. Some of them, however, might be found comparatively on the surface. It would be absurd to say that France owes her wonderful recovery to the Republic. It would be equally absurd to attribute the misfortunes of Germany to her Imperial institutions. France might have recovered with equal rapidity under the Empire. Germany might have been equally unfortunate under a Republic. One radical difference between France and Germany is to be found in the natural resources of the two countries. In natural resources France is really a rich country—one of the richest in the world. In natural resources Germany is comparatively poor. This helps us to understand why France has so wonderfully recovered herself; but it does not explain to us why Germany, after having expended the five milliards of indemnity money, should now be so financially straitened. We must look for the cause of Germany's difficulty elsewhere. And without traveling far, we are convinced that we find the principal and the immediately pressing cause in the military system of the empire. Huge military establishments are the curse of most of the nations of Europe. But nowhere is the military system so oppressive as it is in Germany. The old Prussian system now prevails all over the empire. It is a nation of soldiers. It is the army first; everything else must take a second place. Every able-bodied youth is taught the art of war, is bound to serve a term of three years in the regular army, and is liable ever afterwards, until incapacitated by age or sickness, to be called upon for service in the landwehr. Such a system is, and cannot but be, ruinous to many of the best interests of a nation and people. It absorbs the people's means; it clogs the wheels of industry; it takes away from productive pursuits a larger percentage of intelligent power; it demoralizes a large proportion of the best elements of the population and unfits them for active business. It is not easy to exchange the camps or the barracks for the counting-house or the workshop. Such is the system under which Germany groans; and in this huge military system is, we believe, to be found the real secret of Germany's sorrow. The burden is too heavy. It is crushing the life out of the empire.

If we are right in what we have said, it is manifest that the "blood and war" policy will not cure the evil, or permanently allay German discontent. It is not a love for mere theories which is giving life to German Socialism. It is felt oppression. It is visible wrong. It is real want. The army is the upas-tree which is poisoning the life of the German Empire. While the root source remains, the evil will remain. and Socialism will find nourishment from popular discontent. Bismarck may legislate as he pleases; he may induce the Imperial Legislature to pass repressive bills without number; he may continue with his iron heel to crush out the violators of law; but not by such a policy will he save Germany. If he would be the savior of his country, he must strike at the root of this upas-tree—he must relieve the prople from the oppressive yoke of this Imperial military system. Perseverance in the opposite course may bring about grave evils sooner than most of us are disposed to believe. In Prussia the army are the people, and the people are the army. Bismarck may some day find that he asks too much when he asks the people to turn their weapons against themselves. The reduction of the German army would be a gain not to Germany alone—it would be a gain to Europe and the world.

DEMOCRATIC BOURBONS.

THE stolid indifference of the Democratic leaders in Congress to the lessons of experience is the great marvel of the times. Some weeks since Mr. Edmunds introduced in the Senate a resolution reaffirming the Thirteenth, Fourteenth and Fifteenth Amendments to the Federal Constitution. For this resolution, against which no possible objection can lie, except, perhaps, that it is a surplusage, the Democrats have formally proposed a substitute, adopted in party caucus, which embraces substantially the heresy which impelled the South into rebellion, and which it had been supposed the fierce fires of war had consumed. The substitute admits the amendments to be of binding force and validity, but it asserts that when the right of a citizen to vote is denied or abridged on account of race or color or previous condition of servitude by "the conduct of a person who is not so acting by the authority and in obedience to the laws of the State, the jurisdiction to punish such conduct is in the State Government, and is not in the Government of the United States." The adoption of the principle here advanced would be destructive of the vital element of nationality. It would involve the abdication by the Government of all control over the fundamental sources of its power, and do for the South nearly all that it failed to accomplish by rebellion. The right, it is true, would remain with Congress to prevent State Governments from depriving citizens of the United States of their rights under the Constitution, but the citizens of a State could combine for the accomplishment of that end, and no remedy would be applicable by the General Government. That the States could not be depended upon for the punishment of persons guilty of intimidation, fraud and violence is only too apparent both from the failure of the authorities of South Carolina, Louisiana and Alabama to take any decisive steps for the arrest and trial of persons concerned in the November election frauds, and from the efforts made by citizens of some of them to obstruct the execution of the processes of the Federal Courts.

There can be but one opinion among patriotic citizens as to this attitude of the partisan Democracy. The party leaders cannot plead ignorance of the fact that in at least four of the Southern States the Federal authority has been positively assailed by deliberate legislative action. In Virginia joint resolutions are pending which propose the nullification of the Civil Rights Bill and Enforcement Act; which, in other words, demand the absolute withdrawal of Federal authority as to elections and the equality of citizens. In Florida practically similar action is proposed, while in Alabama the Legislature denounces bitterly all attempts, under Federal law, to secure the purity of elections, and proposes to escape the operation of such law by obstructive local legislation. In the same State certain Federal officials engaged in the performance of lawful duties, and the custodians of important evidence designed to be used in a United States Court in the trial of persons indicted for violation of the Federal Election Law, have been arrested by order of a local court, imprisoned, and the prosecution of the offenders thus made impossible. In all these States, as well as in Arkansas and Missouri, the dominant party asserts, unhesitatingly, the right of the State to protect all persons or communities guilty of violating Federal law, against the authority of the National Government created under the Constitution. Substantially, they take their stand upon the same definition of the reserved rights of the States as was adopted by South Carolina in 1832, when she attempted to prevent the collection of Federal duties upon imports. The "nullification ordinance" declared the Tariff Act of 1828 and 1832 to be null and void, and that no appeal should be made to the Supreme Court of the United States against the validity of a State law nullifying the tariff. This is precisely the spirit of the resolutions proposed in the Senate as a substitute for those of Mr. Edmunds, and thus we are again brought face to face with the old question which has so long vexed our statesmanship and disturbed our politics.

We risk nothing at all in saying that if the Democratic Party desires to carry the country in 1880 it must unload the Bourbons who deliberately propose to surrender the principle that citizenship is national, and, being so, is to be defended, whenever and however assailed, by all the power at the nation's command.

RECENT CRIMINAL TRIALS.

THE recent trials of Hunter and Mrs. Cobb suggest the question of the duty of lawyers to their clients, and the inquiry as to how far they are justified in their efforts to save them. When Boswell, the biographer of Johnson, submitted that question to the great moralist, the latter said his conclusion, after due thought, was that a lawyer was bound to do for his client what the client would do for himself, had he the learning and ability of his counsel. Sterner casuists have considered that this went beyond the strict line of duty, for it involved the criminal's right to compel his lawyer to perjure himself, since, as no man on trial for murder would hesitate to swear falsely to save his life, the lawyer was bound by this dictum to act in a similar manner.

There have been many notable cases in which eminent criminal lawyers have forgotten the claims of truth and uttered what they knew to be false. One case was when Courvoisier, the valet who murdered his master, Lord William Russell, was being tried for the crime. His counsel, Mr. Phillips, one of the most eminent then practicing at the Bar, solemnly assured the Court that he knew from circumstances he could not reveal that his client was innocent of the murder. The evidence, however, against the prisoner was conclusive, and he suffered the extreme penalty of the law. The wretched man, when he found he had no chance of escape, not only confessed to the clergyman that he murdered Lord Russell, but also that he had confessed the same to his counsel before he undertook his defense. Upon the disclosure of this fact, Mr. Phillips tried to explain away his perjury, but it was always a stigma on his reputation, and, of course, very much weakened his influence with juries.

The late James T. Brady, the most eminent and successful criminal lawyer New York has produced, before he undertook the defense of a client, always insisted upon knowing the exact truth about the matter, as otherwise he might "bungle" the defense. He assumed the ground that if a patient deceived the physician as to his symptoms and sufferings, he was more likely to kill him than to cure him. Mr. Brady also modified Johnson's definition of a lawyer's duty by saying that a counsel was only bound to use all his legal knowledge and eloquence to clear his client, but not lie in his behalf, and this, indeed, seems to be the fair inference.

The recent trial of Hunter for the murder of Armstrong, that of Billings for shooting his wife, and lastly, that of Mrs. Cobb for the poisoning of her husband, are all remarkable for the strong animus betrayed by the prosecuting attorneys against the prisoners. They evidently ignored the established axiom that every person is innocent till he is proved to be guilty, and acted upon the French custom, when the *procureur de roi* openly abuses the prisoner at the Bar from the very beginning of the trial. This course sometimes defeats the ends of justice, as it did in the case of Jesse Billings, turning the feeling of displeasure with the district attorney into actual sympathy with the prisoner. In this connection, we must express our disapprobation of the conduct of the prosecuting attorney in the Connecticut case, in placing a little daughter of Mrs. Cobb on the stand to testify against her mother. Proceedings of this character are sure to react by creating a factitious sympathy with the accused, thus very often defeating the ends of justice which would otherwise be attained.

THE NEW SENATORS.

NINE States have elected United States Senators during the last week. In this State Senator Conkling was returned by the unanimous vote of his party. In Indiana Senator Voorhees was re-elected for both the long and short terms, the anticipated opposition disappearing under the whip of party discipline. Mr. Voorhees is a man of undoubted ability and is the idol of the rank and file of his party in his State, but his financial views are radically wrong, and unless he shall abate the rancor of his antagonism to the policy to which the country is now committed, his re-election will not inure to the public advantage. In Pennsylvania, Senator Cameron, against whom a combination of Democrats and discontented Republicans was at one time thought to be probable, was re-elected by a decisive vote, and being thus confirmed in his hold upon the party machinery, he will no doubt continue to exercise a controlling influence in Pennsylvania politics. In North Carolina ex-Governor Zebulon B. Vance was elected in place of Senator Merrimon, who withdrew from the contest before the caucus ballot. The Senate will not be strengthened in statesmanship by the change. Mr. Merrimon has been a hard-working, conscientious legislator, rather conservative than otherwise in his views and tendencies, while Governor Vance is a violent partisan, a supporter of the extremest States Rights doctrines, and generally an obstructionist as to all measures looking to the preservation of the fruits of the Civil War. In Illinois General John A. Logan is elected in place of Senator Oglesby, having achieved a notable triumph over the opposing element in his party. Many will cordially welcome his return to public life. In Connecticut, Orville H. Platt is chosen as the successor of Senator Barnum. He is a gentleman of pure character, of some experience in affairs, but not distinguished for ability. It is surprising that, with the opportunity of securing such a representative in the Senate as General Joseph R. Hawley—a statesman of national reputation, who has been identified with the best elements and all the reformatory tendencies of our politics, and who is withal distinguished for broad and catholic views—the Republicans of Connecticut should have permitted themselves to select a comparatively unknown man for that high and honorable position. In Florida, Mr. Wilkinson Call, who is described as a lawyer, and who served in the Confederate Army, is elected in place of Senator Conover. Of this change, also, it is to be said that the interests of the public service are not likely to be promoted by it. From Missouri, Colonel George G. Vest is chosen for the long, and General James Shields for the short term—the two representing diametrically opposing influences. General Shields, after a long career of honorable service in the Army and in public life, entered the Union ranks at the first mutter of rebellion. Colonel Vest was conspicuous as a leader of the Secessionists in Missouri, subsequently serving in both branches of the Confederate Congress. Since the War he has been the acknowledged leader of what is known in Missouri as the Confederate element. He has pledged himself, however, to the support of all the Constitutional amendments, and especially to the protection of the negro. He declared, also, against granting any pension, bounty or pay to Confederates, or the recognition of Confederate debts, and in favor of the honest payment of the national debt. In Wisconsin, ex-Senator Matthew H. Carpenter has been elected in place of Senator Howe. He will, no doubt, take a leading place in the body of which he has already been, in various ways, a conspicuous member.

SOUTHERN CLAIMS.

TWO significant speeches were made in the House of Representatives last week on the subject of Southern war claims. A Bill having been reported to send to the Court of Claims for adjudication a demand for the payment of damages for property destroyed by the Union Army during the Civil War, Hon. Clarkson N. Potter, of this city, spoke strongly against it, urging forcibly that its passage would establish a

Digitized by Google

dangerous precedent, and that if Congress does not propose to pay all these claims, which are said to amount to a hundred thousand millions, and to bankrupt the Treasury, this would be the time to stop. Mr. Potter was supported in his views by Representative Bragg of Wisconsin, who spoke with an emphasis which provoked the greatest excitement among Southern members. He said he "was willing that the dead past should remain dead, but he was not willing to sit by and allow it to be brought up, in one form or another, by one member or another, and from one committee or another, for the purpose of getting money out of the Treasury under the plea of loyalty. He had heard it said that, unless the Democrats of the North were more liberal, unless they opened their hands and gave more lavishly, the 'solid South,' on which they relied, would go over to the other side. He, representing the Democrats of the North, would say that if there was a man who professed to belong to the Democracy of the South simply for the reason that the doors of the Treasury were to be opened to them, the sooner they went over the better for them, and the better for the Democratic Party."

These views were indignantly resented by Representative Ellis and others, the former quitting his seat and taking his stand at that of General Bragg, where he said that the only loyal men in the South during the war were the men who went with the communities in which they lived. For a time the excitement was intense, but the debate was finally closed by the interposition of a parliamentary objection. General Bragg, who was a brave and distinguished officer of the Union Army during the War of the Rebellion, no doubt expresses the sentiment of the better portion of his party at the North, and it is not at all probable that any claim of the class to which he objects will be allowed by the present or succeeding Congresses.

BEYOND THE SEAS.

THIS winter is extraordinarily severe in the Old World. In England, the misery from destitution and strikes and cotton-mill lines is aggravated by extreme cold. In Switzerland, in consequence of the rigors of the season, the forests of the Bernese Jura are invested with troops of wild boars, farms are frequently attacked by wolves, and chamois are coming down by hundreds into the valleys to seek for food. At Antwerp, in Belgium, on the 22d inst., the ice had accumulated greatly on the highway and rivers. At the same date the Elbe was frozen over, and steamers could not get to Hamburg. In the Ukraine, Russia, violent snow storms raged for three days, blocking the Kharkov and Azor, the Poltava and Soony, and other railways. Seven thousand men are at work clearing the lines of communication between Moscow and Sebastopol. In Afghanistan General Winter is assuming more authority than any other general there, and the Home Government has been constrained to instruct the commander of the Anglo-Indian army of invasion to stop the projected advance from Candahar and Jellalabad, lest during the February snows there should be another fatal mishap like that of General Elphinstone's army in 1842. At Paris those quiet promenaders on the boulevards who dress all the rest of the year like other folks, but at this season come forth enveloped in furs like Muscovites, are more numerous than ever. On the 23d inst. M. Laroche-Joubert even proposed in the Chamber of Deputies at Versailles that the Chamber meet in Paris until the weather became milder. But this was left undecided, for it involves too many serious political possibilities, especially now, in the excitement about the recent ministerial crisis.

That crisis happily ended, for the present at least, in a vote of confidence in the Ministry of M. Dufaure. But the vote was given only because M. Dufaure gave ample promises to respect the natural and logical wishes of the Republicans to have the French Republic administered by Republicans, in the War Department and in the army, as well as in the civil departments. It was thus given on conditions, and the Ministry will be closely watched to see that the conditions are fulfilled. If they be not, another crisis, sooner or later, will be inevitable. Meanwhile, President MacMahon, as well as Minister Dufaure, shows a disposition to accede to the legitimate demands of the Republicans, who seem, at length, to have learned the advantage and the necessity of uniting moderation with firmness.

Politics do not wholly engross attention, even in Paris. Aside from the ordinary round of fashionable amusements, science, art and literature still claim their fair share of interest. Science, indeed, just now seems to run somewhat in the direction of scientific toys, such as talking microphones, Cornu's electric lamp, illuminating paper, and the like. These very toys, however, like old Benjamin Franklin's key and kite-line, may lead to such applications of science as shall, in many respects, revolutionize modern life. The artists are generally pleased with the official decision that, according to the late Charles Sumner's idea, there shall be "no more battle-pictures"—at least that no French ones shall be sent to the Art Exhibition of 1879 at Munich. Wagner, the eccentric musical composer, after having been heard of but little for some time, is making himself talked about again by a doleful letter, published in a German journal, in which he complains of the lack of contemporaneous appreciation. But does he not proclaim his to be the Music of the Future? The Parisian literary world is still exercised over the silly act of Zola, the sensational romance writer, in heralding himself, in a Russian journal, as being, as it were, the sole great living novelist in France. The death of Marc Fournier, the director of the Porte St. Martin Theatre, and the first to carry to its height the modern fashion of luxury and splendor in stage decoration and display, and the death of Admiral Touchard, have been notable events in the respective spheres to which the two celebrities belonged.

The name of Wagner, just mentioned, calls to mind the latest eccentricity of his royal friend, King Louis of Bavaria — a sumptuous sort of Swedenborgian dinner of fourteen *couverts* to Louis XIV. and his *suite*, the guests, of course, not finding it convenient to be bodily present. Another monarch, the King of the Belgians, has acquired recent fame by a royal pun which he made on returning to the Château of Lacken, tired out with the official ceremonies at his Brussels palace on New Year's Day. All the courtiers, he said, had kept calling him "auguste," when they knew that his name was "Leopold." The *Almanach de Gotha*, the Bible of imperial and royal circles in Europe, has scandalized its august readers by chronicling the year of the alleged marriage of Princess Mathilde, of the Bonaparte family, "to the painter Popelin." The widow of Prince Demidoff angrily denies that she is, or ever has been, remarried. A Connecticut parson, in a somewhat similar case, gently said: "It is high time you should be, my dear." Everybody pretends to know now what was the matter with Adelina Patti's knee, as it is announced that the late Marquise de Caux is in an interesting condition.

Ex-President Grant has embarked at Marseilles on the French mail steamer *Labourdonnais* for India, without awaiting the result of the election, by the assembly of notables at Tirnova, of a candidate to the Bulgarian throne. Captain-General Campos will probably be recalled from Cuba to be Spanish Minister of War. A Chinese Ambassador has been received with much pomp and circumstance at St. Petersburg, and the daughter of the Grand Duke Michael, the Czar's youngest brother, was married there with great state, on January 24th, to the hereditary Grand Duke of Mecklenburg-Schwerin.

A NEW market for the product of our coal mines is being developed. A Geneva dispatch states that American coals are beginning to sell in Switzerland slightly cheaper than French and German coals, and are regarded as much superior to them. An American locomotive, burning anthracite coal, is running at Geneva.

THE sales of four per cent. bonds still continue. It is easy to calculate the saving to the people which is accomplished by this funding of the public debt. Every $1,000,000 of four per cents. sold saves $20,000 annually to the tax-payers. With the steady reduction of expenses now going on, and reduction of the debt and interest upon it, it is possible that the debt will be pretty well obliterated by the end of the present century.

THE record of the New Orleans Howard Association during the yellow fever visitation is a brilliant one. The official report shows that it cared for a total of 35,750 patients and provided for 60,000 destitute people at an expense of $380,185. The total receipts of the association were $383,449, of which the sum of $82,637 was contributed by New York. Of the entire contributions reported, this city gave more than the entire South, and three times as much as any other Northern city.

THE United States Centennial Commission has finally adjusted its financial affairs and adjourned *sine die*. The balance sheet shows that the total receipts from all sources amounted to $11,161,611, and the expenditures up to this time, including the return of the Government appropriation of $1,500,000, and dividends to stockholders to about $150,000 less than that sum. This is a much more gratifying showing than many have anticipated. The principal item of expenditure, of course, was for the Exposition buildings, the cost of which was $5,242,295. The expenses of the judges amounted to $198,540. At the Paris Exposition no allowance for judges' expenses was made, those officials having to provide everything, even to their stationery, out of their own pockets. The services of the fire and police departments cost $604,025, and $44,063 was paid for music during the progress of the Exposition.

THE proposition of Senator Windom to set apart a territory for the occupation by colored men at the South who may desire to emigrate is said to be received with favor by leading representatives of the black race. A delegation representing six States, who waited on Senator Windom last week, expressed the belief that 100,000 able-bodied colored laborers could be induced to leave their homes if they should have even moderate assurance that they would improve their condition. The project is a novel one, but it is difficult to see how it can be carried out.

SOME forty Bills have been introduced in Congress providing for the payment of rent for the use of land occupied during the defense of Pennsylvania, in 1863, by United States troops. Of course, the Bills will not pass, but the names of the landowners, in whose interest they are presented, should by all means be given to the public. They must be kinsmen of those enterprising Pennsylvanians about Gettysburg, who were reported to have exacted five pence a glass from every thirsty Union soldier, who, in the pauses of that terrible fight, sought a cooling draught of water at their doors.

THE cost to Russia of the late war with Turkey is estimated by a journal of that country at two milliards of roubles, equal to about $1,500,000,000. It is not stated whether this estimate includes the indirect losses accruing through the war to Russian subjects, but we presume, from the magnitude of the amount, it must do so. As to the losses of the Russians, it is said that 124,471 men lie buried in the Balkan Peninsula, and of the 120,950 men sent back to Russia as sick or wounded, 42,950 died; the complete number of the dead is 172,400 men, not including those who succumbed in Asia Minor.

THE House of Representatives having ordered the Potter Committee to inquire into the cipher dispatches, and appropriated $10,000 to defray the expenses of such inquiry, we may expect a revival of interest in the general subject of the alleged Presidential frauds in certain States. The leaders of both parties have pretended to be anxious for this investigation, but the truth probably is that none of them really desired it, since, should the "bottom facts" be elicited, prominent men on both sides will probably be seriously smirched. General Butler has delivered to the committee 641 cipher telegrams of which he says he does not know the origin—having found them on his table one day last Spring.

A MOVEMENT for the abrogation of the fishery clauses of the Treaty of Washington has been initiated in the United States Senate. Mr. Edmunds, who leads the movement, shows by an array of facts and figures that so far from the privileges secured by the treaty to American fishermen being worth five and a half millions, the amount of the Halifax award, they are practically worthless. It would certainly seem desirable, in view of the differences which have arisen between the two Governments over the operations of the treaty regarding the fishery privileges, that what remains in the agreement should be terminated by mutual consent. Mr. Edmunds expresses the belief that England will not object to the abrogation.

MR. BLAINE, in a speech in the Senate last week, made some statements in reference to the navy which will attract attention. He said, among other things, that the number of men in the navy is limited to 7,500, and for these there is a total of 2,020 officers, or one officer to a little over three men. We have 91 vessels and 38 in commission. The British Navy, which has 320 steam vessels, and a total of 494 vessels, has 4,990 officers, with something over 60,000 men. The pay of the officers of our navy on the active list amounts to over $3,822,000 annually; for those on the retired list, $645,000; while the pay of petty officers and seamen amounts to only $2,300,000 per annum. This shows very clearly the top-heavy condition of the service. Meanwhile, we are turning out annually from the Naval Academy an average of 50 officers. Mr. Blaine proposes that on and after 1880 the graduates from that academy shall not be entitled to commissions except upon merit and to fill existing vacancies, and favors the encouragement of our commercial marine as the only true basis of an efficient navy, by appropriating for the benefit of commerce some part of the money now wasted for naval purposes.

NEWS OF THE WEEK.

Domestic.

A CONSTITUTIONAL Convention is shortly to be held in Louisiana.

J. D. WALKER, Democrat, has been elected United States Senator in Arkansas.

THE Teller Committee are investigating the alleged election frauds in South Carolina.

IT is believed that Sitting Bull, with his entire force, amounting to 5,000 lodges, has returned to the United States from Canada.

THE New York State Soldiers' and Sailors' Home, located at Bath, N. Y., was formally opened on January 23d with appropriate ceremonies.

ARCHBISHOP PURCELL of Cincinnati has executed a deed of trust covering all the Catholic property in his charge for the benefit of his creditors.

GENERAL SHERMAN started, January 25th, on a tour of inspection through the South—his first visit to the military forts in that section since the Civil War.

THE resignation of the Rev. Dr. Buddington, for many years pastor of the Clinton Avenue Congregational Society of Brooklyn, has been accepted, and he has been made pastor emeritus with a life salary.

THE Army Appropriation Bill appropriates for the year 1880 the sum of $26,747,300 as against $25,778,187 appropriated for 1879. The total appropriation by the Post Office Bill is $34,980,343, as against $33,256,373 for 1879.

THE President, on January 25th, signed the Bill providing for the payment of arrears of pensions. As nearly as can be estimated, from $30,000,000 to $80,000,000 will be required to settle all the claims which may be presented under it.

THREE officials of the Canvassing Board of Brevard County, Florida, have been convicted of election frauds, and sentenced, one to three years, and the others to one year each, in the Albany Penitentiary. One of the offenders was a State Senator.

THE losses on the great fire in Worth Street, New York City, amounted to $2,663,050; the insurance was $3,639,500, distributed among a large number of companies, of which the foreign ones suffered most. There has been a general demand for increased insurance by merchants, and an advance of 100 per cent. has been made in the rates for property in the drygoods district.

A SYNDICATE has been formed, composed of New York and London bankers, for the purpose of placing the four per cent. bonds on the European market. The contract provides that the syndicate shall subscribe at once for $10,000,000 worth of the bonds, and take $5,000,000 per month until July 1st, with an option on June 30th to subscribe for all remaining unsold bonds of this issue.

IN reply to the letter of Secretary Sherman, giving his reasons for the removal of Collector Arthur and Naval Officer Cornell, these gentlemen have sent letters to the Senate Committee on Commerce, which are said to thoroughly refute all charges. The committee has reported in favor of rejecting the nominations of General Merritt and Mr. Burt, and of confirming the nomination of General Graham.

THE unfortunate band of Cheyenne Indians who made a bold dash for liberty recently from Fort Robinson, Neb., preferring death to removal to Indian Territory, have been nearly all wiped out by our troops. They were caught January 22d in a wash-out only forty-six miles from their prison, surrounded by the troops, and twenty-three of them killed after a desperate resistance. Nine prisoners only were taken.

ON January 18th Secretary Sherman issued the eighty-second call for the redemption of 5-20 bonds of 1865, consols of 1867, the amount being $20,000,000; on the 22d the eighty-third for a like sum, and on the 24th the eighty-fourth, also for $20,000,000. Since January 1st the Treasury has called in $130,000,000 of the 5-20's. During the week ending on the 25th, the subscriptions to the four per cents amounted to $56,497,650.

MATTHEW T. BRENNAN, ex-Sheriff of New York, died January 20th, aged 58; John Blair Scribner, of the publishing house of Scribners' Sons, on the 28th, aged 26; Dr. John B. Biddle, Professor of Materia Medica in the Jefferson Medical College at Philadelphia, on the 19th, aged 64; Admiral Touchard of the French Navy, and a Deputy for Paris, on the 20th, aged 68; George S. Hillard, author, editor, and compiler of a popular set of reading books long used in the public schools of this country, January 21st, aged 58; Dr. Robert T. Hallock, President of the First Society of Spiritualists of New York, and a member of the Geographical and Polytechnic Societies and of the Farmers' and Liberal Clubs, on the 21st, aged 73; and Hon. John Cadwalader, Judge of the United States District Court for the Eastern District of Pennsylvania, on the 26th, aged 79.

Foreign.

THE estimates of the German Budget for the year provide for an increase of the army by 30,000 men.

THREE transports will be sent next month to bring the pardoned Communist convicts from New Caledonia.

THE North Wales Miners' Association has resolved to encourage by appropriations of money the emigration of its members to America and Australia.

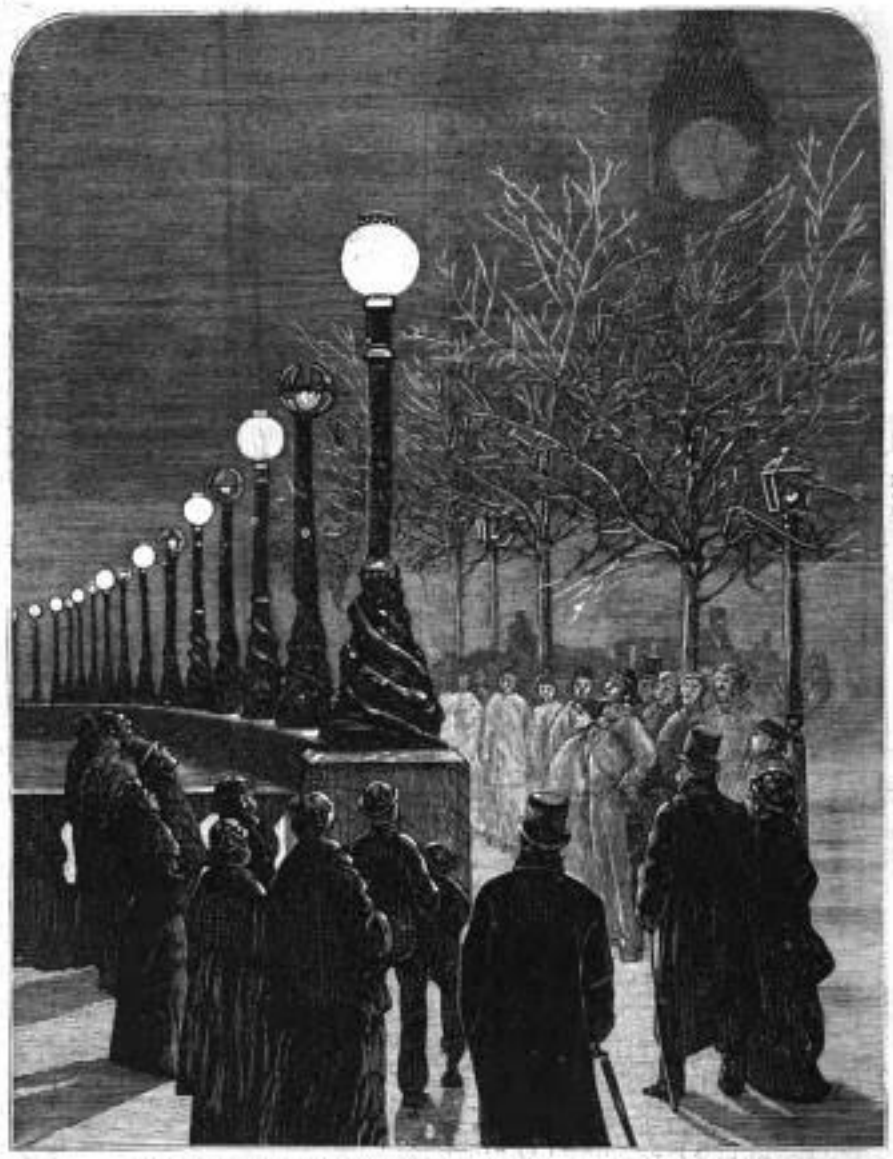
A SANITARY Commission, with delegates from Austria, Germany and Hungary, met at Vienna, January 24th, to devise measures to prevent the spread of the plague in Astrachan, Russia.

BY consent of all the Powers the functions of the Commission for the organization of Eastern Roumelia has been extended, and the Russian administration is accordingly prolonged.

BEFORE the adjournment of the Chamber of Deputies on January 24th to the 28th, the Minister of Public Instruction presented a Bill making primary education obligatory throughout France after the first of next January.

GERMANY will merely keep sufficient naval force in the neighborhood of Samoa to retain possession of two small forts on the island of Upolu, which she seized and will hold as a pledge until the Samoan Government grants Germany her treaty rights.

ON account of the dearth of good investments Londoners are beginning to look toward the United States four per cent. bonds. It is believed the Syndicate has already sold to jobbers and others there a considerable portion of the amount it has just contracted for.



THE Constitution for Bulgaria has been ratified by the Czar of Russia. It will be translated into the Bulgarian language and communicated to the foreign consuls and Bulgarian Assembly. The time consumed in the translation of the Constitution will probably retard the meeting of the Assembly to the 6th or 10th of February, when it will be opened by Prince Dondoukoff Korsakoff, the Russian Governor of Bulgaria.

A CHOPIN WALTZ.

YOUR satin hand give me, sweet love—
Your gold head on my breast—
And I, than all the saints above,
Will be more subtly blest.
We'll float and float, and glide and glide
Adown the moonlit hall,
While the merry masquers walk aside
Where the rose and lily call.

Weird Chopin's mystic music seems
To wrap us round and round
In a silver web of gossamer dreams
That cannot be unbound;
It draws us each to each, my sweet—
It holds us eye to eye;
As one our two hearts beat and beat,
Our rhythmic pulses fly.

The Summer night is soft and still,
The moon is cold and high;
And, wandering at their own sweet will,
Our happy friends go by.
Oh, is it that the waltz is sweet
With strains of life and death
That we, with tears, its strains repeat,
And sobbings in our breath?

Or is it that I love you so,
Pale lily on my breast,
That all the music's ebb and flow
Is but my love confessed?
You rest upon my gentle arm—
I read your eyes divine—
The passion and the holy charm
Of Chopin's thought is mine.

Your little feet are winged with bliss,
The moon is on your face—
Ah! would our lives could fly like this,
Afloat in happy space!
Alas! too soon the waltz is played!
Our palms have fallen apart;
And we, but mortal man and maid,
Stand, freed from Chopin's art.

META V. VICTOR.

THE FALLEN LEAVES.

BY WILKIE COLLINS

CHAPTER VI.

OH, Rufus Dingwell, it is such a rainy day! And the London street which I look out on from my hotel window presents such a dirty and such a miserable view! Do you know, I scarcely feel like the same Amelius who promised to write to you, when you left the steamer at Queenstown? My spirits are sinking; I begin to feel old. Am I in the right state of mind to tell you what are my first impressions of London? Perhaps I may alter my opinion. At present (this is between ourselves), I don't like London or London people—excepting two ladies, who, in very different ways, have interested and charmed me.

Who are the ladies? I must tell you what I heard about them from Mr. Hethcote, before I present them to you on my own responsibility.

After you left us, I found the last day of the voyage to Liverpool dull enough. Mr. Hethcote did not seem to feel it in the same way; on the contrary, he grew more familiar and confidential in his talk with me. He has some of the English stiffness, you see—and your American pace was a little too fast for him. On our last night on board, we had some more conversation about the Farnabys. You were not interested enough in the subject to attend to what he said about them while you were with us—but if you are to be introduced to the ladies, you must be interested now. Let me first inform you that Mr. and Mrs. Farnaby have no children; and let me add that they have adopted the daughter and orphan child of Mrs. Farnaby's sister. This sister, it seems, died many years ago, surviving her husband for a few months only. To complete the story of the past, death has also taken old Mr. Ronald, the founder of the stationer's business, and his wife, Mrs. Farnaby's mother. Dry facts these, I don't deny it—but there is something more interesting to follow. I have next to tell you how Mr. Hethcote first became acquainted with Mrs. Farnaby. Now, Rufus, we are coming to something romantic at last.

It is some time since Mr. Hethcote ceased to perform his clerical duties, owing to a malady in the throat which made it painful for him to take his place in the reading-desk or the pulpit. His last curacy attached him to a church at the west-end of London; and here, one Sunday evening, after he had preached the sermon, a lady in trouble came to him in the vestry for spiritual advice and consolation. She was a regular attendant at the church, and something which he had said in that evening's sermon had deeply affected her. Mr. Hethcote spoke with her afterwards, on many occasions at home. He felt a sincere interest in her, but he disliked her husband; and, when he gave up his curacy, he ceased to pay visits to the house. As to what Mrs. Farnaby's troubles were, I can tell you nothing. Mr. Hethcote spoke very gravely and sadly when he told me that the subject of his conversations with her must be kept a secret. "I doubt whether you and Mr. Farnaby will get on well together," he said to me. "But I shall be astonished if you are not favorably impressed by his wife and her niece."

This was all I knew when I presented my letter of introduction to Mr. Farnaby, at his place of business.

It was a grand, stone building, with great, plate-glass windows—all renewed and improved, they told me, since old Mr. Ronald's time. My letter and my card went into an office at the back, and I followed them after a while. A lean, hard, middle-sized man, buttoned up tight in a black frock-coat, received me, holding my written introduction open in his hand. He had a ruddy complexion, not commonly seen in Londoners, so far as my experience goes. His iron-gray hair and whiskers (especially the whiskers) were in wonderfully fine order, as carefully oiled and combed as if he had just come out of a barber's shop. I had been in the morning to the Zoological Gardens; his eyes, when he lifted them from the letter to me, reminded me of the eyes of the eagles—glassy and cruel. I have a fault that I can't cure myself of. I like people or dislike them, at first sight, without knowing in either case whether they deserve it or not. In the one moment, when our eyes first met, I felt the devil in me. In plain English, I hated Mr. Farnaby!

"Good-morning, sir," he began, in a loud, harsh, rasping voice. "The letter you bring me takes me by surprise."

"I thought the writer was an old friend of yours," I said.

"An old friend of mine," Mr. Farnaby answered, "whose errors I deplore. When he joined your Community, I looked upon him as a lost man. I am surprised at his writing to me."

It is quite likely I was wrong, knowing nothing of the usages of society in England. I thought this reception of me downright rude. I had laid my hat on a chair—I took it up in my hand again, and delivered a parting shot at the brute with the oily whiskers.

"If I had known what you now tell me," I said, "I should not have troubled you by presenting that letter. Good-morning."

This didn't in the least offend him; a curious smile broke out on his face—it widened his eyes, and it twitched up his mouth at one corner. He held out his hand to stop me. I waited, in case he felt bound to make an apology. He did nothing of the sort—he only made a remark.

"You are young and hasty," he said. "I may lament my friend's extravagances without failing on that account in what is due to an old friendship. You are probably not aware that we have no sympathy in England with Socialists."

I hit him back again. "In that case, sir, a little socialism in England would do you no harm. We consider it a part of our duty as Christians to feel sympathy with all men who are honest in their convictions—no matter how mistaken (in our opinion) the convictions may be." I rather thought I had him there; and I took up my hat again, to get off with the honors of victory while I had the chance.

I am sincerely ashamed of myself, Rufus, in telling you all this. I ought to have given him back "the soft answer that turneth away wrath"—my conduct was a disgrace to my Community. What evil influence was at work in me? Was it the air of London, or was it a possession of the devil?

He stopped me for the second time, not in the least disconcerted by what I had said to him. His inbred conviction of his own superiority to a young adventurer like me was really something magnificent to witness. He did me justice—the Philistine-Pharisee did me justice! Will you believe it? He made his remarks next on my good points, as if I had been a young bull at a prize-cattle show.

"Excuse me for noticing it," he said. "Your manners are perfectly gentlemanlike, and you speak English without any accent. And yet, you have been brought up in America. What does it mean?"

I grew worse and worse—I got downright sulky now.

"I suppose it means," I answered, "that some of us in America cultivate ourselves as well as our land. We have our books and music, though you seem to think we only have our axes and spades. Englishmen don't claim a monopoly of good manners at Tadmor. We see no difference between an American gentleman and an English gentleman. And as for speaking English with an accent, the Americans accuse us of doing that."

He smiled again. "How very absurd!" he said, with a superb compassion for the benighted Americans. By this time, I suspect he began to feel that he had had enough of me. He got rid of me with an invitation.

"I shall be glad to receive you at my private residence, and introduce you to my wife and her niece, our adopted daughter. There is the address. We have a few friends to dinner on Saturday next, at seven. Will you give us the pleasure of your company?"

We are all aware that there is a distinction between civility and cordiality; but I myself never knew how wide that distinction was until Mr. Farnaby invited me to dinner. If I had not been curious—after what Mr. Hethcote had told me—to see Mrs. Farnaby and her niece, I should certainly have slipped out of the engagement. As it was, I promised to dine with Oily-Whiskers.

He put his hand into mine at parting. It felt as moistly cold as a dead fish. After getting out again into the street, I turned into the first tavern I passed and ordered a drink. Shall I tell you what else I did? I went into the lavatory and washed Mr. Farnaby off my hand. (N. B.—If I had behaved in this way at Tadmor I should have been punished with the lighter penalty—taking my meals by myself, and being forbidden to enter the Common Room for eight-and-forty hours.) I feel I am getting wickeder and wickeder in London—I have half a mind, Rufus, to join you in Ireland. What does Tom Moore say of his countrymen—he ought to know, I suppose? "For though they love woman and golden store, Sir Knight, they love honor and virtue more!" They must have been all Socialists in Tom Moore's time. Just the place for me.

* * * * *

I have been obliged to wait a little. A dense fog has descended on us by way of variety. With a stinking coal fire, with the gas lit and the curtains drawn at half-past eleven in the forenoon, I feel that I am in my own country again at last. Patience, my friend—patience! I am coming to the ladies.

Entering Mr. Farnaby's private residence, on the appointed day, I became acquainted with one more of the innumerable insincerities of modern English life. When a man asks you to dine with him at seven o'clock, in other countries, he means what he says. In England, he means half-past seven, and sometimes a quarter to eight. At seven o'clock, I was the only person in Mr. Farnaby's drawing-room. At ten minutes past seven, Mr. Farnaby made his appearance. I had a good mind to take his place in the middle of the hearth-rug, and say, "Farnaby, I am glad to see you." But I looked at his whiskers, and *they* said to me, as plainly as words could speak, "Better not!"

In five minutes more, Mrs. Farnaby joined us.

I wish I was a practiced author—or, no, I would rather, for the moment, be a competent portrait-painter, and send you Mrs. Farnaby's likeness inclosed. How I am to describe her in words I really don't know. My dear fellow, she almost frightened me. I never before saw such a woman; I never expect to see such a woman again. There was nothing in her figure, or in her way of moving, that produced this impression on me—she is little and fat, and walks with a firm, heavy step like the step of a man. Her face is what I want to make you see as plainly as I saw it myself; it was her face that startled me.

So far as I can pretend to judge, she must have been pretty, in a plump healthy way, when she was young. I declare I scarcely know whether she is not pretty now. She certainly has no marks or wrinkles; her hair either has no gray in it, or is too light to show the gray. She has preserved her fair complexion, perhaps with art to assist it—I can't say. As for her lips—I am not speaking disrespectfully, I am only describing them truly, when I say that they invite kisses in spite of her. In two words, though she has been married (as I know from what one of the guests told me after dinner) for sixteen years, she would be still an irresistible little woman, but for the one startling drawback of her eyes. Don't mistake me. In themselves, they are large, well-opened blue eyes, and may at one time have been the chief attraction in her face. But, now, there is an expression of suffering in them—long, unsolaced suffering, as I believe—so despairing and dreadful, that she really made my heart ache when I looked at her. I will swear to it, that woman lives in some secret hell of her own making, and longs for the release of death, and is so inveterately full of bodily life and strength that she may carry her burden with her to the utmost verge of life. I am digging the pen into the paper, I feel this so strongly, and I am so wretchedly incompetent to express my feeling. Can you imagine a diseased mind, imprisoned in a healthy body? I don't care what doctors or books may say—it is that, and nothing else. Nothing else will solve the mystery of the smooth face, the fleshy figure, the firm step, the muscular grip of her hand when she gives it to you—and the soul in torment that looks at you all the while out of her eyes. It is useless to tell me that such a contradiction as this cannot exist. I have seen the woman, and she does exist.

Oh, yes! I can fancy you grinning over my letter—I can hear you saying to yourself, "Where did he pick up his experience, I wonder?" I have no experience—I only have something that serves me instead of it, and I don't know what. The Elder Brother at Tadmor used to say it was sympathy. But *he* is a sentimentalist.

Well, Mr. Farnaby presented me to his wife—and then walked away as if he was sick of us both, and looked out of the window.

For some reason or other, Mrs. Farnaby seemed to be surprised, for the moment, by my personal appearance. Her husband had, very likely, not told her how young I was. She got over her momentary astonishment, and, signing to me to sit by her on the sofa, said the necessary words of welcome, evidently thinking of something else all the time. The strange, miserable eyes looked over my shoulder, instead of looking at me.

"Mr. Farnaby tells me you have been living in America."

The tone in which she spoke was curiously quiet and monotonous. I have heard such tones, in the far West, from lonely settlers without a neighboring soul to speak to. Has Mrs. Farnaby no neighboring soul to speak to, except at dinner-parties?

"You are an Englishman, are you not?" she went on.

I said Yes, and cast about in my mind for something to say to her. She saved me the trouble by making me the victim of a complete series of questions. This, as I afterwards discovered, was *her* way of finding conversation for strangers. Have you ever met with absent-minded people to whom it is a relief to ask questions mechanically, without feeling the slightest interest in the answers?

She began: "Where did you live in America?"

"At Tadmor, in the State of Illinois."

"What sort of place is Tadmor?"

I described the place as well as I could, under the circumstances.

"What made you go to Tadmor?"

It was impossible to reply to this without speaking of the Community. Feeling that the subject was not in the least likely to interest her, I spoke as briefly as I could. To my astonishment, I evidently began to interest her from that moment. The series of questions went on—but, now, she not only listened, she was eager for the answers.

"Are there any women among you?"

"Nearly as many women as men."

Another change! Over the weary misery of her eyes there flashed a bright look of interest which completely transfigured them. Her articulation even quickened when she put her next question.

"Are any of the women friendless creatures, who came to you from England?"

"Yes, some of them."

I thought of Mellicent as I spoke. Was this new interest, that I had so innocently aroused, an interest in Mellicent? Her next question only added to my perplexity. Her next question proved that my guess had completely failed to hit the mark.

"Are there any *young* women among them?"

Mr. Farnaby, standing with his back to us thus far, suddenly turned and looked at her, when she inquired if there were "young" women among us.

"Oh, yes," I said. "Mere girls."

She pressed so near to me that her knees touched mine. "How old?" she asked, eagerly.

Mr. Farnaby left the window, walked close up to the sofa, and deliberately interrupted us.

"Nasty muggy weather, isn't it?" he said. "I suppose the climate of America——"

Mrs. Farnaby deliberately interrupted her husband. "How old?" she repeated, in a louder tone.

I was bound, of course, to answer the lady of the house. "Some girls from eighteen to twenty. And some younger."

"How much younger?"

"Oh, from sixteen to seventeen."

She grew more and more excited; she positively laid her hand on my arm in her eagerness to secure my attention all to herself. "American girls or English?" she resumed, her fat, firm fingers closing on me like a vise.

"Shall you be in town in November?" said Mr. Farnaby, purposely interrupting us again. "If you would like to see the Lord Mayor's Show——"

Mrs. Farnaby impatiently shook me by the arm. "American girls or English?" she reiterated more obstinately than ever.

Mr. Farnaby gave her one look. If he could have put her on the blazing fire and burnt her up in an instant by an effort of will, I believe he would have made the effort. He saw that I was observing him, and turned quickly from his wife to me. His ruddy face was pale with suppressed rage as he spoke to me. "Come and see my pictures," he said.

His wife still held me fast. Whether he liked it or not, I had again no choice but to answer her. "Some American girls, and some English," I said.

Her eyes opened wider and wider in unutterable expectation. She suddenly advanced her face so close to mine that I felt her hot breath on my cheeks as the next words burst their way through her lips.

"Born in England?"

"No. Born at Tadmor."

She dropped my arm. The light died out of her eyes in an instant; they wandered away again as if my very presence in the room had ceased to impress itself on her mind. In some inconceivable way, I had utterly destroyed some secret expectation that she had fixed on me. She actually left me on the sofa, and took a chair on the opposite side of the fire-place. Mr. Farnaby, turning paler and paler, stepped up to her as she changed her place. I rose to look at the pictures on the wall nearest to me. You remarked the extraordinary keenness of my sense of hearing while we were fellow-passengers on the steamship. When he stooped over her and whispered in her ear, I heard him—though nearly the whole breadth of the room was between us. "You hell-cat!"—that was what Mr. Farnaby said to his wife.

The clock on the mantelpiece struck the half-hour after seven. In quick succession the guests at the dinner now entered the room.

I was so staggered by the extraordinary scene of married life which I had just witnessed that the guests produced only a very faint impression upon me. My mind was absorbed in trying to find the true meaning of what I had seen and heard. Was Mrs. Farnaby a little mad? I dismissed that idea as soon as it occurred to me; nothing that I had observed in her justified it. The truer conclusion appeared to be that she was deeply interested in some absent—and possibly lost—young creature, whose age, judging by actions and tones which had sufficiently revealed that part of the secret to me, could not be more than sixteen or seventeen years. How long had she cherished the hope of seeing the girl, or hearing of her? It must have been anyhow a hope very deeply rooted, for she had been perfectly incapable of controlling herself when I had accidentally roused it. As for her husband, there could be no doubt that the subject was not merely distasteful to him, but so absolutely infuriating that he could not even keep his temper in the presence of a third person invited to his house. Had he injured the girl in any way? Was he responsible for her disappearance? Did his wife know it, or only suspect it? Who was the girl? What was the secret of Mrs. Farnaby's extraordinary interest in her—Mrs. Farnaby, whose marriage was childless; whose interest, one would have thought, should be naturally concentrated on her adopted daughter, her sister's orphan child? In conjectures such as these I completely lost myself. Let me hear what your ingenuity can make of the puzzle; and let me return to Mr. Farnaby's dinner, waiting on Mr. Farnaby's table.

The servant threw open the drawing-room door, and the most honored guest present led Mrs. Farnaby to the dining-room. I roused myself to some observation of what was going on about me. No ladies had been invited, and the men were all of a certain age. I looked in vain for the charming niece. Was she not well enough to appear at the dinner-party? I ventured on putting the question to Mr. Farnaby.

"You will find her at the tea-table, when we return to the drawing-room. Girls are out of place at dinner-parties." So he answered me, not very graciously.

As I stepped out on the landing, I looked up; I don't know why, unless I was the unconscious object of magnetic attraction. Anyhow, I had my reward. A bright young face peeped over the balusters of the upper staircase, and modestly withdrew itself again in a violent

Digitized by Google

hurry. Everybody but Mr. Farnaby and myself had disappeared in the dining-room. Was she having a peep at the young Socialist?

(*To be continued.*)

ICE YACHTS ON THE HUDSON.

THE Hudson River, since it was frozen solid during the early days in January, has been the scene, especially in the vicinity of Poughkeepsie and Newburg, of exciting sports which have attracted wide attention. Conspicuous among these is ice-yachting. At Poughkeepsie a large amount of money is invested in ice yachts, great handsome crafts, beautifully constructed, having wire-rigging, nickle-plated ironwork and timbers and railings, and runner-planks made of the most enduruble and costly woods. Every yacht in the fleet can make a mile in a minute in a stiff breeze. There have been several races which have occasioned wide interest and excitement. At New Hamburg there is also a fine fleet of ice yachts.

Between Newburg and Fishkill, a ferry was established during the snow blockade by "Hank" Ward, the oarsman, who carried both passengers and freight in his yacht. Our illustration shows his craft crossing on the ice with a load of sheep and a number of lady excursionists.

THE ROMANCE OF THE COUNTERFEITERS.

THE recent arrest by officers of the United States Secret Service of Charles Ulrich and Henry C. Cole, and the successful resumption of specie payments on January 1st, have called renewed attention to the ever mysterious subject of counterfeit money. Ulrich has long been known as the most expert engraver in the world, and Cole bears the reputation of having handled more counterfeit money during the past thirty five years than any other man in the United States. How like a very romance, repiete with indications of physical courage, of determination, of continuous criminal operations, of capture, imprisonment, escape and recapture, reads the narrative of those men just drawn from their last hiding-place. The chief interest centres in the career of Ulrich, the expert engraver, who, in cutting plates of national bank and Treasury notes, has succeeded in producing work which professional examiners have said could not be imitated by hand. Costly machines have been made to cut the lathe work on the back of Treasury notes in perfect geometric lines, supposed to be absolutely proof against any attempt at imitation; and yet Ulrich, patiently engraving in a secluded room, under the guard of confederates, has outmarveled the machine. He is said to be the only man who ever successfully counterfeited the notes of the Bank of England. In August, 1876, we find Charles Ulrich stepping from the penitentiary in Columbus, Ohio, where he was serving a sentence of ten years for engraving and printing a $100 note on the First National Bank of Boston, with a pardon in his pocket. His reputation as a counterfeiter was so high that, notwithstanding he had been pardoned and had announced that he was going out of the business, Secret Service detectives began watching his movements. Fully aware that he was under close surveillance, he allowed his natural cunning to control him, when, presto! like the harlequin in the pantomime, he disappeared entirely from view. The entire detective force of the Government, with the countless agencies throughout the country, were unable to discover his abiding place, and the authorities began to think that he was really endeavoring to keep his word and lead a different life. In the Spring of 1877 it became evident that he had resumed his dangerous work. Not that any officers saw him anywhere in this broad country, but a $50 bill of the Central National Bank of New York City found its way into the market, and was subject to much controversy about its genuine issue. At last experts declared it a counterfeit. The existence of Ulrich was made known by his work, for no other known man could have cut the plate so accurately. Henry C. Cole had visited him in Columbus directly he received his pardon and induced him to break his pledge to abandon counterfeiting, offering to supply all the money for rent of quarters, tools, plates, and other necessaries. Ulrich yielded, and the two passed beneath the noses of the detectives into Philadelphia, where Cole hired a house and Ulrich cut the plate for the $50 bill. A batch representing $100,000 was printed and distributed on the market by Cole. It was not until April, 1878, that the retreat of the men was discovered. By this time Ulrich had engraved the plates and Cole put into circulation a vast amount of counterfeit bills on the Central National Bank of New York City, the Third of Buffalo, and the national banks of Tamaqua and Hanover. Although Cole covered his tracks so shrewdly that the detectives who were watching him could obtain no evidence against him, it was deemed best by the two that they should separate. Accordingly, in October, 1878, Ulrich removed to Fanwood, N. J., where he hired a house, and entered apparently upon the life of a gentleman of leisure and means. He was of good appearance, he talked well, and dressed in good taste, and his mode of life attracted no attention among the neighbors. A detective, however, never lost sight of him. Ulrich came frequently to New York, and the invisible officer noted in his memorandum that the places he visited were principally shops where engravers' tools were kept. After a few trips to New York Ulrich secluded himself in his house, and seldom came out. Then the detectives knew that he had begun work on another plate. Chief James J. Brooks, of Washington, and Captain Curtis, of New York, had a conference and planned the arrest. A favorable time was chosen, and the officers dashed into the house on the 30th of November last.

Ulrich, in shirt sleeves, was working on the nearly finished plate of the back of a $100 Treasury note. The engraving was a marvel of skill. Ulrich was doing by hand the fine net-work tracing that on the genuine notes is done by the geometrical lathe, a machine for which the Government paid $100,000, because it was supposed it could do work that could not be counterfeited. It was said by Treasury officials who saw the plate that the imitation was so good that the notes printed from it would have passed anywhere without detection.

The officers still lacked the evidence to convict Cole, who remained in Philadelphia. They were satisfied that he furnished the capital to Ulrich, and Ulrich confessed as much to the officers. But better evidence was needed. Cole guarded his movements closely. Ulrich was arrested on the 30th of November. The detectives had him quietly committed without publicity, and he was used to bait a trap to catch Cole. For seven weeks a detective staid with Ulrich in the latter's own house night and day waiting for Cole. At last Cole appeared. The officer was secreted, and Cole and Ulrich talked over their plans. By Friday night, January 17th, Cole had so completely implicated himself that the waiting detective came from his hiding-place and arrested him. Cole has served a part of a short term for dealing in counterfeit money. He has been arrested a dozen times, but he always contrived to get off on defective evidence. It is said by the Secret Service officers that these counterfeit notes are the only ones in circulation, the plates of which have not been captured, and as both principal and engraver are now in custody, there is little doubt that the plates from which these were printed will soon be in the hands of the officers.

Owing to the reputation and skill of Ulrich, it is scarcely possible that the career of any other counterfeiter will compare with his in thrilling scenes and interest. Yet the Secret Service officers are kept on as constant a watch for them as the Internal Revenue officers are for the "moonshiners." In fact, there is much similarity in the location, secrecy and safeguards of a retreat of counterfeiters and of illicit distillers. For each operation apparatus and materials are required that in completeness, general utility and value, are far beneath those employed legitimately. In the case of metallic or coin counterfeiters, as seen in our engraving on page 409, from a sketch by a Secret Service officer, the machinery is crude, clumsy and inexpensive compared with that at the Philadelphia Mint. We have the furnace for melting the heavily alloyed metals, the molds for casting the ingots, the rollers for reducing them to strips of the required thickness, the cutting press for converting the strips into planchets, the milling machine and the coining press—in a word, a complete mint, but of inferior quality. In several instances where arrests have been made the entire work has been done in deep cellars; in others, in various parts of a building, where no suspicion would be excited, the melting in one room, the cutting and stamping in another, the assorting, counting and bundling in a third; while in other cases a separate building has been chosen for each operation—a distribution of labor made necessary owing to the vigilance of "shadowing" officers.

Although it is generally believed that the national bank and Treasury notes offer the best field for the counterfeiter, which he occupies by imitating both the plate and the patent paper, the various pieces of coined money satisfy the ambition of many, and a comparatively equal amount of skill is shown in cutting the dies and giving the metallic substance the peculiar shades of coined gold and silver.

OYSTER CULTURE.

THE INDUSTRIES OF CHESAPEAKE BAY.

A QUAINT little city is Annapolis, the county seat of Anne Arundel, and capital of the State of Maryland. It is so rich in historical reminiscence that it is known as "ye ancient citye." The town was founded in 1649, and was selected as the most desirable site for "ye greate citye of ye Southe"; but events changed the current of progressive development, and Baltimore seized the crown. The city is charmingly located on the south bank of the River Severn, and but two miles distant from the Chesapeake Bay. The original settlement was called Providence, it was changed to Anne Arundeltown, and subsequently to Annapolis, after the good Queen Anne of England, of whom as wags are wont to say that she is now defunct. In the noble State House, Washington surrendered his commission as Commander-in-chief of the American Army, and within the State House grounds is the Land Office, wherein are kept the original records of the Colonial Government. The United States Naval Academy occupies a superb position, the largest vessels in the navy being able to come alongside the Academy wharf at full tide. Many of the houses are pre-Revolution, and built of red English brick, the doors and windows being of the "severe classic," so much admired ere the House of Hanover reached the English throne. Dotted all over the bay, and as far as the eye can reach, are the boats of oyster fishermen during the oyster season—some close to land, others out at Tally's Point Reef, in search of luscious bivalves; while dredgers sail away down Chesapeake Bay, followed by the maledictions of those who work with tongs, from out frail-looking skiffs that reel and wobble with every movement of the muscular toiler of the deep. The finest oysters are the Roanokes, Rappahannocks, the Western Shores and Cherrystones. There are are many other known descriptions, but these are supreme for fatness, ditness and flavor.

Tally's Point Reef is considered one of the finest oyster grounds in the United States. It is safe from the dreaded dredgers, the water being so shallow, but it is the favorite resort of small boats, each manned by an adult and a boy called a "culler," who is employed to take oysters from the tongs, to select the fish from the *debris*, and to dress the shells by means of a small hammer. A good culler will dress twenty-five baskets a day, or 3,750 oysters. One house in Annapolis opens 3,000 gallons of oysters per day, giving employment to one hundred men in "canning" for the West. As many as one hundred boats may be seen working on Tally's Point Reef at once, each taking thirty bushels a day or 450,000 oysters. If a sloop's captain is in want of oysters he suspends a basket at the foremast head, the small boats come to him, and as soon as he puts in his cargo he lowers his wicker flag of distress. The lone fishermen tell terrible tales of the dredgers. The fleet is known as the "Irish Fleet," from the names attached to the vessels. We passed under the sterns of the *Rose of Erin*, the *Banshee*, the *Mavourneen*, and others possessing equally suggestive titles. The lone fishermen say that these boats are manned by the street scrapings and by jail-birds, that the crews are as lawless as in the days of Captain Kidd, and little better than out and out pirates. Dredging is destructive to the smaller but not less vital interests of the small boats.

"Where I can pick up three with a tongs the dredge will get fifty," said a lone fisherman to the writer. "Isetera'll be a luxury in a little time—the dredges crushes all the young isetera into pulp!"

The crew of the dredger runs from seven to ten men. The dredge is worked by a windlass, and two dredges are lowered at the same time at either side of the vessel.

"They goes to trawling grounds exempted from dredging and gets their six or seven hundred bushels a day."

"Surely the authorities take some steps to prevent this?" we asked.

"Yes," replied the lone one, "there's the police boat," pointing to a rakish-looking schooner, "but it can't be everywhere, and them fellows watch it as a cat watches a mouse," adding, with a grin of intense satisfaction, "there was two men shot lately on board of dredgers."

"What is the value of a take of oysters to a dredger?"

"That depends on the state of the market—at times a cargo is worth $2,000, and at other times they goes in debt. Iseters is kinder tricky—sometimes they're worth a dollar a bushel, and then again they won't be worth their shell."

The waters close to the wharf of the Naval Academy are not open to small boats, but during the "hard Winter" of 1870, when the ice was so thick in the bay as to prove invincible, the fishermen petitioned the naval authorities for permission to use the tongs in the prohibited waters. The request was complied with, and in one week 75,000 bushels of oysters were taken up by the tongs.

A boat manned by darkeys, the fisherman having treated his friends to the sail, leaves Annapolis to the music of a chorus that is faithfully borne over the sunlighted waters; but ere the sun grows high in the heavens comes a change in wind, a nor'wester starts up, the snow begins to fall and the sleet to cut the skin, and then the only hope for keeping up the circulation is a vigorous working of the tongs, while the skiff rocks in the chopping sea, every moment threatening to capsize.

There are 4,000 licensed oyster boats in the waters of the Chesapeake. "Shucking," or oyster opening, is a regular profession at Annapolis. One firm employs 750 shuckers who shuck over 100,000 bushels a week. A smart man will shuck from twenty to twenty-four pots of six pints each, one bushel to a pot, a day, for which he is paid at the rate of twenty cents a pot. Shucking gives employment to about fifty white girls, who earn from ten to eighteen dollars a week. These girls have nothing in common with the stereotyped fishwife about them; on the contrary, they are modest, refined, intelligent and highly industrious. One couple—a man and wife—were pointed out to the writer as shuckers who had, by shucking alone, saved $10,000.

The Kaiser at Home.

HIS MAJESTY'S standard is again floating over his palace at Berlin, and everything in the imperial household has resumed its customary appearance. At noon when the soldiers, on mounting duty, pass the Linden, the Emperor never fails to look at them from the corner window of his study, where his face may also frequently be perceived by the many people coming from far and near to have a glimpse of their revered sovereign. The aged monarch, not heeding the admonitions of his physicians, has undertaken the full burden of Government. From early morning to a comparatively late hour of the evening the Kaiser is busily occupying himself with the discharge of the affairs of State. The only relaxation he allows himself consists in a drive through the Thiergarten, generally between the hours of two and three. Not the least precaution is observed by him in these open-air exercises. He is always accompanied by one of his adjutants on duty, who have pledged their word to each other never to leave him alone in his rides or drives.

PICTORIAL SPIRIT OF THE EUROPEAN ILLUSTRATED PRESS.

M. Gambetta Addressing the Commercial Travelers.

The recent crisis in French politics, averted on January 24th by a compromise between the Government and the Left which resulted in the passage of a resolution of confidence in the Ministry, by a vote of 223 to 121, attracted a greater share of attention than usual to M. Leon Gambetta. It was believed he had planned the attack upon the Ministry, and if he had ascended the tribune and delivered a speech in accordance with his known convictions the result would have been far different. To his forbearance in this respect is credited the great victory of the Government. The compromise was due in a great measure to his personal efforts. And just here it was asserted that he was awaiting an opportunity more auspicious, if such is possible, for posing himself forward. For, had he so willed, he could have caused the defeat of the motion and the overthrow of the Ministry; and then M. Gambetta himself would have been called upon to form another Cabinet. This is what his partisans say he does not want, for he prefers to wield his vast influence among the Deputies, rather than occupy the position of the mouthpiece and apologist of the Government. For a man of forty years Gambetta's political position is a peculiarly responsible one, yet he bears his honors and burdens in a manner quite free from arrogance. With all the official and party cares upon him, he finds time to deliver innumerable addresses upon all manner of subjects, his latest appearance outside of the Chamber of Deputies being at the banquet of commercial travelers.

The Electric Light on the Victoria Embankment.

The trial of the Jablochkoff system of electric lighting upon the Thames Embankment, between Westminster and Waterloo Bridges, has proved beyond all possibility of dispute its practicability and efficiency. There are twenty lamps, the light from which is moderated by means of opalescent glass globes. They are placed about 120 feet apart along the river-side parapet, some of the old gas-posts serving as standards for them, and from each lamp the electric conductor, consisting of seven strands of fine copper wire, surrounded by two coats of insulating material, is carried down the pipe, and thence along the subway to the engine-house, from which the furthest light is 730 yards distant. The engine, which works at the rate of 140 strokes a minute, turning the magnets of the Gramme machine at the rate of 600 revolutions per minute, is one of twenty horse-power. On the first night of the trial only ten lamps were used, but the whole number are now nightly in operation, and the general effect is most satisfactory. The light is strong and clear, the entire roadway of the Embankment being brilliantly illuminated, and the rays extending on the other side far across the river itself, whilst the intervening gas jets only serve as foils to set off the beauty and brilliancy of their new rivals. Large print can be easily read at a distance of fifty feet, whilst the smaller kinds used in newspapers are distinctly legible at thirty. The electric light in itself is absolutely colorless, the reddish tinge observable when this system is employed resulting from the plaster of Paris used in the construction of the "candle."

The Afghan War.

The journey from Lahore to Jhelum is made by rail, and, beyond the latter, which is on a river of the same name, is continued to Peshawur by the high road. Military stores are carried on bullock-wagons, which make an average speed of two miles an hour. The driver, squatting on a small board in front of his vehicle, bears a "chabook," or whip, to mend the pace of the "bile," which is the Hindostanee word for a bullock. If that will not do, he seizes the animal's tail, and gives it a twist, which seldom fails of its due effect. It reminds one of handling a boat's rudder to steer its course, for the tail, like the bridle, may serve to direct the animal to the right or to the left. After Sir Samuel Browne had captured the Fort of Ali Musjid, on December 21st, he gave permission to the native camp-followers to plunder or loot the enemy's tents. There were many dishes, rugs, rugs, belts, drums, and some "posheens," or sheepskin overcoats, which have the woolly side in-wards, like Brian O'Lynn's breeches, and their edges fringed with the wool, all colored yellow. Such coats are worn by the cavalry of the Punjab Guides. The loot parties were allowed to carry off every article they desired save the tents and stray arms. The sketch of the Eighth Bengal Cavalry on the march to Quettah needs little or no mention beyond the fact that the road to Quettah, through the Bolan Pass, was, as we have previously stated, exceedingly arduous, and especially so for cavalry. Still the transportation of baggage was far more rapid than that of the commissariat stores by the bullock-teams. The engraving of a sub-division of a mountain battery is from a photograph, and shows the position of the pieces and men when drawn up for action.

AT HOME AND ABROAD.

—THE breeding of silkworms has been attempted at Montevideo, with brilliant success.

—WESTERN MASSACHUSETTS made 150,000 barrels of cider the past season, and temperance people are aghast.

—THE Roman Catholic Bishop of Montreal has prohibited female singers in the choirs of his diocese after June 1st.

—THE Cincinnati authorities have decreed that bakers must stamp the weight upon every loaf of bread they offer for sale.

—THE tribe of Oldtown Indians, in Maine, is said to have lost, under the influence of education, almost all traces of its native character.

—ALL the prison officials throughout Russia are to be armed with revolvers, as a precaution against suspected Nihilist plots to liberate the prisoners.

—KENTUCKY horses now find such a ready market in this country and England, Kentucky breeders are going into the horse-raising business more extensively than ever.

—THE French wine crop last year fell off 48,700,000 hectolitres compared with the yield of 1877, and 8,023,000 compared with the average of the decade. Causes, phylloxera and oidium.

—IT is expected that London will be very dull till after Easter, and that there will be no Court festivities with the exception of those connected with the Duke of Connaught's marriage.

—THE Yellow Fever Relief Committee in Grenada, Miss., has published its report, showing that it received $24,493 in subscriptions, disbursed $16,298, and now has claims before it for $13,260.

—THE newly created Humboldt Academy at Berlin was opened on January 13th. Its purpose is to give a sort of university education to persons who have not qualified themselves for entering a regular university.

—A BILL has been introduced into the St. Louis Municipal Assembly making it a misdemeanor punishable by fine to ring bells on churches, convents, schools or factories, or anywhere that the noise will disturb people.

—IT is positively stated that in 1790 Virginia advanced the United States Government $120,000, and Maryland $70,000, to aid in building the Federal Capitol, and that both these sums, with interest, are still due the States named.

—DURING the next six months the French Government will have at its disposition in the Legion of Honor five nominations to the grade of grand officer, eighteen to that of commander, seventy seven to that of officer, and 410 to that of chevalier.

—SAN FRANCISCO records about two thousand marriages during the past year, and nearly three hundred divorces. The grounds of separations were adultery, desertion, cruelty, and failure to provide. The decrees were in favor of the husband in less than one-fourth of the cases.

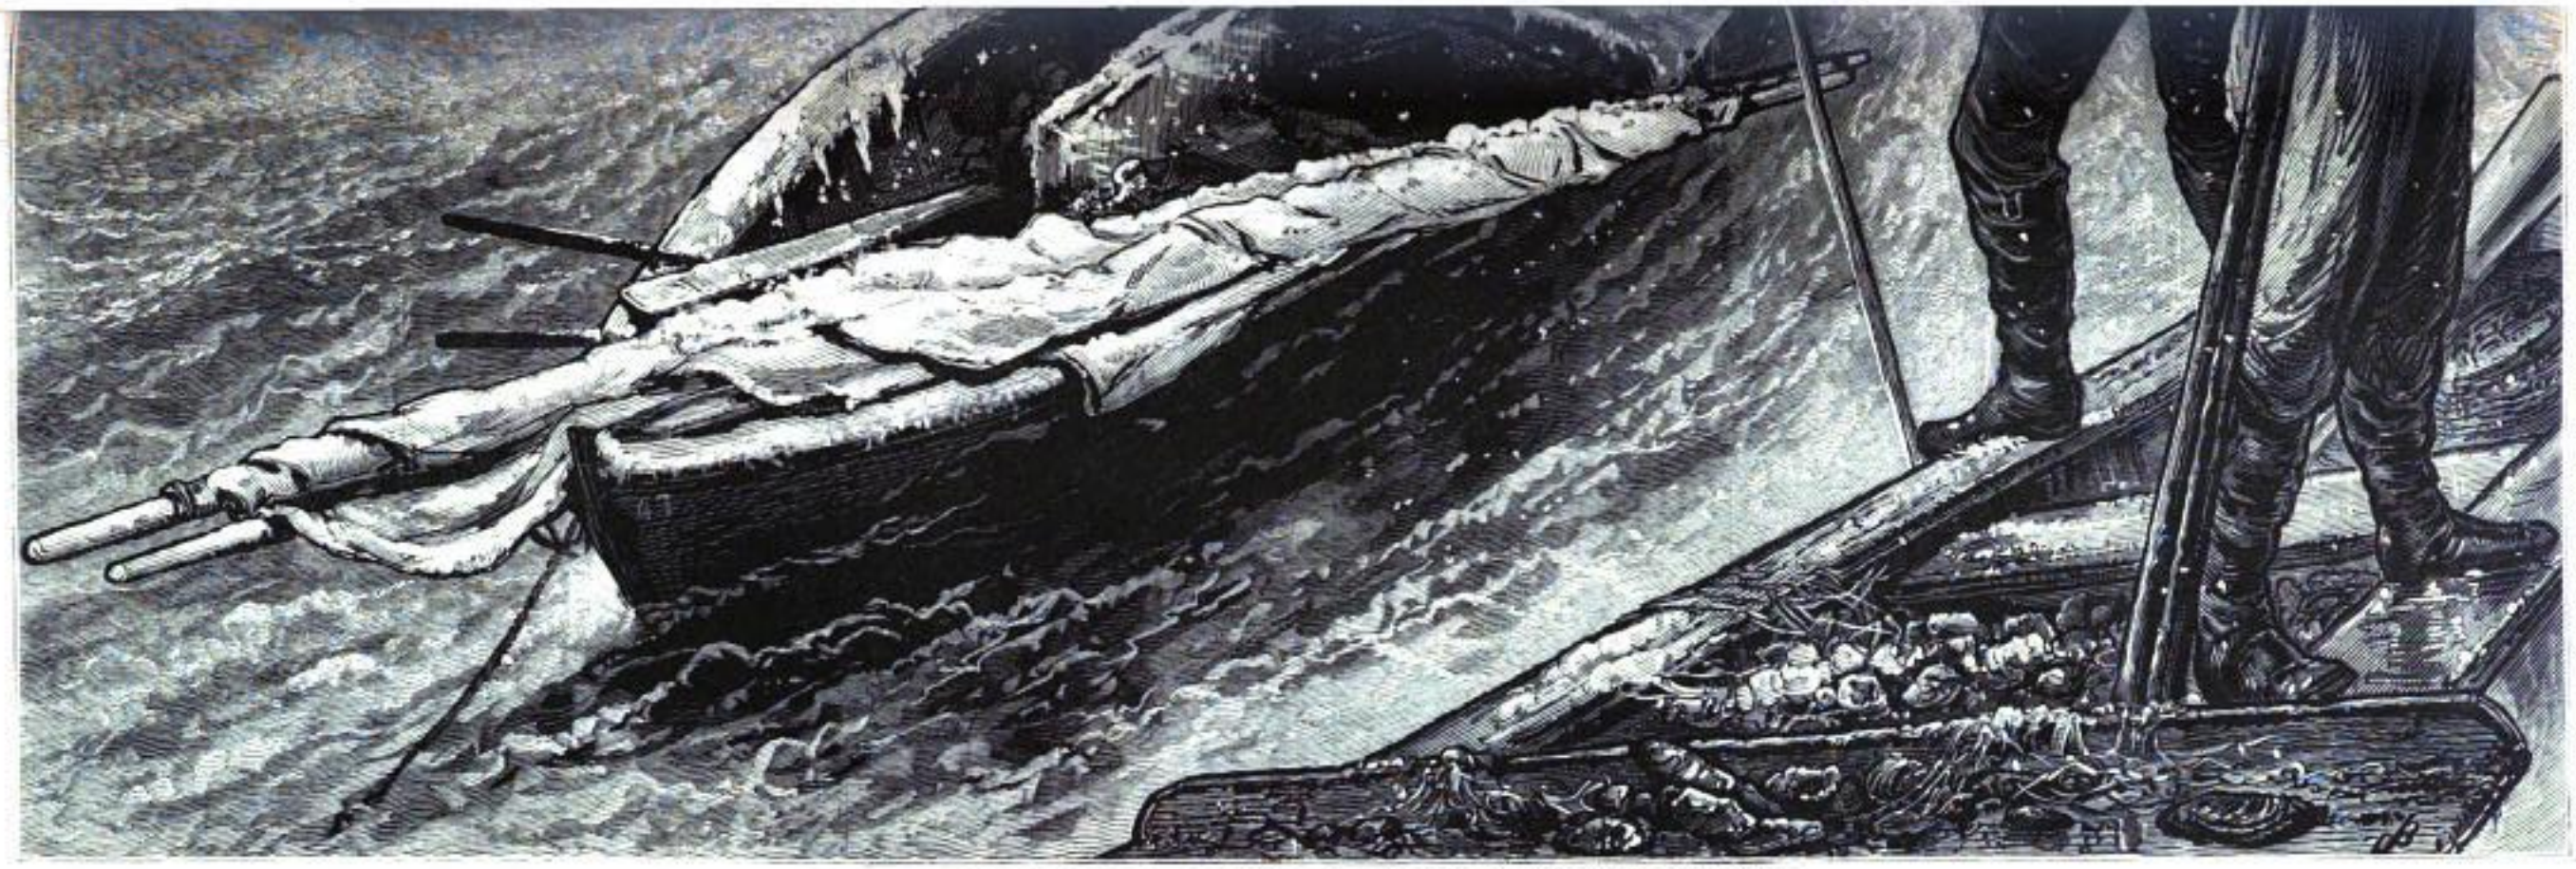
—PEOPLE may live to see a vast inland sea in Africa, in the natural basin to the north of the desert of Sahara. M. de Lesseps's surveyors have found that the country through which it is proposed to cut a canal is of sand and soft earth, and entirely free from rocks or other obstacles.

—IN 1874 there were four gold mills in operation in Georgia—there are now over forty. There were then about forty stamps at work—there are now nearly five hundred. The stamps at work now will get out over $500,000 in gold bullion during this year if not another stamp is added.

—ENGLAND wants to buy out and out certain Crown lands in Cyprus, and offers Turkey £15,000 for them. The Turks, however, pay England the compliment of asking £55,000, on the ground that the value of the lands will largely increase under a beneficent British administration.

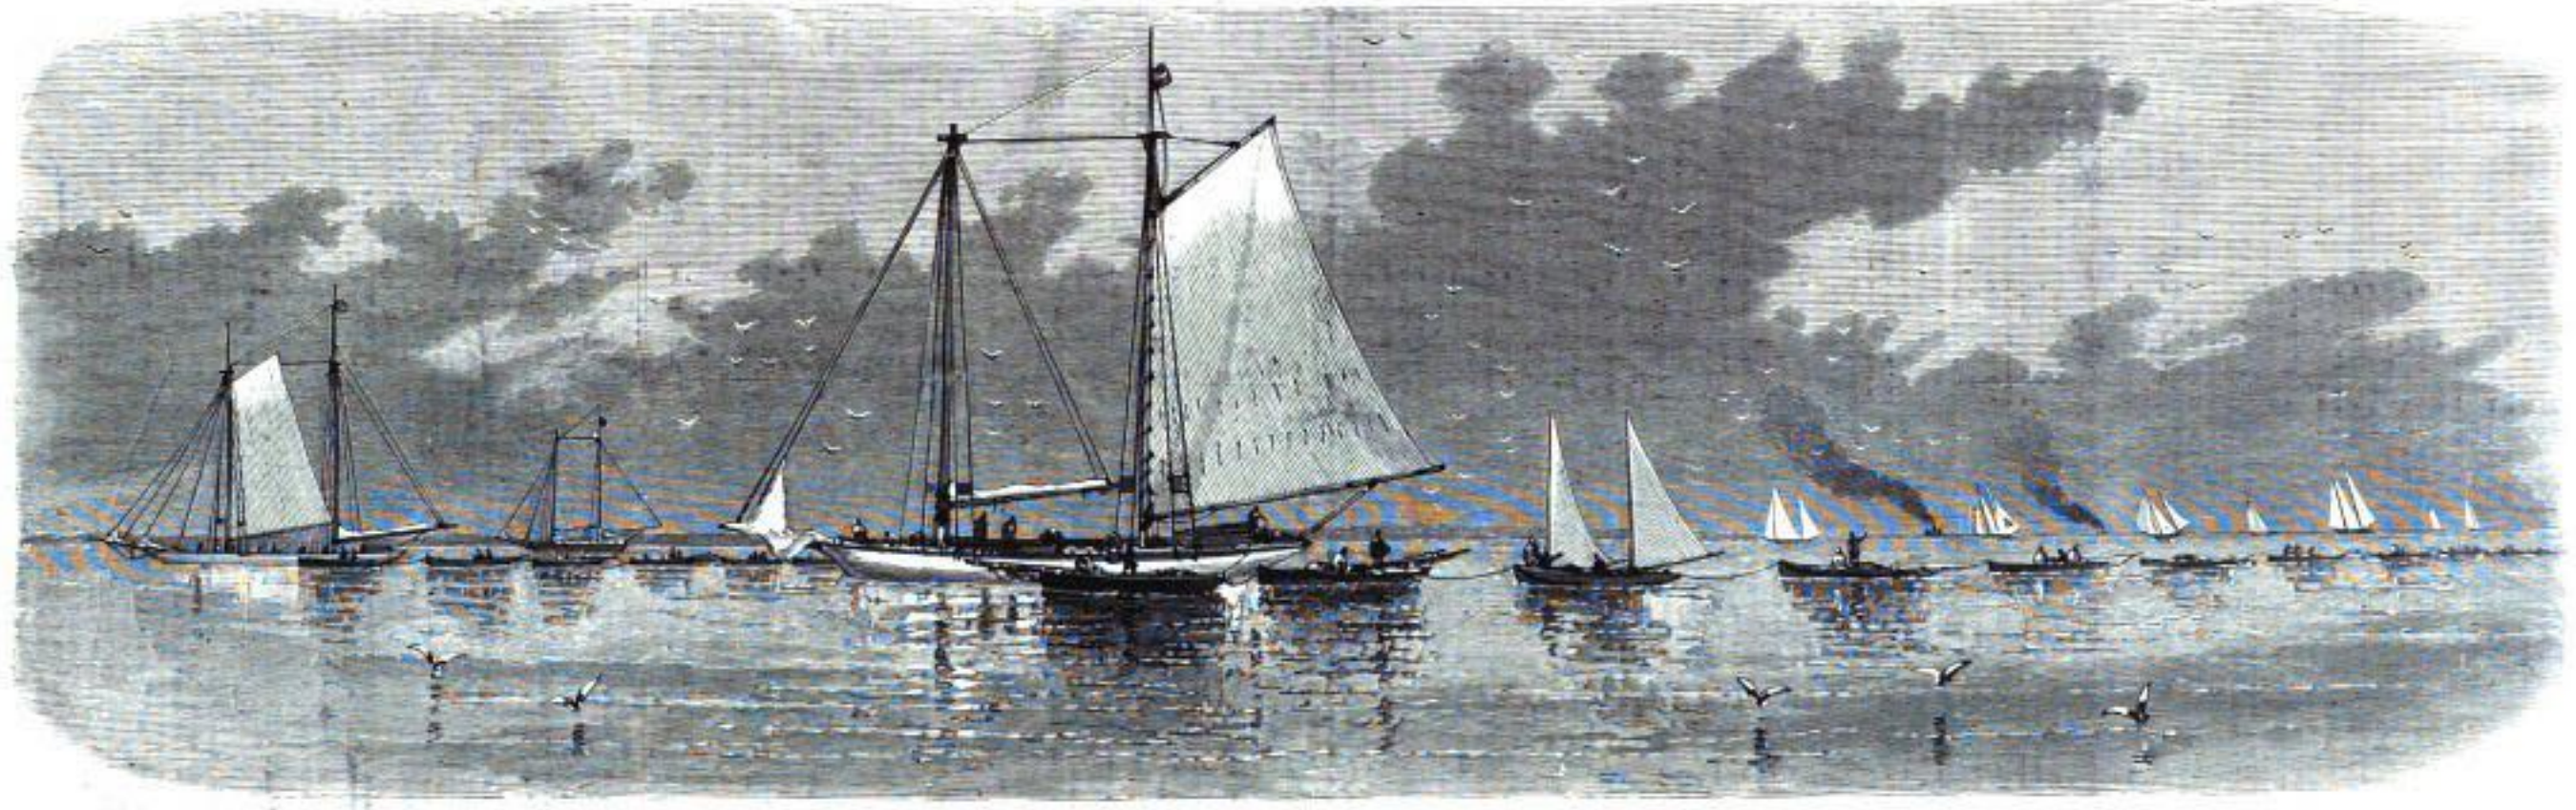
—THERE are fifty-eight tramways in the United Kingdom, with £4,207,350 expended capital and 268¾ miles of track, 1,134 cars and 9,222 horses. The roads carried last year 146,031,223 passengers, their total receipts being £1,145,465, and the net receipts £230,954, or 5½ per cent. on the capital.

—THE Prohibitionists of Ohio are endeavoring to secure the passage of an amendment to the Constitution of the State prohibiting the manufacture or importation of alcoholic liquors in the State except for use as a medicine. They want to get 200,000 signatures to a petition in its favor before the 20th of February



—HARD times in Berlin. More than 200,000 persons, according to a statement prepared by Herr Zimmermann, were last year prosecuted for non-payment of income tax, and in the great majority of cases a seizure of the effects of the defaulters yielded nothing. More than 120,000 persons were prosecuted for having failed to pay their rent.

—A CO-OPERATIVE store has been established in Paris by English capitalists, which employs about ninety persons, and deals in almost everything required by housekeepers. The capital is $300,000. The London co-operative societies report handsome profits. One concern, upon sales of $5,200,000, is said to have realized $130,000 clear of expenses, though selling about twenty per cent. below the ordinary retail prices.



—THE number of passengers landed at New York from foreign countries during the last year was 121,369; the aliens numbered 75,347. This shows an increase of 20,811 as compared with 1877. The number coming by steerage was 33,891. Of these 30,546 remained in New York, 7,855 were distributed in the Middle States; 33,653 in the West and Northwestern States; 4,921 in the Eastern States; 1,566 in the Southern States; 1,011 in Canada; and 97 in South America.

—THE Senate of Virginia refused, by a very decided majority, to repeal the whipping-post law. A Richmond correspondent says: "The infliction of corporal punishment since the adoption of the law has saved a very large amount in criminal charges to the Commonwealth. It has proved to be a good law in this city. Formerly the docket of our police court was crowded with petty larceny cases; under the new order of things these cases have been very greatly diminished. Petty thieves are afraid of the lash."

A SECRET MARRIAGE AND ITS CONSEQUENCES.

BY THE DUKE DE POMAR,

AUTHOR OF "THE HONEYMOON," "THROUGH THE AGES," "WHO IS SHE?" "FASHION AND PASSION," ETC.

BOOK THIRD.

THE MYSTERIOUS HEIRESS.

CHAPTER XI.—GLAMOUR BECOMES MORE PUZZLED THAN EVER.

GLAMOUR is sitting in his study, and Monsignore Berretta stands beside him.

Perhaps for the first time in his life the strongest tendencies of his nature are rushing in one mighty current instead; of being divided into several narrow channels, and the Italian seems fully aware of this, as he observes him in silence with his keen eyes that appear to possess a greater power than those of other men.

"So you have not been able to find out anything about her?"

"No. Lady Rollingford received me with her usual cold politeness; she was exceedingly gracious, and the thought of your taking such an interest in her young *protégé* seemed to be highly gratifying to her, for she is very fond of her it appears. But she refused to tell me anything about her, and I begin to fear that there is a mysterious link, more powerful than we imagine, existing between her and Miss Reymond."

The young duke bows his head in silence, and appears to relapse into a reverie.

Monsignore has a very difficult task to perform. He not only desires that Glamour should become a member of the Church, but he would have him marry, not a girl like Miss Reymond, whose antecedents no one seems to know anything about, but into a really old Catholic family, in the bosom of which he might continue to remain a strict adherent to the faith of Rome. He has nothing to say against the young lady, but he would rather his friend should not marry her. Perhaps—who knows?—Mademoiselle Robertoff has been speaking to him concerning her marrying young Cassilis, and his sympathies are already enlisted on that gentleman's side. He looks excited, yet passive, almost breathless with solicitude, and yet conscious of the great responsibility of his position. His keen eyes are fixed on Glamour's aristocratic countenance as if they would read all the thoughts that are passing through his mind. His voice is at all times low, but to-day he speaks almost in whispers, though it is in whispers full of emphasis and that convey a whole world of meaning in them.

The bewildered nobleman rises presently, paces the room with downcast eyes, and says, more to himself than to his faithful mentor (for he seems unconscious of the excited interest with which the latter watches every change of expression that passes over his agitated face).

"I not know if I love her or not—I like her, and I would fain make her my wife; and yet, as you say truly, a man in my position can scarcely sacrifice everything he owes, both to society and to his faith, in order to gratify the desires of his heart. Ah, life is most unsatisfactory, even at its best; it is a dreary dilemma betwixt thought and action."

"What makes life dreary and unsatisfactory is the want of a motive," the Italian says, startling him with his voice, though he speaks almost in a whisper. "When once your faith is settled, my dear duke, you will find life anything but unsatisfactory."

"If there was but one church I could see my way clearly enough."

"There is only one Church, believe me. The more you study its tenets, the more you will perceive that it is the only one which is indestructible and omnipotent over the erring heart of man."

"The claim of Rome to orthodoxy seems to me irresistible; but yet what is orthodoxy? What men call orthodox in England Frenchmen call heretical; and yet England is a very religious nation."

"If England were indeed a religious nation, do you think that there would be so many different sects? England was once the island of saints, and her sovereigns were the defenders of the faith; but, alas, what has become of their faith now?"

Never have monsignore's arguments seemed so plausible to Glamour; his cultivated intellect is aroused even to enthusiasm by the warm, passionate accents, and he opens his heart to them, and imbibes all their satisfying nourishment with the avidity of a man who has been for many a long day deprived of the bread of life.

"My son," the Italian concludes by saying, "Satan is trying you, though you know it not; twice blessed if you stand the test. You are destined for a glorious work, believe me, Glamour; your mission is second to none, if it be estimated at the value of its possible results."

I began this chapter by saying that at last all Glamour's intensest longings are directed into one mighty current, instead of being, as has been the case until now, divided into several channels, each of which was too narrow to satisfy him, and between which he could not make up his mind to choose. And such indeed is the case. All his tendencies now draw him towards the Church of Rome; and having at last found a man like Berretta to guide his faltering steps, he feels that the time for philosophical speculations is over, and that he must, in spite of himself, take a decisive step ere it be too late.

CHAPTER XII.—FRANK REYMOND'S DAUGHTER.

MRS. CHAMPION, made acquainted by a letter from Glamour with Lady Rollingford's ultimatum, begins to fear that a match between him and the daughter of Frank Reymond is not quite such an easy thing to arrange as she had imagined.

Will Lady Rollingford never relent? Will she persist in keeping the secret of Louisa's birth all her life, thus putting a barrier between her and her happiness?"

Ordering her carriage that very afternoon, she drives into town and calls at Rollingford House.

Lady Rollingford receives her in her little boudoir down-stairs.

As usual, she is perfectly composed, and looks as calm and cold as a marble statue. She appears younger than Mrs. Champion, and her stern demeanor only adds majesty to her stately figure. Mrs. Champion trembles for her cause when she sees her, for her great knowledge of human nature tells her at once how difficult it will be to inspire such a being with anything like sympathy for another, especially when it is to the prejudice of herself.

"I have just heard of your interview with Monsignore Berretta, Lady Rollingford," she says, as soon as the stereotyped phrases of greeting have passed between them.

"Indeed!" she answers, smilingly.

"The Duke of Glamour loves Louisa, and is ready to marry her; but, of course, he cannot do so unless he is made aware of her real name and position."

"You would have liked me to tell that cunning priest my secret, then? Ah, Mrs. Champion, you expect too much!"

"I only ask you to show ordinary consideration for the poor girl, and not to destroy all her chances of future happiness, as you are doing."

"You speak well. It is certainly a grand thing to be able to speak well; but yet words are not actions. I have done more for the girl than you have, though you express your love for her in such warm terms."

"Perhaps you do not approve of the duke's suit?"

"I have nothing to say against it. I will not attempt to deny that I shall be sorry to part with her, as I have grown to appreciate all her good qualities, and I shall certainly miss her when she leaves me; yet I suppose it will be for her good, and so I am ready to sacrifice my comfort to her happiness. I could not wish a better husband for her than the duke."

"I can understand your objecting to tell the history of her birth to a man like Berretta, whom, let us hope, Glamour will find out ere it be too late; but surely you can have no objection to reveal your secret to the man who is going to marry your adopted daughter?"

"I will never reveal what you are pleased to call *my secret* to any one. When I adopted Louisa, it was on the condition that the secret of her birth should never be divulged. I have done everything that I could for her; I have been a mother to her; I have given her a first-rate education, and have obtained for her a position in society such as her own mother could never have dreamed of; all this I have done in remembrance of Frank Reymond, who believed her to be his daughter, and begged of me to look after her as such. But do you think that I will endanger my position in society, and dishonor my spotless name, in order to secure for her a brilliant match? No, Mrs. Champion; you ask too much."

"Yet she is your husband's daughter; and by rights all his property, even to this very house, belongs to her. You have deprived her of the rank and the fortune that by law belong to her. Don't you think that you owe her something in return for all these injuries?"

"By law! You seem to forget that I am Lord Rollingford's widow, and that by his own will all his property was left unconditionally to me. He was never married before. The *liaison* on which you seem to place such importance was not a real marriage. No proofs of it exist, and even that wretched woman herself could never establish the shadow of a claim to his name or title. Besides, how do we know that Louisa is my husband's daughter, after all? She is not in the least like him, either in feature or in character, and we have only Marie Gautier's word for it."

"You do not believe, then, that she is Frank Reymond's daughter?"

"I think it is just as likely that she should be the daughter of any one else—the Count de la Mazerolle, for instance, with whom every one knows her mother was living at the time of her birth."

"Alas, how true it is that the sins of the fathers are visited upon the children! Lady Rollingford, I am sure you are mistaken, and yet I cannot prove it."

"I thought that you would never have mentioned this unpleasant subject again. I have your solemn pledge never to reveal the secret to any one, and I believed that even to me you would have had the good taste never to have mentioned it. But I see I was mistaken; and yet you did not hesitate to accept my ten thousand pounds!"

Mrs. Champion's face flushes scarlet.

"Madam," she answers, rising, and looking down upon the great lady with supreme contempt, "that money you forced upon me; I never asked for it, and you sent it to me after I had already promised to keep your secret. But it shall be returned to you; not another week shall pass ere it is paid back, every penny of it—yes, and with interest, too—into your own hand!"

"I do not want the money!" Lady Rollingford exclaims, frightened at what she has done; "you are welcome to keep it."

"Ay, but I want you to release me from my promise."

"*That* I can never do. You promised to keep my secret, and you must do so; it is too late now to retract or change your mind. You have a prejudice against oaths. No wonder. Oaths may remind one who, like you, is so apt to change her mind, with unpleasant force of perjury. Still, you told me that day in Paris that you considered your word as binding as an oath; I will not insult you by doubting for a second that such, indeed, is the case."

CHAPTER XIII.—AT THE RACES.

I NOW take my readers to one of the most lovely spots in merry England—the park of Sandown, near the picturesque little village of Esher.

On the fine clear Spring day when we contemplate this favorite spot a dense crowd of people fill the inclosure; the grand stand is full of gayly attired ladies and men of all grades; whilst a more exclusive set of privileged mortals occupy the members' stand, or promenade up and down the lawn, listening to the martial strains of the military band, and anxiously waiting for the saddling-bell to ring and for the hoisting of the telegram-board, whilst they discuss the chances of the different horses, and make up their last sweepstake before the race.

Every train from London arrives at the little station above the course filled with people, for the fine day and the brilliant Spring sun have tempted many to repair to what they are pleased still to call the "country," who, as a rule, take but little interest in racing; the greater number, however, are men whose faces are better known at Newmarket than in Piccadilly. But though the rail can convey one so quickly and for so little expense to the very gates of Sandown Park, many have the good taste to prefer driving down, and various drags and landaus and wagonettes and conveyances of all kinds arrive on the course, and take up their place in front of the grand stand, making the place look like a second Ascot or a miniature Epsom.

On one of these, a large drag drawn by a beautiful team of grays, on whose silver harness appears on every available spot a count's coronet, we perceive, sitting on the box-seat, by the side of the saucy and ever-smiling Mademoiselle de Robertoff—whom some one in the grand stand has just named, and I think with some reason, "the first favorite of the day"—our old friend Louisa Reymond, Lady Rollingford's adopted daughter.

She is looking perhaps a trifle thinner and paler than when we saw her at the end of last season, but her wondrous dark eyes have lost none of their fire, and even compared with the sly, saucy, almost wicked, yet ever-smiling eyes of the brilliant girl beside her, they shine with an effulgence unrivaled. She is most elegantly dressed in a complete *toilet des courses*, in rich *faille* of the shade known as *violet Ophélie*. Her dark brown hair is drawn off her face and discloses her beautifully-shaped forehead; and her coquettish *chapeau-capote* of violet-colored *crêpe* is adorned at the back with a profusion of mauve ribbons which fall gracefully over the hair.

Louisa has never looked more lovely in her life; at least so thinks the gay Cassilis, who sits just behind her on the top of the drag, his elbows resting upon the large Fortnum & Mason basket which contains the luncheon, as he leans over her, and every now and then joins in the animated conversation between the two young ladies, who both seem in great form to-day, and who are at all times a good match for each other in a combat of words.

A strange, sad look, however, overshadows the generally bright countenance of the mysterious heiress, and causes her at times to look almost melancholy—a rare thing in one so full of health and life, and who would seem to have been born for nothing but happiness, and which is particularly noticeable to-day amidst such a gay spirit-stirring scene as this.

What can she be thinking about? Can it be that her thoughts have wandered back to last season, when she used to converse for hours together with the clever and talented young duke, whose wife she at one time hoped to become? But no: she has just heard the news of his approaching marriage with the beautiful Gwladyth de Beverley confirmed by one who of all men is a reliable authority, Monsignore Berretta himself; and she heard it with a smile playing upon her coral lips, and without a pang of regret, at least to all outward appearance, troubling her heart.

Is her mind dwelling on the one curse of her life—the one dark point in her bright and dazzling existence—the mysterious secret of her birth and parentage? Perhaps. Yet why should she trouble herself about what is out of her power ever to settle satisfactorily? Is she not courted by all, respected by the whole world, welcomed into the highest society in the land? Is not her adopted mother as kind and lenient to her as if she were indeed her own child, and will she not inherit at her death a fortune which kings might envy? No; the mystery that surrounds her seems but to add to her attractions, and she is well aware of this. Were she, indeed, the daughter of a royal house, as she has so often imagined in her dreams, she could not possibly be more courted or *fêted* by the crowd of admirers who surround her, and amidst whom she passes almost for a Corinne, only more beautiful and more mysterious than even Madame de Staël's world-famed heroine.

No; it is evident that we must seek some other reason for her mysterious melancholy.

I have already remarked that Rupert Cassilis is sitting just behind her on the drag. The gay young fellow also seems at times sad and downcast, his conversation is scarcely as lively as usual, he but seldom laughs; and it is strange, too, that every time he addresses Louisa, however trifling or commonplace his remark may be, that young lady trembles, as a sensitive plant might do at the gentlest touch, and an expression in which both pain and joy are mingled steals over her lovely young face.

The truth is that matters between them have come to a crisis at last, and that it was not by accident that the saucy Mademoiselle de Robertoff advised her aunt to invite Rupert and Miss Reymond to be of their party to these races.

Louisa is fully conscious of the clever little lady's manœuvres. For some time past she has been almost hourly expecting a proposal from the handsome Rupert, for since we last met them he has become a constant visitor at Rollingford House, and his attentions to her have been most marked; and yet—strange contradiction of the human heart—though she admires him above all men, and feels happy only in his company, though his looks cause her heart to beat faster, and his most commonplace remark brings a blush to her cheek, she yet dreads to hear this very confession of love for which she now almost longs, and would fain place an ocean between them even at this moment, though such a separation would almost kill her.

Several races have been run and won and lost; the whole scene seems to her more like a dream than a reality; even the witty remarks of her bright little companion fall unheeded on her ear, for Cassilis is leaning over, and, though he but seldom speaks, she can feel his warm breath fanning her cheek. She knows that the moment has come, she knows that this day will decide her fate, that yonder glorious sun will not shine another day upon the free Miss Reymond, that the most ardent desire of her heart is about to be accomplished; yet she trembles, and would fain send from her side him whom she loves so dearly.

Presently Mademoiselle de Robertoff suggests that they should descend from their elevated position and take a turn on the lawn, and look out for their friends and acquaintances amidst the gay, bustling crowd.

Lightly as a sylph she descends from her uncle's drag, her aunt the countess and Louisa being obliged to follow her example; and once on the ground she manages so that, whilst she herself takes her aunt's arm, Cassilis is obliged to offer his to Miss Reymond. And thus they all four cross the course and enter the inclosure beyond, where, as it was only to be expected, they soon get separated by the crowd; and when Louisa turns round to speak to Countess Sartorious, she finds that that lady and her fairy-like niece are no longer near her, and that she is alone with Rupert—alone though in the midst of a crowd—and that purposely or unconsciously he is pressing her hand in his, and drawing her closer to him.

She looks up into his face as if to seek for protection, and his light blue eyes, so full of deep meaning, so sweet, so pure, and so intense in their expression, meet hers. She can doubt no longer—he loves her!

Yet his conversation is unlike that of a lover; a few passing remarks, perhaps more cutting and facetious than charitable, about the mutual friends whom they happen to pass in their walk, a racy anecdote, or the odds just offered by Tattersall's men against such or such a horse. But how sweet they sound in her ears! Ah, it is not necessary for a handsome young lover to describe beautiful palaces by the Lake of Como in glowing language and enchanting verse, that his lady-love, if she be really in love with him, may hang, even as the bee upon the flower, upon the honey of his words.

"Look who is coming this way, Miss Reymond," he says, pointing out to her a tall, graceful lady, most elegantly attired, who leans on the arm of a middle-aged man, with a not over-aristocratic countenance. Lady Victoria Fitzcharles—at least, I beg her pardon—that was, and unfortunately is no more—Lady Victoria Sadfall."

Louisa looks up and recognizes the lady in question, who, as Cassilis has just informed us, has indeed changed her name at last.

As I said when I first had the pleasure of introducing this amiable and talented lady to my readers, Lady Victoria has passed the age of sweet April-like eighteen. From her earliest youth she had been led to believe that she was destined to make a grand marriage; in fact, that she had only to make her appearance in the world for every man to fall in love with her immediately. But, alas! years passed, season succeeded season, and the handsome and clever daughter of his late Grace of Warrington—for handsome and clever she is, there is no denying *that*—saw every girl of her acquaintance, one after the other, marry and settle down, whilst she still remained unmarried, and she began to dread that, after all, she would end by being an old maid. She perceived with dismay that every year the chances of her ever making a grand marriage became more and more problematic; the idea of dying an old maid did not please her at all; and so, after refusing a marquis and three earls during her first season, an earl and two barons during her second and third, two viscounts and a baronet during her fourth, fifth and sixth, and a couple of baronets and a rich knight some time during her seventh and eighth London seasons, seeing that the Prince Charming of her dreams did not arrive, and was not likely now ever to do so, she has just bestowed herself upon plain Mr. Sadfall, who is not enormously rich either; and glad enough she was to accept him, too—at least, so some people say.

"How proud the fellow seems of his new wife!" Cassilis remarks to his companion.

"He may well be so; she is a beautiful woman; fancy her marrying a man like that!—Lady Vic, too, who used to look so high for a husband, and who is said to have refused a duke!" replies Louisa, as she bows to her.

"Yes, the Duke of Glamour, I believe," answers, Cassilis, maliciously, and looking at her to see what effect his words produce.

Louisa suddenly turns pale, and he feels the hand resting so gracefully on his arm is trembling like the branch of a tree when stricken by the storm.

"Nonsense," she says, trying to appear calm and composed—"nonsense; why, that was the year she came out, and the Duke of Glamour only made his first appearance in London society last season; he must have been a boy at Eton at the time."

"I meant no harm; how seriously you take it! Well, he, too, is safely disposed of at last. Do you know, this Miss de Beverley he is going to marry? No!" Then carelessly, yet still watching her closely, "Well, anyhow, I am sure I have often seen him flirting with Lady Victoria."

"The duke never flirts!"

"No? Only with you, you mean, of course."

"Mr. Cassilis, I wish you would not be personal."

Rupert, though a little disconcerted at the effect which the mention of the duke's name has produced upon his companion, has pity upon her, and looking once more in the direction of the Lady Victoria, who has stopped at a little distance from them, and is conversing with a couple of tall, showy women, wondrously attired, he mutters, half aloud:

"True love—true love! Miss Reymond, do you think that such a thing exists?"

"What a question! How can I tell?"

"Do you know these ladies she is talking to?"

"Yes; Mrs. Harley Topham and her daughter."

"She, too, is a bride. I heard all about her marriage yesterday at Green's. Well, she for one has not thrown herself away, according to worldly ideas. I hear her husband is immensely rich, and a peer; but I wonder which of the two will be the happier?"

"Surely you are not going to philosophize upon marriage?"

Digitized by Google

"And why not? Is it not a subject that interests us all?"

"Lady Pike's dress interests me much more at this moment," Louisa says, trying to hide her confusion. "Let us walk nearer to them; I want to see how it is made."

Cassilis gives her his arm once more, and after walking close by the little group formed by the three fashionable ladies and Mr. Sadfall, who seems consciously out of place amongst them, they leave the racecourse, and are soon wandering arm-in-arm through those beautiful woods which form such a picturesque background to this racecourse.

The trees are thick, the furzes and brushwood that conceal the ground are high, the solitude seems perfect; they might be walking through a primeval forest. The long looked-for opportunity has come at last, and the handsome Cassilis, no longer afraid of being overheard, pours out his heart into hers, and confesses his love. His passionate, soul-stirring words are irresistible—his very looks seem to kindle love in her youthful heart. What can she say? What can she answer? In vain she tries to persuade herself that she does not care for him; she loves him, and she knows but too well that she will have to yield before long; yet she, who has so long imagined that nothing less than a peer would be good enough for her, begins to fear that she would be doing a great wrong to this man if she married him.

"No, no!" she cries, turning away from him; "you must not love me; you do not know who I am."

"As if that mattered, my darling! A name—what is there in a name? A rose——"

"It matters more than you imagine. What will your family say? What will the world think of your marrying a poor girl like me, who does not even possess a name?"

"I will give you a name which no one will be able to take away from you. You need a protector! Let me be that protector; once my wife, who will dare to question your origin?"

"Ah!"

"You consent? You promise to be my wife?"

"I cannot promise yet. Lady Rollingford's great kindness has bound me to her in such a way that I should not feel justified in accepting any one as a husband without her consent."

"I will talk to Lady Rollingford; she loves you: she will give her consent, I feel sure of it."

"Very well. See her, then, and find out from her all about me. If she gives her consent, and if she informs you of my real name and parentage, I will be your wife; but if she refuses to do this, promise me in your turn that you will never speak to me of love again. I should be miserable for life if I thought that in marrying me you brought into your family a nameless girl they would be ashamed to own. If you can discover who I am, then, Mr. Cassilis, I will be your wife, but not till then."

"My love, not a doubt troubles me now; I am so happy. Ah! you cannot imagine how happy you have made me, for your words tell me that you love me."

"Hush! Let us now return to the lawn: the countess must be getting anxious about us. Hush, not another word!"

Offering his arm to her, they quit the solitude of the woods, but as they approach the entrance of the members' enclosure a tall, picturesque-looking gypsy—one of those women who are always to be found at races—approaches them. She is attired in the humble peasant garb generally affected by her race, and a scarlet cloak and hood cover her head and shoulders.

She asks in a shrill voice if they would like to have their fortunes told.

Louisa laughs good-naturedly, she feels so happy at this moment; and taking off her glove she presents to the gitana her tiny little hand, which Rupert, echoing her laughter, crosses with a silver piece.

For a few moments the gypsy remains silent, holding the delicate taper fingers of the young lady in her own brown and weather-beaten hand. Then her face becomes suddenly clouded, as if she were displeased and disconcerted by what she has discovered there.

"You will soon be married, my pretty young lady—you will soon be married—and to a tall, handsome man with blue eyes and fair hair."

"Is that all?" Louisa exclaims, seeing that the gitana is about to release her hand.

"Would you care to hear more?" she says, half sadly.

"Yes, of course! Shall I be happy? Will this handsome husband you promise me, will he love me very much?"

"Shall I speak the truth?" the gypsy says, turning round towards young Cassilis.

"Yes; tell her all she wants to know; here is more money for you," he says, dropping another coin into her hand.

"But you will not be angry with the poor gypsy?"

"Angry! what nonsense! Fire away; but don't be long, for our friends are waiting for us."

The poor woman again takes Louisa's hand in hers, and, after examining the lines upon it for a few seconds in silence, she murmurs in a low, almost unearthly tone, that to the frightened lovers sounds like the voice of some supernatural being.

"You will be married before this year is out; you will be very happy at first—yes, very happy—but afterwards a dreadful doubt will begin to trouble your soul; you will be miserable. Pretty lady, beware of jealousy; it is the poor gypsy who tells you so. Your husband will soon get tired of you; he will seek for other amusements. You will be very unhappy, though, perhaps, not for long, for if you succeed in bringing him back, he will be for ever after faithful to you. Yet if you could see into the future as the poor gypsy can, I do not think you would change your lot."

* * * * *

Miss Oscott is not a girl to be easily discouraged. She had made up her mind to place the Duke of Glamour on her list of friends, and, in spite of all the misadventures with which their acquaintance had commenced, she has at last succeeded in making of the wealthy young peer an intimate friend of her family.

It is at a large dinner-party at her father's house that we again have the honor of meeting her. The cardinal archbishop is dining with them, and to meet him several members of the principal Catholic families in London have been invited, and Glamour, strange as it may seem, is of the party.

The cardinal has acted for some years as a sort of guardian to the young nobleman, and, though they have of late seldom met, their esteem for one another is very great; and Monsignore Berretta has kept his eminence duly informed of the gradual changes that have been taking place lately in his ward's but too impressionable mind.

After dinner he leads Glamour into an inner drawing-room, where no one presumes to follow them, and, seating themselves on a sofa, they are soon engaged in a deep and all-absorbing conversation.

The gentlemen have just entered the drawing-room, and Monsignore Berretta—who, of course, is one of the party—makes his way immediately towards a group of ladies who are sitting in a corner of the room, and are engaged in a most animated conversation, in which he speedily took part.

At last the red robes of the archbishop are seen at the further end of the room. His eminence's face is elated with joy, and his eyes sparkle with unusual brilliancy. Every one in that room feels as if a great object had been attained, and every heart beats faster. Glamour, looking very solemn and thoughtful, walks beside the cardinal, and when Sir Charles Oscott approaches him, bows with that dignified air of graceful simplicity which is so natural to him, yet which on this occasion seems almost forced and constrained.

Conversation now becomes general and animated, and very soon turns on religious topics. It is the eve of a great religious ceremony, and the cardinal is most anxious that every one present should attend it.

"You will be there too, I trust, duke," Miss Oscott says, addressing herself to Glamour.

"All our nobility will be there, all the faithful, and several others too, who sympathize with the unity of the church. The duke is very anxious to show to the world in general that he is ready to unite himself to us for the good of God's cause in this world, and for the advancement of his soul in heaven. You will consent to take part in the ceremony, I trust?"

These words produce a strange effect upon Glamour. His respect and affection for the cardinal force him to give a definite and straightforward answer to this question, and yet he feels that whatever that answer may be it will be as good as a public confession of his actual faith, and become a pledge of his future conduct given before the world to a man above the world, by which he will have to stand in all future time, whether he like it or not; yet at this moment he can no longer resist following the dictates of his heart, and he answers, in a voice trembling with emotion:

"It is the most ardent desire of my heart. I shall certainly attend that service."

And thus it happens, as it has many a time happened before, and to greater men than Glamour, that the necessity to reveal the true feelings of his heart at some critical moment of his life changed and transformed that life for ever after.

Though unspoken in so many words, his desire to become a Catholic has now been publicly expressed; his word has been given, he cannot go back.

Presently a very handsome young lady, who has been sitting in a distant corner of the room, rises, and, encouraged by a smile from the monsignore, approaches Glamour, and, in a voice full of genuine emotion, exclaims, taking the hand which he with undisguised admiration extends toward her:

"Let me be the first to congratulate you."

This young lady is no other than Miss Gwladyth de Beverley, and all present begin to suspect that they will before long have to attend a wedding as well as a baptism.

Alas, no one at that moment seems to think of the mysterious heiress. Yet can Glamour have already forgotten her?

(To be continued.)

Statistics of the Army.

THE Secretary of War has sent to the House Committee on Military Affairs, by request, a statement showing the actual strength of the regular army at a stated period in each year from the beginning of the Government to the present time. It appears that the strength of the army, both officers and men, from 1789 to 1794 was about 3,500. From that time to 1812 it varied from 3,600 to 6,600; but in 1813 it increased to 19,000, in consequence of the war with Great Britain, and in the next year to 38,146. In 1815 it was 33,434. For 1816 it fell to 10,000, and in the three years following to 8,500. From 1820 to 1838 it averaged about 6,500. For 1839 it was increased to nearly 10,000, and in subsequent years to 1846, varied from 8,500 to 11,000. In 1847 it increased to 21,026, falling in the following years, until 1854, to an average of 10,000. For 1855, 15,752, and from that year to 1861 the average was 16,000. From 1862 to 1864 the usual annual returns of the army were suspended. For 1865 the strength of the army was 22,310; in 1866, 56,815; in 1868, 51,000; in 1869, 36,774; in 1870, 37,075; and from this period to 1877 it has varied between 25,000 and 29,000. For 1877 it was 24,000, and in 1878, 25,818.

Long Annuities.

THE year's public accounts show that the following annuities are payable out of Great Britain's public purse: £4,000 a year to the heirs and descendants of William Penn for ever; £1,080 to the heirs of the Duke of Schomberg; £1,200 hereditary pension to the Earl of Bath; £5,000 to the person on whom the title of Earl Nelson shall descend; £4,000 to whom the title of Duke of Marlborough shall descend; £3,000 to the representatives of Jeffery, Earl Amherst; £2,000 to the heirs male on whom the title of Viscount Exmouth shall descend; £2,000 to all and every the heirs male on whom the title of Lord Rodney shall descend; £878 hereditary pension to the Earl of Kinnoul. The following are not among the perpetual pensions, but are payable during the life of the present holder of the title mentioned and his next successor: The Duke of Wellington, £4,000 a year; Viscount Hardinge, £3,000; Viscount Combermere, £2,000; Lord Seaton, £2,000; Lord Keane, £2,000; Lord Gough, £2,000; Lord Raglan, £2,000; Lord Napier of Magdala, £2,000.

SCIENTIFIC INTELLIGENCE.

The Waters in the Straits of Gibraltar at the depth of 670 fathoms is four times as salt as at the surface.

A Prague Chemist has invented a mirror which reveals the contents of wine casks without removing the heads.

We are Glad to Learn that the health of Professor Hofman, the well-known chemist, is now completely restored, and that he is again among his pupils.

The Heretofore Regarded Worthless sage barrens of Nevada are found to be excellent pastures for Cashmere goats. A single herder near Carson has a flock of three thousand.

Thirty Years Ago the profession of mining engineer was almost unknown in the United States; to-day the American Institute of Mining Engineers numbers over seven hundred members.

Dr. Tholozan, physician to the Shah of Persia, is organizing a scientific exploration of the province of Khuzistan, the southern province of Persia. The expedition will start from Bassorah on February 1st next.

Geologists having reported that there is in Japan enough workable coal to produce a yearly yield equal to that in Great Britain for 1,000 years, the Japanese Government have agreed to grant a loan of $1,500,000 for the purpose of working them.

The Question of "reserves" for the aborigines having been recently raised in the Queensland Legislature, it has been recommended that the system of the Darnley reserve should be extended, as there are many other places where it might be advantageously tried.

Action of Chemical Substances on Germination.—M. Heckel has been trying the action of chemical substances on the germination of seeds. Carbolic acid in extremely feeble doses arrests vegetation at once, but if this substance is removed, by evaporation or otherwise, the physiological functions are again revived. On the other hand, salicylic acid and the salicylate of soda kill the grains outright. The author finds that this effect is not attended by any apparent anatomical alteration.

A New Compound of Iron and Steel.—A new composition of iron and steel is described in the *Revue Industrielle*. A cast-iron mold is divided into two sections by means of a transverse plate of thin sheet iron. The two metals are then poured into the respective compartments. The sheet-iron partition prevents the mixing of the metals, and facilitates the welding by itself being brought into a state of fusion. It is said that the product is well adapted for safes, and that it resists drills.

The Ocarina.—This is the name of a musical instrument which can be learned in half an hour—such, at least, is the averment made by its introducer to the English public, Mr. Barr, the music publisher, Queen Victoria Street, London; and the instrument looks so simple and innocent, if somewhat uncouth, that the averment may be true. In appearance it may be classed with the singed cat or ugly duck, but the thing, properly manipulated, discourses most dulcet music of a voice-like (not human) quality. It has a complete chromatic scale from the lower B to the upper E, and can be used, irrespective of key, with any other instrument, notably the piano. Amateurs have taken to the "Ocarina" very kindly, and the only fear is that it may suffer in reputation from its popularity and the facility with which it can be learned.

Increased Manufacture of Soda Ash.—The importation of pyrites into England in 1862 was only 43,917 tons, to which must be added pyrites from Ireland and Cornwall, then extensively used and amounting to 29,783 tons, making the consumption 72,800 tons, whereas in 1877 the importation was 186,757 tons, and, after allowing for the manure trade, etc., it leaves a total consumption of 150,000 tons for alkali works, as against 72,800 tons at the former period named. And again, the consumption of the salt, which in 1862 was 90,000 tons, is now, 92,500 tons, showing in these two articles, which constitute the largest raw materials used, an increase of double the former consumption. The production of alkali in 1862 was 203,000 tons, with an employed capital of £2,000,000, and in 1876 it was 430,000 tons, employing a capital of £7,000,000.

A Mineralogical Phenomenon.—Professor Nordenskiöld, previous to embarking on his voyage of exploration to the Siberian Arctic Ocean, transmitted to Professor Daubree, of Paris, some specimens of a mineral made up of the most astonishing constituents—a sort of "happy family" among stones—to which, in the amazement produced by its discovery, the name *thaumasite* (from the Greek "astonishing") has been given. The mineral in question was found in the mines of Gustav and Carlberg, and has been known for a hundred years, but has always been overlooked. Careful analyses made of specimens selected from different deposits show that the mineral contains at the same time silicic acid, carbonic acid, and sulphuric acid, combined with water and lime. The formula proves it to be a silicate, sulphate, and carbonate of lime, with fourteen per cent. water. The microscope reveals a perfect homogeneity of composition and not a mechanical mixture. The Swedish chemist suggests the probability of its occurrence in other mines, and finds in the mineral the promise of an explanation of the origin of certain rock formations which have hitherto appeared to be inexplicable.

Further Researches on Gallium.—No new sources of this rare metal have been discovered and its occurrence is still confined to the zinc blende of the Pyrenees. The metal has been recently very carefully studied, and its leading properties have been established. In its appearance it manifests a general resemblance to lead, but is not so blue-tinted or quite so soft, though it is readily malleable, flexible, and capable of being cut with a knife. Like lead again, and unlike zinc, gallium is not an easily volatile metal. Unlike lead, however, it acquires only a very slight tarnish on exposure to moist air, and undergoes scarcely any calcination at a red heat. The specific gravity of gallium is a little under 6, that of aluminum being 2.6, that of zinc 7.1, and that of lead 11.4. A most remarkable property of gallium is its low melting point. It liquifies completely at 86° Fahrenheit, or below the heat of the hand; and, still more curiously, when once melted at this temperature, it may be cooled down even to the freezing point of water without solidifying, and may be kept unchanged in the liquid state for months. Indeed, in the original communication of its discovery to the French Academy, it was described as a new liquid metal similar to mercury; but on touching with a fragment of solid gallium a portion of the liquid metal it at once solidifies. Unlike lead, again, gallium is a highly crystalline metal, its form being that of a square octahedron. In its chemical habitudes the rare element gallium shows the greatest analogy to the abundant element aluminum. In particular, it forms a sort of alum, not to be distinguished in its appearance from ordinary alum, but containing oxide of gallium instead of oxide of aluminum or alumina. This would seem to indicate that gallium yielded a sesqui-oxide, the same as aluminum. The therapeutic properties of this alum have not been studied, nor does it appear whether the oxide of the new metal could be used as a mordant or could replace alumina in other chemical compounds. The extreme scarcity of material stands in the way of a full knowledge of the element, and as long as this scarcity continues its possible applications in the arts can have very little interest. Should it be found somewhere in large quantities we may then expect to hear of its application to some useful purpose.

PERSONAL GOSSIP.

THE fashion in England, set by Lord Harrington, is for afternoon marriages.

SENATOR BURNSIDE is said to give more entertainments than any other Senator in Washington.

THUS far $3,186.58 has been contributed for the benefit of the family of the late John Wilson Barron, the murdered cashier. It is a small amount for such heroism.

THE two oldest Unitarian clergymen in the country are the Rev. Calvin Lincoln, of Bingham, Mass., and the Rev. Increase Sumner Lincoln, of Wilton, N. H., who were ordained in 1824.

THE venerable Albert Pike is now engaged in organizing the "Knights of the Cactus," to be composed of the veterans of the Mexican War, and the Order to descend to their male children.

THE Empress Eugenie is described as leading the quietest and most monotonous of lives at Chiselhurst. She is still handsome, her beautiful golden hair shining royally above her plain black dress.

IT is said that on January 28th last Prince Joachim Murat and M. Rouher went to the Palais de l'Industrie, where Prince Murat drew the number 207 in the name of the Prince Imperial, who is therefore liable to be called upon to serve in the army.

PRINCE DONDUKOFF-KORSAKOFF is carefully selecting a number of youths belonging to the best families in Eastern Roumelia to be sent to the New Military College he has recently opened at Sophia. As many as two hundred will undergo military training at the Bulgarian capital.

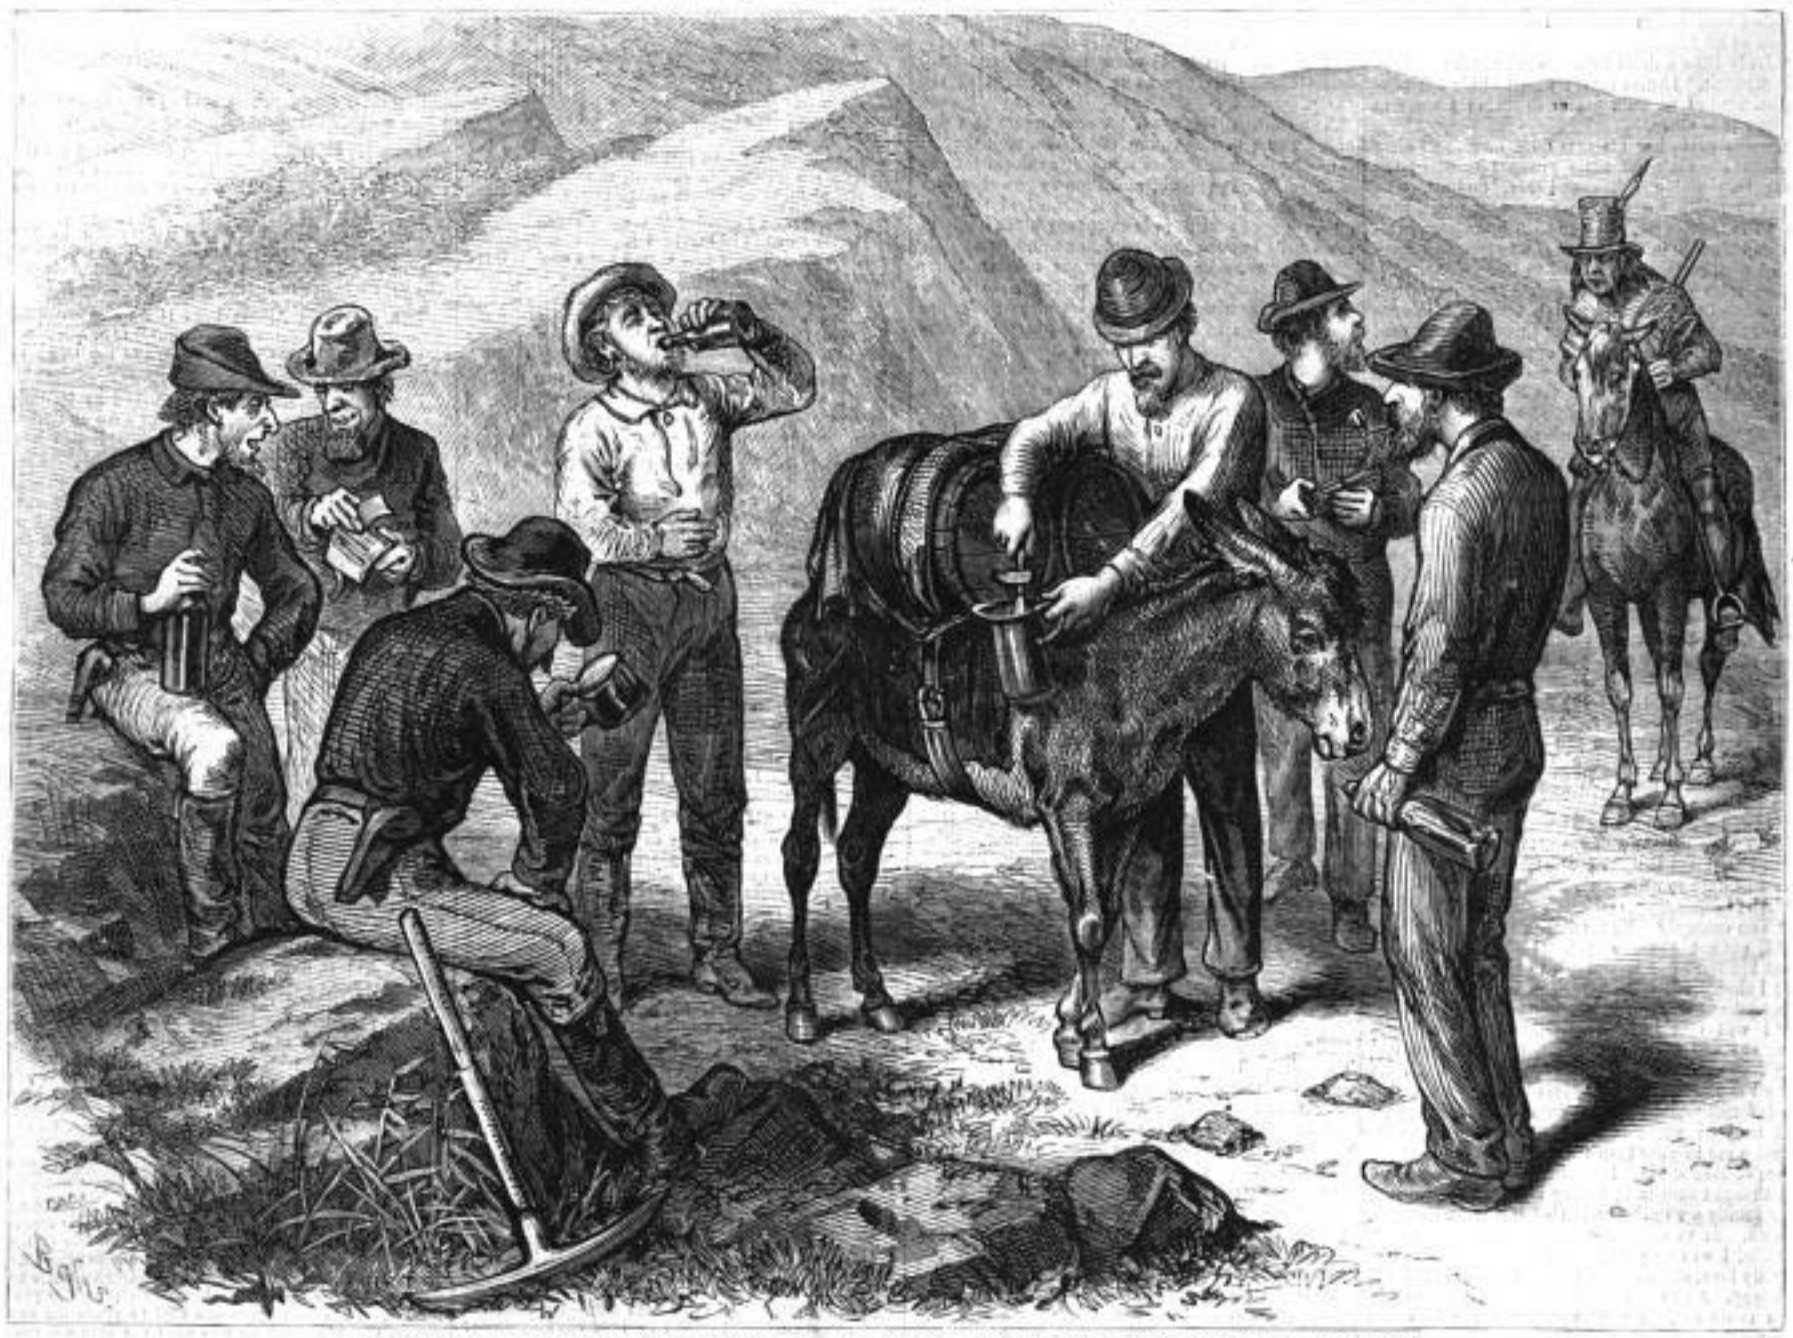
MR. CASSIUS M. CLAY has just given the Kentucky Historical Society the oil portraits of Alexander II. of Russia and his wife, painted by Winterhalter. He has also presented to the society more than three hundred rare and valuable objects, including many desirable autograph letters.

THE Marquis of Lorne shakes hands heartily and makes himself extremely agreeable to his visitors. The Princess goes about doing her own shopping, and it is said dresses so plainly that she has met with some impertinence from the tradespeople who did not recognize royalty in that simple guise.

TWO ENGLISH ladies have received the Cross of St. Elizabeth at Bucharest, for their aid and services during the late war. One is Mrs. Mansfield, wife of the (late) Consul-General, the other, Mrs. Mawer, wife of the English physician, the latter lady, aided by subscriptions, having started and maintained a small hospital.

MISS MORGAN, of this city; Miss Burlingame, daughter of the former Minister to China; and Miss Neal, daughter of the artist, are said to be the possessors of three of the charming faces to be seen in Mr. Rosenthal's picture of the "Seminary Alarmed"—a picture which is becoming familiar through photographs and engravings.

JUDGE HENRY G. SMITH, of Memphis, Tenn., who died a few days ago, is described as a man of singular bravery, as is illustrated by the story of one of his cases tried years ago in Tennessee. He was to prosecute a man for murder. Friends of the murderer let it be known that they would kill whosoever appeared as prosecutor. Mr. Smith began the trial by producing two pistols, which he kept by him until the man was convicted. He was a stanch Union man during the war.



THERE are some lively old colts in the Virginia Legislature. Mr. Reuben N. Harrison, delegate from Rockingham, a few days since was playing with some children in the dining-room of the Valentine House, when he jumped up to crack his heels together. He was standing under the gas burner, and, as he shot upward, his head went against the burner, the sharp point of which entered the top of his head, making a very painful wound. Mr Harrison is about seventy years of age.

WILKINSON CALL, Democrat, the new United States Senator from Florida, was born in Virginia, but came to Florida in early life. His mother was a pronounced Unionist, and was opposed to taking the State out of the Union, though her son served in the Confederate service in this State. He was one of the early and steadfast Whigs who supported the Bell and Everett electoral ticket in 1856, as against the Breckenridge ticket. He was elected United States Senator under the reconstruction policy of President Johnson, but was not admitted to a seat. Returning to the State, he resumed the practice of his profession, that of law, which he has followed since.

GEORGE G. VEST, who has been elected United States Senator from Missouri for the term ending in 1885, is a native of Kentucky, and is about forty-five years old. He is a lawyer of some note, having been solicitor of the Missouri Pacific Railroad for several years. He first became prominent in Missouri as a leader of the Secessionists in 1861. His active exertions and speeches did much to stimulate the movement which sent many thousand Missourians into the Confederate army. As a speaker he is ornate, and is brilliant rather than solid. The charm of his speeches is lost when the echo of his words has died away. In 1861 he was elected to the Confederate House, but in 1864 he was transferred to the Senate. He was conspicuous in both Houses, and since the war has been the acknowledged leader of what is still known in Missouri as the Confederate element. Mr. Vest advocates the issue of $1,000,000,000 in greenbacks and the abolition of the national banks.

GENERAL JAMES SHIELDS, who has been elected by the Missouri Legislature to the United States Senate for the term ending next March, was born in County Tyrone, Ireland, in 1810, and came to this country when about sixteen years of age. After receiving a good education he settled at Kaskaskia, Ill., where he opened a law office. Since then he has been a member of the Illinois Legislature (1836), Auditor of the State (1839), a Judge of the State Supreme Court (1843), Commissioner of the General Land Office (1845–'47), a United States Senator from Illinois (1849 to 1855), and from Minnesota (1858 to 1859), and Adjutant-General of Missouri (1877). In 1846 General Shields was appointed by President Polk as a brigadier-general of volunteers, and served with distinction throughout the Mexican War, receiving severe wounds at Cerro Gordo and Chapultepec. He received the rank of brevet major-general in 1848, when he was mustered out of service. He removed to Minnesota after his term as Senator from Illinois, and after serving Minnesota in the Senate he went to California. He entered the Union Army in 1861 as a brigadier-general, and commanded a division in Banks' army in the Shenandoah Valley, where he gained the battle of Winchester, March 23d, 1862. On the previous day he received a severe wound in a skirmish. During the past few years General Shields has been a resident of Missouri. Efforts to elect him as Doorkeeper of the House, in Washington, in 1878, and to have him placed on the retired list of the army, failed, but his pension was increased to $100 a month. The vacancy to which he has been elected was caused by the death of Lewis V. Bogy (Democrat), in 1877, and has been filled since then by David H. Armstrong (Democrat), who was appointed by the Governor. General Shields has always been a Democrat.

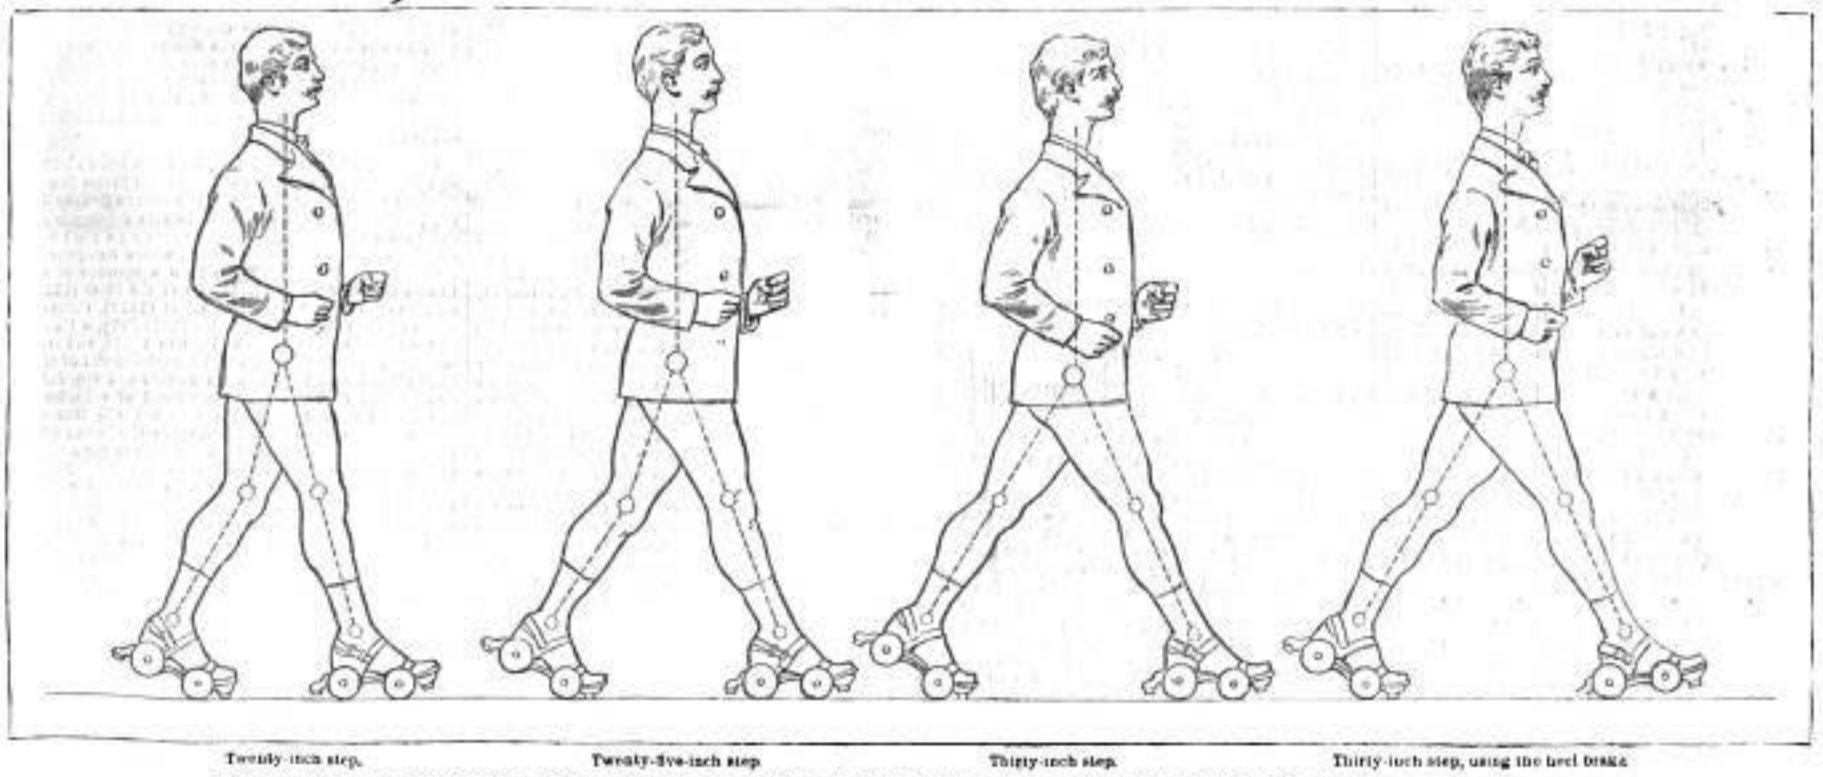
THE PEDOMOTOR.

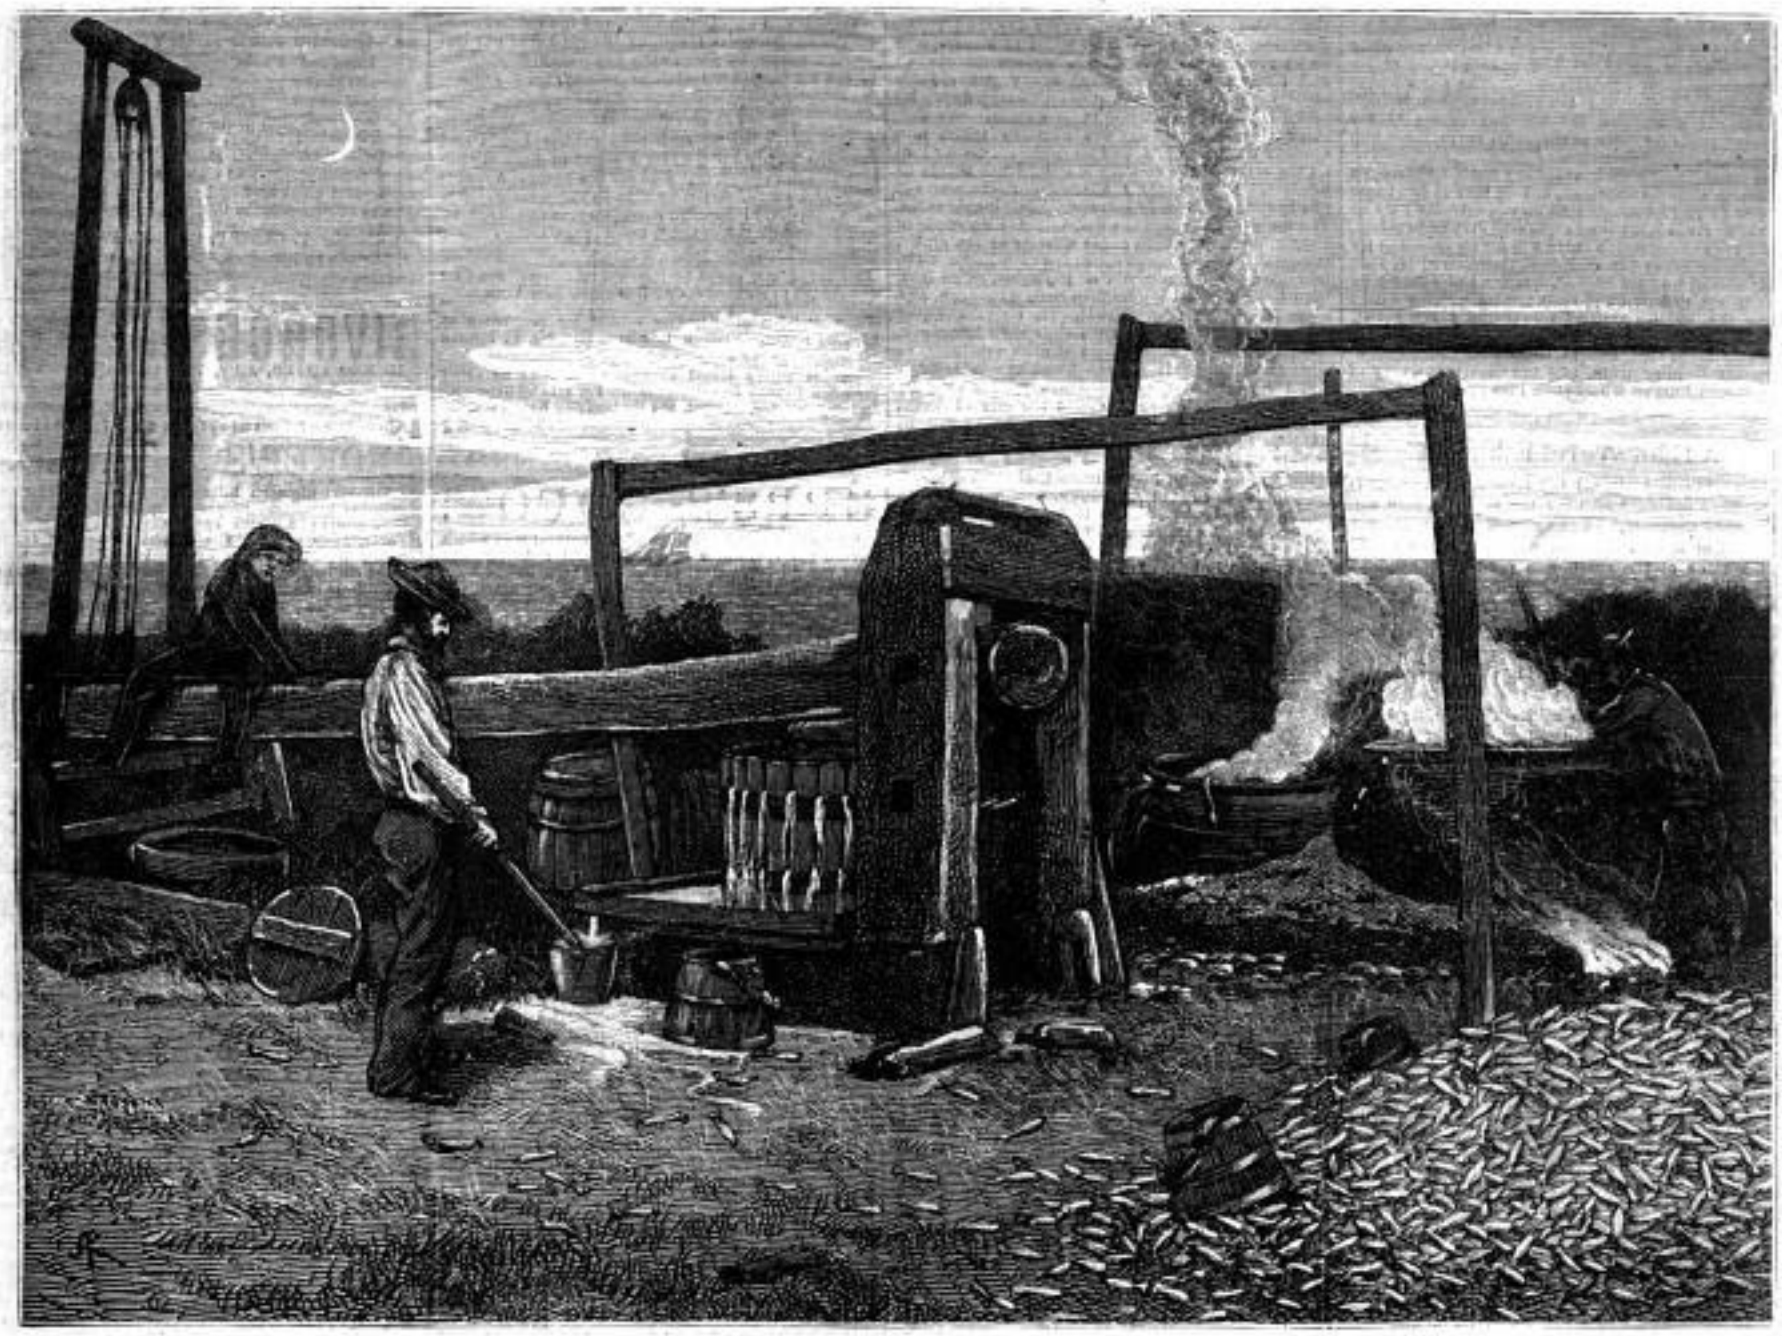
THE LATEST INVENTION IN PEDESTRIANISM.



AN invention which promises to be of great practical utility is just now attracting attention in Philadelphia, where the inventor, Mr. J. H. Hobbs, a well-known architect, resides. It is known as the pedomotor, and is designed for the use of pedestrians, who can attain by it a speed of ten or twelve miles an hour with entire ease. The pedomotor consists of four tough, light wooden wheels, supplied with an outer rim of tough india-rubber. These wheels are secured to a frame the shape of the foot, which is strapped to the pedal extremities in the usual manner. Unlike roller-skates, the wheels of these little vehicles are not under, but are placed on each side of, the foot, thus giving the wearer a good standing as well as a solid footing. The rear wheels are three inches in diameter, while those in front are but two and half inches. This gives the foot a slight incline, and when in motion has much to do in impelling the pedestrian forward. Extending from the toe, with a slight curl towards the ground, is a piece of casting termed the pusher, which is simply used in mounting the elevation or steep incline. From the centre of the heel a small brass wheel extends backward, serving as a guide as well as a brake. The whole scarcely turns the scale at a pound weight. In using them no more effort is required than in ordinary walking. The wearer steps with his regular stride, and is amazed to find himself skimming over the ground so rapidly with so little muscular effort.

THE PEDOMOTOR ADJUSTED FOR USE.

In the diagrams four forms are shown in the act of taking a step. In Fig. 1 the action is for a 20-inch step, or a slow pacing motion. Fig. 2 is a slow, ordinary walk with a stride of twenty-five inches. Fig. 3 is a rapid 30-inch step. Fig. 4 is a 30-inch step, taking the heel, which prevents the movement forward upon the wheels and retards the motion to an ordinary walk. It will be readily observed that a figure taking the weight upon the wheels in the position of Fig. 1, the centre of gravity being behind the wheels, the latter will run forward and distribute weight in a forward motion with equal distance to the velocity of the motion minus the friction upon the journals—the hind foot acting as a propeller to keep the body in equal forward motion. Any push beyond this immediately causes an increased forward movement. In Figs. 2 and 3 the precise principle is carried out with greater and more rapid motion. Fig. 4 represents the figure in checking the rolling motion, which admits of the immediate halt as in walking. By raising upon the front wheels the body can be turned around with the most rapid motion. Any change of direction can be made gracefully and safely. Less side room is required than in ordinary walking; six inches is sufficient width of pave; one can also walk in much straighter lines. The pedomotors can be made use of upon clay roads, grass, brick or stone pavements; they can be used safely going up or down stairs, crossing streets, etc.; taking each flag as a step, the wearer can ascend and descend the curb without checking his motion.



A pedestrian, using the same exertion as a pro-

Twenty-inch step. Twenty-five-inch step. Thirty-inch step. Thirty-inch step, using the heel brake.

THE PEDOMOTOR.—DIAGRAM ILLUSTRATING THE MOTION IN WALKING BY FOUR DIFFERENT STEPS, BY WHICH A SPEED OF TWELVE MILES AN HOUR CAN BE ATTAINED

LONG ISLAND.—THE MENHADEN FISHERIES—BOILING AND PRESSING THE FISH FOR OIL AND GUANO, AT ORIENT.—SEE PAGE 418.

fessional walker, would travel over twelve miles an hour. The lightness obtained by the weight being distributed on the forward motion is very sensible to the walker, when we consider the fact that a man taking a three-feet step, walking four miles per hour, must necessarily travel a fraction less than six feet each second, and, should he double that motion to twelve feet per second, the rapidity of the forward motion would very materially change the downward weight. Experiments in this may be understood by the ricochet stone skipping over the water, or a heavy ball rolled rapidly over the ice, or the same principle may be discovered in the motion of the gyroscope. The motion differs entirely from the skate. It is simply a forward motion; its effect is to relieve the tiresome jar of the foot on the ground, so that the same amount of walking may be done with the pedomotor with a minimum amount of fatigue. The newspaper carrier who serves papers to the attendants in the Permanent Exhibition Building in Philadelphia goes his rounds at the rate of twelve miles an hour by the use of one of these vehicles.

"OTTO," SON OF THE NEZ PERCES INDIAN CHIEF.

AT a recent meeting of the Board of Indian Commissioners at the Palace Hotel, San Francisco, and in the presence of a large company of ladies and gentlemen, Colonel C. E. S. MacDonald, the well-known Indian military instructor, introduced Otto, son of Chief Joseph of the Nez Percés tribe. The young Indian was attired in grand costume, and, when stripped for action, was conceded to be by the whole assemblage the finest specimen of Indian beauty that they had ever seen, although representatives from every part of the country had been before them. The boy is built like a gladiator, and, although but twelve years of age, seemed a man in proportion.

In going through his military exercises, the physical endurance displayed was marvelous. The applause was constant, and the party seemed deeply moved. This episode was followed by a reiteration of Colonel MacDonald's project for the employment of the Indians which he has been urging upon the Government for many years. It may be remembered that some time ago an official circular was sent to several of the most experienced army officers acquainted with Indian life asking their opinion on the possibility of organizing and drilling the Indians up to the standard of the regular army. The replies indicated that the project was not feasible. Hearing of this decision, Colonel MacDonald determined to try the experiment at his own expense. He proceeded immediately to collect a body of Indians, representing the principal tribes both of British and American Indians, and began drilling them, to prove, as he said, that when properly organized and trained the Indians would prove better material for warlike purposes for the United States than the Algerians did for France or the Sepoys for England. The first public performance of this singular regiment confirmed his impressions. The Indians moved with almost lightning rapidity, their natural indolence was overcome, and had they been otherwise attired they would have been considered representatives of some first-class National Guard organization. Colonel MacDonald, in his instructions, followed in the main the course he laid out when preparing the San Francisco Cadets for their wonderfully successful tour of the United States, and soon had the Indians under such discipline that they would execute the most intricate evolutions either when blindfolded or

Digitized by Google

in utter darkness. The press liberally applauded his efforts; but the authorities, many of whom privately acknowledged the worth and practicability of his scheme, took no official action. The detachment of his first regiment that the colonel took to Europe absolutely astonished the military critics of the leading cities for their prodciency, correctness and discipline.

Colonel MacDonald has recently published an open letter to General Sherman, asking him in the name of justice and humanity that an opportunity may be afforded for solving the perplexing Indian problem, by a plan under which there will be no occasion for extermination or the continual violation of treaties that should be held sacred. Instead of employing our troops to guard and fight the Indians, he would have the Indians trained into regular army life. Their nomadic habits would be checked, they would become more independent, there would be no occasion for frontier wars, and the vast machinery of the Indian Bureau would soon become useless.

A PERIPATETIC BARROOM.

NOTWITHSTANDING the multitude of temperance societies all over the country, men will do almost anything, and run almost any risk, to get a drink of liquor. Miners, whose labor is under the surface of the earth, can readily be excused if the craving for a stimulating drink is often so strong as to compel them to violate rules made for their guidance, and to part with a good portion of the money which they earn so hardly. The scene depicted in our illustration is one which occurred at Leadville, Colorado, but it is doubtless familiar enough at other mines as well. The donkey bearing the two kegs of whisky forms a sort of peripatetic barroom, and the proprietor of the establishment is the barkeeper. The miners, who have been duly informed of the arrival of the liquor-merchant, eagerly gather around, anxious to part with their money and receive in exchange the fiery liquid dispensed by the donkey-owner. At the rate at which he seems to be serving it out, it is probable that his two kegs will soon be exhausted, and that he will have to depart for a fresh supply.

The solitary Indian on horseback looks longingly at the group of miners imbibing their favorite drink, but it would probably be dangerous for him to attempt to put his wishes into deed, for the revolvers of these rough and ready toilers are always at hand, and it does not take much to provoke their use. It is certain that that Indian will not get any of that whisky.

THE MENHADEN FISHERIES ON LONG ISLAND.

THE Menhaden, or mossbunker, fisheries form a very important industry along the shore from Maine to New Jersey, and particularly on the coast of Long Island, where the peculiar American fish is caught and treated for the purpose of securing the oil from the body, and the rich guano from the pressed remains. The fish frequent salt-water only, swimming in vast numbers near the surface, and are representatives of the herring family. They are caught both near the shore and at points thirty miles seaward. The process of treatment is very simple, such as the people who live along the shores can readily devise, the apparatus consisting of kettles for boiling the fish, and a press for squeezing out the oil. After the extraction of the oil, which is used largely in dressing leather, the refuse is easily converted into a fertilizing agent. As a single fish is considered equal in richness to a shovelful of barnyard manure, an idea may be formed of the value of this enterprise, especially when it is known that in a single year 36,299 tons of guano have been secured, besides 2,214,800 gallons of oil. On the coast of New York and New England there were sixty-two factories in operation in 1873, employing 2,206 men on shore and at sea, and representing a capital of over $1,000,000. In addition to this organized handling of the fish, there are countless points along the coast like the one shown in our engraving, where settlers carry on the business "on their own account."

GOVERNOR H. M. HOYT.

COLONEL HENRY MARTYN HOYT, inaugurated Governor of Pennsylvania on January 21st, was born in Luzerne County, Pennsylvania, in 1830. He studied law at Wilkesbarre under Chief Justice George W. Woodward, and obtained a large legal practice in the western part of the State. In 1861 he was active in raising the Fifty-second Regiment Pennsylvania Volunteers, and was commissioned as lieutenant-colonel by Governor Curtin. He was in General Naglee's brigade during the Peninsular campaign of 1862. He participated, under General Gilmore, in the siege operations conducted on Morris Island against Fort Wagner and Fort Sumter. In the Summer of 1864 a night attack was organized by General Foster against Fort Johnston, in Charlestown Harbor, where he was taken prisoner. After being confined at Macon, Colonel Hoyt was brought back with six hundred other officers to Charleston jail. While on the way from Macon to Charleston he escaped from the cars with four other Union officers. After several days and nights of fruitless efforts for liberty, they were recaptured by the enemy, with the aid of bloodhounds, and placed in the Charleston jail. Upon being exchanged, Colonel Hoyt rejoined his regiment and remained with it until near the close of the war. He was promoted to colonel on January 9th, 1864, and was mustered out of the service on November 5th, 1864. On March 13th, 1865, he was brevetted brigadier-general. During the year 1867, under an appointment from the late Governor Geary, he discharged the duties of additional law judge of the Eleventh District. In 1875 and 1876 Colonel Hoyt was Chairman of the Republican State Committee, displaying in the successful campaigns of that year marked ability as a political leader. He was also one of the delegates at large from Pennsylvania to the Republican National Convention of 1876 at Cincinnati.

Some London Facts.

LONDON (with all its suburbs) covers within the fifteen miles radius of Charing Cross nearly 700 square miles. It numbers within these boundaries over 4,000,000 inhabitants. It contains more country-born inhabitants than the counties of Devon and Gloucester combined, or thirty-seven per cent. of its entire population. Every four minutes a birth takes place in the metropolis, and every six minutes a death. Within the circle named there are added to the population 205 persons every day, and 75,000 annually. London has 7,000 miles of streets, and on an average 28 miles of new streets are opened and 9,000 new houses built every year; 1,000 vessels and 9,000 sailors are in port every day. Its crime is also in proportion to its extent. Seventy-three thousand persons are annually taken into custody by the police, and more than one-third of all the crime in the country is committed within its borders. Thirty-eight thousand persons are annually committed for drunkenness by its magistrates. The metropolis comprises considerably upwards of 100,000 foreigners from every quarter of the globe. It contains more Roman Catholics than Rome itself, more Jews than the whole of Palestine, more Irish than Belfast, more Scotchmen than Aberdeen, and more Welshmen than Cardiff. Its beershops and gin-palaces are so numerous that their frontages, if placed side by side, would stretch a distance of sixty-two miles. If all the dwellings in London could thus have their frontages placed side by side they would extend beyond the city of York, a distance of 172 miles. London has sufficient paupers to occupy every house in Brighton. The society which advocates the cessation of Sunday labor will be astonished to learn that sixty miles of shops are open every Sunday. With regard to churches and chapels, the Bishop of London, examined before a committee of the House of Lords in the year 1840, said: "If you proceed a mile or two eastward of St. Paul's, you will find yourself in the midst of a population the most wretched and destitute of mankind, consisting of artificers, laborers, beggars and thieves, to the amount of 300,000 or 400,000 souls. Throughout this entire quarter there is not more than one church for every 10,000 inhabitants, and in two districts there is but one church for 45,000 souls."

FUN.

A LONE association—An old maids' club.

GOOD centre-piece for the dinner-table—A bowl of flowers.

WHICH is the best of the four seasons for arithmetic?—The Summer.

PEOPLE that are invariably known by the company they keep—Theatrical managers.

I WAS an amused witness of a little scene in one of the law courts the other day which illustrates the reverence of the junior branch of the profession for the senior. Enter two attorney's clerks, decidedly seedy in appearance. *First Clerk* (to companion): "Confound it! Where's my man? Can't see 'im anywheres." *Second Clerk:* "Do's your man?" *First Clerk:* "The Attorney-General, confound 'im!"

JOHN DOLLAR, of Birmingham, showed his lack of cents by getting drunk and falling into the hands of the police.—*Sanitary News.* When taken to the police-station the magistrate addressed him, "Dollar, this is ten times you've been before me, and I'm now obliged to provide you with new quarters, or impose a fine of ten of your last name." Dollar, not being worth ninety-two cents, went up for ten days.—*Norristown Herald.*

THE following examination of a candidate for admission to the bar is taken from the *Western Law Journal:* The examination commenced with, "Do you smoke, sir?" "I do, sir." "Have you a spare cigar?" "Yes." "Now, sir, what is the first duty of a lawyer?" "To collect fees." "Right. What is the second?" "To increase the number of his clients." "When does your position towards your client change?" "When making a bill of costs." "Explain." "We are then antagonistic. I assume the character of plaintiff, and he becomes the defendant." "A suit decided, how do you stand with the lawyer conducting the other side?" "Cheek by jowl." "Enough, sir; you promise to become an ornament to your profession, and I wish you success. Now are you aware of the duty you owe to me?" "Perfectly." "Describe it." "It is to invite you to drink." "But suppose I decline?" Candidate scratches his head. "There is no instance of the kind on record in the books. I can't answer the question." "You are right; and the confidence with which you make the assertion shows you have read the law attentively. Let's take the drink, and I will sign your certificate."

A SICK SENATOR.

THE excessive corpulency of a certain United States Senator has long been the butt of editorial wit and spicy bon mots from the pens of Washington correspondents. Few persons have suspected that his obesity was a disease, and liable to prove fatal. Yet this is the sad fact. Excessive fatness is not only a disease in itself, but one liable to generate other and more serious ones. Chemistry has at last revealed a safe, sure, and reliable remedy for this abnormal condition of the system in Allan's Anti-Fat. Distinguished chemists have pronounced it not only harmless but very beneficial to the system, while remedying the diseased condition. Sold by druggists.

THE PENN MUTUAL LIFE.

TOO MANY of the great life insurance companies blind the eyes of insurers with their enormous assets until they forget that the true test of the solvency of a company is its ratio of assets to liabilities. A company with a hundred millions of assets and ninety millions of liabilities has a surplus of ten millions, but it is no safer than a company with a surplus of only one million, provided that company has only nine millions of liabilities. The Penn Mutual, whose statement appears in another column, has $125 for every $100 of liabilities—a ratio that is reached by only one other company in the country. Add to this the fact that these assets are invested in United States bonds and local securities on which the company could realize their full value at the shortest notice, and it will be seen that the company has every reason to command the fullest confidence of the community. It is ably and economically managed, as the steady increase of its assets shows. The total is now $6,632,504, the increase during the year being $320,000.

A WONDERFUL MUSICAL NOVELTY.

THE Phonographic Cornet; any tune played without any knowledge of music; took the prize at the Paris Exposition.

LOW-PRICED WATCHES in many cases are found to be very useful; for instance, a lady or gentleman who contemplate traveling will find it safer to leave their fine watches at home and invest a *few dollars* in a cheap but good timekeeper. There is no place in the city where you can procure one of these watches or any piece of jewelry that will give you better satisfaction than at the Collins Gold Metal Watch Factory, 335 Broadway (up-stairs), corner of Worth Street. Every watch is fully guaranteed or time for one year.

LADIES can obtain the engraved fan cards issued by the St. Nicholas Hotel, as alluded to in our last week's paper, by addressing Mr. Welch, proprietor of the St. Nicholas Hotel, Broadway, New York.

ARTIFICIAL limbs with india-rubber hands and feet are highly popular on account of their simplicity and durability, and also for the natural appearance and movement they give to the wearer. Mr. A. A. Marks, of No. 575 Broadway, is the inventor and manufacturer of these useful substitutes.

Stuttering cured by BATES' APPLIANCES. Send for description to SIMPSON & Co., Box 2,250, New York.

Easy Shoes.—Superior quality for gentlemen at reduced prices. EUGENE FERRIS & SON, No. 81 Nassau Street, West Side.

Keep your Bird in health and song by using SINGER'S PATENT GRAVEL PAPER. For sale by druggists and cage-dealers. Depot, 582 Hudson St., New York.

GRATEFUL—COMFORTING.

EPPS'S COCOA.

"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of well-selected cocoa, Mr. Epps has provided our breakfast-tables with a delicately flavored beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—See article in the *Civil Service Gazette.*

BOKER'S BITTERS.

The best Stomach Bitters known, containing most valuable medicinal properties in all cases of Bowel Complaints; a sure specific against Dyspepsia, Fever, Ague, etc. A fine cordial in itself, if taken pure; it is also most excellent for mixing with other cordials, wines, etc. Comparatively the cheapest Bitters in existence.

L. FUNKE, Jr., Sole Agent, No. 78 John Street, New York, P. O. Box, 1029.

THE ADVANTAGE

OF HAVING A

Maine Non-Forfeiture Law Policy

IN THE

UNION MUTUAL LIFE INS. CO.

In 1864 and 1865, Capt. Charles L. Gardiner, of Chelsea, Mass., insured in the Union Mutual Life Insurance Company, of Maine, for $5,000, on two ordinary Life policies, payable at death provided the premiums were paid annually, *according to the terms of the contract.*

On the 2d day of July, 1877, Capt. Gardiner had his policies changed to the form now used by the Company, which gives the benefit of the Maine Non-forfeiture Law.

On the 11th day of September, 1877, he sailed from Boston as master of the good ship "Iceland," on a voyage to Calcutta. The ship and all on board were lost at sea. The premiums due July 27th, 1867, and August 3d, 1877, were not paid, and by the terms of the original policies this would have worked a *forfeiture of the entire insurance;* but under the new policies which had been gratuitously offered by the Company, the insurance would have been continued in force more than three years, or until November, 1880, notwithstanding the non-payment of the premiums due in 1877; and the fact of the death being established to the satisfaction of the Company, the full amount of the policies was paid on the 29th day of October, 1878.

Results of Three Annual Premiums Paid on a Thousand-Dollar Policy Issued at Age of 30.

$68.15 on the ordinary Life Plan secures	5 years' and 212 days' insurance.
91.08 on 20-Payment Life Plan secures	7 years' and 220 days' insurance.

FROM THE PARIS EXPOSITION.

PHONOGRAPHIC CORNET.

The Latest and Greatest Musical Wonder.

The Phonographic Cornet is the latest invention in the musical line. It attracted unbounded attention at Paris, and thousands were sold during the Exposition. We are the SOLE AGENTS in the United States. The action of this instrument is almost marvellous. The picture represents the manner of playing: simply turning the little crank on the side produces most exquisite music. The music-producers are genuine first-class Organ Reeds, and the music itself is like that of a first-class organ played on the high notes. Any tune that ever was written can be instantly played on the *Phonographic Cornet*, **without any instruction or knowledge of music whatever** by the operator. A little strip of paper in which the tune has been stamped is placed in the instrument, and then simply turning the little handle brings out the tune in a clear and extremely melodious manner. There is no break in the music after one piece is played through it instantly begins to repeat automatically, or it can be instantly removed and a new tune inserted. Selections of choice music accompany each Cornet, and Directions can be furnished by which any new tune can be instantly adapted to it. Any child can do this and make its own tunes, **no knowledge of music being required,** staff being done by rule measure and a chart. Any child can play this instrument, the music is very pleasing, all the new tunes can be easily obtained, and as musical instrument in the world at these times the price will provide as much genuine entertainment, at home or in company, as the Phonographic Cornet. **Any one** can play it, and produce the latest music in a manner that will surprise themselves. The instruments are all strongly and elegantly made of fancy woods, standard trimmings, and silvered bells. They are packed in a neat case, with extra tunes, directions, &c., &c., and sent by express to any address for **$3.50**; by registered mail, prepaid, **$3.75.** No one will regret the purchase. Our price is LESS than the retail price in Paris.

Frank Leslie's
SUNDAY MAGAZINE
(REV. CHARLES F. DEEMS, D.D., LL.D., EDITOR.)

THE CHEAPEST SUNDAY MAGAZINE IN THE WORLD!

THE FEBRUARY NUMBER NOW READY.

OPINIONS OF THE PRESS.

"The cheapest and best magazine of the kind ever published, giving for three dollars more than fifteen hundred large, double-columned pages and over seven hundred woodcuts, not all of the highest art, but all interesting, and many of them instructive in foreign manners and scenery."—*Christian Register*, Boston.

"This magazine, published in New York, has attained a proud position among the religious monthlies."—*Christian Statesman*, Philadelphia.

"Dr. Charles Force Deems conducts the magazine with excellent taste and judgment. The articles treat a great variety of subjects, and are all good of their kind. The illustrations are profuse, and in many cases convey information as well as give simple pleasure."—*Grange* (N. J.) *Journal*.

"For real worth, in its profuse illustrations and entertaining and profitable reading matter, it is, in our opinion, far ahead of all competition. Considering the tendencies of the age, and the overflowing abundance of the light, vain and politicly hurtful in magazine and newspaper literature, the SUNDAY MAGAZINE rises in importance as an agent of good in all the families of the land."—*Central Protestant*, Greensboro, N. C.

"It is ably conducted, always being filled with choice selections and original articles from the ablest magazine writers. If parents desire a thoroughly orthodox magazine, they need go no further than Frank Leslie's, New York, and get this one."—*Assembly Herald*, Fairport, N. Y.

"It is emphatically a family magazine, and ought to be in every household where intelligence and virtue obtain. It offers a table of contents at once varied, appetizing and instructive. Its illustrations are very numerous, and the publication is of unrivaled cheapness."—*Wilmington* (N. C.) *Morning Star*.

"It is only two years old, and yet it is one of the most extensively circulated magazines in the United States. . . . All ages and classes can find something suited to interest and please. Dr. Deems, the editor, is making his mark upon the age."—*St. Louis Observer*.

CONTENTS:

Prominent among the DESCRIPTIVE ARTICLES are: "A Day with the Lebanon Shakers," by Annette S. Bassett, graphically describing a visit to this singular Community, and summarizing the leading points of their system of religious faith. The article is profusely illustrated. "The Pagoda of Subramanyon at Tanjore"; "Jaffa" (the Ancient Joppa) in Palestine, etc. In the DEPARTMENT OF FICTION is the continuation of the admirable serial, "David Fleming's Forgiveness," and the conclusion of "In Mischief Again." Among the shorter stories are "One Life," by Ella T. Dunoway; "The Story of Miles Phillips," by A. H. Guernsey; "A Well-spent Day," by Mary E. Porter; etc., etc. ESSAYS by Augusta Browne Garrett; "Hints for a Sunday-school," by F. W. Upham, LL.D.; "Anticipations of Scientific Truth in Scripture"; "Take God at His Word"; "The Rock of Ages and its Author," by Rev. William Aikman; "The Altar in the House," etc., etc. Among other very interesting SKETCHES are "Jappo's Picture," "The Light of His Eyes," "The Sergeant and the Pastor," "Loving One's Neighbor," "The Grey Mare is the Better Horse," "A Sunday with the Mississippi Negroes," by Alexander Clark, D.D., etc., etc. POEMS by Charles D. Warner, Elizabeth Cummings, Rev. A. A. Lipscomb, Byron A. Brooks, etc., etc. The Rev. Dr. John E. Edwards contributes a number of characteristic anecdotes of the late Bishop Early of Virginia. The topic of the sermon by the editor is "The Kingdom of God." He also gives his Popular Exegesis. The miscellaneous departments contain even more than the usual variety of subjects, and abound with entertainment and valuable information.

128 Quarto Pages. Nearly 100 Engravings.

Annual Subscription Price, $3; Single Copies, 25 Cents, Postpaid.

SEND 25 CENTS FOR A SPECIMEN COPY.

Opening with so many threads of mystery, the reader's interest is excited to follow a story which, in the hands of such an able novelist, must be throughout intensely dramatic.

The contrast of the two girls, three families, each with its grief, and a fugitive who can never appear but as another, fix the attention and awaken sympathy.

To interest the public in this story, exaggeration is not required, for every reader of this remarkable production cannot fail to be completely engrossed by its perusal.

In the same number of FRANK LESLIE'S CHIMNEY CORNER was also begun:

FLORILINE!

"FLORILINE"—FOR THE TEETH AND BREATH,

Is the best liquid dentifrice in the world. It thoroughly cleanses partially decayed teeth from all parasites or living "animalcule," leaving them pearly white, and imparting a delightful fragrance to the breath.

THE FRAGRANT "FLORILINE"

removes instantly all odors arising from a foul stomach or tobacco smoke. Being partly composed of honey, soda, and extracts of sweet herbs and plants, it is perfectly harmless and delicious as sherry.

Prepared by **HENRY C. GALLUP, No. 493 Oxford Street, London, England,** and retailed everywhere.

HERRING'S SAFES
IN THE GREAT FIRES

AT BROADWAY AND GRAND STREET, AND IN WORTH AND THOMAS STREETS.

HOWARD, SANGER & CO.

"The two Safes purchased of you were subjected to the heat for many hours, but their valuable contents are preserved. We recommend your Safes to our friends and the public. HOWARD, SANGER & CO."

EDWIN BATES & CO.

"Our office was on the third floor, and the Herring's Safe used by us fell into the sub-cellar. After some days' labor it was finally reached, and opened this afternoon. (21st.) We are rejoiced to find the contents saved in perfect condition. EDWIN BATES & CO."

NAUMBURG, KRAUS, LAUER & CO.

"On being opened, we find the contents, consisting of all our valuable books and papers, in perfect order.

"Considering the extent and fury of the fire to which the Safe was subjected, we deem it due to you to make this acknowledgment of our implicit confidence in your Safes. NAUMBURG, KRAUS, LAUER & CO."

VAN VOLKENBURGH & LEAVITT.

"Our stock was consumed, but our books and papers are preserved, and we are now using them, enabling us to resume business without delay or embarrassment. For this we are indebted to one of your Safes. It contained all our books and papers.

"VAN VOLKENBURGH & LEAVITT."

FORSTMAN & CO.

"The contents of both are in excellent condition, thus confirming our confidence in your Champion Safes.

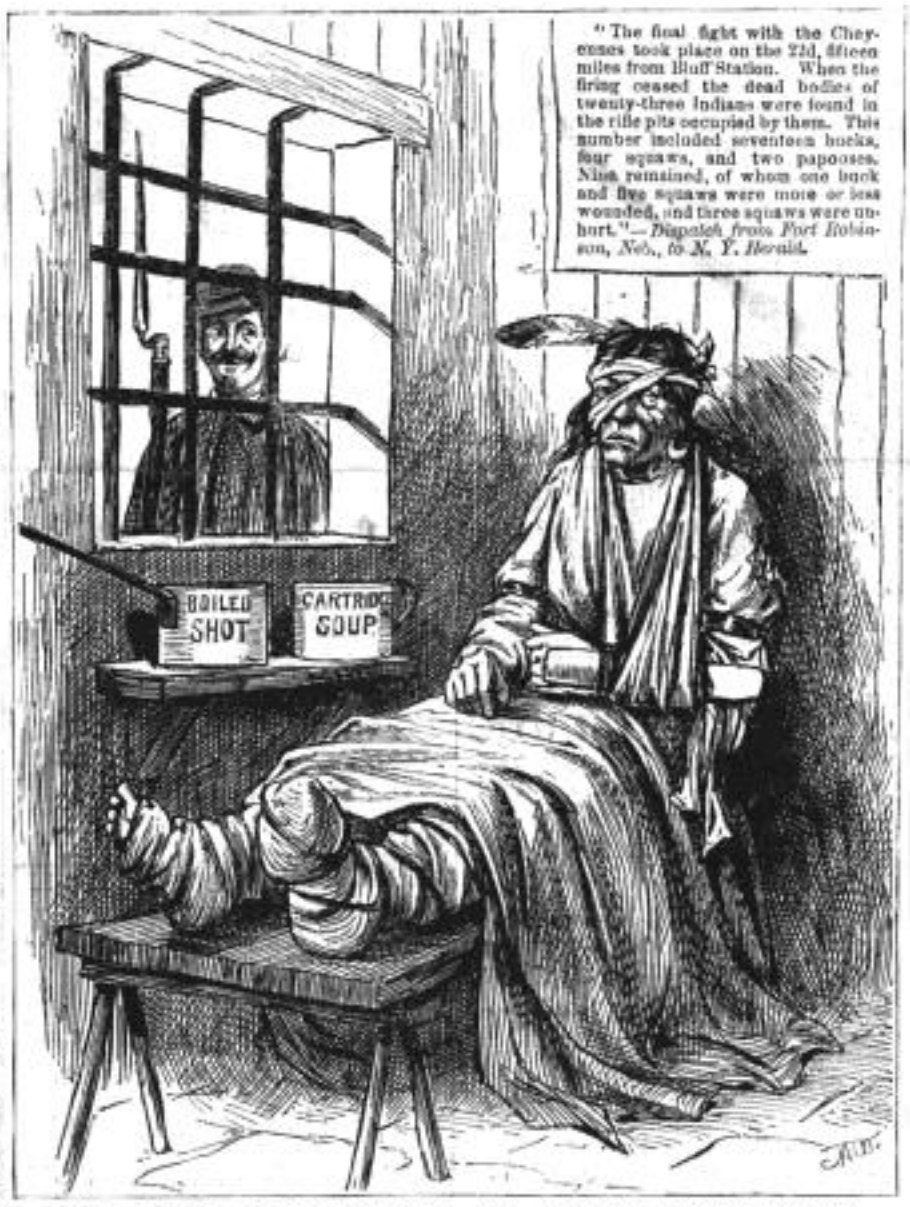
"FORSTMAN & CO."

JOHN SLADE & CO.

"We were much pleased, on opening our Herring's Safe, to find all our books, etc., in good order—not the slightest trace of fire or smoke. JOHN SLADE & CO."

HERRING & CO.,

NOS. 251 AND 252 BROADWAY, NEW YORK.



COMFORT FOR THE FEET.

All who would have feet free from corns, dress the feet with a view to health, good taste and comfort. Shoes made on our lasts, modeled from nature—an essentially different style—and latest improvements. They press the foot evenly, giving elasticity in walking, and by the ingenuity of their construction, they appear smaller than they really are, giving an elegant appearance even to the largest and clumsiest feet.

EUGENE FERRIS & SON,

81 Nassau Street, West Side, New York.

"The final fight with the Cheyennes took place on the 22d, fifteen miles from Bluff Station. When the firing ceased the dead bodies of twenty-three Indians were found in the rifle pits occupied by them. This number included seventeen bucks, four squaws, and two papooses. Nine remained, of whom one buck and five squaws were more or less wounded, and three squaws were unhurt."—*Dispatch from Fort Robinson, Neb., to N. Y. Herald.*

THE LATEST ILLUSTRATION OF OUR HUMANE INDIAN POLICY.

THE ESTEY ORGAN
THE WORLD OVER IS THE BEST.

MANUFACTORY, BRATTLEBORO, VT.

SOCIAL AND MORAL TESTS.

THE intensity of moral and social forces may be accurately gauged by their power to assimilate the alien elements and counteracting influences with which they come into contact. Nothing more clearly reveals the leavening power of Christianity than the fact, that in a little more than three centuries, it transformed the Roman world, conquered the Roman polity and relegated the institutes of heathenism to the border lands of barbarism. In like manner the civilizing forces of modern times may be measured by their capacity to propagate themselves within the bosom of the society in which they are planted.

Tried by this criterion, the political principles embodied and enforced in the organism of American society must be admitted to possess a transforming potency which is without example in the history of nations. There was a period in the annals of civilization when the city of Alexandria, in Egypt, seemed to be "the mixing-pot" in which the Jewish, Greek and Roman philosophies were brought into combination, but their cohesion was rather mechanical than chemical — the result of forces from without rather than of forces from within. And these forces, moreover, found room for play and development in the schools of philosophy rather than in the figure of society at large.

On the contrary, the forces which give shape and direction to our peculiar polity are inherent in the very organization of our civil society, and spread with an energy which pervades every branch of the body politic. Our naturalization laws, and the history of naturalization in the United States, are but the expressions and exponents of the faith cherished by the American people in their capacity to absorb and transmute the alien nationalities, which, during the last hundred years, have been incorporated not only into our economical, but also into our political system. It was no idle boast of General Grant when, on the occasion of his recent visit to Ireland, he dropped the remark at one stage of his travels, that while President of the United States he had the honor of ruling over more persons of Irish descent than even Her Majesty the Queen of England, Ireland and Scotland. And it would, we suppose, be no idle boast of our Irish fellow-citizens in this city if they should say that during the last twenty years they have furnished a majority of the office-holders who had swayed the destinies of the great commercial metropolis which, in all business relations, holds the place and performs the function of the heart in the human frame.

The introduction of the freedmen into our political contests was another gigantic step in the same direction, and a step which put a fresh strain upon the powers of our political life to absorb and assimilate the foreign matter injected in our social system. Never before was such an experiment tried on a scale so broad and under circumstances so critical. Even that good friend of our institutions in England, honest John Bright, looked with undissembled misgivings upon the bold venture of the statesmen who risked the advocacy of colored suffrage as the best possible choice between the alternative policies then presented to the American people at the close of a civil war which had subverted the old social system of the slave-holding States.

That the experiment has been attended with many incidental evils and embarrassments it would be idle to deny, in the presence of the investigations and prosecutions now going on at the South, as also in memory of the misrule to which certain of the Southern States were subjected under the sway of the "carpet-bag domination." But it is well to remember that the experiment of negro suffrage has not yet produced any wide-spread reactionary feeling like that which has more than once found expression in our country where the alleged intrusion of the European foreigner was concerned. Attempts have more than once been made to exclude the naturalized European from any participation in the distribution of political favors, but all such attempts have reacted to the confusion of their authors and promoters, insomuch that it is to-day a badge of political discredit to have been a member of the Native American party. And yet the prejudice which exists to-day against the negro voter in South Carolina and Louisiana may be said to have found its analogue in the violence and antipathies which once ran riot in the streets of Philadelphia and Baltimore against the white naturalized European who assumed to exercise political rights under the Constitution and laws of the United States.

In order to promote and hasten the process of political transfusion which was inaugurated by colored suffrage, Senator Wisdom has proposed that an appropriation of money should be made by Congress for the purpose of facilitating the emigration of colored people from the South to the Northern and Western States or Territories. The expediency of such an appropriation may be questioned on grounds of public economy, but the mere suggestion of such a measure ought to be a pregnant hint to such of the Southern politicians as would keep alive the hatreds of race engendered by the emancipation and enfranchisement of the negro. The negro will not continue to be an economical factor in any community where his presence as a political factor is resented with outrage and violence. The voluntary emigration to Liberia, which received such a sudden impulse in South Carolina less than a year ago, was an impulse which took its initiative from the social unrest of the colored race in that State, consequent on a feeling of political disability and personal wrong. That movement in favor of migration to Africa was checked by the disasters which attended the first expedition of the bark *Azor*, but at the late annual meeting of the American Colonization Society it was announced that as many as half a million of colored people are now turning their eyes in quest of an exodus to the home of their fathers. If the Irish exodus to the United States is a standing commentary on the poverty and misrule of Ireland, it behooves the people of the South to take heed lest an exodus of the colored race to Africa should come to point a better moral against the equity and wisdom of the "white man's government" in that part of the country which, by its climate, is best suited to the occupation and industrial activity of the colored man.

WHAT ARE WE WORTH?

IT is just as possible to invent perpetual motion as to arrive at definite results concerning national wealth. Sixty years, according to Mr. J. R. McCulloch, is the very shortest time in which the capital of an old and densely peopled country can be expected to double. On the other hand, it is assumed by Joseph Lowe that the wealth of Great Britain actually doubled in eighteen years, the period being from 1823 to 1841. Levi, a publicist of much reputation, and others, calculated the private wealth of Great Britain in 1858 at $29,178,000,000. Mr. Giffen, an English statistician of merit, has reached the conclusion that the present private wealth of that kingdom amounts to $39,200,000,000, of which $15,700,000,000 is represented by real estate, and $23,500,000,000 by personal property. If Levi and Giffen are to be accepted as competent authority, the actual gain has only amounted to $10,022,000,000 in twenty years. M. Vacher, Vice-President of the Paris Statistical Society, emulous of the reputation of his own country, now startles the world by showing that, in point of private wealth, France stands in the foremost rank of nations. According to his recently published work on the wealth of France, the modern Gauls own real property to the extent of $21,000,000,000, and personal property to the amount of $18,700,000,000. The total, as represented in money, reaches the enormous sum of $40,300,000,000. Thus, on paper, France leads England to the extent of eleven hundred millions of dollars. That both countries are enormously wealthy cannot be questioned, but who will vouch for the correctness of the figures put forth by the publicists?

The statements of Giffen and Vacher have naturally started the question in every direction, What are *we* worth? This is a question more easily asked than answered. We have no data on which to found an opinion save that furnished by the Government, and that, as will appear, is too faulty to help to correct conclusions.

Every ten years the Government assumes to collect information from all sections of the country relative to production, trade, and progress in material wealth. The census for 1850 stated the real and personal estate of the country at $7,135,780,228. Ten years later the real and personal property of our people was said to be worth $16,159,616,068, while in 1870 the aggregate wealth of the nation was represented to amount to $30,068,518,507. Thus in a period of twenty years the people of the United States, according to official representation, more than quadrupled their personal wealth. Accepting these statements as unquestionable truths, and evidently believing that the same ratio of increase will be continued *ad infinitum*, an enthusiastic American writer says that "our individual wealth will be sixty billions of dollars in 1880; one hundred and twenty billions in 1890, and two hundred and forty billions in 1900." Thus, when the next national census shall have been taken, we shall lead France to the extent of $19,700,000,000, and beat Great Britain to the tune of $20,800,000,000. If this is not statistical nonsense, what is it?

The census reports authorized by Congress carry with them their own condemnation. A very few illustrations will make this apparent. Going back to the census of 1860, we find that 3,953,587 slaves tended to swell the sum of personal property owned by the country. These human chattels, if valued at $500 each, including young and old, large and small, made up a sum of $1,796,793,500, or, in round numbers, the former slave property of the South may be set down at $2,000,000,000 in 1860. The whole of this personal property was swept away during the opening years of the succeeding decade. The assessed value of personal property in the States which composed the Southern Confederacy was $2,478,844,459 in 1860. In 1870 the assessed value was $611,777,308, showing a decrease of $1,867,067,151. During the same period the assessed value of real estate fell off to the extent of $302,640,972.

The Census Bureau professes to give the "assessed" and "true" value of the real and personal property of the country by States, counties, etc. The following table will show the "true valuation" (?) of real and personal property in the Confederate States for the years 1860 and 1870, the same being aggregated:

States.	1860.	1870.
Alabama	$426,237,078	$201,565,841
Arkansas	219,256,473	156,184,691
Florida	73,101,500	44,163,655
Georgia	645,895,237	268,169,207
Louisiana	692,118,568	321,125,696
Mississippi	697,324,911	249,197,345
North Carolina	358,739,399	260,757,484
South Carolina	548,128,754	208,146,989
Tennessee	463,903,892	498,237,724
Texas	265,100,614	319,052,542
Virginia	793,249,681	*660,239,624
Total	$5,202,166,107	$2,929,340,528

This statistics, compiled from the data of the Census Bureau, show the loss of the Confederate States in real and personal property to have been $2,272,825,579 during the decade terminating in 1870. Hon. David A. Wells, when Commissioner of the Revenue, furnished estimates which went to prove that the aggregate destruction of wealth, or diversion of industry which would have produced wealth, in the United States from 1861, and on during the years of the war, approximated nine thousand millions of dollars—a sum nominally in excess of the entire increase of wealth, as returned by the census for the whole country from 1850 to 1860. And yet, in the face of just such facts as these, the Government set forth the wealth of the country for 1870 at $30,068,518,507—a gain in ten years of $13,908,902,439. Who can believe the story when, as we have seen, it required twenty years for England, with all her superior advantages and accumulations of centuries, to increase her private wealth to the extent of $10,022,000,000.

At the close of 1868, Mr. George Walker, of Massachusetts, in an important paper on finance, ably argued that the wealth of this country did not exceed twenty thousand millions of dollars. And who will undertake to disprove the correctness of Mr. Walker's opinion? The people of the United States are virtually the Government. If, therefore, we take into consideration the national, State, county, township and municipal indebtedness of the nation, the loss to the Southern States of slave and other property, the loss to the remainder of the Union of its merchant marine and carrying trade, as well as the diversion and suspension of industry for more than four years, and the difference between a currency and gold valuation of property, not to enumerate other matters having a direct bearing upon the subject, we have the following result for the decade ending in 1870:

National Debt, June 30th, 1870	$2,480,672,427
State Indebtedness	352,868,998
County Indebtedness	187,593,549
Township and Municipal Debts	328,244,920
Southern Loss in slaves and other Property	2,272,825,579
Northern Loss to Commerce and Industry	1,200,000,000
Difference between Currency and Gold Value of Property	3,297,548,038
Total	$10,119,722,502

If the foregoing sum, as it stood June 30th, 1870, be deducted from the value of national wealth, as represented at the same date, the balance is $20,948,795,705. This latter amount, may then be set down as the extent of our national wealth when the last census was taken.

There is no disguising the fact that hitherto census-taking has been a botch. It has been undertaken without order or system, and represents nothing at last. In 1860 the census-marshals added about 33.67 per cent. to the assessed value of real and personal property, and assumed that as the true value. In 1870, to determine the true value, they added 114.45 per cent.. That was the average addition, but upon what principle the addition to assessed value was raised from 33.67 per cent. in 1860 to 114.45 in 1870 no living man can tell. But when we look more closely at the matter the inequality and rank injustice of the official system becomes indisputable. For instance, in determining the true value in 1870 the average addition to assessed value of the recent Confederate States was only 35.41 per cent., while the average addition for the balance of the country was 116.35 per cent. Looking at individual States, we find that the addition to assessed value in New York amounted to 288.11 per cent., while in Georgia, the so-called Empire State of the South, the addition was but 18.16 per cent. The same gross disparity exists between other Northern and Southern States.

Again, the real and personal property of the Confederate States — West Virginia added — was returned at $2,929,340,528, and the population at 9,929,000. The per capita of property, therefore, amounted to $295.01. Comparison with other States plainly indicates that the material wealth of the South was greatly underrated by the Federal census taken in 1870, or else that the financial condition of the Northern States was largely overrated. Compare the figures given for the Confederate States with the following, and the most skeptical must stand convinced. The figures of the table are taken from the census report of 1870:

States.	*Population.*	*Value of Real and Personal Property.*	*Per Capita.*
Illinois	2,539,891	$2,121,688,529	$ 835.34
Ohio	2,665,260	2,225,430,260	828.72
Pennsylvania	3,521,791	3,908,340,112	1,061.36
Massachusetts	1,457,351	2,132,148,741	1,463.03
New York	4,382,759	6,300,841,264	1,453.29

Many additional facts might be adduced to show the untrustworthiness of past census reports in so far as they relate to national wealth. Congress is now engaged in framing a Bill for the taking of a census in 1880. The project had better be abandoned and the money it will cost saved to the Government, unless the country can be furnished more correct information than it has yet received relative to its growth in material wealth.

* West Virginia included.

THE NEW FRENCH PRESIDENT.

THE confidence we have expressed in the stability of the French Republic is amply testified by the events of the past week. Not only was the change in the Presidency accomplished without commotion or disturbance, but the change itself, and the choice made by the Chamber of Deputies, amount to a positive triumph of the moderate and rational republican element of the country. The new President, M. Jules Grévy, is not a new character in French politics. For forty odd years he has been among the leaders of radical republican thought, and for thirty years has been conspicuous in every crisis of the national history as the resolute opponent of monarchical tendencies and schemes. He was the originator of the proposition in the Assembly to amend the Constitution so that the chief executive power should reside not in a President chosen directly from the people, nor in a President of a Council consisting of members named by the Assembly, but in "a President of the Council of Ministers," a body which could at any time be removed by the Assembly. Had that proposition carried, the terrors which afterwards came upon France would probably have been averted; but it was lost, Louis Napoleon became Emperor, and for a time liberty and progress were held at the mercy of Imperial bayonets. Since the establishment of the Republic, M. Grévy has been universally regarded as the natural head of the conservative republicanism of France, and as President of the Assembly, during the reconstruction period after the German war, exercised a controlling influence upon public affairs. He is about sixty-six years old, vigorous in health, phlegmatic in temper, distinguished for executive ability, legal acumen, and a knowledge of parliamentary law; brave, industrious, serious and successful; and we may be sure that in his hands the liberties and the interests of France will be jealously and faithfully guarded.

THE CIPHER DISPATCHES.

THE inquiry into the matter of the cipher dispatches has already unraveled the mystery of their publication. A great batch of dispatches, some thirty thousand in number, were delivered by the Western Union Company to the Senate Committee on Privileges and Elections. Some one in the confidence of this committee abstracted

Digitized by Google

a large number of the telegrams so delivered, and they were then, after being copied and given to a city journal for publication, placed secretly on General Butler's table. A few of the dispatches were carried off by certain Republican officials who feared they would be criminated by them, and have never since been seen. There seems to be no doubt that the whole body of dispatches surrendered by the telegraph company lay in the committee-room for several weeks, accessible to any one who was on friendly terms with the clerk of the committee, Senator Morton's brother-in-law, and with the messenger, a man named Bullock; and it is equally clear that, in the whole business, the Republicans had an advantage to which they were not entitled. They could at will pick out and make away with the evidence, if such existed in the telegrams, of an intrigue for stealing the Presidency, while they could manipulate all telegrams from Democratic sources in any way whatever likely to advance their partisan interests. It will be difficult, if not impossible, for the committee or its subordinates to explain away the disgraceful features of this utterly indefensible affair.

But it will be even more difficult, we imagine, for the Administration to justify its action in appointing to an important consulate the person who is shown to have abstracted the dispatches. This man, Bullock, was a mere messenger to the committee, of ordinary attainments and without social standing, and yet he was made consul at Cologne, over the heads of applicants infinitely his superiors in every particular. Why? No possible reason for so extraordinary an appointment can be imagined than that "he passed the damaging cipher dispatches from the committee-room into the hands of persons able when they got them to make public use of them, but who could not afford to be charged with taking them themselves." And this is a "reform" Administration, which pretends to make capacity and integrity the standard of all appointments in the consular and diplomatic service.

CHINESE IMMIGRATION.

THE House of Representatives has passed the Bill to restrict the immigration of Chinese to the United States, the Democratic members having made it a subject of caucus action, and refused to permit discussion of its extraordinary features. The Bill makes it unlawful for the master of any vessel to bring to this country more than fifteen Chinese passengers, and imposes a penalty of $100 fine and six months' imprisonment for each passenger in excess of that number brought to any American port. Under the terms of the Bill, as thus stated, an Embassy from China, like that recently arrived, which consists of forty persons, would be excluded, and a vessel manned by a Chinese crew would also be prevented from entering one of our ports. So, if an American or other vessel bound to the United States were to rescue shipwrecked Chinese mariners they could not be landed on our shores. This Bill is in flat contravention of our treaty with China, which explicitly declares that "Chinese subjects visiting or residing in the United States shall enjoy the same privileges, indemnities, and exemptions, in respect to travel or residence, as may there be enjoyed by the citizens or subjects of the most favored nation." This treaty was of American origin and the result of American pertinacity; and it is simply astounding that any body of men outside of a lunatic asylum should propose now to nullify its provisions and antagonize the spirit of the age in the interest of a mere local political prejudice.

EVENTS ABROAD.

THE principal events of the past week have been the MacMahon resignation of the Presidency of the French Republic, and the election of Jules Grévy as his successor for seven years. Of the French ex-President it may be said, in Shakespearean phrase, that in his official life "nothing became him like the leaving it." His own formal announcement of his decision to step down and out is creditable to his heart if not to his head. The fact is that this illustrious soldier is as incapable of comprehending modern republican and democratic ideas as he is of sympathizing with them. As narrow-minded as he is brave and honest, he sincerely believes that the general measures which the ministry and the majority of the Senate and the Chamber of Deputies, and, it may be added, the majority of the French people, wished him to decree in regard to high military commands, are contrary to the interest of the army, and consequently to those of the country. "I cannot subscribe to them," he frankly declares. "Any other ministry taken from the majority would impose upon me the same conditions. I consider myself, therefore, bound to shorten the duration of the mandate which the National Assembly confided to me, and I, therefore, tender my resignation. In quitting power I have the consolation of thinking that during the fifty-three years I devoted to the service of my country, I have never been guided by sentiments other than honor and duty and absolute devotion to my country." These are manly words, and they are unquestionably true. But how far they fall short of the ringing words in which Washington's farewell address warned the American Republic against the perilous subordination of the civil to the military power! Here was the very point at issue between MacMahon and the Republican representatives of the French people. Moreover, in addition to the conscientious scruples of the marshal-duke, the strongest pressure was brought to bear upon him in this emergency, as in that of the memorable 16th of May, by reactionists of all shades, including members of his own family. The late "Accidental" President of the French Republic was, indeed, in some respect free from the fetters of party. Even Jules Simon, in his recently published history, remarks of MacMahon that "it might be said that he had enlisted in no party. By his family traditions he should have been a Legitimist. He had begun his career under the monarchy of July and completed it under the Emperor, who had lavishly rewarded him. One occasion was recalled when he had right nobly proved that he was not a courtier, but could speak and vote with independence." If he had any scruples on the 16th of May, Madame la Maréchale, a strong-willed, ambitious woman, earnestly devoted to the Catholic cause, although her mother, the Countess de Castries, is a Protestant, did not find it difficult to remove them. He afterwards corrected the mistake by which he was then led to dismiss the Simon Ministry, and accepted the situation which irresistible public opinion forced upon him. But now he has yielded to the same influences which then made him commit a blunder almost equal to a crime. His present action, however, has affected his own fortunes and fame much more than the destiny of the Republic.

Of the life and career of M. Jules Grévy, the new President, we have spoken elsewhere. To what is said in that connection, it may be added that ex-President MacMahon promptly called to congratulate his successor—a fact which may be regarded as not merely a formal act of politeness, but as a token of the esteem with which the conservative but decided republicanism of President Grévy has inspired even his political opponents, and as a favorable sign that the French crisis will be followed by an era of tranquillity. France is anchored, at last, to a strong promise of peace and prosperity for seven years to come.

This absorbing French crisis leaves but little space to allude to the resignation of M. Halanzier as manager of the Grand Opera at Paris, an event in the artistic world that, at any other time, would have made a great sensation; to those events in the literary world, the publication of a new poem, "La Pitié Suprême," by Victor Hugo, and, at Berlin, under the auspices of the Academy of Sciences, "The Correspondence of Frederick the Great"; to the revelation that a woman, and an American lady at this, Mrs. Ronalds, *née* Carter (who is well remembered at Boston, New York and in the American colony at Paris), was at the bottom of the recent difficulty, and almost war, between France and Tunis; to the release of the United States frigate *Constitution* from the threatened lawsuit that might have possibly involved a war between Great Britain and our Western Republic; to the wedding at St. Petersburg between a son of the Grand Duke of Mecklenburg and the Grand Duchess Anastasia Michaelovna, eldest daughter of the Grand Duke Michael; and to the extraordinary precautions which European Governments have been compelled to take for the purpose of resisting the spread of the Asiatic plague. Well, indeed, would it be if the plague of war, which was its proximate cause, could be quarantined.

THE House of Representatives last week rejected, by the decisive vote of 212 to 22, the Bill proposing to lend $500 from the public Treasury to every settler on the public lands. Such a proof of sound common sense, and indifference to the appeals of demagogues, will occasion no less surprise than gatification. Few would have supposed that the House which passed the Pension Arrearage Bill, or that for the exclusion of the Chinese, could be capable of resisting any appeal made, nominally, in the interest of "the dear people."

THE Brazilian Government proposes, among other reforms, to suppress all the religious orders in the country, to pension the existing monks and nuns, and to apply the property to the reduction of the national debt. This property is estimated at from $2,500,000 to $3,000,000. The number of pensioners would be less than one hundred, most of them advanced in years—the admission of novitiates having been for some time past rigidly prohibited. Such a step will, no doubt, provoke opposition, but its success would be a great stride forward in the promotion of Brazilian prosperity and tolerance.

DURING the past month the United States Treasury paid over $25,000,000 of coin obligations, including $1,400,000 of United States notes presented for redemption, and yet the stock of coin has steadily increased. Hereafter the interest on Government bonds will be paid in gold, if demanded, as was the case prior to January 1st. The payments of the January interest were in legal-tenders or coin checks on the Sub-Treasury in this city whenever the latter were preferred. The February interest will be the first considerable sum that will be paid out in gold (if demanded) for interest. It will amount to about $6,000,000. But the Department does not anticipate any great demand for gold.

THERE is nothing like consistency, and no Administration has ever furnished more striking illustrations of this quality than that which now directs the affairs of the country. What, for instance, could be more effective, in a spectacular way, than the President and Cabinet deciding that the Arrears of Pension Bill ought never to become a law, and then determining, in the next breath, that the President must sign it? It is as if, finding a burglar with his hands full of plunder upon premises left in your charge, you should call the policeman, and then help the thief escape out of the back window before the "minion of the law" could respond to your call. This last illustration of the Administration idea of consistency will cost the country unknown millions of money; but then, in this perverse world, virtue always costs.

AN interesting statement in reference to the wages and general working classes in Great Britain is just published by Professor Leon Levi. According to the professor's calculations, wages have increased considerably of late years, averaging about £94 for each family among the laboring classes, or £88 after allowing for depression of trade. "Within the last twelve years," he goes on to say, "our laboring classes have had opportunities of setting aside a considerable amount, and there ought to be no reason for the excessive distress complained of at this moment." The consumption of imported articles of food has risen—for ham and bacon three hundred per cent., for wheat nearly a hundred, for sugar sixty, for tea thirty, for spirits twenty, and though these figures are in some sort susceptible of other explanations, they certainly betray an increase in spending on creature comforts.

SENATOR HILL of Georgia made a telling speech the other day in opposition to the payment of Southern war claims. He said, among other things, that "the sooner the people of the South were taught to repair their losses by work, by frugality and industry, the better it would be for them and the country. Let the losses of the war go, and if the people desire to avoid such losses in future they must avoid war." Senator Hill, in concluding his remarks, said "there were four things which the Democratic Party ought to proclaim; first, not to pay war losses, loyal or disloyal, except in exceptional cases, as in the cases of religious and educational houses; second, not to vote any more public money to build up mammoth monopolies; third, to pay the public debt in good faith; and, fourth, to restore Constitutional rights to the people of the country and to practice economy in the public expenditures." The party that shall take its stand, honestly and in good faith, on this platform, will be the party to which the people will in future commit the control of their affairs.

A NOTABLE feature of our growing trade with Europe is the great increase in the exportation of agricultural implements. During the first ten months of 1878, our exports of mowers and reapers, and other agricultural machinery, as compared with the same period in 1877, increased nearly fifty per cent. Our exports of live stock, during this period, show an increase of nearly $5,000,000. Indeed, there is scarcely an article of merchandise the amount of which exported has not largely increased during the past year, and in some of the great articles of export the increase is enormous. The shipments of wheat have more than doubled, which is also the case with rye, and the prepared breadstuffs (which include farina and other articles of food manufactured) have increased more than three times; the exportation of oats has increased nearly five times, while other breadstuffs show large gains. The exports of unmanufactured cotton increased thirty per cent., while the exports of manufactured cotton were more than equal to the previous year. The shipments of leather increased about twenty-five per cent., and those of oils show a similar increase.

NEWS OF THE WEEK.

Domestic.

SENATOR J. P. CHRISTIANCY of Michigan was nominated for United States Minister to Peru on January 29th, and promptly confirmed.

A. LOUDEN SNOWDEN, Postmaster of Philadelphia, has been tendered and accepted the position of Director of the Mint, in place of the late Dr. Linderman.

THE subscriptions to the four per cent. loan during the month of January, 1879, amounted to $158,851,250, and the calls during the same period to $130,000,000.

THE Potter Committee began the investigation of the cipher telegrams at Washington, January 27th, and decided to send a sub-committee to New York to take testimony.

ON January 29th, the Legislature passed the bill repealing the charter of Memphis, and remanding it to the territory of Tennessee, and providing for its local government as a taxing district.

THE Louisville (Ky.) alms-house was burned January 31st; four of the inmates were killed and two seriously injured, while all others, 334 in number, fortunately escaped. Loss, $175,000.

THE United States District Court at Alexandria, Va., in the Arlington ejectment suit, has decided in favor of General G. W. C. Lee, and it is believed the Supreme Court, to which the Government has appealed the case, will sustain the decision.

A NUMBER of prisoners were arraigned in the United States District Court, New Orleans, on January 31st, on charges of violating election laws and interfering with United States Supervisors in the discharge of their duties. Thirty other persons are yet to be arraigned.

R. F. JONAS has been elected United States Senator in Louisiana, J. D. Walker in Arkansas, John J. Ingalls in Kansas, and R. L. T. Beale, a Member of Congress in Virginia. In Florida the Supreme Court has declared Mr. Bisbee (Rep.) elected to Congress, but Governor Drew refuses to give him a certificate.

THE excess of exports over imports of merchandise for the year 1878 amounted to $304,542,871. For the year 1877, the excess was only $140,056,112. A comparison of the exports and imports of gold and silver coin and bullion shows that for twelve months ending with December last, the excess of imports was $1,974,173. For the previous twelve months the excess of exports was $24,648,352.

THE contest over the New York Custom House appointments is not yet ended. On January 31st President Hayes sent to the Senate a communication from Secretary Sherman, reiterating the charges against General Arthur, the late Collector, and insisting that his removal was demanded by the public interests. The Senate, after hearing the document read, laid the whole matter over until February 24. It is understood that Secretary Sherman's letter fails to furnish any evidence which really reflects, in the least degree, upon the official or private character of General Arthur.

Foreign.

THE German Reichstag will reassemble on February 12th.

SPAIN and China have signed a treaty regulating the coolie traffic.

THE Marquis of Hartington was installed Lord Rector of Edinburgh University on January 31st. His inaugural speech was an exhortation to adhere to liberal principles.

A DISPATCH from Rome says that a consistory is fixed for February 21st. The Pope will review his allocution and the pontifical policy of the year. He will also give a sketch of his schemes for the future.

RUSSIA, having protested against the delimitation of the frontier between Silistria and Mangalia, refuses to cede the line regulated by the commission, and Roumania has addressed a circular to the Powers on the subject.

LEADING Bulgarian deputies advocate a prolonged occupation of Bulgaria by Russian troops, and a majority of the foreign consuls at Sophia have united in a statement that it will be impossible for the Turkish troops to return to Roumelia.

ON account of the spread of the plague in Russia the Italian Government has ordered a stringent quarantine against vessels from the Black Sea, with a promise that if this measure proves insufficient, further precautionary steps will be taken.

PRUSSIA is said to be preparing a measure for the Diet, providing for the permanent retention of the Guelph fund by Prussia on the ground of its forfeiture; but eminent jurists say that the claims of the newly-married Duke of Cumberland cannot be legally set aside.

THE British Admiralty has directed the dockyard authorities to charge the United States only with the bare cost of labor and materials employed in the repairs of the *Constitution*. No dock dues or tonnage was charged. The captain of the *Constitution* has written, warmly thanking the Admiral-Superintendent at Portsmouth for the courtesy and kindness of all of the officials.

THE trial of the directors of the City of Glasgow Bank, on charges of fraud, theft and embezzlement, which was preferred against them, has resulted in the conviction of Lewis Potter, of the Glasgow shipping firm of Potter, Wilson & Co., and of Robert Sumner Stronach, the manager of the bank, of the offenses as charged. The other directors were found guilty of uttering false abstracts of balance sheets. The former were sentenced to eighteen months' imprisonment and the latter to eight.

FROM 4,000 to 5,000 mill-operatives at Blackburn, England, are out of employment and destitute, and 7,000 miners are idle in the County of Durham, where the present distress has not been equaled since the great strike of 1844. The Miners' Union have notified the South Yorkshire and North Derbyshire coal-owners of their agreement to submit to arbitration. The engineers' and dock-men's strike began January 31st at Liverpool and Birkenhead, where over 2,000 went out. A general strike of the ironworkers, numbering 3,500, and brass founders, at Liverpool, began on February 1st. Two thousand boilermakers and shipbuilders are also considering the advisability of striking.

AN official report from Astrakhan dated January 30th states that no fresh case of the plague has occurred in Wetlianka, or in that neighborhood. It is stated that Professor Botkin, physician to the Czar, advises the burning of Wetlianka and the other villages where the epidemic has broken out, together with all the furniture in them, and the removal of the inhabitants to healthy places. In spite of the heavy expenses that such a scheme would involve, the Czar is said to be disposed to follow Professor Botkin's advice. A regiment of Russian light cavalry has been sent to strengthen the force on the line of the cordon marked out against the advance of the plague, and the Russian Minister of the Interior has offered liberal terms to medical men volunteering for military service, and pensions to their families in case of their death.

NEW YORK CITY.—TWENTY-FIFTH ANNUAL JUBILEE OF THE ARION SINGING SOCIETY, AT THE CLUB-HOUSE, 57. MARK'S PLACE, JANUARY 25TH.

TWENTY-FIFTH JUBILEE OF THE ARION SINGING SOCIETY.

THE members of the Arion Singing Society, with a goodly company of congenial friends, celebrated the twenty-fifth anniversary of the formation of the organization at the club-house, No. 19 St. Mark's Place, on Saturday evening, January 25th. The portico of the club-house was transformed into a perfect wilderness of ivy and vines, wreathing the columns, overrunning lamps and cornices, and finally festooning the whole front from story to story. Within the spacious hall on the second floor, where the revelers were marshaled, there were six window-curtains, on which were recounted the origin and progress of the Arion Society. On the first, at the left of the hall, stood a bearded old lady in a nightcap, with a baby in her arms. Such was the birth of Arion twenty-five years ago, and it was noticeable that the features of the old woman bore a curious resemblance to those of the first president of the society. The remaining pictures simply reported various stages of progress. In one, a huge cap, ornamented with sundry bells—the emblem of Arion—appeared descending, without hands, upon a diminutive figure of the old woman depicted upon the first curtain; and upon the last of the six appeared sundry winged heads of members of the society hovering about a huge tankard overflowing with foam. Lastly, at the left, a fool's tribune had been erected, with Arion (the German Neptune) above it riding upon a double-headed fish, preceded by a shield bearing the motto in German, "Honor to whom honor is due." The Prince Carnival himself, with his Prime Ministers, six on either hand, entered at five P. M., at the head of a procession, preceded by the master of ceremonies, bearing a fool's cap upon a walking-stick, and followed by the jester, who carried an old broom above his head as the emblem of the night. Three long tables extended from the throne to the rear of the hall.

After the Prince reached his throne he called upon his guests to drink to the twenty-fifth anniversary jubilee, and with the assistance of a couple of his Prime Ministers, he lifted a huge stoneware beaker, capable of containing a gallon of lager, to his lips and took a deep draught, and the whole 300 of his subjects did the same. During this ceremony there was a silence which was broken only by the screaming of the violin and the hoarse groans of the violoncello; and when, with an expression of supreme satisfaction, His Royal Highness deposited the beaker upon the desk before him, the faithful 300 clapped their hands and commenced to sing the jubilee celebrating the virtues of Mayerhofer, and Adams, the tenor, and Bergmann, and Damrosch, and other famous musicians. At the close of the uproarious singing the members and guests proceeded to the great banquet-hall, where the annual dinner was served, the courses being interspersed with toasts, songs, short speeches and rollicking stories.

M. JULES GRÉVY, ELECTED PRESIDENT OF THE FRENCH REPUBLIC, JANUARY 30TH.

THE NEW PRESIDENT OF THE FRENCH REPUBLIC.

M. JULES GREVY, President of the French Assembly, was chosen President of the Republic in a Congress of the two Chambers, upon the resignation of Marshal MacMahon, January 30th, by a vote of 536 to 99 for General Chanzy. M. Grévy was born in 1813, in the department of the Jura, and went from college to Paris, where he studied for the Bar. He took part in the revolution of July, 1830, and was one of the combatants who captured the Babylone Barracks. He was admitted to the Paris Bar, and soon distinguished himself in defending political prisoners, and notably by the defense of his companions of Barbes, who were tried in 1839. In 1848 he acted as Commissary of the Provisional Government in the Jura, and gave general satisfaction by his prudent and conciliatory conduct. Owing to his great popularity, he was elected to the Constituent Assembly of 1848 by 65,000 votes, and was thus the first on the list of the eight representatives from the Department.

In the Assembly, M. Grévy served on the Committee on Justice, and acted as Vice-President. He spoke frequently from the tribune, and was regarded as one of the ablest and most forcible of the orators of the Democratic Party. While he maintained an independent position between the Socialist and Mountain Parties, he usually voted with the ultra-Radicals. He became remarkable by an amendment which he proposed to the Constitution, giving the Executive power to a citizen, to be known as the President of the Council of Ministers, who was to be elected by the National Assembly for an unlimited term, but removable at pleasure. This amendment was rejected at the

Digitized by Google

setting of October 7th, 1848, by 643 to 158 votes. After the election of Louis Napoleon, he continued in opposition to him, and disapproved of the Roman expedition.

M. Grévy was elected to the Legislative Assembly, where, without making common cause with the Mountain Party, he was one of the principal opponents of the Government. After the coup d'état he returned to the practice of his profession. In 1869 he returned to public life, and, as a Democratic opposition candidate, was elected to represent a district in the Jura in the Corps Legislatif by 22,000 out of the 32,000 votes cast. This was the first time that the Administration was so completely defeated in the country. This success was regarded as so decisive that the Government placed no official candidate against him at the next election, when he was re-elected by a great majority. In 1871 he was elected President of the Assembly. He was retained in that post by eight almost unanimous re-elections until April 2d, 1873, when he resigned in consequence of the impertinence of some of the Monarchists, and refused to recall his resignation, though re-elected by a considerable majority.

During the months of confused monarchical machinations which followed the election of Marshal MacMahon, M. Grévy gave his valuable aid and advice to the combined groups of the Left, and in October of that year published a celebrated pamphlet, "The Necessary Government," which concluded with the statement that "France can find safety only in the organization of the democracy." In November, 1873, he opposed the establishment of the "Septennate" in favor of Marshal MacMahon, and, refusing to recognize the constituent powers of the Assembly, abstained from voting upon the constitutional laws. When M. Buffet became Premier in place of the Duc de Broglie, March 9th, 1875, M. Grévy was recalled to his old post as President of the Assembly. He refused to be a candidate for a life seat or any other in the Senate, was re-elected to the Assembly in July, 1876, and October, 1877, and was maintained in the Presidential chair at each renewal of the legislative offices. From the death of M. Thiers (September 3d, 1877), he has been the person designated by the republican sentiment of France to fill the Executive office whenever it should next become vacant, and the fitness of this selection was long ago indorsed by M. Gambetta.

Personally, M. Grévy is a very attractive man, of a calm, dignified, pleasant manner and fine countenance. He has a high forehead, large, dark-gray eyes, a well-formed nose, and a chin giving token of firmness and courage. There is a peculiar neatness in his appearance, and a certain something about him which causes even older and very important people to instinctively range themselves behind him. He was evidently born to command, and takes, by a seemingly natural right, the front rank.

THE FALLEN LEAVES.

By Wilkie Collins.

CHAPTER VI.—(CONTINUED).

ANOTHER interruption to my letter, caused by another change in the weather. The fog has vanished; the waiter is turning off the gas, and letting in the drab-colored daylight. I ask him if it is still raining. He smiles and rubs his hands, and says "It looks like clearing up soon, sir." This man's head is gray; he has been all his life a waiter in London—and he can still see the cheerful side of things. What native strength of mind cast away on a vocation that is unworthy of it!

Well—and now about the Farnaby dinner. I feel a tightness in the lower part of my waistcoat, Rufus, when I think of the dinner; there was such a quantity of it, and Mr. Farnaby was so tyrannically resolute in forcing his luxuries down the throats of his guests. His eye was on me if I let my plate go away before it was empty—his eye said, "I have paid for this magnificent dinner, and I mean to see you eat it." Our printed list of the dishes as they succeeded each other also informed us of the varieties of wine which it was imperatively necessary to drink with each dish. I got into difficulties early in the proceedings. The taste of sherry, for instance, is absolutely nauseous to me; and Rhine wine turns into vinegar ten minutes after it has passed my lips. I asked for the wine that I could drink, out of its turn. You should have seen Mr. Farnaby's face when I violated the rules of his dinner-table! It was the one amusing incident of the feast—the one thing that alleviated the dreary and mysterious spectacle of Mrs. Farnaby. There she sat, with her mind hundreds of miles away from everything that was going on about her, entangling the two guests, on her right hand and on her left, in a network of vacant questions, just as she had entangled me. I discovered that one of these gentlemen was a barrister and the other a ship-owner, by the answers which Mrs. Farnaby absently extracted from them on the subject of their respective vocations in life. And while she questioned incessantly, she eat incessantly. Her vigorous body insisted on being fed. She would have emptied her wine-glass, I suspect, as readily as she plied her knife and fork; but I discovered that a certain system of restraint was established in the matter of wine. At intervals Mr. Farnaby just looked at the butler, and the butler and his bottle, on those occasions, deliberately passed her by. Not the slightest visible change was produced in her by the eating and drinking; she was equal to any demands that any dinner could make on her. There was no flush in her face, no change in her spirits, when she rose in obedience to English custom, and retired to the drawing-room.

Left together over their wine, the men began to talk politics.

I listened, at the outset, expecting to get some information. Our readings in modern history at Tadmor had informed us of the dominant political position of the middle classes in England since the time of the first Reform Bill. Mr. Farnaby's guests represented the respectable mediocrity of social position, the professional and commercial average of the nation. They all talked glibly enough, I and an old gentleman who sat next to me being the only listeners. I had spent the morning lazily in the smoking-room of the hotel, reading the day's newspapers. And what did I hear now, when the politicians set in for their discussion? I heard the leading articles of the day's newspapers translated into bald chat, and coolly addressed by one man to another, as if they were his own individual views on public affairs. This absurd imposture positively went the round of the table, received and respected by everybody with a stolid solemnity of make-believe which it was downright shameful to see. Not a man present said, "I saw that to-day in the *Times* or the *Telegraph*." Not a man present had an opinion of his own; or, if he had an opinion, ventured to express it; or, if he knew nothing of the subject, was honest enough to say so. One enormous sham, and everybody in a conspiracy to take it for the real thing—that is an accurate description of the state of political feeling among the representative men at Mr. Farnaby's dinner. I am not judging rashly by one example only; I have been taken to clubs and public festivals, only to hear over and over again what I heard in Mr. Farnaby's dining-room. Does it need any great foresight to see that such a state of things as this cannot last much longer in a country which has not done with reforming itself yet? The time is coming in England when the people who *have* opinions of their own will be heard, and when Parliament will be forced to open the door to them.

This is a nice outbreak of republican freedom! What does my long-suffering friend think of it—waiting all the time to be presented to Mrs. Farnaby's niece? Everything in its place, Rufus. The niece followed the politics at the time, and she shall follow them now.

You shall hear first what my next neighbor said of her, a quaint old fellow, a retired doctor, if I remember correctly. He seemed to be as weary of the second-hand newspaper talk as I was; he quite sparkled and cheered up when I introduced the subject of Miss Regina. Have I mentioned her name yet? If not, here it is for you in full—Miss Regina Mildmay.

"I call her the brown girl," said the old gentleman. "Brown hair, brown eyes, and a brown skin. No, not a brunette; not dark enough for that—a warm delicate brown; wait till you see it! Takes after her father, I should tell you. He was a fine-looking man in his time; foreign blood in his veins, by his mother's side. Miss Regina gets her queer name by being christened after his mother. Never mind her name; she's a charming person. Let's drink her health."

We drank her health. Remembering that he had called her "the brown girl," I said I supposed she was still quite young.

"Better than young," the doctor answered; "in the prime of life. I call her a girl, by habit. Wait till you see her!"

"Has she a good figure, sir?"

"Ha! you're like the Turks, are you? A nice-looking woman doesn't content you—you must have her well-made too. We can accommodate you, sir; we are slim and tall, with a swing of our hips, and we walk like a goddess. Wait and see how her head is put on her shoulders—I say no more. Proud? Not she! A simple, unaffected, kind-hearted creature. Always the same; I never saw her out of temper in my life; I never heard her speak ill of anybody. The man who gets her will be a man to be envied, I can tell you."

"Is she engaged to be married?"

"No. She has had plenty of offers; but she doesn't seem to care for anything of that sort—so far. Devotes herself to Mrs. Farnaby, and keeps up her school-friendships. A splendid creature, with the vital thermometer at temperate heat—a calm, meditative, equable person. Pass me the olives. Only think! the man who discovered olives is unknown; no statue of him erected in any part of the civilized earth. I know few more remarkable instances of human ingratitude."

I risked a bold question—but not on the subject of olives. "Isn't Miss Regina's life rather a dull one in this house?"

The doctor cautiously lowered his voice. "It would be dull enough to some women. Regina's early life has been a hard one. Her mother was Mr. Ronald's eldest daughter. The old brute never forgave her for marrying against his wishes. Mrs. Ronald did all she could, secretly, to help the young wife in disgrace. But old Ronald had sole command of the money, and kept it to himself. From Regina's earliest childhood there was always distress at home. Her father harassed by creditors, trying one scheme after another and failing in all; her mother and herself half starved—with their very bed-clothes sometimes at the pawnbroker's. I attended them in their illnesses, and though they hid their wretchedness from everybody else (proud as Lucifer, both of them), they couldn't hide it from me. Fancy the change to this house! I don't say that living here in clover is enough for such a person as Regina; I only say it has its influence. She is one of those young women, sir, who delight in sacrificing themselves to others—she is devoted, for instance, to Mrs. Farnaby. I only hope Mrs. Farnaby is worthy of it! Not that it matters to Regina. What she does, she does out of her own sweetness of disposition. She brightens this household, I can tell you! Farnaby did a wise thing, in his own domestic interests, when he adopted her as his daughter. She thinks she can never be grateful enough to him—the good creature!—though she has repaid him a hundredfold. He'll find that out, one of these days, when a husband takes her away. Don't suppose that I want to disparage our host; he's an old friend of mine—but he's a little too apt to take the good things that fall to his lot as if they were nothing but a just recognition of his own merits. I have told him that to his face, often enough to have a right to say it of him when he doesn't hear me. Do you smoke? I wish they would drop their politics; and take to tobacco! I say, Farnaby, I want a cigar."

This broad hint produced an adjournment to the smoking-room, the doctor leading the way. I began to wonder how much longer my introduction to Miss Regina was to be delayed. It was not to come until I had seen a new side of my host's character, and had found myself promoted to a place of my own in Mr. Farnaby's estimation.

As we rose from table, one of the guests spoke to me of a visit that he had recently paid to the part of Buckinghamshire which I came from. "I was shown a remarkably picturesque old house, on the heath," he said. "They told me it had been inhabited for centuries by the family of the Goldenhearts. Are you in any way related to them?" I answered that I was very nearly related, having been born in the house—and there, as I supposed, the matter ended. Being the youngest man of the party, I waited, of course, until the rest of the gentlemen had passed out to the smoking-room. Mr. Farnaby and I were left together. To my astonishment, he put his arm cordially into mine, and led me out of the dining-room with the genial familiarity of an old friend!

"I'll give you such a cigar," he said, "as you can't buy for money in all London. You have enjoyed yourself, I hope? Now we know what wine you like, you won't have to ask the butler for it next time. Drop in any day, and take pot-luck with us." He came to a standstill in the hall; his brassy, rasping voice assumed a new tone—a sort of parody of respect. "Have you been to your family-place," he asked, "since your return to England?"

He had evidently heard the few words exchanged between his friend and myself. It seemed odd that he should take any interest in a place belonging to people who were strangers to him. However, his question was easily answered. I had only to inform him that my father had sold the house when he left England.

"Oh, dear, I'm so sorry to hear that!" he said. "Those old family-places ought to be kept up. The greatness of England, sir, strikes its roots in the old families of England. They may be rich, or they may be poor—that don't matter. An old family is an old family; it's sad to see their hearths and homes sold to wealthy manufacturers who don't know who their own grandfathers were. Would you allow me to ask, what is the family motto of the Goldenhearts?"

Shall I own the truth? The bottles circulated freely at Mr. Farnaby's table—I began to wonder whether he was quite sober. I said I was sorry to disappoint him; but I really did not know what my family motto was.

He was unaffectedly shocked. "I think I saw a ring on your finger," he said, as soon as he recovered himself. He lifted my left hand in his own cold fishy paw. The one ring I wear is of plain gold; it belonged to my father, and it has his initials inscribed on the signet.

"Good gracious, you haven't got your coat-of-arms on your seal!" cried Mr. Farnaby. "My dear sir, I am old enough to be your father, and I must take the freedom of remonstrating with you. Your coat-of-arms and your motto are no doubt at the Herald's office—why don't you apply for them? Shall I go there for you? I will do it with pleasure. You shouldn't be careless about these things—you shouldn't indeed."

I listened in speechless astonishment. Was he ironically expressing his contempt for old families? We got into the smoking-room at last, and my friend the doctor enlightened me privately in a corner. Every word Mr. Farnaby had said had been spoken in earnest. This man, who owes his rise from the lowest social position entirely to himself, who, judging by his own experience, has every reason to despise the poor pride of ancestry, actually feels a sincerely servile admiration for the accident of birth! "Oh, poor human nature!" as somebody says. How cordially I agree with Somebody!

We went up to the drawing-room, and I was introduced to "the brown girl" at last. What impression did she produce on me?

Do you know, Rufus, there is some perverse reluctance in me to go on with this inordinately long letter, just when I have arrived at the most interesting part of it. I can't account for my own state of mind; I only know that it is so. The difficulty of describing the young lady doesn't perplex me like the difficulty of describing Mrs. Farnaby. I can see her now as vividly as if she was present in the room. I even remember—and this is astonishing in a man—the dress that she wore. And yet I shrink from writing about her, as if there was something wrong in it. Do me a kindness, good friend, and let me send off all these sheets of paper, the idle work of an idle morning, just as they are. When I write next, I promise to be ashamed of my own capricious state of mind, and to paint the portrait of Miss Regina at full length.

In the meanwhile, don't run away with the idea that she has made a disagreeable impression upon me. Good heavens! it is far from that. You have had the old doctor's opinion of her. Very well; multiply his opinion by ten, and you have mine.

[NOTE: A strange indorsement appears on this letter, dated some months after the period at which it was received: "*Ah, poor Amelius! He had better have gone back to Miss Mellicent, and put up with the little drawback of her age. What a bright, lovable fellow he was! Good-by to Goldenheart!*"

These lines are not signed. They are known, however, to be in the handwriting of Rufus Dingwell.]

CHAPTER VII.

I PARTICULARLY want you to come and lunch with us, dearest Cecilia, the day after to-morrow. Don't say to yourself, "The Farnabys' house is dull, and Regina is too slow for me," and don't think about the long drive for the horses from your place to London. This letter has an interest of its own, my dear; I have got something new for you. What do you think of a young man who is clever and handsome and agreeable, and, wonder of wonders, utterly unlike any other young man you ever saw in your life? You are to meet him at luncheon; and you are to get used to his strange name beforehand. For which purpose I inclose his card.

He made his first appearance at our house at dinner yesterday evening.

When he was presented to me at the tea-table he was not to be put off with a bow; he insisted on shaking hands. "Where I have been," he explained, "we help a first introduction with a little cordiality." He looked into his teacup after he said that with the air of a man who could say something more, if he had a little encouragement. Of course I encouraged him. "I suppose shaking hands is much the same form in America that bowing is in England?" I said, as suggestively as I could.

He looked up directly, and shook his head. "We have too many forms in this country," he said. "The virtue of hospitality, for instance, seems to have become a form in England. In America, when a new acquaintance says, 'Come and see me,' he means it. When he says it here, in nine cases out of ten he looks unaffectedly astonished if you are fool enough to take him at his word. I hate insincerity, Miss Regina—and now I have returned to my own country, I find insincerity one of the established institutions of English Society. 'Can we do anything for you?' Ask them to do something for you—and you will see what it means. 'Thank you for such a pleasant evening!' Get into the carriage with them when they go home—and you will find that it means, 'What a bore!' 'Ah, Mr. So-and-so, allow me to congratulate you on your new appointment.' Mr. So-and-so passes out of hearing—and you discover what the congratulations mean. 'Corrupt old brute! he has got the price of his vote at the last division.' 'Oh, Mr. Blank, what a charming book you have written!' Mr. Blank passes out of hearing—and you ask what his book is about. 'To tell you the truth, I haven't read it. Hush; he's received at Court; one must say these things.' The other day a friend took me to a grand dinner at the Lord Mayor's. I accompanied him first to his club; many distinguished guests met there before going to the dinner. Heavens! how they spoke of the Lord Mayor! One of them didn't know his name, and didn't want to know it; another wasn't certain whether he was a tallow-chandler or a button-maker; a third, who had met with him somewhere, described him as a d——d ass; a fourth said, 'Oh, don't be hard on him; he's only a vulgar old cockney, without an h in his whole composition.' A chorus of general agreement followed, as the dinner-hour approached. 'What a bore!' I whispered to my friend. 'Why do they go?' He answered, 'You see, one must do this sort of thing.' And when we got to the Mansion House, they did that sort of thing with a vengeance! When the speech-making set in, these very men who had been all expressing their profound contempt for the Lord Mayor behind his back, now flattered him to his face in such a shamelessly servile way, with such a meanly complete insensibility to their own baseness, that I did really and literally turn sick. I slipped out into the fresh air, and fumigated myself, after the company I had kept, with a cigar. No, no! it is useless to excuse these things (I could quote dozens of other instances that have come under my own observation), by saying that they are trifles. When trifles make themselves habits of yours or of mine, they become a part of your character or mine. We have an inevitably false and vicious system of society in England. If you want to trace one of the causes, look back to the little organized insincerities of English life."

Of course, you understand, Cecilia, that this was not all said at one burst, as I have written it here. Some of it came out in the way of answers to my inquiries, and some of it was spoken in the intervals of laughing, talking and tea-drinking. But I want to show you how very different this young man is from the young men whom we are in the habit of meeting, and so I huddle his talk together in one sample, as Papa Farnaby would call it.

My dear, he is decidedly handsome (I mean our delightful Amelius); his face has a bright, eager look, indescribably refreshing as a contrast to the stolid composure of the ordinary young Englishman. His smile is charming; he moves as gracefully—with as little self-consciousness—as my Italian greyhound. He has been brought up among the strangest people in America, and (would you believe it?) he is actually a Socialist. Don't be alarmed. He shocked us all dreadfully by declaring that his socialism was entirely learnt out of the New Testament. I have looked at the New Testament since he mentioned some of his principles to me, and, do you know, I declare it is true!

Oh, I forgot—the young Socialist plays and sings! When we asked him to go to the piano, he got up and began directly. "I don't do it well enough," he said, "to want a great deal of pressing." He sang old English songs with great taste and sweetness. One of the gentlemen of our party, evidently disliking him, spoke rather rudely, I thought. "A Socialist who sings and plays," he said, "is a harmless Socialist, indeed. I begin to feel that my balance is safe at my banker's, and that London won't be set on fire with petroleum this time." He got his answer, I can tell you. "Why should we set London on fire? London takes a regular percentage of your income from you, sir, whether you like it or not, on sound Socialist principles. You are the man who has got the money, and Socialism says: You must and shall help the man who has got none. That is exactly what your own Poor Law says to you, every time the collector leaves the paper at your house." Wasn't it clever?—

Digitized by Google

and it was doubly severe, because it was good-humoredly said.

Between ourselves, Cecilia, I think he is struck with me. When I walked about the room, his bright eyes followed me everywhere. And, when I took a chair by somebody else, not feeling it quite right to keep him all to myself, he invariably contrived to find a seat on the other side of me. His voice, too, had a certain tone, addressed to me, and to no other person in the room. Judge for yourself when you come here; but don't jump to conclusions, if you please. Oh, no—I am not going to fall in love with him! It isn't in me to fall in love with anybody. Do you remember what the last man whom I refused said of me? "She has a machine on the left side of her that pumps blood through her body, but she has no heart." I pity the woman who marries that man!

One thing more, my dear. This curious Amelius seems to notice trifles which escape men in general, just as we do. Towards the close of the evening, poor Mamma Farnaby fell into one of her vacant states, half-asleep and half-awake on the sofa in the back drawing-room. "Your aunt interests me," he whispered. "She must have suffered some terrible sorrow, at some past time of her life." Fancy a man seeing that! He dropped some hints, which showed that he was puzzling his brains to discover how I got on with her, and whether I was in her confidence or not; he even went the length of asking what sort of life I led with the uncle and aunt who have adopted me. My dear, it was done so delicately, with such irresistible sympathy and such a charming air of respect, that I was quite startled when I remembered in the wakeful hours of the night, how freely I had spoken to him. Not that I have betrayed any secrets, for, as you know, I am as ignorant as everybody else of what the early troubles of my poor dear aunt may have been. But I did tell him how I came into the house a helpless little orphan girl, and how generously these two good relatives adopted me, and how happy it made me to find that I could really do something to cheer their sad, childless lives. "I wish I was half as good as you are," he said. "I can't understand how you became fond of Mrs. Farnaby. Perhaps it began in sympathy and compassion?" Just think of that from a young Englishman! He went on confessing his perplexities, as if we had known one another from childhood. "I am a little surprised to see Mrs. Farnaby present at parties of this sort; I should have thought she would have staid in her own room." "That's just what she objects to do," I answered; "she says people will report that her husband is ashamed of her, or that she is not fit to be seen in society, if she doesn't appear at the parties, and she is determined not to be misrepresented in that way." Can you understand my talking to him with so little reserve? It is a specimen, Cecilia, of the odd manner in which my impulses carry me away in this man's company. He is so nice and gentle, and yet so manly. I shall be curious to see if you can resist him, with your superior firmness and knowledge of the world.

But the strangest incident of all I have not told you yet—feeling some hesitation about the best way of describing it, so as to interest you in what has deeply interested me. I must tell it as plainly as I can, and leave it to speak for itself.

Who do you think has invited Amelius Goldenheart to luncheon? Not Papa Farnaby, who only invites him to dinner. Not I, it is needless to say. Who is it, then? Mamma Farnaby, herself! He has actually so interested her that she has been thinking of him and dreaming of him in his absence!

I heard her last night, poor thing, talking and grinding her teeth in her sleep; and I went into her room to try if I could quiet her, in the usual way, by putting my cool hand on her forehead and pressing it gently. (The old doctor says it's magnetism, which is ridiculous.) Well, it didn't succeed this time; she went on muttering and making that dreadful sound with her teeth. Occasionally a word was spoken clearly enough to be intelligible. I could make no connected sense of what I heard; but I could positively discover this—that she was dreaming of our guest from America!

I said nothing about it, of course, when I went up-stairs with her cup of tea this morning. What do you think was the first thing she asked for? Pen, ink and paper. Her next request was that I would write Mr. Goldenheart's address on an envelope. "Are you going to write to him?" I asked. "Yes," she said, "I want to speak to him, while John is out of the way at business." "Secrets?" I said, turning it off with a laugh. She answered, speaking gravely and earnestly, "Yes; secrets." The letter was written, and sent to his hotel, inviting him to lunch with us on the first day when he was disengaged. He has replied, appointing the day after to-morrow. By way of trying to penetrate the mystery, I inquired if she wished *me* to appear at the luncheon. She considered with herself, before she answered that. "I want him to be amused, and put in a good humor," she said, "before I speak to him. You must lunch with us—and ask Cecilia." She stopped, and considered once more. "Mind one thing," she went on. "Your uncle is to know nothing about it. If you tell him, I will never speak to you again."

Is this not extraordinary? Whatever her dream may have been, it has evidently produced a strong impression on her. I firmly believe she means to take him away with her to her own room when the luncheon is over. Dearest Cecilia, you must help me to stop this! I have never been trusted with her secrets; they may, for all I know, be innocent secrets enough, poor soul. But it is surely in the highest degree undesirable that she should take into her confidence a young man who is only an acquaintance of ours; she will either make herself ridiculous, or do something worse. If Mr. Farnaby finds it out, I really tremble for what may happen.

For the sake of old friendship, don't leave me to face this difficulty by myself. A line, only one line, dearest, to say that you will not fail me.

(*To be continued.*)

RECEPTION OF MORTON COMMANDERY OF KNIGHTS TEMPLAR,

AT GILMORE'S GARDEN, JANUARY 29TH.

THE "ball season," as it is styled, is at its height in New York, and the latest and greatest "crush" of the season occurred at Gilmore's Garden on the night of Wednesday, January 29th. The occasion was the ball and reception given by Morton Commandery, No. 4, of Knights Templar. There are few, if any, of the commanderies in the United States which can show a longer period of deserved prosperity than Morton Commandery, No. 4, Knights Templar. This has a historical record, its original charter, granted over half a century ago (1823), was signed by De Witt Clinton, the eminent statesman, who was himself a Knight Templar, and in 1873 the Commandery celebrated in the Academy of Music its semi-centennial. It was originally called Morton Encampment, and in its second year was visited by the illustrious Lafayette, and his son, who were "knighted" under its auspices. An account of this interesting ceremony is to be found in Hardcastle's "Annual Masonic Calendar," published in New York in the year 1824. Among those who participated were many who afterwards became well and widely known in political and social circles. Among these gentleman and knights were William P. Platt, E. C.; Mr. Richard Bennett, Generalissimo; Jared L. Moore, Captain-General; W. E. Ross, Prelate; and T. C. Bowles, S. W.; Peter Brewer, J. W.; S. Chapman, Recorder; D. N. Schmidt, Treasurer; G. Blanchard, Warder; John Coats, Sword Bearer; H. Paddleford, Standard Bearer; John Gastner, Herald; John Niles, Sentinel.

The career of Morton Commandery has been a long series of social triumphs, but probably the greatest ever achieved even by this organization was that of last Wednesday evening. It resulted in one of the greatest balls, in point of numbers, ever given in the metropolis. Immense as is Gilmore's Garden, the largest inclosed structure on the continent, there was only "standing room" in it for a while—and not much of that. At the lowest calculation, there must have been 14,000 people present, and by many the figures are placed at 17,000 or 18,000. "All the world" was there, and his wife and his wife's sister. The ladies attended in evening or ball toilet, and the *tout ensemble* of the spectacle presented was really grand.

The Knights Templar in their uniform, the officers and privates of the Seventh, Ninth, Seventy-first, Twenty-second, Twelfth, and other city regiments, the military guests, the ladies in ball costume in the boxes, and in full evening and walking-dress upon the floor—all these constituted a scene unsurpassed in the annals of New York.

Not the least notable item, *apropos* of the occasion, was the rapidity and completeness with which the Garden—which the night before had been a skating-rink—was transformed into a ballroom, as if by magic. The building was artistically decorated, and literally blazed with light. From the ceilings hung streamers of tricolored bunting, while the pillars were ornamented with the silver flags of the order of Knights of the Red Cross and the banners of the Order of Templars. The boxes were draped with tricolored bunting, and here, there and everywhere were banners, emblems and insignia.

A low, crimson-covered partition, or seat, surrounded the ballroom-floor, and separated it from the aisles. The circuit of this partition afforded a delightful promenade—when a promenade was possible. The music, furnished by Gilmore's Band, was stationed in front of the cascade, which was "masked." The doors were opened promptly at nine o'clock, at which hour over two thousand persons were in waiting, extending in line for several blocks.

About half-past ten o'clock the grand *entrée* took place, the Eminent Commander, Sir William F. Costenbader, leading the processional promenade, assisted by the floor committee. This opening procession extended around the entire area of the Garden in double lines, after which the ball commenced in earnest, 160 sets being formed for the opening "Lanciers." Every box was sold, and every seat was occupied. The members of the Commandery were in full uniform, and were notable among the assembled thousands.

The full Board of Managers were: Eminent Sir Jere. S. Baker, Chairman; Sir Wm. Delamater, Secretary; Sirs J. D. Hadley and Haywood Prince, Trustees; Eminent Sir Oliver G. Brady, Captain-General; Sirs James A. Jewell, Charles T. White, William Clyde, J. H. Wellbrock, Robert H. Trafford, Theophilus Pratt, J. D. Kinmey, Wm. H. Hawks, George T. Edwards, Jos. C. Pinckney, William L. Gardner, Robert Vandervoort. The Reception Committee was composed of Eminent Sir Albert G. Goodall, Chairman; Eminent Sirs W. T. Marvin, Adon Smith, George H. Chase, Thomas C. Cassidy, George Smith. Sir John Scott, the Generalissimo of the Commandery, was a leading spirit of the festive occasion, supported by Em. Sir Oliver G. Brady, Captain-general; and the trustees, Em. Sirs Jere. S. Baker, John D. Hadley and Haywood Prince, proved zealous officials.

Among the prominent persons present were P. E. Commanders A. G. Goodall and George Smith, of Morton Commandery; E. C. George W. Skellon; H. H. Brockway, Generalissimo; J. B. Rand, Captain-General; J. A. Rich, Recorder, and many Knights of Palestine Commandery, No. 18; E. C. William Henry White, of Clinton, No. 14; E. C. Alonzo Brymer, of St. Elmo, and delegations from all the other commanderies in the city. Delegations were also present from New Jersey, represented by M. M. Brohan, Grand Commander of the State, and staff, and Sir Knight J. N. Talmage, of Hugh de Payne Commandery, No. 1; from Massachusetts, represented by Sir Knights H. M. Coney, H. W. Eddy, T. E. Drake, A. C. Russell and others; from Pennsylvania, represented by P. E. C., C. E. Meyer; Grand Recorder, P. E. Commander J. L. Young and D. Setter, and six Knights, John Borden, Charles W. Packer, George M. Watson, C. A. Matthews, Jr., G. Conrade and others of St. Mary's Commandery, No. 36; P. E. Commander Philip Crawford, of Philadelphia Commandery, No. 2; from Virginia, by Grand Commander James Bain and staff, with a delegation from Portsmouth and Grace Commanderies. There were also present Past Master James, Past Master J. W. Simonton, D. E. Sickles, thirty-third degree; R. McCoy, P. G. M. of New York, D. G. M. Roome, D. D. G. M. A. Yeomans, and P. C. George F. Smith. Adolphus Andrews, who was knighted in Morton Commandery along with Lafayette, was also present.

There were at least 7,000 ladies in the Garden, many of whom wore toilets displaying alike wealth and taste.

"Home, Sweet Home," was rendered at 4:30 A. M., and the world went home satisfied with itself and with Morton Commandery, No. 4. The receipts of the ball were sufficient to meet all expenses, and any surplus which may remain will be applied to the charitable fund of the Commandery.

PICTORIAL SPIRIT OF THE EUROPEAN ILLUSTRATED PRESS.

The Royal Marriage in Denmark.

The Duke of Cumberland and the Princess Thyra of Denmark were married with great pomp in the Chapel of Christiansborg Castle, in the suburbs of Copenhagen, on the evening of Saturday, December 21st. The bride is the youngest daughter of the King and Queen of Denmark, and a sister of the Princess of Wales and the King of Greece, and the bridegroom is Prince Ernest August, Duke of Cumberland, head of the Guelph dynasty and prospective Duke of Brunswick; the former is twenty-five years old and the latter thirty-three. The fortune of the duke is to a considerable extent held by the Prussian Government in addition to the estates it has confiscated which belonged to the duke's father, the late ex-King George of Hanover. The Government demands as a condition for releasing the property the renunciation by the Duke of all claim and title to the disrupted kingdom of Hanover, which he will not make. Political considerations, however, may present a means of solving the difficulty on a mutually advantageous basis. The newly married couple expect to make their principal abode in England.

Reception by the Emperor of Austria of a Delegation of Herzegovinians.

A deputation of Herzegovinian notables, sent to pay homage to Francis Joseph, set out from Dalmatia by sea for Trieste, and proceeded thence to Vienna by rail. As the Emperor had been called away to Buda, they followed. The delegation included a bey, or Mohammedan, landed proprietors, a Greek bishop and archimandrite, a Franciscan friar, a Catholic bishop, Christian and Moslem proprietors, merchants and public functionaries. The day appointed for the reception at Buda was November 14th. The real head was the actual chief of police of Mostar, formerly Civic Captain or Prefect of Zagabria. The Emperor received the deputation in the castle punctually. The spokesman was an effendi, while a Greek priest and a Catholic priest presented Francis Joseph an address, bound in vellum and gold. The Emperor said, among other things, that all the religions of the country, their customs and well-established rights, should be protected by him, and urged them, upon their return, to tell their fellow countrymen that the Emperor sincerely desires their happiness, and is a man of his word. The deputies welcomed these words with hearty shouts.

The Distress at Sheffield.

The deplorable condition of the working classes in the manufacturing districts of the West Riding and South Yorkshire, North and South Lancashire, and South Wales, from the depression of the iron, cutlery and cotton industries, still appeals to public sympathy. It is most severely felt in Sheffield; and we present an illustration of the scene there witnessed on the day appointed for giving away soup to the distressed people, when crowds of children, with jugs and basins in their hands, beset the doors of the Vestry Hall at Brightside, to receive the allotted portion. The Duke of Norfolk, who is the owner of large property in the town, and lord of the manor, has visited Sheffield for the purpose of rendering assistance to the local committee. On January 4th the Mayor of Sheffield gave a free breakfast in the Cutlers' Hall to 1,000 men, women and children. These for the most part were persons in the deepest poverty, and had received tickets for the breakfast from the various relief committees.

New Bridge over the Douro at Porto, Portugal.

This bridge, which has now been in use about a year, is said to have the longest single span in the world. The length of the one in the St. Louis bridge is 354 feet, and that of the more famous Britannia Bridge is only 320 feet. This central arch is one piece and 480 feet in span, the entire bridge being 750 feet long, and 485 feet above low water. In its construction 1,450 tons of wrought iron were used, 750 in the arch and 700 in the pillars, trestle-work, etc.

The Afghan War.

Peshawur was greatly excited on the morning of the 5th of December, when the twenty-four guns of Shere Ali, which were captured at the fall of Ali Musjid, entered the cantonment. The sight was a very grand one; these trophies of war being drawn along in solemn procession from the Jumrood entrance of Peshawur to their destination in the arsenal of the Peshawur fort. Each of the large guns was drawn by six of the large oxen that are employed in the heavy siege train battery belonging to Peshawur, and the smaller guns and howitzers, with their carriages, were borne on the backs of six large elephants of Major Wilson's elephant battery. Most of these guns, which were of brass, had a beautiful finish, and were all made at the Ameer's foundry in Cabul, excepting one, which had been given to the Ameer by the English, and had an English inscription on it. However pleasant the society may be, life on board an ocean steamer after the first week becomes somewhat monotonous. The sea air excites the appetite, which a Peninsula and Oriental steamer is not slow in appeasing with the many excellent meals her stewards prepare for her passengers. This necessitates plenty of exercise on the part of the voyager, or superfluous weight is the result. To prevent this great evil, on a recent voyage to India with a large number of officers going to the front, the military section on board organized a series of walking matches, open to all comers, to prepare them, and to store up muscle for the fatigues of the forthcoming march on Cabul. The chief figure in our sketch, in the dark coat, we may add, is Lord Francis Conyngham. The small frontier town of Thull, with the Afghan fort of Kapiyanga on the opposite bank of the Khoorum River, is the subject of the third of our sketches. At three o'clock on the morning of November 20th last, the river was crossed by a squadron of the Tenth Hussars, under Major Berkeley, who took up their position in the valley at some distance behind the fort, so as to cut off the retreat of its garrison. At the same time Major Channer, V. C., left camp with two companies of the Twenty-ninth Punjab Infantry, by a circuitous route through the hills, came down a mile above the bridge, forded the stream, and took up a position to command the fort on the south side. The daylight revealed the Hussars and Punjabees in the position assigned to them. Orders were instantly given for the troops assembled below to advance. The native infantry regiments, led by Colonel Gordon, of the Twenty-ninth, threw down the barricade of bushes and dashed quickly across the bridge; while the Twelfth Bengal Cavalry, under Colonel Gough, V. C., and No. 1 Mountain Battery, Captain Kelso, crossed the ford beside it. The infantry proceeded rapidly towards Kapiyanga in skirmishing order. The fort was silent, and not a flash of a rifle came from its walls. The gates were closed; but these were speedily burst open, and the troops rushed into it, only to find it empty. The garrison must have fled but a short time previously. Probably, in spite of the silence preserved, the movements of the distant columns had been heard by a scout, and hasty flight had at once taken place. The fires were still alight, and half-cooked food was lying on the ground near them.

AT HOME AND ABROAD.

—THERE were 177 strikes in England last year, as against 181 in 1877.

—THE new Greenback Treasurer of Maine has the presidents of three national banks among his bondsmen.

—AN $8,000 tabernacle, to accommodate 4,000 people, is to be built by the Camp Meeting Association at Martha's Vineyard.

—THE Indian Government has issued an official list of the names of places and of words in common use, with the official spelling.

—BOTH Houses of the Legislature of Colorado have passed a Bill providing penalties for the defacement of natural scenery by advertisements.

—AN attempt is being made to reopen the edifying Sugat will case at Dublin, the opponents of the widow denouncing the original trial as a miscarriage of justice.

—THE Pope has sold the sole remaining ship of his navy, the *Immaculate Conception*, stationed at Toulon. The admiral and two captains who were aboard are superannuated.

—IN Frankfort-on-the-Main, on Saturday evenings, the daughters and wives of the pawnbrokers in the Ghetto drive to the promenade covered with the jewels left in pawn with their fathers and husbands.

—THE Cincinnati Musical Festival Association announce that they will give a prize of $1,000 for an original composition for orchestra and chorus, to be performed in the festival of next year. The competition is limited to native Americans.

—LAST September a census was taken of the Japanese Islands. The total population of the empire was 34,338,404. Of these, 1,036,771 dwell in Yeddo, or, as the inhabitants name it, Tokio, in 236,961 houses, being about 4.37 occupants for each house.

—FIFTY-THREE per cent. of the population of France are engaged in agriculture, twenty-six per cent. in manufacturing and other industries, fourteen per cent. in trade, and four per cent. in the liberal professions, the remainder being returned as of no occupation.

—A SOLAR telegraph is used in communicating with the Fastnet's Island Lighthouse, off Guilford, combinations of quick and long dashes forming words and conveying messages. The keepers of the light are sometimes shut off from the shore for months during the Winter.

—THE Geographical Society of Paris has taken the initiatory steps towards forming an emigration society, which will give information to those desiring to emigrate regarding all sections of the civilized world. It will describe the advantages and disadvantages of emigration in detail.

—THE Spanish Government has ordered a man-of-war to be dispatched to Puerto Plata, San Domingo, to demand reparation for the insult offered to the Spanish flag by authorities of San Domingo in seizing two insurgent generals who had taken refuge on board a Spanish steamer and shooting them.

—THE American Antiquarian Society of Worcester, Mass., has received a copy of the celebrated Caxton Memorial Bible, which was printed, bound and lettered in twelve hours at the Oxford University press, on the occasion of the opening of the Caxton celebration, an event of much note last year. Only one hundred were printed.

—NINE-TENTHS of the thousand million dollars which France borrowed of English bankers in order to pay Germany is now held in the shape of national bonds by Frenchmen at home. As fast as the foreigners would sell, the bonds were bought up on the Paris market, and thus, though France still owes that vast sum, she owes it in bulk only to her own people.

—DR. EDWARD HITCHCOCK assures the American Antiquarian Society that the proportion of college-educated men in Massachusetts is decreasing. In 1800–1804 there were in the colleges of the State 88 undergraduates to every 100,000 inhabitants, while in 1876 there were 55 only. The decrease is attributed to the increased number of foreign-born persons who are making Massachusetts their home.

—THE consumption of beer in the whole German Empire last year was 841,038,768 gallons, or nearly twenty gallons per month of population. The importations amounted to 3,333,814 gallons and the exports to 19,038,266 gallons. Bavaria leads, for, though the rate of consumption is not given, so great is the production—53½ gallons per head—and after making due deductions for the exportation, a greater than average quantity is left for home consumption.

—WOMEN are admitted this year for the first time to all the examinations and degrees of the University of London, without exception, on precisely the same terms as men. At the Winter matriculation, recently, there were nearly 600 graduates altogether, and eleven of these were young ladies. One lady presented herself at the examination for the degree of Bachelor of Laws. These are the first twelve ladies who have been admitted to the regular examinations of any English university.

—THE increasing production of ostrich-feathers on the South American farms, combined with a falling off in the demand at home, has led to a decline in the market rates for this produce at the colonial sales. Feathers of superior quality, however, fetch high prices. At a recent sale at Grahamstown thirteen splendid "primes," or perfect white feathers, realized a guinea each, or at the rate of $725 per pound. The average price for fine white feathers was $203 per pound, while blacks realized about seventy dollars, and drab or fancy colors only twenty dollars per pound.

—THE Commune of Samnaune, one of the most remarkable, as it is one of the least known, in all Switzerland, is situated in a mountain valley, 6,000 feet above the level of the sea, and almost cut off from the world. The inhabitants fetch their daily supply of provisions from Martinsbrück, on the other side of the Inn, and for the greater part of the distance, seven hours in all, they have to carry everything on their backs up the steep mountain paths. They get their letters from the Austrian village of Ramders, which involves a walk for the postman of ten hours, four thither and six back. Fifty years ago the members of the commune met together, and, being of opinion that German was on the whole a more desirable language for the ordinary purposes of life than their mother tongue, they resolved thenceforth to speak German only, and so teach it to their children. So thoroughly has this purpose been carried out that, with the exception of a few old people, the Romanisch speech, their native tongue, has been completely forgotten by the inhabitants of the valley.

DISSONANCES.

FIRST VOICE.

HOW bitter that when a few years vanish, I
Shall surely die!

All that the unfinished world shall grandly be,
I may not see!

Rich harmonies out of discord streaming clear,
I shall not hear!

Equality's last superb triumphant throe
I shall not know!

Miraculous deeds by science shall be wrought
When I am naught!

The last expiring hope's last rancorous hiss
My soul shall miss!

Love's golden universality angest
Shall find me dust!

Oh agony, that when these few years are fled,
I shall be dead!

SECOND VOICE.

How bitter that death, when I so long to die,
Should pass me by!

Life on my heart like a great fetter weighs,
Whose links are days!

Equality! Shout it to the starving mobs
That luxury robs!

The glory of science? Do we praise, indeed,
Blind men for speed?

When all believe he has perished, crafty Hate
Will hibernate!

Love's ultimate reign? Salute her, loyal scos,
With needle-guns!

I too have thrilled, while shadowing mist was drawn
From bournes of dawn!

I too have talked with the stars, entranced, inspired,
To night I am tired.

EDGAR FAWCETT.

A SECRET MARRIAGE
AND
ITS CONSEQUENCES.

BY THE DUKE DE POMAR,

AUTHOR OF "THE HEIRTHRON," "THROUGH THE AGES," "WHO IS SHE?" "PASSION AND PASSION," ETC.

BOOK FOURTH.

LADY ROLLINGFORD'S SECRET.

CHAPTER I.—A GLIMPSE OF ANOTHER WORLD.

MADAME DE FLEURVILLE is a very well-known Parisian actress; well-known—not that she is by any means a famous actress, for even her warmest admirers are bound to confess that her acting is at its best but indifferent enough; it is by her beauty, *chic*, and talents as a *femme du monde* that she has become a woman of almost European celebrity.

Whence she originally came no one knows, and most likely no one will ever know, but by her exquisite grace and *savoir faire* she has actually become one of those all-powerful *lionnes* by whom men swear in public, and at whom their wives swear in private.

With men—those brave, jolly good fellows of the Jockey Club and the Cercle des Joueurs, who live for pleasure, and with whom life *means* pleasure—she is a goddess, at whose altar they offer their daily incense; for she is a woman whose wit never wearies, whose speech, though at times a trifle *décolleté*, is never vulgar or coarse, and whose soft, melodious voice charms like the sound of a streamlet running through a tropical forest.

At the moment when I first present Madame de Fleurville to my readers she is holding her court, reclining on a Louis XV. sofa of pale-blue satin, in a charming little boudoir *à la* Pompadour. She has just returned from the theatre, where she has achieved a great success in the new piece in which she has appeared this evening for the first time.

Though tired and weary after the fatigues of the evening, she has taken off her dress; her hair is still dressed as if she were to appear once more upon the stage, and large diamond stars and strings of pearls and rubies sparkle amidst her golden tresses. Around her neck also shine diamonds and pearls of priceless value; but her skin is whiter far than the pearls that rest upon it, and her soft, voluptuous lips are redder than the rubies that sparkle on her brow.

But, strange to say, though her skin is of the fairest, and her hair is brighter than burnished gold, her eyes, which are by far the most conspicuous feature in her face, are of the deepest black, and shine with a lustre quite Oriental.

I have said that Madame de Fleurville is holding her court. Now let us see who are the courtiers grouped around her couch, and who seem to have no eyes and no thoughts but for her. They are mostly young, handsome, and noble—the very *jeunesse dorée* of Paris—ay, and some of its gilded *moyen âge* also; for near her we notice more than one millionaire, who court her for fashion's sake, and one or two diplomatists who pay her constant attentions to further their political schemes, for Madame de Fleurville and her set form a power, nowadays, by no means to be despised. Yes, in the good old days of paint and powder the mistress of the royal Louis ruled the world, but now *nous avons changé tout cela*.

The conversation, as might be expected amongst rivals, and between men who have come to seek amusement, and by no means with the intention of rendering themselves agreeable and entertaining, is rather broken and disconnected, yet is carried on in a light, careless strain, and, as may be easily imagined, the topic is the new play, at the first representation of which they have all assisted this evening.

"How beautifully you sang that pathetic little romance in the second act!" says the Comte de la Mazerolle, who is said to have been her constant admirer, and to have acted as her banker on and off for the last ten years—for Madame de Fleurville is by no means a new beauty, but has reigned supreme over the hearts of men longer, perhaps, than she would care to remember.

"A silly little *chanette*, two couplets and a claptrap refrain; and yet it is the only song in which I can possibly make any point or hope to receive an encore, while Angélique has three long songs all to herself. Ah, it was not so two years ago. I should have liked to see the manager who would dare *then* to insult me by giving the best part of a piece to another. But what can one expect," she adds, turning her large, dark eyes upon the count, "when even La Mazerolle is beginning to get tired of me?"

"How can you say that, Zoé, my queen? Am I not as devoted to you now as I was when you made your *début* upon our stage?" he replies, rising and taking her jeweled hand in his. "You have heard about our young friend Cassilis?" the count adds presently, anxious to please the reigning beauty.

"And what about him?" Madame de Fleurville asks, a look of eager curiosity beaming in her bright eyes. "I trust nothing has happened to him; I like that boy, and, *dame*, I should be really sorry if any harm were to befall him."

"Well, a great harm is about to befall him—he is going to be married."

"Married! *ciens!* Going to be married! and you call that a misfortune?"

"Well, you ought to be the best judge on that point, Zoé; you have the advantage over any of us there—you have been married."

"Bah! nonsense! You know that my marriage was so slight an affair that it scarcely deserves the name. But who is he going to marry?"

"An heiress—a very wealthy English heiress—a charming miss."

"Really!" exclaims M. Fétevojeu, getting interested. "Well, I am glad of that; the poor fellow was always hard up for money, and it is a pity, for he is fond of fun and loves cards."

"Oh, you wicked man!" Madame de Fleurville says, laughing, and showing a double row of faultless teeth of surpassing whiteness. "You only think of yourself. But tell me, Léon, who is this girl. An English miss, you say?"

"Why, that is the general question. No one knows."

"But you have been in London lately, and can tell us."

"I wish I could; why, I should become the greatest favorite at all the clubs, if I could answer that question."

Madame de Fleurville's curiosity becomes excited, and she half arises from her couch, as she says:

"But surely this girl must have a name, a family history."

"No, she has no name, no family history."

"You are joking."

"You know, Zoé, I never joke."

"Then tell me the name of the girl our friend is about to marry."

"Her real name no one knows—she is one of the mysteries of Mayfair—but she goes by the name of Miss Reymond, which is the family name of Lady Rollingford, the lady who has adopted her, and whose fortune, it seems, she is to have at her death."

Silence reigns for a few seconds after this.

"What is the matter, Zoé?" exclaims the count. "How pale you look! What is the matter? You are not feeling ill, are you?"

"I? Well, yes, I am a little tired after the play; new performances are always very fatiguing, and you know that I am not very strong," she answers, in some confusion. "But tell me," she adds, trying to speak in her natural tone of voice, "tell me all you know about this mysterious Miss Reymond."

"You are fatigued—don't you think that we had better leave you?"

"No—without supper?—certainly not; I could not allow such a thing. It is nothing, believe me; I am better now. Ring the bell, Léon, and let us have supper at once; I suppose it is of no use waiting any longer for our other friends; I daresay they are supping with Angélique at the Maison Dorée. But do tell me all you know about this girl."

"Some say she must be a natural daughter of Lady Rollingford herself; others suppose her to be the child of some royal house, who from political motives is afraid to own her; some even go so far as to name the family; but I fear all these stories are alike devoid of foundation."

Madame de Fleurville remains silent for a few minutes, and seems as if lost in deep thought, for she does not notice that the young lord at her feet has taken possession of her hand, which was hanging listlessly beside her, and is imprinting warm, ardent kisses upon it; at last she becomes aware of the fact, and, withdrawing it with a brusque movement, says:

"Has it never occurred to any one that she might be Lord Rollingford's daughter?"

"It is impossible, believe me, Zoé, to imagine anything that has not already been suggested by some one; but the story that she is a daughter of Lady Rollingford's husband seems to me the most improbable of all. Do you think that any woman in her senses would ever adopt her husband's natural children?"

"Well, perhaps not; but is she really going to leave her all her money?"

"Let us hope so, for our friend's sake," the count answered, with a grimace, for already the conversation is beginning to bore him.

"You are sure that she is going to have all Lady Rollingford's money? I hear she is enormously rich."

"One cannot be sure of anything, *mon cher* Fétevojeu. I have never seen her will, so how can I tell? All I know is, that people in London society seem to think so."

"It will be a grand marriage for young Cassilis, then," M. Champignon remarks. "Some one pointed out the Hotel Rollingford to me when I was last in London, and really it is a splendid building."

"Come, come, don't you think that you have talked enough about this Miss Reymond?" says the young lord, rising and walking to the fireplace, where a large wood fire is burning.

"Ah, *milord* Dare, perhaps you can tell me something really true about her; you are an Englishman, and must know her."

"Oh, bother! Well, yes, I know her, of course; but, upon my soul, I know nothing at all about her, neither do I care, by Jove!"

"You know her—ah, she is pretty?"

"Rather."

"Only rather? Now what is she like? Do tell me; I am all curiosity."

"So it seems. I had no idea, Zoé, that you were so fond of that young Englishman, and took such a deep interest in all his doings," the count says; and then, turning to the servant who has just entered the room in answer to his summons, he inquires in an angry tone if the supper is ever going to be ready.

"What is she like?—do tell me, Lord Dare."

"Well, she is dark, tall, and clever-looking; she looks more like a foreigner than an English girl."

"Is she a Catholic?"

"Yes, I think so."

"Ah, thank God for that!"

"Thank God for what? *Ah, diantre!* how pious we are getting!"

The servant comes in at this moment to announce that that "*Madame est servie*," and a few minutes later the fascinating actress and her friends are partaking of an exquisite supper in the gorgeously decorated dining-room, and the conversation and laughter become gayer and brighter as the champagne corks fly, and the Venetian tumblers, full of sparkling wine, circulate round the merry group, and "the health and happiness of Monsieur and Madame de Cassilis" is proposed as the toast of the evening by the brilliant queen of the feast.

CHAPTER II.—RUPERT CASSILIS.

RUPERT CASSILIS, as every one knows, is the second son of Sir Robert de Cassilis, an English baronet descended from an illustrious line, and married to a French lady, who has induced her husband to reside almost entirely in France. Their second son, Rupert, was born at the Château de la Quintenie, the fine ancestral home of her family in the sunny South, and brought up at the family hotel in Paris.

Being the youngest of her children, he was from his cradle his mother's pet. She was a thorough French lady of the old school, nobly born and noble-minded, a devout Catholic and a stanch Légitimiste. She perfectly doated upon her pretty curly-headed little English boy, and for many years scarcely permitted any one to touch her treasure, for fear, I suppose, that he might get broken.

As soon as he was old enough to learn anything besides mischief he was placed under the care of the family chaplain, a priest who had lived so long in the Cassilis family that he almost formed part of it. But even this solemn and highly respectable ecclesiastic was forced to confess, after a while, that the youthful Rupert was too much for him—for, indeed, brought up amongst women and priests, and accustomed to have his own way in everything, the child had become very self-willed, and could not be coaxed into doing or learning anything—and so at an early age he was torn from the arms of his tender-hearted mother, who shed copious tears over him, by his hard-hearted father, Sir Robert, and placed in the Lycée, where he soon became a general favorite with the boys, if not with the masters, and where he learnt all he was ever destined to learn, little as it was.

Some years afterwards, when his "studies" were completely finished—that is to say, when he grew too old to remain any longer at college, and the sacred precincts of that temple of wisdom and mischief had grown too hot to hold him any longer—he entered the army; but he got into so many scrapes, and wanted to fight so many of his brother officers, that at last his father made him send in his resignation and adopt a quieter style of living.

From the time he left college, his mother's great object in life would seem to have been to provide him with a wife, who she hoped would have the power to keep him out of mischief, and render him a happy man. But the young scapegrace would not be caught in any of the nets so carefully laid for him; no bait, however brilliant and dazzling, tempted him.

Disgusted with the society of the *beau monde*, where politics and religion seemed to be the only topics of conversation, and tired of the innocent, serious, reserved girls just out of convents, whom he alone met in the aristocratic saloons of the Faubourg Saint-Germain, he turned his eyes to that other section of the Parisian world, commonly known as the Quartier Bréda, where politics and religion are but little discussed, and innocence and reserve unknown.

In this world, amidst the gayest of gay companions, and the prettiest and most charming of women, Rupert spent a few years of mad folly and feverish, reckless dissipation, until one day he was forced to fight a duel for a certain actress, about whom he did not care a straw; and after having nearly killed his man, he had to fly to England, badly wounded himself, to escape the police. For a few months after this no one knew where "le beau Rupert," as he was called in the gay world of Paris, had gone; his disappearance was a subject of general conversation, and for the ordinary nine days he became the *wonder* of fashionable life. He had written to his family, however, like a dutiful son, to inform them of his hiding-place, and also that his letters might be sent after him without delay; and thither his father went, to give him a piece of his mind. But the reaction had come by this time, and "le beau Rupert," heartily ashamed of himself, and disgusted with what he was pleased to call his "great experiences of life," rushed into his father's arms and promised to reform and turn over a new leaf.

Since then he has spent most of his time in England, where he has found a few sympathetic friends, amongst whom he feels thoroughly at home, as, in spite of his foreign education, he has been able to master the language with great ease.

That he is very handsome and prepossessing, I have already stated, over and over again; but I must now add that he is also one of the best and truest of men, and that at heart, despite all his little escapades, he is thoroughly good-natured and noble-mined. An easy-going, devil-may-care, warm-hearted man of the world, as handsome as Apollo himself, and perfectly indifferent to his personal advantages—such is the man to whom Louisa Reymond, our interesting and mysterious young heroine, is about to be united.

If any girl was ever happy in this world, I think that girl is our Louisa—not that she has forgotten her nameless condition, but because love is such a tyrant that, when he is actively working in the heart, everything else seems unimportant. Troubles may not vanish before him, but they certainly appear much less important. The thought of Rupert's love has already power enough to swallow up all other feelings, and for the first time in her life she almost forgets that she is nobody's child, and that there is nothing in the wide world she can lay claim to as her own.

(*To be continued.*)

THE COMMERCIAL EXPEDITION TO MEXICO.

THE TRIP ACROSS THE GULF AND ARRIVAL AT VERA CRUZ.

AT five o'clock A. M. on Thursday morning, the 9th of January, there were knockings, and ringings, and shoutings, and yellings, and howlings, and groanings, and ejaculations, and full-flavored words resounding through the corridors of the St. Charles Hotel, New Orleans; and at seven o'clock the members of the deputation, some in omnibuses, some in hacks, some on foot, started for the levee, where lay the good ship *City of Mexico*, of the far-famed Alexandre line, with steam up, in readiness to convey us across the Gulf. After the usual hustle and excitement consequent upon departure, and the acrobatic reception of the stereotyped late passenger, we swung slowly into the river, where we coquetted a while with the current, till, by the aid of a powerful but singularly uproarious tug, we were finally enabled to face the situation, and to leave the Crescent City in the receding distance. All hands were summoned on deck and the purser read out the passenger-list, a list as fatal to many of us as those prepared by the *sans culottes* for *la mère guillotine*. "Mr. Brown, No. 5," read the purser—"with you, Mr. Brown, are Mr. Smith and Mr. Thompson." A rush to ascertain the exact whereabouts of our ocean home immediately took place, and the expressions upon the visages of the returning explorers would have put the rueful countenance of Don Quixote de la Mancha to the blush. The staterooms had been allotted in the order of application for tickets, and, as a matter of course, the man who had purchased the last ticket howled loudest for the best cabin. A revolution seemed imminent, but the sound of a breakfast-gong dispersed the rioters, and when the inner man had been satisfied his better nature came slowly but surely to the front. The artist and the writer were fortunate in being placed together, while a sort of improvised shelf was allotted to a very lively and entertaining young gentleman, to whose good humor and good fellowship I beg at this writing to bear honest testimony.

The sail down the Mississippi strongly and strangely reminded me of the "lazy Scheldt." Given a few windmills and the resemblance would be simply perfect. The old châteaux with their trimly and primly cut ever so green trees, in this instance laden with golden oranges; the banks rising on either side above the flat-lying plantations, all of sugar; the dull, dreary sameness, with no object to break the sky-line—was I on the *Baron Osy, en route* for Antwerp and down among the Dutchmen? The ten hours in the river were disposed of by the writing up of diaries, the vigorous consumption of oranges, and feeble and irresolute prognostications anent the chances of a smooth passage. The passengers who declared that they never got sick were regarded with feelings of envy, and those who announced that they were never well at sea begat aversion and contempt. Field-glasses were at a discount, and as towards sunset we espied breakers ahead, we feigned a cheerfulness that we were very far from participating in. At six o'clock we reached the levee and the South Pass, now twenty-six feet deep, and at five minutes past, seventy-five per cent. of the passengers were clasped in the clammy embraces of *mal de mer*. I have traveled far and wide, from the Baltic to the Mediterranean, from the Atlantic to the Pacific; I have beheld the miserable cockney on a Thames liver boat, the son of Gotham off the fishing banks; but never, oh, never did I behold so instantaneous a development of this merciless malady—never gaze upon a set of joyous, boisterous, happy human beings so suddenly plunged into the writhings of a fathomless despair. The artist succumbed, the writer bent his head before the blast, and, taking refuge in our stateroom, made no visible sign until the morning of Sunday, the 12th, when, desperate and dauntless, we rolled from our respective berths, plunged through the saloon, and ascended the companion way to take a wistful peep at the snow-capped summit of the extinct volcano, Orizaba, that stood in solemn and awful grandeur, partly wrapped in a mantle of gloomy cloud, and fully sixty miles away. Never have I beheld any sight so sublime—a sight so calculated to fill the soul as with the chorus of a great amen. For one brief second the sun shot a single ray across the snowy peak, and for one brief second flashed upon us "the white radiance of eternity." We continued to gaze at this grim and ghostly sentinel until he disappeared high in the clouds, and it was hours ere the faint outlines of Montezuma's shores became mingled with the hazy horizon.

We were favored with a *norte*, which sprang up with a suddenness only known to the Gulf, where the sudden changes of the weather are more frequent than even the *pronunciamiento*. The *norte* is a wind that, although inconvenient to the shipping and obstructive to the landing of merchandise, is a welcome guest, since it temporarily frees the town of Vera Cruz from the scourge of vomito—that most malignant type of yellow fever, and for which the town enjoys so unenviable a reputation. It seems scarcely credible that the chief port of the Republic should lack a harbor and every arrangement to facilitate the shipping traffic. But such is the case, and, with the exception of the mole, a stone pier over which every wanton wave gayly disports itself at will, Vera Cruz is without a landing-place. It is, however, but just to say that its topography is unfavorable to the construction of a harbor. At present vessels must anchor between the shore and a small island about half a mile to seaward, on which is built the fort of San Juan de Ulloa. At the back of this island, and parallel to the coast, coral reefs extend for a considerable distance, so that the town can only be approached from the north or south. When a *norte* is blowing, communication between the vessels in the roadstead and the shore is impossible; and when the wind becomes very violent, as is frequently the case in January and February, ships put out to sea in order to prevent inevitable wreckage, should their anchors

Digitized by Google

come to drag. A norte rose at us; we put on every pound of steam that the boiler would stand, in order to endeavor to make the roadstead before the wind came to its full strength. We spun over the boiling, hissing, seething waters, the norte whistling through the rigging and wrestling desperately with the good ship, that creaked, and groaned, and labored to the uttermost limits of endurance. When almost within hail of the shore we signaled for a pilot, but the sea was washing over the mole, and the pilot, wise in his generation, refused to come to our relief. *Hinc illæ lachrymæ!* There was nothing for us but to put to sea again, and run for the smooth water lying five miles away between the mainland and a small island called Sacrificio. This island is remarkable, since it was here that the Aztecs offered up human sacrifices to their bloodthirsty and exacting gods. Upon a particular day in each year a youth, selected for his beauty and *physique*, accompanied by his four wives, chosen from the loveliest of the Aztec maidens, was borne across the flashing waters to his doom. For one year he was treated as a god; everything that earth could yield him in the way of delight was his. Then came the terrible and ghastly voyage to Sacrificio. He was led to an altar, still in existence, and now shaded by four date-palms, the only trees on the island. A priest, shrouded from head to heel in blood-red robes, approached and, with a horrible dexterity, cut the heart from out his body, flinging it, still palpitating, upon the gore-dyed stone. Sacrificio lies two miles from the mainland, just opposite to where General Scott landed his forces in 1847. Some of our party visited it and returned laden with several specimens of coral, together with a real live cocoanut. The lamentations were loud and long when it became known that another night should be passed on board ship; but when the captain assured us that to sleep in Vera Cruz was not unattended with risk, especially to those whom sea-sickness had marked for its own, we resigned ourselves to the inevitable and prepared for a good square sleep. It was our first night in the tropics, and we made much of it. The moon bathed ship and sea in liquid pearl, the stars glittered as they glitter only in these latitudes. The Southern Cross appeared in the dark-blue vault, while came from the shore a delicious fragrance borne on a caressing breeze that wooingly whispered of rare and radiant flowers. Many of us remained on deck far into the "wee sma' hours," as we did not dare insult the glory of that tropical night by jilting it in favor of our staterooms.

I have advisedly passed over the details of our voyage across the Gulf. Like the needy knife-grinder, I have no *story* to tell. By grace especial the *City of Mexico* steamed direct from New Orleans to Vera Cruz, making no calls by the way, thus saving at least two clear days of ocean travel—two centuries to many of our deputation. There were some of the passengers who enjoyed the whole thing, and never missed a meal, while others, resigning themselves to their fate, never appeared until the eagerly-looked-forward-to hour of landing.

A vertical sun blazing right over our heads, and gilding everything it lighted upon with a dazzle and a glare impossible to describe save as *white daysbine*, saluted us on Monday morning, the 13th of January. On our left lay Vera Cruz, baked to a dull pink, on our right the fort of San Juan de Ulloa, part of whose battlemented walls showed fearful zigzag rents done by the terrific battering power of the *norte*. A few black-faced, white-helmeted toy soldiers gazed stolidly at the *City of Mexico*, blinking like human owls. At anchor rode a sister ship, with half a dozen craft of various descriptions, while away at sea were tiny sail-boats, whose canvas resembled a nicely assorted hand at euchre, the cards opening outwards from the base of the palm.

The fort, as seen in our illustration, which is also a prison, is built upon the small island on which Hernando Cortez landed on the 21st of April, 1519. It was commenced in 1569, finished in 1633 by the Spaniards, in whose power it remained until several years after the independence of Mexico. This island, in 1568, fell momentarily into the hands of Sir T. Hawkins, and in 1683 the pirate Nicolas Agramont pounced upon it. In 1825 it was surrendered to the Mexican General Barrazza. In 1838 the Prince de Joinville, son of Louis Philippe, took possession of it. It was occupied by the American army in 1847-8, and it was finally abandoned by the Mexicans when the allied forces of England, France and Spain arrived in the waters of Vera Cruz. On the 18th of May, 1858, the Constitutional Government of Mexico withdrew within its walls—Benito Juarez, President. On the 28th of August, 1864, several inhabitants of Mexico City were imprisoned within its walls for having too forcibly advocated republican principles. As I gazed at its crumbling and storm-rent walls, I bethought me of the strange, strange stories these very walls could tell.

The town of Vera Cruz, all pink, the window-shutters a light green, the houses constructed of *adobe*, solid and stunted, naturally focused our attention. Church towers, surmounted by gilt crosses flashing in the sunlight, stood out in bold relief against the pale-blue sky, while here and there the crest of a stately palm seemed painted upon the wall of azure. On the right a white, feathery column told us that the *ferro carril*, or railway, lay in that quarter; on the left stretched dead, dull sand, till it met the bright-blue line of heaven. Dim and shadowy spectres filled in the background, gigantic mountains still closely veiled in their jealous scruples of cloud.

Around the steamer shore-boats were packed as closely as sardines in a box, blue-painted, with white awnings, and occupied by boatmen who would insure the success of an *opera bouffe*—such picturesque-looking fellows, in dazzling white drawers cut away at the knee, a *rayah*, or red sash, round the waist, a vest whiter than the snow on Orizaba, and straw *sombrero*. Their breasts, arms, legs and feet were naked and the color of roasted coffee; their teeth were as white as their garments, while hair and eyes were black as the raven's wing. They were all looking up at us, and we were all looking down at them, each boatman gesticulating and shouting *uno peso* in a shrill and squeaky voice, his attitude that of mortal defiance. This was our first wrestle with the Spanish language, and the efforts of some of the party—hard-headed commercial men—to strike a bargain for carrying ashore were irresistibly ludicrous. My experience in Spain made me the hero of the hour, and having been elected paymaster-general to a very large boat-load, I succeeded in landing about fifteen persons at the rate of half a dollar a head. How gladly we sprang ashore, how joyfully we planted our feet once more upon *terra firma!* The mole was literally swarming with human beings, from the picturesque-looking porters who were detailed by the custom-house authorities to pass on our impedimenta, to the "swells" of the town, who affect the shiniest of high silk hats, the shortest of short-tailed coats, the tightest of tight pants, save at the feet, where they expanded to the tip of the shoe, and the daintiest of cushioned-toed boots. There were military uniforms and glittering *charlo*; there were ladies in delicate black with airy mantillas veiling with *media* women in flaunting hues and rebozos—that half-shawl half-cloak, all-veil that they fling about their little frames with the grace of a Senglian *maja!* there were poorly-clad Indios, but ever so neat, despite their tatters; there were copper-skinned flower-girls, each with a scarlet bud coquettishly inserted in her blue-black hair. *Aguadores*, or water-carriers, in their leathern garments bearing huge earthen water-jars—*chocohal*—on their backs, suspended by straps from their foreheads, and a smaller jar—*cantaro*—hanging in front; there were hawkers of confectionery, *dulces agua fresca*, *tamales*, and a hundred other wares of the nature of which I am still in blissful ignorance. A whiter, brighter, or more glowing scene it has never been my good fortune to witness, and I lingered on the mole while the artist made his sketch, languidly reveling in this tropical color-bath.

A deputation boarded the *City of Mexico* at an early hour, bidding us welcome to Vera Cruz, and making us free of the Commercial Club; and before I chronicle the proceedings of the American Industrial Deputation in the town of the True Cross I shall make brief mention of the place itself.

Vera Cruz was founded by the Viceroy Count Monterey at the end of the sixteenth century, and until the Declaration of Independence its port had the privilege of alone being open to foreign commerce on the Atlantic seaboard of Mexico. This was a source of great wealth to the town, and its buildings retain all the marks and tokens of a past grandeur. Originally a fortress, it is still entirely surrounded by massive walls and ramparts—the latter stretching a quarter of a mile along the seashore, flanked on both sides by ancient forts, whilst on the land side the ramparts are curved in the form of an arc, and entered by a number of quaint gateways bearing the signs of rude buffetings from time and tempest. The first houses built at Vera Cruz by the conquerors were situated on the same spot where the city now stands, and the new colony was called Villa Rica de la Vera Cruz, "the rich town of the true cross," but in 1524 it was moved twelve miles further north. It was then taken by Cortez to the place now known as La Antigua Vera Cruz, "the old Vera Cruz," and finally re-established in the year 1600 under Monterey in its primitive and actual situation. By these migrations the Spaniards hoped to free themselves from the *vomito*; but, as it is produced by the bad quality of the water, the reflection of the sun on the sands, and the emanations of the marshes, they found that the whole coast was infected. The town, which is small, contains 12,000 inhabitants, its floating population being 41,000. Its surrounding fortifications were erected in 1793. They measure 8,500 feet, and are mounted with over 100 guns. The city suffered considerably in 1696, 1698 and 1712, from fire, and it was pillaged on the 17th of May, 1683, by pirates. The countless ancient cupolas and towers look hoar and venerable, whilst the houses are kept in good repair and carefully coated with paint to conceal the wrinkles of age. The streets are admirably neat and clean, and how the street-scavengers, the sombre *zopilotes*—buzzards—manage to thrive and get fat on their chances is a matter of wonder. These birds are to be seen at every turn. They take no notice of anybody and no person notices them. They perch where they like and are free of the city, and woe to him who dare lay profane hand upon them. Such a wanton is instantly fined or imprisoned. I saw one perched upon an upturned basket in the market-place solemnly blinking in the midst of the clatter of a fiercely gesticulating and densely-packed crowd of people—blinking like Grip, the iron-gray raven of Barnaby Rudge.

The City of Vera Cruz is the capital of the State of the same name, and through it pass two-thirds of all the Mexican imports and exports. Before 1835 all the goods landed at Vera Cruz for the capital and the interior were forwarded by mules, while the conductas of specie were forwarded to this port for shipment, escorted by a detachment of cavalry. It was from this city that Montezuma had red mullet carried to the capital by means of running bearers, each slave conveying the much cherished fish in a basket a very short distance, but at his very highest speed, when he transferred to the next runner, and so on to the capital, where it arrived still fresh, and where it was cooked after the Mexican fashion, a fashion clung to to-day—and *parole d'honneur*, Delmonico should write for the receipt. If Cologne has "two-and-seventy odors" Vera Cruz heads it by one. The same stale, garlicky perfume that had greeted my olfactory nerves in sunny Spain greeted me here, and for a little while the aroma from the open sewers—all the sewers are open and run a liquid resembling the waters of a clear stream, producing a feeling akin to nausea. A cold water plunge, however, soon put me to rights, the bath constructed of blue-glazed tiles, almost as delicate as the "real Chelsea," the apartment hung in scarlet and giving upon a *patio*, or fountain-decorated courtyard, the tropical sun flinging its white dazzle on a nursery of the most enchanting greenery, on palms, and ferns, and orchids, and on red and yellow blossoms, such as even Fortuny dared not have attempted with his all-glowing brush. After assembling at the Commercial Club, a cool, elegantly gotten-up establishment, the American deputation, who were received by the Governor and the Captain-General, proceeded in twos to the Fonda Gran Hotel Veracruzano, a quaint old building, where the municipality entertained them at *almuerzo*, or midday meal, the most noticeable features of which were a dish composed of eggs, rice, and the Lord knows what else besides, the red mullet—absolutely delicious—and snails. I observed that the dishes of snails were not extensively patronized. After *almuerzo* the artist and I took a stroll through the city, always advisedly keeping on the shady side of the streets, for the sun was intensely hot, and the sheen and dazzle almost blinding. We thought of Chicago, and 21 degrees below zero, and of the magic carpet in the "Arabian Nights" story that wafted its happy possessor in a second from "Indus to the Pole," or vice versâ. What color in every turn of the streets of Vera Cruz! Here a string of mules laden with every conceivable commodity, the leader ridden by the heavy villain of the cheap tragedy; or a rude, quaint cart, its sides composed of a netting, drawn by three mules—one in the shafts, the others at either side: the one on the left hand bestridden by a jaunty fellow in *charro*—that is, in a gray felt sombrero bound in silver lace, in a skin jacket, braided with silver cord, in high buff boots, and always the blood-red *rayah*, or waist-belt; another turn would reveal dark-eyed señoritas peeping at us from beneath gayly-striped awnings stretched over iron balconies, the daughters of Vera Cruz sending forth their puffs of blue-white smoke from their coquettish cigarettes, while a low but joyous laugh at the Americanos would ripple into the sun-lighted street. Donkeys, haggard and hideous, such as one beholds in Spain, gazed at us as we sauntered along. Millers, whose cane-incased limbs showed white against the pale-blue sky, while here and there the shadow, jogged lazily beside their donkeys; *aguadores* cried their wares. Indians in dazzling white sped rapidly by us, never so much as vouchsafing us a passing regard. We strolled into the market-place. Oh! the glory of those reds and yellows and greens! Such tropical fruits and flowers!—such golds and blues and purples. Indian women stretched on mats indolently watched their stock of red and green pepper pods, of *tortillas*, of *granadas*, of cocoanuts, of melons, of strange sweetmeats and uninviting-looking tarts of *bizarre* shape; *rancheros* dismounted from their dapper little horses to bargain for this, that, or the other; men in *sombrero* and *serapes* and *ponchos*, stood listlessly around, unconsciously creating a picture over which the artist gushed and gushed again. Fain would we have lingered amongst these fruits and flowers, but two o'clock was named for our departure for Orizaba, and punctuality was the order of the day, for every inch of the scenery along the line of rail must be secured ere sunset.

Casting a last long, lingering glance at the market-place, we moved in the direction of the cathedral and on to the *plaza*, where we beheld our first cocoanut growing in the open air. We had not time to visit the Alameda, or more than a moment to glance round us at the *plaza*, a capital specimen of this national institution, tesselated with a most curious and artistic pavement of marble. The cathedral is very dingy and wears a thoroughly poverty-stricken aspect. Past shoemakers working at their high-heeled, cushion-toed boots, in the open air; past glimpses of cool interiors, lighted by the vertical sun; past tobacco-dealers, spreading the leaf on mats to dry; past warehouses, so singularly uncommercial-looking as to suggest the idea that their occupiers were merely engaged in playing at commerce just to kill time; past wine-shops, reeking with unwholesome smells; past bakery establishments, containing the prettiest and most artistically made up bread; past ragged soldiers and linen-clad policemen, we got back to the Commercial Club, where we picked up our satchels and started for the *ferro carril*.

All the leading citizens thronged the depot, and the scene was one of intense animation. The engine, so unlike anything we had ever seen, secured considerable attention, and how it ever dragged us up the inclines we so safely traversed is still a matter of wonder to many of us. The cars were constituted after the fashion of our own, but very clingy and very third-rate. The regular carriage on this line is of the English pattern, in compartments, each compartment capable of containing eight persons; but this class of car would never have suited the requirements of so large a party, consequently the management, who put on the "special" free of all charge, was wise in its selection. The strange engine blew a strange, unearthly sound from a strange whistle, and, amid a thousand *adios*, we slowly started from the depot, every man of us endeavoring to secure a seat on the left-hand side of the train, in order to enjoy the scenery—started out across the tawny sands *en route* for the halls of the Montezumas.

SCIENTIFIC INTELLIGENCE.

Fine Asbestos Mines have been discovered in the Province of Quebec, Canada.

Immense Savings of Coal are reported through the use of asbestos pipe-coverings.

Owners of Vineyards in France have ordered large quantities of the sulpho-carbonate of potassium to be applied as a remedy for phylloxera.

The Emperor of Germany has approved of the election of Mr. Darwin and Professor Owen as Foreign Members of the Berlin Academy of Sciences.

French Scientific Circles think it unfair that the salaries of professors of law and letters should exceed those of medicine and science by about 2,000 francs.

A Fine Building has been constructed in the new Boulevard St. Germain for the uses of the Geographical Society of Paris. The architecture is plain but elegant.

An Electric Spark Pen, for producing engravings on copper or zinc, has been invented by a Parisian. The light of the spark also guides the artist in a dark room.

A Study of the *Patent Office Gazette* shows that inventions go by streaks. Recently it was windmills; still later the minds of inventors were directed to fire-escapes.

The Peruvian Miners chew cocoa-leaves, which have a mild, sedative influence, and are thought to increase strength. They assist endurance through long periods of abstinence.

A Solution of Common Salt is recommended by M. Mercier for preserving botanical and zoological specimens. It is cheaper than alcohol, does not evaporate readily, and does not disappear in other ways.

At the Royal Arsenal, Woolwich, a series of experiments with kites as a means of lifting weights are being made. The kites are the invention of Hodgson, and are said to rise with the least breeze, and to float horizontally with considerable buoyancy.

M. Raoul Pictet is quite restored to health. The University of Geneva has conferred upon him the honorary degree of Doctor, and he has just been made a Chevalier of the Legion of Honor by the French Government, in recognition of his eminent services to science, and especially of his successful experiments in the liquefaction of gases.

Manufacture of Aluminum in France.—At Salindres, near Alais, France, aluminum is manufactured in the following manner: Bauxite, which is a hydrated sesquioxide of iron and aluminum, is heated in a reverberatory furnace with soda; the aluminate of soda thereby formed is leached and then precipitated by passing a current of carbonic acid through the liquor. The precipitate is mixed with salt and coal-dust, shaped into balls and heated in vertical retorts to a white heat, while a current of chlorine gas passes through the vessel. A double chloride of aluminum and sodium is formed which distills over into a receiver which must be carefully closed to exclude moisture. By adding thirty-five per cent. of sodium and forty per cent. of cryolite, metallic aluminum is formed, which gathers in the bottom of the crucible and can be subsequently melted into ingots under a fux of common salt. The cost of metallic aluminum when prepared in this way is $7 per pound.

Drying Eggs by Wholesale.—A large establishment has been opened in St. Louis, Missouri, for drying eggs by the thousand dozen. The eggs, after being carefully inspected by light, are thrown into an immense receptacle, where they are broken and subsequently, by centrifugal operation, the white and yelk are separated from the shells, very much as liquid honey is taken from the comb or water is removed from sugar. The liquid is then dried by currents of warm air at a temperature that does not coagulate the albumen, and the dried article, which resembles brown sugar, is packed in barrels ready for transportation. The dried preparation has been taken twice across the equator in ships and then made into omelette which compared very favorably with that prepared from fresh eggs. As long as the eggs are preserved dry there is no difficulty in keeping them indefinitely after they have undergone the above process. This method will add to the list of preserved food, and will prove valuable on long voyages. It is analogous to the process of manufacturing dry albumen from blood, and was no doubt suggested by that operation.

PERSONAL GOSSIP.

HERBERT SPENCER will Winter in the south of France.

A CAFFE paper says the Caffre name for Sir Bartle Frere signifies "The dog that bites before he barks."

THE wife of President Porter of Yale College has been elected President of the Connecticut Training School for Nurses.

EDMOND ABOUT says that an election to the once famous French Academy is no longer coveted by any writer or author of eminence in France.

PROFESSOR DAVID SWING will not have to preach in a theatre next year, as his Chicago friends are going to build for him a lecture hall costing $150,000.

SENOR ZAMACONA, the Mexican Minister, is a thorough musician. He has a piano and an organ in his house at Washington, and plays remarkably well upon both.

THE oldest member of Queen Victoria's Privy Council is Viscount Stratford de Redcliffe, who is ninety-one; and the youngest member is Prince Leopold, aged twenty-six.

J. D. MCLEOD (colored) has been appointed Government storekeeper at Covington, Ky., being the first man of his race who has ever received an appointment of the kind in the State.

IT is stated at Madrid that the Kings of Spain and Portugal, at the approaching meeting at Elvas, will discuss a marriage between the Infanta Maria Della Paz, sister of King Alfonso, and Prince Augustus of Portugal, brother of King Luis.

MISS LEE, the eldest daughter of the late Confederate general, is said to be an energetic traveler. She was not long ago entertained by Lord and Lady Napier at Gibraltar, and a few weeks before was within the Russian lines in Turkey.

ARCHBISHOP GIBBONS of Baltimore has been appealed to by the former Venezuelan consul at Baltimore, to ascertain whether any Sisters of Charity can be found in this country who are willing to go to Venezuela as religious teachers.

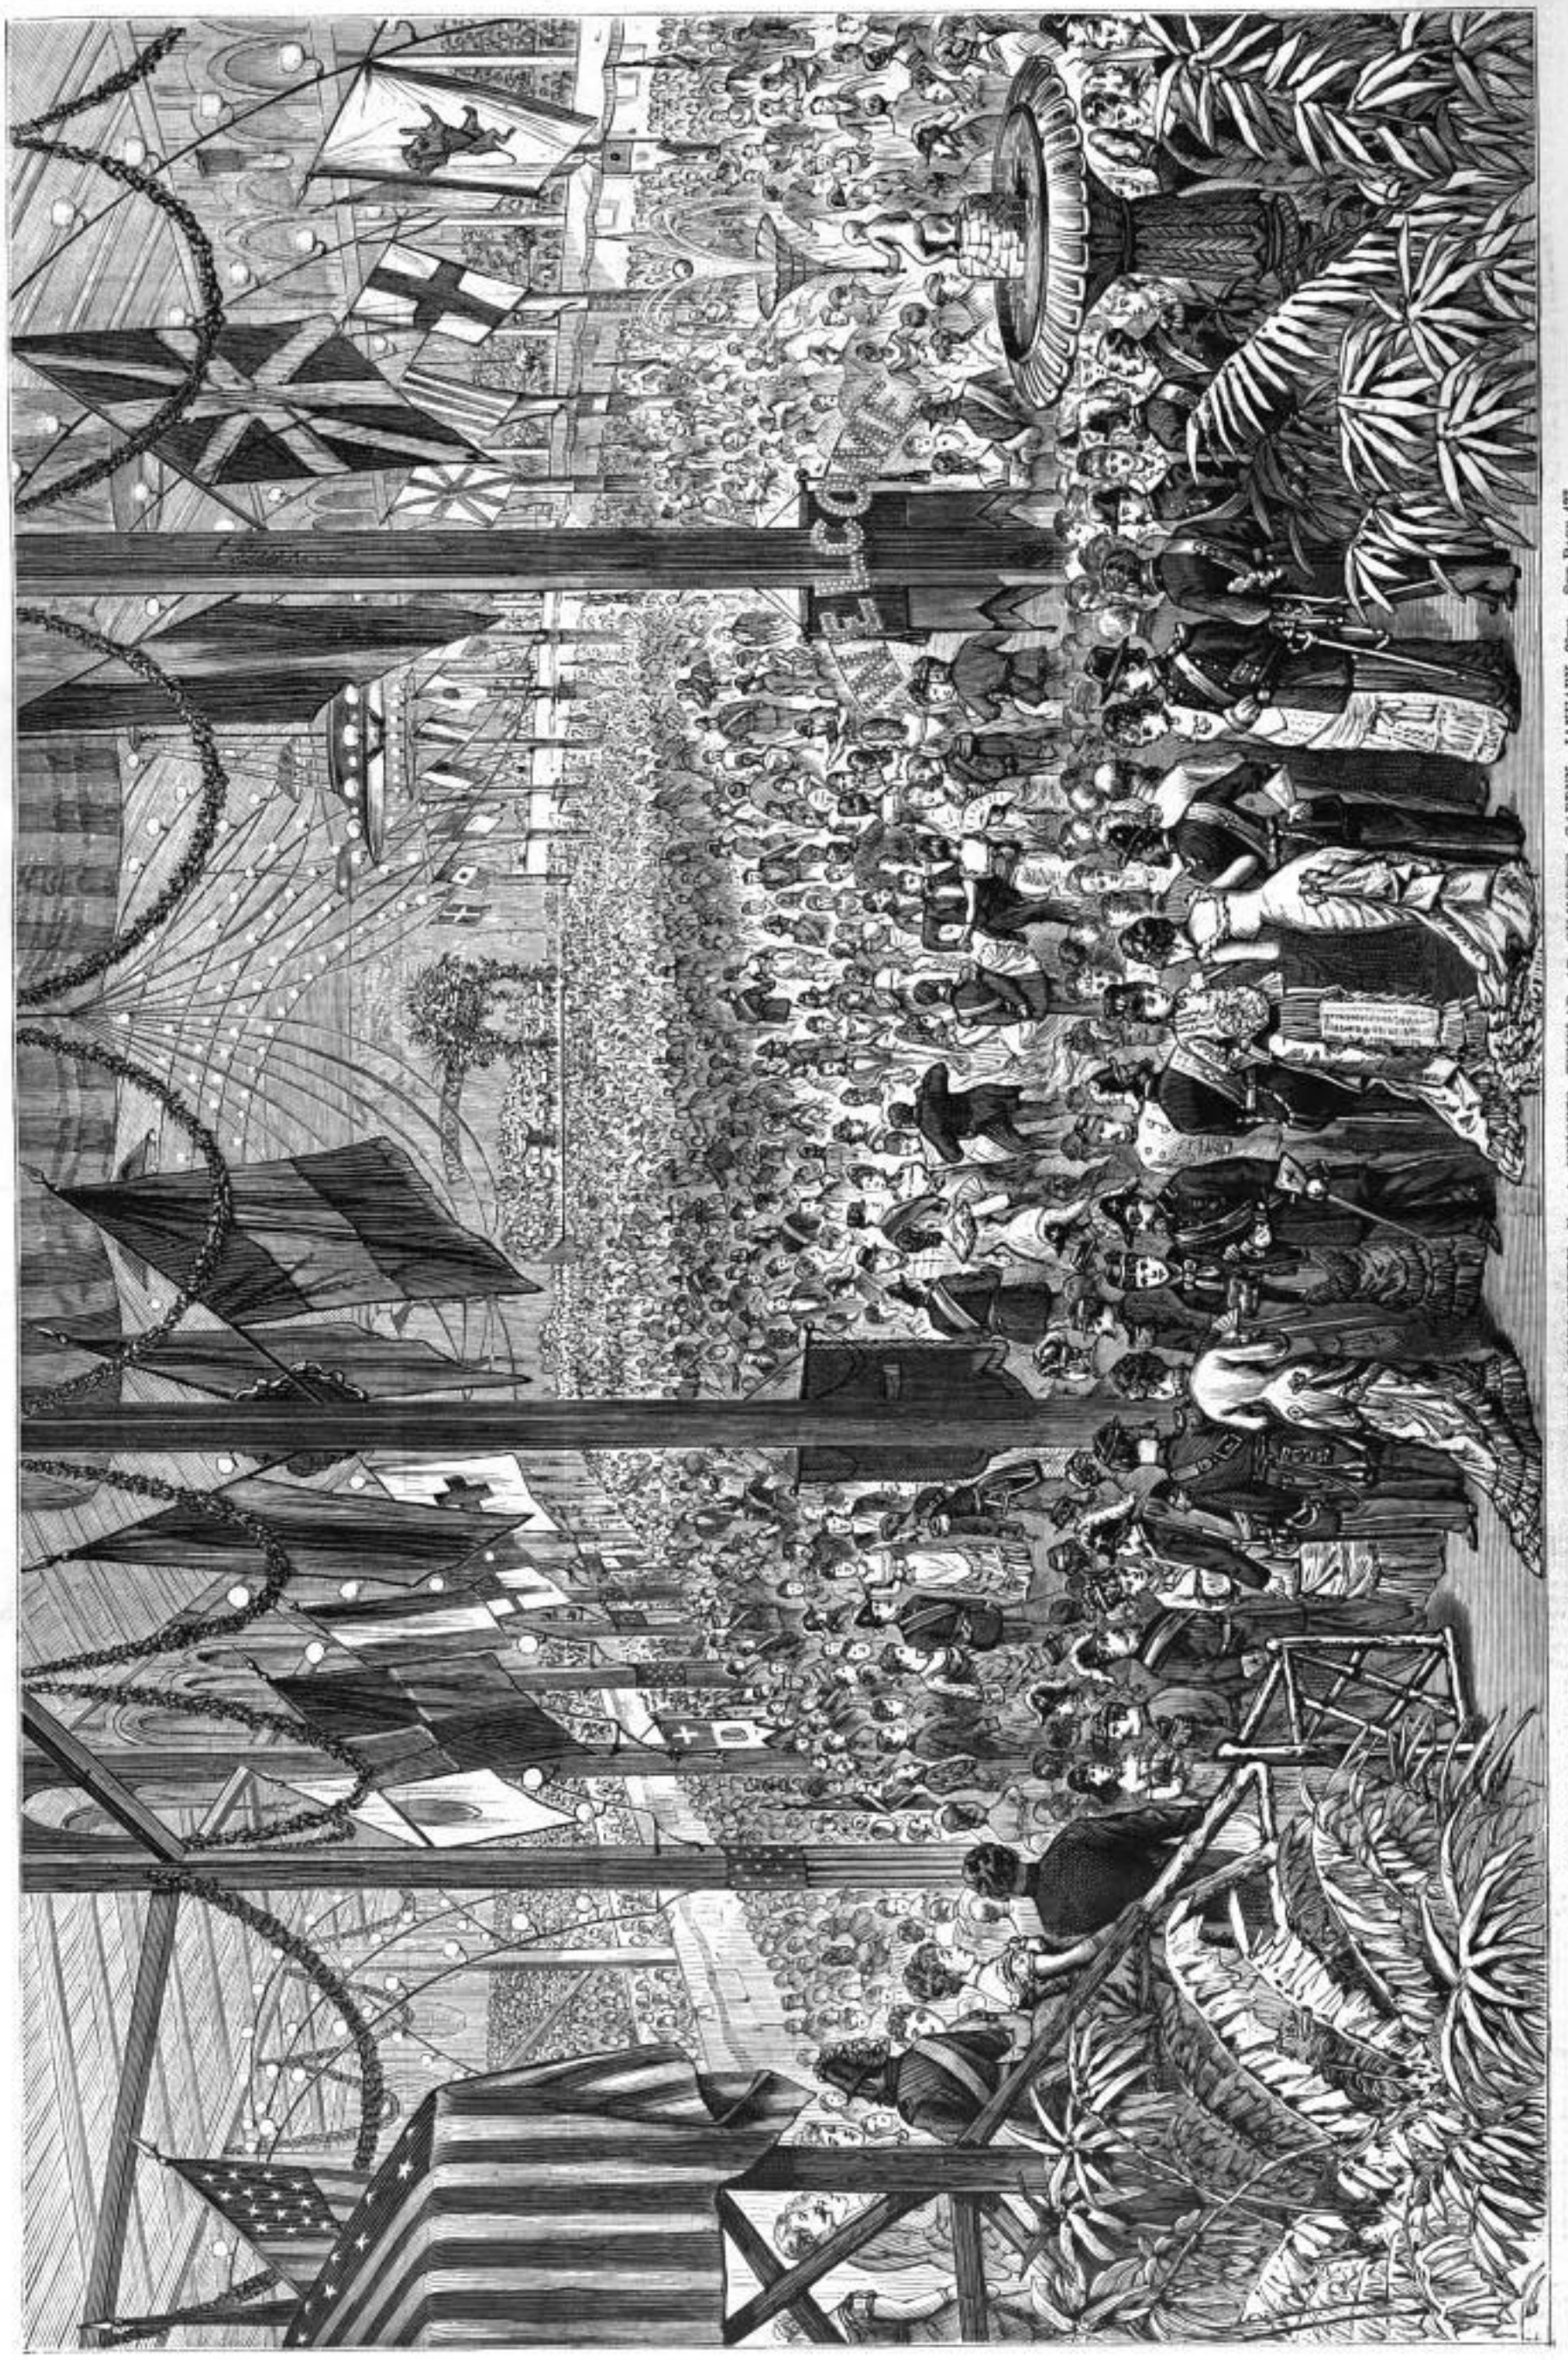
THE German Emperor is wonderfully well and vigorous, though still obliged to carry his right arm in a sling, and drives out daily, accompanied only by the Crown Prince or an equerry. All the forenoon he devotes to receiving reports and giving audiences.

GOVERNOR MARKS has only one leg. State Treasurer Polk has only one, and Colonel Gaines, Comptroller, has but one arm—this in Tennessee. In Louisiana Governor Nicholls has but one arm and one leg, and in South Carolina the Governor has but one leg, and the two United States Senators have but two legs between them. Wars and mules did it.

MADAME COSIMA LISZT WAGNER, the wife of the composer, has just enjoyed a unique serenade on the occasion of her husband's birthday. The Duke of Saxe-Meiningen sent the ducal orchestra to Villa Wahnfried, the home of the Wagners, where they delighted the ears of the accomplished lady with excerpts from her husband's new opera of "Parsifal."

SIR WILLIAM JENNER has just retired from the Chair of Morbid Anatomy, in University College, which he has filled with rare success for nearly thirty years. The *Lancet* says that the demands made upon his time by his appointments and the public have compelled Sir William's resignation, and laments that in England they have no endowments which are worthy the acceptance of their master minds.

THE two sons of the Prince of Wales—Prince George and Prince Victor—have made a highly creditable examination, and returned at Christmas to their mother laden with prizes. The two boys, on joining, were at once christened "Herring" and "Sprat," and by these sobriquets are known to this day. The princes respond to their curious appellations with jaunty frankness and sailor-like good humor.



THE Duchess of Edinburgh, while she has been very frigid in manner on all ceremonious occasions in England, was very agreeable when among her own friends, serving them with her own hands as unostentatiously as though she were an English Princess. Her great stateliness has hitherto made her unpopular, but now, it appears, she has altered her ways, is entering into the local interests about her English home, and is said to like it and to be liked very much better than before.

GENERAL DE NANSOUTY, the Director of the Meteorological Observatory on the Pic du Midi, has been suffering from his devotion to science. He was snowed-up alone at his station, and, being old and in delicate health, great anxiety was felt about him. Heroic efforts were made by the peasantry to reach him, which they did at last, and the telegraphic line was repaired. The general bravely refused to relinquish his post, and he is spending his Winter as usual on one of the highest peaks of France.

THE Princess of Tanjore, who has not only made her appearance in public, but permitted the Governor of Madras to invest her with the insignia of the Star of India, is the most highly educated princess in the Orient. She owes her intellectual culture to the aid of an accomplished young German lady, and has made considerable progress in English. An eye-witness of the ceremony says that her slight figure and charming face at once gained the sympathy of all. Over a plain and straight dress of cloth-of-gold, with a girdle of the same stuff, she wore an emerald-green silk *tchu*, most beautifully ornamented with jewels and embroidery, and her headdress seemed to be a sort of turban. A female attendant carried a splendid sword.

ZEBULON B. VANCE, the new Democratic Senator from North Carolina, was born in Buncombe County, N. C., May 13th, 1830. He studied law, and was admitted to the Bar in 1853. In 1854 he was elected to the State Legislature. When Congressman T. L. Clingman (who had been elected Senator) resigned in 1858, Governor Vance was elected as a States Rights American to succeed him. He was re-elected to the Thirty-sixth Congress, and served till the close of his term in March, 1861. Then he went into the Confederacy, and was elected Governor of North Carolina, serving from 1861 to 1864. During the early part of the war he was colonel of a regiment raised by him for the Confederate Army. In 1863 he addressed a letter to Jefferson Davis on the subject of peace, declaring that the only way of removing the discontent then prevailing in North Carolina was by making some attempt at negotiating with the Federal Government. In August, 1864, he was again elected Governor, defeating Wm. H. Holden by 34,000 majority. He served until May 29th, 1865, when Holden was appointed Provisional Governor. In 1870 he was elected United States Senator, but it was declared that he was not eligible. In 1872 he again ran for the Senatorship, but withdrew before the contest ended. His disabilities had been removed in the meantime, and he would have been admitted if elected. Governor Vance still continued to be very active in North Carolina politics after his unsuccessful attempts to secure the Senatorship, and in 1877 was elected Governor for the term ending in 1881.

THE LAST INDIAN FIGHT.

ON the 20th of October last a band of Cheyenne Indians, officially reported as numbering 149, was surrounded in the sand hills of Northwest Nebraska by three companies of the Third United States Cavalry, during a severe snowstorm, and forced to surrender. They expressed a willingness to remain peaceably at Camp Robinson, or to live with Red Cloud's people, but refused in emphatic terms to return to their reservation in the Indian Territory, where they declared they had been starved. On the 19th of December Commissioner Hayt ordered their removal to Fort Leavenworth, Kansas, but on the 8th of January the order was modified so as to provide that all full-grown men should be taken to the Dry Tortugas, or St. Augustine, Fla., and the women and children to their agency in the Indian Territory whence they had fled. When this decision was announced to them they became sullen, then silent. They ceased their demands for the long-promised food and clothing. Their sudden quiet excited the suspicions of the army officers, and a heavy guard was placed over their prison quarters.

At about eleven o'clock on the night of January 9th, the Indians broke prison and made for the prairie, firing upon the guards as they ran. The noise of the firing aroused the main guard, which, with a cavalry force, was immediately sent in pursuit. In the chase over forty of the Indians were killed by the troops. Subsequently the troops captured or forced to surrender thirty-seven, nearly all women and children. The remainder made a stand in the bluffs, fortified their position with hastily constructed breastworks, and awaited an attack by the troops. The remainder of the story is a repetition of the oft-told tale. After various expedients had been adopted by the army officers, and the Indians had been driven from one point to another, they were finally caught in a wash-out only forty-six miles from their prison, surrounded by the soldiers, and, after a most heroic and stubborn resistance, during which twenty-three of their number were killed, only nine were left to surrender.

The most intelligible accounts of this disgraceful and cruel affair are derived from Lieutenant Schuyler, who was sent by General Crook to investigate it. He states that many Indians, chiefly squaws, had given in before the outbreak, and only the leading chiefs still held out. Several of them were induced to come out for a talk and were immediately secured, Wild Hog, one of the number, stabbing a soldier during the *mêlée*. The Indians inside, learning this, put up blankets at the windows and doors, which the soldiers could only remove at the cost of their lives. The Indians then tore up the floor and constructed rifle-pits underneath, whence they guarded every point. They had fifteen rifles and many revolvers. They guarded every avenue until ready, and then sallied out in a body, shooting down two sentinels and taking their guns.

Since the fight a pit has been found under the prison-house, which was completely carpeted with empty sacks. It is here that the arms were probably hidden, and the question will naturally be asked why was there so incomplete a search, and, in view of the fact that it was known that an escape was contemplated, why was there no attempt to barricade the prisoners and a stronger guard placed over them?

The cavalry sent out in pursuit, under command of Captain Wessells, struck the fugitives at a point twenty-two miles from camp. The place of defense selected by the Cheyennes was found to be a rifle-pit eight feet long and four feet wide, deep enough for their complete concealment, while near them, in the sloping ground, was an oval hole dug out, with the side hollowed, so that they could get in under it and be safe from the range of any shot fired at them. This enabled them to keep up a fusilade with deadly effect at close quarters until completely overwhelmed. During their fight they threw away their blankets, so as not to impede the rapidity of their movements and to be in full Indian fighting trim.

As the troops were exhausted and without supplies they returned to the camp, and the Indians, of course, escaped. In the subsequent engagement, January 22d, all four companies were deployed as skirmishers—Company F, Lieutenant Baxter, moving from the south to the northeast side; Company H, Captain Wessells, directly opposite; Company E, Captain Lawson, closed in at the mouth of the ravine, where the Indians had intrenched themselves, and Company A moved to the rear, thus hemming them in on all four sides, leaving no possible avenue of escape. The Indians had placed themselves in a deep washout, keeping under cover. As soon as the skirmishers were within 150 yards of the savages' stronghold the latter opened a deadly fire, killing Sergeant Taggert and Privates Brown and Nelson, of Company A, and dangerously, if not fatally, wounding Private Dubois, of Company H. Despite the dreadful volley poured into the troops they steadily advanced, and when within seventy-five yards of the savages' position fire was opened on all sides with terrible effect. At this moment Captain Wessells, leading his company and loudly cheering them forward, received a slight scalp wound from a pistol in the hands of one of the Cheyennes, rendering him completely insensible. Lieutenant Chase, of Company A, seeing the commanding officer fall, rushed forward instantly, seized Captain Wessells and carried him beyond the range of the enemy's fire; then dashing at the head of his own company, he led them to the very edge of the washout, where they fought the enemy with unabated fury. Meanwhile, Wessells having regained consciousness, again came to the front, and seeing the ground strewn with the dead bodies of the savages, implored his men to cease firing, with a view to getting the remaining Cheyennes to surrender, but the Indians stubbornly refused and rushed at the troops with formidable hunting-knives, having expended all their ammunition. They seemed determined to surrender to death only, but ere they had advanced many paces a volley was fired by the troops and all was over.

SHILOH SHELTER.

A POOR MAN'S LODGING-HOUSE.

THERE are two kinds of charities—the charity that provides for the poor, and the charity that helps the poor to provide for themselves. Of this latter kind is Shiloh Shelter, which is a lodging-house for poor men, in the old church on the corner of Prince and Marion Streets, in New York City. The church has been abandoned as a place of worship for some eight or ten years. It was formerly occupied by a colored congregation, and was called Shiloh Church: hence the name of the Shelter. In November, 1875, Mr. Charles H. Dessart, a merchant of a philanthropic spirit, rented the building, fitted up the pews and benches as banks for lodgers, and erected frames of scantling, from which hammocks were swung, altogether making places for from 450 to 475 lodgers. During the first Winter the lodgings were free. Tickets were distributed at all the police-stations in the city, with requests to send respectable men to the Shelter. One Winter's experience served to show that there were many who abused the privilege thus accorded to them, and Mr. Dessart resolved to make a change in the plan, and charge a nominal sum for lodging. A bunk in a pew costs three cents a night, and a hammock costs five cents. In the morning a breakfast of boiled mush, flavored with pork and sugar, is served to each one who wants it. Every one can have as much as he wants at a cost of two cents.

Even those who cannot afford these small sums are not rejected, if they are willing to work for the Shelter, in sawing and splitting wood, sweeping up the place, and other chores of that kind.

In the basement there are also banks, but the larger part is occupied by wash-rooms, bath-rooms, and water-closets. Every lodger is expected to wash himself before leaving in the morning, and when he is very dirty he is given a wash-ticket and is directed to wash not only himself, but also his clothes. If he refuses, he is not admitted again. There is also what is called a "deverminating closet," which is a room about six feet square, which is heated to 140 or 160 degrees. In this the clothes of those who are infested with vermin are hung at night, and in the morning they are entirely free from the pests. In addition, every lodger is furnished with a clean towel, abundance of soap and hot water, and buttons, needles and thread. These are all free.

The house is open at eight o'clock every evening, and remains open till ten. When a lodger presents himself, if he is a new-comer, he must wait until nine o'clock before he can be assigned to a bunk. If he has been there the previous night, he simply leaves his name and the number of the bunk he occupied, and it is then reserved for him until nine o'clock, or if he pays for it in advance, it is reserved all night. After ten o'clock the house is closed and none are admitted. At six o'clock in the morning the lodgers are called; at half-past six there is a second call, and at seven a third, and at half-past seven the house must be cleared of all who are not working or washing their clothes. The latter are allowed to remain until their apparel is dry. The greater part of the lodgers are regular customers, who go night after night. No drunken or disorderly person is admitted, nor any one who will not keep clean. Mr. Dessart is himself present every evening except Sunday, remaining from eight till ten o'clock, and seeing that everything goes aright. During the cold weather the Shelter is filled every night, but in Summer the demand for bunks is not so great.

There are eight men constantly employed in taking care of the place, and the entire premises are thoroughly swept, ventilated and deodorized every day, and once a week every part is thoroughly scrubbed. The names of all the lodgers are registered, and as far as possible the lodgers are always assigned to the same bunks. The Shelter does not pay its expenses, and every year Mr. Dessart is called upon to make up the deficiency. Nevertheless, he keeps it open for charity's sake.

FUN.

HAPPY thought! Those ciphers must have been made naughtomatically.

THE filthy lucre which rolls into the coal-dealer's coffers nowadays is his weather profit.

A BROADWAY hatter engages the services of a poet to concoct his advertisements. A verse-a-tile writer, forsooth.

WHAT is the difference between a street railway and a marine colporteur? One sells the tracks and the other tracts the sails.

THE plumber came down like a wolf on the fold,
His pockets were laden with solder and gold.
And for four mortal hours he made love to the cook,
And seventeen dollars were charged up in his book.

WHEN a young tobacco-chewer, who boasted that his father used the weed up to the day of his death, was asked if he didn't think it shortened his days, he replied, "Not at all. Each one of his days was twenty-four hours long, just the same as if he hadn't used tobacco."

A FRIEND of Dr. Johnson's, in conversation with him, was lamenting the disagreeable situation in which those persons stood who were eminent for their witticisms, as they were perpetually expected to be saying good things—that it was a heavy tax on them. "It is indeed," said Johnson, "a very heavy tax on them—a tax which no man can pay who does not steal."

NEAR Dumfries lived a pious family who had adopted an orphan who was regarded as half-witted. He had imbibed strict views on religious matters, however, and once asked his adopted mother if she did not think it wrong for the people to come to church and fall asleep, paying no better regard to the service. She replied she did. Accordingly, before going to church the next Sunday, he filled his pockets with apples. One bald-headed old man, who invariably went to sleep during the sermon, particularly attracted his attention. Seeing him at last nodding and giving nasal evidence of being in the "land of dreams," he struck the astounded sleeper a blow with an apple on the top of his bald pate. The minister and aroused congregation at once turned round and indignantly gazed at the boy, who merely said to the preacher, as he took another apple in his hand, with a sober, honest expression of countenance, "You preach; I'll keep 'em awake!"

Advertisements for any of Frank Leslie's Publications will be received, at regular rates, at the Philadelphia Office of Frank Leslie's Publishing House, 1309 Chestnut Street.

ADVICE TO CONSUMPTIVES.

THE celebrated physician, Dr. Paul Memeyer, gives the following valuable suggestions to persons suffering from lung affections: "The patient must, with scrupulous conscientiousness, insist upon breathing fresh, pure air, and must remember that the air of closed rooms is always more or less bad. . . . No man, however uncleanly, would drink muddy, dirty water. A party which occupies a room for hours, breathing the same air, might be compared to a party of bathers drinking the water in which they bathe. The patient must keep the window of his bedroom open. Night air is fresh air without daylight. In close, crowded rooms, the patient suffering from lung complaints breathes consumptively." By taking these precautions and using Dr. Pierce's Golden Medical Discovery and Pleasant Purgative Pellets, fully one-half of the cases of lung complaints would be cured in six months. For cough and irritation of the lungs do not always indicate the presence of consumption, although it may result in that disease, and if consumption has already become deeply seated in the system, this is the most efficient course of treatment that can be pursued outside of any institution that provides special facilities for the treatment of this disease. Dr. Pierce's celebrated Invalids' Hotel is such an institution. Send stamp for descriptive pamphlet containing also a complete treatise upon consumption, explaining its causes, nature, and the best methods of treating it, together with valuable hints concerning diet, clothing, exercise, etc., for consumptives. Address, Faculty of Invalids' and Tourists' Hotel, Buffalo, N. Y.

FACILE PRINCEPS among the finest metropolitan inns, the ST. NICHOLAS sustains the reputation of its long life, and in its rooms, furnishing, cuisine and general accommodations, is now, as ever, the most delightful of resting-places for the stranger to the great American capital. The terms have been reduced, while nothing is spared to keep it up to the best standard.

"WHAT A MAN SOWETH THAT SHALL HE ALSO REAP."—We would call the attention of all wishing good seeds to the advertisement of Boist's Warranted Garden Seeds, which, after the test of half a century, stand as the most popular because the most reliable in this country. They have won a world-wide reputation, being sold in all parts of the United States, as well as China, Japan and India. They were awarded the Grand Prize Medal for purity, and Diploma of Honor for superior quality, at the Centennial Exposition.

INDIGESTION, DYSPEPSIA, nervous prostration, and all forms of general debility relieved by taking MENEMAN'S PEPTONIZED BEEF TONIC, the only preparation of beef containing its *entire nutritious properties*. It is not a mere stimulant like the extracts of beef, but contains blood-making, force-generating and life-sustaining properties; is invaluable in all enfeebled conditions, whether the result of exhaustion, nervous prostration, overwork, or acute disease; particularly if resulting from pulmonary complaints. CASWELL, HAZARD & CO., Proprietors, New York.

ANY of our readers in the smaller cities and towns who are seeking employment, or who wish to add to their incomes, would do well to correspond with the H. W. Johns Manufacturing Co., 87 Maiden Lane, New York. Their Asbestos Roofing, Steam Pipe, and Boiler Coverings, round and flat Steam Packing, Fireproof Sheetings, Coatings, Cements, etc., are universally needed, and find a ready sale at all seasons of the year. The company are also the most extensive manufacturers in this country for strictly first-class Liquid Paints, and they offer liberal inducements to reliable men as local salesmen.

AN OBSTRUCTIVE STATUTE.

THE President of the United States, in recently transmitting to the Senate a letter of Secretary Sherman in regard to the suspension of the late Collector and Naval Officer of the Port of New York, took occasion to comment as follows on the management of the New York Custom House under Messrs. Arthur and Cornell:

"For a long period of time it has been used to manage and control political affairs. The officers suspended by me are, and for several years have been, engaged in the active personal management of the party politics of the City and State of New York. The duties of the offices held by them have been regarded as of subordinate importance to their partisan work. Their offices have been conducted as part of the political machinery under their control. They have made the Custom House a centre of partisan political management."

Mr. Secretary Sherman, in explaining to the President the grounds on which he had sought to procure the voluntary resignation of these officers, as the indispensable condition of civil service reform in the New York Custom House, proceeds to remark as follows on an obstruction placed in the path of the President by an existing statute of Congress:

"The Tenure of Office Act, of which your predecessor complained, left it within the power of the Senate to compel you to employ, in the discharge of the most delicate executive duties imposed upon you by the Constitution and the laws, persons whom you believed unfit to be trusted with such duties, and the well known practice in the Senate to defer largely to the Senator representing the party in the State where the office is located made it at all times difficult and sometimes impossible to make the most necessary changes."

A statute which so flagrantly interferes with the conduct and freedom of the Executive as to render "it at all times difficult and sometimes impossible to make the most necessary changes" in the employment of subordinate officers is a statute which plainly encroaches on the lawful prerogatives of the President. But in so writing to the President, it would seem that Mr. Sherman has slightly presumed on the "short memory" which, according to a familiar adage, is esteemed as the indispensable adjunct of politicians: for both President Hayes and Secretary Sherman were among the supporters of the Tenure of Office Act when it was passed in the year 1867. On referring to the record we find that they voted for it at every stage of its passage through Congress, and helped to pass it over the veto of President Johnson.

The wearer of the shoe can best tell where it pinches, and the law which was originally meant to serve as a "Spanish boot" for the punishment of President Johnson has survived to cramp the feet and vex the patience of President Grant and of President Hayes. As this Act was draughted by Senator Edmunds of Vermont, and received, at its passage, the support of every Republican Senator and Representative in Congress, it is entirely natural that the advocates of the measure, still remaining in the present Congress, should continue to assert its rightfulness, and to maintain its lawful place among the flowers of the Senatorial dignity. It is entirely natural, too, that the President and Secretary Sherman, having ceased to be legislators, and having become Executive officers of the Government, should be able to realize, as they never realized before, the practical difficulties and theoretical incongruities of the statute by which their hands are hampered in the institution of needed reforms.

The case affords a pregnant example of the evils which flow from general legislation with a view to meet a special and exceptional emergency. The defection of President Johnson from the Republican Party left the incumbent of Federal places subject in his case to the power of removal which, from the origin of the Government, had been lodged in the hands of the President. The Tenure of Office Act was invented for the repression of that Executive freedom which had been previously enjoyed in this matter down to the year 1867; and the freedom thus reposed in the hands of the President had not been placed there by the hap-hazard of chance and convenience. The first Congress under the Constitution, whose office it was to set the machinery of the Government in motion, had been called to sit in judgment on this question, and after careful and protracted debate, participated in by such worthies as Fisher Ames of Massachusetts, and James Madison of Virginia, it had been decided that the power of removal from office was vested in the President, without the consent of the Senate. It was on this theory that the Executive department of the Government was administered by the men who assisted in framing the Constitution, and who might be presumed to understand its meaning and purpose, as well as the men who eighty years afterwards gave a new construction to the instrument, and who put that new construction in the shape of a legislative statute.

The anomaly of the new construction is now set before the country in the most striking light. It is the sworn duty of the President to execute the laws of the land, and President Hayes represents that in the Custom House which collects more than two thirds of all the customs revenues of the Government, it has been the habit of Mr. Collector Arthur and of Mr. Cornell to regard the duties of their offices as "of subordinate importance to their partisan work." At the same time we are informed by Mr. Secretary Sherman that "it is a well-known practice in the Senate to defer largely to the Senator representing *the party* in the State where the office is located," and that in consequence of this deference to the interests of a local Senator it is "at all times difficult, and sometimes impossible, to make the most necessary changes."

That is, under the "practice of the Senate," as sanctioned and confirmed by the operation of the Tenure of Office Act, the most important offices of the land have come to be considered as among the political perquisites of the Republican Senator who chances to represent the Republican party of the State in which the offices are located. It would be impossible to conceive of any theory more demoralizing than this, and it ought to be a matter of congratulation to the friends of civil service reform that the iniquitous working of the innovating statute of 1867 is set forth by the President and Secretary of the Treasury in the light of such a signal example. It adds to the force of the Secretary's language that in condemning this statute he has not spared either himself or the President, and that in stigmatizing the "practice" of the Senate under it, he has not spared his recent colleagues in that body.

ARBITRATION IN LABOR DISPUTES.

THE last annual Message of Governor Hartranft to the Pennsylvania Legislature discussed at some length the question of the so-called conflict of labor and capital, from which the interests of that State have more largely suffered, perhaps, than those of any other. The collisions which have marked recent industrial annals, are not, he argues, peculiar to this country. All the labor communities of the Old World have passed through precisely the same turbulent career of strikes, riots, outrages and murders, which have excited so much alarm in Pennsylvania. Occurring in every industrial community and under every form of government, they cannot be regarded as menacing particularly republican institutions, nor is the cause to be looked for in our political organization. But the direct and indirect losses and miseries they entail upon the community demand a patient investigation of the causes, and an honest attempt at readjustment. In Pennsylvania, in the last eight years, the sum of $832,905 has been expended, over and above the ordinary military appropriations, for the suppression of riotous outbreaks. Meantime, the direct loss to capital, in the destruction of property, has been very great, while the damage from enforced inaction has been enormous. The loss of wages to the working class has amounted to many millions of dollars, and habits of individual independence and thrift have been enfeebled by a demoralizing dependence upon organizations. Then, besides, the antagonism of class has been a fruitful source of crime, and the large sums expended in the detection and conviction of the perpetrators of these outrages must be placed to the same account.

Governor Hartranft does not believe that the Molly Maguire murders originated in the depravity which deliberately selects criminality as a settled mode of life: "they were essentially class murders, and, as is always the case in the bitterness engendered by such contention, their criminality was ignored by many of the class and nationality outside of the guilty circle of the Order." In view of all the facts, Governor Hartranft seriously doubts "whether the policy of repression is the best remedy that the wisdom and humanity of the age can devise. It must eventually prove a failure in the United States. Under our political institutions the best way to promote the spread of communistic ideas is to hedge property with bayonets. In the long run, the policy of elevation is safer and cheaper than the policy of repression." Governor Hartranft concludes his argument by commending the system of arbitration and conciliation adopted in England as embodying, perhaps, the best attainable solution of the problem which has so long vexed our statesmanship. This system must originate with employers and their operatives, but the Legislature can do much to promote it, especially by encouraging industrial education by all the means at its command. "Such a system would be costly, but the return to the State, in the extension and elevation of its industries, and the diffusion of greater comfort and content among the people, cannot be accurately measured in dollars and cents."

The suggestions here presented are certainly worthy of the consideration of legislators and all who are in any way concerned in industrial pursuits. The question of the satisfactory adjustment of the relations between labor and capital is one of supreme importance to the whole country, and any proposition which embodies a possible solution, or seems to offer a probable abatement of existing disorders, deserves attention and practical trial.

THE NEW PENSION "RAID."

THE time has yet to come when the great American Republic can be accused of having been ungrateful or unjust to its defenders. The deeds of our fallen heroes have been gratefully remembered, and their memories fondly cherished. The central military figures of four separate wars received at the hands of the nation the highest civic honors it could bestow; and the rewards conferred upon Washington, Jackson, Taylor and Grant were but typical of the favors lavished upon men of all grades in the military service. Nor has the country been ungrateful in a pecuniary sense. The Treasury has opened its coffers to all who have borne the flag to victory and survived the perils of the field, and to the widows and orphans of the fallen.

The pension statistics of the Government are instructive and full of interest. Those of a recent date indicate that the patriots who bore arms through our Revolutionary struggle have all been "gathered to their fathers." One year ago the pensioned survivors of the War of 1812 had dwindled to a mere handful, their number being but 12,802, and the widows of their dead comrades to 4,609. The great mass of the national beneficiaries are those who were made so by the recent Civil War. The total number of pensioners but a few months ago was stated at 232,104. Of this number, 128,723, an army in itself, were invalids, and 103,381 were women and children whose natural protectors fell in defense of the country. All but 17,411 of this grand total draw pensions as an incident of the fratricidal attempt to dissolve the Union.

Looking at the pecuniary side of the subject, we find that the pension list of 1791 aggregated $175,813. In 1815 it had decreased to $69,656. The second war with Great Britain sent it up to $2,415,939 in 1819, and to $3,208,376 the following year. In 1833 the Government paid out pensions to the extent of $4,589,152. From this point onward the sum varied from year to year, until in 1860, the year before the rebellion, the total amount paid to pensioners was but $1,100,802. In 1862 the pension roll amounted to only $852,170. Two years later it had increased to $4,985,473. What it has been since 1864 will best be shown by the following table:

Years.	Amount.	Years.	Amount.
1865	$16,347,621 34	1872	$28,533,402 76
1866	15,618,287 75	1873	29,359 436 86
1867	20,936,631 71	1874	29,038 414 66
1868	23,782,386 28	1875	29,456,216 92
1869	28,476,621 76	1876	28,257,385 69
1870	28,340 292 17	1877	28,132,683 44
1871	34,443 894 88	1878	27,137,019 03

The sum total is $367,847,125.16. From 1791 to 1868, both years inclusive, the whole amount of money paid on account of pensions aggregates $455,501,409.95, of which sum $372,832,506.08 has been paid out since the close of the fiscal year ending in 1863. In seventy-three years the Government paid out only $82,668,903.87 to its pensioners, while the balance of $445,501,409.95 has been distributed during the past fifteen years. We have been thus minute in order to show that the country has dealt most generously with those who served it in the hour of need.

For the current fiscal year the sum to be taken from the Treasury on account of pensions, according to Secretary Sherman, will be $29,300,000. But this is not all. The present reform Congress, with the help of President Hayes, has saddled the country with an arrearages pension law which will take from the Treasury an additional sum variously estimated at from $20,000,000 to $100,000,000, the latter sum being the estimate of the Secretary of the Treasury.

When Congress passed a Bill for the equalization of bounties, General Grant, a soldier himself, crushed it by a veto. The Bill was just enough in principle, but the President saw that to permit it to become a law would swamp the Treasury for the sole benefit of claim agents. Whatever may be urged against General Grant and his administration of public affairs, he certainly, in this case, had the courage and moral honesty to withstand and prevent a gigantic swindle. If Mr. Hayes had possessed a tithe of the stamina of Grant, he would, in like manner, have vetoed the measure for the payment of arrearages of pensions. The benefit to the soldier will be next to nothing, while the country will be taxed for the advantage of a horde of jobbers and plunderers.

If the invalids made by the war and the families of deceased soldiers actually needed this money, and were sure to get it into their own hands, we would be among the last to begrudge it to them. Nothing that we could do or say in their behalf would be withheld. But we have no evidence that the survivors of the Union armies petitioned Congress for the passage of this Act, or complained of unjust treatment in the past. They periled their lives in defense of the country, and are too patriotic to attempt to rob its Treasury now. The Bill originated in a House controlled by a party which, in 1864, declared the war a failure. A weak, nominally Republican Senate, fearing to be charged with being opposed to the soldier element, tamely consented, and a President who is more anxious apparently about a few paltry Custom House offices than about the real interests of a tax-ridden people, assisted to make the scheme a success.

There should be a limit to this sort of thing. If the country is still indebted to its brave defenders, let us make a final settlement and have done with it at once and for ever. But we stand resolutely opposed to depleting the Treasury for the benefit of claim agents and their Congressional *confrères*. More, we are opposed to the passage of moneyed Bills as a bid for the soldier vote, nor do we believe that the veterans of the Union armies can be bribed by any such measure into giving their support to any party which is not in all its impulses and tendencies favorable to the preservation of the fruits of their valor and sacrifice.

THE WATER-COLOR EXHIBITION.

THE collection of water-colors now open to the public at the National Academy is specially interesting as being more markedly an exhibition of the work of American artists than any we remember to have seen. There are few foreign names to be found in the catalogue, and but few specimens from Continental studios to be met with on the walls—a fact which renders it the easier to judge of the progress made in this line of art by our native artists, and to note the general tendencies of this young but growing American school, if "school" pictures which show the influence of all schools and artists who with a few notable exceptions reproduce the mannerisms, methods and styles of their European masters or models, this particular branch of American art can yet be called.

But in spite of the strong evidence of this foreign influence upon the character and style of our artists' work, this present exhibition is indicative of very marked progress in originality, and an originality with a wholesome flavor of vigorous independence in its methods of treatment and its choice of subjects, while also proving that there is growing up among our artists a stirring and earnest spirit of emulation. A society which is not yet in its teens, and which can number among its members so many names which have already made themselves famous in other fields of art—whose work bears so unmistakably the stamp of individuality of thought and purpose, and displays so great a variety of methods and styles—need not be troubled by any fears as to its future success.

In this collection one familiar with the foreign schools will find at every turn pictures which reproduce the mannerisms and styles of the Munich, French, Spanish and other *ateliers*. The most prominent evidence of this is seen in the so-called "Impressionist" infection which seems to have taken a very violent hold upon the imagination of our American artists. When an "Impressionist" is as honest and truthful as Winslow Homer shows himself to be in every stroke of his brush, one's faith in that particular school needs no bolstering of argument or initiation into its subtle beauties. Such pictures as his are genuine works of art, the excellence and beauty of which require no technical knowledge of art mysteries as a preparation for their enjoyment. But when it comes to the extravagant affectation, to the extraordinary effects of color and the incomprehensible composition of Mr. Currier's contributions, an Impressionist seems to stand for a man who believes an impression rises in art value in proportion as it is vague and undefined. At a distance of two feet Mr. Currier's pictures are nothing but capricious—and ugly—blotches of color. Across the room these blotches of color resolve themselves into blurred landscapes, with no spe-

Digitized by Google

cially marked points of excellence as an excuse for their peculiar and seemingly useless method of treatment. However, these works have been, at least, of use in arousing much discussion and as offering a strong contrast for comparision with our native productions.

It seems as if in water-colors there were a broader field open for the display of originality and a fairer chance for our American artists to show their individual force and strength than in oil.

There is a peculiar lightness, brightness and clearness in our skies, a vivacious play of color and an intensity in our autumnal tints and sunset hues which lend themselves admirably to the purposes of the water-colorist. So, too, in the character of our landscapes, in the play of human life seen in them, are subjects full of suggestiveness to artists pursuing this branch of art. Oil demands a certain richness and depth of tone and color which our climate does not yield. And the figure-artists in oil need either the inspiration of picturesque surroundings or must draw upon the sources of historical subjects or of art traditions. We possess no landscape enlivened with ivy-hung castles and animated with a picturesque peasantry. Neither is our history rich enough to supply the artist with striking original subjects. But the lighter and more evanescent character of a water-color sketch does not require so vast a background. The characteristics of our own landscape and people offer very distinct and original subjects of inspiration. And if they be reproduced with the accent of their novel and individual peculiarities, the American water-colorist may yet succeed in establishing that American "school" so much despaired of.

BUYING THE PRESIDENCY.

THE evidence elicited by the House Committee engaged in investigating the cipher dispatches has conclusively established the fact that a deliberate and corrupt attempt was made by certain Democratic agents to purchase the electoral votes of Florida and South Carolina for Tilden and Hendricks. Mr. Smith M. Weed, a well-known Democratic politician, testifies that in the month of November, 1876, at the request of prominent party associates, he entered into negotiations to purchase the fraudulent certificates of the Returning Board of South Carolina for the Tilden Electors. He agreed upon their sale for a sum which may have been $60,000 or $80,000, and reported the bargain to his principals in New York by telegraph in a cipher furnished by them. He received their assent and started North to close the transaction, when he was met at Baltimore by Colonel Wm. T. Pelton, the nephew of Governor Tilden, who said that the matter had come to the knowledge of that gentleman, and that the money could not be furnished. Colonel Pelton, in his testimony, fully confirmed these statements. He confessed having received from Manton Marble, when the latter was in Florida, and from Mr. Weed, when he was in South Carolina, propositions for the purchase of both the Returning Boards, and he admitted having replied favorably to these proposals. Although the amounts asked were as high as $80,000, he took the responsibility of closing the negotiations, relying, as he said, upon the Democratic National Committee to raise the money in case the objects desired were obtained. He claimed to have studiously and purposely kept all knowledge of these particular transactions from his uncle, but that gentleman somehow discovered what was going on, and "scolded" severely. Mr. Marble positively denies any actual participation in the corrupt proceedings, and there does not seem to be any evidence that Mr. Tilden was a party to them. In fact, he explicitly declares that he was not in any way whatever concerned in any negotiations of the character indicated.

The annals of American politics present no darker or more disgraceful page than that which records these infamous attempts to purchase the Presidency. The whole transaction, from beginning to end, was a positive menace to the integrity of law and government, but appears all the same to have had the sanction of some who pass as reputable citizens and patriots. There is probably no law under which the scoundrels who have confessed their infamy can be adequately punished; but they should at least be branded as pariahs, and made to suffer the penalty of absolute exclusion from decent society.

IN THE OLD WORLD.

AFTER war, the plague. The "black plague," which is alarming all Europe, and which has even, it is said, already crossed the Atlantic and appeared in Brazil, exemplifies the old saying, "Behold, how great a matter a little fire kindleth!" A Cossack, returning from the war in Turkey to Wotilanka, offered a shawl, doubtless his share of booty, to his betrothed. She wore it two days, then fell sick with all the symptoms of the Asiatic plague, and died. During the four following days the other members of her family suffered the same fate. The epidemic swiftly spread until it is now reported that it has reached Thessaly in one direction and the vicinity of Moscow in another. Russia at first neglected the terrible disease, or, at least, tried to conceal its existence. But after other countries had taken strict precautions against it, Russia, although bitterly complaining through the St. Petersburg press that such precautions, especially those of Austria and Germany, were attempts to ruin Russian commerce, was at last compelled to act in self-defense. Austria, Germany and Roumania would let no one enter their territory without sanitary passes. Italy has increased to thirty days the quarantine at her ports, absolutely prohibiting the importation of certain articles. France has announced by an official note that measures will be taken to prevent the transmission of the plague by sea. Meanwhile, Russia has doubled the quarantine of her infected districts. General Melikoff has been sent to those districts which have been temporarily converted into a province, and full powers have been given to him to burn villages, remove the inhabitants, and do whatever else is requisite to check the progress of the plague. In Moscow and St. Petersburg sanitary committees have been formed, as they should have been long ago, to promote cleanliness among the poorer classes, and special lectures are given at the medical schools in order to diffuse a knowledge of hygienic laws.

What reactionists throughout Europe, whether imperialists or monarchists, fear worse than the plague is the revival of republican sentiment and opinion in consequence of the recent political crisis in France. But all far-sighted thinkers throughout the world rejoice that the result of that crisis is the firmer establishment than ever of a French republic that is at once conservative and progressive. The Presidential message of M. Grévy is a model of its kind. Simple, correct, strictly parliamentary, and breathing the true spirit of representative government, it shows that MacMahon's successor is just what he has been fitly described to be—the ideal of a chief of the executive power, appreciating its precise limitations, and absolutely incapable of going beyond them. Garibaldi is warranted in declaring that the election of Grévy to the Presidency of the French Republic is a triumph for humanity. Gambetta's inaugural address, as President of the Chamber of Deputies, will be memorable for two points of great historical significance. These two points are, first, the declaration that the French Republic has come forth victoriously from party conflicts, and must now enter upon an era of organization and practical development; and second, the recommendation to the Chamber of Deputies to apply itself to school, military, financial and commercial reforms. This recommendation, in an altogether unprecedented way lifts education high above army and money interests in national importance.

It is somewhat surprising that five out of six members of the new French Ministry are Protestants, but this only shows that the first steps have now been virtually taken in France towards such a formal separation of Church and State as has been found advantageous for both in our own republic. The universal amnesty to Communists, advocated by Victor Hugo in the Senate and Louis Blanc in the Chamber of Deputies, is to be decided upon in the bureaus. The impeachment of the "men of the 16th of May," will doubtless be abandoned, and one provocation of the worst political passions will thus be avoided. The generous indifference of the Republican leaders on this point, and as to a number of recent petty manifestations of royalist sentiment, cannot fail to convince their most obstinate opponents that the Republic is at last so solidly established as to apprehend no danger from such leniency.

In the midst of the recent political agitation the Parisians have not been so absorbed by them as to interrupt the flow of their usual pleasures. To these the unusual fall of snow has given special variety, transforming Paris, for the nonce, into something like St. Petersburg. In the streets, indeed, such accumulations of snow and filth have been heaped up as to remind sojourning New Yorkers of their native Gotham. But the iron chairs and benches in the *pare Monceaux*, all cushioned as with white satin, have curiously delighted the Parisians.

In England, the burning of the Drury Lane Theatre; the birth of an heir to Lord Lytton, the Viceroy of India; the probable promotion of the Duke of Connaught to be Viceroy of Ireland; the expected entrance of Prince Leopold, eighth child and fourth son of Queen Victoria, into the Church of England, and a possible future Archbishop of Canterbury; the appointment of Lord Dufferin as successor of Lord Loftus, British Ambassador at St. Petersburg, and of the latter as Governor-General of New South Wales; the attempts to check the growing importation of cattle from the United States; but, above all, the spreading plague of labor strikes, are the main topics of the day. The latest addition to these is the conclusion of a treaty between England and Portugal for the suppression of the negro slave trade between Mozambique and the island of Madagascar.

THE resolutions of Mr. Edmunds, affirming the validity of the thirteenth, fourteenth and fifteenth amendments to the Constitution and declaring that Congress should pass laws for the enforcement of the amendments, passed the Senate by a party vote on the evening of the 5th instant. The resolutions were violently opposed by Senators Morgan, Bayard, Garland, and other leading Democrats, but the Republicans contented themselves, for the most part, with voting. Now that the matter is out of the way, perhaps the Senate will be able to devote itself to subjects of practical interest.

THE Employment Bureau at Castle Garden, which had its origin solely in a desire to provide for emigrants who arrived here without any definite purpose or aim, proposes, as the result of a good deal of pressure, to widen its sphere of operations. The Commissioners, who are in constant receipt of inquiries from abroad, intend to print in circular form all the facts about wages, the price of land, etc., which are needed for the guidance of those meditating removal to the New World, and this information, widely diffused, will no doubt not only increase the volume but improve the character of future immigration.

THE plans for the Saratoga monument, commemorative of the surrender of Burgoyne, provide that the shaft shall be 150 feet in height, the side walls to be covered with historic tablets and bas-reliefs. The panels of the bronze doors on the several floors are to be filled with original historical subjects designed by Launt Thompson, J. Q. Ward, James E. Taylor, of Frank Leslie's establishment, and other prominent artists. Of the large niches in the four gables, three are to be filled with appropriate groups of sculpture in bronze, representing the three generals, Schuyler, Gates, and Morgan, with their accessories, the fourth being vacant, with the word ARNOLD inscribed underneath.

THE defeat of Senator Conkling, in his attempt to carry the Senate against the Administration in the matter of the New York Custom House appointments, is a serious blow to the prestige of that would-be dictator of our politics. And the result is due, perhaps, as much to his own overweening insolence of manner as to any other considerations. The Senate has grown weary of sustaining a gentleman who can never, as one of them puts it, "find time to speak to his associates except when he wants something from them, and who, even then, has great difficulty in speaking to them with common politeness"; and it may be assumed with safety that the Senate will never again crouch at the crack of his whip.

THERE appears to have been a decided change in the sentiment of the House of Representatives in reference to the silver dollar since the resumption of specie payments. In May last the House passed a highly objectionable Bill authorizing the exchange of subsidiary silver coin for legal-tender money when presented in sums of twenty dollars. On February 4th a Bill of the same character, requiring the Secretary of the Treasury to exchange silver dollars for gold when presented in sums of $100 and upwards, offered in the House by Mr. Whitthorne, not only failed to receive the two-thirds vote required to pass it, but did not receive even a majority vote, the record standing 101 yeas to 136 nays. Evidently the silverites find it hard to kick against the pricks.

SHOULD the judgment of the United States District Court, recently given in the Arlington ejectment suit, be confirmed by the Supreme Court, all the tenants who have been in possession since the transfer of the estate to the Government under a tax sale in 1863 will be ejected, and General Lee will be restored to the full enjoyment of the property. Some anxiety has been expressed as to how the decision will affect the National Cemetery, with its 15,000 bodies of dead Union soldiers; but there does not seem to be any ground for apprehension on this account, General Lee having declared that he has no desire to disturb the dead or to regain possession of that part of Arlington Cemetery proper, which is but a trifling portion of the whole estate. He has only wished to establish his entire property rights to the lands in question, and is quite willing to surrender that portion of the estate, or the whole of it, to the Government at a fair valuation. There is a Bill pending in the Senate to buy the cemetery part of the estate.

NEWS OF THE WEEK.

Domestic.

ARTICLES of impeachment against State Treasurer Yates of Missouri have been presented in the Lower House.

THE President has appointed General A. S. Badger to be Collector of the Port of New Orleans, and Dr. McMillan to be Postmaster there.

THOMAS LORD, the aged millionaire, who was married to Mrs. Hicks, on December 31st, 1878, died at his residence, New York City, on February 8th, aged 85 years.

ALL apprehensions about the safety of the U. S. sloop-of-war *Richmond* were set at rest on February 8th by the announcement of her arrival at Gibraltar, with all on board well.

THE Senate Finance Committee, by a vote of five against four, have decided to recommend concurrence in the House provision reducing the tax on manufactured tobacco to sixteen cents per pound.

THE Mississippi Levee Bill after being amended was passed in the House by a vote of 155 to 73, and the bill to admit women to practice in the Supreme Court of the United States was passed in the Senate.

THE great billiard tournament in New York City, for the championship of the world, the champion vase and a purse of $1,000, was won by Jacob Schaefer, on February 7th, he winning seven games and making an average of 85.

NOTWITHSTANDING Virginia's efforts to compromise with her bondholders on a three per cent. basis, a new loan of $260,000 at six per cent. has been authorized. The State revenues have been pledged for payment, and the loan is to be refunded before June 15th.

CONGRESSMAN HUNTON agreed to act as Chairman of the Sub-Committee of the Potter Investigating Committee sent to New York to inquire into the cipher dispatches, and the hearing was opened in the Fifth Avenue Hotel on February 5th, when Smith M. Weed and Mayor Cooper gave testimony. On the 6th Colonel William T. Pelton was examined at length, and on the 7th Manton Marble.

THE President has sent the following nominations to the Senate: Ex-Governor John F. Hartranft to be Postmaster at Philadelphia; James Pollock to be Naval Officer at Philadelphia, A. Louden Snowden to be Superintendent of the Philadelphia Mint; Martin Perry Kernard to be Assistant Treasurer of the United States at Boston, Mass.; Thomas Stevenson to be Collector of Internal Revenue for the Fifteenth District of New York; N. P. Banks to be Marshal of the Southern District of Massachusetts; and Martin L. Townsend to be United States Attorney for the Northern District of New York.

THE House Committee on Indian Affairs have agreed to report the Bill prepared by the Indian Bureau for the transfer of Chief Joseph and such of the Nez Percé Indians as desire to accompany him to the Indian Territory. The Bill sets aside four townships of land within the limits of the Cherokee cession of 1866, and vests the title therein in the Nez Percés. It also sets aside and invests in four per cent. United States bonds, $250,000 for the benefit of these Indians, one-half of the interest to be paid in money, and one-half to be expended annually for their benefit. In addition, $75,000 is appropriated for the purchase of the land, and $15,000 for transportation and settlement.

Foreign.

MIDHAT PASHA'S scheme for the reorganization of Syria has met with the approval of the Porte.

THE black plague has made its appearance in the Province of Ceara, Brazil, and created grave apprehensions.

OWING to the straitened condition of the Pontifical finances, an extraordinary effort is making in Rome to give a new impulse to the collection of Peter's pence.

A DISEASE has appeared in Thessaly which is thought to be identical with the plague, and precautionary measures have been adopted at all the Turkish Ægean forts.

THE distress among the laboring population of Glasgow is beginning to decrease, but at Liverpool and elsewhere there is still much suffering.

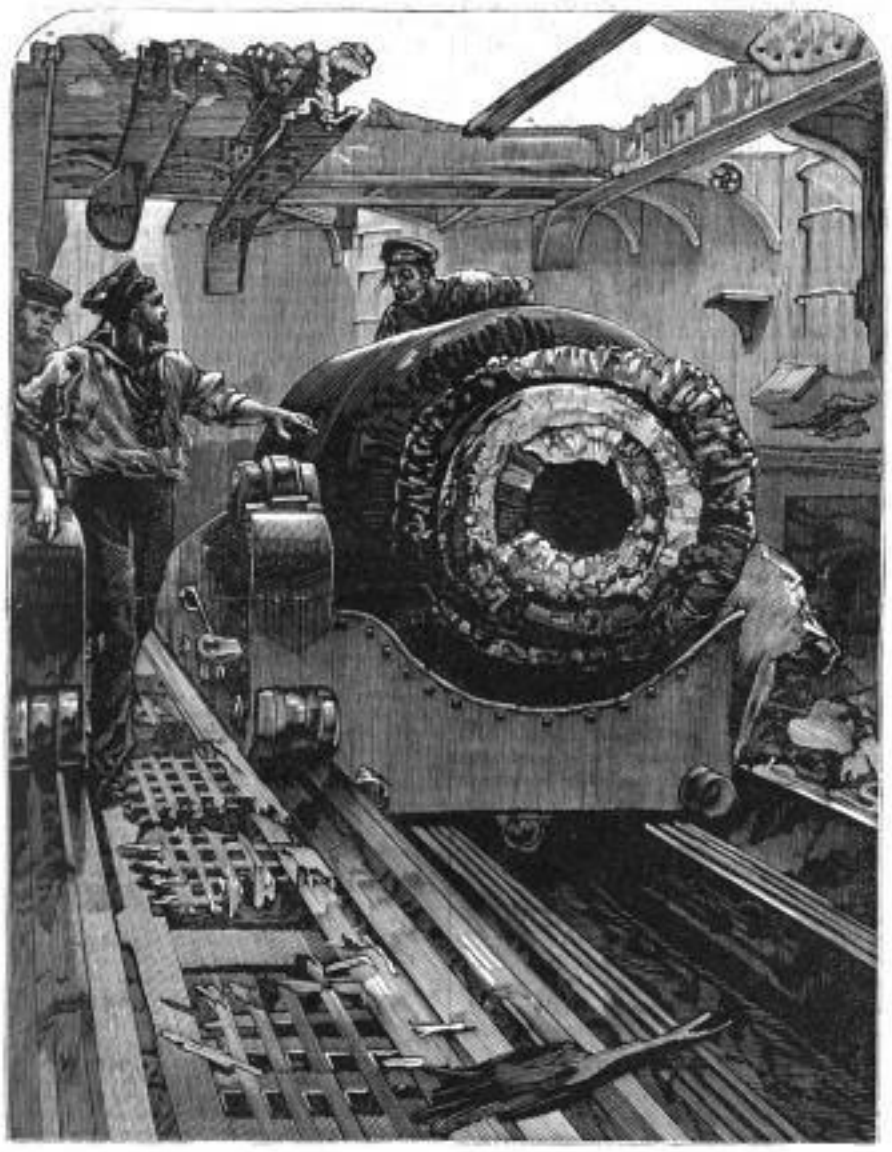
THE failure of the usual Winter rains is causing great anxiety throughout Northern India. The loss of the Spring crops would cause widespread suffering.

THE treaty between Turkey and Russia was signed on Saturday; the war indemnity is fixed at 300,000,000 paper roubles, and the San Stefano stipulations remain as modified by the Berlin Treaty.

GREAT difficulty is experienced by the British troops in Afghanistan in obtaining supplies; the cavalry and artillery, men and horses, are suffering from want of clothing and food. The people of the country are sulky and inclined to be insolent. Elephants, bullocks and camels are dying in great numbers from cold and starvation.

AN order in the Dominion Council has been passed prohibiting the importation of cattle from the United States for three months from the first of February. British Consuls in the United States have reported to the Privy Council at London that a mild type of pleuro-pneumonia exists among cattle in some parts of the country, but that it is not malignant or infectious.

A PARIS dispatch confirms the report that M. Léon Say, as a condition of entering the Cabinet, exacted a pledge that it should defend the commercial treaty system against all assailants. The Government's Bill relative to pardoning Communists contains a clause against fresh prosecutions for political offenses committed since 1870, which covers the case of the Ministry of May 16th.



THERE appears to be no diminution in the spread of the plague in Russia. Extreme measures have been adopted by neighboring Governments to check it, and the Russians themselves are prompt to repressive action, yet considerable indignation is expressed at the severe quarantine regulations prescribed by Germany and Austria. Quarantine against the plague has been ordered in all Spanish ports.

IT is estimated that from 30,000 to 35,000 men are now on a strike at Liverpool. The demeanor of the crowd on February 7th was most threatening, in consequence of the sailors joining the strikers. The laborers in the provision trade have also struck. At the Waterloo Dock the mob broke up the staging and did much damage. After their expulsion by the police they endeavored to storm the gates.

THE German Minister at the Court of Denmark has been recalled. The North Schleswig question is probably at the bottom of the matter. It is rumored that Denmark will recall her Ministers from Vienna and Berlin. The people of North Schleswig propose to issue a protest against the abrogation of the Fifth Article of the Treaty of Prague. Should Germany prohibit such action, the North Schleswig Deputies will formally protest in the Reichstag.

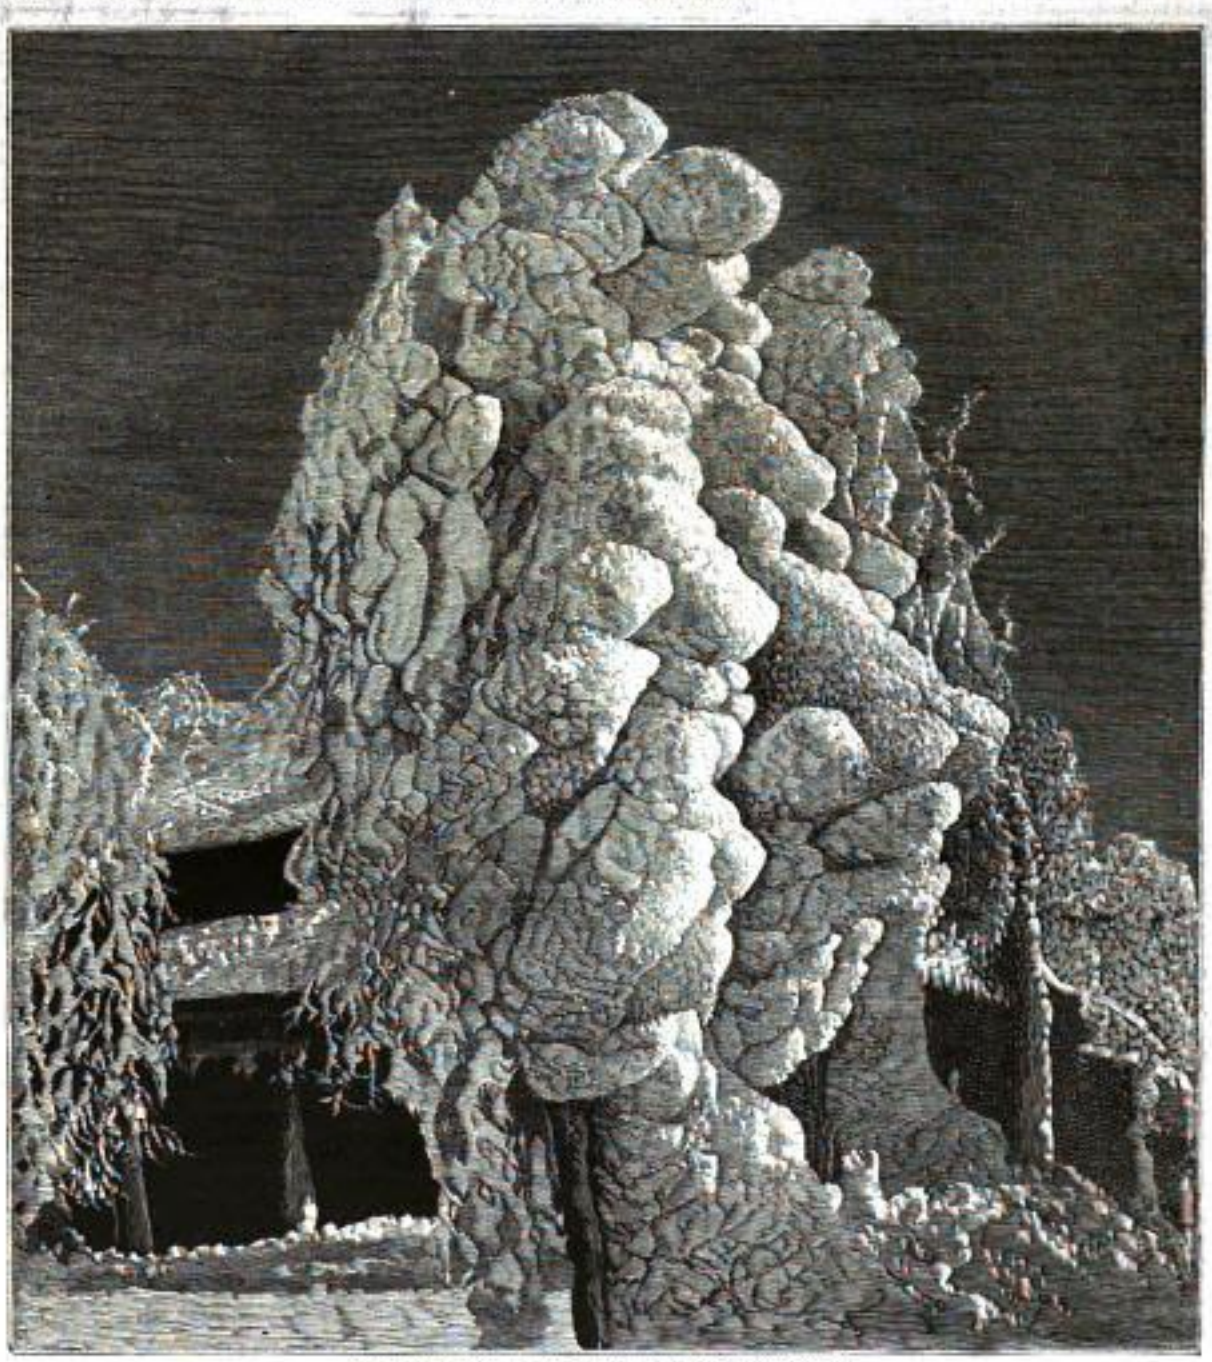
BRIDGE OF ICE AT THE FOOT OF THE FALLS, EXTENDING FROM THE AMERICAN TO THE CANADIAN SHORES.



THE ICE-BRIDGE AT NIAGARA FALLS.

VISITORS to Niagara Falls during the severe weather of the present Winter have witnessed scenery which contrasts singularly with that of the Summer, and by its rare and dazzling splendor has extorted universal admiration. For some days previous to January 1st great quantities of snow-covered ice passed over the Falls. At last the mass of ice became so large that it came to a standstill beneath the Suspension Bridge. This, however, was only temporary. The ever onward-rushing water pushed it along; but the conflict between the huge masses of ice and the powerful currents of water resulted in one of the grandest spectacles ever

ARCHWAY OF ICE AT PROSPECT POINT.

witnessed there or elsewhere. Vast quantities of ice and snow were caught in the rushing water and tossed hither and thither like playthings, grinding themselves to fragments in the terrible engagement. Great hummocks, weighing hundreds of tons, were pushed into the air, and remained there as monuments of the fearful battle. Large boulders were torn from the shore and swept into the stream, and the solitary fir which was wont to mark the landing-place of the ferry became a victim to the warring elements, though ordinarily it stands three feet above high-water. The slow, awful strength of the waters was so apparent that it seemed as if they must rend the great gorge in twain and escape from their thralldom by some

TREES COVERED WITH AN ACCUMULATION OF FROZEN SPRAY.

NEW YORK.—GRAND EFFECTS OF THE SEVERE WINTER AT NIAGARA FALLS, UNDER THE SWAY OF THE FROST KING.

Digitized by Google

new outlet; but there was only one gateway open for them, and, as they could not break the mile-wide dam in two, they lifted it up bodily and swept away beneath, still raging, but completely conquered by the armies of the Frost King.

Having thus succumbed to this inevitable humiliation, the water allowed the ice to rest above it, accepting the yoke which it could not break, despite its brassied strength. And so it will remain until the beams of the spring sun deprive it of its strength and once more restore Niagara to its accustomed freedom. The bridge is nearly a mile in length, extending from a line drawn perpendicularly to Point Lookout, in the American Park, half-way to the railroad bridge, and filling the gorge from shore to shore, the ice itself being about sixty feet in thickness.

The sight is magnificent. The ice everywhere glistens in the sun, and transfigures every familiar sight. Looking over to the Canadian shore, the observer can see huge icicles of many tons' weight hanging like the ropy locks on the foreheads of giants in the story-books. But these sights are nothing when compared to the broad sheet of wrinkled snow-ice which lies at his feet. There it is—the conqueror of Niagara—sparkling in the sunlight calmly and peacefully.

Beside the rotunda which stands at the base of the American Fall, a mountain of snowy spray-ice towers up eighty feet high, and is each day climbing higher and higher towards the summit. The dome of the rotunda bears an ice-crown of exceeding beauty, and along the roof of the dressing-shed are curious ice-formations, which nothing less than photographic camera can adequately picture. Giant icicles hang from the cliffs, and every once in a while a huge fragment comes tumbling down. The ice is perfectly white, and seemingly quite porous, but excessively hard-frozen. Its appearance is exactly that of spun glass. It is said that the spray which formed this ice was perfectly pure, and that if a ton of it were melted it would produce no appreciable quantity of sediment.

The great ice-bridge itself is a counterpart in miniature of an Alpine glacier. We have the rough, broken surface, the hummocks reaching ten, fifteen, twenty feet into the air, the startling fissures gaping perhaps with a depth of thirty feet in the solid ice; and we have the pure snow-ice itself in a million strange and inexplicable shapes; but there is an association of terror in this place which does not belong to the genuine glacier, and which may come from the muffled roar of the waterfall, perchance the thought of 200 feet of water seething and boiling beneath our feet. Many of our readers have stood on the bank beside the Whirlpool Rapids and seen the waters mount upwards towards the sky in a thousand contending currents as they battle to escape from their prisoning walls. Imagine this agitated surface suddenly becoming petrified, and every broken wave halting just where it was, and you will have an idea of the magnitude of this structure.

THE FALLEN LEAVES.

BY WILKIE COLLINS.

CHAPTER VIII.

IT was an afternoon concert; and modern German music was largely represented on the programme. The patient English people sat in closely-packed rows, listening to the pretentious instrumental noises which were impudently offered to them as a substitute for melody. While these docile victims of the worst of all quackeries (musical quackery) were still toiling through their first hour of endurance, a passing ripple of interest stirred the stagnant surface of the audience, caused by the sudden rising of a lady overcome by the heat. She was quickly led out of the concert-room (after whispering a word of explanation to two young ladies seated at her side) by a gentleman who made a fourth member of the party. Left by themselves, the young ladies looked at each other, whispered to each other, half rose from their places, became confusedly conscious that the wandering attention of the audience was fixed on them, and decided at last on following their companions out of the hall.

But the lady who had preceded them had some reasons of her own for not waiting to recover herself in the vestibule. When the gentleman in charge of her asked if he should get a glass of water, she answered sharply, "Get a cab—and be quick about it."

The cab was found in a moment; the gentleman got in after her, by the lady's invitation. "Are you better now?" he asked. "I have never had anything the matter with me," she replied, quietly; "tell the man to drive faster." Having obeyed his instructions, the gentleman (otherwise Amelius) began to look a little puzzled. The lady (Mrs. Farnaby herself) perceived his condition of mind, and favored him with an explanation.

"I had my own motive for asking you to luncheon to-day," she began, in the steady, downright way of speaking that was peculiar to her. "I wanted to have a word with you privately. My niece Regina—don't be surprised at my calling her my niece, when you have heard Mr. Farnaby call her his daughter. She *is* my niece. Adopting her is a mere phrase. It doesn't alter facts; it doesn't make her Mr. Farnaby's child or mine, does it?"

She had ended with a question, but she seemed to want no answer to it. Her face was turned towards the cab-window, instead of towards Amelius. He was one of those rare people who are capable of remaining silent when they have nothing to say. Mrs. Farnaby went on:

"My niece Regina is a good creature in her way; but she suspects people. She has some reason of her own for trying to prevent me from taking you into my confidence; and her friend Cecilia is helping her. Yes, yes; the concert was the obstacle which they had arranged to put in my way. You were obliged to go, after telling them you wanted to hear the music; and I couldn't complain, because they had got a fourth ticket for me. I made up my mind what to do, and I have done it. Nothing wonderful in my being taken ill with the heat—nothing wonderful in your doing your duty as a gentleman and looking after me: and what is the consequence? Here we are together, on our way to my room, in spite of them. Not so bad for a poor helpless creature like me, is it?"

Inwardly wondering what it all meant, and what she could possibly want with him, Amelius suggested that the young ladies might leave the concert-room, and not finding them in the vestibule, might follow them back to the house.

Mrs. Farnaby turned her head from the window, and looked him in the face for the first time. "I have been a match for them so far," she said; "leave it to me, and you will find I can be match for them still."

After saying that, she watched the puzzled face of Amelius with a moment's steady scrutiny. Her full lips relaxed into a faint smile; her head sank slowly on her bosom. "I wonder whether he thinks I am a little crazy?" she said, quietly to herself. "Some women in my place would have gone mad years ago. Perhaps it might have been better for me." She looked up again at Amelius. "I believe you are a good-tempered fellow," she went on. "Are you in your usual temper now? Did you enjoy your lunch? Has the lively company of the young ladies put you in a good humor with women generally? I want you to be in a particularly good humor with me."

She spoke quite gravely. Amelius, a little to his own astonishment, found himself answering gravely on his side; assuring her in the most conventional terms that he was entirely at her service. Something in her manner affected him disagreeably. If he had followed his impulse, he would have jumped out of the cab, and recovered his liberty and his lightheartedness at one and the same moment, by running away at the top of his speed.

The driver turned into the street in which Mr. Farnaby's house was situated. Mrs. Farnaby stopped him, and got out at some little distance from the door. "You think the young ones will follow us back," she said to Amelius. "It doesn't matter; the servants will have nothing to tell them if they do." She checked him in the act of knocking when they reached the house-door. "It's tea-time down-stairs," she whispered, looking at her watch. "You and I are going into the house, without letting the servants know anything about it. *Now* do you understand?"

She produced from her pocket a steel ring, with several keys attached to it. "A duplicate of Mr. Farnaby's key," she explained, as she chose one, and opened the street door. "Sometimes, when I find myself waking in the small hours of the morning, I can't endure my bed; I must go out and walk. My key lets me in again, just as it lets us in now, without disturbing anybody. You had better say nothing about it to Mr. Farnaby. Not that it matters much; for I should refuse to give up my key if he asked me. But you're a good-natured fellow—and you don't want to make bad blood between man and wife, do you? Step softly, and follow me."

Amelius hesitated. There was something repellent to him in entering another man's house under these clandestine conditions. "All right!" whispered Mrs. Farnaby, perfectly understanding him. "Consult your dignity; go out again, and knock at the door, and ask if I am at home. I only wanted to prevent a fuss and an interruption when Regina comes back. If the servants don't know we are here, they will tell her we haven't returned—don't you see?"

It would have been absurd to contest the matter after this. Amelius followed her submissively to the further end of the hall. There she opened the door of a long narrow room, built out at the back of the house.

"This is my den," she said, signing to Amelius to pass in. "While we are here, nobody will disturb us." She laid aside her bonnet and shawl, and pointed to a box of cigars on the table. "Take one," she resumed; "I smoke, too, when nobody sees me. That's one of the reasons, I daresay, why Regina wished to keep you out of my room. I find smoking composes me. What do you say?"

She lit a cigar, and handed the matches to Amelius. Finding that he stood fairly committed to the adventure, he resigned himself to circumstances with his customary facility. He, too, lit a cigar, and took a chair by the fire, and looked about him with an impenetrable composure worthy of Rufus Dingwell himself.

The room bore no sort of resemblance to a boudoir. A faded old Turkey carpet was spread on the floor. The common mahogany table had no covering; the chintz on the chairs was of a truly venerable age. Some of the furniture made the place look like a room occupied by a man. Dumb-bells and clubs of that sort used in athletic exercises hung over the bare mantelpiece; a large, ugly oaken structure with closed doors, something between a cabinet and a wardrobe, rose on one side to the ceiling; a turning lathe stood against the opposite wall. Above the lathe were hung in a row four prints, in dingy old frames of black wood, which especially attracted the attention of Amelius. Mostly foreign prints, they were all discolored by time, and they all strangly represented different aspects of the same subject—infants parted from their parents by desertion or robbery. The young Moses was there, in his ark of bulrushes, on the river-bank. Good St. Francis appeared next, roaming the streets, and rescuing forsaken children in the wintry night. A third print showed the foundling hospital of old Paris, with the turning cage in the wall, and the bell to ring when the infant was placed in. The next and last subject was the stealing of a child from the lap of its slumbering nurse by a gypsy-woman. These sadly suggestive subjects were the only ornaments on the walls. No traces of books or music were visible; no needlework of any sort was to be seen; no elegant trifles; no china or flowers or delicate lace-work or sparkling jewelry—nothing, absolutely nothing suggestive of a woman's presence—appeared in any part of Mrs. Farnaby's room.

"I have got several things to say to you," she began; "but one thing must be settled first. Give me your sacred word of honor that you will not repeat to any mortal creature what I am going to tell you now." She reclined in her chair, and drew in a mouthful of smoke and puffed it out again, and waited for his reply.

Young and unsuspicious as he was, this unscrupulous method of taking his confidence by storm startled Amelius. His natural tact and good sense told him plainly that Mrs. Farnaby was asking too much.

"Don't be angry with me, ma'am," he said; "I must remind you that you are going to tell me your secrets without any wish to intrude on them on my part——"

She interrupted him there. "What does that matter?" she asked, sharply.

Amelius was obstinate; he went on with what he had to say. "I should like to know," he proceeded, "that I am doing no wrong to anybody, before I give you my promise?"

"You will be doing a kindness to a miserable creature," she answered, as quietly as usual; "and you will be doing no wrong to yourself or to anybody else if you promise. That is all I can say. Your cigar is out. Take a light."

Amelius took a light, with the dog-like docility of a man in a state of blank amazement. She waited, watching him composedly until his cigar was in working order again.

"Well?" she asked. "Will you promise now?"

Amelius gave her his promise.

"On your sacred word of honor?" she persisted.

Amelius repeated the formula. She reclined in her chair once more. "I want to speak to you as if I was speaking to an old friend," she explained. "I suppose I may call you Amelius?"

"Certainly."

"Well, Amelius, I must tell you first that I committed a sin many long years ago. I have suffered the punishment; I am suffering it still. Ever since I was a young woman, I have had a heavy burden of misery on my heart. I am not reconciled to it, I cannot submit to it yet. I never shall be reconciled to it, I never shall submit to it, if I live to be a hundred. Do you wish me to enter into particulars? or will you have mercy on me, and be satisfied with what I have told you so far?"

It was not said entreatingly, or tenderly, or humbly; she spoke with a savage self-contained resignation in her manner and in her voice. Amelius forgot his cigar again—and again she reminded him of it. He answered her as his own generous, impulsive temperament urged him; he said, "Tell me nothing that causes you a moment's pain; tell me only how I can help you." She handed him the box of matches; she said, "Your cigar is out again."

He laid down his cigar. In his brief span of life he had seen no human misery that expressed itself in this way. "Excuse me," he answered; "I won't smoke just now."

She laid her cigar aside like Amelius, and crossed her arms over her bosom, and looked at him, with the first softening gleam of tenderness that he had seen in her face. "My friend," she said, "yours will be a sad life—I pity you. The world will wound that sensitive heart of yours; the world will trample on that generous nature. One of these days perhaps you will be a wretch like me. No more of that. Get up; I have something to show you."

Rising herself, she led the way to the large oaken press, and took her bunch of keys out of her pocket again.

"About this old sorrow of mine," she resumed. "Do me justice, Amelius, at the outset. I haven't treated it as some women treat their sorrows—I haven't nursed it and petted it and made the most of it to myself and to others. No! I have tried every means of relief, every possible pursuit that could occupy my mind. One example of what I say will do as well as a hundred. See it for yourself."

She put the key in the lock. It resisted her first efforts to open it. With a contemptuous burst of impatience and a sudden exertion of her rare strength, she tore open the two doors of the press. Behind the door on the left appeared a row of open shelves. The opposite compartment, behind the door on the right, was filled by drawers with brass handles. She shut the left door; angrily banging it to, as if the opening of it had disclosed something which she did not wish to be seen. By the merest chance, Amelius had looked that way first. In the one instant in which it was possible to see anything, he had noticed, carefully laid out on one of the shelves, a baby's long linen frock and cap, turned yellow by the lapse of time.

The half-told story of the past was more than half-told now. The treasured relics of the infant threw their little glimmer of light on the motive which had chosen the subjects of the prints on the wall. A child deserted and lost! A child who, by bare possibility, might be living still!

She turned towards Amelius suddenly. "There is nothing to interest you on *that* side," she said. "Look at the drawers here; open them for yourself." She drew back as she spoke, and pointed to the uppermost of the row of drawers. A narrow slip of paper was pasted on it, bearing this written inscription: "*Dead Consolations.*"

Amelius opened the drawer; it was full of books. "Look at them," she said. Amelius, obeying her, discovered dictionaries, grammars, exercises, poems, novels and histories—all in the German language.

"A foreign language, tried as a relief," said Mrs. Farnaby, speaking quietly behind him. "Month after month of hard study—all forgotten now. The old sorrow came back in spite of it. A dead consolation! Open the next drawer."

The next drawer revealed water colors and drawing materials huddled together in a corner, and a heap of poor little conventional landscapes filling up the rest of the space. As works of art, they were wretched in the last degree; monuments of industry and application miserably and completely thrown away.

"I had no talent for that pursuit, as you see," said Mrs. Farnaby; "but I persevered with it week after week, month after month. I thought to myself, 'I hate it so, it costs me such dreadful trouble, it so worries and persecutes and humiliates me, that *this* surely must keep my mind occupied and my thoughts away from myself!' No; the old sorrow stared me in the face again on the paper that I was spoiling, through the colors that I couldn't learn to use. Another dead consolation, Amelius! Shut it up."

She herself opened a third and a fourth drawer. In one there appeared a copy of Euclid, and a slate with the problems still traced on it; the other contained a microscope and the treatises relating to its use. "Always the same effort," she said, shutting the door of the press as she spoke; "and always the same result. You have had enough of it, and so have I." She turned and pointed to the lathe in the corner, and to the clubs and dumb-bells over the mantelpiece. "I can look at them patiently," she went on; "they give me bodily relief. I work at the lathe till my back aches; I swing the clubs till I'm ready to drop with fatigue. And then I lie down on the rug there, and sleep it off, and forget myself for an hour or two. Come back to the fire again. You have seen my dead consolations; you must hear about my living consolation next. In justice to Mr. Farnaby—ah, how I hate him!"

She spoke those last vehement words to herself, but with such intense bitterness of contempt that the tones were quite loud enough to be heard. Amelius looked furtively towards the door. Was there no hope that Regina and her friend might return and interrupt them? After what he had seen and heard, could *he* hope to console Mrs. Farnaby? He could only wonder what object she could possibly have in view in taking him into her confidence. "Am I always to be in a mess with women?" he thought to himself. "First poor Mellicent, and now this one. What next?" He lit his cigar again. The brotherhood of smokers, and they alone, will understand what a refuge it was to him at that moment.

"Give me a light," said Mrs. Farnaby, recalled to the remembrance of her own cigar. "I want to know one thing before I go on, Amelius. I watched those bright eyes of yours at luncheon-time. Did they tell me the truth? You're not in love with my niece, are you?"

Amelius took his cigar out of his mouth, and looked at her.

"Out with it boldly!" she said.

Amelius let it out, to a certain extent. "I admire her very much," he answered.

"Ah," Mrs. Farnaby remarked, "you don't know her as well as I do."

The disdainful indifference of her tone irritated Amelius. He was still young enough to believe in the existence of gratitude; and Mrs. Farnaby had spoken ungratefully. Besides, he was fond enough of Regina already to feel offended when she was referred to slightingly.

"I am surprised to hear what you say of her," he burst out. "She is quite devoted to you."

"Oh, yes," said Mrs. Farnaby, carelessly. "She is devoted to me, of course—she is the living consolation I told you of just now. That was Mr. Farnaby's notion in adopting her. Mr. Farnaby thought to himself, 'Here's a ready-made daughter for my wife—that's all this tiresome woman wants to comfort her; now we shall do.' Do you know what I call that? I call it reasoning like an idiot. A man may be very clever at his business, and may be a contemptible fool in other respects. Another woman's child a consolation to me! Fah! it makes one sick to think of it. I have one merit, Amelius, I don't cant. It's my duty to take care of my sister's child; and I do my duty willingly. Regina's a good sort of creature—I don't dispute it. But she's like all those tall, darkish women; there's no backbone in her, no dash; a kind, feeble, goody-goody, sugarish disposition, and a deal of quiet obstinacy at the bottom of it, I can tell you. Oh, yes, I do her justice; I don't deny that she's devoted to me, as you say. But I am making a clean breast of it now. And you ought to know, and you shall know, that Mr. Farnaby's living consolation is no more a consolation to me than the things you have seen in those drawers. There! now we've done with Regina. No; there's one thing more to be cleared up. When you say you admire her, what do you mean? Do you mean to marry her?"

For once in his life Amelius stood on his dignity. "I have too much respect for the young lady to answer your question," he said, loftily.

"Because, if you do," Mrs. Farnaby proceeded, "I mean to put every obstacle in your way. In short, I mean to prevent it."

This plain declaration staggered Amelius. He confessed the truth by implication, in one word.

"Why?" he asked, sharply.

"Wait a little, and recover your temper," she answered.

There was a pause. They sat on either side of the fireplace and eyed each other attentively.

"Now, are you ready?" Mrs. Farnaby resumed. "Here is my reason. If you marry Regina, or marry anybody, you will settle down somewhere, and lead a dull life."

"Well," said Amelius; "and why not, if I like it?"

"Because I want you to remain a roving

Digitized by Google

bachelor; here to-day and gone to-morrow—traveling all over the world, and seeing everything and everybody."

"What good will that do to you, Mrs. Farnaby?"

She rose from her own side of the fireplace, crossed to the side on which Amelius was sitting; and, standing before him, placed her hands heavily on his shoulders. Her eyes grew radiant with a sudden interest and animation as they looked down on him, riveted on his face.

"Because I am still waiting for the one living consolation that may yet come to me," she said. "And, hear this, Amelius! After all the years that have passed, you may be the man who brings it to me."

In the momentary silence that followed, they heard a double knock at the house-door.

"Regina!" said Mrs. Farnaby.

As the name passed her lips, she sprang to the door of the room, and turned the key in the lock.

(*To be continued.*)

AWAITING THE TRAIN.

AN INCIDENT OF THE CARNIVAL SEASON.

FROM all parts of the country come loud and full notes of the preparations for the revels of Prince Carnival. Memphis, though no longer in possession of corporate rights as a city, New Orleans, Mobile, Louisville, and innumerable other and smaller cities, have in progress arrangements for the celebration of Mardi Gras which are said to be far in advance of those of any previous year. In New York City the season was opened on January 20th by the "Cercle Français de l'Harmonie," which gave a fancy dress ball in the Academy of Music. On the night of the 25th, Prince Carnival presided over the twenty-fifth annual jubilee of the Arion Singing Society. The grand display of folly, however, is reserved for February 13th, when the ever-popular Liederkranz Society will give its annual masquerade ball at the Academy. Following this the children will have their Carnival frolic on the 17th, and the friends of the poor will give the customary Martha Washington reception and ball on the 24th, with a tableau of the first inauguration of President Washington.

While these are features of the season upon a large scale, there are countless smaller balls of societies and private parties on the *tapis*, and almost any night a spectacle such as that represented on the front page of this issue may be seen at any of the up-town stations of the elevated railroads. The revels are over, the masks have been removed from the faces in obedience to police regulations, and the weary, head-heavy, footsore men and women are awaiting the approaching train to bear them towards the bed to which they will cling as long and comfortably as the proverbial bug on the rug.

ICE-GATHERING ON THE HUDSON.

NEVER before in the history of ice-gathering has such an immense quantity been cut and housed as in the season now closing, and never before has there been thicker or a better quality of ice put in.

There is now more ice taken from the Hudson River than any other stream or body of water in the world perhaps. Its proximity to New York City, with its immense demand for home consumption and general shipping purposes, renders this product peculiarly valuable; and it would be difficult to select a more favorable point for securing the desired supply. The large amount of help required in the cutting season is readily at hand, and would, indeed, be otherwise idle. The total amount of capital invested in docks, buildings, machinery, implements, barges, tugs and horses can scarcely be estimated, but it must aggregate a very large amount. Between Albany and Newburg there are about seventy different ice-houses, ranging in capacity from ten thousand to sixty-five thousand tons. These various houses are owned and operated by seven regularly incorporated companies and some eighteen or twenty private companies and individuals. The total amount of the Hudson River ice crop gathered this season has been placed at three million tons; but these careful computations made from official data will place the sum about half a million less, which is doubtless a full estimate—nearly ninety million cubic feet. The nature of the business is very uncertain, as warm Winters and cold Summers make a prosperous or a losing business for those who are concerned in storing it.

The Knickerbocker Ice Company, of New York, having been more than twenty-five years in the business, and having paid for their knowledge by experience, stand far ahead of all other competitors. More than one-half of the entire crop is harvested and sold by them. This company owns thirty-six houses between Albany and Newburg, with a capacity of more than one million tons. The house at Schodack has a capacity of about sixty-five thousand tons, and can be filled in twelve working days, employing in the operation three hundred men and boys and twenty horses.

This company has invested in docks, houses, boats, barges, tugs and machinery, not far from five million dollars, and the President, Robert McLay, Esq., manages the business with judgment and with success.

The house of the Arrow Ice Company, at Athens, has been completed this year. It is one of the best constructed houses on the river, holding about forty thousand tons, and is filled to its entire capacity. The gentlemen who control this are Messrs. Franz P. Müller, Wm. Harmon Brown and Henry C. Fuller, who are all well known in Wall Street.

This house is situated opposite Mount Merino and near the famous Black Rock on the Hudson. When there is any ice in the river this company is sure of getting its share, and the quality is of the best, as the current at this point of the river is favorable to pure ice.

Mr. John J. Burchell, at Four Mile Point, has a new house, covering two and one half acres of ground, holding about seventy thousand tons, costing one hundred thousand dollars. Here are seen eight steam elevators at work, putting in two to three hundred tons an hour. Mr. Burchell is a well-known New York builder and contractor, who believes that there is ice enough for all, and that he will have his share. He has a large house at Coxsackie, and another in process of construction on the island. At Athens is located the house of Messrs. Wolfe, Beals & Gautier, holding about thirty-eight thousand tons, which has been completed during the past season.

The wholesale price of ice last year was about $3 per ton, retailing at from fifty to sixty cents per hundred pounds. It is calculated that it costs from twenty cents to thirty cents per ton to put up the ice, and when it is remembered that more than one-half is wasted by melting before it reaches the consumer, and that the weather is one of those things that cannot be foretold, it can scarcely be considered to be a business in which there are millions to be speedily gained by the eager capitalist, though the contrary opinion is held almost universally.

THE LOST CHILD.

THERE are but few, if any, of us living in large cities who do not recall with a shudder the startling cry and the rolling peal of the bell which in our early days announced the loss of a child. Almost every city and town had its public crier and bell-ringer—a man of powerful voice, who adapted himself to all conditions of weather, and was at the ready call of any person who had a special announcement to make to the public. Notices of auctions, of thefts of property, of escapes of prisoners, of important meetings, were shouted by the crier after he had attracted the attention of the people by a vigorous ringing of his bell. Many of his proclamations had but a limited interest; but when, on a dark and stormy night perhaps, he made his rounds, swinging his bell until every one listened for his sonorous words, and then shouting, "Lost child! lost child! lost child! Johnny Green has disappeared; hasn't been seen since yesterday; had on cap, big tippet and shoes without strings; short coat of black stuff, and breeches turned up at bottom. Who's seen him? who's seen him? who's seen him? Johnny Green! Johnny Green! Six years old, brown hair, blue eyes, lives near the tavern! Oh, lost child, lost child, lost Johnny Green!" everybody became interested, and many people would join in the search with bells and lanterns.

Then, too, when the crier announced that he had found a lost child, and gave whatever particulars he could gather from the straggler, people were equally excited until they hunted up their own little ones and knew that the unfortunate child had been restored to its parents.

This custom came down to us from colonial days, and is still observed in sparsely settled sections. In the large cities, however, the police authorities have been constituted the protectors of lost children. Even in New York City with its far-reaching and crowded streets a lost child, under ordinary circumstances, may be found by its parents within a few hours of its disappearance. Whenever a policeman meets a child who acknowledges that he is lost, or acts in a bewildered manner, the officer leads him immediately to the station-house of the precinct. If the child can give his name and address, he is sent home; if not, he is cared for until some one comes to inquire whether a lost child has been brought in. Parents and guardians missing a child long enough to become alarmed, may go to the precinct house and inquire. If no straggler has been brought in, a "general alarm," as it is called, or a notice to all the station-houses in the city, is telegraphed, with instructions to bring the child to the designated station. If a child found in the streets is not claimed or restored by nightfall, it is sent to Police Headquarters and placed under charge of the amiable Mrs. Webb, who has a large room for the particular care of lost children. There they are washed, fed, given comfortable beds, medicine, if they require it, and tenderly cared for until restored.

There is a wide but a pleasing difference between our present illustration and views we have previously given of the life in Mrs. Webb's nursery of lost children—in fact, another evidence of the progress of the time.

M. WADDINGTON, PREMIER OF FRANCE.

UPON his accession to the Presidency of the French Republic, M. Jules Grévy called on M. Waddington to form a new Cabinet, and on the 4th of February it was constituted as follows:

M. Waddington, President of the Council and Minister of Foreign Affairs.
M. De Marcère, Minister of the Interior, and also Minister of Public Worship ad interim.
M. Léon Say, Minister of Finance.
M. De Freycinet, Minister of Public Works.
General Gresley, Minister of War.
Admiral Jauréguiberry, Minister of Marine.
Senator Le Royer, Minister of Justice.
M. Jules Ferry, Minister of Public Instruction and Fine Arts.
M. Lepère, Minister of Agriculture.

M. Jules Ferry was appointed Minister of Public Instruction, instead of Minister of Commerce, as was first intended, because he manifested protectionist tendencies.

M. Waddington, the new Premier, was born at Paris in 1826. He received his university education at Cambridge, where he was highly distinguished for his classical attainments, and displayed a special fondness for numismatics and Grecian archæology. Choosing at his majority the French nationality, he devoted his leisure for some years to the study of classical inscriptions, and became an active member of the Society of Antiquaries. After a course of travels in England and Germany he proceeded to the East in 1850, devoted himself to the geography of Asia Minor, and on his return published "Travels in Asia Minor from a Numismatic Point of View" (1852), which were "crowned" by the Academy of Inscriptions and Belles Lettres. A second journey, in 1852, included Greece, and was extended to the almost unknown deserts of Northern Syria, and yielded a rich result in inscriptions of the Himyarites and the Nabatheans. In 1864 M. Waddington published his work, "The Edict of Diocletian." Other results of his journey were embodied in the "Archæological Journey in Greece and Asia Minor" (1864–8), which he published along with Philippe Lebas. In 1865 M. Waddington presented himself to the electors of the Fourth Circumscription of the Aisne as a candidate for the Corps Législatif, on a liberal platform, but a more radical candidate was successful. In 1870 he was appointed a member of the Grand Committee of Decentralization, presided over by Odilon Barrot, but before he had time to make his mark therein the Franco-German war terminated the enterprise.

Elected a Deputy for the Aisne, February 8th, 1871, M. Waddington first took his seat in the Right Centre, but the rapid progress of events soon brought him to the support of a Conservative Republic, and from the close of 1871 he quitted the group of the constitutional monarchists for the Left Centre, where he gave a frank support to the policy of President Thiers. He was called to the Ministry of Public Instruction in place of Jules Simon, May 19th, 1873, but the crisis of five days later terminated his first essay in an administrative capacity. At the elections of January 30th, 1876, he was chosen Senator for the Department of Aisne for the term ending in 1885. Recalled to the Ministry of Public Instruction March 10th, 1876, in place of M. Wallon, he filled that post until the fall of the Cabinet of Jules Simon, May 16th, 1877. M. Waddington was appointed Minister of Foreign Affairs in the Cabinet formed by M. Dufaure in December, 1877. The new Minister established at once the most cordial relations with England, Italy, and even Germany, and as chief representative of France at the Berlin Congress last year he won golden opinions from all his associates. It was chiefly to his influence that the favorable decision upon the claims of Greece is to be attributed, and that interesting country will count Premier Waddington among its greatest benefactors. The recent diplomatic incident with the Bey of Tunis revealed M. Waddington as a determined upholder of the honor of France in the East, and the Egyptian negotiations which resulted in the appointment of a Frenchman as Minister of Public Works in Egypt point to the same conclusion. M. Waddington was married in November, 1874, to his second wife, a New York lady, Miss Mary Alsop King, daughter of the late Charles King.

PICTORIAL SPIRIT OF THE EUROPEAN ILLUSTRATED PRESS.

The Explosion on the "Thunderer."

An officer of the British squadron in the Sea of Marmora, under the command of Vice-Admiral Sir Geoffrey Hornby, has forwarded two sketches illustrating the disaster that took place at the anchorage of Ismid, on Thursday, January 2d, during the gunnery practice of the squadron. One engraving shows the position of the ships at the moment of this unfortunate occurrence. The unlucky turret-ship, H.M.S. *Thunderer*, is seen advancing towards the spectator, with her bows foremost, and the bursting of one of the thirty-eighton guns in her fore-turret produces an appearance which might be compared to the ordinary firing of the gun, but that the volume of smoke is cast more upwards, and the water in front is smitten by many falling pieces of the gun, the shell, and the turret armor plating. To the left hand of the *Thunderer*, in this view, is seen H.M.S *Achilles*, firing, and to the right, likewise firing, was H.M.S. *Pallas*. Away to the extreme left lay H.M.S. *Monarch*, beyond which is discerned the entrance to the Gulf of Ismid; and H.M.S. *Alexandra*, the flagship, which was firing. The sea was quite calm, and the ships were gently moving. The other engraving gives an illustration of the interior of the *Thunderer's* fore gun turret, with one of the two thirty-eighton guns, which has its muzzle part quite carried away, just as it appeared after the disaster; the roof of the turret is torn off, iron beams are bent or twisted, and a portion of the side of the turret is forced out; pieces of the gun and of iron grating are scattered on the floor. The ship is now at Malta for the official inquiry. The wounded men are in a fair way of recovery; but it is a melancholy affair, having cost the lives of several good officers, marines and seamen.

Trial and Conviction of the City of Glasgow Bankers.

The trial of the directors and managers of the City of Glasgow Bank was begun in the High Court of Justiciary at Edinburgh, Scotland, on Monday, January 20th, and resulted in the conviction of the parties of the offenses as charged on the 31st. On February 1st sentence was passed upon them. Robert Sumner Stronach and Lewis Potter, convicted of fraud, theft and embezzlement, were sentenced to eighteen months' imprisonment. The five other directors—John Stewart, Robert Salmond, William Taylor, Henry Inglis, and John J. Wright—convicted of uttering false abstracts of balance sheets, were sentenced to eight months' imprisonment. Considerable surprise was created by the leniency of the presiding judge, Lord Justice Moncrieff, particularly as the accountant of the bank had testified that under the instructions of Potter and Stewart he had for years systematically falsified the balance-sheet to the extent of about $5,000,000 annually.

Presentation by Wends to the German Emperor.

On New Year's Day, according to an ancient custom, a deputation of Wends called upon the Emperor of Germany at the Palace in Berlin at the dinner hour, and presented him with a quantity of eggs and beer as a mark of the homage and loyalty of their people. At the present day the Wends occupy portions of Brandenburg, Silesia, and the Kingdom of Saxony, a lavatis district being along the banks of the Spree. Most of them are Protestants, though a large number of those living in Saxony are Catholics. From the fourth to the ninth century these people inhabited the eastern portion of Germany, and by the close of the thirteenth Charlemagne and his successors had almost extirpated them from Germany. There is now a branch designated as Southern Wends, occupying the rural districts of the Illyrian provinces of Caleithan Austria, with colonists in southwestern Hungary, and in Friuli, Italy.

New Year's Reception by the King and Queen of Italy.

Italian papers proclaim Humbert and his Queen to be, not only in theory but also in fact, the first gentleman and first lady of their kingdom. Our illustration shows the royal reception on New Year's Day. The court has resumed a more dignified appearance than in the days of Victor Emmanuel, who hated court etiquette and ceremony. The throne-room in the Quirinal has been beautifully fitted up. The throne is at the end of the rectangular room between the two doors. The ladies of the court and of the palace, the adjutants and officials of the King, the great dignitaries of the court, and the Queen's gentlemen of honor, stand on either side. The King and Queen receive the deputations of the great bodies of the State at a short distance from the throne in the middle of the throne-room. On these occasions the Queen and her ladies wear the ceremonial mantle. The white dress trimmed with gold worn by the Queen on New Year's Day has attracted much attention.

Fort of Dakka, on the Cabul River.

Dakka, a miserable village, is situated on the southern bank of the Cabul River, which at this season of the year is a rapid stream of about 120 yards broad, over 20 feet deep, with a current of over four miles an hour. On the northern bank is the large village of Lalpoora, the Khan of which, a near relation of the Ameer, rules over a considerable tribe, and is an ally of the British. The position forms a level basin of two or three miles in length and breadth, partially cultivated, having marks of canal irrigation, and evidently liable to be overflowed in the rainy season, almost bisected by the Cabul River; the greater part of the plain, however, being on the southern, or Dakka side. This plain is completely surrounded by wild and rocky hills rising from about 2,000 to 4,000 feet in height above the water level. In the centre of the southern plain is the fort of Dakka, which now contains the Divisional Headquarters. The fort has been built by the Afghans since the last British invasion of Cabul. It is a square fort, each side 400 yards in length; the walls are of mud, about 25 feet high, with rows of barrack-rooms built in upon the walls. In the centre is a summer-house and garden of the Ameer; the former is now used as the Headquarter Staff mess, and the latter as the camping-ground for the General and his staff. The centre of the fort was occupied by a good number of tumble-down mud buildings, which are now rapidly being leveled and cleared away by the Engineers.

AT HOME AND ABROAD.

—THE Galveston new cotton exchange building has just been completed, at a cost of $100,000.

—NORWAY is the smallest nation of Europe in most respects, but its commerce is such that its fleet is the third largest in the world.

—FLORIDA has produced 500,000 barrels more oranges this season, by natural increase and not by superior yield, than she did last season.

—THE Bavarian Government has sent to the heads of the various religious bodies of that country to ascertain their opinion concerning cremation.

—A CONVENTION of all the teachers of Texas is called to meet at Austin on the 28th of this month, to suggest a better system of public instruction.

—AN effort has been made in the Tennessee Legislature to compel the members to purchase their own stationery. The effort was unsuccessful, however.

—THE Grosvenor Gallery (London) Water Color Exhibition of this year contains 350 examples of the work of English artists, seventy-six studies by Ingres, and 800 drawings by old masters.

—ALL lodging-houses in Russia are ordered to be placed under the supervision of the political police, and a number of *cafés* in the university towns, frequented by the students, have been closed.

—AN Act of Parliament will be introduced during the ensuing session providing for the removal to England of European prisoners sentenced to penal servitude for offenses committed in Crown colonies.

—MEMPHIS AVALANCHE: Letters intended for this point should be in future addressed, "Steamboat Landing at the mouth of Wolf River, Taxing District, Shelby County, Tennessee, opposite Hopefield, Ark."

—BOSTON UNIVERSITY has received $12,000 as the nucleus of a Professorship in the College of Liberal Arts, and $2,000 as a nucleus of a fund for the endowment of a woman's professorship in the same college.

—PENSACOLA imposes a tax of $2,000 on all establishments where liquors are sold and theatricals carried on, and managers prefer to abandon their business rather than pay the tax, thus producing the desired effect.

—THE first piece to be performed in the magnificent new theatre in Monaco is to be a comic opera by Pierre Véron and Robert Planquette, in which M. Ismaël, Mesdames Galli-Marié, Lecombe-Duprez and Irma Marie will take part.

—IT seems that Scotland is about to be favored with a Cardinal by Pope Leo. There are now in that country six Roman Catholic Bishops, 272 priests, and 264 churches and chapels. In 1858 there were only 118 priests and 97 churches and chapels.

—THERE is a curious creek in West Texas, which enters a rocky gorge and runs under ground for forty miles. In some places natural wells two hundred and forty feet deep are found, through which the roaring of this subterranean creek can be heard plainly.

—THE new Bulgarian Assembly is to consist of 256 members—partly ex-officio, partly nominated by the Government, but chiefly elected. Every Bulgarian of twenty-two years of age, possessing property, or engaged in calling other than a servant, student, or daily laborer, is to have a vote.

—VIENNA has more fine coffee-houses than any other city in Europe; the latest statistics put down the total number at 600. It was the first city in Christendom that started the institution; the coffee was captured in bags from the Turks in their second siege of the city, in 1683, and in that year the first *café* was started.

—THE Italian sculptors who exhibited at the Paris Exposition have decided not to take back their works to Italy on account of their fragility, but intend to sell them by auction in Paris. The proceeds of the sale will be equally divided among the sculptors, so that the minor artists may profit as highly as their more famous brethren.

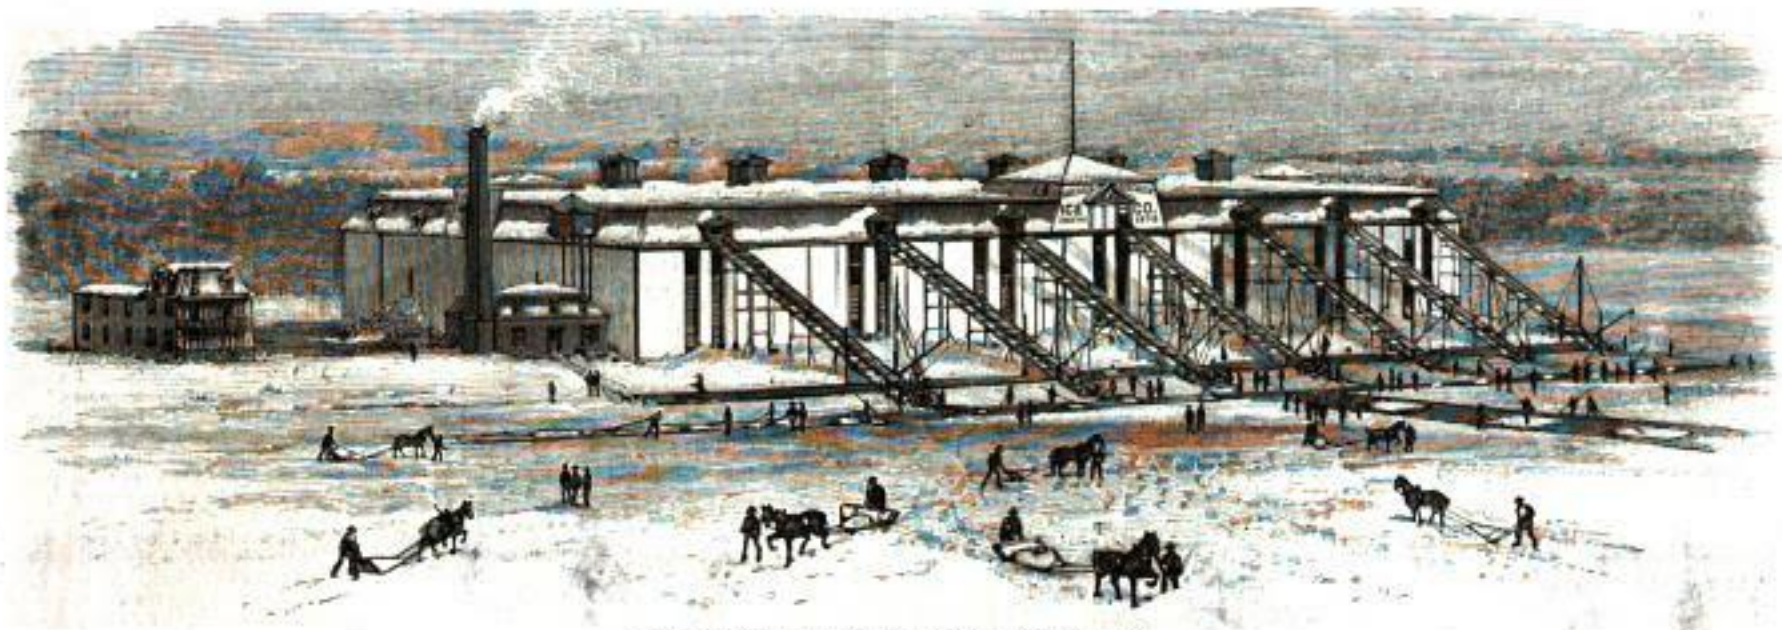
—THE baby carriage is condemned by the Berlin physicians in cases where the little ones sit facing their nurses and are pushed backward. The natural desire of the eye is to draw nearer to what it sees, and the practice of reversing this normal order of things and causing surrounding objects to recede is liable to affect injuriously the development of both sight and brain.

—THE Russian Synod, acting under instructions from the Imperial Government, is preparing to send a large party of missionaries to Japan. Permission has been accorded by the Mikado for the erection of a missionary college at Yeddo; and here, it is stated, will be collected and trained the eighty converts that have already been baptized last Autumn in the Japanese capital.

—NEWFOUNDLAND will get $975,000 of the Halifax fisheries award money, and Canada $4,387,500, the remaining $137,500 being retained by England till the expense accounts are settled. Prince Edward Island will claim $1,000,000 and possibly half of the Dominion's share, on the ground that it was shown at Halifax that the inland fisheries were more valuable than those of any other province, or of all of them combined.

—CONSIDERABLE progress has been made towards the completion of the theatre portion of the Shakespeare memorial at Stratford-upon-Avon, the handsome proportions of which are seen to great advantage now the greater part of the scaffolding has been removed. The memorial, indeed, now forms one of the "sights" of Stratford, and no pilgrim to the shrine of the great dramatist is content to leave the town until he has taken a glimpse at it.

—ONLY thirty or forty miles distant from the City of Mexico are two of the best wheat-producing valleys in the world, and yet wheat costs at wholesale there from $1.60 to $2.40 a bushel, and flour retails for $1.75 per twenty-five pounds. The Mexican tariff on foreign wheat is about $1.15 a bushel, and on flour $6 a barrel. A barrel of flour, costing in New York $6, shipped to the City of Mexico, is worth $29 by the time it arrives, on account of duty, freight, and other charges.



—THE Bank of England will be 185 years old the 27th of the coming July, having received its charter of incorporation at that date, and having been projected by William Patterson, a Scotchman. Constituted as a joint stock company, with a capital of £1,200,000, the whole sum was lent at interest to the Government of William and Mary, then much embarrassed. At the outset it was the servant of the State, and has ever since continued such more or less. The charter, granted at first for eleven years, has been from time to time renewed, the last renewal, subject to modification or revocation, having been in 1844. For a while the business was done in one room; now the bank occupies, as everybody knows, a large building on Threadneedle Street, and employs some 800 men. Nothing less than a £5 note is ever issued, and no note is issued a second time. The average amount of notes in circulation is £25,000,000.

ENTHRALLED.

YOU cling unto me, and your fragrant hair
Floods o'er my face a glory of rich gold.
I see its shining mesh in masses rolled
Down your lithe form, an amber-fretted stair
For love to climb, and take me unaware
About me sweeps your soft robe's dreary fold,
And your warm lips will not let mine be cold.
Your soul-lit eyes burn with a radiance rare,
And their deep light drive sombre thoughts away.
Ah, who could break the clasping of your hand?
Who turn from kisses so divinely sweet?
I hear your ringing voice through all the day,
And, happy in the sunlit summer-land,
Follow the guiding of your canny feet.

THOMAS S. COLLIER.

A SECRET MARRIAGE
AND
ITS CONSEQUENCES.

BY THE DUKE DE POMAR,

AUTHOR OF "THE HONEYMOON," "THROUGH THE AGES," "WHO IS SHE?" "FASHION AND PASSION," ETC.

BOOK FOURTH.

LADY ROLLINGFORD'S SECRET.

CHAPTER II.—(CONTINUED).

LOUISA feels so perfectly happy that not even the dreadful prophecy uttered by that odious, disagreeable gypsy at Sandown Park troubles her peace of mind, though at the time it cast such a threatening gloom over the first joys of this newly-declared love, and had even brought tears to her beautiful eyes.

She loves Rupert, and she is perfectly convinced that he loves her, yet at times strange thoughts will pass through her mind, perhaps prompted by the threatening words of the gitana. She has not yet forgotten that conversation she had with him in the Egyptian Room at Rollingford House, now nearly a year ago, when he asked her who she was, and she had been forced to confess that she did not know. But it is not these words that now recur to her memory, for, as I have before said, the mystery of her birth troubled her but little at this moment; it is what he said during that afternoon about a certain French actress, of whom he had actually had the audacity to say she reminded him.

"He cannot care for me much when he can compare me to a woman like that!" she thought at the time, though it did not trouble her long. Now every word she has ever heard him say comes back to her with startling distinctness, and the image of that obnoxious Madame de Fleurville begins to float before her, like that wandering bird that generally precedes the storm, and which sailors dread as an evil omen.

Has he ever loved this woman? The very thought is hateful to her; yet she knows that, before coming to England, he has led a fast and godless life, and that, according to the world, the list of his loves is by no means a short one. Will she, too, some day be forgotten and dethroned from that heart over which she now feels that she rules supreme? Alas, who can tell?

The day after the Sandown races Cassilis went to Rollingford House, and had a long interview with Lady Rollingford.

What took place during this interview, and what was said on either side, Louisa has not yet been able to discover. When Cassilis left Lady Rollingford's private boudoir, he went immediately to join her in the drawing-room, where it had been previously arranged they should meet; but he merely told her that all was right, and that her adopted mother had given her consent to their union.

When she asked him if he had learned who she was, he merely bowed assent, and his handsome face became clouded: and when she insisted upon knowing what Lady Rollingford had said, he answered that he had promised not to tell her until after they were married, but that she might make her mind easy, for Lady Rollingford's secret was a secret no longer to him, and would soon cease to be a secret to the rest of the world.

Yet the poor girl could not help perceiving by his manner, and in spite of his cheering words, that the fatal mystery was not yet cleared up to his entire satisfaction.

CHAPTER III.—WHAT LADY ROLLINGFORD TOLD CASSILIS.

ONE of the first persons to whom Louisa announces her approaching marriage is Mrs. Champion, who has always been such a true friend to her, and who seems to look upon her more as a daughter than as a friend.

Mrs. Champion is both surprised and disappointed, living as she does apart from society, and mixing but seldom in the fashionable world in which the mysterious Miss Reymond is alone known and discussed; she has not yet heard of her predilection for the handsome young Frenchman, though it has been the talk of the town for the last two months, and until that moment she has entertained vague hopes that, after all, she might yet marry the Duke of Glamour if she chose. The news of her engagement to Cassilis comes upon her, therefore, like a thunderbolt, and in one instant destroys the wild visions of supreme happiness for her two young friends in which she had indulged ever since Glamour's return to England.

Miss Reymond also tells her, in her letter announcing her approaching marriage, that Lady Rollingford has revealed the secret of her birth to Cassilis, and that it has been only on the understanding that there should be no more mysteries that she has consented to marry him. This news, almost more startling to her than that of her engagement, only serves to increase Mrs. Champion's annoyance.

Indeed, she feels that, in spite of Louisa's statement, Lady Rollingford cannot possibly have revealed her secret. The poor girl must necessarily be laboring under a great mistake; and so, to try and discover the truth, she orders her carriage and repairs at once to town, to question Lady Rollingford herself about a matter which affects so deeply her young friend's future happiness.

Her ladyship receives her in her little boudoir—the same room in which she had received Cassilis but two days before—and, as Mrs. Champion soon perceives, notwithstanding her usual preoccupation, Lady Rollingford is unusually gracious towards her.

Mrs. Champion, with her usual impulsive nature, begins at once on the delicate subject, and asks her point-blank if it is true that she has told her secret to Rupert Cassilis.

"What secret?" Lady Rollingford exclaims, pretending to be surprised.

"The secret of Louisa Reymond's birth, of course."

"It was but natural that Mr. Cassilis should want to know who the young lady he is about to marry really is, so I told him *all I could tell him* about her."

"And what is that?"

"What I told Monsignore Berretta, when he was sent by the Duke of Glamour to find out all all about my adopted daughter."

Mrs. Champion shudders.

"Then you have told him a lie, Lady Laura." (She generally addressed her as Lady Laura now, as Lady Rollingford has so often said that she lost in position when she consented to marry poor Frank Reymond.)

"A lie, Mrs. Champion?"

"Nay, I am no longer under any obligation to you; the money you once so cunningly lent me, to try and buy my silence, under the pretext that you sympathized with the war in Italy and wanted to contribute to the ambulance I was forming for the succor of the wounded, I have paid back to you, and with full interest—though for nearly ten years I thought that it was a free gift. I am under no obligation now, and I will speak."

"No, you will not, Mrs. Champion. I know you better than you know yourself."

"What do you mean?"

"I mean that you gave me your word of honor never to divulge the secret which, by certain strange coincidences, came to your knowledge; and though it is true that twenty years have come and gone since then, I am so sure that you will keep your word that your threats trouble me not."

Lady Rollingford's cool, determined manner could not but impress Mrs. Champion, who, seeing at once that threats and words of indignation would have no effect upon this cool-headed, cold-hearted, self-reliant and self-possessed woman, changes her tone, and when she again speaks it is in her usual dreamy far-off way.

"You are right, Lady Laura—I would not, I could not, break my word; yet you must allow that to see this poor girl made a victim of in this way must necessarily pierce me to the heart."

"But what would you have me do?" Lady Rollingford asks, an almost imperceptible smile appearing on her face—but a smile so faint, that it just served to curl her proud lips, and give her a more contemptuous expression.

"Tell the truth, and brave the consequences."

"I have told this Mr. Cassilis *what I consider to be the truth.*"

"And what may that be, pray?"

"That when I was in Paris with my husband, now more than twenty years ago, he was very anxious that I should adopt a child and bring it up as ours, as heaven had not blessed us with any of our own; that to please him I adopted this little girl, whom I have ever since looked upon as if she had been indeed my daughter; and that, on his deathbed, Lord Rollingford begged me to love her and make her happy; and that, pierced to the heart by the thought of losing him so soon, and anxious to gratify him, I promised to be always a mother to Louisa."

"If that is what you told Monsignore Berretta, I no longer wonder that he should have advised the Duke of Glamour not to marry her."

"And why? You know that it is the truth, and nothing but the truth."

"Ay, but not *all the truth.* And do you think that a clever man of the world like the monsignore could not see plainly enough through your words, and guess that there was a deeper mystery in the whole affair than you were revealing to him? Ah, I know these Italians: you cannot deceive them. Much as I deplore all that has happened since then, yet I cannot but admire the Duke of Glamour for having chosen Monsignore Berretta for his ambassador."

"I thought you were very anxious that he should marry Louisa."

"No one could have been more anxious. I have known the duke almost from his childhood, and I know that no woman could wish for a better or a nobler husband."

"I did not object to him. I know as well as you do, Mrs. Champion, the worth of the Duke of Glamour, and, as I told you at the time, I could not possibly have wished for a better husband even for a daughter of my own; but you do not know the world, Mrs. Champion, or you would never have imagined, even for a moment, that the Duke of Glamour could have married a girl like Louisa."

"Yet he changed his religion to please her," Mrs. Champion remarks, half aloud, casting a vacant look round the apartment.

"He became a Catholic because he has always had a strong tendency that way, as every one knows; you should thank Monsignore Berretta for his conversion, not Louisa Reymond."

"And you approve of her marriage to this gentleman?" she asks, now rousing herself for a moment, as if from a deep reverie; anxious, perhaps, to drop a subject that cannot but be unpleasant to her to discuss.

"He is of a good English family, and a Catholic; and, though it is true that he has neither a title nor a fortune to give her, yet he loves her and she loves him, and I am convinced that he will make her very happy."

"Do you think that this is the sort of marriage your dead husband would have wished for her?"

"You do not understand. Can you not see, Mrs. Champion, that, under the circumstances, it is the very best match that I could possibly have made for her? A man like Cassilis can afford to marry whom he pleases. He is so madly in love with Louisa that I think he would have married her with his eyes shut; but, of course, I could not allow *that*, and so I have told him as much about her history as I thought myself free to tell without endangering the honor of the house of Reymond."

"He had no idea, then, that she is Lord Rollingford's daughter?"

Lady Rollingford's brow becomes clouded, and her hand trembles visibly.

"Are we so sure, Mrs. Champion, that Louisa is his daughter?" she says, presently; then, almost as if she were speaking to herself, she adds, "No; the more I think about it, the more convinced I am that she is not my husband's child; she is not in the least like him, either in person or in character; and, besides, I know *that* which, could I prove to you as clearly as I have proved it to myself, I am sure would at once drive that supposition from your mind."

"Then, whose daughter is she?"

"Yes, yes—who is her father?"

"That is the question which meets my ears wherever I go. But, Lady Laura, I never would have imagined that I should end by hearing it from *your* lips!"

"Remember that we have only the word of that woman in Paris to prove that Louisa is my husband's daughter. What reliance can one place on information from such a source? Why should we think a woman like that should happen to speak the truth on that one occasion in her life?"

"What has become of her?"

"She is dead. I could almost say, 'Thank God!' Yes, she died some years ago in France."

"Poor woman!"

"Alas, no one could have grieved and suffered more for all this than I have. To think that I should have married Frank Reymond, knowing what I did! But I was mad; I was not myself, believe me, at that time; I scarcely knew what I was about."

"Let us change the subject," Mrs. Champion murmurs, very much moved, "let us change the subject. Tell me about this Cassilis. I have heard that he is rather wild, and that he has led a fast and profligate life. Is this true?"

Some minutes elapse before Lady Rollingford is able to answer. "There are some strange stories about him," she says, presently, speaking once more in her cold, measured way; young men are all more or less wild, but I do not think that a man is any the worse for having sown his wild oats before marriage. He is good and noble-minded, and he loves Louisa to distraction. I entertain no fears for their future; she will be able to quiet him down—trust Louisa for that!"

"You have told him all, then?"

"No, not all—I could not tell him all; but I have told him as much as I could. I have told him the name of Louisa's mother, and what sort of a woman she was—she is dead now, and it will do her no harm—and I have also told him that my late husband was once very intimate with her; that she pretended, on the strength of their past *liaison*, that Louisa was his daughter; and that it was on this account, and because my husband, in his last moments, troubled by doubts and misgivings, and wishing to atone for the past, begged of me to adopt the child, that I adopted her and brought her up as if she had been my own daughter."

"Great God! You have given him to understand, then, that she is an illegitimate child?"

"I have told him all I dared; and I even went so far as to give him the name of the physician who attended my husband in his last illness—Dr. Pigwall, do you remember?—who is the only person living, besides you and me, who knows anything about this sad affair. But what do you think? when I told him the name of that woman—Marietta—Cassilis started back, and then informed me—I really forget how he had heard it—that she had been the mistress of a certain Comte de la Mazerolle, in Paris."

"Yes; we know that before."

"Ah, but what we did not know is, that this man is supposed to have married her just before her death, and, therefore—as Cassilis himself suggested—most likely Louisa is his daughter, and, as he loved Marietta so much, perhaps he will not object to recognize Louisa. Another strange complication in this most complicated of mysteries is, that this Comte de la Mazerolle happens to be a great friend of his."

"That is bad."

"Why?"

"Because it may lead to great unpleasantness between them. Suppose he will not recognize Louisa as his daughter? Supposing he proves that she is not his daughter?"

"You still believe her to be Lord Rollingford's child? Ah, I can see that?"

"I must confess that I do; Marie was a base deceiver, a woman without a conscience and without honor, yet she had a heart, poor woman! a tender, loving heart, and I cannot believe that she could have been capable of acting a comedy in such a supreme moment, and before the man, too, who had loved her so much."

CHAPTER IV.—A VISIT FROM GLAMOUR.

LADY ROLLINGFORD'S words have made a great impression upon Mrs. Champion. She cannot bring herself to believe, for a single moment, that Louisa is not the daughter of her poor young friend Frank Reymond, whose career has had so suddenly cut short; yet she cannot doubt that Lady Rollingford really entertains strong suspicions that such, after all, is not the case.

The day following her interview with Lady Rollingford, Mrs. Champion receives a visit from the Duke of Glamour, who comes in person to announce to his old friend the news of his approaching marriage with Miss Gwladyth de Beverley. Her daughter—the saucy and lovely Bella—has gone out riding with the general, and her other children are out with their governess, so that Mrs. Champion is alone in the house when he arrives; and she receives him in her private study.

Glamour is looking as handsome as ever, and when he enters the room a crowd of recollections, perhaps not wholly unpleasant to her, rush to her mind.

"So you are going to be married, at last?" she says, musingly, and looking, as is often her habit now, with dilated eyes, as if at something immediately in front of her which no one else can see.

"Yes, Mrs. Champion, and I think you will approve of my choice. Miss de Beverley is a beautiful girl, and as good and pious as she is lovely."

"I have heard she is very charming," she says, rather sadly; and then, suddenly looking him full in the face, she adds, abruptly, "I suppose you have quite forgotten poor Louisa Reymond?"

The duke looks confused and remains silent for a few seconds. "No," he answers at last, "I shall never forget Miss Reymond, for I can never forget that it is, perhaps, thanks to her more than to any one else that I am at last a Catholic."

"Well, tell me something about your marriage; when is it going to be?"

"To-morrow," Glamour replies, brightening up.

"So soon! I had no idea of this. I wonder I never saw anything about it in the papers."

"I do not think it has been in the papers. I want it to pass off quietly—I hate a fuss. We are to be married quietly at the Pro-Cathedral, and only our most intimate friends are to be present. By-the-by, won't you be of the party? I came purposely to ask you?"

"How good of you! But I fear I must say No. I do not know your bride, and my presence therefore could give her no pleasure. As for me, the thought that you are marrying the woman you love will be enough—of course, you do love her very much?"

"Yes; she is the best and kindest woman I know—save one."

"Ah, Louisa Reymond, I suppose," she says, thoughtfully.

"No—yourself."

"Ah, I did not think at the moment that you meant to pay *me* a compliment. But tell me honestly, do you really like her better than you did Louisa?"

"Oh, yes. I liked Miss Reymond very much, but I do not think I could ever have loved her as I love *her* who to-morrow will be my wife. I hear, by-the-by, that Miss Reymond is also about to be married. I scarcely know her future husband, yet I am sure I hope she will be very happy."

A few hours after his conversation with Mrs. Champion the handsome young duke is dining in his own house. It is the last dinner he will eat as a bachelor, and Lord Inganess, who is going to be his best man on the morrow, is sitting beside him.

"Do you know, old fellow, that I have a great wish to follow your example and to get married myself. After all, as you say already, with all the complacency of a Benedict, married life is the happiest and best for a man," he says, as he peels an orange.

Glamour has been telling him of his visit to Champion House, and enlarging very much upon the former beauties and charms of the divine Dorothea.

"Indeed! I always said that you would end by falling in love with that vivacious and sparkling little Miss Champion," his friend answers, laughing. "That is what comes of being always there. I am glad I did not keep up my old intimacy with her parents, for perhaps I might have fallen in love with her myself."

"Don't you admire her?"

"A little. She is certainly very pretty and winning, and clever, too, I should say; but she is rather too much of a flirt for me."

"A flirt—Bella a flirt!"

"Oh, I do not mean to insinuate anything against her; but even you, Inganess, must confess, I think, that she's rather wild, and perhaps even a trifle fast and horsey."

"Which means that she is young and bright, and that she loves horses and dogs—three great crimes, to be sure. Well, I can sympathize with her *there*—I, too, love dogs and horses. I only wish I were going to marry her to-morrow."

"I should advise you to wait—she is such a child; besides, how do you know that she cares for you?"

"I think she does," Inganess replies, rather mysteriously.

"Now, Inganess," the duke replies, filling his glass with claret for the last time, "let us go see the De Beverleys, and arrange our programme for to-morrow."

CHAPTER V.—TWO MARRIAGES.

THE next day, at the Pro-Cathedral at Kensington, the Duke of Glamour is married to the Hon. Gwladyth de Beverley.

The marriage goes off very quietly, for only a few of their most intimate friends have been invited.

The Cardinal Archbishop, assisted, of course, by Monsignore Berretta, performs the ceremony.

And thus Glamour's fate is sealed. Do any thoughts of Louisa Reymond cross his mind at this moment? and if so, does he experience any pangs of regret for the past, or misgivings for the future? Who can tell? He looks the very picture of happiness, in spite of his perhaps too well sustained composure and calmness.

* * * * * * *

A few days later Monsignore Berretta starts for Rome, where he receives from the hands of the Holy Father the cardinal's hat which he has so deservedly won; and in that city, not many months afterwards, he is called upon to bless the union of our friend Rupert Cassilis and Louisa Reymond; for Lady Rollingford, with some reluctance, has at last acceded to her adopted daughter's most earnest wish, and consented to accompany her to the Eternal City, that she may be married at the altar dedicated to her patron saint.

Of course, though married from an hotel, all the best people in Rome are present at the wedding, and for a week or two the interesting young Catholic girl and her Protestant mother are the favorite topics of conversation amongst the the Italian nobility. Lady Rollingford's pride is more than satisfied. Never, even in the wildest dreams of her youth, had she imagined that she would one day become so great and powerful that even the aristocracy of a land in which she is such a complete stranger, would flock to her hired rooms to witness the marriage of a poor nameless girl whom she had chosen to adopt.

There has not been so grand a marriage in Rome

Digitized by Google

since the Italian invasion had produced such consternation in the Catholic world, and caused, as a consequence, so great a stagnation of its usual stately festivities.

Do any thoughts of the handsome duke suggest themselves to the bride as she holds forth her hand for the perhaps still handsomer commoner to place upon it the consecrated ring that is about to make her his? Ah, no! At this moment, whatever others may feel and think, the image of the clever young duke is far away from her mind.

It was only toward the latter part of the ceremony, when the cardinal comes forward to address a few words to them on the obligations of marriage, that she suddenly remembers him. She knows that only a few days before this same high dignitary of the Church has blessed *his* union to another, and she cannot help wondering whether the words she now hears about true love and eternal happiness are the very same which he addressed to *him*; but the thought only makes her smile.

* * * * * * *

At last the sumptuous breakfast comes to an end; the lovely bride has changed her dress, and said good-by for the last time to her adopted mother, who stands in the centre of the gorgeous saloon, surrounded by Italian princes and princesses, by French dukes and English peers; and, after having thanked them all, with tears in her eyes, for the honor they have conferred upon her, she steps into the carriage that awaits them in the crowded Corso, and, seated beside Rupert Cassilis, the companion of her future life, she drives off amidst a shower of slippers.

As the carriage rolls through the quiet streets toward the station, the heavy load which has hourly been increasing since the morning, and which lately seemed to weigh down upon her like so many thousand tons of gold, falls suddenly from off Louisa's heart, and, turning her lovely young face to her husband, she falls weeping upon his breast.

"You love me, then, Louisa, *ma chérie*," he whispers in her ear, pressing her to his beating heart—"you love me as much as I love you?"

"I do not know how much you love me," she says, with a strange mixture of innocence and coquetry, smiling sunnily through her tears.

"Let me, then, show you how much I love you by my life's devotion, my own angel; this day you have made me the happiest of men. Ah, my Louisa, my own dear Louisa, let me teach you to love me as I love you!"

"Yes, yes, I love you, Rupert!" she exclaims, returning his embrace. "I love you, and I am yours—yours for ever; but love me always as you love me now, for I never knew what it was really to live before; and now—now I feel that if one day you were to love me less I should die."

CHAPTER VI.—THE STORM BURSTS UPON LOUISA'S DEVOTED HEAD.

THE next morning they cross the French frontier, and soon afterwards find themselves comfortably settled in the pretty little *appartement* which Rupert has taken in the Avenue du Bois de Boulogne.

For some weeks they are the happiest couple in the whole world; the days seem to fly before they can realize how they spend them. The lovely Louisa never imagined, even in her sweetest and brightest dreams, that there could be so much happiness in this world.

And Cassilis, on his side, is also beginning to realize that the only true joy worth having consists in loving and being loved.

They seem to live but for one another; and in these ever-to-be-remembered days of their bright honeymoon how little do they think of the ominous words of the gitana at Sandown races, which were the first to cast a shadow over their newly-plighted love! But her dark prophecy was still looming in the future, like a black cloud on the horizon.

Their honeymoon is scarcely over, their love is still warm and has lost none of the charms of novelty, when the thunder-clouds gather over their heads, and the unexpected storm bursts upon them unawares with unrelenting fury.

One morning Rupert and his wife are sitting at their breakfast-table, discussing the programme for the day. Most of the letters are from England, and the youthful couple hasten to open and look over them together, little dreaming of the fatal contents of one of these letters, so carelessly opened, but nevertheless destined to strike the cruel blow which, for a time, at least, comes to put a sudden end to their happiness.

The letter in question is from one of Cassilis's English friends, who, with that avidity which most friends display in announcing any disagreeable news concerning us, incloses him the second number of a new paper—a publication of whose very existence they are both as yet profoundly ignorant, and which rejoices in the peculiar name of *Topsy-turvy*—containing a certain paragraph, printed in large, bold characters, which the friend's friendly care has marked with a red pencil, so that it may not escape the view of the bewildered couple, who read, to their astonishment and dismay, the following news, which the friend informs them has already created the greatest sensation in London, and caused the scurrilous paper to sell by thousands in the great metropolis.

"We understand," so runs this wretched paragraph, "that the young lady whose recent marriage in Rome to the son of an English baronet has lately created such an excitement amongst the upper circles of London society is the daughter of the Comte de la Mazerolle, and, as this nobleman is a single man, the young lady in question—who for many years has been living amongst us under the name of one of our oldest and most distinguished families—is but a natural child, after all. After this we imagine that but few people will care to visit her, and that her acquaintance will be declined by all proper-minded and virtuous persons."

Their astonishment and indignation at reading this may perhaps be better imagined than described.

Louisa, strong in her innocence of heart, and sustained by her pure conscience, is ready to take the scurrilous paragraph at its true worth, and to make light of it, though the mere idea that such things should be written about her, and that any one should dare to publish them, cannot but wound her sensitive feelings to the quick; but Cassilis, who feels at once how difficult it will be for him to contradict the report, and who, although greatly upset by it, can scarcely help fearing that there may be some truth at the bottom of this assertion so boldly given to the world, and no doubt most readily received by society at large, is completely overwhelmed by it, and begins to realize the awkward position in which he has placed himself by his marriage.

Lady Rollingford's words come back to his memory, and for the first time he is impressed by their awful signification, and begins to perceive the dangerous step he has taken in marrying a girl whose parentage is so questionable as that of Louisa Reymond.

Carried away by a feeling of sympathy for the prepossessing young fellow, and anxious to secure his alliance for her adopted daughter, Lady Rollingford had so far committed herself as to disclose to him, if not the whole truth concerning Louisa's birth, at least as much of it as might lead him to discover the rest for himself. But the very moment after she had spoken she had perceived her folly, and regretted what she had done. She loved Louisa, and was most anxious to see her settled in life with such a desirable man as Cassilis for a husband, but she felt that the avowal of her secret—the disclosure of her own false position—was too great a price to pay, even to secure her adopted daughter's happiness. This was the reason why, when Rupert mentioned De la Mazerolle's name, and informed her that Marietta had been his mistress for many years, and that some even imagined that he had married her just before her death, she had seized the clew he had thus unconsciously given her, and suggested that most likely Louisa was *his* child.

To Cassilis this supposition seemed as plausible as any other, and he was so much in love with the sweet Louisa at the time that he had agreed to marry her, though Lady Rollingford's explanation had been anything but satisfactory—love is so blind! But now—now that the illegitimacy of his wife was being openly discussed, and the secret which he had fondly imagined would never have been known by any one, had no doubt become public property, his courage gives way, and not even his great love for the innocent Louisa is strong enough to embolden him to face the coming storm; and, in the first moment of passionate indignation, he curses the love which has made them man and wife, and united his lot to hers, making him the sole protector of her honor and reputation.

(To be continued.)

JOAQUIN MILLER'S NEW PLAY, "MEXICO."

THE appearance of Madame von Stamwitz, the distinguished actress, of whose abilities we have had frequent occasion to express in very complimentary words, as the heroine in Joaquin Miller's new drama entitled "Mexico," and produced for the first time in the Grand Opera House, New York, on February 10th, created an impression that fully justified all that has been said in favor of this charming woman. The play is illustrative of the rich fund of Spanish-American life and character, the fertility of which is not sufficiently known because it has been worked so little. In preparing this admirable drama, Mr. Miller has kept constantly in view the peculiar lines in which Madame von Stamwitz's reading and strength attain their highest perfection; and that both author and interpreter shared each other's sympathy and *esprit* is shown by the remarkably accurate rendering of the diversified *rôle* of *Dolores*, as well as by the ease and precision of action sustained to the close by the actress.

The scene is laid in historic Mexico, during the brief but eventful day of the unfortunate Maximilian. *Dolores*, the heroine, is betrothed to *General Tercio*, of the native army; her cousin, whom she cannot love. *Captain Randolph*, the hero, is a tall, dashing, handsome American, who has placed his fortunes with those of the young Emperor.

In the opening scene there is a grand view of the city of the Montezumas, with the outlines of the Cordilleras in the distance. Gardens of tropical foliage, and lakes of clear, leisure-inviting water brighten the panorama and suggest a delightful languor. Two volcanoes are in the throes of an eruption in the background. All the characters in the play are here introduced, and much merriment is created by *Dr. Popper*, the American Consul, who is a representative of the type spoken of by Julia Ward Howe, who says, "the first requisite of an American Consul is that he shall not speak the language of the country to which he is accredited; and the second, that he shall not speak his own." The Doctor, while constantly asserting that he is a man of few words, is the most verbose of the personnel. In this act *Dolores* creates quite a patriotic furore. In consequence of her intense admiration of the person and character of Maximilian, and it is owing to her persuasions, nay, her commands, that other characters in the drama unite their fortunes with his. Nothing backward herself, she joins the army as a Sister of the Geneva Cross, and takes *Barney's* sweetheart as her maid.

The plot grows interesting in the second act. *Barney O'Shea*, a rollicking Irishman, who has gone to Mexico with his sweetheart, *Mollie O'Rourke*, to make his fortune, enlists in the patriot army as an orderly of *General Tercio*, who, watching an opportunity, takes *Barney's* clothing from him and dons it himself, leaving his own uniform to the orderly. In a battle the *General* keeps himself out of danger in a safe retreat, while *Barney*, with the impetuosity of his race, leads the soldiers through the thick of the fight until victory rewards them. The *General* is found far away from the scene of the conflict, and, not being recognized, is arrested as *Barney* and charged with cowardice. The uniforms are secretly exchanged, and the *General* instead of hushing the matter to save his own credit, as well as the life of his orderly, is the loudest for his condemnation. This leads us to the subject of our illustration. *Barney* is brought out before the troops to be shot, and just at the moment his General gives the order to fire, *Dolores* rushes forward to save him and is blinded by the explosion of powder in her face. In the third act the blind heroine is seen fleeing from her betrothed, whom she now detests more bitterly than ever. A most dramatic scene in this act is when the excited *Dolores* withdraws the dagger that has confined her hair and veil, and, holding it in a threatening attitude, informs *Tercio* that she has discovered his treachery and baseness, and calls down upon his head a most fearful curse. As onward she speeds she reaches a bridge spanning a mountain torrent; ignorant of the removal of several planks at the instigation of the cowardly *Tercio*, she takes the step that would ordinarily have proven fatal, and would perish in the abyss, did not the hero, *Captain Randolph*, catch her at the critical moment.

Queretaro is shown in the fourth act. *Captain Randolph* denounces *Tercio* for his treachery, and in the fight that ensues between them the Captain is wounded. He is subsequently sent to the hospital where the blind *Dolores* had been taken.

The heroine, in groping her way between the cots, reaches the captain, and, passing her hand over him, touches a cross she had given him at the time of her rescue. By this she recognizes the sufferer, and, while supplicating him for some mark of recognition in return, *Tercio* enters and orders her away. She is forcibly torn from the captain's side and thrust into prison.

In the fifth act *Randolph*, sentenced to death for having fought with the Emperor, and *Barney* for the cowardice exhibited by *General Tercio*, are seen in the cell of the Capuchin Convent, from which Maximilian had but a short time previously been led to his execution. The final climax is reached in the next act when *Randolph* and *Barney* are led forth to die. *Dolores* has recovered her sight during the confinement in the prison cell. After *Dr. Popper*, the American Consul, has attempted to protect the condemned men and been rudely thrust aside, *Dolores* appears, and, wrapping an American flag about the kneeling figures, dares *General Tercio* to fire upon them.

It will be seen from this summary that the play is full of thrilling situations, and that the interest is well sustained. The play is mounted in exquisite style, and will undoubtedly prove the *chef-d'œuvre* of the talented author and his conscientious interpreter.

SCIENTIFIC INTELLIGENCE.

The Iridescent Glass, which is becoming very popular, is prepared by exposing it while very hot to the fumes of stannic chloride. When the colors are very deep the nitrate of barium or of strontium has been added.

General G. K. Warren maintains that the Minnesota Valley and the Mississippi Valley have been formed since the deposition of the glacial drift, and that the loose deposits extending up to the Savannah are later than the last glacial drift.

Monument to Dr. Mayer.—A committee has been formed in Germany with the object of creating a monument to the memory of Dr. Robert Julius Mayer in his native city of Heilbronn. Dr. Mayer's name is associated with the establishment of the mechanical theory of heat.

Exploration of Arabia.—An interesting scientific expedition is at present being undertaken in Arabia. M. Renzo Manzoni, an Italian explorer, who has already traveled over Yemen, the road from Aden to Sana and Jaia, Dhobaketh, Mokha, Zebid, Hodeida and Menakha, is about to visit the region situated to the north of Asyr and to the east towards Hadhramaut.

The International Pisciultural Exhibition which will take place at Berlin in the Spring of next year promises to be extremely interesting. A number of English, Russian, American, and even Japanese and Chinese exhibitors have already promised to take part in it. The Crown Prince of Germany has undertaken the protectorate of the exhibition, and takes a great interest in its success.

A New Emotional Art.—The effect of music upon the emotions has long been known to Western nations but in the East, as for example in Japan, posturing takes the place of the operatic singing of other countries. Color and motion may be made to produce emotions like good music, and are likely to be employed as adjuncts in the entertainments of the future. We are likely to have a philosophical work entitled "Emotion as a Mode of Motion."

Dr. Otis Johnson, of the University of Michigan, gives the following new test for arsenic: Place the mixture containing arsenious or arsenic compounds in a Marsh apparatus with a concentrated solution of potassic hydrate and a little aluminium wire. Upon warming, arseniuretted hydrogen will be evolved, which may be subjected to the usual tests. If, however, the gas blackens argentic nitrate, the proof is quite conclusive, since antimony by this process is not converted into antimoniuretted hydrogen.

Increase in the Value of Straw.—In discussing the profits of wheat-growing no one appears to have observed that the grain itself represents but one half of the produce; the other half—the straw—has been omitted from the calculation. Now, it is a fact that, while wheat has been declining for years, the price of straw has been rising, until latterly, in some countries, the straw has actually become the more important of the two. The demand for straw as litter, for fodder to mix with other foods and for manufacturing purposes outside of agriculture, has so increased that sometimes there is a positive scarcity even in rural districts. Some farmers only grow grain because they want the straw for their cattle; and as an adjunct in the production of meat, the value of the straw must be borne in mind. Hence, to the value of the grain must hereafter be added the price of the straw.

Wine from Oranges.—In the first trials to make wine from oranges, it was shown that the ripe fruit was unfit for the purpose, and they must be selected not when they have become quite mature and superabound in the sugary principle, but before they are wholly ripe and still possess an appreciable amount of citric and malic acids. At present four different sorts of wine have been obtained from the orange. One called imperial, and another a dry wine, are procured in January with the fruit of the season; another, the mandarin, is furnished by the orange gathered in April. These three sorts have a color pleasing to the eye, are perfectly translucid, have an agreeable savor with a slight tinge of acidity, and an alcoholic richness of about fifteen per cent. As to the fourth, a sparkling wine prepared by a special process, it possesses little more than twelve per cent. of alcohol. The methods of fabrication are still too rudimentary to admit of the article being placed upon the market.

Thymol as an Antiseptic.—Dr. Hanke, of Halle, Saxony, recommends the substitution of thymol for carbolic acid as an antiseptic. Thymol is a principle discovered in the herb thyme, and possesses much greater antiseptic power than the coal-tar product, and is far more useful as an application to wounds. The solution used consists of one part of thymol, ten parts of alcohol, twenty of glycerine, and a thousand of water, and may be employed either as a spray or a solution. The mode of application is very simple: a piece of thin linen is saturated with the liquid and laid on the sore direct, as the thymol does not cause any irritation. If the linen becomes dry it can be moistened with the solution once or twice a day. From the experience of fifty wounds dressed with the new antiseptic, Dr. Hanke has no hesitation in asserting that it is superior in its action to any preparation hitherto in use. Moreover, it has the great advantage that it may be employed by any one, as it is not poisonous.

PERSONAL GOSSIP.

THE popular English author, A. L. O. E., is now a missionary in the Punjab, India.

PRINCE ALEXANDER of Battenberg has declined the candidature for the Bulgarian throne.

IT is reported at St. Petersburg that Lord Dufferin has been appointed British Ambassador to Russia, in place of Lord Augustus Loftus, recalled.

THE motion is made to erect a statue of Henry Bergh in Central Park. If the dumb animals had voice, how cheerfully would they second that motion.

THE Begum of Bhopal is a clever and energetic lady. She has built the best hospital in India, out of Calcutta, is making excellent roads, and arranging for a railroad to her dominions.

THE unveiling of the statue of Berryer, in the Salle des Pas Perdus of the Palace of Justice, in Paris, on the 20th of January, was the occasion of a mild and harmless royalist demonstration.

THE wife of Rev. Jesse Boring died in Augusta, Ga., aged sixty-three. She crossed the Plains on a mule when her husband went to California and established the first Methodist Church on the Pacific Coast.

CAPTAIN EDWARD GUBB of the British Navy was recently found dead in his bed at Leamington, at the age of eighty-one. He was a son of the second Earl of Arran, and had been in the Navy since 1810.

HENRY M. STANLEY, the explorer, was present at the recent meeting of the conference on the civilization of Africa at Brussels, and stated that he would lead the Belgian exploring expedition which is soon to start for Africa.

THE armchair occupied by the late Honorable Gustav Schleicher in the congressional hall was presented to his widow as a memento. It is a monstrous large affair—big enough to seat two common-sized men comfortably.

BISHOP CHATARD, of the diocese of Vincennes, Ind., has expressed himself in strong terms against secret Orders. Much feeling exists, and a committee from sixteen lodges in Terre Haute will ask to confer with the bishop upon the subject.

A MISS LISETTA REST has left a considerable sum in the hands of trustees to be applied for ever to the distribution of gravel on steep and slippery London roadways, a work which she personally superintended and paid for during her lifetime.

COLONEL PERCY WYNDHAM is dead. This distinguished soldier of fortune, who was formerly with Garibaldi, and with the Northern Army in the American Civil War, was killed at Rangoon, India, February 3d, while attempting a balloon ascension.

CARDINAL MANNING will leave England for Rome early in February, and will be absent during the season of Lent. The cardinal, it is understood, visits Rome on the special invitation of Pope Leo XIII., to confer with him on matters relating to the organization of the Catholic Church in England.

OSCAR GUSTAVUS ADOLPHUS, Crown Prince of Sweden and Norway, is nineteen years old, and is said to be intelligent, but ignorant of literature and art. He is spending the Winter in Rome, under the tutelage of Mr. Hare. The Prince is tall, fair-haired and awkward, with a simple and candid face and a rosy complexion.

IT is announced that the following named Englishmen will be included in the forthcoming list of new peers: Sir Ivor Guest, Sir William Hart-Dyke, Mr. Holford, Colonel Loyd Lindsay, V. C., Mr. Henry Chaplin, Mr. John Malcolm, of Poltalloch, and Mr. Baillie Cochrane, and that Lord Barrington will be raised to the English peerage.

MEMORIAL windows, sacred to the memory of the Right Rev. Richard Channing Moore, late rector of the church, and Bishop of Virginia for a period of sixty years or more, and James H. Gardner and W. P. S. Mayo, late vestrymen of about forty-five years' service each, are to be put up in the Monumental Episcopal Church of Richmond, Va., shortly.

DR. SCHLIEMANN is ambitious to be United States Consul general at Athens. He is an enthusiastic American, has married a Greek lady, and is building a fine palace in Athens. He is on good terms with the King, and would gladly give his services gratuitously, besides doing all he could for the United States in the various archæological explorations now going on.

GENERAL GRESLEY, the new French Minister of War, used to be chief of staff in the war office. He was dismissed after the elections of the 14th of October, 1877, by General Rochebouet, when a coup d'état was in contemplation, and replaced by a friend of General Ducrot, General Mirbel, whom General Gresley will now dismiss in his turn. Moreover, he was chosen as a Republican candidate for a life senatorship.

IT is shown by the report of the Auditor of the United States Treasury Department, that Miss Ada C. Sweet, the pension agent in Chicago, disburses more money than any other agent in the country, her payments last year amounting to $2,287,858, or more than one-twelfth of the entire pension fund. Of this amount $1,196,149 went to invalid soldiers, $999,893 to widows, and $46,493 to veterans of the war of 1812.

GENERAL GEORGE CADWALADER, brother of the late judge, and the last of five sons of Thomas Cadwalader, died in Philadelphia, February 3d, aged seventy-five. He was apparently in good health until Sunday evening, when he was seized with an attack resembling apoplexy, and remained unconscious until death. During the late Civil War he commanded the Department of Annapolis, and afterwards the Second and Sixth districts of the Army of West Tennessee. He subsequently commanded the Loyal League of the United States.

THE oldest bishop in the Church of England is Rev. Alfred Olivant, Bishop of Llandaff, aged eighty-one; the youngest is Right Rev. Rowley Hill, Bishop of Sodor and Man, aged forty-three. The oldest prelate of the Irish Episcopal Church is Right Rev. John Robert Darley, Bishop of Kilmore, aged seventy-nine; the youngest, Right Rev. Robert Samuel Gregg, Bishop of Cork, aged forty-five. The oldest prelate of the Scotch Episcopal Church is Right Rev. Robert Eden, Bishop of Moray and Ross (Primus), aged seventy-five; the youngest, Right Rev. George Richard Mackarness, Bishop of Argyll and the Isles, aged fifty-six.

THE death is announced of Sir James Matheson, remarkable as the second largest landed proprietor in the British Isles, and as a man who struggled to the topmost difficulties of an unusual kind. He was compelled by family circumstances to accept, at a very early age, a clerkship in Calcutta, and was dismissed by his employers as "too stupid even for trade." At the earnest request of a Baptist missionary the firm agreed to give him a further trial of six months in their China branch. He made in China a splendid fortune, and returned to Scotland probably the richest subject in that kingdom. He purchased the Island of Lewes and resided there the greater part of his subsequent life, expending, it is said, nearly £250,000 for the benefit of his subjects, who, nevertheless, never took to him.

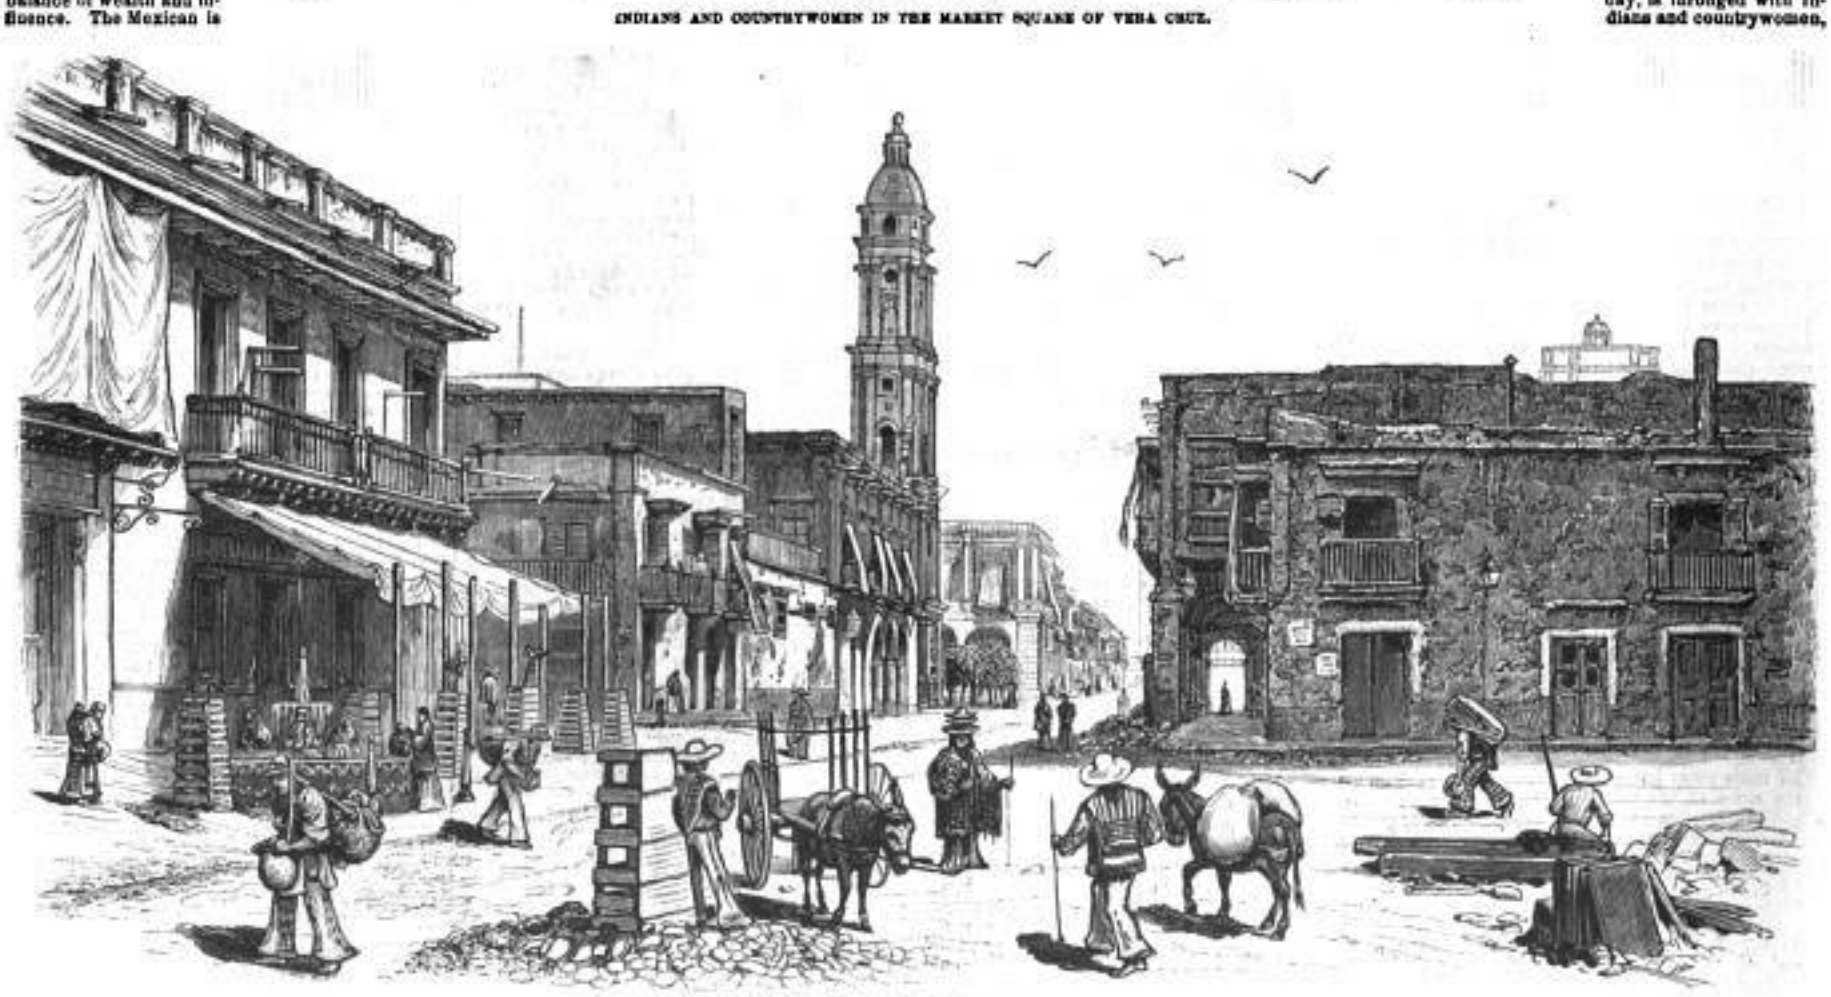
VIEW OF THE ALAMEDA OR PUBLIC GARDEN OF VERA CRUZ.

SCENES IN VERA CRUZ, MEXICO.



WE have already given, in a previous issue, a general account of the incidents which attended the visit of the American Industrial Delegation to Vera Cruz, Mexico, with a general description of the city and its more prominent objects. This week we add several illustrations of street life and of points of interest in the city, as sketched by our special artist during the pause of the commercial party in their progress towards the Mexican capital.

The streets of Vera Cruz cross one another rectangularly. The Plaza Mayor, otherwise known as the Plaza de la Constitution, is a square of about 300 feet on each side, ornamented with trees and shrubs of all tropical varieties, and having a huge bronze fountain in its centre. It is the chief place of rendezvous at all times, but more especially in the later hours of the evening, when its arcades are crowded with promenaders in many different costumes. There is much in these costumes and in the customs of the population which is at once quaint and picturesque. Of the 15,000 inhabitants, the Indian predominates in numbers, as in nearly all the Mexican towns, the Spaniard holding the balance of wealth and influence. The Mexican is a conglomerate of both these classes. In no other place, perhaps, will one meet with a greater diversity of complexion. The white and olive-colored creole and Spaniard; the bronze-brown mestizo, or mixed blood of Spanish and Indian; the dark-brown Indian himself; the repulsive bistre-brown *mulange*, cross between Indian and negro, known as the zambo; the unadulterated negro, and his mulatto, quadroon and octoroon descendants, are all seen upon the streets. The creole dress consists of a short round jacket and pantaloons fitting tightly around the hips; the hacendero wears bright-colored velveteen trousers, wide hat, yellow leather boots, and huge spurs; soldiers strut in straw hats and coarse uniforms of cheap linen; poblanas promenade in sleeveless chemise of snowy linen, petticoat with points of lace, nude ankles, and small, well-shaped feet incased in satin slippers; and occasionally some grand señora, in heavy black silk, with high tortoise-shell or silver comb upon her head and black mantilla falling on her shoulders, is met going to or returning from church.

A market scene in a Mexican city presents a striking picture of native customs and products. The market, which begins with the dawn of the day, is thronged with Indians and countrywomen,

loaded at this hour in arranging and displaying their different commodities to advantage; fruits of a score of different kinds, wild birds in cages, fire-flies for the decoration of the hair, several kinds of tortoises, armadilloes and a considerable variety of water-fowl. The show of fish, for beauty and variety, is such as can scarcely be conceived. Hundreds of various species, glowing in all the colors of the prism and surpassing the most brilliant tints of the humming-bird, cover the stones of the market place. The meat-market, however, is the reverse side of the picture; the flesh, being cut into strips and sold by the measure, presents a very repulsive appearance. It is thus exposed to the air and dried without salt. Poultry, which seems plentiful and cheap, occupies another division of the market, and the cooked meats a third. The Indian women, clean and neatly dressed, by means of small fires of charcoal burning in earthenware dishes, prepare in considerable quantities, and in a variety of ways, meat, fish, poultry and vegetables, finding their customers for the most part among the poorer classes. Their cooking is generally highly seasoned with chili, the favorite condiment of the natives. The market-women also produce a great variety of liquors, of every color and flavor. Bread is prepared of a variety of forms and materials and of good quality, while the scarcer kinds of meat, brought from a distance, are inclosed in coarse paste pies, half-baked to preserve them. Considerable quantities of the coarse red earthenware of the country are exposed in the markets; in the manufacture of this ware the Mexican potters excel. The forms and designs are generally very elegant and of exceeding lightness for their size. The whole of their cooking utensils are formed of this ware, metal vessels being almost unknown in their kitchens; so cheap is it that a dollar, judiciously laid out, will often furnish all the requisites of the kitchen.

THE LATE JUDGE JOHN CADWALADER.

AFTER an illness of one week, Judge John Cadwalader died at his residence, No. 252 South Fourth Street, Philadelphia, on Sunday morning, January 26th, in the seventy-fourth year of his age. He belonged to one of Philadelphia's oldest families: his father, General Thomas Cadwalader, was a well-known and honored citizen, and his grandfather, General John Cadwalader, after whom he was named, was one of the most notable officers of the Revolution. Judge Cadwalader was born in Philadelphia on the first day of April, 1805, and after a thorough course of study at the University of Pennsylvania, he graduated with honors at that institution, and immediately began his law studies in the office of the late Horace Binney, Esq. He attained distinction at an early age in his legal career, and was elected to Congress on the Democratic ticket in 1856. He served only one term, and in 1858 he was appointed by President Buchanan to the honorable position of Judge of the District Court for the Eastern District of Pennsylvania, as successor to the Hon. Judge Kane. When this last position was tendered to him it was considered more a position of honor on account of the many illustrious gentlemen that had previously filled it than on account of the arduous duties attached thereto, as it was looked upon as a position of most elegant leisure. During the war, however, the business of this court increased until it became one of the most important. The matter of war prizes was settled in it, as well as various questions of international law, bankruptcy cases, and the business growing out of the Internal Revenue. Judge Cadwalader made these branches his special study, and mastered them as he did every other subject which he had to handle, and thus he became very distinguished. He was the only Judge at the time who knew how to fill that position. The office is life-long, with the privilege of retiring on full pay at the age of seventy years, but Judge Cadwalader possessed such a high sense of honor that he refused to take advantage of this privilege, so long as he was capable of fulfilling the functions of his office. He has, through his entire career, displayed this honorable and high-toned demeanor, and he was looked upon by all who knew him as one of the highest-toned gentlemen, as well as the possessor of the greatest learning, of any in his profession. As a Judge he was just, and commanded the respect of all with whom he came in contact. He was a conscientious member of the Protestant Episcopal Church, and carried his practical religion into all of his actions, both professional and private. He was kind and thoughtful, and a friend to those in distress. At the time of his death he was engaged in editing the life and letters of the late President Buchanan. This is the same work which the dead President directed in his will should be written by the late William B. Reed; but when that gentleman left Philadelphia and took up his residence in New York the papers in the case were transferred to Judge Cadwalader.

MR. BEECHER ON AMUSEMENTS.

IN a lecture on "Amusements," recently delivered in this city, Rev. Henry Ward Beecher took the ground that "a man's amusements should be the opposite to his daily occupation." "The age had passed when a clergyman's dress needed to be that of a clergyman, when his nose needed to be carried at a saintly elevation and when he stepped by clerical note. Now he was like any other professional man, and his worth was measured by his manhood. Such men—editors included—should exercise their bodies freely, since the man in them became tired while the animal was resting. Gymnasiums, bowling-alleys and ball-fields were passable for the purpose, but walking was better and horseback-riding best. Also a billiard table was an excellent institution, which should be translated into every family. On the other hand men whose occupations were out-doors needed indoor, elevating amusement. There was a prevalent notion that amusement meant dissipation, but that notion was a mistaken one. Those who, in the pursuit of enjoyment, overstepped the bounds of health also overstepped the bounds of common sense. As to the popular amusements of theatres, operas, billiards and cards and dancing, every man should form his own judgment and act accordingly. None of them were wrong or right in themselves."

We illustrate on pages 454 and 455 Mr. Beecher's laws of opposites in the relation to amusements.

Ernest Renan and his Paris Home

No one meeting Ernest Renan at home would suspect him of gloomy views. He lives very quietly, occupying part of a grand old town mansion, built in Richelieu's time, and now tenanted by the Prince of Monaco. The fine, roomy building in the Rue St. Guillaume is a capital model of the ancient French dwelling-house of the first class. It must have been as quiet as a convent before the new Boulevard St. Germain drove straight through its garden, and brought the roar of traffic to some of its most secluded rooms. One accidental provision remedies this inconvenience, in so far as Renan is concerned—the books deaden the noise, and, thanks to them, it is still as quiet *chez lui* as in the British Museum. His *appartement* is armor-plated with these slabs of learning, and on the most approved model—with the thinnest layers towards the extremities, the solidest in the middle. This is but a roundabout way of saying that there are books in the very anteroom, but chiefly of the lighter sort. The Tauchnitz collection of British novels is stored there by the care of Madame Renan. We catch glimpses of more warehousing of the same kind as we cross the little dining-room on our way to the study.

But once in that sanctum all these things cease to interest us for a time, as we find ourselves in presence of the master of the house. His history is not in his looks. He is retund in person, almost jovial in bearing, and being a perfectly polite Frenchman as well as a philosophic seer he is too full of his guest to have any thought of exhibiting himself. He is studiously simple in manner; and at first sight, the only sign that you have of a man of mark before you is the red ribbon of the Legion of Honor in his buttonhole, if that be any sign of the kind nowadays. The broad and lofty forehead does not strike you till afterwards; the outward evidences of intellect are obscured for a moment by the effect of the polished *bonhomie* of address. You have still not exactly a man of the world before you, but one who speaks with something of the suavity of a courtly priest. Half of this is due to his Breton race, half to his almost cloistral training. It gives the clew to a peculiarity of his style: he is an iconoclast who strikes with a muffled hammer. His new work "Les Origines du Christianisme," now in course of publication is the great task of his life, and there are some signs that he means to make it a final one. Five volumes are out, two more will complete it; and the notes for these are in such order, that the manuscript might be finished by another hand. This is in some sort his literary testament, and he regards the writing of it as his supreme duty. The armor-plating of learning is, of course, thicker in his study than in any other part of the premises. Over these by the fire and just behind the writing-table are shelves for the books in daily use. The alcove is stuffed full of literature, the little dressing-room the same; it is a headache to think of all that Renan must have read. Charity and toleration form the rule of Renan's life. Madame Renan, who is of the family of the painter Scheffer, was a Protestant at the time of her marriage, is a Protestant to this day, and her daughter is of the same faith.

A Model Republic.

A BUFFET of wine, cheese and bread at the Paris Exposition is the agreeable representative of San Marino, the oldest and smallest Republic in the word. In the reign of Diocletian, Emperor of Rome, a Christian martyr, Marinus, fled from the imperial city and took refuge on a mountain crag in the centre of Italy. The Christian's simple faith and religion attracted many other refugees, and from a small community with a patriarchal government the family republic grew through many ages and various persecutions. The numerous barons and petty kings of the dark ages warred against San Marino, but the free republicans held their mountain fastnesses as the free eagle holds his eyrie. In the year 1200 the Count Montfietre gave the little republic a beautiful farm called the Château Tumoroso (temerity) a good name for the possession of such bold mountaineers. In 1300 the Court of Rome tried in vain to break up the little nation, which continued through constant war to maintain itself until the middle of the fifteenth century, when, for the first time, it was absolutely and formally recognized by the neighboring nations. At last the young Napoleon, the war comet of France, shot into Italy, and one of the victor's first thoughts was to offer the little republic protection under the tri-color. San Marino played coy, and finally absolutely declined. So the rock stood alone and independent during the storm of war, as it had done for centuries, and it does to-day. The Government consists of two "captain regents," elected every six months by the "grand council."

A Chinese Review.

A CHINESE review has just been witnessed and described by a correspondent of the Shanghai *Courier*. The men, clad in uniforms of red and blue, were ranged in two ranks, every tenth man holding a bright scarlet flag, while a sergeant in the middle gave the time to the advance by waving a huge crimson standard. At the sound of a horn, which resembled the humming of a gigantic bee, the battalion prepared to receive cavalry. Out popped a soldier brandishing a pike, which he poked at an imaginary assailant; then uttering a shriek like an owl, he flourished his shield, turned a somersault, and trippingly retired to the ranks. When everybody had popped out, brandished and poked his pike, shrieked like an owl, flourished his shield, thrown a somersault and retired, the big horn hummed once more, the soldiers formed in square and one of them danced gravely but energetically forward, throwing out his right leg with a graceful jerk; then bounding backwards he again danced forward, this time throwing out his left. Then he jumped, he waltzed, he capered, he pranced, he turned head over heels, rolled himself well in the dust—which rose in clouds—stood on the back of his neck while he flourished his legs in the air, recovered himself, grasped wildly with his arms at nothing in particular, made a grotesque courtesy to the Viceroy and retired. With this martial spectacle the review concluded.

A Legend of Venetian Lace.

THE laces made by the women of Burano, an island near Venice, received a prize at the Paris Exhibition. These manufactories which employ so many women there have revived the art of making laces for which Venice was once so famous. The beautiful designs introduced in the lace represent strange animals, rosea, and all varieties of flowers and seaweeds. There is in Venice a pretty legend of the invention of lace in the time of the republic. A young mariner on board of one of those vessels which Venice at that time sent to distant countries stood one evening at twilight leaning over the side of the vessel and sadly looking at the waves which were not those of his own Adriatic. While he was gazing into the water he saw one of those marine herbs called the "lace of the sirens," and it was so beautiful that he gathered it for the sweet girl of whom he was dreaming. She received the gift with pleasure, and in order to retain a durable remembrance of its beauty tried to copy its intricate design with her needle. After many attempts she at last succeeded, and the art thus originated soon extended and has descended to this generation.

FUN.

SOUND to the corps—A bugle call.

"LET'S see, wasn't Othello a tawny general of Venice?

AT this season every schoolmaster has his rod and every rabbit has his fur-long.

WHY are naughty children like stair-carpets?—Because neither can be kept in order without the rod.

IN struggling to make a dull-brained boy understand what conscience is, a teacher finally asked, "What makes you feel uncomfortable after you have done wrong?" "Father's leather strap," feelingly replied the boy.

THE janitor's instructions to his son: "When you meet the first floor, bow and take off your hat; for the second, uncover; for the third, carry your hand to your head; for the fourth, nod; for the attic floor, let the lodger nod first."

FRIENDLY PUTMAN (to Cabby): "Well, Honesty, are you goin' out with that kicking 'oss to-day?" *Cabby:* "No, Robert, it's four-wheeler's turn this time; a kickin' 'oss may do for a 'ansom, y'see—yur got yer fare 'twixt you an' 'is 'eels if he wos to turn hincidental, but a four-wheeler ain't, you see."

AN Irishman accosted a gentleman in the street late at night, with a request for the time. The gentleman, suspecting that Pat wished to snatch his watch, gave him a stinging rap on the nose, with the remark, "It has just struck one." "Be jabers," retorted Pat, "I'm glad I didn't ax yez an hour ago!"

HE had been sitting still so long that the mother expected to find him asleep, when she looked around and asked: "Well, Harry, what are you thinking of?" "Ma, are we rich?" he solemnly inquired, by way of reply. "In one way we are," she said; "your father says he values me at three million dollars, you at two millions, and the baby at one." That closed the conversation on that subject, but next morning, as Harry was getting on his overcoat, he examined the new patch which had been added, and coolly observed: "Well, I think father had better sell off about half of you or the whole of the baby and get the rest of us some decent duds to put on."

A FORTUNE-TELLER was plying his vocation in the presence of an awe-stricken group of country-folk, when a stranger approached, crossed his palm with silver, and received the usual prediction of health, wealth, a pretty wife and sixteen children. "Humph!" says the stranger, cynically. "Well, that's not so bad as folks in your profession go, but I can tell your fortune better'n you can yourself." "Rash mortal——" begins the seer. "Come, now," says the stranger; "I never saw you before in my life, but I can tell you where you will sleep every night for the next six months, and you couldn't tell that——" "The starry orbs——" "So you don't know? You'll sleep in jail for obtaining money under false pretenses. Come along with me." (He plays badge and marches off necromancer.

Advertisements for any of Frank Leslie's Publications will be received, at regular rates, by Col. W. B. Crooks, 1309 Chestnut St., Philadelphia, Pa.

THE VALUE OF TIME.

As in a fire the loss greatly depends upon the time required for efficient aid to arrive, so the result of catarrh greatly depends upon the speedy use of efficient remedies. For over a quarter of a century Dr. Sage's Catarrh Remedy has been the standard remedy. The positive cures it has effected are numbered by thousands. Each year has witnessed an increased sale. Its reputation is the result of superior merit. If the disease has extended to the throat or lungs, Dr. Pierce's Golden Medical Discovery should be used with the Catarrh Remedy. These two medicines will speedily cure the most stubborn case of catarrh. See the People's Common Sense Medical Adviser, a work of over 900 pages. Price, $1.50. Address the author, R. V. Pierce, M. D., Buffalo, N. Y.

FAIRBANKS' SCALES.

THE Fairbankses shipped 399 carloads of scales in 1878, more scales than in any previous year of their history.—*St. Johnsbury (Vt.) Caledonian.*

H. W. JOHNS' ASBESTOS LIQUID WHITE PAINT has been adopted for interior and exterior wood, iron and stone-work on the United States Capitol at Washington.

VAN SCAN'S STRATENA is one of the most attractive and salable cements in market. It adheres very firmly, and being transparent, leaves no mark or coloration.

THE pleasure of a stranger in visiting a great city is largely dependent on the hotel where he stops. None can be so unhesitatingly recommended as the ST. NICHOLAS. In the very centre of life and business, superbly kept according to the modern idea of a palatial hotel, every attention is exhausted to subserve the enjoyment of the fastidious guest. The rates have been reduced in accordance with the general tendency of the times.

Stuttering cured by BATES' APPLIANCES. Send for description to SIMPSON & Co., BOX 2,236, New York.

Easy Shoes.—Superior quality for gentlemen at reduced prices. EUGENE FERRIS & SON, No. 41 Nassau Street, West Side.

Keep your Bird in health and song by using SCHULTZ'S PATENT GRAVEL PAPER. For sale by druggists and cage-dealers. Depot, 662 Hudson St., New York.

GRATEFUL—COMFORTING.

EPPS'S COCOA.

"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of well selected cocoa, Mr. Epps has provided our breakfast-tables with a delicately flavored beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—See article in the *Civil Service Gazette.*

Sold only in soldered tins, labeled

JAMES EPPS & CO., Homœopathic Chemists, London, England.

A BRAIN AND NERVE FOOD.

Vital force in the brain is mind force, in the nerves, nerve force, but both brain and nerves need their appropriate nourishment or there is nothing to sustain vital force. Vitalized Phosphates feed the brain and nerves, as they are composed of the vital or nerve sustaining principles of the ox brain and wheat germ similar to that which sustains the human brain and nerves. Physicians have prescribed 160,000 packages, restoring lost energy in all weakness of mind or body, relieving debility and nervousness and preventing consumption.

THE CHEAPEST SUNDAY MAGAZINE PUBLISHED!

Frank Leslie's

SUNDAY MAGAZINE

Edited by Rev. C. F. DEEMS, D.D., LL.D.

OPINIONS OF THE PRESS:

"THE SUNDAY MAGAZINE is much improved with its new cover. And there is just the same wealth of reading matter and illustrations within. It is good for old and young, and contains more than one can digest in a month."—*The Methodist*, New York.

"THIS magazine makes its appearance in a new and attractive cover, and contains its usual variety of subjects, with even greater abundance and beauty of illustration. Some of the pictures are very charming, and the variety will please every eye. The sermon by the Editor on the 'Kingdom of God,' the serial story, and several shorter ones, besides various other topics, ably discussed, fill up the one hundred and thirty pages of this ever-welcome family magazine."—*Church Union*, New York.

"THE SUNDAY MAGAZINE contains a vast amount of good reading. The illustrations are good, and very numerous. Much of the matter, especially the articles of the Editor, is very original and striking; all of it is moral, and most of it evangelical. The magazine is well sustained, and it deserves the support it receives. It is doing a good work, and all good people will rejoice in its success, for it is helping in the good work of displacing that literature which is the bane of our country and the peril of our youth. It is an excellent magazine for the young and the home circle. The magazine has our best wishes for a wider and still wider circle of readers."—*Christian Observer*, Louisville, Ky.

"FRANK LESLIE'S SUNDAY MAGAZINE, conducted by Charles F. Deems, D.D., has been a regular, welcome visitor to our sanctuary for several months. It is ably edited and conducted successfully. It contains a large amount of excellent reading matter, and is the cheapest paper of the kind we have seen."—*The Christian*, St. Louis.

"THE SUNDAY MAGAZINE is most admirable for family reading—always lively and instructive. Its illustrations are appropriate, greatly enhancing the value of the magazine. Dr. Deems, the Editor, is doing grand work."—*Christian Advocate*, San Francisco.

THE MARCH NUMBER NOW READY.

128 Pages Quarto. Over 100 Illustrations.

CONTENTS:

DESCRIPTIVE ARTICLES: "The Island World of the Pacific," by Byron A. Brooks, A. M., 13 illustrations, and portrait of King Kalakaua, Sandwich Islands; "The Chinese Feast of Lanterns"; "Street Scenes in Madrid," 12 illustrations; "Funeral Procession in the Caucasus," illustrated; "The Convent of La Rabida," illustrated, etc.

SERIAL AND SHORT STORIES: "David Fleming's Forgiveness," continued; "Thirteen Hundred Years Ago," by Mrs. J. J. Hussey; "Andrew Fordham's Second Thought," by Frances E. Wadleigh; "The Old Bellringer"; "A Story of Twenty Years Ago," etc., etc.

SERMONS: "Jeanne D'Albret and Henry of Navarre," by Harlon L. Stanly; "An Incident in the Life of Cardinal Wolsey"; "Joan of Arc, the Maid of Orleans," by Alfred H. Guernsey, etc., etc.

POEMS: Hours with English Sacred Poets—"Frances Quarles" (1592–1644); "Overtaken by the Tide"; "One Year," by Augusta Browne Garrett; "The Pictures Fade," by Adelaide Stautz; "The Hare and the Hound," a Fable; "Vanquished," by Columbus Drew; "M. Corbeau's School," from the French of Charles Manelle, by John M. Richardson; "Beauty," by Rev. Joseph H. Martin, D.D., etc., etc.

THE HOME PULPIT: Sermon by the Editor—subject, "Mystery"; "Popular Exegesis," by the Editor, who also discourses upon various topics of current interest, such as "Ecclesiastical Changes," "Literary Mediators," "Times Change," "Neal Dow," "Mr. Spurgeon," etc., etc.

THE MISCELLANEOUS DEPARTMENT is very comprehensive, embracing a large variety of subjects, many of them being profusely illustrated.

DIAMONDS

IN SOLID GOLD MOUNTINGS.

ONE DOLLAR — THE WONDERFUL LEFEVRE — **ONE DOLLAR**

Lefevre Ring, $1. Set of Studs, $1. (The Shank) Stud, $1. Lefevre Ear Drops, $1.

THE ONLY PERFECT FAC-SIMILE OF THE REAL DIAMOND IN THE WORLD.

Pronounced by the Academy of France that *M. Lefevre has really obtained artificially the true diamond.* The basis of these gems are pure crystals found in the Sierra Nevadas, from whence they are exported to the Lefevre Laboratory in Paris, France, where they are submitted to a chemical and voltaic process,

BY WHICH THEIR SURFACES ARE COVERED WITH A COATING OF PURE DIAMONDS,

Imparting to them all the BRILLIANCY, HARDNESS, and refractive qualities of the natural diamond, and making them as desirable for **Wear, Brilliancy,** and **Beauty,** as the veritable gems themselves. The Ring, Studs, and Ear Drops, as displayed in this announcement, are accurate engravings of SOLID GOLD MOUNTINGS, CONTAINING THE WONDERFUL LEFEVRE DIAMOND, warranted by certificate U. S. Mint assay.

ON RECEIPT OF ONE DOLLAR in America, either article as above represented. Our "Book on Diamonds," with illustrations of article Diamond Jewelry in solid (14 k.) gold, mailed free.

I have seen many imitations of diamonds, but never saw that could equal the Lefevre.—M. ELLROY, Stamford, Conn.
I am in receipt of a pair of the Wonderful Lefevre Ear Drops, for one dollar; to say that I am pleased with them hardly hits the nail, they are simply elegant.—ANDREW HOREES, Harpersville, N. Y.
The Wonderful Lefevre Diamond Ring, for one dollar, came in hand this morning. It is really elegant, giving entire satisfaction, and exciting wonder and admiration from all who see it.—W. H. REEDY, Martinsburg, W. Va.
The Lefevre Diamonds, mounted in solid gold, are truly marvelous.—B. F. AYERS & SONS, Stone and Terra Cotta Works, Louisville, Ky.
The eminently successful experiments of M. Lefevre silence all doubt of the artificial reproduction of the true diamond.—M. DE FRENOY, the great French Scientist.
The Lefevre Diamond must effectually disturb the slumbers of the possessors of costly gems.—Journal of Science.

☞ We guarantee the Wonderful Lefevre Diamonds for **One Dollar** to be mounted in **Solid Gold,** and will cheerfully refund the money if found unsatisfactory. Address all orders to the

THE LATE THOMAS LORD.

THOMAS LORD, the aged millionaire, whose marriage to Mrs. Hicks last Winter caused so great a sensation, died at his residence, in this city, February 8th. He had been ill for a long time, but about three weeks ago his physicians declared that he was out of danger. He was in his eighty-fifth year. Mr. Lord was born in Norwich, Conn., but came to this city soon after reaching his majority, and was for a long period engaged in business here, retiring several years ago with a large fortune, which was increased by the addition of one-half the $3,000,000 fortune of his brother, Rufus L. Lord, upon the death of the latter some time ago. Mr. Lord lost his first wife in 1872, and until recently lived with his four sons and two unmarried daughters. On December 31st, 1877, he was married to Mrs. Annette Wilhelmina Wilkens Hicks by Cardinal McCloskey. Another ceremony was also performed by the Rev. Dr. Van Kleek, of Hyde Park, Mass. Mrs. Hicks was born in Surinam, S. A., and after her marriage to Mr. Hicks was a leader in New York society. After she became a widow in 1866 she spent much of her time in Europe, whence it was several times reported that she was to be married. Mr. Lord was a friend of hers before she visited Europe, and upon her return renewed the acquaintance, which culminated in marriage.

This marriage aroused very great opposition on the part of Mr. Lord's sons, and they made application for a commission in lunacy, which was granted upon their showing the alleged unsoundness of their father's mind. During the proceedings the bridal pair were in seclusion at the residence of Mrs. Hicks, where they remained for over a month. At length, in February, 1878, Mr. Lord emerged from his retirement, having obtained the affidavits of Drs. Austin Flint and Fordyce Barker as to his entire soundness of mind; and, after a brief delay, a settlement of the family difficulties was made, and a deed was drawn by which his property was all to go to his sons upon his death, his wife relinquishing all right of dower in consideration of a liberal settlement made upon her by Mr. Lord at the time of the marriage.

FLORILINE!

"FLORILINE"—FOR THE TEETH AND BREATH,

Is the best liquid dentifrice in the world. It thoroughly cleanses partially decayed teeth from all parasites or living "animalcules," leaving them pearly white, and imparting a delightful fragrance to the breath.

THE FRAGRANT "FLORILINE"

removes instantly all odors arising from a foul stomach or tobacco smoke. Being partly composed of honey, soda, and extracts of sweet herbs and plants, it is perfectly harmless and delicious as sherry.

Prepared by **HENRY C. GALLUP, No. 493 Oxford Street, London, England,** and retailed everywhere.

40 MILES From Salt Lake City and one mile from the Railroad, is located the noted "ARGENT" Silver Bearing Lode, the ore from which assays from $3 to $5 in GOLD, about fifty per cent. Lead, and $30 to $136 per ton. **OF SILVER**

Directors are all solid business men. Stock is assessable. Send for prospectus.

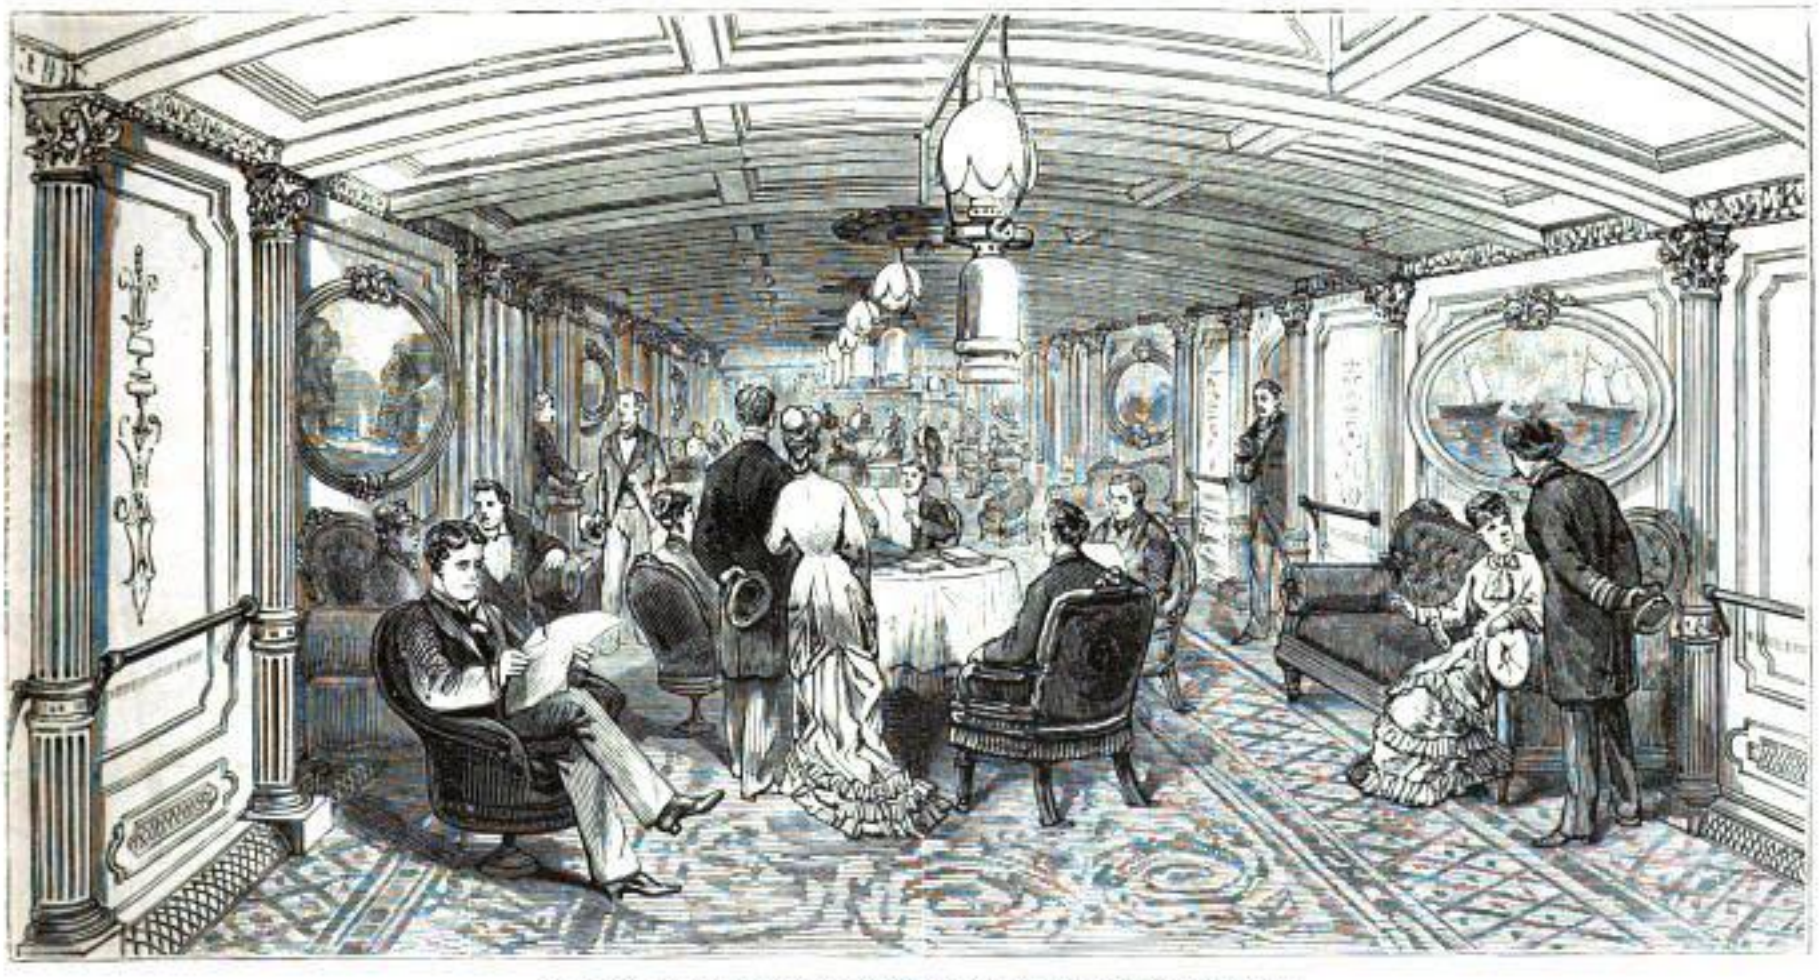
THE NEW IRON STEAMSHIP "GENERAL WERDER," NOW BEING FITTED UP AS A FLOATING COLLEGE.

WOODRUFF SCIENTIFIC EXPEDITION.

A VOYAGE AROUND THE WORLD IN A FLOATING COLLEGE.

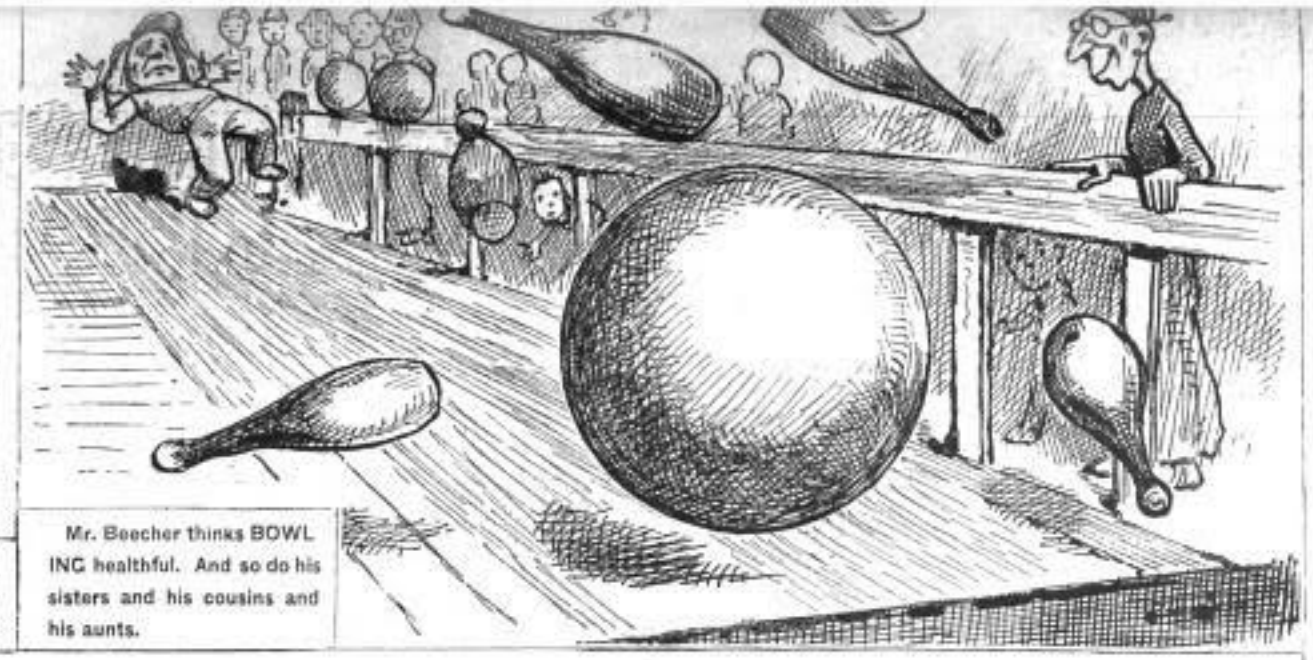


SOME ten years ago Mr. James O. Woodruff, a gentleman of wealth and culture, residing in Indianapolis, conceived the idea of arranging a grand scientific, educational and recreative voyage around the world. For years he dreamed of it, and worked for it, and now it appears likely that he will see his idea put into successful operation.

One of the earliest difficulties encountered by Mr. Woodruff, was the obtaining of a suitable steamship for his purpose. Foreign steamships perfectly adapted to such an expedition were easily to be had, but the absurd shipping laws of our country debarred Mr. Woodruff from purchasing any such until, after a five months' struggle, an Act was passed by Congress on March 2d, 1878, which empowered the Secretary of the Treasury "to grant for the purposes of the 'Woodruff Scientific Expedition around the World' register of a foreign-built steamship." This Act, to be sure, was qualified with the provisions that the steamer should "be approved by the Secretary of the Navy as suitable in all respects for the purposes of the expedition," and that there shall "be maintained thereon, without expense to the United States, a school with capacity for at least two hundred students, together with a competent faculty, for the promotion of scientific and nautical knowledge."

THE BATH-ROOM ON THE STEAMSHIP.

Upon the passage of this Act, Mr. Woodruff at once went abroad to negotiate for the purchase of a vessel. He secured the refusal of the new steamship *General Werder*, of the North German Lloyd Steamship Line, for the sum of $350,000, which was about half the amount he would have had to pay for an American-built ship. Upon the arrival of the steamship in September, 1878, she was examined by a board appointed by Mr. R. W. Shufeldt, Acting Secretary of the Navy, and on the approval of that Board was purchased at the above-mentioned price. The *General Werder* was built in 1874, and had made but five trips to this continent at the time of her purchase. She is 351 feet long, 39 feet in breadth, 31 feet deep, and has a registered tonnage of 3,020 tons. Her average speed during the last voyage from Southampton, England, to New York is given at 11.7 knots per hour, burning from forty-two to forty-four tons of coal per day. The main saloon is very large. Its walls are of bird's-eye maple and some darker shaded wood. It is hung with pictures, and its furniture, carpets and appointments are all new and tasteful. Opening out of this saloon alone are staterooms for 150 passengers. The second cabin has rooms for many more, and below the main saloon, in that portion of the ship ordinarily used for freight and baggage, is to be made another, the rooms opening into which will be built somewhat larger than those above, to remedy the disadvantage of their lower position. Of the steerage will be made a handsome dining-hall. This plan will leave the main cabin and saloon for a parlor, where



MAIN SALOON ON THE STEAMSHIP, TO BE USED AS A LIBRARY AND CONSULTATION-ROOM.

NEW JERSEY.—THE WOODRUFF SCIENTIFIC EXPEDITION AROUND THE WORLD—THE FLOATING COLLEGE "GENERAL WERDER" NOW LYING AT HOBOKEN.

Digitized by Google

the constant interruption of spreading and clearing tables will not occur. The second or forward cabin is to be used as the lecture or recitation-room. An excellent library will be provided, a friend of the enterprise having offered to contribute $5,000 worth of well-selected books.

The expedition is expected to start from Hoboken, where the steamship is now moored, on the 8th of May, and be gone about sixteen months, arriving home again in September, 1880, having in the meantime made a complete circuit of the globe. A most comprehensive route has been laid out, which includes almost all the points of interest in the world. Leaving New York, the first point will be the Azores Islands; from thence Queenstown, Ireland, will be visited, and Dublin, the old capital of the Evergreen Isle. About six weeks will then be given to England and Scotland, the vessel touching port at Southampton, then the Isle of Wight, London and Edinburgh, leaving the latter place about July 16th. The North Sea will then be crossed, and passing through the Skager Rack and Categat to Copenhagen, the Baltic Sea to Stockholm and the Gulf of Finland, St. Petersburg will be reached. About four months will thus be spent. Then, retracing the route, Hamburg, Antwerp and Havre will be visited. Lisbon and Cadiz complete the list of Atlantic ports. Having passed through the Straits of Gibraltar, the principal Mediterranean ports will be visited, and then the expedition will pass on to the older lands—Turkey, Egypt, Palestine, and through the Suez Canal to India. The Southern Europe part of the trip will occupy about four months, and India is expected to be reached by January, 1880. After leaving India, the principal islands of the Malay Archipelago will be visited, and the chief seaports of China and Japan, leaving the latter country in August. Crossing the Pacific Ocean to America once more, the Sandwich Islands will receive a short visit, and, on arriving at San Francisco, a special train will be engaged to bring the party back to New York.

The attractions of this route alone, apart from any educational idea, ought to be sufficient to draw a large number of travelers, but it is said that in addition a complete scientific course of instruction will be given. This will be by lectures, illustrated with the necessary scientific apparatus. The course will include astronomy, mathematics, navigation, chemistry, physics, architecture, archæology, geology, mining, botany and general natural history. All along the route collections of specimens in the departments of zoology, botany and ethnography will be made.

The originator and director of the expedition is Mr. James O. Woodruff, but he will be assisted by a competent and full corps of professors. The President of the Faculty is W. S. Clark, LL.D., now President of Amherst Agricultural College. Mr. Clark is one of the best known scholars of this country, and was for some years employed by the Emperor of Japan as Superintendent of Education in that country. He is a gentleman of extensive travel, and is familiar with many of the countries that the expedition proposes to visit. The vessel throughout will be commanded by officers of the United States Navy, with Commander A. P. Cooke as captain. The business manager of the expedition is Arthur B. Proal, a gentleman well known in New York City, and a son of the late Rev. Dr. Proal, of Utica, N. Y. Surgeon J. H. Kidder, United States Navy, and Assistant Surgeon J. J. Sowerby, United States Navy, will accompany the expedition in their professional capacity. The trustees of the expedition are Franklin Edson, President of the New York Produce Exchange; W. S. Clark, of Amherst College, and Commander A. P. Cooke.

The fee to be paid by students is $2,500, to be paid by instalments between the date of departure and March 1st, 1880. Messrs. Drexel, Morgan & Co. are the treasurers of the expedition.

The treasurers will hold the "booking fee" of $500 intact until the entire number of students or tourists have paid. If that result has not been reached by May 8th, they will refund the amount to those depositing the same, thus insuring entire safety to those contemplating becoming members of the expedition.

This is undoubtedly one of the grandest schemes for combining pleasure and instruction ever invented, and there is no doubt that very good results will flow from it. In addition to the practical knowledge obtained by the students, they will receive enlarged views of life, and an appreciation of the greatness of our world which they could obtain in no other way. The expedition has commended itself to and received the indorsement of the best and most highly cultured scholars, statesmen and *litterateurs* of our country, including such names as Dr. O. W. Holmes, H. W. Longfellow, Robert C. Winthrop, Joseph Henry, of the Smithsonian Institute (since dead); Judge Charles P. Daly, Governor Rice of Massachusetts; William F. Warren, President of Boston University; O. P. Hubbard, Secretary of New York Academy of Science; E. J. Nolan, Secretary Philadelphia Academy of Sciences; all the Faculty of the University of Pennsylvania; William C. Russell, Vice-President Cornell University; J. S. Newberry, of Columbia School of Mines; M. B. Anderson, President Rochester University; Edwin P. Whipple, Henry Ward Beecher, and many other prominent persons. It is said that several colleges throughout the country are now considering the question of appropriating funds to send some of their students on the expedition; and we are also informed that several individuals of wealth, deeply interested in the plans and purposes of this exhibition, have subscribed for scholarships, proposing to donate them to those worthy and unable themselves to pay.

THE LATE MARSHAL ESPARTERO, EX-REGENT OF SPAIN.

MEDALS
FOR THE YELLOW FEVER NURSES.

THE Southern communities which suffered so severely from the yellow fever scourge during the recent visitation have not been slow to recognize the services of the faithful men and women who periled their lives in nursing and caring for the sick and dying. This is particularly true of Memphis, Tenn., where, on December 26th, Messrs. Jacob Kohlberg and Mozart Sartorius, members of the Hebrew Hospital Association, were publicly presented with handsome gold medals for their humane efforts during the epidemic. The presentation was made by Mr. Jacob S. Menken, in a graceful address, in the presence of a large and brilliant company. The medals are of elegant workmanship, in relief. The inscriptions are as follows: "Presented to Jacob Kohlberg and M. Sartorius for philanthropic services in the cause of suffering humanity. Yellow fever epidemic, Memphis, 1878." The reverse side contains the monograms of the gentlemen, surrounded with wreaths of gold leaves and pearls. The gentlemen were also presented with solitaire diamonds, worth $500 each, by prominent citizens of Memphis.

The occasion was one of great interest, and significantly marked the popular appreciation of those heroic qualities, which has nowhere found grander expression than amid the perils of the fever hospital.

Another recipient of a handsome testimonial, of which we give an illustration, was Miss Daisy Murdock, of Charleston, S. C., to whom a medal was recently presented by the Howard Association of Memphis, "in grateful acknowledgment of valuable services gratuitously rendered during the epidemic, in relieving the cares of the sick and distressed" of that city. Miss Murdock illustrated by her labors the very highest virtues of the female character—courage, benevolence and self-consecration.

MEDAL PRESENTED TO MOZART SARTORIUS BY THE HEBREW HOWARD ASSOCIATION OF MEMPHIS.

MEDAL PRESENTED TO DAISY MURDOCK BY THE HEBREW HOWARD ASSOCIATION OF MEMPHIS.

MEDAL PRESENTED TO JACOB KOHLBERG BY THE HEBREW HOWARD ASSOCIATION OF MEMPHIS.

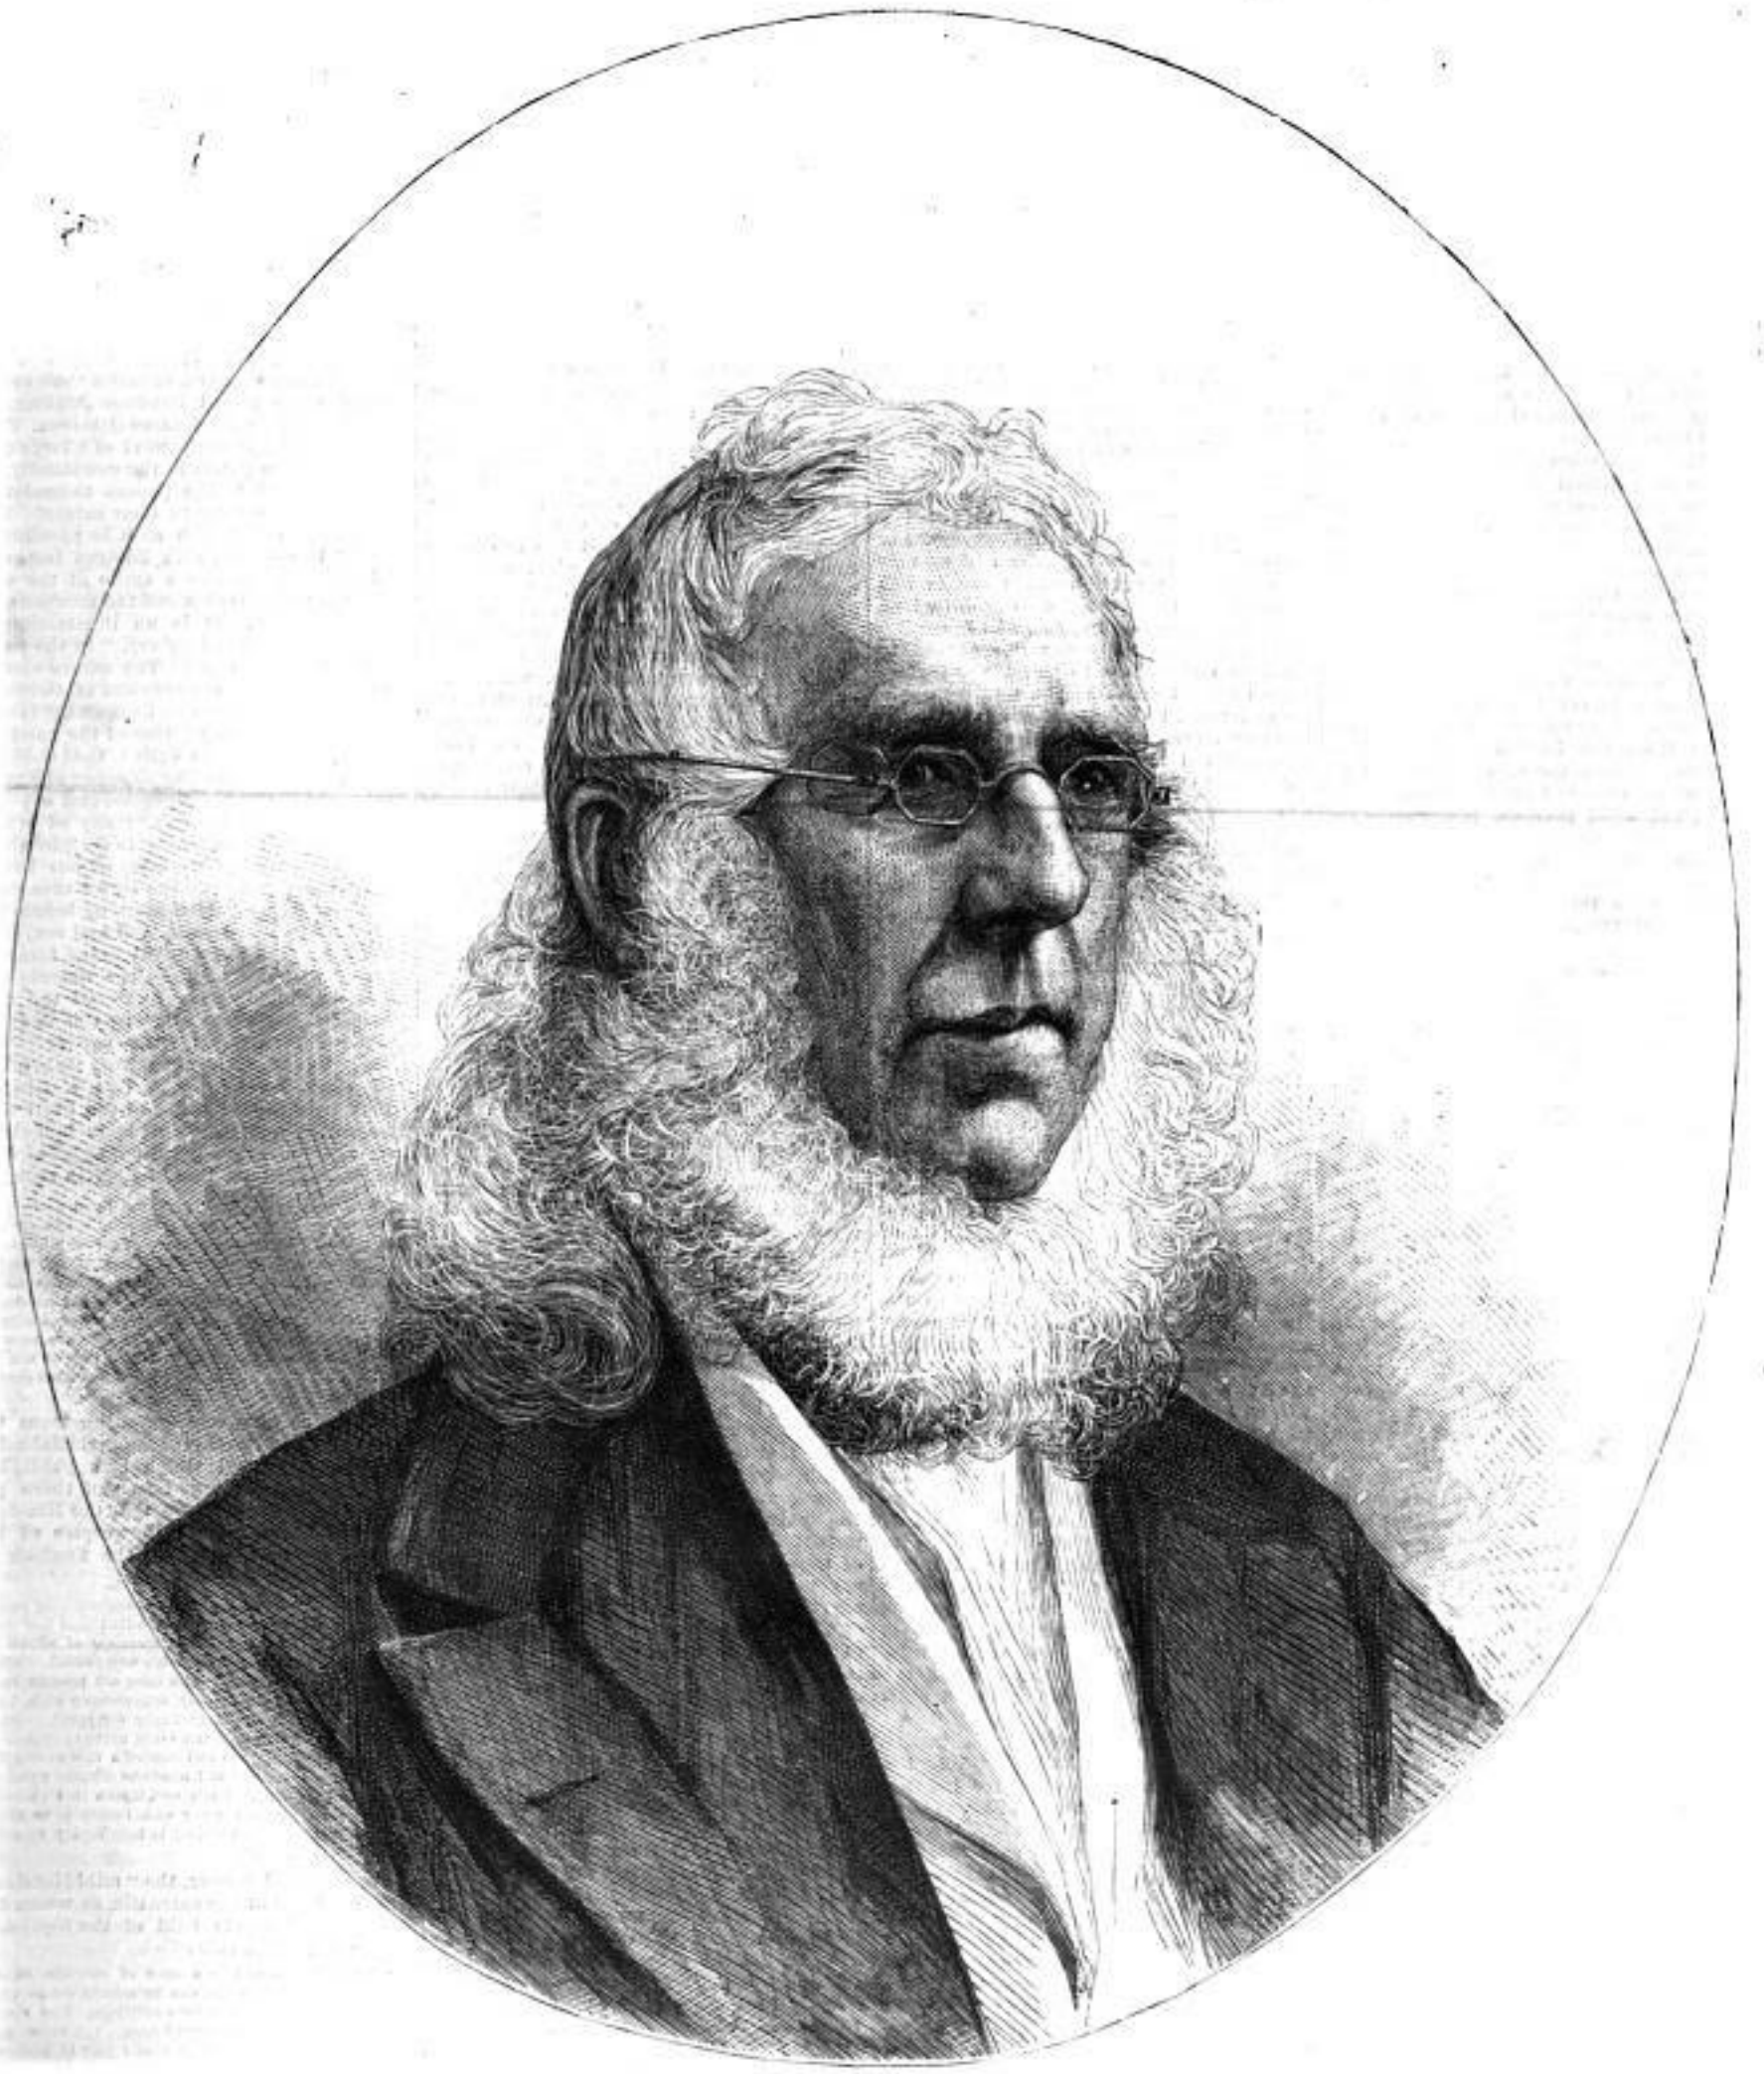
THE LATE MARSHAL ESPARTERO, OF SPAIN.

FEW more honorable or conspicuous characters appear in Spanish history than that of Marshal Espartero, who died early in January last. Baldomero Espartero was of humble birth, the son of a rustic wheelwright in La Mancha, and was partly educated for the priesthood, but quitted that career, while a youthful student, to serve as a volunteer in the national insurrection against Napoleon I. He afterwards served in the Spanish colonial provinces of South America with the army employed to put down their revolt against the Government of Spain.

Having gained military rank as colonel and brigadier, Espartero returned to Spain, at the age of thirty-two, married, and held one or two important appointments. In the long civil war which, upon the death of King Ferdinand VII., resulted from the resistance of Don Carlos, representing the party of despotic monarchy and of the Papal authority, in opposition to the principles of the constitutional government of the legitimate sovereign, General Espartero performed most important services, and after the defeat and submission of the Carlists, he was rewarded with great honors, being made Duke of Vittoria, a Grandee of Spain, and Knight of the Golden Fleece, while Queen Christina attempted to carry on the Government. But her corrupt and arbitrary administration soon excited bitter discontent among the Progressists, or advanced Liberal Party, who persuaded Espartero to become their military chief. An insurrection broke out, the result of which was the deposition and flight of Queen Christina, and the election of Espartero, in May, 1841, to be sole regent during the minority of Queen Isabella. His period of rule was brief and troubled, having to contend with military and provincial revolts, at Pampeluna, Madrid, and Barcelona, and finally with a rebellion in the manufacturing town of Catalonia, which at length, in August, 1843, overthrew the Government of Espartero, and drove him into exile. He resided four years in England, till the decree of outlawry against him was repealed, when he returned to Spain, and was greeted at Madrid with enthusiastic popular acclamations. The Government of Queen Isabella, then under the management of his personal antagonist Narvaez, regarded him with no good will, and he lived in private retirement at Logrono till 1854. In that year, when a new military faction, led by General O'Donnell, had obtained power, Queen Isabella turned to Espartero for assistance, and a compromise was effected, by which he and O'Donnell were to co-operate in forming a ministry, and the monarchy was to be preserved, with guarantees of constitutional liberty. But these two rival military politicians could not long agree; and Espartero, being the older and weaker, was eventually turned out, retiring once more, in 1856, to his quiet residence at Logrono. He refused to leave it again in 1869, after the dethronement of Isabella, though some partisans would have elected him President of a Spanish Republic, or Regent, or perhaps even King of Spain.

Espartero has, by impartial minds, generally been considered an honest and disinterested man, though not a statesman of great ability. He was a Knight Grand Cross of the Order of the Bath, and enjoyed the friendship of many leading English statesmen. At the time of his death he was eighty-seven years of age. Our illustration is from a photograph taken many years ago, and represents General Espartero as he was in the latter part of his political career, under the reign of Queen Isabella II.

ANOTHER POMPEII.



ANOTHER Pompeii has been accidentally discovered in the neighborhood of Mount Gargano, near Manfredonia. There were found an ancient temple of Diana, with a magnificent portico about twenty metres long, and an underground necropolis of great extent. A large number of important inscriptions have already been forwarded to and exhibited by the National Museum of Naples. The discovered city is the ancient Sipontum, near Arpinum, mentioned by Strabo and Titus Livius. The houses are nearly twenty feet beneath the cultivated soil. This town was engulfed through a terrible earthquake. The Italian Government has ordered researches to be made on a large scale; and antiquarians are deeply interested in the results.

CAUTION.

Subscribers, in ordering our publications, should be careful to write the name of FRANK LESLIE *in full, and direct their letters to 53, 55 and 57 Park Place, New York, from which address all our publications are issued.*

INTERNATIONAL ETHICS.

BY the terms of the treaty concluded between the United States and China in the year 1868, it is provided that the two Governments shall "cordially recognize the inherent and inalienable right of man to change his home and allegiance, and also the mutual advantage of the free migration and emigration of their citizens and subjects respectively from the one country to the other for purposes of curiosity, trade, or as permanent residents." In the face of this international compact a large majority of both Houses of Congress has attempted to put a restriction on "the free migration" of the Chinese into the United States, and to impose penalties on the commander of any ship or steamer who shall aid or abet the migration of more than fifteen Chinese in any single voyage he may make between the ports of China and of this country.

By this legislation it is sought to contravene a political principle which has hitherto been recognized by American statesmen as "the inherent and inalienable right of man"—a principle for which we have contended in all our diplomacy with foreign nations, and in defense of which we once declared war against the most powerful nation in Europe. That the United States, after fighting the war of 1812-14 in order to extort from Great Britain an acknowledgment of this "inalienable right," and after eventually receiving from the British Government a complete, though tardy, acquiescence in the principle as one of international obligation as well as of personal prerogative inherent in all men, should now show signs of recreancy to this fundamental doctrine of American polity and should ostentatiously publish that recreancy in the national Legislature, is a fact which argues a strange unhingement of the moral and political ideas on which the whole theory of our Government has been heretofore supposed to turn. For, by the denial of this "inalienable right" to the inhabitants of China, a majority in the Senate and House has sought to put back the clock of the world to the time it marked in the Dark Ages when vassal and serf were "tied to the soil" in which they were doomed to delve for the benefit of their masters without hope of change in their lot or habitation.

But the anomaly of this proposed legislation does not end here. It involves an assault upon the most fundamental doctrines of international jurisprudence by inflicting, if it should prevail, a fatal blow upon the faith of treaties. Every treaty engagement between the United States and a foreign nation carries with it a twofold obligation. In relation to our own people it is a law, and, according to the express terms of the Constitution, is "the *supreme* law of the land." In relation to the foreign country it is a contract, subject to termination and to modification by the mutual consent alone of both the contracting parties, unless a state of war shall supervene to effect a violent rupture of all treaty relations. The pretension that one party to a treaty engagement can, by an act of legislation, work a change in the clauses of any particular treaty without the consent of the other party, is a preposterous inversion of ideas which does equal violence to common sense, logic and justice.

"Under the Constitution of the United States," says Wheaton, "it seems to be understood that the Congress is bound to redeem the national faith pledged by a treaty, and to pass the laws necessary to carry the treaty into effect." This principle was settled in Washington's administration, when the action of Congress was required in order to carry Jay's treaty with England into effect; and it is a principle for which President Jackson was ready to go to war with France when, in the year 1834, the French Chamber of Deputies failed to vote the supplies necessary to pay the indemnities due to our citizens, under a treaty concluded between the United States and the Government of Louis Philippe.
